SESSION 1934

HOUSE OF COMMONS

Vol II

May 3, 1934

Special Committee

On

Price Spreads and Mass Buying

PROCEEDINGS AND EVIDENCE

OTTAWA
J. O. PATENAUDE
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1934

MINUTES OF EVIDENCE

House of Commons, Room 368,

Thursday, May 3, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The Chairman: Order, gentlemen. The minutes contain the usual record of the witnesses heard and the number of exhibits filed. There are no other matters of importance in them, so I will declare them approved.

A request was made yesterday for the filing of certain petitions that have been forwarded to the House of Commons, and the clerk of petitions will now file them.

Mr. J. P. Doyle, clerk of petitions appeared before the Committee and filed,—

List of Petitions Protesting Against the Imposition of an Excise Tax on Leaf Tobacco

Session 1934

Petition No. — From

15. J. R. A. St. Martin and 508 other farmers and tobacco growers of the counties of Joliette, L'Assomption, Montcalm and Berthier.
30. Joseph Labreche and 456 other tobacco growers of the district of Joliette, Quebec.
31. Emile Archambault and 29 other tobacco growers of Ste. Mélanie, Quebec.
32. Leonide Desrocher and 289 other tobacco growers of St. Thomas de Joliette, Quebec.
33. Alphonse Cloutier and 5 other tobacco growers of St. Cléophas de Brandon, Quebec.
34. E. Forest and 254 other tobacco growers of St. Ambroise, Quebec.
35. E. Filiatrault and 54 other tobacco growers of Ste. Marcelline, Quebec.
37. Joseph Martel and 136 other tobacco growers of Ste. Marie-Salomé, district of Joliette, Quebec.
62. Donora Charron and 4,240 other tobacco merchants, of Montreal, Quebec.
67. J. A. Lamarche and 815 other tobacco consumers of Quebec, Quebec.

The Chairman: Attached to that are certain resolutions of protest against the imposition of an excise tax on leaf tobacco. I think these all come from the province of Quebec. The list will be included in the minutes, and the petitions will be here with the committee.

86332—95½

List of Resolutions of Protest Against the Imposition of an Excise Tax on Leaf Tobacco

session 1934

Municipalités de Saint-Zénon, compté de Berthier, Que.; Saint-Pierre Baptiste, Que.; Saint-Valier, comté de Bellechasse, Que.; Beaumont, comté de Bellechasse, Que.; Saint-Michel, comté de Bellechasse, Que.; Saint-Damien de Buckland, comté de Bellechasse, Que.; Saint-Joachim, comté de L'Assomption, Que.; Saint-Lin, comté de L'Assomption, Que.; Saint-Henri de Mascouche, Que.; Saint-Sabine, comté de Bellechasse, Que.; Saint-Nérie, Que.; Saint-Jean Chrysostôme, comté de Lévis, Que.; Saint-Modiste, comté de Témiscouata, Que.; Saint-Louis du Ha Ha, comté de Témiscouata, Que.; Saint-Méthade d'Adshack, Que.; Saint-Anasthase de Nelson, comté de Mégantic, Que.; Plessisville, comté de Mégantic, Que.; Canton du Bouchette, comté de Wright, Que.; Crabtree-Mills, district of Joliette, Que.; Saint-Gérard Majella, Que.; Paroisse L'Assomption, Que.; Village de Saint-Jacques, comté de Montcalm, Que.; Lachenaie, Que.; la ville de L'Assomption, Que.; Marie Salomé, Que.; L'Epiphanie, Que.; Repentigny, Que.; Saint-Henri de Mascouche, comté de L'Assomption, Que.; Saint-Alexis, comté de Montcalm, Que. 111 Tobacco Merchants of Montreal, Que.; 38 Tobacco Merchants of Montreal, Que.; 490 Tobacco Growers of Saint-Jacques, Que.; 384 Tobacco Growers of Saint-Henri de Mascouche, Que.; 252 Tobacco Growers of Saint-Alexis and Sainte-Julienne, Que.; 226 Tobacco Growers of Saint-Esprit, Que.

Before we call the witness for to-day, I might make a very brief statement. I shall only make this statement in an exceedingly brief manner because I have not had an opportunity to discuss with the committee two letters that I have here. At our last meeting, when the tobacco matter was under review, I think the committee was impressed with the desirability of achieving some understanding between the parties affected, if possible, with the one hope that it might materially help those who, at present or in the last year or two, have been suffering from the very low price of raw leaf tobacco. I wish to say that in so far as the Imperial Tobacco Company is concerned, the Rock City Tobacco Company, and the growers as represented by the witnesses of the previous meetings, these gentlemen got together and apparently did make a considerable effort to come to an understanding. There is, however, one notable exception in the matter which I think I should mention. The Macdonald Tobacco Company, I am informed, refused to participate in any effort at arriving at an understanding, and would not attend the conferences. I have before me a letter from Mr. Miller of the Imperial Tobacco Company and also one from Mr. Picard of the Rock City Tobacco Company, indicating certain views—I can't describe them as much more than that—and also outlining what attempts were made to arrive at an understanding. In neither case does it indicate that a complete or satisfactory arrangement was achieved. I will submit these documents to the committee for later consideration. But I would like to say this to the committee, if I might, and to the witnesses that are now about to be heard: the effort that was made indicates to me quite clearly that it is not beyond the realm of possibility for these varying interests to get together, if there was perhaps some assistance given them by government authority. But we have no authority at the present time, that I know of, that we could exercise to that end. If the committee could keep that thought in mind, it is possible that as we proceed with the examination,—which we shall now proceed with—information might be secured, and light might be brought to bear on the subject, which will help us, when we are framing our report, to make suggestions that would be beneficial to all concerned. In the meantime these letters will be held and discussed later with the committee at an executive meeting.

Who is the witness?

Mr. Young: Just a minute; if they have a plan, a get-together plan that would be submitted at some meeting, maybe they will be away by that time. This plan might not be acceptable to us.

The Chairman: Mr. Young, as I have regretfully intimated, there is no plan upon which there is agreement.

Mr. Factor: It is just a résumé.

The Chairman: Just a résumé of what has happened. I think it would be preferable if we did not discuss it now, but discussed it later in an executive meeting.

Mr. Senn: Mr. Chairman, have you no report from the growers' representatives about the matter?

The Chairman: No, I have no report here. There was no written report.

Mr. Scythes: There is no written report, but Prof. Leitch is prepared to make a statement.

The Chairman: Does the committee wish to hear Prof. Leitch make a statement?

Mr. Factor: Well, I suppose if Prof. Leitch makes a statement, the other people would want to.

The Chairman: If the committee do not agree with me they can intimate their views, but I would suggest that Prof. Leitch make a written statement and submit that to me so we can have that for consideration. Does that meet with the approval of the committee?

Mr. Factor: Yes.

The Chairman: We will ask Prof. Leitch to do that.

Mr. Factor: Is there any other help we can extend to the parties here to arrive at something?

The Chairman: I don't know of any, unless we were to suspend operations, shall I say. I don't know that there is anything we can do.

By the way, I would like to ask, before we proceed, whether the Macdonald Tobacco Company is represented here to-day.

A Voice: Yes.

The Chairman: Your name is what?

A Voice: Stewart.

The Chairman: Thank you very much.

Mr. Sommerville: Just before opening, may I ask if the Canadian Leaf Tobacco Company is represented here to-day by any person. Apparently not.

Mr. Factor: Who is the Canadian Leaf? Are they an independent company?

Mr. Sommerville: No. It is one of the companies that does a large amount of buying. It is a branch of the Universal Leaf Tobacco Company of the United States. We would ask them to submit their statement of purchases.

May I file with the committee a statement from the Dominion Bureau of Statistics on the price index numbers and actual prices of tobacco from 1926 to 1933, showing the prices obtained for the various varieties of tobacco in Canada for the years 1932 and 1933, with a summary for 1926 to 1933, and also the retail prices of cigarettes—certain cigarettes therein named—showing that the prices of tobaccos had decreased, for the raw tobacco leaf, from the index number of 100 in 1926 to 41·1 in 1933, while the index of retail prices of tobacco and cigarettes had decreased from 100 in 1926 to 89·6 in 1933. In other words, there was a decrease in the price of the raw material of 59 points in that period, and a decrease in the retail price of 11 points. That will be Exhibit No. 121.

The CHAIRMAN: Would the committee like to have this statement printed in the evidence? It is a rather comprehensive, basic schedule. We could get copies made for the committee, or would you prefer to have it printed.

Mr. SENN: I believe it would be well to have it printed, if it gives comparative prices to consumers and producers.

Mr. SOMMERVILLE: It does.

The CHAIRMAN: It is a very comprehensive schedule. We will have it inserted in the evidence.

DOMINION BUREAU OF STATISTICS

PRICE INDEX NUMBERS AND ACTUAL PRICES OF TOBACCO, 1926-1933

Index Numbers, 1926-1933.—Price index numbers of Ontario Burley and Virginia tobacco shown in the attached table indicate that a sharp decline occurred in basic tobacco prices between the years 1930 and 1933, and that more moderate declines had occurred in the two years preceding 1930. The indexes mentioned above were, in 1933 between 55 p.c, and 60 p.c. lower than in 1926. Manufactured tobacco prices, however, have registered much smaller recessions. Cigarettes in 1933 sold at from 80 p.c. to 90 p.c. of 1926 levels, while smoking and chewing descriptions shown, have not changed materially in the past eight years.

Prices 1932-1933.—The spread between prices of unmanufactured and manufactured tobacco is considerable as may be gathered from tabulated Burley and virginia prices which centred around 10 cents per pound in 1932 and 1933, while smoking and chewing tobaccos of popular descriptions at wholesale ranged from $1 to $1.50 per pound. The spread between wholesale and retail quotations of tobacco and cigarettes at present centres around 15 p.c.

(1) Price of 100 cigarettes at retail multiplied by 10.

Perhaps I should also report this to the committee. One of the witnesses gave evidence to the effect that it would be helpful to the growers if statistics were available of the stocks in the hands of the processers or manufacturers at various times in the year, particularly during that period when they were making preparations for the next year's crop. The matter was taken up by the clerk of the committee with Mr. Coats, the chief statistician, and he in part states as follows:

> The Tobacco Division of the Dominion Department of Agriculture and the Agricultural Branch of the Dominion Bureau of Statistics co-operate in the issuance of an annual report on the tobacco crop, with details as to acreages, production, prices to producers, imports and exports, and stocks in bonded warehouses, but there are no statistics extent of stocks in the hands of manufacturers.

That is the statement. So that we have no government statistics on that point. It is a matter that the committee may keep in mind, and perhaps the counsel will query the companies as they come here, in regard to the matter.

All right, Mr. Sommerville.

Mr. SOMMERVILLE: I will call on Mr. Miller, president of the Imperial Tobacco Company.

GRAY MILLER, called and sworn.

The WITNESS: Mr. Chairman, I would like to say that Mr. H. P. Buell, one of our vice-presidents in charge of our leaf is here; also Mr. F. P. L. Lane, the secretary; Mr. T. L. Lea of our leaf department and Mr. A. V. Calder. If you would allow it, I would like to have Mr. Lane help me in the reading of the brief, and Mr. Buell to answer questions. I thought may be you would like to have them sworn in, probably at the same time.

Mr. SOMMERVILLE: I would really prefer to examine them separately. If you require information, you may get it from time to time from them.

The CHAIRMAN: Mr. Miller may consult with the experts from time to time.

Mr. SOMMERVILLE: Oh, yes.

The WITNESS: We have a number of copies of the brief. They can be distributed to the members of the committee.

The CHAIRMAN: This is a rather ostentatious looking brief.

The WITNESS: Well, it is a rather big subject, Mr. Chairman.

By the Chairman:

Q. We have had, as you know, Mr. Miller—I think you were present—representatives of the growers before us, who have given certain evidence?—A. Yes.

Q. They have presented to the committee a certain picture. The counsel of the committee is desirous—in order to proceed in an orderly manner, and before going into any complicated matters that might arise out of this brief—of securing certain information of a major character which has already been referred to and which, in his opinion, affects the general set up of the tobacco industry, and upon which we desire specific information. So we will proceed with that first, and then we will go into the question of the brief, and anything that the Imperial Tobacco Company may wish to say.—A. All right.

By Mr. Sommerville:

Q. Mr. Miller, you are president of the Imperial Tobacco Company?—A. Yes.

Q. The Imperial Tobacco Company, in its present form, was incorporated, I understand, in 1912?—A. I think so. All the particulars are in here. You have it.

Q. That company, in its present form, acquired a previous company?—A. Yes.

Q. By the same name?—A. Yes.

Q. That previous company was made up of constituent parts?—A. I could not tell you without referring to this memorandum. I have given you par-

ticulars in that letter, I think. It is quite a complicated affair. It is all covered by this brief and the letter. I think, Mr. Sommerville, that really we have tried to anticipate anything that might be of interest to this committee in your investigation, and I would like to suggest that I think you will find all of that covered, if you would only let us proceed.

By Mr. Factor:

Q. You have not got an index to this brief?—A. No, we have not had an opportunity to index it. I think we would cover the whole thing, Mr. Sommerville. I am not trying to dictate at all, but I feel that it would be covered if you would let us proceed.

By the Chairman:

Q. Could you not put your finger on the answer to this question in your brief? I have just been skimming through it, and frankly I don't see any way I could put my hand on it?—A. In your letter there, Mr. Sommerville, I think you will find all that you asked in that question.

Q. There does not seem to be any index?—A. No, I am sorry to say there is not. I had hoped to have that. If you would let us proceed with this brief—

By Mr. Sommerville:

Q. The letter does give some information that will be helpful in answer to that. You say in reference to the inquiry as regards capital structure, the American Tobacco Company of Canada Limited was the original company which later grew into the Imperial Tobacco Company?—A. Not the original company. D. Ritchie and several other smaller companies is my recollection. I don't know how far back you want to go.

Q. At any rate, in September, 1895, the American Tobacco Company was incorporated.

The CHAIRMAN: That is far enough back.

Mr. EDWARDS: Page 73.

The WITNESS: Yes, capital structure, page 73.

By Mr. Sommerville:

Q. The American Tobacco Company was incorporated on September 7, 1895, with an authorized capital of one million dollars?—A. Yes.

Q. All of which was subscribed and fully paid for in cash?—A. Yes.

Q. That consisted of 10,000 shares of the par value of $100 each?—A. Yes.

Q. That was the capital that was put into the company at that time?—A. Yes.

Q. With that capital there were taken over certain companies that were in existence at that particular time?—A. Yes.

Q. Then that company acquired from the American Tobacco Company of New Jersey certain Canadian rights?—A. Yes.

Q. And it acquired the business of D. Ritchie & Company?—A. Yes.

Q. And of the American Cigarette Company?—A. Yes.

Q. Then the next change in the capital structure occurred on December 18, 1898?

The CHAIRMAN: 1908.

The WITNESS: Yes, 1908.

By Mr. Sommerville:

Q. All right, in 1908. Then the first Imperial Tobacco Company of Canada, Limited, was incorporated on June 11, 1908?—A. Yes.

Q. With an authorized capital of eleven million dollars, is that right?—A. Yes.

Q. Which was divided into 1,027,397-26/100 preference shares at £1?—A. $4.86-2/3.

Q. $4.86-2/3 each?—A. Yes.

Q. And 60,000 ordinary shares of the par value of $100 each?—A. Yes.

By Mr. Factor:

Q. How much of that is paid up?—A. It proceeds with the explanation here. It follows right on.

By Mr. Sommerville:

Q. That was the first Imperial Tobacco Company?—A. Yes.

Q. On the incorporation of that company, in July, 1908, it took over the business of the existing American Tobacco Company of Canada, Limited?—A. Yes.

Q. And the company known as the Empire Tobacco Company Limited?—A. Yes.

Q. Which latter company was incorporated in 1898?—A. Yes, and certain shares of The B. Houde Company Limited.

Q. It took over at that time certain shares of The B. Houde Company Limited?—A. Yes.

By Mr. Factor:

Q. A majority of the stock?—A. Yes.

By Mr. Sommerville:

Q. The majority of the stock of The B. Houde Company Limited?—A. Yes.

Q. The Imperial Tobacco Company then paid 711,504 preference shares of £1 each?—A. Yes.

Q. At a value of $3,462,651.05?—A. Yes.

Q. And 54,005 ordinary shares of the par value of $100 each, amounting to $5,400,500, for the assets which it then took over?—A. Yes, that is right.

Q. Is that correct?—A. Yes, that is correct.

Mr. Factor: Just read on there, starting with "In other words."

Mr. Sommerville (Reading): In other words, the Imperial Tobacco Company received tangible assets to the value of $3,251,970.67, shares of The B. Houde Company Limited, National Snuff Company Limited and the Joliette Tobacco Company Limited, all valued at $396,379.42, and goodwill, trade marks, etc. valued at $5,214,800.96.

The Witness: Yes.

By Mr. Sommerville:

Q. That is a statement of the position?—A. Yes.

Q. Was there any cash put into the company at that time?—A. Page 74: In October, 1908, there were subscribed for and fully paid in cash 110,414 preference shares amounting to $537,348.13.

Q. That is in October of that year?—A. Yes.

Q. The cash put in amounted to $537,348.13?—A. Yes.

Q. And that was for 110,414 preference shares?—A. Yes.

Q. That is in 1908?—A. Yes.

Q. What was the par value of those shares?—A. $4.86\frac{2}{3}$ or £1.

By Mr. Factor:

Q. Those are preference shares?—A. Yes.

Q. What do you mean by tangible assets valued at $3,251,970.67; is that stock in trade and buildings?—A. Yes, stock; everything except intangible assets.

Q. Everything but goodwill and trade marks?—A. Everything but the shares and goodwill.

By Mr. Sommerville:

Q. Were these assets not owned or controlled by the company which was in existence at that time, namely the American Tobacco Company?—A. The Empire Bond was not; I don't think B. Houde was; I do not think they could have been sir, it does not seem—we would have to investigate that sir and let you know.

Q. Is it not a fact that between 1895 and 1908 there was given to the shareholders of the American Tobacco Company as a bonus 40,000 shares of that company?—A. I do not think so, sir.

Q. Then, in 1895, or between 1895 and 1908 was there not a bonus then given to the shareholders?—A. No.

Q. Of the American Tobacco Company?—A. No.

Q. And the 10,000 shares originally issued in 1895 remained still the 10,000 share that were issued and outstanding in 1908, when the American Tobacco Company was taken over by the Imperial Tobacco Company?—A. Yes.

Q. That is the correct position?—A. Yes.

Q. And then, at that rate, what was the exact position in 1908, after the incorporation of the Imperial Tobacco Company, and the acquisition of these various companies, what was the outstanding capital?—A. The total outstanding capital?

Q. The share-capital?—A. Let me understand your question again?

Q. I want to know then what was the outstanding share capital of the Imperial Tobacco Company when it had completed the acquisition of the subsidiary companies in 1908?—A. That would be 711,504 preference shares, one pound each; value $3,462,651.05: and 54,005 shares of ordinary stock at a par value of $100, making $5,400,500.

Q. Amounting to—that is to say, there would be a total outstanding capital of $8,863,151.05?—A. Yes, sir.

Q. That would be the total outstanding in 1908?—A. Yes.

Q. And at that time no additional cash had been put into the Imperial Tobacco Company. These shares were issued in part for certain assets that were taken over, no additional cash was put in?—A. Not to my knowledge.

The CHAIRMAN: Except what he has already stated, in October.

By Mr. Sommerville:

Q. I am not talking about October: immediately afterwards?—A. Immediately afterwards.

Q. When you completed the acquisition of these various companies taken over by the Imperial Tobacco Company, no additional cash was put in?—A. That is right.

Q. But the original cash of $1,000,000 as it is given in 1895?—A. Excuse me a second, that is very complicated old history.

Q. Yes.—A. Page 73 there gives the full history of it. I do not see any reference—I do not think there was any cash, sir. That is a fair answer to your question. I am not trying to evade—it is quite difficult.

Q. We are trying to get the history in simple form?—A. Right.

Q. In other words, in 1908 you paid for the assets taken over by the issue of shares?—A. Yes.

Q. In a company that had been incorporated for the purpose of taking these assets?—A. Yes.

Q. So that the shares issued by that company represented the assets that were taken over from the previous company?—A. Yes.

Q. And then, following that, the sum of $537,348.13 was subscribed in October, 1908?—A. Yes.

Q. And that was paid in to the treasury of the Imperial Tobacco Company in cash?—A. Yes, sir.

Q. Then you have an addition of that amount of cash?—A. Yes.

Q. And these were, at that time, one hundred common shares; preferential shares at $5?—A. No, sir, $4.86⅔.

Q. One pound shares?—A. Yes.

Q. Then, what was the next step in your capital structure?—A. The present company, the Imperial Tobacco Company of Canada Limited, incorporated in 1912, now has an authorized capital of $63,733,309, which is divided into 1,999,995 cumulative 6 per cent preference shares of one pound each—$4.86⅔—having a total par value of $9,733,309; together with 10,800,000 ordinary shares of a par value of $5 each, with a total par value of $54,000,000. At the present date the paid-up capital of the company consists of $8,030,000 preference shares and $47,255,160 ordinary shares, making a total of $55,285,160.

Q. At this point, no stocks have been issued for preference shares, and common shares were not sold for cash?—A. Up to that time, no.

Q. But what change took place immediately following the reorganization of 1908?—A. 1908?

Q. Yes. Were there any bonus shares then issued, common shares, between then and 1912?—A. There were no bonus shares issued, but the $100 shares were split into $5 no par value shares; the same total par value.

Q. That is to say, the common shares which had been given for the assets in 1908 amounting to 54,005 ordinary shares at a par value of $100 each?—A. That is right.

Q. And that represented a total value of $5,400,500?—A. Yes, sir.

Mr. Factor: Where do you get this 54,000?

Mr. Sommerville: On page 74.

By Mr. Sommerville:

Q. Were any of these 54,000 ordinary shares at that time issued as a bonus to those who were turning over their assets for preferred shares?—A. No.

Q. They did not?

The Chairman: The answer is what, Mr. Miller?

The Witness: No.

By Mr. Sommerville:

Q. Were the assets that were turned over not fully represented by the value of $3,462,651.05 of preference shares issued at that time. The tangible assets consisted of $3,251,970.67, and the shares which had a value of $396,379.42; a total of $3,462,651.05 worth of stock.

Q. But at that time of the $5,400,500 of common shares issued, there was issued for goodwill, trade marks, etc., $5,214,800.96?—A. Yes, sir.

Q. And the 54,000 ordinary shares, practically all went to pay for goodwill, trade marks, taken over?—A. As stated, yes.

Q. In a sense they were not bonus shares?—A. No.

Q. But the assets which the Imperial Tobacco Company received were not cash, but goodwill, trade marks, etc.?—A. Not altogether.

Q. Whatever that may cover?—A. It is as stated.

Q. That covers a multitude of things in every organization, does it not?

By Mr. Factor:

Q. They were the intangible assets at any rate?—A. Yes, sir, goodwill, trade marks, and so forth.

By Mr. Sommerville:

Q. Will you tell me what happened to these particular common shares, 54,005 ordinary shares; what happened to the stock structure with reference to the shares; they were $100 shares?—A. They were exchanged for $5 par value shares.

Q. When did that take place?—A. That took place on May 31, 1912.

Q. On May 31, 1912; the Imperial Tobacco Company, as at present constituted?—A. No, that is in 1908.

Q. That is the 1908 Imperial Tobacco Company?—A. Yes.

Q. They issued 20 shares of common, of a par value of $5 each for each $100 of common stock then outstanding?—A. Yes.

Q. That is the next situation?—A. Yes.

Q. So that these 54,005 ordinary shares became what?—A. 1,080,100 shares.

By the Chairman:

Q. $100 shares?—A. No, $5 shares.

Q. $5 shares?—A. Yes.

Q. And that meant that the $100,000,000—in round terms, we will speak of it as approximately $100,000,000—of common shares was then outstanding?—A. $100,000,000?

The CHAIRMAN: No, no; $1,000,000.

Mr. SOMMERVILLE: I beg your pardon, $1,000,000.

By Mr. Factor:

Q. The par value did not change?—A. The total par value, no.

By Mr. Sommerville:

Q. Then, the 1,000,080 common shares then outstanding represented the price that was paid for goodwill, trade marks, etc., in 1908?—A. Well, less some—

Q. Less a few assets?—A. I do not know what you call a few—it was $180,000 approximately.

By Mr. Factor:

Q. That was all in 1908?—A. No.

Mr. SOMMERVILLE: The change in stock took place in 1912.

Mr. FACTOR: No, in 1912 there is $10,800,000.

Mr. SOMMERVILLE: That is the next set-up, we will come to that.

The CHAIRMAN: You had better describe that next set-up, it is a change in the capital value of the shares from $100 to $5?

The WITNESS: That is right.

The CHAIRMAN: Which called for 20 $5 shares for each $100 share.

By Mr. Sommerville:

Q. That took place in—?—A. May of 1912.

Q. At that time no additional cash was put into the company?—A. At that time, no.

Q. Then the next step was what, Mr. Miller?—A. Shortly following its incorporation the present 1912 company took over the business and operations of its predecessor, the 1908 company.

Q. When was the present company incorporated, what month?

Mr. FACTOR: April of 1912.

Mr. SOMMERVILLE: Yes, that is right; April of 1912, I understand, was the date of incorporation.

The WITNESS: April 3, 1912.

By Mr. Sommerville:

Q. What was his authorized capital?—A. Authorized—at that time?

The CHAIRMAN: It is on page 73, or 74 there; authorized capital $63,000,000.

The WITNESS: That is it.

By Mr. Sommerville:

Q. The present authorized capital then is—?—A. The original of April 3rd, 1912, was 1,999,995 one pound shares, of $4.86⅔.

By Mr. Factor:

Q. That is preference?—A. Yes. And six million ordinary shares of a par value of $5.

Q. Six million?—A. Yes, sir.

Q. Of $5, so that its authorized capital shares had a par value of $30,000,000?—A. Yes, sir.

By Mr. Kennedy (Winnipeg):

Q. What is the total of these two?—A. A par value of $39,733,309.

Q. The total authorized value was then $39,000,000?—A. Yes.

Q. That was a considerable reduction from your capital authorization?

The CHAIRMAN: No, increase.

Mr. KENNEDY (*Winnipeg*): I mean increase. The 1912 assets grew up to $63,000,000; but when incorporated in 1912—

The WITNESS: And in 1921.

By Mr. Sommerville:

Q. Just before we leave that: when that company was incorporated in 1912, it was with a view to turning over the assets to said company of this new company that the par value of common shares was reduced from $100 to $5?—A. I could not answer that, sir. You see, we—it was done with that object.

Q. When you were contemplating turning over the assets of the old Imperial Tobacco Company of 1908 to the newly incorporated company of 1912? —A. I could not answer that, sir.

Q. Well, you have given us the intimation that the change from $100 shares to $5 shares took place in May of 1912?—A. Yes, sir.

Q. This company was incorporated in April 1912?—A. Yes.

Q. With a view to taking over certain assets?—A. Yes, certain assets.

Q. And in the consummation of that enterprise the shares in the old company that was then going out of business were changed from $100 to $5 shares, common shares?—A. That is right.

The CHAIRMAN: Synchronized, in any case.

By Mr. Sommerville:

Q. And the old company did go out of business?—A. Yes, sir.

Q. Well then, what was paid by the new company for the new assets then taken over?—A. The present 1912 company took over the business operations of its predecessor, the 1908 company, paying the shareholders thereof 821,918 preference shares to the value of $4,000,000.93, together with 5,400,500 ordinary shares with a par value of $27,002,500.

Q. That is to say, when you took over the assets of the old company you paid the common shareholders of the old company share for share in the new company?—A. That is right.

Q. That is the same issue?—A. 5,400,000.

Q. Share for share in the new company, having a par value of $5.00?—A. That is right.

Q. So that at the close of that operation the new company had issued to the shareholders of the old company 5,400,500 ordinary shares of a par value of $5.00 each?—A. Yes.

Q. And the total par value of $27,002,500?

Mr. FACTOR: I do not understand that.

Mr. ILSLEY: That is share for share.

Mr. FACTOR: I thought that the ordinary shares had a par value of $5,400,000.

Mr. ILSLEY: So they did, and this is 5,400,500 shares.

Mr. SOMMERVILLE: Right—now we will get it.

The WITNESS: I think we are wrong there, there was 1,080,000 shares.

By the Chairman:

Q. What were they exchanged for?—A. For 5,400,500 shares.

By Mr. Sommerville:

Q. In other words, in the change from the new company to the old you gave five shares in the new company for each share in the old company?—A. Yes, sir.

Q. In ordinary shares?—A. Yes, sir.

Q. And the persons who received these 5 shares put up no additional company to the new company?—A. Not for that, not at that time.

Q. Then, when you were disposing of the preferred shares of the 1912 company, did you give share for share in the preferred share?—A. Yes, share for share.

Q. Share for share?—A. Yes, sir.

Q. So that what actually took place then was that the preferred shareholders in the 1908 company got preferred shares for the same amount and the same value in the new company?—A. Yes.

Q. And the common shareholders in the old company got 5 shares in the new company for each share they held?—A. That is right.

Q. In other words, you added $22,000,000 of capital issued at that time?—A. Yes.

Q. Which was distributed among the shareholders of the Imperial Tobacco Company of 1908?—A. Approximately, sir.

Mr. FACTOR: In other words, they got a bonus of about $22,000,000.

Mr. SOMMERVILLE: They got a bonus of $22,000,000 anyway.

The CHAIRMAN: Put that to the witness and ask him.

By Mr. Sommerville:

Q. In other words, the common shareholders of the 1908 Imperial Tobacco Company got a bonus of $22,000,000 in the ordinary shares of the new company?—A. Can I answer that by saying that they got $27,000,000 par value for $5,400,000 of the previous par value stock.

Q. What do you call that, a bonus or a premium?—A. It is an exchange of stock; I do not know what you would call it, sir.

Q. Oh, I see; well, all right.

Mr. FACTOR: It is a bonus all right.

By Mr. Sommerville:

Q. Well then, what was the next step in the set-up of the structure?—A. The Imperial Tobacco Company; you mean in issued stock.

Q. What took place, if anything, after that?—A. On September 30, 1912, there was an issue of 410,959 shares of preference stock for cash.

Q. And these were common shares?—A. No, preference shares.

Q. Preference shares?—A. For cash.

Q. Preference shares for cash, $2,000,000.47.

By Mr. Factor:

Q. That was cash paid into the company in September of 1912?—A. Yes, sir, in September of 1913 there was issued for cash, 417,123 shares for $2,029,998.60.

By Mr. Kennedy (Winnipeg):

Q. Preference shares?—A. Yes.

By Mr. Sommerville:

Q. That is the cash that came into the company?—A. Yes, sir.

Q. Now, were there any common shares given as a bonus or as part of the price paid for these preference shares?—A. No.

Q. They were sold on their own merits, alone?—A. Yes.

Q. Well then, we have here an addition of $4,000,000 in these two operations; we have an addition of $4,029,999.07 in capital, cash to the treasury of The Imperial Tobacco Company of 1912?—A. Yes.

Q. And no change in the common stock structure by reason of that operation?—A. No.

Q. Then, what was the next thing that happened?—A. In July of 1921 there was issued 400,000 ordinary shares of a par value of $5 each, amounting to $2,000,000 to the British American Tobacco Company Limited, for and in consideration of trade marks and goodwill pertaining to their business in Canada.

Q. In July of 1921 The American Tobacco Company were issued—?—A. The British American Tobacco Company Limited.

Q. The British American Tobacco Company were issued 400,000 ordinary shares having a par value of $5 each or $2,000,000?—A. Yes.

Q. For trade marks, and goodwill pertaining to their business in Canada?—A. Yes, sir.

Q. The British American Tobacco Company is the parent company of The Imperial Tobacco Company of Canada?—A. Yes, sir.

Q. And the British American Tobacco Company are the owners of a substantial portion of the shares of your company?—A. Yes, sir.

By Mr. Factor:

Q. Your prospectus says, controlled by the British American Tobacco Company Limited; do they hold a majority of the stock of the Imperial of Canada?—A. We have a list of the shareholders, we have submitted to you a list of the shareholders, I think.

Mr. SOMMERVILLE: Yes.

By Mr. Sommerville:

Q. But in actual fact that is the situation, is it not; that they are controlled by the British American Tobacco Company?—A. You have a list of the shareholders there, sir; technically—.

Q. Why debate it technically; is not it a fact that that is the way it is; it is with them that you do your business, and it is from them that you receive your orders as to policy?—A. Well, I would not say that, sir; except in the broadest sort of sense.

Q. I do not care how broad you make it?—A. All right, sir.

Q. They are the controlling factor in the Imperial Tobacco Company?—A. Yes, sir.

Mr. ILSLEY: This is the first time it has been mentioned in this statement; what kind of a company is it?

By Mr. Sommerville:

Q. Tell me, what is the British American Tobacco Company?—A. It is an English corporation, sir.

Q. Incorporated in England?—A. Yes, sir.

Q. And it has offices in the United States?—A. Its offices are in England.

Q. But they have offices in the United States?—A. Yes, sir.

Q. And has a number of officers there?—A. No—well, two I think.

Q. And it owns and controls a large number of companies in the United States?—A. Not a large number; not to my knowledge, sir.

Q. Is it not the owner or the controller of a very large business in the United States?—A. So far as my knowledge goes, sir, they control the Brown Williamson Tobacco Company.

Q. And that company is one of the largest cigarette manufacturers in the United States?—A. One of the smaller ones, sir.

Q. The Brown Williamson Company?—A. Yes, sir.

Q. One of the small ones?—A. Yes, sir.

The CHAIRMAN: You are getting into a new field there, where big things are handled in a big way.

The WITNESS: Well, by comparison, sir.

By Mr. Sommerville:

Q. Perhaps they are; they are one of the large companies handling the cheaper cigarettes?—A. The Brown Williamson Company is one of what they term the smaller four—the little four.

Q. Give me in your own words now, Mr. Miller—I am going to leave it entirely to you to say what is the position of the British American Tobacco Company as far as its business is concerned; what does it control, or direct, or own; or what does it have in the way of subsidiaries?—A. Well, it is a large tobacco company that has interests pretty well all over the world, generally speaking.

Q. I think in the Senate of the United States the other day it was said that they had the heathen for their inheritance and the ends of the earth for their

possession; was that a fair description of this British American Company?—A. They are pretty generally represented throughout the world. They have interests throughout the world.

Q. Are they the owners or have they a controlling interest in the Imperial Tobacco Company of Great Britain and Ireland?—A. Not to my knowledge or belief. I don't think so.

By Mr. Factor:

Q. Is it not the other way around? Does the Imperial Tobacco Company of Great Britain and Ireland not own substantial capital stock of the British American Tobacco Company?—A. I believe that to be true.

By Mr. Sommerville:

Q. Then the order is reversed. The Imperial Tobacco Company of Great Britain and Ireland owns the British American, or a very substantial share of the British American?—A. I think so.

Q. Do they control the activities of the British American?—A. Not to my knowledge or belief.

Q. At any rate, the British American is linked with the Imperial Tobacco Company of Great Britain and Ireland, and is linked with your company here?—A. Yes.

Q. And controls the company on this side of the line, at any rate?—A. Yes.

Q. What did they give for the $2,000,000 of common shares that were given to them in 1921?—A. They gave trade marks and goodwill pertaining to all of their business in Canada.

Q. What actually, did they have in Canada?—A. They had the rights to a lot of important brands in Canada. That is included in that.

By Mr. Kennedy (Winnipeg):

Q. Referring to the point under discussion, Mr. Miller, of the giving of $2,000,000 to the British American Tobacco Company in consideration of trade marks and goodwill in Canada, I suppose that issue would be pursuant to an agreement entered into?—A. Yes.

Q. In taking over the trade marks and goodwill of the British American Tobacco Company in Canada, would that exclude the British American Tobacco Company from operating here?—A. On these brands. I don't know that it was complete exclusion.

Q. That is the point I want to get?—A. I am not competent to answer that. That is legal.

Q. I am not asking it, as your friend suggests, from a strictly legal point of view. What was the understanding? Your company was paying $2,000,000?—A. Yes.

Q. For the trade marks and goodwill of the British American Tobacco Company in Canada?—A. Yes.

Q. What was the understanding of the Imperial Company as to what they were getting? What rights were they getting?—A. We were getting very valuable rights, brands and trade marks that were known throughout the world.

Q. And also was it excluding the British American Tobacco Company from carrying on business in Canada?—A. Truthfully I could not answer that. They don't carry on business here. I believe so.

By the Chairman:

Q. Would it not be reasonable to expect that if you paid out $2,000,000 for their brands, they would not themselves sell those brands in Canada?—A. Oh, they can't sell those brands.

By Mr. Kennedy (Winnipeg):

Q. I didn't mean those brands, but that they would not carry on business in Canada?—A. They don't; I could not answer that question positively.

Q. Since the date of that deal, or since the date of that purchase, the British American have not carried on business in Canada?—A. No, sir.

Mr. KENNEDY (*Winnipeg*): That answers it.

By Mr. Sommerville:

Q. Were they carrying on business independently of your company before that deal was made in 1921?—A. I don't think so.

Q. In other words, you were using those brands previous to 1929?—A. I don't say that.

Q. Well, were you not?—A. I understand we were conducting it on a royalty basis for them.

Q. But they owned your company or they controlled your company; you were manufacturing those brands in Canada and selling those brands in Canada. The British American were not doing that?—A. No, they were not; not directly. We were selling them under some arrangement, under agreement for them; or some of the brands.

Q. Then you took over these rights, whatever they were, and gave them $2,000,000?—A. Yes.

Q. Gave it to the people who controlled your company?—A. Yes.

Mr. FACTOR: Whatever they were. What were they?

By Mr. Sommerville:

Q. What were those rights?—A. I would have to get a copy of the agreement and refer to it. I would be glad to do that.

By the Chairman:

Q. You might mention some of them?—A. Well, Player's, Wills', Gold Flake, Ogden's, Capstan, Three Castles. Those were very prominent, the most prominent.

By Mr. Factor:

Q. What do you mean, that they had the patent to the name or cigarette?—A. They had trade-mark rights.

Q. You were selling those products under some arrangement with them?—A. Some of them; although, for instance, we were selling Player's, I think, I don't think we were selling Capstans at that time. They have just recently been put on the market, but Player's we were.

By Mr. Sommerville:

Q. Those that you were not manufacturing were not being made by the British American in this country in opposition to you?—A. No.

Q. However, that is the statement you made, and you will let us have the agreement under which that was transferred?—A. Yes.

Q. That increased the ordinary shares by 400,000 or $2,000,000. At that time there was no cash put in?—A. No, sir.

Q. What was the next step in the development of the stock structure?—A. In July, 1921, there was issued to Sir Mortimer Davis, Incorporated, 65,580 ordinary shares of a par value of $5 each, amounting to $327,900, for and in consideration of their holdings in the capital stock of Scales & Roberts Limited and the H. Fortier Company Limited.

Q. Who were Scales & Roberts Limited?—A. Jobbers, wholesalers.

Q. Wholesalers, where?—A. Head office in Toronto.
Q. Who were H. Fortier Company Limited?—A. They were jobbers.
Q. With head offices where?—A. In Montreal.

By Mr. Factor:

Q. Scales & Roberts had branches throughout Ontario?—A. Several branches. Probably half a dozen, I think.
Q. Did H. Fortier Company have branches?—A. No, no branches.
Q. They just had their place in Montreal?—A. Yes.

By Mr. Sommerville:

Q. For certain holdings in the capital stock of these two companies, there was issued to a company called Sir Mortimer Davis Incorporated, ordinary shares to the value of $327,900?—A. Yes.

By Mr. Factor:

Q. So that you acquired control of Scales & Roberts and H. Fortier?—A. Yes.

By Mr. Sommerville:

Q. At that time Sir Mortimer Davis was the president of your company?—A. Yes.
Q. Was it a new departure at that date, acquiring control of jobbers in the country?—A. Yes, on the part of the Imperial Tobacco Company.
Q. How long had they been controlled by Sir Mortimer Davis Incorporated?—A. I think it was several years; not more than five or six years, probably.
Q. So that the president, through his private company, owned these jobbing houses?—A. Yes.
Q. And then turned them over to your company?—A. Yes.
Q. For the consideration that has just been mentioned?—A. Yes.
Q. These were common or ordinary shares?—A. Yes.

By Mr. Factor:

Q. There was no cash in that transaction?—A. No, shares.
Q. Shares?—A. Yes, shares represented it.

By Mr. Sommerville:

Q. What was next?—A. In September, 1921, there was issued 420,000 ordinary shares of a par value of $5 each to the value of $2,100,000 which were paid for in full by cash.
Q. That is common, ordinary shares sold?—A. Yes.
Q. To the value of $2,100,000 in cash?—A. Yes.
Mr. Factor: Sold to the public?

By Mr. Sommerville:

Q. Was the issue sold to the public?—A. It was sold to some individuals in the company under some arrangement.
Q. This is in 1921?—A. Yes.
Q. Is not this the issue that took place to the officers in your own company?—A. Yes.
Q. Was that not issued as a bonus for services?—A. It was issued for cash.

By the Chairman:

Q. At par?—A. Yes, at par.

By Mr. Factor:

Q. You mean the officers paid cash for those shares?—A. Yes.

By Mr. Sommerville:

Q. Is it not correct to say that this issue was made to the executive officers in your company?—A. And others.

Q. For services rendered?—A. And to be rendered.

Q. And those services rendered or to be rendered were treated as cash?—A. No, they were issued for cash under some arrangement.

Q. What was the arrangement?—A. I have not got the particulars of it.

Mr. Ilsley: What did he mean by services to be rendered?

The Witness: Well, I mean in consideration—there was an agreement made with a trustee, whereby the trustee paid the par value for the stock, and the individuals paid the trustee over a period of years, to take delivery of the stock.

By Mr. Sommerville:

Q. Was there a relative increase in the salaries of the officials to whom this stock was sold, to take care of these payments?—A. No.

Q. My information is that this was a bonus issued to the employees or executive officers of your company, that it was put through the books as such, and treated as such, and that it was not an issue as in the ordinary course for cash?—A. It was issued for cash. Just a minute, please, till I look it up. It was issued to some, I would say, twenty-five different individuals.

Q. Twenty-five individuals who were officers?—A. And employees.

Q. Mostly executive officers, weren't they?—A. No, salesmen, factory managers, important men in the company. It was not limited to the executives at all.

Q. It was issued to them at par?—A. Yes, it was issued to a trustee at par, and they paid for it over a period of years.

By Mr. Kennedy (Winnipeg):

Q. They paid for it actually in cash?—A. Yes.

Q. Or were they credited on the stock by virtue of services rendered?—A. No, paid for in cash.

By Mr. Sommerville:

Q. Was there an arrangement for a certain amount to be taken from their salary to pay for it?—A. No.

By Mr. Factor:

Q. What was the market value of those shares in 1921?—A. I don't know.

Q. They were issued to them at par, $5?—A. Yes.

Q. Can you tell me what the market value was in 1921?—A. No, I don't know.

Q. Was there an agreement made, a written agreement, with the trustee in this transaction?—A. I think there was a written undertaking with the trustee.

Q. Will you let Mr. Sommerville have that agreement?

By Mr. Sommerville:

Q. Yes. I don't think anybody is complaining about the transaction at all. It was a favour to a certain group, of some twenty, you say?—A. Yes.

Q. To take the shares at par at the time?—A. Yes.

Q. You say you were paid in cash?—A. Yes.

Mr. Factor: Make a note to ask him the market value of the shares in 1921.

By Mr. Sommerville:

Q. What is the market value of those shares to-day, ordinary shares?—A. Around between $11 and $12.

Q. That is the $5 par value?—A. Yes.

Q. What was the next change that took place in your capital structure?—A. Over a period of time ending 30th September, 1927, the company issued as fully paid 1,299,080 ordinary shares of a par value of $6,495,400, in full settlement and consideration of the company's bonded obligation of $6,495,400; in other words, ordinary stock of the company was issued for bonds on a flat exchange at par value.

Mr. FACTOR: That is the first time I have heard of bonds. When were those bonds put out?

By Mr. Sommerville:

Q. Yes. I understand in the year 1921 you sold an issue of $6.500,000 of bonds of the company—

Mr. FACTOR: No, 1927.

By Mr. Sommerville:

Q. Yes, they sold an issue in 1921?—A. I have not got the particulars of it —about 1921.

Q. That is what I say. I understand that in or about the year 1921 you sold an issue of six and a half millions of bonds in England, largely?—A. Offered to the shareholders.

Q. To your shareholders?—A. Yes.

Q. And those bonds contained the privilege of exchanging at par value the bonds for ordinary shares?—A. Yes.

Q. Was that at the rate of two for one?—A. No, it was at the same par value.

Q. At the same par value?—A. Yes.

Q. That is to say, they could get dollar for dollar in ordinary shares, if they desired to exchange?—A. Par value.

Q. This bond issue was taken up by the shareholders of your company, and was afterwards exchanged by those shareholders. So that your bond issue was wiped out, and common shares were issued to the value of 6,495,400?—A. Yes, that is right.

Q. And that amount of cash was received by the company for the bonds? —A. Yes.

By Mr. Factor:

Q. What interest rate did those bonds carry?—A. Seven per cent.

By Mr. Sommerville:

Q. What was the next stock change that took place?—A. In October, 1928, the directors determined that a portion of the undivided profits that had been accumulated during the previous 16 years should be capitalized, and for that purpose issued as fully paid up, out of surplus, 1,517,032 ordinary shares having a par value of $7,585,160.

Q. That is to say, the directors issued a bonus, or 20 per cent stock dividend? —A. Yes.

Q. A stock dividend of 20 per cent?—A. Yes.

Q. And that represented 1,517,032 ordinary shares?—A. Yes.

Q. Of the par value of $7,585,160?—A. Yes.

Mr. ILSLEY: Where did you get the 20 per cent?

By Mr. Sommerville:

Q. At that time there were outstanding ordinary shares amounting to $7,500,000 odd?—A. Yes.

Q. The 20 per cent represented one-fifth of that?—A. That is right.

Q. And that was distributed to the shareholders?—A. Yes.

Mr. FACTOR: That is from accumulated profits?

Mr. SOMMERVILLE: From the accumulated profits.

By Mr. Sommerville:

Q. Then, what was the next change?—A. In a period terminating November, 1930, there were issued as fully paid 348,840 ordinary shares of a par value of $1,744,200 in full settlement and consideration of 11,628 ordinary shares of a par value of $100 each of the Tuckett Tobacco Company Limited.

Q. You acquired control of the Tuckett Tobacco Company Limited?—A. Ownership of the common stock.

Q. And for it you issued 348,840 ordinary shares?—A. Only for that number of ordinary shares of Tuckett.

Q. I beg your pardon?—A. I say that was issued for only that 11,628 ordinary shares of Tuckett. That was in full.

Q. That was the control?—A. No, not quite. Tucketts had 25,000 outstanding, ordinary shares.

Q. But that gave you a block of 11,628 ordinary shares for which you paid in the ordinary shares of your company $1,744,200?—A. Yes.

Q. Had they been acquired over a period of years by someone in your company?—A. No, sir.

Q. How did you acquire those shares in the Tuckett Company?—A. We made an offer to the Tuckett shareholders, a public offer.

Q. You made a public offer to the Tuckett shareholders?—A. Yes, to exchange.

Q. And there were exchanges to this extent at that time?—A. Yes.

Q. What did they represent, the 11,628 shares of the Tuckett Company; that would be about what?—A. $1,162,000.

Q. About $150 a share?—A. Yes.

Q. You would be paying the Tuckett people about $150 a share?—A. Yes.

Q. That would be on the basis of your shares at par?—A. Yes.

Q. Your shares at that time were substantially above par on the market?—A. Yes.

Q. As I understand it, in 1930 they were substantially above what they are at the present time, weren't they?—A. In 1930?

Q. Yes, in 1930?—A. I don't think so.

Q. Were they about the same price?—A. About the same. This is high.

Q. This is high?—A. To my knowledge.

Mr. ILSLEY: What is the Tuckett Company?

By Mr. Sommerville:

Q. What is the Tuckett Tobacco Company?—A. It is a company incorporated under Dominion laws, with headquarters in Hamilton, a factory in Hamilton.

By the Chairman:

Q. A very well known, old tobacco company?—A. Yes, a very old tobacco and cigarette manufacturing company.

By Mr. Factor:

Q. With factories in London and Montreal?—A. No. They did have factories at one time in London, and they have not one at the present time in Montreal; just in Hamilton.

Q. Do they also control a subsidiary called the Tobacco Produce Corporation of Canada?—A. Yes.

By Mr. Sommerville:

Q. To summarize, the present outstanding capital of the Imperial Tobbaco Company consists of $8,030,000 in preference capital?—A. Yes.

Q. $47,255,160 in ordinary capital?—A. Yes.

Q. Which was issued in consideration of $24,036,380.91 in tangible assets?—A. Yes.

Q. And 2,431,978.13 shares in various companies?—A. Yes.

By the Chairman:

Q. That is 2,431,978.13 dollars, not shares?—A. Par value.

By Mr. Sommerville:

Q. That is, your $24,036,380.91 included in tangible assets?—A. No, tangible assets of $24,000,000 odd.

Q. Then $2,431,978.13 shares were issued in payment of shares in other companies?—A. No par value.

Q. The shares in the various companies, together with the tangible assets which you received, accounted for the $24,036,380.91?—A. Plus $2,431,978.13, the two together. I don't know that I understand your question clearly.

Q. We will just talk about the outstanding capital structure?—A. Yes. There is $47,255,000 odd ordinary capital that has been issued, and $8,000,000 odd preference, and it is stated there that that is represented by tangible assets of $24,036,000 odd.

Q. Right?—A. And in shares which might represent tangible and intangible, or is tangible, I suppose, $2,413,000 odd, which leaves a difference of $28,816,000 odd for trade marks, goodwill and so forth.

Mr. Ilsley: Mostly "and so forth."

Mr. Factor: I would like to get, if possible, how much was cash. There is a total capitalization of preference and ordinary shares of $55,285,160. How much of that was actual cash?

Mr. Sommerville: That is exactly what I was coming to now.

By Mr. Sommerville:

Q. What of that was actual cash paid into your company?—A. First of all, there was $1,000,000.

Mr. Kennedy (Winnipeg): Mr. Sommerville, I just tabulated that from the pages here. Might I just check it?

Mr. Sommerville: Yes, I think we can get it very briefly.

By Mr. Kennedy (Winnipeg):

Q. Mr. Miller, referring to the point at issue, in your final paragraph here you sum it up?—A. Yes.

Q. Your present issued capital is preference stock, $8,030,000?—A. Yes.

Q. Ordinary stock, $47,255,160?—A. Yes.

Q. A total of $55,285,160?—A. That is right.

Q. That is your present issued capital stock?—A. Yes.

Q. Now, checking back—correct me if I am wrong—starting at page 73, as to the actual cash put into the company I have these items. You might follow them. First, in 1895 there was put in in cash into the American Tobacco Company $1,000,000?—A. Yes.

Q. Next in 1908 there was an issue represented to be paid for in cash by the Imperial Tobacco Company of $537,348.13.

Mr. FACTOR: Where is that?

The WITNESS: I don't see that. Where is it? Oh, that was in October, 1908, you mean?

By Mr. Kennedy (Winnipeg):

Q. Yes, I will repeat that. In October, 1908, there was put in in cash $537,348.13?—A. Yes.

Q. The next item I have is September, 1912, when there was another cash issue of $2,000,000.47?—A. Yes.

Q. The next one is in 1913, the next paragraph?—A. Yes.

Q. October, I think?—A. September.

Q. September of 1913?—A. Yes.

Q. Another cash issue of $2,029,998.60?—A. Yes.

Q. Then the next cash item that appears is in 1921, amounting to $2,100,000.

Mr. FACTOR: That is of the employees.

By Mr. Kennedy (Winnipeg):

Q. Yes, it is referred to as cash?—A. Yes.

Q. That is all I find. That is the total of cash put in?—A. How about bonds?

Mr. SOMMERVILLE: Your bonds must be included.

Mr. KENNEDY (*Winnipeg*): No, for another purpose.

By Mr. Kennedy (Winnipeg):

Q. These bonds are paid for by the issue of some capital stock?—A. The original cash was paid for them.

Mr. SOMMERVILLE: Cash went in; the original cash went in.

Mr. KENNEDY (*Winnipeg*): We will add that. What is the amount of the bonds?

Mr. FACTOR: $6,495,400.

By Mr. Kennedy (Winnipeg):

Q. That will make a total of cash of $14,162,747.20?—A. Yes. There was also issued $2,000,000 to the trustee for the benefit of the employees.

Mr. FACTOR: That is included.

Mr. KENNEDY (*Winnipeg*): Yes, included in the $2,100,000.

Mr. FACTOR: That is the total cash invested.

By Mr. Kennedy (Winnipeg):

Q. The shares of the other companies was paid for by the issue of stock out of this company?—A. That is right.

Q. Out of earnings?—A. No, not out of earnings necessarily.

Q. Well, it is stock?—A. It is capital.

Q. What I am trying to get at is the amount of cash that was actually put into this company. The total amount appears to be $14,162,747.20?—A. I was going to say, for instance take the Tuckett issue—it seems to me that it is the

same thing, where we sold our common stock for cash and paid cash to the Tuckett shareholders for our stock.

Mr. Ilsley: We understand that.

The Chairman: I think Mr. Miller, who is representing his company, has the right to draw attention at this point to shares that were issued for real value, whether they were for cash or assets.

The Witness: Yes.

The Chairman: He merely wants to be fair.

Mr. Ilsley: In order to make it fair, we have got to get this, try to get the capital.

Mr. Sommerville: I think if you will just add to the $14,000,000, what was paid out for tangible assets, that would give it.

The Chairman: Sir Mortimer Davis.

By Mr. Factor:

Q. Let us get a separate schedule; the actual cash investment is $14,162,-747.20?—A. I have not checked that, but the net result is referred to in the last paragraph, as to what the whole capital structure is.

Q. I want a separate schedule of what you paid, what you call tangible assets. Let us take that in a separate schedule and then we can get a picture of this.

Mr. Kennedy (*Winnipeg*): Mr. Factor, I am just at the end of my question. I wonder if I might pursue it?

The Chairman: Pursue your question, Mr. Kennedy.

By Mr. Kennedy (Winnipeg):

Q. I have gone through some of the material and have picked out several places where it has been mentioned that shares have been issued for cash?—A. That is right.

Q. I will read them if you like. The total there was $7,667.347.20?—A. Didn't you overlook the bonds.

Q. That is the cash I am talking about; then you issued in payment of bond obligations, $6,495,400?—A. That is cash received from the issue of bonds.

Q. That makes the total represented by cash $14,162,470.20; is that right? —A. I think that is approximately correct sir, for actual cash, if you eliminate the question of other tangible assets.

Q. Without eliminating, we can come to that later?—A. All right, sir.

Q. But, that is cash?—A. Approximately, subject to verification, I think that is approximately correct.

Q. And it has been built up—I am not raising any question as to how—but it has been built up to the present paid-up capitalization of over $55,000,000?—A. But other tangible assets.

Mr. Sommerville: Tangible and intangible.

Mr. Kennedy (*Winnipeg*): Quite true. I say it has been built up to the present capital of $55,000,000.

Mr. Sommerville: That is the market value of about $11 for each $5 share.

Mr. Kennedy (*Winnipeg*): The market value is upwards of $100,000,000.

The Chairman: Excuse me one minute; let Mr. Miller answer that last question by Mr. Kennedy; Mr. Kennedy says that this has been built up to $55,000.000. Mr. Miller certainly should have an opportunity to make any answer he wishes to that question.

The WITNESS: Well, it has been built up through the issue of stocks either for tangible assets or stocks in other companies to the total of the net final result as previously said, having been issued for $24,036,380.91 in tangible assets, and $2,431,978.15 in shares of various companies.

Mr. SOMMERVILLE: And $28,816,800.96 for trade marks, goodwill, etc.

Mr. KENNEDY (*Winnipeg*): I am not suggesting that there is no value there for the $55,000,000 odd, I was just trying to follow the history of how it built up from a certain investment—I am not questioning the value behind that $55,000,000.

By Mr. Sommerville:

Q. Now then, Mr. Miller, do you want to make a list of the stocks issued for the tangible assets?—A. Would you like us to compare your list?

Q. Yes. I just want a schedule of how you make up the tangible assets of $24,036,380?—A. It will be filed.

The CHAIRMAN: I think it is all set out in the schedule.

Mr. ILSLEY: He wants the tangible assets which account for the cash exclusively.

Mr. SOMMERVILLE: They can be worked out very simply now, can they not; let us have them now.

The CHAIRMAN: Mortimer Davis, Tucketts, and the bonus.

The WITNESS: I think it would be better if you let us file a statement later on. I think it has been fairly covered in this brief here.

The CHAIRMAN: All right. Mr. Miller will file the statement. In the meantime, I think it is pretty well down in this statement here. We can check his.

Mr. ILSLEY: Before you leave that, there is just a question: we might take the shares, these shares may have been built up from very humble beginnings; perhaps that is a matter for enquiry—is it, Mr. Sommerville?

Mr. SOMMERVILLE: It may be.

Mr. ILSLEY: Yes.

Mr. FACTOR: Mr. Ilsley's remark here should be developed. In producing the statement of these tangible assets, and the shares of other companies, we ought to analyze these other companies to see how their shares were built up.

Mr. SOMMERVILLE: That may be, but on the other hand this company paid for them; whoever may have received the benefit from the building up may have been entirely different from these shareholders.

Mr. ILSLEY: They may have been, they may not have been; time after time big prices are paid because some people are interested.

Mr. SOMMERVILLE: That is perfectly true.

Mr. KENNEDY (*Winnipeg*): The point just raised by Mr. Factor and Mr. Ilsley is, I think, well indicated in the second last paragraph on page 75 where they took over the stock in the Tuckett Tobacco Company. There it is set out: in a period terminating November 1930 there were issued as fully paid 348,840 ordinary shares of a par value of $1,744,200 in full settlement and consideration of 11,628 ordinary shares of a par value of $100 each to the Tuckett Company; so that indicates the accretion in the value of the stock of the Tuckett Company there.

Mr. ILSLEY: Yes.

Mr. KENNEDY (*Winnipeg*): The original cost of the Tuckett shares at $100 each would be—?

The CHAIRMAN: $110,000.

Mr. KENNEDY (*Winnipeg*): $116,280.

Mr. SOMMERVILLE: Yes.

Q. Which was bought for $1,744,200.

Mr. FACTOR: It becomes very important, because I see here in the statement of the Tuckett Tobacco Company that on common shares the dividend was 32 per cent per annum in January of 1933; so that these shares may have been capitalized—the accummulated profits may have been capitalized in the Tuckett Tobacco Company.

Mr. SOMMERVILLE: I propose to deal with some of these companies now.

By Mr. Factor:

Q. Can you tell me what the market value of the capital is now?—A. You mean, the preference stock.

Q. Take the ordinary common shares, $47,000,000 of common shares?—A. They are selling at around $11 or $12 a share.

By Mr. Kennedy (Winnipeg):

Q. And the par value is $5?—A. Yes.

Q. What about the preference shares?—A. Selling about 27 shillings the same as sold in England.

Q. And the pound is what?—A. 20 shillings—4.86\frac{2}{3}$.

By Mr. Sommerville:

Q. Your company also owns the National Tobacco Company?—A. No, we have a 50 per cent interest in it.

Q. And you acquired that in July 1908?—A. Just a minute, I will find the statement—what was your question again.

Q. The interest of the Imperial Tobacco Company in the National Tobacco Company Limited was originally secured by the purchase of 250 ordinary shares in the National Snuff Company?—A. Yes.

Q. And these shares were acquired from the American Tobacco Company in July 1908, and I understand that that was done through the issue of preference shares in the Imperial Tobacco Company of Canada Limited in 1908 to the value of $25,200?—A. Yes.

Q. I am taking your statement at page 2?—A. Yes.

Q. Then you issued preference $25,200 to pay for 250 ordinary shares of the National Snuff Company?—A. Yes.

Q. The National Snuff Company apparently owned the National Tobacco Company?—A. No, I think there was a change in the name subsequently.

Q. At the time when you acquired them, you acquired the shares in not the National Tobacco Company, but the National Snuff Company which controlled the National Tobacco Company?—A. Yes.

Q. Subsequently the National Snuff Company issued script as dividends to all shareholders, and the Imperial Tobacco Company of Canada Limited by this means acquired script in the National Snuff Company to the value of $25,000?—A. Yes.

Q. Was that in lieu of the preference shares, or was it additional to them? —A. It was additional.

Q. In the nature of a stock dividend?—A. No, cash.

Q. Script?—A. No, cash.

Q. Then you got back $25,000 return from that $25,000 in cash?—A. No, we paid them an additional $25,000.

Q. No, you acquired script in the National Snuff Company to the value of $25,000?—A. Yes.

Q. And you had already issued to them preference shares to the value of $25,000, so you got your money back?—A. I will be glad to look into that and give you an answer.

Q. I am reading from your statement?—A. All right, sir. Subsequently the National Snuff Company issued script as dividend to ordinary shareholders, and the Imperial Tobacco Company by this means acquired script in the National Snuff Company—we got an additional—.

Q. You got an additional $25,000?—A. Yes.

Q. And that paid you for the value of the shares that had been issued to the Snuff Company, $25,200 had been issued?—A. I do not know, sir; it appears so from this statement.

Q. It is a simple mathematical proposition?—A. I did not realize it.

Q. In June of 1913 the National Tobacco Company was incorporated with an authorized capital of $4,000,000, divided into 800,000 shares with a par value of $5 each?—A. Yes.

Q. Now, you did receive back all the money from the National Tobacco Company that had been put in, $25,000; and when that incorporation took place the National Tobacco then acquired the National Snuff Company as a going concern, the consideration being the issue of the total authorized capital of the new company to the nominees of the old company; that is correct, is it not? I am following the statement you have given me?—A. All right, sir.

Q. Reading further from your statement to me: by this means the Imperial Tobacco Company of Canada Limited 1912, acquired its present holdings in the National Tobacco Company Limited amounting to 400,000 shares of a total par value of $2,000,000. Now, that is correct, is it not?—A. Yes, sir.

Q. The total par value?—A. Yes.

Q. Then let me read the profits for the past few years:—

1924	$365,174.55
1925	398,459.12
1926	427,399.55
1927	469,070.76
1928	546,086.60
1929	537,921.76
1930 for 15 months ending December 31	714,654.82
1931 12 months ending December 31	487,192.80
1932	428,911.54
1933	403,240.28

Those were the profits of the respective years?—A. Yes, sir.

Q. And in that company you have a 50 per cent interest?—A. Yes, sir.

Q. And that 50 per cent interest really cost you nothing?—A. I think there is some mistake about that statement, sir; it did cost us something, I am sure that it did.

Q. You issued $25,000 of preferred shares in the Imperial Company for the stock which subsequently became $2,000,000 par value?—A. Yes, sir.

Q. And you got back a dividend of $25 000 in scrip?—A. It certainly appears so, sir, from this record, but I think probably in our effort to try to produce all these things in a hurry—and this is an old transaction—there must be something misleading about that statement, because I do not think that that is true.

Q. Well, supposing that we forget the scrip entirely, leave out the question of what we got back. Then the situation is, that for $25 par value of preferred shares in the Imperial Tobacco Company you subsequently got $2,000,000 par value in the National Tobacco Company?—A. That is correct.

Q. Out of $4,000,000?—A. Yes.

Q. And that represented 50 per cent of the assets of this company?—A. Yes.

Q. And from that company you have been receiving very substantial profits every year for many years?—A. Yes, sir.

Q. And in that company you have a 50 per cent interest in the undivided profits of that company?—A. Yes.

Q. Whatever they may be at the present time?—A. Yes.

Q. Perhaps you have not got that figure?—A. I have not, sir.

Q. But the undivided profits at the present time must have accumulated to quite a substantial sum?—A. I have not got that, sir.

Q. Will you be good enough to let us have that?—A. Yes.

Q. Perhaps before we leave the National Tobacco Company, the dividend that you received last year, for the year ending 31st December, 1933, from the National Tobacco Company, Limited, amounted to $195,000?—A. That is the record, yes.

Q. That is on an original investment of $25,000?—A. Yes. I think there are some additions to that investment though, sir. I will be glad to find out.

Q. Whatever they are we will be glad to have them; and, relatively, you received similar amounts each year?—A. Yes, sir.

Q. During the past ten years?—A. Yes.

Q. Perhaps I might look at 1932. In the year 1932, the dividend that you received from the National Tobacco Company Limited, for the year ending 31st December, 1932, was $400,000?—A. That is so.

Q. Since then, have you acquired all the shares in that company, or do you still own just half of them?—A. Half of them.

Q. Who owns the other half?—A. The United States Tobacco Company.

Q. The United States Tobacco Company?—A. Yes, of New York.

Q. Is that a subsidiary of the British American Tobacco Company?—A. No, sir.

Q. Not connected with it in any way?—A. No, not to my knowledge or belief, sir.

Q. Or the Imperial?—A. No, not to my knowledge or belief.

Q. And in the year 1931, you received as dividends from the company, the sum of $240,000?—A. Yes.

Q. And while we are at it, for the year 1930 you received as dividends from the National Tobacco Company Limited, the amount of $300,000?—A. Yes, sir.

Q. And for the year 1929 you received as dividends from the National Tobacco Company Limited $240,000?—A. Yes, sir.

Q. Now, that is just for these last five years, but I have no doubt that, relatively speaking, you received the same proportion of dividends for the previous five years?—A. I think so, sir.

The committee adjourned at 1 p.m. to resume at 3.30 p.m.

AFTERNOON SITTING

The committee resumed at 3.30 p.m.

Gray Miller, recalled.

By Mr. Sommerville:

Q. Mr. Miller, I don't know whether at the noon recess you took occasion, or did find anything more about the $25,000 dividend of the National Tobacco Company that we were inquiring about?—A. I think I could clarify that.

Q. I thought while it was fresh in our memory, perhaps you would like to do that?—A. Yes. We tried. I have a little memorandum which I hope

will make it clear. The American Tobacco Company of Canada Limited held 250 shares in the National Snuff Company, representing an investment of $25,200. The Imperial Tobacco Company of Canada, 1908 company, acquired these shares when they took over the business of the American Tobacco Company of Canada, as previously explained. During the time these 250 shares were held by the I. T. Company of Canada, 1908—

Q. The Imperial Tobacco Company of Canada, 1908?—A. Yes. —the National Snuff Company declared out of accumulated profits a dividend in the form of interest—bearing scrip, the value of the Imperial Tobacco Company (1908) of Canada's share of this scrip dividend being $25,000. The Imperial Tobacco Company of Canada, 1912 company, acquired these 250 shares and the $25,000 worth of scrip which had not been redeemed by the National Snuff Company, when they took over the business of the Imperial Tobacco Company (1908) as previously explained.

Q. The Imperial Tobacco Company of 1908?—A. Yes. In 1913 the National Tobacco Company, Limited—that is a new company that you just had the earnings of—took over the business of the National Snuff Company; and issued capital stock in payment of the National Snuff Company's liability in the scrip referred to above. Is that clear?

Q. In scrip and in preferred shares?—A. No, in scrip. Let us see, in 1913 there was not any. The Imperial Tobacco Company, 1908, already had at that time the $25,200 worth of stock.

Q. 250 shares?—A. Yes.

Q. Or ordinary shares?—A. Preferred. They had issued preferred stock for taking it over from the American Tobacco Company.

Q. The 1908 company held 250 ordinary shares of the National Snuff Company?—A. Yes.

Q. And then subsequently the National Snuff Company issued scrip?—A. Declared a dividend in scrip.

Q. They declared a dividend in the form of scrip?—A. Yes.

Q. Bearing interest at 7 per cent?—A. I don't remember the interest. I can verify that.

Q. Bearing interest, at any rate?—A. Yes.

Q. The amount that went to the Imperial Tobacco Company of 1908 was $25,000 of that scrip?—A. That is right.

Q. So that the Imperial Tobacco Company of 1908 got $25,000 in scrip as their share of the dividend?—A. That is right.

Q. And they still held 250 shares, common shares, of the National Snuff Company?—A. Yes.

Q. Then when the National Snuff Company sold out to the National Tobacco Company—in June, 1931, was it?—A. In 1913, yes.

Q. The position then was that they owed to the Imperial Tobacco Company of 1908, $25,000 in scrip?—A. Yes.

Q. And the Imperial Tobacco Company had at that time $25,200 worth of stock?—A. Of stock.

Q. 250 shares of stock?—A. Yes.

Q. And for that they got, or for the scrip they got—A. Scrip and stock.

Q. Then in 1913 the National Tobacco Company was incorporated with $4,000,000 capital?—A. That is right.

Q. Divided into 800,000 shares of $5 each?—A. Yes.

Q. And for the $25,000 of scrip——A. And the stock.

Q. —and the stock, 250 shares of stock, the Imperial Tobacco Company got 400,000 shares of the par value of $5 each?—A. Yes, 400,000. That is right. So that their investment stood at $50,200.

Q. $50,200?—A. Yes.

Q. For which they got stock to the par value of $2,000,000?—A. Yes.

Q. The investment having accumulated from the original $25,000, by reason of the script dividend that had been declared?—A. I don't just understand your question.

Q. Well, they had originally $25,000?—A. They declared a dividend which they didn't pay in cash. They had to pay it sometime. It was a liability.

Mr. Factor: The dividend was declared by the National Snuff Company?

Mr. Sommerville: Yes.

Mr. Factor: But when the Imperial Tobacco Company paid $25,000 for the stock, they got in return $25,000 worth of scrip.

Mr. Sommerville: Yes.

Mr. Factor: I may be dense, but I can't see how you make a $50,000 investment.

Mr. Sommerville: Well, it seems very simple.

The Witness: May I read the final paragraph?

By Mr. Sommerville:

Q. The original investment of the Imperial Tobacco Company in the National Snuff Company was $25,000?—A. And $200.

Q. $25,200?—A. Yes.

Q. And for that they had 250 shares of ordinary stock?—A. Yes.

Q. That investment stood?—A. Yes.

Q. And that investment passed on from the Imperial Tobacco Company (1908) to the Imperial Tobacco Company (1912)?—A. Yes.

Q. In the meantime, the National Snuff Company declared a dividend of $25,000 represented by scrip?—A. Yes.

Q. Which they handed out to the Imperial Tobacco Company?—A. Yes.

Q. So that at that time the Imperial Tobacco Company's investment was represented by $50,200, made up of those two factors?—A. That is right.

Q. And for that $50,200, they received the $2,000,000 of shares in the National Tobacco Company?—A. Cancelling the scrip and the stock.

Mr. Ilsley: Why do you say it was an investment of $50,000? The scrip is nothing more nor less than an unpaid dividend on a $25,000 investment.

Mr. Sommerville: That is perfectly true.

Mr. Ilsley: Then there is an investment of $25,200.

Mr. Sommerville: There was an investment of $25,000 plus an unpaid dividend of $25,000.

Mr. Ilsley: It is like any other unpaid dividend.

The Witness: Like any unpaid liability; note, bond or anything else.

Mr. Factor: The $25,000 pales into insignificance compared with the profits. We are just wasting a lot of time.

Mr. Sommerville: The net result is that the $25,000 represented by stock, the amount paid for the stock, was represented by your dividend.

Mr. Ilsley: What is the difference between scrip and an unpaid dividend, except that it bore interest?

By Mr. Sommerville:

Q. Well, if you invested $25,000 in a company and got $25,000 dividends, you got your money back, didn't you?—A. Yes. In a period of time. It depends on how long you had it.

Q. I quite appreciate that?—A. I think we have got the explanation there.

The CHAIRMAN: It would be perhaps more profitable if we simply added the value of the scrip to the subsequent earnings that came to the original stock investment.

Mr. SOMMERVILLE: Yes.

Mr. FACTOR: I think that is the way to do it.

By Mr. Sommerville:

Q. What interest do you own in the B. Houde Company, Limited?—A. We own 4,352 shares out of the total issue of 5,000 shares; roughly 87 per cent.

Q. There is issued 5,000 shares of $100 each?—A. Yes.

Q. The total capitalization of that company is $500,000?—A. That is right.

Q. And you hold 87 per cent of the shares of that company?—A. Yes.

Q. That company manufactures what?—A. Tobaccos.

Q. Smoking?—A. Yes.

Q. Cigarette?—A. No, sir.

Q. Just tobaccos?—A. Yes.

Q. Pipe?—A. Pipe and fine cut.

Q. They don't manufacture cigars?—A. No, sir.

Q. I observe the profits of that company for the ten years from 1924 are as you submitted them to me?—A. Yes.

Q. 1924, twelve months to September 30, $16,096.97?—A. Yes.

Q. 1925, $109,392.90?—A. Yes.

Q. 1926, $150,528.34?—A. Yes.

Q. 1927, $182,272.55; 1928, $191,195.29; 1929, $164,551.02; 1930, fifteen months to December 31st, $175,505.38; 1931, twelve months to December 31st, $176,624.41; 1932, $79,825.14; and 1933, $54,419.47?—A. Yes, sir.

Q. And the amounts that you received in the Imperial Tobacco Company from the Houde Company's dividends are as follows: In 1929 you received in dividends from the B. Houde Company $130,560?—A. From the statement you have. I have not the information.

Q. And in 1920 you received from the B. Houde Company dividends of $145,792. In 1931 from that company, dividends to the extent of $287,232. I observe that your share of dividends for 1932 amounted to $287,232; although the profits for the year amounted to $79,825.14. I presume they were accumulated profits?—A. Undoubtedly.

Q. For the year 1932 you received $78,336; and for the year 1933, $43,520. Now, what was the amount paid for that investment in the B. Houde Company?—A. Is it not shown on that statement? I think you will find it on that statement. I have not got all the particulars with regard to that.

Q. No, it does not appear?—A. It does not appear on our balance sheet?

Q. No, it does not appear?—A. I will be glad to furnish that to you, sir.

Q. Perhaps it is in your brief?—A. I do not think it is dealt with in the brief.

The CHAIRMAN: Page 73 shows the B. Houde Company, the National Snuff Company Limited and the Joliette.

The WITNESS: All brought into the same figure, it is not broken up into units.

By Mr. Sommerville:

Q. I observe that the total amount that you paid for the shares of B. Houde Limited, the National Snuff Company Limited, and the Joliette Tobacco Company Limited was $396,379.42?—A. Yes.

Q. Paid by the issue of shares in the Imperial Tobacco Company of 1908?—A. Yes.

By Mr. Factor:

Q. What would be the value of these shares, $100 each?—A. Yes.

By Mr. Sommerville:

Q. You own what proportion of the Tuckett Tobacco Company?—A. We own all of the outstanding common capital stock.

Q. Of the Tuckett Tobacco Company?—A. Yes. But that is a preferred issue of $2,000,000.

Q. What does that amount to?—A. A par value of $2,500,000 on the common stock; $2,000,000 preferred stock.

Q. $2,000,000 preferred stock?—A. Yes.

Q. And there is $2,000,000 common stock?—A. $2,500,000 common stock.

Q. Which was 25,000 ordinary shares at $100 each; and you own all of the common stock?—A. Yes.

By Mr. Factor:

Q. Where do you refer to that? I think it was only 11,000 shares?—A. We purchased the balance for cash.

By Mr. Sommerville:

Q. Perhaps you can tell us then how you purchased the 11,000 shares?—A. 11,628 ordinary shares were acquired by our issuing 348,000 shares of our ordinary stock, and the balance was acquired.

Q. That was on a par value of about $744,200?—A. Yes, sir.

Q. And the balance is purchased—?—A. For cash.

Q. By your company?—A. By our company, yes, sir.

Q. Out of its accumulated assets?—A. Yes, sir.

Q. What was the amount paid for the balance then?—A. We purchased 11,501 shares from the Tobacco Products Export Corporation of New York for the sum of $2,990,260.

Q. $2,990,260?—A. And 1,871 shares were purchased on the market in Montreal for the sum of $381,065.90.

By Mr. Senn:

Q. That would be $200 a share?—A. Yes, about $200 a share.

Mr. Sommerville: So that you paid altogether a sum of about $3,200,000.

Mr. Ilsley: What do you count they paid when they issued their shares, are you taking the par value of their shares.

By Mr. Sommerville:

Q. What amount then did you pay altogether for the 2,500 common shares of this company?—A. Altogether?

Q. Yes?—A. $5,115,525, including the stock.

Q. Yes?—A. There was an issue of stock.

Q. Was that at par?—A. Yes, par.

By Mr. Ilsley:

Q. But your shares are worth more than that?—A. They were selling at something over par at that time, I am reasonably sure.

Q. I thought perhaps it was twice that?—A. I do not remember what it was.

By Mr. Sommerville:

Q. Then the shares you purchased from the Tobacco Product Export Corporation of New York, is that a subsidiary of the British American Tobacco Company?—A. No, sir, not to my knowledge.

Q. Are they connected in some way with them?—A. Not to my knowledge. They may have some shares in it but they certainly do not control it.

Q. By whom is it controlled?—A. It is a public company. I do not know that it is controlled by anybody. I do not even know—I do know who is the president of it, a fellow by the name of Chalkley.

Q. I was under the impression that that was one of the companies in the British American group?—A. No, they may have some share interest; I am not familiar with that.

Q. At any rate, that is the price you paid for the Tuckett Company's common share?—A. Yes.

Q. And I observe that the profits for the last five years in that company, to the 31st March in each year, were: for 1929, $456,791.15; for 1930, $634,625.91; for 1931, $729,015.69; for 1932, $732,944.74; for 1933, $496,908.39?—A. Yes, sir.

Q. And of that amount there was paid into your company in 1929 -I think the first payment was, in what year?—A. I have not the information. They have paid a dividend right along.

Q. In 1931 there was paid into your company $113,284 -December 31, 1930? —A. I have not the information there, sir.

Q. The statement shows that it was paid into your company, $113,284. Then in the year 1931 there was paid into your company by the Tuckett Tobacco Company, $250,000. In 1932 the sum of $800,000, less an amount reserved of $325,000, net $475,000—what does that mean?—A. That means that we did not take into income all the dividends that were paid by the Tuckett Company to ourselves, but set it up as a reserve against the price of the stock.

Q. But the Tuckett Company paid to your company $800,000?—A. Well, you have the statement there.

Q. The statement shows that. Of that $800,000 you took into your account as income $435,000?—A. Yes.

Q. And you set up $325,000 as a reserve?—A. Yes, sir.

Q. Against what?—A. Against possible contingencies on investments of subsidiary companies.

Q. Yes, I see. That was one of the reserves built up at that time?—A. Yes, sir. And I think there was some perhaps in previous years—$30,418.

Q. What was that, what did you receive the previous year?—A. I am not sure about that, I think from the difference in the figures you have given there was some. I will find out if you wish.

Q. It does not show here in your statement?—A. I see, I may be wrong.

Mr. Ilsley: Mr. Sommerville, just explain where you are going in your questioning; or are you going to get that direct. I don't just understand—we are trying to show that these were very profitable investments during these years.

Mr. Sommerville: I am eandeavouring to show the accumulation of profit from these various sources, and then the accumulative reserves that there are in these various companies.

Mr. Ilsley: Yes: I can't make very much out of it, for this reason. I did not know what they paid for the shares in this Tuckett Company, is it shown in the material here.

The Chairman: The details were given this morning, Mr. Ilsley.

By Mr. Sommerville:

Q. They are being put there from time to time?—A. For a short time, sir.

The Chairman: November of 1930 was really the base-line date for the acquisition of the stock; that is set forth on page 75.

Mr. Ilsley: That is when they issued their shares for the bulk of the stock.

The CHAIRMAN: Subsequently they bought part for cash from the American concern, and part on the open market.

The WITNESS: It was all within a short time.

By Mr. Sommerville:

Q. Within one year?—A. Yes, within a few months.

Mr. ILSLEY: Without knowing that, these figures have no meaning in relation to the amount you are receiving from it.

By Mr. Sommerville:

Q. Then, may we take it that up to the end of 1930 you had acquired all the assets of the Tuckett Company under the common shares?—A. I think that is the date, yes.

By Mr. Ilsley:

Q. Is that your policy in connection with companies in which you have investments, to only take a part of the dividends and leave the rest there as what you would call a reserve?—A. I do not know that we have any very positive policy.

By Mr. Sommerville:

Q. I do not know—if they are to take them and divide them up into two funds, one into your income fund and the other you set up as a capital reserve.

The CHAIRMAN: In the Imperial Tobacco Company's books.

The WITNESS: Yes.

By Mr. Ilsley:

Q. What is the advantage of that practice?—A. Well, it is a matter of policy; we think it is conservative accounting I suppose, or finance.

Q. Why would that practice be followed rather than counting the whole dividends as income of your company, and then appropriating a certain amount as reserve?—A. That is hard to answer, it is a matter of opinion, I would say, Mr. Ilsley.

Q. I was just wondering why, there must be some reason for doing this; do you have many of these accounts?—A. Many of which accounts?

Q. Do you have many of these divisions of dividends in these companies in which you have invested?—A. No, I do not think there is any division except with respect to Tuckett, and with respect to the jobbing companies; our policy has been not to take into income what we receive from them as profit, because of the nature of the business. We think that is the conservative thing to do. You think you might lose, do you; next year the jobbing companies might lose?—A. Yes.

Q. So you don't really know whether there is a profit or not; you just leave that alone to see how long you can get along without it?—A. Not always, we sometimes will declare it into the company, but we will not take it in as our income, we will set it up as a reserve against investments.

The CHAIRMAN: I think what Mr. Ilsley is concerned about, Mr. Miller, and I confess it gives me a little difficulty to understand, how you can take from a subsidiary a payment ostensibly as a dividend on stock held, and not take it into your income account in the full amount in which it is paid.

Mr. ILSLEY: Yes.

By the Chairman:

Q. Without questioning the wisdom of it, it looks to be a little odd.—A. Well, I think probably that we may have credited it into our income and set it back and made a reserve as a matter of form.

Q. There cannot be any criticism of any company setting up any reserve it desires.—A. In this way we take it back, Mr. Stevens, with the same result.

By Mr. Ilsley:

Q. You do not know what the advantage is of taking it back out of the dividends from that particular company rather than taking a lump sum out of your income; you do not know whether there is any advantage in that or not?—A. No, we eventually never considered it that way.

By Mr. Sommerville:

Q. Is not this one of the advantages, Mr. Millar, that you take into your income account only that portion which you treat as income and on that you pay income tax?—A. No, it has no bearing on that at all.

Q. It has no bearing on that at all?—A. No, sir, not at all.

Q. Perhaps I may follow this through, the next year, for the year 1933, you received from the Tuckett Tobacco Company $300,000 less amount carried to reserve $75,000, and carried forward into income account $225,000?—A. Yes.

Q. And you showed in that year a total income from these various sources of $5,670,176.60?—A. Yes.

Q. That includes the $225,000?—A. Yes.

Q. But does not include the $75,000 set aside for reserve?—A. Yes.

Q. And then your auditor says:

> Provision has been made for Dominion Income Tax on the profits for the year, the amount being arrived at as follows:
>
> Net profits for the year, $5,670,176.60.

A. Yes.

Q. Exactly the figure that I have indicated to you, not including the amount that is held out for reserve?—A. Well, I am not intimately familiar with that phase, but it certainly was not done with any such intention.

Q. It may be quite within the provisions of the Income Tax Law, Mr. Miller, I am not raising that question; we are just trying to get an explanation for it.

Mr. ILSLEY: That seems to be the reason.

By Mr. Sommerville:

Q. You see, Mr. Millar, the only point I am interested in there is to ascertain whether the declared profit of $5,670,176.60 is the exact profit for the year, or whether to that there should be added something else?—A. Well, the accountants have stated that was so, have they not?

Q. Yes, but the accountants have deducted $75,000 from the dividends received from the Tuckett Company in one year, and they deducted $325,000 in another year and have not carried that into the profits of the year.—A. Just a minute, please. As I understand it, we do not make a consolidated income statement for taxation purposes, and the Tuckett Company make their own tax statement and pay their own taxes, and dividends received from the company under those circumstances, I understand, are not taxable. I do not see frankly that it has any bearing on it, Mr. Sommerville.

Mr. ILSLEY: That may be correct. I thought we restored the principle of double taxation a year or two ago? I may be wrong about that.

By Mr. Sommerville:

Q. In any event, Mr. Miller, this is the practice that has been adopted?—Yes.

Q. The auditor's statement reads:

> Provision has been made for Dominion income tax on the profits for the year, the amount being arrived at as follows:
>
> Net profits for the year, $5,570,176.60.

Which is the amount that comes from page three, trading and profit and loss account for the year ending December 31?—A. Statement two, is it not.

Q. I beg your pardon, I am looking at 1932. Then too, you will find that from that they have deducted a number of items?—A. Yes, sir.

Q. Including the dividends received from other companies?—A. Yes.

Q. And from the $300,000 received from Tucketts you will observe they have deducted the $75,000; that is carried into the special reserve?—A. Of course, the $275,000 had previously been included in the $5,670.176, and for taxation purposes he is perfectly right.

By the Chairman:

Q. He already having paid taxes on account of the Tuckett Company?—A. Yes.

By Mr. Factor:

Q. You are taking a share of the profits of the Tuckett Tobacco Company; you were entitled to the dividends of the Tuckett Tobacco Company?—A. Yes.

Q. Then will you explain this to me: For the year 1931 the net profits are shown as $729,016. You disbursed under preferred and common dividends $290,000, leaving a balance of $490,016; and then it shows a surplus of $733,682. What does that mean?—A. That remains with the Tuckett Company.

Q. In other words, the Tuckett Company had, in the year 1931, an undisbursed or undistributed surplus of $2,176,698?—A. I have not the exact figure, but some such figure as that.

Q. And in the year 1932 they had an undisbursed surplus of $2,469,643?—A. Yes.

Q. And in the year 1933 an undisbursed surplus of $2.026.551. What is your policy, you let that surplus remain in the Tucket Company?—A. Up till now, yes, sir.

Q. That is all accumulated profits?—A. For years gone by, yes, sir, a good many years.

Mr. Sommervile: What is the total, say to the 31st December, 1933?

Mr. Factor: The total of the three years that I have here is approximately over six and a half million dollars.

The Witness: Oh, no.

Mr. Sommerville: Undisbursed?

Mr. Factor: Oh, the undisbursed surplus at the end of 1933 was $2,026,551.

By Mr. Sommerville:

Q. Yes, and what is the undistributed surplus in the Tuckett Tobacco Company at the end of last year?—A. I have not the figure.

Q. In which you hold the enttire amount of common stock?—A. I have not the figure sir, but I can confirm it later.

Q. Perhaps, Mr. Millar, you could give us the undistributed surplus at the end of December, 1933, for each of those companies?—A. All right, sir.

Q. The National Tobacco Company, the B. Houde Company, and the Tuckett Tobacco Company?—A. Yes.

Q. And the other companies, the General Cigar Company, The Imperial Tobacco Sales Company, and the Imperial Leaf Tobacco Company.

Mr. Factor: And the Andrew Wilson Company.

By Mr. Sommerville:

Q. And the Scales & Roberts Company?—A. Yes, sir.

Q. The Andrew Wilson Company?—A. Yes, sir.

Q. Which you own and control?—A. Through the General Cigar Company, yes.

Q. And the Fortier Company?—A. Yes, through Scales & Roberts.

Q. And the Punch Cigar Company?—A. Yes, sir.

Q. Which you own and control through the General Cigar Company?—A. Yes, sir.

Q. And what other companies are there?—A. James Craig, Limited.

Q. Of Halifax?—A. No, Hamilton, Ontario.

By Mr. Factor:

Q. And John Erzinger Limited, Winnipeg and Saskatoon?—A. Yes.

By Mr. Sommerville:

Q. What about Liggett & Myers Tobacco Company of Canada?—A. Yes, sir.

Q. Are they owned directly by the Imperial Tobacco Company or through one of these others?—A. Which is that?

Q. The Liggett & Myers Tobacco Company of Canada?—A. Directly, sir.

By Mr. Factor:

Q. May I ask—I may be wrong in this—did your company, or the United Cigar Stores own the Gordon Tamblyn Drug Stores?—A. No, sir.

Q. Never owned them?—A. The Imperial Tobacco through maybe the Metropolitan Tobacco Company may have originally, but it was sold several years ago.

Q. But the Imperial Tobacco Company did own that concern through the Metropolitan?—A. Either that or through the United Cigars.

Q. For how long?—A. Oh, for several years, four of five years, maybe.

Q. And you have disposed of your interests?—A. Yes, sir, three or four years ago.

Q. Can you furnish a statement to Mr. Sommerville of your profit and loss account in connection with the operation of the Gordon Tamblyn Stores?—A. You mean, under our direction?

Q. The profit and loss account during your operation?—A. Well, we will give you what we have, sir.

Mr. KENNEDY (*Peace River*): In regard to this amount of $800,000 paid over by the Tuckett Tobacco Company to the Imperial in 1931, I think it was, there is $475,000 taken over as income, and that apparently was part of the sum on which the Imperial paid income tax.

Mr. SOMMERVILLE: The Imperial paid income tax apparently on $475,000.

By Mr. Kennedy (Peace River):

Q. The point I am interested in is this, if the Tuckett Tobacco Company paid income tax on its own profits, why should the Imperial pay income tax on the $475,000; if it paid on the $475,000 why not on the $800,000.

Mr. SOMMERVILLE: I am asking the same question.

The WITNESS: We do not pay on the income on any of the dividends received from any of the subsidiary companies.

By Mr. Edwards:

Q. It already has been paid, Mr. Miller?—A. Yes, sir.

By Mr. Sommerville:

Q. Look at your financial statement for 1932.—A. 1932?

Q. Yes, 1932.—A. Yes, sir.

Q. On page 2, your net profit for the year is shown at $5,471,175.08?—A. Yes, sir.

Q. And added to that are certain items that are included, bringing your total profits up to $6,974,260.04?—A. Yes, sir.

Q. And from that there are deducted certain amounts?—A. Yes, sir.

Q. For taxation purposes?—A. Well, deducted in arriving at the tax.

Q. At the taxable amount?—A. Yes, sir.

Q. And the amount that is deducted, or at least one of the amounts that is deducted is $475,000?—A. Yes, sir.

Q. And the reason that that is deducted, you say, is because it was included in the statement of your income in arriving at the profit?—A. That is right. Maybe I can make it clear in this way. The $800,000 is the amount of dividends received. Now, dividends are not taxable. The Tuckett Tobacco Company paid its own tax, and we set up a reserve of $325,000 and charge it to income, so that it left a net difference in income of $475,000. Now, in order to arrive at the amount—from the Imperial Tobacco Company's point of view—that is taxable, whatever amount this was included in that income should be deducted, therefore, the amount is $475,000.

By Mr. Kennedy (Peace River):

Q. The Imperial Tobacco Company did not pay income tax on this $475,000? —A. No, sir.

By Mr. Sommerville:

Q. Nor on the $325,000, since the Tuckett Tobacco Company had already paid it?—A. Yes, sir.

By Mr. Ilsley:

Q. What is the reason for doing this, for deducting $325,000 from your income and setting it up as a reserve from the dividends of a particular subsidiary company? Why do that rather than take an appropriation for reserve out of your income as a whole? Is there any reason for following one practice rather than the other? What is the reason for it?—A. In our judgment, it was conservative financing. We have got, as you say, a certain amount paid by the Tuckett Tobacco Company as dividends, and we thought it was conservative business not to take the full amount of the dividends but to set up a reserve, and that was the method used to do it. I suppose we just did not consider your method—

Q. It is not my method, but it is the natural method, I would think. You did the same thing with your jobbing companies?—A. Yes.

Q. Well, does the appropriation of a certain amount for reserves out of dividends from particular companies have anything to do with the prospects of those companies, the hazard of carrying on the business of those particular companies?—A. Yes.

Q. Then that would be the reason?—A. There is always a hazard, sir, in any investment.

Q. I know, but has this particular accounting practice anything to do with the hazard of the company in respect of which you make the deduction as a reserve, or has it not?—A. Well, let me be sure I understand your question, I want to be perfectly honest.

Q. I hope I do myself, but what I understood you to say was, that in your jobbing companies and in this Tuckett Tobacco Company you have certain dividends which normally would be put in your books as income?—A. Yes.

Q. The whole of which would go in as income. Now you put it in as income, but you take it out again, or part of it; instead of taking a lump sum out of your total income, and put it aside as reserve, you take part of that which you get from a particular company and set it aside as a reserve instead of putting it in your income account and I was just wondering what the reason was. Is this the reason, that perhaps you get a substantial sum as dividends from the Tuckett Tobacco Company in one year and that next year there might be a loss and, therefore, you take part of that substantial sum which you get in dividends and put it aside as a reserve?—A. Yes.

Q. And I am wondering whether that particular practice is pursued in reference to a particular subsidiary company because of the possibilities of loss in the carrying on of the business of that company?—A. Well, I would not say there would be any special reason to assume that there would be any loss in the Tuckett Tobacco Company any more than any other business; but as to why we do it that way, why, it seems to me that it is very difficult if you have got investments in subsidiary companies, or what not, to gauge definitely what they might be worth. You want some yard stick to measure as to how the business is being carried on, in order to set up something, and it seems to me to be a conservative way of doing it, in a particular investment to put part of that aside; it seems to be a perfectly justifiable way of doing it, and we have felt that way about it.

By the Chairman:

Q. Mr. Miller, you see what the committee by its order of reference is particularly concerned in is the spread between what is received by the grower and what is paid by the consumer, and the committee's duty is to determine if, in its opinion, that spread is justified, and also to break down the various charges that enter into it to see to what degree there is equity in the distribution of it among all those concerned. I simply bring that to your recollection because that is the object of this committee according to its order of reference. If company A—and we will leave your company for the moment out of the picture—owns companies B, C, D, E, and F, and in its operation of these subsidiary companies it makes unusually high earnings which are not fully disclosed in its own profits, it might very well be that there would be buried there and not disclosed to the committee, shall I say, profits far beyond what the service warranted which, if discovered by us, would indicate to us that the grower on the one hand is not getting a fair share, or perhaps the consumer on the other hand is paying too much. Therefore, it is of great importance to the committee that we should know not only the officially disclosed gross profit or profits but how that profit is built up, and that is the object that we have in pursuing this matter in this way. Therefore, what Mr. Ilsley is speaking about and enquiring about is very important to the members of this committee. For instance, if the Tuckett Tobacco Company had in its operation as a separate entity set up a reserve, then paid you a profit of $800,000 in one year, out of which you set up a reserve of $300,000 and took $400,000 into your earnings it might be—I am not saying it is—that a careful examination of that might disclose a rather abnormal amount carried to reserve?—A. Quite.

Q. And it is very essential, I think, to the committee that such should be fully disclosed, of necessity. I am not criticizing, because I think the Imperial Tobacco Company in their brief is showing a willingness to assist the committee in its effort, but I do not want you to feel that we are unjustly pursuing the point, because I really think that point is of importance to the committee.—A. All right, sir, I am perfectly willing to give you all the information we have.

The Chairman: We have before us the Tuckett statement.

By Mr. Senn:

Q. In regard to that amount of $325,000—I am speaking now of the Tuckett Tobacco Company—was it ear-marked for a special purpose, or was it set up in the ordinary cash reserve?—A. No, it was set up as a reserve.

Q. It was not ear-marked for the use of the Tuckett Tobacco Company?—A. No.

By Mr. Sommerville:

Q. Altogether there is an accumulation of $2,000,000, quite apart from the amount you were setting up as reserves?—A. Oh, yes.

By the Chairman:

Q. It would not look, Mr. Miller, as if there was any need to set up a reserve against the investment in Tuckett's?—A. Well that, of course, Mr. Chairman, is a matter of opinion I suppose, but you will see we paid $........ for the stock that has now a par value of two and a half million dollars.

By Mr. Sommerville:

Q. And in which there is already a surplus and accumulated reserves of $2,000,000?—A. Even so, sir.

Q. Which belongs to you?—A. Well, of course, the preferred shareholders have the first assets.

By Mr. Senn:

Q. I would like to ask one more question in regard to the amount you say you are holding in the Tuckett Tobacco Company. You said two and a half-million?—A. You mean surplus?

Q. No, you said your holdings were two and a half-million?—A. Yes, two and a half-million, par value of the whole amount, common stock.

Q. At page 75 of the report you went over this morning, you estimated your holdings in the various companies as $2,431,000 odd; how do you account for that?—A. We advised previously that we bought the difference with cash.

The CHAIRMAN: You must add to that, Mr. Senn, a sum paid out in cash for the balance of the Tuckett shares, about 12,000 or 13,000. That is not referred to here.

Mr. SOMMERVILLE: This only includes the amount paid in shares for Tuckett's shares.

By Mr. Sommerville:

Q. With a view to our being able to follow that through, would you be good enough to have the unabridged reports of your auditors for Tucketts and the National Tobacco?—A. Yes.

Q. The General Cigar, and those other subsidiaries that you have mentioned?—A. Yes, we will be glad to.

Q. And have them submitted to the committee?—A. We will be glad to.

Q. Perhaps you will be good enough to tell me if there are any other companies that you have or control. You have, first of all, your Imperial Tobacco Company?—A. Yes.

Q. Then recently, within the last couple of years, you turned your sales department over to the Imperial Tobacco Company?—A. Tobacco Sales Company.

Q. The Imperial Tobacco Sales Company?—A. Yes.

Q. And you turned your leaf purchasing department over to the Leaf Tobacco Company, was it?—A. Yes.

Q. Let me get that right?—A. The Imperial Leaf Tobacco Company.

Q. Those are like organizations that are carrying on activities within your own office?—A. Yes.

Q. Of the Imperial Tobacco Company?—A. Yes.
Q. And through the Imperial Tobacco Company. You function through those two organizations?—A. That is right.
Q. Then you have manufacturing companies that manufacture tobaccos, cigars and cigarettes, some of them?—A. Well, Tuckett does.
Q. Tuckett does; and the pipe tobaccos?—A. Yes.
Q. And the cut tobaccos?—A. Yes.
Q. Then you have the chain of various distributors or jobbers across the country?—A. Yes.

By Mr. Factor:

Q. The Tuckett firm also control the Tobacco Products Corporation of Canada?—A. Yes. That is not an operating company, though.

By Mr. Sommerville:

Q. It is a holding company?—A. Well, it is just a small company, a dead company really, kept alive by the trade mark.
Q. Then you have this chain of jobbers across the country?—A. We have a few.
Q. Have you none in the Maritimes?—A. No, sir.
Q. I was under the impression you had one in Halifax or St. John?—A. No.
Q. You have them in Montreal, Toronto, Winnipeg and Hamilton?—A. Yes.
Q. Then in addition to that you have the retail stores, the United Cigar Stores?—A. Yes.
Q. About how many stores are there in the United?—A. About 175 stores.
Q. About 175 stores?—A. Yes, about that.
Q. They cover from coast to coast?—A. Except in the Maritimes.
Q. There are none in the maritimes?—A. No.
Q. You don't own any retail outlets in the maritimes?—A. No.

By Mr. Kennedy (Peace River):

Q. Have you any farms for producing tobacco?

By Mr. Sommerville:

Q. Oh, you have some farms for producing tobacco?—A. No, sir.
Q. That is not profitable. I was wondering whether you were leaving anything out of the circle?

Mr. FACTOR: That was a leading question.

Mr. SOMMERVILLE: Well, Mr. Kennedy wanted to get him into the same class as the farmer, He wanted to feel the Imperial was with him.

By Mr. Sommerville:

Q. Will you be good enough to tell me what were the profits of the Imperial Tobacco Company, the consolidated profits, during the past five years?—A. Of the Imperial Tobacco Company?
Q. Yes?—A. For the past five years?
Q. Yes?—A. Consolidated?
Q. Yes?—A. You mean our own statement?
Q. Your own operations, yes?—A. I didn't know you asked for it. It is a matter of public record. I have not got it handy here. It has been published several times.
Q. We would like to get it on the record at this time in such form as you have it?—A. I don't think I have it.

Q. Mr. Lane will probably have it?—A. For the year 1929, to September 30, $5,862,207.73.

Q. That is from when?—A. For the twelve months ending September 30, 1929.

Mr. KENNEDY (*Winnipeg*): Mr. Sommerville, let us be sure just what that is.

By Mr. Sommerville:

Q. This is the profit of the Imperial Tobacco Company?—A. Yes.

Q. Including such dividends as may have been received during the year from the subsidiaries?—A. Yes.

Q. For 1929 it was what?—A. $5,862,207.73.

Q. And for 1930?—A. For 1930—fifteen months is the next period, to December, 1930, $8,153,638.04. If you care to have it, it is stated for the twelve months, to December 31st.

Q. It is all right as it is. You changed your fiscal year?—A. Yes.

Q. And that fifteen-months' period covers the amount you have just given us?—A. Yes.

By Mr. Kennedy (Winnipeg)

Q. That fifteen months ends on what date?—A. December 31st.

Q. Of 1930?—A. Yes. 1931, $5,914,079.47; 1932, $5,471,175.08; and 1933, $5,670,176.60.

By Mr. Sommerville:

Q. In arriving at your profits, of course you set up a certain reserve for depreciation, etc.?—A. Yes.

Q. And in your balance sheet for December 31, 1933, I observe that you carry your real estate and buildings at cost, $1,575,994.49?—A. Yes, sir.

Q. And you carry your plant, machinery, furniture and fittings at cost, $2,707,015.29?—A. Yes.

Q. Together, those two amounts represent a sum of $4,282,000 odd?—A. Yes.

Q. Against that $4,282,000 you have a reserve for depreciation of $3,461,-203.52?—A. Yes.

Q. In other words, your depreciation set up is about 75 per cent?—A. A little more than that, is it not?

Q. A little more than that?—A. Well, I don't know.

Q. Well, say 80 per cent; depreciation which has so far been set up out of your profits against these buildings represents 80 per cent of the value of the buildings, plant and machinery?—A. Yes, about that.

Q. That includes land as well, in that valuation?—A. Yes.

Q. So that it would look as if your buildings have been almost fully covered; buildings and plant have been almost fully covered by the reserve set up out of profits for building and machinery?—A. I don't think so entirely, no, sir.

By Mr. Ilsley:

Q. Can you separate it into land and machinery?—A. It is pretty difficult to do. In some cases it may be separated.

Q. You have separated it for some purposes, I fancy—A. Yes, for insurance purposes.

Q. You probably have a depreciation account more than enough to cover everything that depreciates, have you not?—A. Well, that again is a matter of opinion. Take machinery, that is very doubtful in many ways. There is new machinery being developed all the time.

Q. From these figures it would appear that you have as much money as all your assets that can depreciate; you have it all covered by depreciation account now?—A. Well, it is a matter of opinion.

Q. I don't just think it is a matter of opinion. If you could separate land from the assets that do depreciate, we could tell you that ourselves?—A. I would be glad to give you any statement you wish.

Q. Land does not depreciate, does it?—A. Well—

The CHAIRMAN: Is it not separated there? I think it is separated. Just a minute, Mr. Ilsley, the value of the lands and buildings is shown at $2,700,000.

Mr. SOMMERVILLE: No.

The CHAIRMAN: No, not buildings. That is machinery.

Mr. SOMMERVILLE: Yes.

The CHAIRMAN: The lands and buildings are not separated?

Mr. ILSLEY: No.

The CHAIRMAN: However, your reserve covers entirely plant, machinery, furniture and fittings, plus about $700,000 to apply against $1,500,000 of buildings and lands.

Mr. ILSLEY: Yes. It might be an interesting fact if we had that.

By the Chairman:

Q. Apparently it would cover virtually the whole value of your buildings, plant and machinery?—A. I might make a statement on that. I think you will find it will figure out that on any obsolete or out of date machinery, there is 100 per cent provided; and 80 per cent of ordinary equipment. We provide for the buildings according to the regular $2\frac{1}{2}$ per cent for regular buildings. I am speaking purely from memory now, but I don't think they will show more than 50—somewhere between 50 and 60 per cent of their cost value, maybe a little more. But the land value, of course, is not a very appreciable amount.

By Mr. Ilsley:

Q. You are keeping on setting aside a certain per cent on the original cost value for depreciation, are you?—A. Where we have reached 80 per cent on our machinery, at the present time it is not our policy to continue to set up a reserve.

By Mr. Sommerville:

Q. You have got machinery in here at cost?—A. Yes.

Q. And on the 100 per cent on machinery that has already been written off, you will still write in depreciation?—A. Not into our profits. We might write it in and take it back, though. It is not added to our reserve.

Q. Have you ever taken anything off that reserve?—A. Yes, I think there was. Anything that is destroyed is charged to that.

Q. Looking at Schedule B of your statement for 1933, you will observe that you have plant, machinery, furniture and fittings at cost, amounting to $2,707,015.29. It is shown in the balance sheet at that figure?—A. Yes.

Q. Now then, if you look at Schedule B you will find that the $3,461,203.52 applies entirely to buildings, machinery and plant?—A. And office furniture and fixtures, depreciated merchandise and machinery.

Q. You will observe also that with respect to machinery modernizing—you call it—you have set up an account of $2,707,000 – $2,374,596?—A. That is right, sir.

Q. So that the only amount of your entire machinery that has not been covered is a sum of about $350,000?—A. I think that is right, sir.

Q. And as against other machinery you have set up a depreciated merchandise of $50,000?—A. Yes, sir.

Q. And you have set up a machinery special reserve account of $4,727—later you wiped it out?—A. Yes.

Q. And on depreciation on office furniture and fittings you have set up a reserve of $119,025.85?—A. Yes, but that is included in plant, machinery, furniture and fixtures.

Q. Yes, it is included in your balance sheet, as coming under that $3,461,000?—A. Yes.

Q. The amount the company have put as a separate item in your schedule B?—A. Yes.

Q. That would indicate that your office furniture, fittings, etc., have been 100 per cent covered by the depreciation of $119,000?—A. I do not think it has.

Q. At any rate, out of the profits of your company you have set up these reserves?—A. Yes, sir.

Q. And then in addition to this you have set up some other reserves, you have set up a general reserve of $803,000?—A. Yes, sir.

Q. What is this general reserve for?—A. It goes back to the formation of the company in about 1912, it was set up out of surplus. I do not know except as a general reserve, it is just a special reserve.

Q. It is a general reserve?—A. Yes, sir.

Q. Then we have included in reserve this $400,000 that you have set apart from the Tuckett dividends?—A. We deducted that from the value of investments in subsidiary and associated companies.

Q. Oh I see, that is to say that is where the reserve is; that is to say instead of setting up $400,000 on the credit side of your ledger statement, that is there for contingencies?—A. Yes.

Q. You deduct that from the value of investments in subsidiary and associated companies?—A. Yes.

Q. At cost or under?—A. Yes.

Q. And that brings down the cost of these investments in your subsidiary companies?—A. Yes.

Q. From time to time?—A. As referred to in schedule F, which gives the full particulars on that.

Q. And in that year there was deducted from your investments in subsidiary and associated companies the sum of $595,418.03?—A. Yes.

Mr. Ilsley: What did they do all this for?

Mr. Sommerville: That eventually writes down all the assets to nothing.

Mr. Ilsley: I know, they get rid of their investments entirely.

Mr. Sommerville: Yes.

Mr. Ilsley: What are they paying?

Mr. Sommerville: I do not know, ask Mr. Miller.

The Witness: It is only conservative accounting from our point of view, sir.

The Chairman: Then that $500,000 of surplus was deducted from earnings, and written off these various investments.

The Witness: Set up as a reserve against them and deducted in that balance sheet.

The Chairman: I am sorry, I cannot follow you there, it does not show as a reserve in your account sheet. If it is set up as a reserve, it should show in the credit side of a balance sheet as a reserve from assets. Instead of that it is deducted in schedule from the assets. The question arises, have the assets shrunken in value during the year the amount of that deduction. For instance,

we will take Tuckett's, from which this $500,000 comes; there is no question of shrinkage there?

The WITNESS: No.

By Mr. Sommerville:

Q. In the list of your investments, Mr. Miller, as of the 31st December, 1933, shown in your statement you have the National Tobacco Company Limited 400,000 shares at a par value of $5 each carried forward at a cost of $50,200?—A. Yes, sir.

Q. So that the National Company investment of $50,200 is one of the items from which $595,418 is deducted at the end of the year?—A. It might apply to any in that.

Q. It might apply to any of them?—A. Yes.

Q. And I presume you follow the same policy in respect to each investment?—A. I don't know what you mean.

Q. They are all treated in the same manner?—A. In what respect.

Q. By way of your writing off, or deducting from them the amount of the reserve you show here?—A. No, only the ones we set up as reserve.

Q. Have you anywhere an independent appraisal of the value of your lands and buildings?—A. We have an appraisal of buildings, it is not altogether independent, it is made by some of our own engineers, I do not think we have an appraisal of land.

Q. You have an appraisal of building, plant and machinery?—A. Not on machinery or plant, no sir; we have an inventory of it, but we have no appraisal of it. For insurance purposes, I presume?—A. Yes.

Q. And that is based on cost?—A. On cost, yes.

Q. Plus additions I presume by way of repairs from time to time?—A. No, all repairs are charged off.

Q. All repairs are charged off the current account?—A. Yes, sir.

By Mr. Ilsley:

Q. What is the reason for this practice, for your wishing to get rid of anything on your books showing that you have an investment in subsidiaries? You are gradually writing down on your books your investment in subsidiaries by appropriating part of your dividends from your subsidiaries as reserve, and not showing it as a reserve, but just reducing the amount on your books of your investments in these subsidiaries; would that be a sort of " innocent " for one to ask?—A. Anyone might ask it.

Q. Why do you do that?—A. For conservatism sir.

Q. What advantage is there in doing that?

Mr. FACTOR: Not in the political sense, I take it, Mr. Miller.

The CHAIRMAN: Treated that way, it would be a liberal reserve.

The WITNESS: Frankly I do not know how to answer you any differently, Mr. Ilsley. It may be we are too conservative. I think you recognize that the price that we paid for the Tuckett Tobacco Company is a tolerable amount of money, and I think if we were satisfied to take in a reasonable amount of the dividends that we get from them—that is, of course, it would all go into the profit account, and then part of it is taken back as a reserve. It was only a matter of conservatism, creating these reserves against these large amounts of investment.

By Mr. Ilsley:

Q. It simply makes your book look different. It would appear at first blush that your return from that company is at a lower amount than it is; secondly, it would look as if your investment in that company was much smaller than it is;

it just looks different, it makes a difference in the way the books look to the casual observer; that is as far as I can see. I am wondering why you do it, is that your reason for doing it?—A. Yes, that is our reason for doing it. The only reason that I could think of sir; it has been done now for several years. I cannot think of any other reason.

Q. I do not believe that you just mean that answer to that question. I was asking you if you were doing that purposely to give the impression that your investment is smaller than it is, or that your dividends are smaller than they are?—A. I can answer that, absolutely no, sir.

Q. You answered it yes a minute ago?—A. Did I; I did not understand you, sir.

Q. I knew that, and that is the reason I repeated it.—A. I did not understand you, I am sorry.

Q. I did that because I felt you did not understand the question. I am just asking you, what is your reason for this. To the observer it looks like a peculiar juggling of a part of the dividends and transferring them from one account to another for some strange reason that is not apparent to me?—A. Well sir, there is no intention of that.

By Mr. Factor:

Q. What will happen if that method is not followed and you show these dividends in the ordinary profit and loss account?—A. What would happen?

Q. Yes, how would your statement appear?—A. Our statement would appear with increased profits.

Q. And among your assets your investment in subsidiary companies would be higher?—A. Yes.

Q. What great advantage do you gain by doing that, or do you gain an advantage?—A. I do not know whether we gain any advantage or not. It is just the same as you might criticise, I suppose, our setting up any reserve for machinery, or reserve for plant.

Q. That is a different thing?—A. The only difference is a matter of opinion, I would suggest. When you have a big lot of investments in companies, it seems to me that it is conservative to make such a provision as that; that is our opinion.

By Mr. Kennedy (Winnipeg):

Q. Whichever way you set it up it would reflect the same results in operation—I mean whichever system?—A. If we did not set up that reserve it would increase our profits.

By Mr. Factor:

Q. That is the point.—A. I think it would be all the same.

The CHAIRMAN: There is no conceivable objection at all, Mr. Miller, in setting up reserves. Everbody I think will agree with that. But I think there is a legitimate curiosity on the part of the committee to find out to what extent these reserves have lessened the disclosed profit, so that we may estimate in our own opinion the fairness of the cost in between the grower, as I said a moment ago, and the consumer. That is the sole object in this matter.

The WITNESS: Mr. Chairman, then I would suggest that these reserves, such as the reserves for the purposes you have suggested, any of these reserves that we have set up from the Tuckett Tobacco Company should be added back in taking that into account.

Mr. FACTOR: Does the consolidated profit and loss account include these reserves, or are they excluded from it?

By Mr. Sommerville:

Q. No, they are not included, Mr. Miller. That is the accumulation of your reserves for the year?—A. Well, not for the year, for the period up to that date, up to December 21st; that is not for the current year, that is the accumulation up to that date. I may be mistaken.

Q. But at any rate, that reserve is deducted before your profits are shown?—A. Yes.

Q. So that if you were showing your real profits you would add that $595,418.03 to the profit statement?—A. Over the period of years.

Q. For the period it had accumulated?—A. Yes, sir.

Q. And if $325,000 of it came out of dividends in one year that would be added to the profits of that year?—A. Yes, sir.

Q. And that $75,000 for the second year, that would be added back?—A. Yes.

Q. That would be the system that would be followed to get the correct amount?—A. Yes, sir.

Q. Now then, will you just tell us, Mr. Miller, on page 2—this is a statement of profit and loss for the year ended December 31st, 1933, and in it I see "Surplus brought forward from last year $7,875,058.91." What is that, Mr. Millar, where does that come from? Does that come from the previous year?—A. Yes, sir.

Q. That is the previous year's surplus?—A. Profit and loss account.

Q. That is the surplus of the previous year?—A. Yes.

Q. Well then, the next item is net profits for the year after deducting all charges and expenses for management and providing for income war tax, $5,670,176.60?—A. Yes, sir.

Q. Now, can you tell me what was deducted for all charges and expenses for management, etc., where will I find that item?—A. I think we gave you a statement.

Q. And as well for income war tax, so as to get that amount?—A. It is all disclosed in the statement, I think.

Q. What page is that?—A. Page three.

Q. All right.—A. Statement three, page three.

Q. Statement number three?—A. Section number five.

Q. That shows, Mr. Miller, how the $5,670,176.50 is made up?—A. Yes.

Q. But what I am asking you is, what amount must be added to that for the income tax provision and all other charges that you have already deducted from your profits?—A. If you follow this through from page one, right through two and three to the conclusion. it shows an analysis there of all expenses. On page three there is provision for income tax for the year 1933, shown at the top there, section four, of $631,678.72, as having been provided out of those profits prior to arriving at the final figure.

Q. Where is that?—A. Section 4 on page 3.

Q. Oh, yes.—A. That is the amount that has been deducted in that year, the upper left-hand side.

Q. That is the income war tax, 1932?—A. 1933.

Q. Oh, yes.—A. There was an adjustment the previous year of $43,181.99, and a provision for the current year of $631,678.72.

Q. Where do you begin with your gross profit, show me that.—A. We gave you a statement, sir. This is involved because of the Imperial Sales Company—we made up a statement and submitted it to you a week or two ago. Here is a copy.

Q. Thank you.—A. That statement is just consolidating the Sales Company and the Leaf Company.

Q. That is a consolidated statement of the Imperial Tobacco Company, the Imperial Leaf, and Imperial Sales?—A. Yes, and shows the available profit, and shows sales value gross of $36,154,702.76?—A. Yes, sir.

Q. And from which there is deducted costs of raw material, labour, overhead, commission, amalgamated sales tax, a total of $27,633,445.90?—A. Yes, sir.

Q. Which leaves an available profit of $8,521,256.86?—A. Yes, sir.

Q. As the gross profit for the year?—A. Before selling and advertising.

Q. Before selling and advertising expenses are taken off?—A. Yes, sir.

Q. Then your selling expenses, a deduction of $1,169,135.28?—A. Yes, sir.

Q. And your advertising expenses, $2,673,666.04?—A. Yes, sir.

Q. In other words, there is a total deduction for selling and advertising of $3,842,801.42?—A. Yes, sir.

Q. And that leaves you a departmental profit of $4,678,455.44?—A. Yes, sir.

Q. Then to that is added certain items amounting to $1,461,628.55?—A. Yes, sir.

Q. Making a total of $6,140,083.99?—A. Yes.

Q. And from that there is deducted certain items of legal expense, share transfer department expense, trademark and patent expense, income war tax, income war tax adjustment, bonus to officials adjustment 1932, and bonus to officials 1933, a total of $1,096,704.46?—A. Yes, sir.

Q. And that brings you a net income of $5,043,379.53?—A. Yes, sir.

Mr. KENNEDY (*Peace River*): Have you that detail of bonus to officials?

Mr. SOMMERVILLE: Yes, we have the details, Mr. Kennedy.

By Mr. Sommerville:

Q. And to which are added dividends for the year amounting to $626,797.07, making a total of $5,670,176.60?

By Mr. Factor:

Q. Is that the net after deducting the reserve?—A. Yes, sir.

By Mr. Sommerville:

Q. And then you add to that the surplus brought forward from last year $7,875,058.91, which make a total of $13,545,235.51. From that you deduct the dividends on preferred shares of $324,507.05, and the ordinary dividends for the final of 1931-32 of $1,653,930.60, and your ordinary dividend of $3,307,861.20, or total dividends of $5,286,298.85, which leaves you with a balance or surplus of $8,258,936.66. And you have made then provision for dividend on preferred shares for three months of $124,450, and that leaves undivided profits at the end of 1933 of $8,138,486.66?—A. Yes.

Q. Now, I observe that you deducted last year for ordinary dividends, final 1931-1932, an amount of $1,653,930.60. What was the meaning of that? Were those dividends not paid in 1931-32?—A. They were paid in 1934.

Q. That is, out of the profits of last year?—A. No, they were paid in 1933 out of the profits of 1931-32, out of surplus; they were paid in 1933.

Q. In other words, last year what was the amount of the dividend?—A. The final dividend is 3½ per cent.

Q. And then your ordinary dividend is 7 per cent?—A. Seven per cent per annum, yes, sir.

Q. And that meant that last year you paid 10½ per cent out of the profits of last year?—A. Yes, sir.

Q. Which took up the 3½ per cent of the 1931-32 period, that fifteen month period?—A. No, the fifteen-month period was prior to that.

Q. Now, Mr. Miller, let me understand the functions of your Imperial Tobacco Company. The Imperial Tobacco Company manufactures the product and then it sells the product to the Sales Company, is that right?—A. Yes, sir.

Q. And the Sales Company then sell the product to jobbers of the trade?—A. Yes.

Q. And the Leaf Company in 1933 bought from the Imperial goods to the value of $31,127,381.23?—A. Well, I think it would clarify matters if I might explain, that the Sales Company and the Leaf Company are, as you have rightly stated before, I think, all held within the Imperial Tobacco Company's office, and in this statement which you have just read from that is the consolidated of the whole, as though they were one company, as if those three companies were one company, that is really the only way you gentlemen, we think, can get the proper picture of the Imperial Tobacco Company's operations. The Sales Company and the Leaf Company are included in that consolidated figure.

Q. Then you have not kept separate in that statement the profits made on the manufacture?—A. No, sir.

Q. And it is all reflected in this consolidated statement?—A. Yes.

By Mr. Factor:

Q. Have you got a statement of the total reserves of the subsidiary company, that is, the so called reserves?

Mr. SOMMERVILLE: No.

The WITNESS: On the statement, you will notice profit and loss account, balance as per account herewith $8,138,486.66, which is the same as shown by this statement $8,138,486.66.

Q. Yes.—A. What I mean is, they are all brought together for your convenience, sir. There is no undivided surplus in the Sales Company or the Leaf Company.

Q. In neither of them?—A. Neither one of them.

By the Chairman:

Q. Those are really departments of the parent company?—A. Absolutely. For internal management it seemed advisable to do that.

By Mr. Factor:

Q. But they are separate companies?—A. They are run as separate companies.

By Mr. Sommerville:

Q. But in the Leaf Company or in the Sales Company there is a special reserve set up for buildings, machinery, etc.?—A. Oh yes.

Q. And that is not the same reserve included in that reserve of the Imperial Tobacco Company's statement?—A. No, nor the assets; the assets are all separate.

Q. So that in the sales company which was organized in the year 1931—was it 1931?—A. Started in 1932.

Q. Commenced operations in 1932?—A. Yes.

Q. I see in the annual financial statement for December 31, 1933, that your real estate and buildings are shown at $490,085.07?—A. Yes.

Q. And your plant, machinery, automobiles, furniture and fittings at cost, $324,989.49?—A. Yes.

Q. That is about $814,000?—A. Yes.

Q. And against that, in the two years' operation, you have set up a reserve of $229,500?—A. Yes, they were transferred—whatever reserve applied to machinery and plant was transferred from the Imperial to the Leaf company

or the Sales company, either one. The reserve applicable to it was transferred to the company here.

By the Chairman:

Q. And deducted from the reserve in your main balance sheet?—A. Yes.

Mr. SOMMERVILLE: It would be reflected in that way.

The CHAIRMAN: No, it would be deducted.

By Mr. Sommerville:

Q. It was deducted, then?—A. Yes.

Q. From the large company?—A. Assets and reserves were both deducted from the parent company's figures.

Q. Now, with regard to the Leaf company, what happened?—A. The same thing applies.

Q. The same thing applies on the Leaf company?—A. Yes.

Q. So your real estate, buildings, plant and machinery are in at $988,000? —A. Yes.

Q. You have a reserve for buildings, machinery, etc., of $263,914?—A. Yes.

Q. The same thing applies there?—A. Yes.

By Mr. Kennedy (Peace River):

Q. Is that company owned outright by the Imperial?—A. Yes.

Q. There are no dividends paid?—A. Yes, there are dividends paid, but they are all included in that statement.

Q. In the consolidated statement?—A. Yes.

By Mr. Sommerville:

Q. Does that complete the circuit of your relationships with the companies in Canada that are owned or controlled by you? Is there any other company that you have?—A. None other than shown on that list.

By the Chairman:

Q. Does schedule "F" cover that?—A. I will see. I think so. Well, the Quebec Leaf Tobacco Company is owned by the B. Houde Company.

By Mr. Sommerville:

Q. Does that function in the same way with regard to the B. Houde Company as the Imperial Leaf functions with regard to you?—A. No, sir, they are an operating company; that is, in the sense that they sell this leaf tobacco in hands, that has been referred to.

Q. They sell the raw leaf in hands?—A. Yes.

Q. You are competing with yourself?—A. We would like to see if we could find out something about it, like to know what it is all about. It is mentioned here, Andrew Wilson and Punch are owned by the General Cigar Company; and the Dominion, Empire and American tobacco companies are dormant companies. I think except a couple that you have mentioned, Liggett & Myers Tobacco Company—

Q. Liggett & Myers?—A. And Dominion Tobacco Company.

Q. Liggett & Myers is mentioned here; you have $7,000?—A. I see a reference to G. Tamblyn Limited, one share of deferred stock, one dollar, but we have not got any voice in its management, don't get really any statements but public statements. I had overlooked that one dollar.

By Mr. Factor:

Q. You were to get out a statement of the amount realized from the operation of Tamblyns, the amount you have disposed of it for?—A. We will give you all we have on it. It has been a good many years ago, and I don't know what we have.

By Mr. Sommerville:

Q. Then, just to complete the picture of your relationships outside the country—you have given us the picture inside Canada—what are your relationships with the British American Tobacco Company? What is the connection?—A. Well, they are large holders of both our preferred and common stock. That is the only real relationship.

Mr. KENNEDY (*Winnipeg*): Can we settle that they are majority stockholders?

By Mr. Sommerville:

Q. Are they majority stockholders?—A. No, sir.

Mr. SOMMERVILLE: I presume that would hardly be necessary in a big company like that.

By Mr. Factor:

Q. Did you furnish Mr. Sommerville with the list of your shareholders?—A. Yes.

Mr. SOMMERVILLE: Yes, we have that.

By Mr. Sommerville:

Q. I think you told us that the British American control the Imperial Tobacco Company, don't they?—A. No, sir. I want to say right here that I have no connection whatsoever with the British American Tobacco Company. I have never been connected with them. I really know nothing about their affairs at all, except through the contact that we have with the few of their directors that we see.

Q. Are there any of their directors on your board?—A. Yes, two of them.

Q. There are two of their directors on your board?—A. Yes.

Q. And you say they have two officers in the United States?—A. Well, they have two directors in the United States.

Q. Are those two United States directors the directors that are on your board?—A. One of them is.

Q. One of them?—A. Yes.

Q. Have you not a direct connection with any of the companies which they own or control in the United States?—A. No.

Q. No connection?—A. No direct connection.

Q. No direct connection?—A. No.

Q. Well, your contact with them is very close, and that is why I want to give you an opportunity of just stating what the position was?—A. May I get your question?

Q. Perhaps you can tell me who is the representative of the British American in the United States?—A. Well, the director is Mr. George Cooper who is also a director on our board; and the other British American director on our board is Sir Hugo Cunliffe-Owen.

Q. He is president of the British American?—A. He is chairman of the British American Tobacco Company.

Q. He is chairman of the board of the British American Tobacco Company?—A. Yes.

Q. And what connection has he with you?—A. He is a director on our board.

Q. What connection has he with the Imperial Tobacco Company of Great Britain and Ireland?—A. None that I know of.

Q. You know nothing of that?—A. No.

Q. What is the connection between the British American, which has these companies all over the world, I think you told us— —A. Well, as I understand it.

Q. Well, you would know?—A. Only indirectly.

The CHAIRMAN: I think we all know that.

By Mr. Factor:

Q. Did you say that Sir Cunliffe-Owen has no connection with the Imperial Tobacco Company of Great Britain and Ireland?—A. Not to my knowledge.

Q. I may be wrong, but I assumed that he was director or chairman of the board of the Imperial of Great Britain?—A. Not to my knowledge.

Q. You don't know about it?—A. I think it is wrong.

By Mr. Sommerville:

Q. Who is president?—A. I don't know.

Q. Or chairman of the board?—A. I don't know, sir. It is a matter of public record, I think. I don't know him at all.

Q. Do you know the relations between the Imperial and the British American?

The CHAIRMAN: Which Imperial?

By Mr. Sommerville:

Q. The Imperial of Great Britain and Ireland?—A. Not of any real knowledge, beyond what I mentioned this morning.

Q. Are you aware of the fact that one-third of the Imperial of Great Britain and Ireland stock is held by the British American?—A. I have heard of such thing. I don't know to my knowledge. Oh, no, the reverse, a third of the British American held by the Imperial.

Q. A third of the British American held by the Imperial?—A. I have heard that. I don't know that. It was stated here, I think, in some other testimony, but I don't know anything about it.

Q. The Imperial of Great Britain is a very powerful organization over there, embracing a great many companies, is it not?—A. I think so.

Q. I presume you are aware that last year their profits in England were in excess of some $40,000,000?—A. I don't recall it.

Q. You never heard of it?—A. I have seen them, but I don't recall them.

Q. Well, there are some very large sums?—A. Yes.

Q. The British American profits were $27,000,000 or $30,000,000 last year, on their operations?—A. I could not name them. I don't recall them. It is a matter of record.

Q. How do you function with the Imperial of Great Britain?—A. We have no connection with the Imperial of Great Britain.

Q. No connection at all?—A. No, sir.

By Mr. Factor:

Q. There is another concern in Chatham, the British Leaf Tobacco Company; does that operate as a subsidiary of the Imperial Tobacco Company of Great Britain?—A. Gentlemen, as I previously stated, I have no contact with the British American Tobacco Company or the Imperial Tobacco Company of Great Britain, and I don't feel that I have any right to speak for them. I am perfectly frank. Anything I say is from hearsay. I have no knowledge, actual knowledge of their affairs.

Q. Have you any dealings with the British Leaf Tobacco Company of Chatham?—A. We have had dealings, yes, sir.

Q. You don't know the relation of the Imperial of Great Britain?—A. I think they are controlled by the Imperial of Great Britain. I have every reason to believe that, but I don't know it. I wish you to understand that.

By Mr. Sommerville:

Q. What is your relationship, if any, with the Canadian Tobacco Leaf Company?—A. None whatever, no connection, no financial connection.

Q. Has your company any financial interest in the Canadian Tobacco Leaf Company?—A. None whatever.

Q. Has the British American any financial interest in that company?—A. Not to my knowledge or belief.

Q. You are not aware of that?—A. No, sir.

Q. Have you any other connection or financial interest in any other leaf company in Canada?—A. No, sir.

By the Chairman:

Q. Before you leave that, the Imperial Tobacco Company of Canada do act as agents for the Imperial Tobacco Company of Great Britain in their purchases in Canada?—A. We have for two seasons, yes.

Q. That is merely an agency?—A. An accommodation which I think we have tried to explain in our brief.

By Mr. Sommerville:

Q. Now, Mr. Miller, will you tell me what has been the reduction in the price that you have paid to the producers for their raw leaf during each of the past five years?

The CHAIRMAN: Give us the page of the brief where you deal with that. Page 29, is it not?

Mr. FACTOR: Page 11, I think it is.

The WITNESS: No, that is crop prices, I think.

The CHAIRMAN: How about page 29; does that show it?

The WITNESS: Yes, I think that is it, page 29. Page 11 is the crop prices, average of the flue-cured crop year by year, as published by the various authorities I referred to. As you notice, in 1933, there has nothing been obtained, and we have estimated that on the basis of what we paid, or we just put our figure in there. On page 11 are the prices paid by the Imperial Tobacco Company for their tobacco.

By Mr. Factor:

Q. You mean page 29?—A. Yes, page 29.

By Mr. Sommerville:

Q. That is what is paid by the Imperial Tobacco Company for the tobaccos purchased by you in each year?—A. Yes, flue-cured.

Q. And the crop of 1927; perhaps you have the amount available that you can put opposite each of these items as they are dictated, the amount of your purchases?—A. They are stated there in another section on page 21—our purchases. We will start with 1927. For the whole crop of flue-cured tobacco, 33.9 cents; we purchased in 1927—

Q. What page is that?—A. Page 11—it shows the average.

Q. And according to this record it was 33.9 cents?—A. Yes.

Q. And the average price paid in that year was 34.7 cents?—A. Yes, sir.

Q. And the quantity purchased by you was 5,003,000 pounds green weight, which represented 80.3 per cent of the crop?—A. Of the entire crop, yes.

Q. And in 1928 the average price paid for the whole crop in Canada was 31 cents, and you paid—?—A. 32.3 cents; we purchased 7,049,000 pounds which was still 80.9 per cent of the crop. In 1930 the average on the crop was 32 cents; the price we paid was 31.1; and we purchased 8,890,000 pounds or 84.7 per cent of the crop. In 1930 the average price was 32 cents, we paid 31.9 cents, and the amount we purchased was 8,879,000 pounds or 71.7 per cent of the crop. In 1931 the average price of the whole crop was 20.5 cents; our average was 21.9, and we purchased 14,448,000 pounds, which was only 59 per cent of the crop. In 1932 the average all-over price was 16 cents; we paid 17.3 cents and we purchased 15,470,000 pounds, or 56 per cent of the crop. In 1933 as I said, that price is our price; I do not know what the whole price was—19.8 cents.

Q. That is the average price you paid?—A. Yes. We bought 11,961,000 pounds which was 53·2 per cent of the crop.

Q. Now, you will observe there is a very sharp variation in the price paid in the last three or four years for flue-cured tobacco; in 1930 you paid 31 cents, in 1931 you paid 21 cents, in 1932 you paid 17 cents and in 1933 you paid 19 cents. Who makes the market?—A. On this subject of leaf which we had understood was one of the prime points in connection with your investigation I would like to suggest sir that this whole brief, primarily the first two sections of it at any rate, is on that subject. It is a difficult subject to explain. I certainly do not want to take up the time of the committee unnecessarily, but we put a lot of thought in trying to put forward these questions, and it would be most difficult to answer other than by reading the vast majority of the matter that is there, covering particularly the various charges that have been put against us in the previous testimony; and I was wondering if maybe you did not feel that we might at this juncture read that.

Q. I thought perhaps that question might be answered rather simply; that as you are the largest buyers, you fix the price that is paid?—A. We fix the price that we pay.

Q. We will put it that way, you fix the price that you paid; and nobody buys until you have started off to buy, is not that the fact?—A. Well, yes, of course,—I believe that has been the custom, yes, sir.

Q. And that has been the practice over a period of years, they wait for the material to buy?—A. Might I not read.

The CHAIRMAN: You answer the question, Mr. Miller, in your own way. The question is asked of you and we want to give you full latitude in answering the question.

The WITNESS: Thank you, sir. Now, the question of opening the market —page 35, might I read that.

The CHAIRMAN: Yes.

OPENING THE MARKET

For the sake of brevity I shall not quote even part of all that has been said or attempted to be construed from the dates on which the Imperial Tobacco Company made its first purchases of respective crops of flue-cured tobacco. I do, however, flatly deny any attempt or desire to dominate the market or that any action has been taken by the Imperial Tobacco Company to intentionally, or otherwise, demoralize the producers, but in order to remove any further grounds for such absurd and ridiculous inferences and charges as have been laid to the Imperial Tobacco Company of Canada, Limited, I am authorized to state that we shall be pleased to meet all buyers for the purpose of determining a date on which all buyers will effect their first purchases.

However, I should point out at this time that if absurd and ridiculous inferences have been adduced to the buyers when they have never met to determine any concerted action, that from the suggested buyers' meeting for the purpose of determining the date of purchase there may arise in the minds of the producers, or others actuated by malicious motives, a suggestion that at such meeting of buyers to determine the date of opening, the buyers at that time fixed and determine the prices to be paid, and I take particular pains to direct to your attention the probable consequences that may arise from such a meeting and to point out that while we do not propose that this meeting be held, we will however agree to attend and participate in such a meeting for the purpose of determining the date of opening only, providing that this committee and others who find fault with the present practice, assume the responsibility of recommending to the buyers that they adopt such a practice.

While dealing with the subject "Opening the Market," I desire to say, for the benefit of the uninformed, that leaf tobacco is not a perishable commodity such as peaches, pears, strawberries, etc., that must be disposed of within a very short time following their being offered on the market. The fact of the matter is that the Imperial Tobacco Company contracts for the purchase of practically all of its Canadian flue-cured tobacco within 45 days and the tobacco so purchased remains in the hands of the producer in precisely the same form as that when purchased until called for delivery by the purchaser. The purchaser is only able to take delivery in accordance with his capacity to handle the same, with the result that, while we may complete practically all of our purchasing within a period of less than 45 days, the fact remains that we take delivery of that tobacco over a period of approximately four months.

Q. Now, that is interesting, Mr. Miller, but it does not answer my question; who opens the market?—A. I think we have; I think that has been the practice with a few exceptions; if you mean by opening the market the person who first places an order or names a price, it has been Imperial Tobacco Company.

Q. And for many years, up to 1931 and I think including that year, you brought from 75 to 80 per cent of the crop? -A. For some years back, not in the last three years though.

Q. I appreciate that?—A. Yes.

Q. And up to that time there had apparently been a steady but slow increase in the acreage and in the quantity of flue-cured produced? -A. Let me refer to page 5, on the subject of production of Ontario flue-cured tobacco; maybe you would like to have me read the table there.

Q. Up to 1930, from 1924 to 1930 there had been a gradual increase in the amount of crop?—A. Up to 1928 I would think. Let me read that:

> I particularly direct your attention to the production of flue-cured tobacco as set out in the foregoing "Table 1," showing nine million pounds in 1928, ten million in 1929, twelve million in 1930, twenty-four million in 1931 and twenty-seven million in 1932; and while the production figures for the year 1933 used in the above Table are those of the Department of Trade and Commerce, it is, however, the Imperial Tobacco Company's opinion that there were 25,682,800 pounds of flue-cured tobacco produced in 1933.

Q. And for some years prior to 1932, you have been paying an average price of upwards of 35 cents a pound, and taking 80 per cent of whatever crop was produced?—A. I do not think that it was that high. No sir, page 29 shows the highest price was 34 cents, 32 cents and 31 cents.

Q. 30 cents or better?—A. Yes.

Q. As a matter of fact the top price was around 40 cents, and the average scaled down to 34 cents and 35 cents, I understand?—A. I do not know, sir.

Q. You did not know that. Well, you have opened the market each year and bought the quantities that you have suggested; but in the year 1931 a change took place and instead of opening the market at 40 cents, an average of 35 to 40 cents, you opened the market at a top price of 30 cents; do you remember that?—A. Yes, I remember something like that.

Q. And very quickly your average dropped to 20 cents in the year 1931; so you remember that?—A. I do, but I do not recall the particulars.

The CHAIRMAN: The price is indicated here in the statement, an average of 21.9.

By Mr. Sommerville:

Q. I am talking of the opening in 1931. From the evidence given us, the opening was 30 cents, and within a week you were only offering 20 cents for top product. Now, will you tell us why there was a drop of one-third within five or six days?—A. Yes. Quoting from page 29:

> Dealing with prices paid in the years 1931, 1932 and 1933, the Imperial Company, recognizing that the production of these crops substantially exceeded both domestic and export requirements and that the price must be ranged down to a figure nearer to a comparable price for Empire Leaf; and contemplating the possibility of there being a substantial quantity of such leaf tobacco dumped on the market with no buyers, resulting in leaf in large quantities being made available to competitors at distress prices which they, in turn could offer to the consumer at so reduced a price as to entirely disorganize the marketing of manufactured tobacco; and contemplating the possibilities of a vast quantity of Canadian leaf being offered at distress prices so discouraging the cultivators as to result in subsequent production inadequate for domestic requirements, the Imperial Tobacco Company effected purchases at prices which were still higher than comparable Empire leaf, but which it was hoped would not result in important quantities of Canadian leaf being sold at distress prices and which it is felt returned to the producer a fair profit on his investment.

Q. But that does not answer my question.—A. I do not know that it does.

Q. The question was, knowing the acreage, knowing the production, having your inspectors' reports in your books as to the exact condition of that crop, you started out and offered on Monday morning, on the opening day of your market, 30 cents as a top price. Now, why did you drop it within six days to 20 cents for the top price for the same product, bought from John Jones for 30 cents, and then bought from Bill Smith within six days, the same product, at 20 cents, when you were the dominating factor in the market, why?—A. It could not have been worth that sum.

Q. Well, was it worth it for the same commodity? I am talking about top prices, for top grades. Why was it that in the second week you only paid 20 cents for the top product?—A. Is not that covered, sir, in the Sutherland report?

Q. Never mind the Sutherland report, I am asking you a particular question. —A. I cannot answer your question.

Q. Let me ask you this then: Was it a fact that in the purchase of the crop of 1931 you got certain definite information, or directions, from New York as to the price to be paid the second week?—A. Not to my knowledge, sir.

Q. Well, did you get any information or instructions from a Mr. Harrison? —A. Not to my knowledge, sir.

Q. Are you sure that there was no direct communication with Mr. Harrison the very first week after that purchase was being made, and the direct orders given from New York "Cut it down to 20"; that is my information?—A. Well, I have no recollection or knowledge of it. I do not recall any such affair.

Q. Well, you knew the product, you knew what your needs were, you knew the quality, you knew the quantity; can you tell this committee why you, dominating that market, took 35 per cent off those farmers for top price within five days? Did you find them too soft the first week?—A. I cannot answer your question, sir. Mr. Buell, First Vice-President in charge of our leaf department, has more intimate knowledge of the handling of the leaf department. I have not, and I cannot explain that question to answer it definitely.

Q. Well, you know that for years previous to that there never had been any trouble?—A. Yes.

Q. But you do know that the purchase of the crop of 1931 did create a very, very bad condition among the growers, and also a panic; you know that much, Mr. Miller?—A. I know there was some dissatisfaction, yes sir.

Q. Well, let us put it "dissatisfaction." I said "panic"; that more nearly describes it. Let me ask you this, Mr. Miller: Was it in the year 1931 that Mr. Lea first appeared upon the scene in the purchase of that crop?—A. Yes, sir.

Q. Did the appearance of Mr. Lea from Kentucky, who had experience with the negro growers of the south, did that have some effect upon his attitude towards the farmers of Canada?—A. I do not think so, sir; no sir.

Q. You think not?—A. No, sir.

Q. Had he ever bought anything by the barn method before?—A. Yes, sir.

Q. He had?—A. Yes, sir.

Q. Is it not a fact that he was in the habit of buying on the auction floor?—A. He had done both, sir.

Q. I thought the barn method did not apply in the United States?—A. It does, sir. It has, to a general extent, at places.

Q. Well, did the introduction of Mr. Lea into the purchasing program of 1931 make a difference with the growers?—A. I do not think so, nor do I believe so.

Q. You think not?—A. No, sir.

Q. Did you have any complaints that he was not giving them a square deal?—A. Not to my knowledge.

Q. Well, what were the complaints that you had?—A. Well, I haven't any recollection of any specific complaints, except my recollection, if that was the time, that we heard through some department at Ottawa that they had been having complaints.

Q. Yes. As a matter of fact, Mr. Miller, is it not a fact that the growers were in such a panic that they appealed to governments to help them against this new buyer for the Imperial Tobacco Company?—A. Well, I never realized it, sir.

Q. Well, you are realizing it now. At any rate, can you tell this committee why, in the name of God, you dropped the price from 30 to 20 cents within five days when these men had been growing for you for years, and you had encouraged them to grow for years and had taken everything they grew to the extent of 80 per cent of the whole crop? Will you tell us why, because if you have got an explanation this is the place to make it, Mr. Miller.—A. As I have said, Mr. Sommerville, I have got an explanation to make of our whole attitude with respect to the buying of tobacco in Canada. This whole brief tries to cover that situation, sir.

Q. You can deal with that later, but I am asking you now, with the full knowledge of that whole situation in 1931 that you had canvassed completely, and you had a note on probably every acre of tobacco grown in that country, can you tell us why, with that full knowledge, you started out at a high of 30

cents and dropped it to 20 cents in a few days, for the top product?—A. Mr. Buell advises that the top prices to start out with that year were 30 cents.

Q. That is what I said, and within one week you dropped it to 20 cents?—A. For top price?

Q. Yes. Mr. Miller, let me give you a little information: on Monday morning of the first week you started out at 30 cents and you bought for several days at 30 cents. Then your Mr. Lea left for Montreal, and came back with certain instructions, and on Monday morning went out and created consternation amongst those farmers by offering 20 cents for top price. Why, and what instructions did he get at Montreal?—A. There was just too much tobacco.

Q. Not in 1931.—A. In 1931.

Q. Oh no, I am talking about 1931.—A. There was twice as much as there was in the previous year.

Q. Oh yes, but you took 75 per cent of it.—A. What were our purchases, though, of that crop.

Q. Well, you took 60 per cent of it I think. But, Mr. Miller, coming back to the point, you knew how much tobacco was there, and the day you opened the market you had known for months, you had counted the fields, and you knew the exact condition of that crop. Now, why did you start out at 30 and then drop to 20 for the bulk of your purchases because you must have made the bulk of your purchases at 20 cents or lower to get down to that price.—A. To get down to an average price.

Q. Of 20 cents.—A. The average price for 1931 was 21·9. The price paid by others was 18·5.

Q. Yes. I suggest to you, Mr. Miller, that that meant a drop of 9 points from the top to the average, that never for years before had there ever been such a discrepancy between your average and your top price in any purchases that you made. Now, you know that. Why was that?—A. Well, as I remember it, it was the biggest year's crop that we had ever had.

Q. But you knew that when you started out with a top of 30 cents? Why were you paying 30 cents as the top price, and then on the following Monday morning dropping it to 20? That is what the farmers of this country are asking, and I am asking you, Mr. Miller, as representing this dominating factor in the market, to explain it.—A. Well, sir, except for the fact that it was a big quantity of tobacco and we must have thought that it was too high. I cannot go back now and remember the exact details.

Q. You must have thought; where did you get the second thought from, New York?—A. I do not recall anything coming from New York.

Q. No. Did you have any communication with Mr. Harrison about that crop of 1931?—A. I had no communication with him, I do not recall any.

Q. Surely you are in touch with all of your group, Mr. Miller?—A. In touch through Mr. Buell.

Q. Certainly, and you certainly would discuss your needs before your buying program was begun, and the price that you would pay?—A. In the first place, I might say that at that time I was not president of the Imperial Tobacco Company.

Q. In 1931?—A. No.

Q. Who was president?—A. Mr. D. C. Patterson.

Q. And what was your position then?—A. One of the vice-presidents.

Q. Well, we are asking you now—A. I know, but you were trying to infer—

Q. I do not infer anything Mr. Miller. I want to know from a responsible man in the Imperial Tobacco Company why this change of policy with the farmers of Ontario.

By the Chairman:

Q. What was your position as vice-president, Mr. Miller?—A. In charge of the selling end of it, Mr. Stevens.

Q. Well, Mr. Miller, I must say that I think Mr. Sommerville's question is an exceedingly important and pertinent one, and what puzzles me, frankly, is in a matter of such grave and major importance as this, in the face of a 30 per cent drop in the price paid within a week, why the heads of the Imperial Tobacco Company from its president down to its chief buyer would not have known precisely the reasons why that was done; I confess, frankly, it does not appeal to me as a possibility that that could have happened without the heads of the company knowing.—A. Well, I am not trying to say that we did not discuss it, but you are asking me to go back to 1931.

Mr. Sommerville: The year of the panic, the first panic.

By the Chairman:

Q. It is the year, Mr. Miller, when there is a sharp change in policy. And furthermore, you will not deny this, I don't think—it is known to the committee at least that all large buyers, particularly your own company, carefully examine the crop during its growing period, so that you have scientific knowledge of precisely what the crop is?—A. Yes, sir.

Q. So that when it comes to the day of opening you know quantities, the general amount of each, and the class of tobacco that is being produced, the state of the crop, and you, of course, know your own requirements and your own stocks, and I must say I think Mr. Sommerville's question is one that, so far as I am concerned as Chairman of the committee, I will expect to be answered in a very definite way and a very clear explanation given.—A. Well, it is not that I am not trying to answer you, Mr. Chairman, or Mr. Sommerville.

Q. Well, Mr. Miller, you have certainly throughout the day exhibited a desire and an effort to answer all the questions that have been asked, but I do not know of anything that is as important as this one question, and I must say we will expect, we must expect a definite answer to it.—A. Well, the point is, as to why the top price of—

By Mr. Sommerville:

Q. Why you put the top price for top crop from 30 cents to 20 cents within one week when you knew the whole crop condition?—A. Mr. Buell suggests that in a week's time we had bought up most of the best crops.

Q. If that is so then you bought it at a good deal less than 20 cents.—A. We must have bought later at cheaper prices.

The Chairman: Arithmetically, Mr. Buell's answer does not sound reasonable. You see your average price, Mr. Miller, is 21 cents, and if you bought in the first week a certain quantity at 30 cents you must have bought after that at much less than 20 cents to arrive at an average of 21. I suggest to you that Mr. Buell's answer is not an answer. Mr. Buell may have under his hand possibly the prices and quantities bought during that first week.

Mr. Sommerville: You have got your daily purchases?

By the Chairman:

Q. Mr. Miller, have you your daily purchases for the first week of the crop of 1931?—A. We have not got that with us. We can get it and produce it for you.

Q. Surely Mr. Buell, your head buyer, can, from memory, give to you fairly well the answer for that.

By Mr. Sommerville:

Q. Could you, by telephone, have it sent up to-night so that we might have it in the morning?—A. We will try to, sir.

Q. Now then, if you do not know— A. For how long?

Q. I want your daily purchases for the 1931 crop. Now then, you will see the importance of knowing the answer to that question, because you realize that no competitor can go out and pay more money than you pay, can they?—A. Well—

Q. They would be at a disadvantage in competing with you, would they not?—A. Yes, sir.

Q. So that when you drop the price everybody else has to drop the price, and that affects every grower in the country so that it is an important thing, is it not, Mr. Miller?—A. Yes, sir.

Q. In other words, you dictate the market, not that you have any sinister object in doing it, but the very existence of such a powerful buyer taking such a large proportion of the crop dominates the market and fixes the price. I do not think there is any doubt about that, is there, Mr. Miller?—A. Broadly speaking, I think that is correct.

Q. Now, Mr. Miller, will you tell me, in that 1931 crop what was the nature of the complaints that were made about the purchase, the price paid, and what was done to the growers?—A. To be perfectly truthful, I have only a hazy recollection and can only speak because of your refreshing my memory of that crop and the drop that you refer to in the price, which must be correct from what you say; I haven't any clear recollection of anything specific or anything general at all; it is only from what you have said. I know we have had at times complaints of low prices.

Q. Well, who directs the policy of purchasing from your office?—A. From our office?

Q. Yes.—A. Mr. Buell in consultation with the executive committee of the company.

Q. With the rest of you?—A. Yes, sir.

Q. So that it is executive action taken in purchasing the crop?—A. Yes, sir.

Q. And Mr. Buell carries out the policy that is thus laid down?—A. Yes, sir.

Q. Now, was there any meeting of that executive to change the policy during the first week of your buying on the market, or was it entirely left to Mr. Buell?—A. I cannot answer that, sir.

Q. I will tell you why. It has come to me from a dozen sources, that when Mr. Lea came back from Montreal, or had his messages from Montreal, he went into the hotel at Tillsonburg and he said "We have got to drive this market down, those are the orders and they have got to be obeyed." Did you know of that?—A. I never heard of it, sir.

Q. And that to show them how it could be done, he went out himself, bought crops, came in with the sample of it, and would exhibit the samples in the hotel lobby to the public, if you please, as well as to the buyers, and say, "what do you think of that, what is it worth?" and the buyers would say "24 cents." "Well," he said, "I just bought that from a fellow who is putting himself through school at 14 cents and he took his medicine like a man."—A. I never heard of that.

Q. Is that the kind of buying policy that created the trouble in 1931?—A. I never heard of such a thing.

Q. You never heard of such a thing?—A. No sir, never heard of it.

Q. Did you hear of the wives of the farmers who cried in his presence at the way he was treating the crop that he was buying, and begged of him not to treat them that way?—A. No, sir.

Q. Never did?—A. No, sir.

Q. Did you hear of the occasions when he begged of the women to go into the house, that he could not carry on because of their weeping at the price that he was offering for that crop?—A. No, sir.

Q. Well then, you have not heard very much.—A. No, sir, not along that line.

Q. At any rate, Mr. Miller, there was very considerable commotion, shall we say, after the buying months of 1931. Will you tell me why there should be? —A. Well, sir, I understood we were going to get you, for one thing, the prices that we paid day by day, which certainly would be an indication of just what our policy must have been at that time.

Q. All right, we will leave it at that. We will deal with the 1932 crop to-morrow.

Mr. Factor: We will complete this to-morrow.

The Chairman: Yes, it is six o'clock. We will adjourn till to-morrow morning at 11 o'clock.

The Committee adjourned at 6 p.m., to meet again Friday, 4th May, 1934, at 11 a.m.

HOUSE OF COMMONS, ROOM 268,
May 4, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., the Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: The minutes of yesterday merely recite the witnesses heard and certain exhibits filed, no other matters. I declare the minutes approved.

GRAY MILLER, examination resumed.

By Mr. Sommerville:

Q. Mr. Miller, last evening we left off at that point where you were being asked to explain why the sudden drop in the price of raw leaf purchases in the purchasing season of 1931, and you were going to give us a reason this morning. What reason have you for that drop from 30 cents top to 20 cents within a week, and for the drop that took place that resulted in your buying that whole crop on an average, on your own statement, of 22 cents?—A. Mr. Chairman, before proceeding this morning I wish to state that, in my judgment, counsel for the committee was more or less unfair to me in his method of examining me in reference to the purchase of the 1931 crop. Throughout these entire proceedings, as you yourself openly observed, I have been absolutely frank and truthful in all my statements, have made complete disclosures in reference to all matters of which I have definite knowledge, and in addition have spent considerable time and effort in endeavouring to bring about a basic working agreement between ourselves, the other manufacturers, and the producer.

I was utterly astounded at the charges against the Imperial Tobacco Company of Canada, Limited, involved in the counsel's examination, and felt confident that they were not in accordance with the facts.

During the night I have made a very complete investigation of all the circumstances surrounding the purchase of the 1931 crop, and have obtained all figures covering our daily purchases during that crop buying season. I must confess I am more or less relieved to find that conditions were not as stated by counsel, but on the contrary are very satisfying to me, and I hope will be equally satisfying to the committee in relation to this aspect of the matter. You have asked me to submit this morning an explanation of this condition.

In the first place, we are dealing only with the purchases of the Imperial Tobacco Company of Canada, Limited, and not with the purchase of the total crop.

It would appear, from the manner in which you dealt yesterday with the relation of the top price to the average, that you are under the impression that there should be some relation between the top price and the average from one year to another. If you have any such impression, then I hasten to assure you that there are important factors involved—which you have apparently

overlooked—which nullify any such construction as you now attempt to place on the relation of the maximum price to the general average.

If, for example, the crop of leaf tobacco one year with another were precisely the same as to quantity as to quality, and as to the proportion of the various grades to the total crop; and if there were precisely the same demand for precisely the same quantity, one year with another, then there would probably be some relation in the ratio of the top price to the average year by year. However, the tobacco crops from year to year are not as uniform, one with another, as an annual relation of top price to average price would require.

It is quite apparent that the quantity of the crop has fluctuated violently, and has increased entirely out of proportion to any apparent demand, which is made abundantly clear in the brief which I endeavoured to submit for your consideration yesterday.

The average quality of the crop for one year will vary from the average quality of the crop for another year; and the available proportion of top grades, medium, or low grades will likewise vary from year to year.

In proceeding to buy, the manufacturer first determines his requirements, and then estimating the quantities of various grades available in the crop fixes the average price he is prepared to pay, and from this average determines a high price which is based upon his estimate of the available volume of grades required.

It, therefore, follows that the relation of the top price to the average is contingent entirely upon the conditions prevailing in relation to the particular crop under consideration.

Amongst your charges of yesterday, you stated that in the year 1931 we opened with a top price of 30 cents and within six days reduced our top price to 20 cents. That is not in accordance with the facts. We did not reduce our top price in the year 1931, or for that matter in any other year. We fix a top price that we are prepared to pay for tobacco, and continue to pay that top price for all crops of a quality equal to those for which we determine to pay top prices.

When beginning to buy a crop, we usually purchase the better quality first and then proceed to pick up crops of the lesser qualities. It does not follow, however, that in the first week or ten days we have purchased all of the top grades of tobacco, as can be proved from our effecting purchases at varying prices from time to time throughout the period of purchasing, and I take strenuous exception to any charge that we have reduced our top price. I submit that no such reduction has taken place, and that we have always maintained a scale of payment, comparable to the quality of tobacco that we purchase.

And I make a positive assertion at this time, that in our purchase of the 1931 crop, to which you refer, when we paid 20 cents a pound for tobacco it was 20 cent quality, and that if it had been 30 cent quality we would have paid 30 cents.

Having discussed with Mr. Buell and Mr. Lea, and investigating all records within the short time at our disposal, I would like to give you as near as possible a true picture of what happened surrounding our purchasing the 1931 crop of flue-cured tobacco.

By the Chairman:

Q. Did you get those sheets that we suggested for the first two or three weeks?—A. Yes, sir, the whole crop day by day.

We have endeavoured to point out in our brief that the prices for tobacco in 1929 and 1930, which were higher than in our judgment was wise and for the good of the industry as the growers were attempting—

By Mr. Sommerville:

Q. The prices you paid were higher than in your judgment was wise and for the good of the industry?—A. Taking into account the whole picture.

Q. Do not let me misunderstand you, Mr. Miller. You do not mean that the price paid was too good for the manufacturer?—A. I am talking of the industry as a whole.

Q. What do you mean by the industry?—A. The tobacco industry.

Q. Manufacturer plus grower?—A. Plus consumer, plus everybody.

Q. Then would you say that it was good for the grower to get a lower price in 1931?—A. Would you please let me finish, sir.

Q. I would just like that explanation as you go along, I do not like to miss anything.

Mr. FACTOR: He said, the price paid in other years was not wise or for the good of the industry.

The CHAIRMAN: That would leave a wrong impression on one's mind. I think it would be better if you clarified that, Mr. Miller. I would take it to mean that it was not good for the growers. What you are referring to is the price paid for green leaf?

The WITNESS: Yes, sir.

By the Chairman:

Q. And you say, that in your opinion, the price paid in 1929 and 1930 was not good for the industry?—A. Yes, sir.

Q. I would take that to mean, that you meant it was not good for those who were producing green leaf?—A. Well, in the long run we do think so.

Mr. EDWARDS: Might I suggest, Mr. Chairman, I have read this brief over pretty carefully and I think that pretty well explains Mr. Miller's statement.

The CHAIRMAN: What?

Mr. EDWARDS: The industry as a whole.

The CHAIRMAN: We want to be perfectly clear on that.

Mr. SOMMERVILLE: All right, Mr. Miller.

The WITNESS: We have endeavoured to point out in our brief, that the prices for tobacco in 1929 and 1930, which were higher than in our judgment was wise and for the good of the industry as the growers were attempting to increase the growing of tobacco beyond local demands, and against our advice. Therefore, it was necessary, in our judgment, that their prices should be somewhat comparable with the prices of World Empire grown tobaccos. And, in this connection, Mr. Buell and perhaps others discussed from time to time with Mr. R. C. Harrison, Director in charge of the Leaf Department of the British American Tobacco Company, this whole subject, and he did feel that the prices were higher than they should be.

I would like to make it plain, that neither Mr. Harrison nor anyone else connected with the British American Tobacco Company, nor anyone outside the Imperial Tobacco Company of Canada, at any time designated prices that we should pay for tobacco in Canada; and, beyond Mr. Harrison giving his general opinion on prices, there was no other influence that he had on the situation.

By Mr. Sommerville:

Q. What is Mr. Harrison's position?—A. Director in charge of the Leaf Department of the British American Tobacco Company.

Q. And did he give that information daily?—A. No, sir.

Q. On telephone calls from Tillsonburg?—A. No, sir.

Q. Did anyone of your officials communicate with Mr. Harrison daily?—A. Would you mind letting me finish this, please.

Q. You are saying that no instructions were given. I am just asking if there was daily communication, long distance telephone calls from Tillsonburg to Mr. Harrison in New York?—A. No.

Q. From the Arlington Hotel? Mr. Lea would be able to tell.—A. There was not, I don't think.

Q. I do not want you to answer that offhand, because my instructions are quite to the contrary.—A. No, sir.

Q. Not in 1931?—A. No, sir.

By Mr. Ilsley:

Q. When was this conference between Mr. Buell and Mr. Harrison?—A. I am only speaking generally. The whole subject had been discussed at various times.

Q. It does not mean anything if it was between 1925 and 1928. Was it in the fall of 1931 that conference or conferences took place between Mr. Buell and Mr. Harrison? That is what the committee would like to know.—A. Conferences have taken place every year.

Q. Conferences have taken place every year between your company and the British American Tobacco Company with reference to price?—A. No, not necessarily that.

The CHAIRMAN: Perhaps we might let Mr. Miller finish his statement and then we can examine him in regard to the facts indicated.

Mr. FACTOR: We are liable to forget some points.

Mr. ILSLEY: I agree that, if at all possible, we should not interrupt the witness, but when he says that a conference or conferences took place it does not mean a thing unless he states when the conference or conferences took place.

Mr. EDWARDS: I think it would be much better if we let Mr. Miller proceed with his statement and then we can put questions afterwards.

The CHAIRMAN: Let me put it this way: We will request, as far as possible, that the witness proceed with his statement, but I am certainly not going to muzzle the committee, or any member, from asking a question if he so wishes, but I just draw the attention of the members to the desirability of letting him finish his statement.

Mr. SOMMERVILLE: All right, Mr. Miller.

The WITNESS: I would like to read that paragraph over again:

I would like to make it plain that neither Mr. Harrison nor anyone else connected with the British American Tobacco Company, nor anyone outside the Imperial Tobacco Company of Canada, at any time designated prices that we should pay for tobacco in Canada.

Mr. FACTOR: That is a plain statement in itself, but it does not answer the question that we are trying to arrive at.

The CHAIRMAN: We will examine Mr. Miller on that later, Mr. Factor.

The WITNESS: And beyond Mr. Harrison giving his general opinion on prices, there was no other influence that he had on the situation.

Mr. F. R. Gregory was the senior officer in charge of the company's leaf buying operations in the year 1931. Mr. Lea was junior to Mr. Gregory and, as such, did not direct the operations of the company in buying this crop.

Mr. Gregory was given instructions as to the buying of the 1931 crop, with 30 cents as a maximum price, and the average price to be below 24 cents.

You will note, from statement of daily purchases submitted, that 36½ per cent of our total purchases was made the first day, Tuesday, the 6th October,

at an average price of ·2765 cents; and Mr. Buell felt, upon getting this report, that Mr. Gregory was not following out his instructions in line with arriving at the above general average, and so Mr. Buell telephoned Mr. Gregory reminding him, that in order to bring his general average under 24 cents, he would be compelled to buy some medium and common tobaccos to arrive at an average below 24 cents.

Mr. Lea came to Montreal that week-end and discussed the situation with Mr. Buell.

By Mr. Sommerville:

Q. Mr. Lea?—A. Yes, sir.

Q. Not Mr. Gregory who was in charge of operations?—A. No, sir.

Q. His junior—A. And Mr. Buell's assistant, yes sir.

Mr. Lea came to Montreal that week-end and discussed the situation with Mr. Buell and went back to Delhi with confirmation of these instructions from Mr. Buel to Mr. Gregory.

The fact of the matter is, that the total of purchases of flue-cured tobacco in Norfolk district for 1931 crop averaged ·2297 cents per pound.

I was positively astounded by your charges in relation to statements you claim were made by Mr. Lea in the hotel at Tillsonburg. I have carefully questioned Mr. Lea on this subject, and he tells me that there is no foundation for any such charges beyond Mr. Lea giving to Mr. Gregory Mr. Buell's instructions in Mr. Lea's bedroom in the Tillsonburg hotel.

I would like to say at this time, that Mr. Lea has had a wide experience in purchasing tobacco and comes to us very highly recommended. From all reports coming to our attention, all of the producers have spoken very highly of Mr. Lea's operations in purchasing tobacco in the flue-cured district in Ontario.

In closing, it should be noted, from the statement which I handed to you, that 36½ per cent of our total purchases were made on the first day; that 63 per cent of our total purchases were contracted in the first week; and that over 90 per cent of our purchases were contracted by the end of the second week.

Q. Mr. Miller, you have the daily purchases by prices, have you?—A. Yes, sir.

Q. Oh, this is lumped on the average for each day, these are lumped each day, the average for the day?—A. Yes.

Q. I thought you were going to give us the prices at which each of your crops were purchased?—A. I understand that is what you wanted.

Q. We wanted a statement so that we would then be able to tell or see the descent from top grades of 30 cents.—A. That shows it, does it not?

Q. This is averaged?—A. I understood, sir, that is what you wanted.

Q. At any rate, this is a fact, that on Tuesday, October 6, the market was opened and the average price paid that day was ·2765; that was the average? —A. Yes, sir.

By Mr. Young:

Q. For all grades?—A. Yes, sir.

By Mr. Sommerville:

Q. All purchases?—A. Yes, sir.

Q. And that day there was purchased 3,374,400 pounds; it does not show how many were bought at 28 cents, or 31 cents, or 22 cents.

Mr. HEAPS: How is the average arrived at?

Mr. SOMMERVILLE: Perhaps Mr. Miller can tell you.

The WITNESS: It is the total of all contracts that were made on that day; the contract is extended, quantity and price to arrive at a total amount, and the amounts are added up and the averages produced from that.

By Mr. Sommerville:

Q. That is, the total amount of tobacco it set against the total amount of money paid out?—A. Yes, sir.

Q. And that provides the average for the day?—A. Yes, sir.

By Mr. Factor:

Q. It may include different grades?—A. It does, sir.

By Mr. Sommerville:

Q. And, Mr. Miller, I observe that Tuesday it was 27?—A. Yes, sir.

Q. Wednesday it was 26?—A. Yes, sir.

Q. Thursday, it was 22?—A. Yes, sir.

Q. Friday it was 20?—A. Yes, sir.

Q. Saturday it was 19?—A. Yes sir.

Q. And after Mr. Lea's return from Montreal, it was 18 on Monday?—A. Yes.

Q. Then on Tuesday it was 19?—A. Yes.

Q. Then on Wednesday it was 16?—A. Yes, sir.

Q. And on Thursday it was 16?—A. Yes, sir.

Q. And Friday it was 17?—A. Yes, sir.

Q. And on Saturday it was 17?—A. Yes, sir.

Q. And then on the following Tuesday it was 15?—A. Yes, sir.

Q. And the day before, Monday, it was 16?—A. Yes, sir.

Q. And then on Wednesday it was 15?—A. Practically 16.

Q. The 21st?—A. Yes, that is right.

Q. So that from the 6th October to the 21st of October you have these variations in the averages paid?—A. Yes, sir.

Q. Now then, I observe that no further buying was done from the 21st of October until the 8th of November?—A. That is right, sir.

Q. And in the meantime may I draw your attention to what happened: The farmers of the district, aroused by the prices paid, approached the Ontario government for assistance; you know that?—A. No, sir, I do not.

Q. Well, I am told that is a fact?—A. All right.

Q. And that when that became known, that there would be assistance given by the Ontario government, I observe that on November 8th, when the buying began again, the average price jumped from ·1599 to 23 cents?—A. May I consult Mr. Buell. I think you must not have the right facts in regard to the Ontario government. I think you must be confusing that with some later crop prices.

Q. There was a very definite arrangement in regard to the 1932 crop. What was that promise?—A. What was the promise, if I may ask?

Q. That there would be assistance given to the growers so that they might hold their crops against this constant depreciation in price?—A. We have no knowledge of that sir.

By Mr. Factor:

Q. Did you have any communication from the Ontario government?—A. Not to my knowledge, no sir.

By Mr. Sommerville:

Q. How do you account, Mr. Miller, for the jump in price from the 21st October to 23 cents when you started in to buy again on the 8th November?—

A. Well, I have tried to explain as well as I can. I think we have said before that we buy the best crops that we can first, the major part of the top crops, anyhow, and later on we come across tobacco that is worth more money, and we buy that. That is just a statement I make, sir, I do not know.

Q. Do you want this committee to believe, Mr. Miller, that from the 8th October when you were paying 22 cents, to the 21st October, when you were paying 15 cents, you did not run across those crops?—A. No, I did not make that statement at all. These are the averages of the day. I do not know what the exact quantity was. It might have been at a much higher price. There must have been some at a higher price on each of those days, and some at a lower.

Q. I am asking your explanation for that variation. There is a 50 per cent increase in your own average for the amount sold?—A. Do you not think quantities have some bearing on that, sir? Look at the quantities at the lower price.

Q. All right, we will look at the quantities; 35,000 pounds at 23 cents. That was your buy for that day?—A. Yes.

Q. Then on the next day you got 65,000 pounds at 16 cents?—A. 16·89 cents, yes.

Q. The next day you obtained 124,000 pounds and the price went up to 23·23?—A. Yes.

Q. Why the variation?—A. Because of the quality of tobacco, in our judgment. Excuse me; I tried to make that plain.

The CHAIRMAN: It is a little unfortunate that you could not get during the night the information we asked for yesterday, that is, the actual purchases in that period, because that is the whole story. For instance, on the same quality of tobacco you pay one price on Monday and another price very much below on Thursday or Friday. Now, we are entitled to know the policy which prompted the Imperial Tobacco Company to make that change.

The WITNESS: Mr. Chairman, I have endeavoured to my best efforts to try to give you what I thought you wanted sir, as to the individual contracts.

The CHAIRMAN: May I suggest this: Your Mr. Buell is here. He knows those things, exactly. He has those things in a book; let him go down to one of our offices—I will send a messenger with him—and phone Montreal, and your stenographer or secretary or some one can give it to him in five minutes, I am certain.

Mr. BUELL: It cannot be done.

The WITNESS: There are about 900 contracts, sir.

By the Chairman:

Q. Mr. Miller, you cannot tell me the Imperial Tobacco Company have not a record of their tobacco purchases?—A. There are a body of contracts; these contracts are left in Leamington.

Q. Yesterday you made a statement yourself that as these purchases were made, the company itself had before it, from day to day, the quantities purchased, and they were able to gauge their business by those facts?—A. On the total.

Q. Surely—A. That is what we have given you, Mr. Stevens.

Q. No; will you pardon me. These figures really are quite useless, I submit to you. What value is there in those figures? On October 6th, this list shows an average price of 27 cents, which indicates to me as an ordinary business man, and common sense tells me that the top price must have been 32 or 33 cents?—A. The highest was 30 cents.

Q. All right, we will take that. Now, about five or six days after, we find 16 cents was the average?—A. Yes.

Q. Now, that indicates to me that there must have been some drop in the top price; that it is not all due to the fact that on that date you are buying nothing but poor tobacco. In any case, we are entitled to know.—A. May I suggest that I candidly do not believe that the contracts or anything else would give you any more of the picture than this does.

Q. Excuse me.—A. We are perfectly willing—I do not want you to understand otherwise—to have every one of them here.

Q. If you take the daily report from a gentleman like Mr. Lea, it will tell you that you bought so much tobacco on Monday, so much on Tuesday, and all the way down the line. You must have it?—A. The total?

Mr. YOUNG: The amount of each grade bought. We do not need the individual contracts.

The CHAIRMAN: No, the total quantity bought each day, each grade, and the price, that is all.

By Mr. Ilsley:

Q. Do you buy by grades?—A. No, sir.

Q. Let me ask you a question or two. Your buyer appraises it. That is to say, he makes up his mind that it will grade up in a particular way?—A. Yes.

Q. He uses his judgment, and if it is going to run to low grades, he pays a low price for it; is that true?—A. Substantially, yes.

Q. Therefore your contracts do not show the grades you get from a particular producer?—A. No.

Q. When you grade it, do you keep the tobacco that you bought from any particular seller, separate from what you bought from the others, so that you could tell from your books what particular grade you had when you graded the tobacco?—A. Do you do that, Mr. Buell?

Mr. BUELL: Not each grade of tobacco.

Q. In some business, it is done. Pardon me for referring to apples, but a buyer of apples keeps a record of the grades ordinarily, that he buys from each man?—A. Yes.

Q. So that he can see from reference to his books there was so many of No. 1, so many domestics, so many large domestics, so many small domestics, and so on. Have you a similar system with reference to tobacco, so that we could find out, and check your statement with more exactness? As I understand your statement, the variation in price depends entirely on variation in quality?—A. Yes. After we have set down the top price, and the average that we think is a fair price.

Q. That seems to be the point in issue?—A. Yes, you have it.

By Mr. Senn:

Q. I understand, as you go on buying you do not know how much of each grade you purchase?—A. Only as a mere estimate, or a rough estimate from the crop, from the survey that will have been made as to what is the prospect.

Q. In any event it is pretty certain the first purchases that are made are of the better quality of tobacco?—A. Yes, the top.

Q. Your average, after all, for the crop purchased, no matter what it might be, is the price for the better quality of tobacco?—A. I do not know that I get your question exactly.

Q. I mean to say, if you take the average of 22·97 cents per pound, that would not represent the average of the whole crop, it would only represent the average of what you purchased?—A. Yes.

Q. And that is a higher average than the average of the whole crop?—A. Yes.

By Mr. Sommerville:

Q. In other words, the Imperial usually bought the best of the crop?—A. And paid the best price.

Q. And paid, accordingly, a better price than on the whole average?—A. Yes.

Q. I agree with you on that.

Mr. HEAPS: Could we have the difference in value between the top and bottom grades?

Mr. SOMMERVILLE: At least from 2 to 30 cents.

Mr. HEAPS: On a given day?

By Mr. Sommerville:

Q. As a matter of fact, Mr. Miller, you must have that information in detail in your possession, because after the first day's purchase, you instructed Gregory he was overdoing it?—A. On the average, sir.

Q. On the average?—A. Yes.

Q. You instructed him that his average was too high?—A. For several days, I guess.

Q. You say he was the man in charge of the buying operations for that year?—A. Yes, on the ground.

Q. He has been for probably 30 years?—A. Well, a good many years.

Q. Twenty years?—A. A good many years.

Q. Is he the man who is responsible for the trouble you referred to as complaints from the area in 1931?—A. Only in the sense that he was in charge; I suppose he would be.

Q. What do you mean by that? Was there anything he did that gave rise to those complaints that you refer to as coming from the producer?—A. You mean—

Q. You referred to them yesterday. You agreed that you had a number of complaints. I called it a panic—you called them complaints. You had a number of complaints. Was he responsible for anything that occasioned those complaints?—A. Well, nothing that I know of, sir, offhand; I do not know of anything.

Q. Was it his operations that resulted in those complaints; it must have been?—A. It must have been, yes.

Mr. FACTOR: Might I suggest that we settle this point about getting some information in regard to the quality of tobacco?

By Mr. Sommerville:

Q. I think we can run it down very easily. You do get a record as the crop is growing from your field men of each man's crop?—A. Yes.

Q. You get a record of each man's crop during the season, as it is growing, from your field men who are travelling the area?—A. Yes.

Q. You have probably four or six field men who travel the area during the growing season?—A. Eight, is it not?

Q. And each man has his book and that book contains a record of the man's crop, his acreages and averages, at least, of his crop from time to time?—A. Yes.

Q. And then when the crop is put in the kilns to cure, he visits those kilns several times for the grading process, does he not?—A. Yes.

Q. He has a complete record, then, of how each crop is graded, as it is graded, and growing, and what its condition is with regard to cure?—A. Yes.

Q. Before you start out to buy you know the grade of that crop, do you not; is not that right?—A. I think that is substantially right.

Mr. ILSLEY: I think Mr. Buell wants to qualify that a little.

Mr. BUELL: I did not get that.

By Mr. Sommerville:

Q. Before you start to buy your crops, from the books of the buyers, you know the conditions of the grade, generally, of each crop?—A. We have some idea of it, yes, sir. We have as good an idea as we can get.

Q. You do not get a better idea by driving in on the day, and offering him a price?—A. No.

Q. So that you have the best idea that it is possible for you to get as to the condition of the crop?—A. Surely.

Q. Before you go to buy it?—A. Surely.

Q. Do you not put the price that you are willing to pay, or that your buyer is to pay for that crop on his book?—A. Sometimes we do.

Q. Where are these books for 1931, because I am told the price that he was authorized to pay he did not pay?—A. I do not know, sir, if they are down in Delhi.

Q. Well,— A. Mr. Buell can tell you, he is the manager there.

Mr. LEA: I think you will find them there, sir.

Q. Perhaps you will be good enough to produce those books?—A. Yes.

By Mr. Factor:

Q. When your buyer has completed a purchase, do you not keep a record of the details of the purchase, showing the quality and the price paid in your head office?

Mr. LEA: Not on the individual crop, no.

Q. You have, of the total purchased?—A. Yes. We have graded—

Q. You have that in your head office?

Mr. SOMMERVILLE: Let Mr. Miller give the answer.

By Mr. Factor:

Q. When you purchase a crop from an individual farmer, somebody keeps a record of the quality of the crop and the price paid for it?—A. Not individually, we do not. Just as we tried to explain, we do not keep a record of the result attained from an individual purchase from a farmer.

By Mr. Sommerville:

Q. I will follow this through for you, Mr. Factor. When the buyer comes out with his book, and has a record of that crop, and buys that crop, he marks on the book that he has purchased it at a price, does he not?—A. He makes a contract.

Q. Well then, what entry does he make in his book, his crop book?—A. Nothing special; no special entry.

Q. Then, the contract, coupled with the entries in the buyers' crop book, will give you the growing grade of that buyer, as he saw the crop, just as it was before he got it?—A. Estimated, yes.

Q. His estimate of the grade?—A. Yes.

Q. We shall be very glad to get that in that way.—A. May I interrupt a moment, because if Mr. Stevens wants us to do anything over the 'phone, as he referred to, we will be glad to do it.

The CHAIRMAN: Will you have one of your staff make a note of what we have been looking for here. For instance, these crop books will give us, I

think, the information; but if, instead of this statement showing the average price, you would show in each of those dates on the statement, how much the quantity of tobacco was, and the price actually paid for it—I do not mean to say every individual purchase, but suppose there were a million pounds bought at 30 cents, and a million and a half bought at some other figure, I should like you to give us what that figure was.

The WITNESS: I want to understand you. You mean, separate by price how much we bought at 30 cents, and how much at 29 cents, and how much at 29½ cents, and so forth?

Mr. FACTOR: How you arrived at the average.

Mr. KENNEDY (*Winnipeg*): Permit me to make a suggestion. Would it not be a good idea for Mr. Miller and yourself, Mr. Chairman, to confer before he starts to get this information, and then he would know just what you want, and he could have it for the next session.

Mr. SOMMERVILLE: I think we quite understand it now. If there is any doubt in Mr. Miller's mind, he can let us know.

The WITNESS: I thought that was what you wanted. We spent all night trying to get that over the telephone.

By Mr. Senn:

Q. You do not take delivery of the tobacco immediately the contract is made, I suppose?—A. No, sir.

Q. After it comes into your warehouse, it is graded, I suppose?—A. Before it comes in; when it comes into our leaf handling plant.

Q. You have no information as to how the grades compare in your warehouse with the grading that was made by your buyer?—A. No, you see for one thing our buyers are grading, I take it, pretty well all crops; everybody's is graded. Some we do not buy for various reasons. They sell it to somebody else. We do not demand a penalty, and so try to check up, if that is what you mean, on the buyers, as to whether they made a good estimate or not.

Q. It is apparent you might pick up a higher grading than you are getting on your lower grades— —A. Yes, that is quite true.

Q. You mean to say you have no information respecting the comparison of those grades by the buyer in your warehouse?—A. No.

By Mr. Kennedy (Winnipeg):

Q. Will you permit me to clear up this point. Reference is being made to buying on grades. Are there any specific standardized grades that are known to the tobacco trade, or is it merely that your buyer considers one of better value than another, and buys accordingly?—A. Yes, that is quite right, sir. What would suit one buyer or one manufacturer, would not probably suit another.

Q. There are no specific grades?—A. No.

By Mr. Ilsley:

Q. You said it was graded at the outset, when the purchase is made?—A. According to our own ideas, our own grades, and our own standards.

Q. What are those grades; what do you call them?

Mr. EDWARDS: Different plants have different grades.

Mr. KENNEDY (*Winnipeg*): I suppose you consider some grades better than others?

The WITNESS: For our own purposes.

Mr. FACTOR: In the Sutherland report, there is a copy of a contract which contains the following grades, A, B, C, D, E, F, and then numbers 9, 10, 11, 12, 15, 19, and 20.

The WITNESS: That was put into effect in 1932.

Mr. FACTOR: It will be found on page 36.

By Mr. Ilsley:

Q. You say you were willing to buy it during the whole season and pay 30 cents for a certain grade of crop? Now, what grade of crop were you prepared to pay 30 cents for?—A. The top.

Q. What was the top grade?—A. Well, a very high colour, very good quality. That is a matter of judgment of the individual buyer, something that has been developed over a long period of time by buyers and leaf handlers. I might say tobacco buying really is an art in the sense that it is a question in the judgment of the tobacco men, the best known and most reputed tobacco men in the world will differ one with the other over a piece of tobacco, maybe. I do not know how far, but to a considerable amount on price and quality, as to what he thinks of it, compared with what the other fellow thinks.

Q. The top grade is a matter of judgment?—A. That is all.

Q. Is it not a crop that will yield a certain percentage of a certain definite grade of tobacco?—A. Every crop varies.

Q. I know it varies; but I would imagine that when you are fixing 30 cents for a top grade crop you would mean a crop which would yield, say, 80 per cent—it might be 50 or 90—but 80 per cent of a certain quality of tobacco when it is finally graded out in your plant?—A. Yes.

Q. You have pretty definite grades in your plant?—A. Yes.

Q. Then you want to get a crop that will give you as large a percentage of the highest grade as possible, do you not?—A. Yes. We have to have some lower grades too.

Q. But that is the most valuable crop to you—if you were getting a crop that would give you 100 per cent of the highest grade known in your plant.

Mr. SOMMERVILLE: No. That is not the way it is done.

The WITNESS: No, we could not afford to do it on the basis of paying 30 cents or any fixed top price; we have to have low grades and all kinds of grades to blend. If we make it out of tobacco which we call the best tobacco and tried to make it all out of that you would not like it; it would be very distasteful. You have to blend it with a lot of other grades—lower grades, medium and so forth.

Mr. ILSLEY: So the high grades are worth no more than the low grades then?

The WITNESS: Probably because of a scarcity or because of colour which comes into it to a large extent.

Mr. SOMMERVILLE: They all go into the same cigarettes?

The WITNESS: They are used for different purposes.

Mr. KENNEDY (Winnipeg): It is just on the same basis as you put soda in your whiskey, I suppose.

The CHAIRMAN: Order.

The WITNESS: Yes, sir.

By Mr. Edwards:

Q. Does not this enter into it? At page 26 you are recommending to the growers the different types of tobacco that you suggest they should grow?—A. Yes.

Q. You say you recommend the growing of such tobaccos as "White Stem Orinocco, Gold Tip, Yellow Mammoth and Bonanza, which we advocate rather than the Warne and Gold Leaf varieties?—A. Yes, sir.

Q. Does not that enter into it very largely in deciding the quality of tobacco?—A. Fundamentally, yes, sir. In a broad way. But in each of these there are almost all grades.

By Mr. Sommerville:

Q. On your suggestion, as a matter of fact, the growers did change to Orinocco and Mammoth?—A. To a large extent.

Q. And practically all the crop of 1932 was grown according to your suggestions and on your advice?—A. Yes, sir, except as to the quantity.

Q. And the harvesting was done at your request and suggestion in a different way, by priming rather than splitting the stock?—A. Yes, sir.

Q. And, by the way, it was the 1932 crop which was grown at your suggestion, and these varieties turned out to be quite the best crop in quality that had been produced?—A. Entirely too large.

Q. The quantity may have been large, but the quality was an excellent quality?—A. Yes.

Q. Then, we got away from the question of the buying practice in 1932. That seemed to create the trouble. We are dealing with Mr. Gregory now. You say he was in charge of the buying and he had been buying at too high a figure, and he was called up or called down about it; somebody telephoned him. Who was that?—A. Mr. Buell.

Q. And the complaint was what?—A. That if—as I stated there, sir, if we were going to make our average price, as it was suggested, of something like 24 cents for the entire crop he was paying entirely too much for the higher grades, and he would have to buy more medium and lower grades in order to come within that scope.

Q. And as a result of that it passed into the hands of Mr. Lea rather than Mr. Gregory?—A. I do not think so, no.

Q. Why was not Mr. Gregory brought down to Montreal for the conference and for instructions rather than Mr. Lea?—A. Because Mr. Buell preferred to talk to Mr. Lea.

Mr. Lea: I live in Montreal.

By Mr. Sommerville:

Q. Mr. Lea had first joined your staff that year, 1931, had he not?—A. At the first of the year.

Q. But this was the first buying operation in which Mr. Lea had taken part, in 1931?—A. Yes.

Q. And is it not a fact that on the very first day of buying Mr. Lea, in company with one of the field men, did more than any other team in the whole buying organization that you had?—A. Yes.

Q. So that he was the man who was most active in the buying at those prices?—A. Apparently, yes; in fact, under the direction of Mr. Gregory, though.

Q. Perhaps we might have his purchases compared with the purchases made by others on that first day, and you could indicate in the report which you will make to us how much Mr. Lea purchased?—A. Yes; glad to do that.

Q. Can you give us any further explanation as to why the November prices ran to 25, 23, 23, 25, 23·96 after getting down to 15 and 16 cents in October?—A. I believe one of the reasons, quite apart from the question of the value of the tobacco, was that Mr. Lea told me there were some of the bigger groups getting crops—for instance, the Lake Erie company—which had not been seen by us and were buying at that time a better tobacco and better prices were given for it. I think you can get a verification of that.

Q. In other words, from October 6, to the 21st, you had not made an offer on the good crops of the Erie Tobacco company?—A. Yes.

Q. You had not made any offer; you knew all about that?

Mr. LEA: I did not.

By Mr. Sommerville:

Q. Your buyers did?—A. Yes.

Q. Your buyers had the records of them?—A. Yes.

Q. You did not make any offer on it at all?—A. Not to my knowledge.

Q. Now, why did you stop on the 21st of October? Why did you not continue?—A. Well, the only excuse—the only reason I know is we were getting our requirements filled; we were taking it easier in buying.

Q. Then, within two weeks you started out again, November 8, 9, 10, 11, 12 and 13?—A. Well, sir, we found other tobaccos that interested us.

Q. Your requirements were not filled?—A. I did not say filled; they were being filled. We had got the major part. I think I said 66 per cent.

Q. Mr. Miller, may I suggest this to you, that one of the easiest methods for one who controls a commodity to depress the market is to lay off the market for a couple of weeks? I think you will agree with that proposition?—A. That seems like it.

Q. And if you did lay off the market the effect would be to create a depressed condition of mind on the part of the owners?—A. Not necessarily—

Q. To make them more susceptible to selling at your figure?—A. I do not think that is a fair statement to us.

Q. I am not suggesting now that that was your motive?—A. Oh.

Q. That is the possibility, is it not?—A. Yes.

Q. You have heard of that being done, have you not, in some markets?—A. Oh, yes.

Mr. KENNEDY (*Winnipeg*): When they came back in to buy didn't they buy at a higher price?

The WITNESS: Yes.

Mr. SOMMERVILLE: I am going to ask in a short time what made it necessary to buy at a higher price?

The WITNESS: We found better tobaccos, broadly. I think we also got an order from the Imperial Tobacco Company in Great Britain for some eight or nine hundred thousand pounds.

By Mr. Sommerville:

Q. When did you get that order, in 1931?—A. I could not intimate the exact date.

Q. That is the 1932 order referred to in the Sutherland report.—A. I would not make that as a positive statement, if it came in at that time.

Q. You haven't got that date?—A. I may be able to find it. We will look for it in our records.

Q. At any rate, Mr. Lea when he came to Montreal got instructions to go back and see that the price was reduced to bring down the average?—A. As originally intended.

Q. As originally intended. And after coming back those instructions were carried out the second week?—A. Yes, to a degree.

Q. You got down to an average?—A. Yes.

Q. You got down to an average of $22\frac{1}{2}$ cents?—A. I don't know what that average is for the first week.

Q. I mean for the whole crop?—A. For the whole crop, yes; but that goes into January.

Q. Taking the whole crop, you got it down to an average of what?—A. 22·97.

Q. So that at the end of two weeks you must have been down to substantially below that when you began paying, 22, 23, 23, 25, 27·50?—A. I do not understand your question.

Q. At the end of the first week of buying— —A. The first two weeks of buying.

Q. By the 21st of October your average must have been substantially less than 22 cents?—A. I do not think so, sir.

Q. Because you will find that the next buying was at a higher price?—A. We will work that out and see; I could not say. It would look very like it would. The final average would be over 23, but we will compute it.

Q. Now, Mr. Miller, perhaps you will tell me what these conferences with Mr. Harrison were about with respect to leaf—Mr. Harrison of the British American Tobacco Company?—A. Mr. Harrison is in charge of the leaf buying for the British American Tobacco Company for all over the world where they buy for themselves, for the British American, and naturally, as he is experienced in world conditions and world prices and is also a good authority on leaf tobacco, and Mr. Buell is in charge of our buying of leaf tobacco, Mr. Buell likes to have the advantage of talking to Mr. Harrison about the manners of leaf. We have to buy American leaf—all kinds of grades of American leaf.

Q. Mr. Harrison does not buy Canadian leaf?—A. Oh, no; but I say in general.

Q. Why should Mr. Harrison be consulted about the purchases of Canadian leaf?—A. He was only consulted about the purchase of Canadian leaf along the lines I have suggested—only in relation to broad world markets for Empire leaf, and naturally discussed what are the prospects of the Canadian market and what are the prospects of Canadian prices and so forth—only in a very general way.

Q. Had he been consulted in connection with the market for the purchases of 1930?—A. 1930?

Q. Yes.

Mr. Lea: Every crop is discussed with Mr. Harrison.

By Mr. Sommerville:

Q. Was the discussion of exactly the same character for the crop of 1930 as for the crop of 1931, because the price is very very much larger?—A. It must have been along the same lines. We know of no peculiar difference.

Q. At that time in 1930 did he have a hand in fixing what would be the price; in helping you to settle upon what would be the price paid by the Imperial for the crop of 1930?—A. Will you put your question again, sir. It is rather involved.

Q. In 1930 did Mr. Harrison have a hand— —A. 1930?

Q. 1930?—A. He had a hand—

Q. —in helping you to fix the price you would pay for the crop of 1930?—A. Only in as far as I have already expressed.

Q. Why should he be consulted at all? You are using this Canadian tobacco entirely for domestic purposes; you do not export it; you do not export the manufactured product?—A. Very little.

Q. Very little. It does not amount to anything. You were buying Canadian leaf for Canadian consumers and manufacturing it under Canadian conditions. Why should he be consulted about the price that the Canadian farmer should get for his tobacco?—A. He was not specifically consulted as to what price, only in a broad sort of way.

Mr. Factor: Why should you discuss it even in a general way?

The Witness: Why?

Mr. Factor: Yes.

The WITNESS: As was brought out yesterday, the British American Tobacco Company have a big interest in our company, and if Mr. Harrison is recognized as an expert in leaf tobacco and if Mr. Buell can get the benefit in a general way of Mr. Harrison's knowledge of world conditions and world markets and what not, it seems to me a perfectly logical thing to do.

By Mr. Sommerville:

Q. To manufacture Turret cigarettes you do not need to know world conditions?—A. No, sir.

Q. You are manufacturing some of them, some part of them out of Canadian leaf produced in Canada, manufactured in Canada and sold only in Canada. Now, why should he have a finger in fixing what the Canadian farmer gets for his tobacco.

Mr. KENNEDY (*Peace River*): Is the price in the Canadian market related at all to the world price?

Mr. SOMMERVILLE: Not at all.

Mr. ILSLEY: Is the price of the leaf?

The WITNESS: Frankly, I do not know what you are driving at.

By Mr. Edwards:

Q. In reading over page 16, which sets out the duties on tobacco coming in from the United States to Canada, I was wondering if American tobacco and Canadian tobacco are competitive on the English market?—A. No, sir.

Mr. SOMMERVILLE: No. There is 40 cents per pound preference on Canadian tobacco in the British market, so they are not competitive at all, and there is a 40 cent duty on American tobacco, coming into Canada and, therefore, the Canadian leaf is fully protected.

The CHAIRMAN: The point Mr. Sommerville has been stressing, Mr. Miller, is, without doubt, of great importance to the committee. Here we have a Canadian produced commodity largely consumed in Canada. We will not, for the moment, speak of the excess crop for the last year or two. We would like to know just why a very powerful influence in the United States should be consulted at all in regard to the prices to be fixed for Canadian tobacco. But there is another point, too, that should be kept in mind and that is that, apparently, prices are fixed not by competitive market conditions but are named, in this instance, by your company.

The WITNESS: Yes.

The CHAIRMAN: So that the committee, I think, is vitally interested in getting a full explanation of that point.

The WITNESS: Well, I would like to clear up one part of your statement, Mr. Stevens, to start with, to try to simplify matters. Are you making the point that there is somebody in America doing this?

The CHAIRMAN: It happens to be that way.

The WITNESS: That is the way I understand your statement.

The CHAIRMAN: It happens to be American.

The WITNESS: Well, Mr. Harrison's headquarters are in London. I just wanted to get that clear. Mr. Harrison goes all over the world, and the British American Tobacco Company buy leaf tobacco.

The CHAIRMAN: But from the letter that is cited in Mr. Sutherland's report, from your own evidence and other information, it is apparent that consultations do occur, and I think we are entitled to know just what the relation is between the American market and, if you like, the British Imperial Tobacco Company's part in it as well, and the Canadian. Because frankly, I do not see why you should be influenced by that at all?

The WITNESS: Well, we are only influenced just in—if Mr. Harrison's name had not in some way been brought out in this thing, and you referred to some letters,—

The CHAIRMAN: Well, it is in the evidence anyway.

Mr. SOMMERVILLE: It is in Mr. Sutherland's report.

The WITNESS: Yes. As I recall it, there were several rather, I think, ugly inferences there.

The CHAIRMAN: There is no ugly inference in it at all.

By Mr. Sommerville:

Q. May I put it this way: The Canadian producers are producing Canadian leaf for your requirements?—A. Yes.

Q. And for their protection this government puts a duty of 40 cents a pound on leaf coming into Canada?—A. Yes.

Q. And you could pay up to 40 cents a pound for that leaf before you begin to compete with American Tobacco?—A. That is right,—quality for quality.

Q. Quality for quality, I will agree with you there?—A. Yes.

Q. Why in the name of conscience do you have to consult somebody in the United States as to what you are going to pay the Canadian farmer for his leaf?—A. We don't. I made that statement.

Q. Why these conferences, then, about what you are going to pay, or how much you are going to buy, or what you are going to do with the Canadian producer?—A. Well, may I put it this way—

Mr. FACTOR: Just a minute.

The CHAIRMAN: Wait now, let Mr. Miller answer the question.

The WITNESS: May I try to illustrate?

By Mr. Sommerville:

Q. Yes, anyway you like. It is information we want?—A. If you were a large stockholder, in, we will say, a bakery,—any business—but you are not operating it, or were operating something else, would you not like to consult with those people as much as you could about the business, and particularly if you had any knowledge, or peculiar knowledge of any branch of that industry. And if you did have that peculiar knowledge of any branch of the industry, would you not discuss matters with them?

Q. Yes, perfectly naturally?—A. That is the only point.

Q. But you have already stated that Mr. Harrison does not know the first thing about Canadian leaf. He never bought a pound of it?—A. I didn't say he didn't know anything about it.

Q. Well, does he?—A. I don't know. He must know something about it, the quality or something.

Q. Does he buy it?—A. No, he has never bought any.

Q. Does he deal in it?—A. No.

By Mr. Factor:

Q. You don't expect this committee to believe that when your Mr. Buell talked to Mr. Harrison, the price of Canadian leaf was not discussed, do you?—A. No, not at all.

Q. You did discuss that with Mr. Harrison?—A. I dare say.

Q. Why should Mr. Harrison be consulted as to the price paid for Canadian leaf?—A. It is just as I stated. I am free to confess that I don't know what you are driving at.

By Mr. Sommerville:

Q. Mr. Miller, there are 1,500 growers out there sweating day and night?—A. Yes.

Q. To try and grow that crop, and they are asking that same question, and they are asking it of you through this committee. It is up to you to tell us, if you can?—A. I have told you to the best of my ability.

Q. All right, then?—A. Just a second, till I see if there is anything else to add. Mr. Buell just reminds me that we have been trying to build up an export market for this Canadian tobacco, to use our influence. We have been criticized for it. Mr. Harrison, having headquarters in London, has a contract with the Imperial Tobacco Company, and we wanted to find out about general market conditions; in that way he had that contact, and we felt we could build up a business there. I don't mean that is the only reason, but that is among the reasons for discussing it.

Mr. ILSLEY: This does not convince me at all. Would you follow that up, Mr. Sommerville?

Mr. SOMMERVILLE: I don't think you can get any farther.

Mr. ILSLEY: I think, Mr. Chairman, that I ought to say his answers were unsatisfactory, as an explanation. Speaking as a member of this committee, I want to say if he has not any better explanation than that, he has not any explanation.

The WITNESS: Well, the point at issue as I understand it—I would like to be honest about it. I am not holding back anything.

Mr. ILSLEY: No.

The WITNESS: Does the committee want to know why we discussed—why Mr. Buell or any of us ever discussed the question of Canadian tobacco, price, quality or anything about it?

Mr. ILSLEY: How much you should pay. Why are you discussing that, first? That ought to be an easy question to answer. There are several explanations that occur to me—they may all be wrong—but you won't give any.

The WITNESS: Well, let me get you down—let me understand, if I may. I am honestly trying to find out.

By Mr. Factor:

Q. You understand our question. We have questioned you for half an hour on the same point. Just give us an answer.—A. I have made the statement that Mr. Harrison does not dominate or name the prices that we will pay for tobacco.

By Mr. Ilsley:

Q. That is true; I know that. But you confer with him about it?—A. Well, we don't have to confer with him about it, and we don't feel that we have to confer with him about it.

Q. But you do, every year?—A. Well, if it happened to be; if Mr. Harrison was over here, in the United States, or happened to be down. Mr. Buell has to go down to the States to buy Virginia tobaco, and naturally sees Mr. Harrison and talks to him about it. But there is no reason. We would not hold off buying, or naming our prices or anything else. It has not got anything to do with the prices that we name.

By Mr. Sommerville:

Q. But your statement read to us a few minutes ago was that a discussion did take place, and Mr. Harrison did feel that the prices were higher than they

should be, the prices paid by you?—A. Yes, previously.

Q. May I suggest to you then, looking at page 11 of your brief, that the price in the United States in 1929 was 18 cents, and it was 29 cents in Canada? —A. From that 18 cents, to make it comparable, we have deducted $1\frac{1}{2}$ cents, and there is at least another three-quarters of a cent to be deducted.

Q. I don't care about the per cent. It is the ratio I am after.—A. Oh, all right.

The CHAIRMAN: Take the last column.

By Mr. Sommerville:

Q. If you want to, take the last column. In the United States it was 16·5 per cent for that year.

The CHAIRMAN: Cents.

By Mr. Sommerville:

Q. $16\frac{1}{2}$ cents per pound?—A. Yes.
Q. The average?—A. Yes.
Q. And in Canada it was 29 cents?—A. Yes.
Q. In 1930, it was 32 cents in Canada?—A. Yes.
Q. And it was down to 10 cents in the United States?—A. Yes.
Q. A drop of 60 per cent?—A. In the United States.
Q. In the United States?—A. Yes.
Q. Brought about by the buyers?—A. Well, I don't know. I am not familiar with that.
Q. Who else would bring it about?—A. Well, I presume so; over-production or what not.
Q. Of which the British American is a very large buyer?—A. Yes.
Q. Of which Mr. Harrison is a very large buyer?—A. Yes.
Q. In the next year, 1931, it was driven down to 7 cents?—A. Yes.
Q. In other words, in two years it had dropped from $16\frac{1}{2}$ cents to 7 cents in the United States?—A. Yes.
Q. And Mr. Harrison was in charge of the leaf buying there?—A. For the British American.
Q. For the British American?—A. Yes.
Q. Their market opens earlier than the Canadian market?—A. There are various dates.
Q. But it is generally earlier?—A. Yes.
Q. So that, having established a 7-cent price in the United States, Mr. Harrison was interested in seeing your Canadian price driven down, I suppose? —A. Not any more so than in line with the previous conversations, sir.
Q. In line with what conversations?—A. Well, I mean what I mentioned in my memorandum; and as I said before, they had various conversations over a period of time, and it was generally thought this previous year's prices were too high.
Q. But with 40 cents a pound duty, what right had anybody to try and break down the farmer's price? There was that duty set for protection to him?—A. Well, that is a pretty big question which I have endeavoured to answer in my brief, which you have not allowed me to read, sir.
Q. At any rate, that was the price in the United States at the time these conferences took place, or in the year 1931?—A. Well, yes, I suppose so.
Q. Just while we are discussing it, you were saying that the British American did have a large interest in the Imperial Tobacco Company. They have a large interest in the Imperial Tobacco Company of Canada?—A. Yes.

Q. Just while I have it before me, I will get that interest on the record? —A. Yes.

Q. The British American Tobacco Company owned 275,080 preferred shares in your company?—A. All right.

Q. And 4,091,418 ordinary shares?—A. As per the record. I have no recollection.

Q. Yes, 4,091,418 shares out of a total of 9,451,032 ordinary shares?—A. All right, sir. I will take it at that.

Q. I am reading your statement?—A. Yes, sir.

Q. If it is not correct, I want to know?—A. Well, it is all right.

Q. While I have the record before me, I observe that in addition to that holding, there is a holding of 1,363,806 shares by the Tobacco Securities Trust Company of London, England?—A. Yes.

Q. Do they represent the British American Tobacco Company or the Imperial Tobacco Company of Great Britain and Ireland?—A. I have no intimate knowledge of who the Tobacco Securities Company are, exactly.

Q. But at any rate, those two blocks of stock would very largely control the voting of the company?—A. Yes.

By Mr. Kennedy (Winnipeg):

Q. Mr. Miller, what influence, if any, has the price paid in Canada for the Canadian crop upon the price that would be paid in the United States for the American crop, or vice versa?—A. No direct bearing at all.

Q. Well, indirectly then?—A. Well, nothing. I would not say there was any bearing, no bearing at all.

By the Chairman:

Q. There ought not to be?—A. No.

By Mr. Young:

Q. What are the factors that decide in your mind what price you will pay? Do you look at the British market or look at the domestic market, or what factors come into the problem when you are making up your mind as to what price you are going to pay for tobacco in any given year?—A. What factors enter into it?

Q. Yes.—A. Well, the quantity of tobacco we might have on hand, the quantity of tobacco that is grown in the crop, the type of the crop. In regard to the price, as I have tried to indicate, and tried to put in our brief, we felt that this price previously paid, for any development of an export business to compete with, largely, Empire tobaccos, was entirely out of line.

By the Chairman:

Q. On that point, how do you justify that statement that the price of the previous year was out of line, in view of the protection given in the British market to empire tobaccos?—A. Well, by the prices, as far as we know, that other empire tobaccos were being sold at.

Q. But they are not competitive with other empire tobaccos, as I understand it, are they?—A. Yes.

Mr. SOMMERVILLE: In Canada.

The WITNESS: No, in England, you mean?

The CHAIRMAN: In England.

The WITNESS: That is what you meant, is it not?

By the Chairman:

Q. Are not our tobaccos, our flue-cured Virginia leaf, competitive chiefly with the American flue-cured Virginia leaf, which pays 40 cents a pound duty to enter the British market?—A. No, there are a lot of other empire-grown tobaccos that get the same preference in the British market.

Q. I know they get the same preference?—A. And they are competitive, too.

Q. But on type?—A. On type, yes.

Q. Our tobacco is chiefly competitive with the Virginia leaf?—A. In the British market?

Q. Yes.—A. No, I would say—well, of course it has the advantage of the preference, but I mean there is very definite competition in the British market with Canadian leaf by other empire-grown, flue-cured tobaccos; very definitely, sir, from all the information and belief that we have got, and we have indicated that or tried to.

By Mr. Young:

Q. Can you tell us what price our tobacco was selling for in the British market in 1931?—A. No, I don't think we have got it. Our tobacco?

Q. Yes, our flue-cured tobacco?—A. We have government statistics, yes.

Mr. SOMMERVILLE: We will get some information upon the question.

By Mr. Senn:

Q. Just one more question before Mr. Young leaves that matter of the influences in price fixing of tobacco. Do you take into account the cost of production at all?—A. We have regard for that, naturally.

Q. Are you convinced that the average price paid this year is comparable with the cost of production?—A. Yes, we firmly believe so.

Mr. SOMMERVILLE: We are going to deal with that.

Mr. YOUNG: Mr. Miller was going to answer my question about the price in Great Britain.

The WITNESS: At page 13, you will find a table of prices. Those are given out by government authority in England.

Mr. SOMMERVILLE: Those are not the same grades.

The CHAIRMAN: Taking Mr. Miller's own statement, he says that there are other empire products in competition with ours. Your South African tobacco brought a price of 17·8 in 1927; Canada brought a price of 25·2, which was higher by five cents, seven cents and eight cents than any of them.

The WITNESS: What year?

The CHAIRMAN: 1927. It is in your own brief.

The WITNESS: Yes.

By the Chairman:

Q. In 1932, South Africa got 14·9?—A. Yes.

Q. And Canada got 12; and in 1932 a finer type of tobacco came from Canada than she ever produced in her history?—A. South Africa was 14·9, and Canada was 12, yes, sir.

Q. That makes a difference of 12 cents in Canada, whereas it is only 3 cents difference in South Africa?—A. If you take it at that; look at the previous year.

Q. This is the thing that is worrying me: That followed your arbitrary cut in 1931, from 32 cents in 1930, down to 22 cents in 1931?—A. Yes.

The CHAIRMAN: There is a sequence of events here which, in my opinion, from the evidence we have heard and from the evidence you have given, seem to

indicate a control over the prices to the grower other than ordinary mercantile factors. I must say it is an appalling thing to me, and there is no explanation forthcoming. It is difficult for members of this committee to ask you technical questions and all that, but there are these stubborn facts. Take this fact, Mr. Miller. Explain this to me: In the United States, where Mr. Harrison is one of the dominating factors, the price of tobacco fell from 10 cents to 7 cents from 1930 to 1931; and in that same year, Mr. Lea comes into Canada from the United States to your company, from Mr. Harrison, and there is a drop from 32 cents to 20 cents. Now, there is a significant, and I was almost going to use the word "sinister" synchronization of facts there that ought to be explained. Mr. Miller we are not getting the explanation.

Mr. SOMMERVILLE: That is the crux of the whole situation.

The CHAIRMAN: Don't forget this, Mr. Miller. I have emphasized this. I told you yesterday that I thought you were being frank with us, and I think you were yesterday. I told you yesterday, and I can't express this too strongly, we have heard in this evidence from growers of tobacco in Canada, statements that challenge parliament.

The WITNESS: Yes.

The CHAIRMAN: And parliament stands challenged.

The WITNESS: Yes.

By the Chairman:

Q. But Parliament stands challenged to justify the treatment the growers got, and the man sits beside you who apparently, according to the evidence we have, came in from the States after his association with Mr. Harrison; and, by the way, it would be advisable for you to read what Mr. Roosevelt's government thought of the prices Mr. Harrison and his confreres fixed down there. I tell you that there is a situation that has got to be cleared up?—A. Is it fair, Mr. Stevens, if I may ask; if you have had time to read our brief.

Q. I saw it published in the press, by the way; I saw it published in the press with answers to questions I was supposed to have given that I never gave at all; so that brief was published in the press.

Mr. Miller, I have gone through your brief, not every bit of it, but I have gone through it partly. Your brief does not answer the vital points. That is the difficulty with the brief?—A. I see.

Q. And that is the difficulty with our examination of you this morning, vital points that concern us are not answered?—A. Can we be allowed to try to prepare a statement or try to see if we can put it down in some clear way. If you have any feeling that I am holding back anything, sir, I wish you would get that out of your mind. It may be that there may be something that I have no knowledge of. I am not trying to hold back anything from you, sir.

Q. I think you are confronted with a very serious difficulty. I can apprehend it. I think if you answer our questions frankly and to the point the answer must undoubtedly cast reflections on the actions of some of your own staff and your own policy. That is the difficulty you are confronted with, and you cannot have it both ways, Mr. Miller. I think if you will answer the questions as they merit an answer you will find there will be some reflection cast upon your own staff. That is the way it appears to me from the evidence that we have had from other people; we have had other evidence, you know? —A. Yes, I know.

Q. I do not disbelieve these men. The men who gave us evidence during the last week or so gave us their evidence very frankly, and they impressed the Committee I think very favourably; and there are facts stated there, facts in the Sutherland Report and in your own brief, which present a situation

which must be cleared up, as I have said. And I think the questions which Mr. Factor, Mr. Ilsley, Mr. Sommerville and members of the Committee have asked you ought to be, and must be, answered?—A. All right, sir; we will certainly endeavour to do it to the best of our ability.

By Mr. Kennedy (Winnipeg):

Q. Having in mind, Mr. Miller, that the Canadian crop purchased by your company and used for domestic purposes has not to meet competition from outside—?—A. In Canada, no sir.

Q. Having that in mind, where you pay in one year a much lower average price for your crop than you did in another year, is that lower price to the producer reflected in a lower price in your manufactured product to the consumer?—A. To the consumer; over a period of time it is sir. I think we have submitted that.

Q. It is?—A. It is, yes sir; it has been reflected.

Q. Or has the general price, the Canadian price for cigarettes been pretty well maintained?—A. Of course, we cannot change the retail price several times a year, but there has been a downward trend, sir; there was a statement about that on page 45.

Mr. SOMMERVILLE: Before we get into that—

The CHAIRMAN: We are going to get all that side of the question, Mr. Kennedy.

By Mr. Sommerville:

Q. Mr. Miller, you have referred to the fact that this Canadian tobacco must compete with other Empire tobaccos on the British market, and that there is therefore a condition which dominates the price here?—A. It has a big influence on the price.

Q. I am going to ask, if you will just step aside for a moment, Professor Leitch to take the stand?—A. Yes, sir.

The Witness retired.

Mr. ARCHIBALD LEITCH, called and sworn.

By Mr. Sommerville:

Q. Professor Leitch, you have exported a great deal of Canadian tobacco to the British market?—A. A considerable quantity, yes.

Q. In the years 1931, 1932, and 1933?—A. Rather the crops of 1930, 1931 and 1932.

Q. And you are familiar with the conditions over there, you have been over there lately?—A. Quite frequently in the last four years, yes.

Q. And have just returned quite recently from that particular market?—A. Yes.

Q. Will you tell us what is the position of Canadian leaf on the British market; does it command a premium over other Empire-grown leaf on that market?—A. Yes, up to and including the crop year of 1932, that is as much of the business with the Old Country as has been settled, and it has just been settled, and the 1933 business has not started yet in any volume for various reasons; but up until and incluuding the three crops grown in Canada, the four operations between 1930 and 1932, particularly the last two years, Canadian tobacco did consistently receive in nearly all instances of sales a consistent premium above flue-cured tobaccos from any other source in the Empire.

By Mr. Young:

Q. How much of a premium was it?—A. It depended on the volume, it was very high in the 1930 and 1931 crop; it was less in our tobacco arising out

of the 1932 crop. I am speaking solely of sterling price, not the Canadian price, as the exchange question comes in.

By Mr. Sommerville:

Q. We have to speak in a common language, therefore we speak in terms of sterling exchange?—A. I might cite an instance in connection with the 1930 crop, which was not a good crop as compared with 1932; it happened that I was in Belfast settling up for my 1930 business in February of 1931, and it happened at the same time that quite a large buyer in Southern Rhodesia tobacco, which is the chief source of Empire flue-cured tobacco other than Canada, was there at that time; I settled with Gallagher's for 2 shillings a pound for the Canadian tobacco; it happened at the same time that the dealer had a small deal in Rhodesian tobacco—not the same year's crop, because they grow in our winter, but fairly comparable—and he settled on the basis of a shilling and a penny a pound for tobacco that grade for grade looked infinitely superior on the basis of colour to our tobacco, also on general quality, but our tobaccos had a flavour more near the American type of tobacco than the Rhodesian had; and therefore it has more possibilities of use, and it has demonstrated greater possibilities when used as a substitute for American in manufacturing brands in which they cannot use Rhodesians to the same extent. And while over there with one of the chief officials of the tobacco division on behalf of Canadian growers made an intensive study last summer, last June and July, and in the course of this we interviewed manufacturers large and small as to their experience with Canadian tobacco. I am speaking of those who had already had experience—and they without exception, or with the exception of the Imperial of Great Britain with whose buyer I was not fortunate to meet at that time because of his absence, with the exception of the Imperial of Great Britain, every manufacturer who had had experience with Canadian tobacco said that Canadian tobacco on the basis of its greater similarity to American than any other Empire growth would always command a consistent premium above that of Rhodesia, or any other than non-Empire sources. Now, the question as to the premium they could get, in any one year, of course, might be influenced by conditions especially relating to the supply of Canadian tobacco. If the supply is too large at any one time, or if any one year's growth is too large to meet requirements of those who have had experience in substituting American with Canadian, the surplus has to be sold to manufacturers who have not uses of that kind; then the fragment over that keenly demanded amount must naturally be sold to others.

Q. But the premium does exist?—A. Yes, absolutely; on the intrinsic merit of tobacco, as explained.

Mr. Heaps: Can you give us any idea about production costs?

The Chairman: We have examined this witness before. I just wanted to call him for this special point, because he has knowledge of and acquaintance with it of recent date.

Mr. Ilsley: Did this gentleman give evidence before?

Mr. Sommerville: Yes, Mr. Leitch gave his evidence.

By Mr. Young:

Q. When you export your tobacco to the Old Country and sell a portion of it at home here, can you tell us the difference in the price you receive?—A. With the exception of 1930 we have received—I am speaking of equal quality now, that is grade for grade and quality for quality, assuming it to be equal, since 1930, we got a little more for it in 1930, but since then we have got less for what we exported to England and sold there; we got less for what we sold in England since then.

Q. Less than what you sold it at here?—A. Yes.

By Mr. Sommerville:

Q. But exchange was a factor?—A. Exchange was a very serious factor.

By Mr. Senn:

Q. Is there any publicity campaign, or anything of that nature, being carried on in regard to cigarettes or Canadian tobacco in the British Isles?—A. Not any consciously devised plan. It happens that the control over the sale of tobacco concentrates in very few hands. You have to influence a few dozen manufacturers. The consumer does not come in to it.

Q. Have you tried to organize patrons or specialize?—A. It has been done more or less personally by the trade commissioners over there and by people in the business, like the Canadian Leaf Tobacco Company in the business of exporting in a business way, and large growers like myself.

Q. What effect has that had?—A. If we can gauge it by the increase in the business relatively taking a whole average of four years—.

Q. You do not understand; my question is as to whether something should be done along that line?—A. I am not prepared to suggest anything further. I think everybody, the Trade Commissioners and the agricultural representatives in the High Commissioner's office and the High Commissioner himself and the growers themselves are doing all that is within our capacity to know how to do. We might do a lot better.

By Mr. Kennedy (Winnipeg):

Q. If competition is controlled, advertising would not do much good, would it?—A. You mean, consumer advertising.

Q. If the competition is controlled your advertising would not help very much. Put it this way; if there is a ring that fixes prices, and is sufficiently powerful to fix prices, then the matter of advertising your product won't help very much.

The CHAIRMAN: It might stimulate consumption.

The WITNESS: Personally I have no great confidence in advertising directly to the British consumer, I am speaking now on the basis of its effect on the trade, and I say that for many reasons; in other words, if we are going to get the widest possible distribution of our products, it must be as a substitute for American in already established brands of pipe and American tobacco.

Mr. SOMMERVILLE: Directed to those who will make the substitution. Thank you very much Mr. Leitch, we appreciate very much your giving us this information.

By Mr. Ilsley:

Q. I presume the price here is determined by the price in England; is that a governing factor?—A. No, it is not a governing factor.

By Mr. Young:

Q. Is it a factor?—A. Necessarily.

Q. Is it a large factor?—A. It is becoming a more important factor, I will say that.

By Mr. Ilsley:

Q. Do I understand that the Imperial Tobacco Company can pay just what they like to people in Canada, that there are no determining factors?—A. No, there are many factors that must be taken into consideration in determining the price.

Q. Suppose they offered 10 cents instead of 20 cents; would people have to take that?—A. I would not; I might eventually take 5 cents, but first I would try to improve the situation.

Q. But the growers as a whole, would not they be obliged to take it?—A Up to this last year there was no really definite organization among the growers.

By Mr. Sommerville:

Q. Up to 1930 there was no organization for curing and packing the producers product by the producer; the producers did not grade their tobacco, they sold it in the barn?—A. Yes.

Q. And the producers did not grade it in such a way that they could ship it to the English market?—A. That was not actually brought into effect until 1933; prior to that time that did not need to be used, because of price or other reasons that came in.

Q. There was an attempt made in 1932?—A. Yes.

Q. But it was not done until 1933?—A. No.

Q. But up to that time the buyer was the man who did the grading, and if he wanted to export he exported the grades that were required in the English market? -A. One class of buyers did, the speculative leaf merchants like the Canadian Leaf Tobacco Company.

The CHAIRMAN: Haven't we got all that, Mr. Sommerville?

Mr. SOMMERVILLE: I think we have.

The CHAIRMAN: Thank you, Mr. Leitch.

The Witness was discharged.

Mr. GRAY MILLER, recalled.

By Mr. Sommerville:

Q. Referring to your statement: the first factor you take into consideration in arriving at the price you pay the producer is the quantity that you have on hand?—A. That is one of the factors.

Q. And will you please tell us what quantity of flue-cured tobacco you have in stock in Canada at the present time?—A. I gave you a statement of it, sir, in your letter yesterday.

Q. I wish you would just refer to it. Here it is. On March 31, 1934, you had these quantities of leaf on hand: you had first of all your domestic leaf Ontario grown, flue-cured, 24,069,887 pounds?—A. Yes.

Q. Ontario grown burley 20,422,460 pounds?—A. Yes.

Q. And Quebec-grown cigar leaf 2,830,791 pounds?—A. Yes.

Q. And Quebec-grown smoking leaf, 855,411 pounds?—A. Yes.

Q. And of imported leaf you had Eastern North Carolina and South Carolina 7,997,863 pounds?—A. Yes.

Q. Middle and Old Belt 4,579,108 pounds; Maryland Perique, Latika and miscellaneous 535,529; Turkish Leaf 461,745; imported wrapper, binder and filler leaf for cigars 839,241 pounds?—A. Yes.

Q. That is a total of imported leaf of 14,413,486 pounds?—A. Yes.

Mr. SENN: Would not it be well to set over against that the requirements?

Mr. SOMMERVILLE: I am going to get that.

By Mr. Sommerville:

Q. When you buy your leaf, Mr. Miller, you mature it for a period of years, do you not?—A. Yes.

Q. And it takes, I understand, an average of about two years?—A. Two to three years.

Q. But, on the average?—A. Two years.

Q. Two years, or 18 months?—A. It would be two years.

Q. So that the crop for 1932 would be the crop which would mature in 1934 and be ready for use; is that about right?—A. The latter part of 1934.

Q. Approximately?—A. Approximately, yes.

Q. And that crop that you bought in 1932 amounted to 14,560,800 pounds, less 3,500,000 pounds that you exported to the Imperial Tobacco Company of Great Britain?—A. Yes.

Q. So that what you bought for your own requirements would then be 11,000,000 pounds of the Ontario flue-cured crop for 1932?—A. Yes.

Q. Could you tell us how this 24,000,000 pounds of Ontario grown flue-cured tobacco is broken up, how much you have got of 1931, how much of 1932, and how much of 1933? You will have your figures?—A. We have not got them, sir. It is quite a job to work it out.

Q. Then that also includes some of the quantities that may be on hand of lower grades of these crops?—A. Yes.

Q. Well, have you got them graded in your records?—A. Yes, sir.

Q. Well, would you be good enough to give us the quantities each year in the grades?—A. That is, the quantity of each grade by years.

Q. By years?—A. Productions?

Q. Yes, that is it, and so also with your burley?—A. Yes, Canada flue-cured and burley only?

Q. Oh yes, I am not interested in the others to the same extent. And the same with reference to your Quebec leaf?—A. All the domestic leaf?

Q. All of the domestic leaf, yes. Now, what amount of domestic leaf did you use in the years 1932 and 1933? Mr. Miller, you could give us the total approximately, and then give us separately a detailed statement showing the grades used?—A. Well, for what years did you ask, sir?

Q. Say for 1931, 1932 and 1933, if you have it?—A. This happens to be for the government fiscal year ending March 31, 1931.

Q. This is flue-cured?—A. Yes, sir, flue-cured. Roughly 5,700,000 pounds; and next year 5,700,000 pounds; the next year 6,500,000 pounds; and the next year 7,300,000 pounds.

By Mr. Senn:

Q. Do I understand from that, that the percentage of domestic tobacco used is getting larger in comparison with foreign leaf?—A. Yes, sir. Also volume. But the percentage is being increased, sir, in fact, as fast as we feel that it is safe to do it with the crops that we have that are matured.

By Mr. Sommerville:

Q. You will file then the statement of how the grades are broken up?—A. On hand?

Q. On hand; and the consumption by grades. Do you consume it by grades?—A. It can be had, sir.

Q. If it is not a matter of your regular record I will not insist on it?—A. I ~~will try to give it to you, sir, for what it is worth.~~

Q. Now, I want to ask you this further question: When the price to the producer was reduced from an average of 32 cents in the year 1930 to an average of 16 cents or 17 cents in the year 1932, how much did you reduce the price of cigarettes to the consumer?—A. The price of cigarettes to the consumer?

The CHAIRMAN: Take some typical brand.

By Mr. Sommerville:

Q. Give me a typical brand, Turretts, for instance.—A. Page 48.

Q. That deals with the whole product?—A. Well, so far as any reduction in cigarettes is concerned, that is, in Turretts itself?

Q. Yes.—A. Well, there has been no decrease in price because of any change in the price of tobacco, but there are a lot of governing factors in the situation.

Q. And does that also apply generally to the various brands of cigarettes, that same answer?—A. You mean throughout Canada?

Q. Yes?—A. Yes, sir.

Q. Then the price paid for tobacco, if it is not passed on to the consumer reflects itself in a higher profit to the manufacturer?—A. Of necessity, yes.

Mr. SOMMERVILLE: I will leave it at that point.

The CHAIRMAN: We will adjourn to meet at eleven o'clock on Tuesday.

Mr. FACTOR: Continuing with Mr. Miller?

The CHAIRMAN: Yes.

The committee adjourned at 1 p.m. to meet again on Tuesday, May 8, 1934, at 11 a.m.

House of Commons, Room 368,

May 8, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., the Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Parry, of Toronto, appeared as counsel for the committee.

The Chairman: The minutes of the last meeting simply record the witnesses heard and documents filed. I declare the minutes adopted as read.

Carried.

Have you any documents or communications to file, Mr. Sommerville, before we proceed?

Mr. Sommerville: As we were discussing in the course of the evidence, the statement of purchase contracts for the year 1931, handed in by the Imperial Tobacco Company, I think perhaps it would be advisable to have it entered on the record so that those reading the evidence will understand the reference.

The Chairman: That is right.

Mr. Sommerville: I think Mr. Miller has some documents and papers that he desires to file with us this morning.

The Chairman: Before we proceed, I should like to mention a matter that has been brought to my attention by a letter from the National Associated Women's Wear Bureau of Montreal. I shall read it, because it refers to a matter which affects the committee, and I shall indicate what answer I gave. The letter is dated May 5, 1934, addressed to me, and reads as follows:

> Dear Sir,—About six weeks ago I received a visit from a man who was seeking information in connection with the Stevens' Commission inquiry.
>
> This person informed me that he had visited various members of our industry with a view to finding out what complaints they had to make against the T. Eaton Company, and that he had been advised by them to call on me.
>
> As his question was so pointed, I became suspicious and asked him who he was working for. He informed me that he had been engaged by Professor Goforth, and that Professor Goforth had been engaged by the Stevens Commission. I naturally pointed out to him that anyone could make that claim, and before answering any questions, I would like to have him show proof of the accuracy of his claim. He promised to bring me this proof, but has not returned since. During our conversation, he informed me in response to my inquiry as to his qualifications for this particular work, that he had been in the employ of the C.P.R. company for some years gathering statistics regarding the source of shipments of various products.
>
> The man is stout and short in stature. In view of his failure to return, I would appreciate it if you would be good enough to inform me as to whether Professor Goforth has been engaged by the Commission of which you are the chairman.
>
> Thanking you for your kind attention to this matter, I remain,
>
> Very truly yours,
>
> NATIONAL ASSOCIATED WOMEN'S WEAR BUREAU,
>
> J. P. Lever,
> *Nat. Ex. Director.*

Now, obviously, this individual, who apparently has been visiting a number of business concerns in the country, representing himself as more or less representing this committee, is doing so without the slightest warrant, because neither Professor Goforth nor this man is representing this committee at all. My opinion is that Professor Goforth is retained by T. Eaton Company, to prepare their brief. I thought it was advisable to bring this to the attention of the committee, and to indicate publicly that anyone representing this committee or claiming to represent this committee, must bear an official letter from the Chairman, showing that he is representing this committee, otherwise we will have individuals going about the country claiming to be representatives of the committee, and getting information to which they are not entitled. I thought I should bring that to the attention of the committee before we proceed. All right, Mr. Sommerville.

Mr. Sommerville: I was reading a letter from the Imperial Tobacco Company, Mr. Chairman. In all fairness, I think it should be read, as it indicates the documents that are being filed at the present time.

GRAY MILLER recalled.

Mr. SOMMERVILLE: This is in response to the request of the committee at its last session, and certain requests that are coupled with them from the counsel of the committee. The Imperial Tobacco Company write as follows:—

Dear Mr. SOMMERVILLE: During the proceedings of the Special Committee on Price Spreads and Mass Buying held at Ottawa on Thursday and Friday last, May 3 and 4, requests were made for certain information, statements, etc., which were not available at the time, and which I advised the committee I would be only too pleased to have prepared as soon as possible. In this connection I hand you herewith the following:—

1. Copy of Agreement between British-American Tobacco Co., Limited and Imperial Tobacco Company of Canada, Limited, dated 7th July, 1921, effecting the transfer from the former to the latter Company of certain trade marks, patent, etc., and the goodwill attaching thereto, for all of which there were issued to the British-American Company 400,000 ordinary shares of Imperial Tobacco Co. of Canada, Limited, of the par value of $5 each.

I believe the agreement submitted is perfectly clear and outlines the full intention, and I particularly direct your attention to clause 9 thereof from which you will note that the British-American Company were not excluded thereby from engaging in the manufacture of tobacco in Canada.

2. Copy of agreement dated 23rd September, 1921, between Imperial Tobacco Company of Canada, Limited and the Trustees appointed to subscribe for and take delivery of 420,000 ordinary shares of the aforementioned company on behalf of a specified number of officers and employees of Imperial Tobacco Company.

In connection with the foregoing I wish to particularly draw your attention to the fact that payment for the shares was provided for to the extent of $2 per share through payment made by the company to the trustees, and the extent of $3 by payment in cash by the employee to the trustees.

I regret that I was not in possession of the full details of this agreement at the time that the matter was being discussed last week, and as a consequence may have misled the members of the committee to some extent when dealing with this subject. I trust you will take the necessary steps to acquaint the members of the committee to some extent when dealing with this subject. I trust you will take the necessary steps to acquaint the members of the committee with the full facts in accordance with these remarks.

3. Statement setting forth the undivided profits of Imperial Tobacco Company of Canada, Limited, and its subsidiary companies as at 31st December, 1933, as per audited accounts. (The period covered for the Tuckett Company is that ended 31st March, 1934.)

4. Statement showing amount paid by Imperial Tobacco Company of Canada, Limited (1912), for its investment in the B. Houde Company Limited, this investment being 4,352 shares of the par value of $100 each constituting approximately 87 per cent of the total issued capital stock of 5,000 shares.

5. Detailed Auditor's Reports for the past five fiscal years of each of the following companies, if extant:—

* Imperial Tobacco Company of Canada, Limited.
John Erzinger Limited.

Q. That is a distributor?—A. Jobbing house in Saskatoon and Winnipeg.

Q. In the west?—A. Yes.

Q. "James Kirk Limited"; is that a jobbing house?—A. In Hamilton.

Q. "The H. Fortier Company, Limited"; is that a jobbing house?—A. Montreal.

Q. "Scales and Roberts Limited"; a jobbing house?—A. Toronto.

Q. "General Cigar Company, Limited?"—A. Montreal.

Q. A Manufacturing company?—A. At Montreal, cigars.

Q. "Andrew Wilson and Company, Limited?"—A. Cigar manufacturers at Toronto.

Q. Are they also jobbers?—A. No, sir.

Q. "Punch Cigar Company, Limited?"—A. Of Toronto, cigar manufacturers.

Q. "Liggett and Myers Tobacco Company of Canada, Limited?"—A. Montreal.

Q. Manufacturers?—A. We manufacture cigarettes for them.

Q. They have no plant of their own?—A. No, sir.

Q. You manufacture for them?—A. Under an arrangement.

Q. "National Tobacco Company, Limited?"—A. Montreal, snuff manufacturers.

Q. "The B. Houde Company, Limited?"—A. Tobacco manufacturers, Quebec city.

Q. They manufacture cigars?—A. No, sir.

Q. Just tobacco?—A. Tobacco.

Q. Plug?—A. No, pipe and fine cut.

Q. "Quebec Leaf Tobacco Company, Limited?"—A. Quebec city; they handle raw leaf.

Q. "Dominion Tobacco Company, Limited?"—A. Dormant.

Q. "Empire Tobacco Company, Limited?"—A. Dormant at present.

Q. "American Tobacco Company of Canada, Limited?"—A. Dormant at present.

Q. "Imperial Tobacco Sales Company of Canada, Limited, and Imperial Leaf Company of Canada, Limited," of which we have already heard?—A. Yes.

Q. "United Cigar Stores, Limited"; that is a retail chain of stores?—A. Yes, at Toronto.

Q. "United Cigar Stores, Nova Scotia, Limited?"—A. Dormant.

Q. "United Cigar Stores (New Brunswick) Limited?"—A. Dormant.

Q. "The Tuckett Tobacco Company, Limited?"—A. Hamilton, Ont.

Q. Then you also file the crop list books and grading books used by leaf buyers covering the 1931 and 1932 crops?—A. Yes, in that bundle (indicating bundle on the table).

Q. I observe for 1932 they are all complete, but for 1931 there are a few missing?—A. Yes.

Q. You give the reasons for that?—A. Yes.

Q. The men are not in your employ now?—A. Yes, except, I believe,—one is, but these books seem to have been lost.

Q. Then the 7th statement you file is a statement showing the purchases affected under Mr. T. L. Lea's supervision on the 6th October, 1931, the opening day of the market, and statement showing purchases effected under the supervision of Mr. F. R. Gregory on the same day, from which it will be noted that the former purchased a total of 627,000 pounds at an average of $·2779, and the latter 491,000 pounds at an average of $·2704?—A. Yes.

Q. And the 8th is an order from the Imperial Tobacco Company Limited, of Great Britain and Ireland for 1,000,000 pounds greenweight received by you on the 16th November, 1931?—A. Yes.

Q. And then the 9th is a statement showing yield by grades of Canadian flue-cured tobacco purchased by Imperial Tobacco Company of Canada, Limited, in the Norfolk district and in the Essex district of Ontario, separately and combined for each of the crops 1930, 1931, 1932 and 1933?—A. Yes.

Q. Then, contracts covering the purchases of the 1931 and 1932 crops of Canadian flue-cured tobacco?—A. Yes, in these two trunks here (indicating). Do you want them now, sir?

Q. Mr. Miller, shall we take the summer holidays to examine them?—A. It might be necessary.

Q. Then, statements showing net profits, wages, etc., for each of the years 1931, 1932, 1933, resulting from the operation of the following United Cigar Stores located in Toronto. You give six stores located as follows: Bay and Front streets, Bay and Adelaide streets, Yonge and Adelaide streets, St. Clair and Yonge streets, Dundas and Keele streets, Queen and King streets, Sunnyside, and showing also statement of any reduction in the number of employees and statement of weekly wage paid in each year mentioned to each employee in these stores.

Mr. Heaps: Do these wages include salaries?

Mr. Sommerville: These are for the retail stores, the United Cigar Stores. I presume that they mean all the amounts paid whether you call them salaries or wages?

The Witness: In those stores, yes.

By Mr. Sommerville:

Q. Then, 12 consists of statements showing the total factory payrolls for the years ended 31st December, 1931, 1932 and 1933, in each of the manufacturing plants of the Imperial Tobacco Company of Canada, Limited, and subsidiary companies?

Mr. Factor: Wages only, not salaries?

Mr. Sommerville: Wages only, I understand.

The Witness: The total factory payroll. I do not just know what the distinction is between salaries and wages in the factory.

Mr. Factor: It is for everybody in the factory?

The Witness: It includes salaries paid to certain officials and executives in the office—no, it is in the factory; it excludes the factory officials.

Mr. Heaps: You have it for three years, Mr. Sommerville?

Mr. Sommerville: We have it for 1931, 1932, 1933.

Mr. Heaps: Could we have the 1930 wages?

Mr. Sommerville: I presume they were not asked for that. We asked them for the last three years.

Mr. Heaps: I think 1930 would be a better year to go by than other years. It seemed to be the peak.

Mr. Factor: I think we had better go into that question as a separate proposition later on.

By Mr. Sommerville:

Q. The next statement filed is one showing salaries and bonuses paid to all executives, officers, and directors of Imperial Tobacco Company of Canada, Limited, and subsidiary companies for each of the years 1924 to 1933, inclusive? —A. Yes.

Q. The next statement is one showing recapitulation of detailed contracts of purchases of 1931 crop of flue-cured tobacco at both Delhi and Leamington? —A. Yes.

Q. When you refer to the purchases at Delhi and Leamington, these are the points at which your purchases centre?—A. Yes.

Q. They would cover your purchases of flue-cured tobacco in that area?—A. Yes.

Q. With regard to the schedule of tangible assets amounting to $24,036,380.91 for which capital stock of Imperial Tobacco Company of Canada, Limited, of 1912 was issued, I would like to draw your attention to the memorandum on this subject attached to my letter dated 2nd May, 1934, handed to you on Thursday morning last. I believe that the particular point in question is fully covered in the answer to question No. 4 attached to the above mentioned letter. From this schedule will be apparent also the amount of cash that was received by the company in exchange for capital stock issued.

Dealing with the statement that has been requested concerning the amount realized from the operating of Tamblyn's, I wish to advise that this information is not readily available from our current records, and we have nothing to submit at this time, but we have the matter in hand and as soon as the necessary search can be completed, shall be glad to forward the particulars asked for.

Statements were requested showing the consumption by grades of domestic flue-cured tobacco and are now in the course of preparation for each of the twelve months ended 31st March, 1931, 1932, 1933, and 1934, and will be submitted when completed.

Regarding statements showing inventory of domestic leaf by grade and by crop for Imperial Tobacco Company of Canada, Limited, and its subsidiary companies as at 31st March, 1931, 1932, 1933, and 1934, although these figures are available from our records and the records of our subsidiary companies, it takes a considerable length of time to prepare and correlate the same, and the work has not yet been completed in respect of these inventories. However, the figures are in process of compilation and I shall be glad to submit the same when they are drawn up in the proper form.

Statement showing wage scale and changes in same in Imperial Tobacco Company and Subsidiary Companies' factories will be submitted when completed.

Statement showing adjustments in salaries and dates of same effected by Imperial Tobacco Company of Canada, Limited, and subsidiary companies, and explanation of manner of adjustment, will be submitted when compiled.

By Mr. Sommerville:

Q. This is the information which you are filing with the Committee this morning, Mr. Miller, in answer to the request of the Committee?—A. Yes.

Q. And further information is being completed and filed?—A. Yes.

Mr. Sommerville: Along with this letter will be read a section to be entered in the record, a paragraph Mr. Miller requests, in the memorandum dated 2nd May, 1934, in answer to question No. 4. I will hand it to the reporter at a later time.

By Mr. Sommerville:

Q. May I, just for purposes of information, just at this time ask you what or how the buyers crop book is identified with the individual grower; not having seen this—?—A. I think you just go by the name and the description of the location—it is not a very easy matter to say.

By Mr. Factor:

Q. Did you prepare a statement of the volume purchased of the 1931 crop?—A. Yes, sir, it has been submitted.

By Mr. Sommerville:

Q. Can you tell me, what are the particular grades that the buyer puts into his buyers' book?—A. There are two books, aren't there? One is, I think, called the crop book, and—could I see one of them myself to try to explain; I am not thoroughly familiar with all the details.

Q. Yes?—A. That one is called the crop list, that is the first one; what is your question about this? He does not show any grades there, as you will see; he only shows the man's name, the number of acres approximate under cultivation, and his estimate of yield in pounds; and the reference "it is good." That is when the tobacco is growing in the fields, that is the crop list book.

Q. That is the first book?—A. Yes.

Q. Then, I am looking now at J. B. Wilson crop list for 1931?—A. Yes.

Q. And it contains the name of the grower, the acreage that he has under cultivation?—A. Estimated.

Q. The estimated acreage; the statement as to whether it is "good," "medium," or "fair"; the estimated quantity of tobacco that will be produced?—A. Yes.

Q. That is the first book?—A. That is while the tobacco is still growing in the field.

Q. Yes. Then do I understand that when the crop has been harvested and is taken into the kiln and cured that he has another book in which he enters the condition of the crop?—A. Well, yes, each kiln he makes reference to.

Q. That is a separate book?—A. Yes.

Q. And that is the grading book?—A. Yes, sir.

Q. And on that grading book he makes certain entries?—A. Yes.

Q. And on that grading book does he make any entry as to the price that is to be offered for that crop when he goes out to buy?—A. He might make an estimate basis—

Q. He will make an estimate based on the kiln, the condition that he has found the various kilns in?—A. Yes.

Q. And having examined the various grades he then makes an estimate of the price he will pay?—A. No, he does not make any estimate.

Q. Just look at that book. For instance, I am looking now at J. B. Wilson's, 1931 grade book in which he describes the whole crop, then at the bottom you will see in pencil "25 cents"?—A. Mr. Sommerville, I have prepared here a statement I think that covers a good deal of this.

Q. Perhaps if you will just follow that particular phase?—A. I do not know what that could be. You will see some pencilled figures up here in this corner.

Q. I am talking about the bottom of his entries on the page where he is dealing with the grades, then at the bottom of the page in pencil you will find the price, 25 cents; is not that his estimate of the price to be paid for that crop before he starts out to buy it?—A. You see, at that time, as I understand it—trying to get a clear view in your mind, Mr. Sommerville—as I understand it at this time there has been nothing mentioned or decided as to what basis a price should be offered when they are making these inspections.

Q. Yes?—A. And now for their own good, as I understand it, they sometimes have put a price at the top, or maybe at the bottom.

Q. At the top right-hand corner they have put a price on the basis of previous years' purchases; that is what their figure would be?—A. Yes.

Q. But that does not refer to the figure in the middle of the page, or at the bottom of the page; that is a separate figure?—A. Yes, it does, sir.

Q. Is not that the figure put by the buyer upon his book as to the price that he expects to pay for the crop which he has been inspecting at every kiln during the progress of the curing. If you will just stick to the page I was

looking at; I know that one, I have not looked at any of the others yet?—A. I am sorry, what was the name? I think this is the one you referred to; is that the one?

Q. Yes, that is the one?—A. There seem to be a lot of figures on a lot of the other pages.

Q. That is the one now?—A. Let us see what it is.

The CHAIRMAN: You see what we are getting at, we want to know the system that is followed, because the price paid in 1931 is the ground on which a rather acute difference has developed between ourselves and yourself. We want to know the system followed. This apparently indicates the system. If you will kindly give us just exactly what it means, it will be helpful.

Mr. KENNEDY *(Winnipeg)*: Mr. Sommerville, is that an isolated one, or just indicative of the practice.

Mr. SOMMERVILLE: Indicative of the practice, I just picked it out, the first one I opened.

The WITNESS: Mr. Buell informs me that in looking at this particular page that that in that instance is probably an estimate of the price of the crop; in that particular instance. Some of these figures are the number of kilns added up.

By Mr. Sommerville:

Q. Generally through the pages I find the same condition?—A. The next one has a little pencilled figure at the top, it does not seem to refer to anything.

Q. On that question, on that page that we were referring to, Birdsall's crop, where there is an estimated price of 25 cents; can you tell me what the buyer paid Birdsall for that crop?—A. I do not know whether we have got that or not.

Mr. FACTOR: What date was that, Mr. Sommerville?

Mr. SOMMERVILLE: The 1931 crop.

The WITNESS: It is amongst these contracts.

Mr. SOMMERVILLE: It might just as well be in Montreal, as far as I am concerned. I wonder if you have not some ready reference to the purchases from Birdsall of his crop.

The WITNESS: No ready reference here, we made a list of all contracts just of all contracts just in case you wanted to keep the contract as a record, of what they were; just to refer to them. The name is Charles Birdsall, is it, or Birdsall Brothers?

By Mr. Sommerville:

Q. I will tell you that the crop might be under two names, James Vaughan Boven and Birdsall Brothers; Birdsall Brothers may be the owners of the farm and James Vaughan Boven would appear to be the share man on the farm. My reason for asking?—A. As near as I can see, Mr. Sommerville, and find out here in this short time, I understand that it is not the custom at all to put down prices in these books of what they were going to offer. It may be that, it may be anything; I do not know that we could say what it is from what I can gather.

Q. Mr. Miller, looking at the crop list book I find that that crop is described as "good" and "20,000 pounds"; and that is the highest grade that is given to any crop in this crop list—"good"; there is no higher grade given to any farmer in this entire book?—A. Well, that is only a general remark on his whole crop; they can't tell what it is going to develop.

Q. I know; but at any rate while it is growing he grades it good?—A. All right.

Q. He grades some others "flue-cured medium," some others "fair"?—A. Yes.

Q. He grades some others "poor".—A. Yes.

Q. And he grades some others "medium small" and "light"; so this is at any rate the grade which is the top grade as far as this buyer is concerned when the crop is growing?—A. You say he has it marked "good" in that book?

Q. He has it marked "good" in that book; now I want to know what you were paying for that top grade?—A. We may not have bought it. I see here, Birdsall—James Birdsall, John Birdsall and some others.

Q. And the price paid to them was what?—A. John Birdsall, 25 cents.

Q. Birdsall Brothers?—A. Oh yes, here is Birdsall Brothers; 17 cents.

Q. 17 cents paid for a crop on which that buyer has estimated 25 cents?—A. I do not like to say that that is necessarily unfinished.

Q. Well, Mr. Miller, can you give this committee any other conceivable explanation for that entry at the bottom of that crop report after the crop has grown and is top grade, after it is cured in the kilns and has been examined weekly and then the buyer goes out to buy it and before he goes puts a price of 25 cents on the bottom of the page; is there any other explanation you could make?—A. I would like to try to make this explanation: that I did not personally have intimate contact with that, and I tried to find out.

Q. Mr. Miller, we appreciate that, but you have your cohorts here; is there any one of them who can give us the slightest explanation of why that man was paid 17 cents on the top grade of tobacco that was bought from him at that time when you consider the difference with the top price of 30 cents in the crop of 1930; because that is the crux of the thing. That is the complaint, Mr. Miller, from that whole area. Let me put it to you fairly: the complaint is that by reason of this strange new method introduced with Mr. Lee, when you had top grade crops and your alleged top price was 30 cents and one fellow got 17 cents, and another 15 cents, and another 27 cents, and another 22 cents; and it just happens—I did not pick that first book—that that seems to be borne out. Now, if there is any explanation, Mr. Miller, you are perfectly free to make it, or have your men make it now, or at any time?—A. I thought we had explained it; that first book that we looked at is just made when the crop is growing.

Q. Yes, and it is quite possible that that crop may grade at top grade when it is growing and yet in the curing it might be spoiled?—A. Quite.

Q. I can see that. The second book reports certain conditions?—A. Quite.

Q. And at the bottom of the page certain prices were apparently indicated; why the reduction of $33\frac{1}{3}$ per cent in the price paid?—A. I was going to say that even after these inspections were made there could be considerable change in a crop between the time that it was inspected and the time they came to buy it.

By Mr. Factor:

Q. After it is graded?—A. Yes, after we have seen it in the kiln.

By Mr. Sommerville:

Q. All right, Mr. Miller, let us take that basis; what you are saying is, the buyer goes out and he examines each kiln that is being cured separately?—A. Yes.

Q. And that kiln is completed and he makes his record of just what is the condition of that kiln when it is cured?—A. Yes.

Q. And it is all done within a few weeks, is it not?—A. Yes.

Q. And then the next kiln is put in and cured?—A. Yes.

Q. And the next kiln put in and cured, he knows that one, and the next kiln is cured; and do you say that between the time that these four kilns, say

the sixth, the tenth, the twentieth and so on as the case may be, are cured, that it may change in value to the extent of warranting a 33⅓ per cent reduction?—A. It might change considerably.

Q. I mean in quality; you say that?—A. Yes, if they do not handle it right it may be ruined—too much moisture.

Q. After curing?—A. Even after curing, yes, sir.

Q. My reason for asking you to consider that carefully, Mr. Miller, is that I see growers all around this room just with beaming faces laughing at the suggestion; I do not know whether it is right or wrong.

By Mr. Factor:

Q. What has to be done to that crop after it is cured? Would you let Mr. Buell—would you attempt to explain this, Mr. Buel—is that agreeable, sir?

Q. Yes.

The CHAIRMAN: You had better swear Mr. Buell.

HENRY P. BUELL, sworn.

Mr. SOMMERVILLE: Mr. Buell, what explanation have you got to make for the reduction from 25 cents to 17 cents on this particular crop that we are talking about of Birtsall Brothers.

Mr. BUELL: This particular crop of tobacco shows that there were 20 acres; fifteen of it was good and five poor.

Mr. SOMMERVILLE: Yes?

Mr. BUELL: Well, the price that is indicated down at the bottom does not mean that that is the buying price.

Mr. SOMMERVILLE: What is it on there for if it is not a buying price?

Mr. BUELL: In 1930 the price was higher than it was in 1931, but if we set a price he can relatively break that price of tobacco down to what he thinks it is worth at the time the buying takes place, that is, the buyer can.

Mr. SOMMERVILLE: But remember, Mr. Buell, in this case he has examined all the kiln, his examination is completed, his entries in his book are finished, and at the bottom of it—knowing what he is going to do with that crop—he puts in a price of 25 cents and he knows it when he fixes that price.

Mr. BUELL: Oh no, that was done before.

Mr. SOMMERVILLE: How do you know?

Mr. BUELL: Because it is the custom.

Mr. SOMMERVILLE: It is the custom what?

Mr. BUELL: To put a price down as a guide to the man.

The CHAIRMAN: Before you inspect the kiln?

Mr. MILLER: Afterwards.

The CHAIRMAN: That is what Mr. Sommerville says, but Mr. Buell says no.

Mr. SOMMERVILLE: What do you say is the practice now among your buyers?

Mr. BUELL: The buyer finds out what we have paid for the previous year's crop and he puts that down in his book as a guide for his buying.

Mr. SOMMERVILLE: Look at that book, he has not got those figures at the right hand corner of the page.

Mr. MILLER: It has got nothing on there.

Mr. SOMMERVILLE: Look at the rest of it, look at the top of the adjoining pages.

Mr. BUELL: I am not talking about the crop, I am talking about the quality of it.

Mr. SOMMERVILLE: I know what you are talking about, Mr. Buell, but what this committee would like to get is an explanation of that figure.

Mr. BUELL: That is a guide that they use when they are buying.

Mr. SOMMERVILLE: You think that is the explanation for paying this man 33 per cent less than the estimated figure of 25 cents?

Mr. BUELL: Well, that has got a lot to do with how the tobacco turned out as to quality.

Mr. SOMMERVILLE: Can you think of any other explanation?

Mr. KENNEDY (*Peace River*): What would the price of last year's crop have to do with it, would not the quality of the tobacco be the governing factor?

Mr. SOMMERVILLE: The 1931 crop was a better crop in quality, was it not? As a matter of fact, the 1930 crop was one of the poorest crops you had had, was it not?

Mr. BUELL: Yes, 1930 was not a very good crop; it was a small crop.

Mr. SOMMERVILLE: It was a small crop and it was poor quality, and for that poor quality crop you paid 40 cents a pound as a top?

Mr. BUELL: As a top, yes.

Mr. SOMMERVILLE: And you paid an average of 31 or 32?

Mr. BUELL: Yes.

The CHAIRMAN: An average.

Mr. SOMMERVILLE: An average, and the next year it was a better quality crop, and yet your prices ranged from 25 to 17. Is not that what you said the buyer has done?

Mr. BUELL: The buyer has put that price in there.

Mr. SOMMERVILLE: Yes?

Mr. BUELL: As a guide based on 1930 prices.

Mr. SOMMERVILLE: All right.

Mr. FACTOR: You have got 25 cents as an estimated price. Now, you never paid 25 cents for any tobacco, top price, in 1930.

Mr. BUELL: We paid more than 25 cents for the 1930 crop.

The CHAIRMAN: You paid as high as 40 cents.

Mr. BUELL: From 40 down.

Mr. FACTOR: So that this figure of 25 cents has no relation to the price you paid for the 1930 crop?

Mr. MILLER: Mr. Buell means this, the buyers do not know what the top price is going to be; but they knew that the top price for the previous crop was 40 cents; that is all he knows. Assuming that it is going to be the same top price this year, that is, for 1931 as it was for 1930, then his price would have been 25 cents. In other words, 40 cents top price of crop would have been worth 25 cents. That is known before he has made a final inspection.

Mr. SOMMERVILLE: Is there a single entry in this book from beginning to end showing 40 as the top price?

Mr. BUELL: No.

Mr. SOMMERVILLE: The 1931 crop was a better crop than the 1930 crop, was it not?

Mr. BUELL: Yes, it was a better crop.

Mr. SOMMERVILLE: So that, with that better crop, if that was the system that was being followed he would somewhere or other in this book have entered 25 cents, 35 cents, 30 cents or 40 cents for the various higher grades of crop, would he not?

Mr. BUELL: Yes.

Mr. SOMMERVILLE: Well, he has not done anything of the kind, because 25 and 26 seem to be the best.

Mr. MILLER: There are some thirties there, I think, or I may be wrong.

Mr. SOMMERVILLE: Here you are, 27.

Mr. MILLER: There are some 32.

Mr. SOMMERVILLE: Here you are, 23, 22, 20, and 18; here is one 19.

Mr. KENNEDY (*Peace River*): Not a 40?

Mr. SOMMERVILLE: Oh, no.

Mr. MILLER: The 40 is for fancy.

Mr. ILSLEY: A 32 entry would give some support to what these gentlemen have said; if 30 was the top price in 1931, on our theory—if I may put it that way—there should not be anything above 30, but on their theory they should have some up to 40.

Mr. MILLER: Yes, you are right.

Mr. EDWARDS: Would 40 cents be paid for the whole crop or a select part of the crop?

Mr. MILLER: Generally for select. The top price is really for fancy, for high coloured tobacco.

Mr. EDWARDS: That was the 1930 crop?

Mr. MILLER: I mean any top price in any crop.

Mr. EDWARDS: That 40 we are referring to that was top for 1930?

Mr. MILLER: Yes.

Mr. EDWARDS: Your average for 1931 was about?

Mr. MILLER: About 21.

Mr. SENN: But in very few cases would the top price be paid for the farmers whole crop.

Mr. MILLER: In very few cases.

Mr. SOMMERVILLE: We will have to examine these books at greater length and deal with that branch of the subject later. I just wanted to ascertain the meaning of the entries in the particular books.

Mr. YOUNG: Here is an entry in connection with one man's crop—good, medium, one; medium, one; medium, three; and then at the bottom he has written Good, Medium, and the price at the bottom is five; and the next page we have Good, Medium three; Medium five; Common $6\frac{1}{2}$; poor $3\frac{1}{2}$; and he has written "poor", and the price on this is 19 cents. If on the basis of last year's price one crop is worth only 5 cents I do not see how he gets 19 for that other.

Mr. MILLER: That does not seem right.

Mr. SENN: Would it be possible to follow this identical crop through to the curing stations and have them maintain their identity and know what the grades are there?

Mr. MILLER: Would it be possible?

Mr. SENN: Yes?

Mr. MILLER: And then separate it into our grades and know the result of each?

Mr. SENN: When you buy a farmer's crop at a certain grade in these books do you follow the farmer's crop down to the curing stations and give a grade there?

The CHAIRMAN: There is a record of what was paid.

Mr. SENN: Oh no, the grades.

Mr. EDWARDS: They have already bought the crop.

Mr. MILLER: We separate it into our own grades.

Mr. SENN: Can you identify it, in grades there, with the grade given by the buyer?

Mr. MILLER: No, sir; there are a good many more grades; we divide it up into a good many more grades.

Mr. SENN: Do you not keep any check on the buyers grades with what the actual grade is?

Mr. MILLER: You mean, we do not check up to find whether the buyer has bought well or poorly, is that your idea?

Mr. SENN: That is the idea, yes.

Mr. MILLER: I am not sure, Mr. Senn, that I quite understand. Would you mind putting your question again.

Mr. SENN: What I want to get at is this: The buyer gives a certain grade and buys on that grade; you take his word for what the grade is when it is bought and the contract is made. Now, do you not check up on his activities as to whether he is making good purchases, or whether those grades are finally as good as he says they are at the beginning?

Mr. MILLER: When that crop comes into the plant, somebody inspects it in a general way. That is all the buyer has made, is a general inspection, and they check it to be sure that it is roughly the same.

Mr. SENN: In other words, unless the buyer is making a good deal for you and getting a grade at least as good as he says it is at the price, you would not keep him very long?

Mr. MILLER: No, we would not. In other words, he has bought it on a general inspection, and when it comes into the plant the general inspection proves that it is roughly worth that, and if we are satisfied with it from that point of view, it is taken in and graded in to our own grades.

Mr. SENN: And I suppose if it is a good deal higher that is all the better for the company and the buyer gets credit for that?

Mr. MILLER: I suppose that might happen. For instance, a buyer says that tobacco is worth 18 cents, and the supervisor goes with him to see the crop. The supervisor says no; he thinks that crop is worth more and he says more. I have heard of many such instances.

Mr. SENN: On the other hand, I have heard of instances where a buyer would pay 15 cents for a crop which was a better crop than a crop that 21 cents was paid for.

Mr. MILLER: The same buyer?

Mr. SENN: Yes, I heard of that.

Mr. MILLER: I would hate to think that that happened.

Mr. SENN: You do not know whether it has or not?

Mr. MILLER: No sir, not to my knowledge.

Mr. SOMMERVILLE: Mr. Miller, the figures that are referred to that are above 30 and 32, and so on, refer to the acreage entirely.

Mr. MILLER: They do?

Mr. SOMMERVILLE: Yes, so we will just have to look into this book later.

Mr. MILLER: They are only really guides anyhow. There are no hard and fast rules on it.

Mr. SOMMERVILLE: But it is the guide that affects the grower, Mr. Miller, however rough it is, and that is just what we are trying to get at. When we adjourned on Friday, we were dealing with the question of the price of tobacco. Perhaps you will tell me, what was the total price paid for the entire crop of 1930; have you got those figures, Mr. Miller?

Mr. MILLER: The total price,—you mean the average price?

Mr. SOMMERVILLE: No, in dollars and cents, the total price of it.

Mr. MILLER: The total price in dollars and cents that we paid for the whole crop?

Mr. SOMMERVILLE: That was paid for the whole crop. I thought you would have those figures.

Mr. MILLER: We have the total quantity I believe.

Mr. SOMMERVILLE: Perhaps you can tell me the total price that you paid for all the tobacco you bought.

Mr. MILLER: For what crop?

Mr. SOMMERVILLE: For the crops of 1930, 1931, 1932 and 1933.

Mr. MILLER: That is on those statements which we have handed to you.

Mr. EDWARDS: Page five, what is that?

Mr. SOMMERVILLE: No, that is the total amount produced, but that is not the Imperial Tobacco Company purchases.

Mr. MILLER: That is the total production, and if it were figured out at the average price, you would get at the other, Mr. Sommerville, but we have not got that. It could be easily computed by multiplying. Page eleven shows the average prices for the crops and on page five there is the total crop.

Mr. FACTOR: Mr. Sommerville is talking about the Imperial Tobacco Company.

Mr. MILLER: These statements that were handed in give that information, I think. Here it is: Our total purchases for 1931 crop, Mr. Sommerville.

Mr. SOMMERVILLE: Yes, if you can start with 1930.

Mr. MILLER: All right. 1930 we purchased a total of flue-cured—which is Leamington and Delhi—8,878,626 pounds at an average price of ·3190 to us, or $2,832,607.62 to the farmer.

Mr. SOMMERVILLE: Yes, $2,832.607.62 to the farmer. Now, will you add to that flue-cured price, the total price you paid for other tobaccos; can you tell me that?

Mr. MILLER: What other tobaccos?

Mr. SOMMERVILLE: Well, you buy Burley and other leaf. Can you give me that.

Mr. MILLER: No, sir, we have not got it.

Mr. SOMMERVILLE: Does your flue-cured tobacco cover 80 per cent or 90 per cent of the domestic tobacco that you buy? What proportion would it cover?

Mr. MILLER: You mean in value?

Mr. SOMMERVILLE: In value, in dollars and cents.

Mr. BUELL: Oh no, not that much.

Mr. SOMMERVILLE: I mean Canadian.

Mr. BUELL: Of our Canadian purchases, how much does flue-cured represent of the total?

Mr. SOMMERVILLE: What proportion of the total would it cover?

Mr. MILLER: Of course, it would change from year to year, crop to crop, Mr. Sommerville.

Mr. SOMMERVILLE: Well, approximately.

Mr. MILLER: Well it might change quite considerable depending on a crop. We would make you up a statement on it.

Mr. SOMMERVILLE: Well, does it represent 75 per cent in dollars and cents, because your Burley is a very much cheaper tobacco?

Mr. BUELL: From two-thirds to three-fourths. That is an estimate.

Mr. SOMMERVILLE: In dollars. In other words, there would be a quarter to a third more in dollars value added to the flue-cured price which you have just given us, which would be a rough estimate of your entire tobacco bought by the Imperial.

Mr. BUELL: We have not got any figures on the Burley, but offhand it is something like that.

Mr. SOMMERVILLE: Then, at that rate, your total purchases of tobacco for the year 1930 represented a value of something between three and a half million and three and three-quarters, in dollars; for flue-cured, $2,800,000, and if you add a third to that you would have approximately three and a half millions, or thereabouts.

Mr. BUELL: On that basis, yes.

Mr. MILLER: Subject, of course, to verification. Will you let us give you a statement on that?

Mr. SOMMERVILLE: I would like to have it on the record exactly. I wanted to compare that with your profits for that year, Mr. Miller; that year in which you paid say three and a half million dollars for your total purchases your profits, according to the statement filed, were $6,512,000?

Mr. MILLER: Yes, but of course, other things would go into it, other tobacco.

Mr. SOMMERVILLE: I appreciate that there is imported tobacco goes into it, but imported tobacco plus domestic tobacco constitutes the raw material for your product?

Mr. MILLER: Yes.

Mr. ILSLEY: You are just taking the Canadian tobacco?

Mr. SOMMERVILLE: The Canadian tobacco, yes.

Mr. ILSLEY: That is three and a half millions.

Mr. SOMMERVILLE: Yes.

Mr. ILSLEY: I should think your comparison would not be of very much value unless you take the total raw material with the profits, that would be interesting.

Mr. KENNEDY *(Winnipeg)*: Is it not just the amount of Canadian tobacco being purchased by this company?

Mr. ILSLEY: I do not see the purpose of the comparison unless you take the total raw material.

Mr. BUELL: I can tell you the value, Mr. Sommerville.

Mr. SOMMERVILLE: All right.

Mr. BUELL: The total value of flue-cured tobacco was $2,832,607, and the total value of Burley tobacco was $1,443,406, making a total of $4,275,000, and, in addition to that, there was cigar leaf and other tobaccos.

Mr. MILLER: And besides that there were some further amounts paid for Canadian tobacco such as cigar leaf and Quebec leaf.

Mr. ILSLEY: And your profits were made on other tobaccos as well as Canadian tobaccos?

Mr. MILLER: Yes, other imported tobaccos, Havana tobacco.

Mr. ILSLEY: How much would that be?

Mr. MILLER: We have not got the figure.

Mr. SOMMERVILLE: Perhaps you would be good enough to prepare for us a statement showing what your total purchases were.

Mr. BUELL: And the amount of tobacco.

Mr. SOMMERVILLE: And did those purchases not include purchases for the Tuckett Company or some of your subsidiaries?

Mr. MILLER: Yes.

Mr. SOMMERVILLE: So that the profits of these subsidiaries would be a factor also for comparison?

Mr. MILLER: All dividends received would be included in those figures.

Mr. SOMMERVILLE: But dividends do not represent anything like the profits?

Mr. MILLER: Not necessarily.

Mr. EDWARDS: Did that include purchases for the British Company, Mr. Miller?

Mr. SOMMERVILLE: Not in 1930. You did in 1931 and 1932.

Mr. MILLER: We bought nothing for the British Company in 1930.

Mr. SOMMERVILLE: Then if you will prepare a statement of the amount which will show the entire amount of tobacco used by each of those dealers.

Mr. MILLER: Used?

Mr. SOMMERVILLE: Yes.

Mr. MILLER: Domestic, American, or domestic and imported?

Mr. SOMMERVILLE: All kinds of tobacco used in your various grades.

Mr. MILLER: Yes.

Mr. SOMMERVILLE: We would appreciate having that.

Mr. MILLER: All right, sir. What year?

Mr. SOMMERVILLE: For 1930, 1931, 1932, and 1933.

Mr. YOUNG: When you say the total amount, do I understand that the Canadian tobacco used this year was purchased two years ago?

Mr. MILLER: Yes, probably two years ago. We would not begin using it for about two years.

Mr. BUELL: It varies.

Mr. MILLER: It is eighteen months to two years before we begin to use it, and we will be using two or three crops at the same time. I understand Mr. Sommerville to say that he wants to know the value of the tobacco that we used.

Mr. SOMMERVILLE: Purchased and used.

Mr. YOUNG: The value of the tobacco you used and the price you paid for it.

Mr. SOMMERVILLE: And used, Mr. Miller.

Mr. MILLER: Used.

Mr. YOUNG: The quantity of tobacco you used and the price you paid for it, and the amount of tobacco you manufacture this year and the price you paid for it.

Mr. MILLER: There would be tobacco purchased say three years ago used at the same time.

Mr. SOMMERVILLE: Now then, Mr. Miller, the tobacco that you bought in 1931 at an average of 22 cents, or 21·9 cents, I think you said, you used that in the year 1931?

Mr. BUELL: We have not used it all yet.

The CHAIRMAN: So that the flue-cured tobacco bought in 1931 is still being used in your manufacture?

Mr. BUELL: Some of it, yes.

The CHAIRMAN: And that was tobacco that cost you on an average of 22 cents?

Mr. BUELL: In 1931, yes.

The CHAIRMAN: Yes, and in 1933 you were using the tobacco that was bought in 1930?

Mr. BUELL: Some of it. We are still using some of it.

Mr. SOMMERVILLE: In other words, the profits in 1933 were, to some extent at any rate, based upon tobacco that cost you a top of 40 cents and an average of 21 in 1930.

Mr. MILLER: Yes.

Mr. SOMMERVILLE: And in 1934 the profits also were based upon tobacco that cost you a top of 30 cents in 1931 and an average of 22.

Mr. MILLER: Some of it.

Mr. SOMMERVILLE: And then when you come to 1932 you had an average of 16 cents?

Mr. MILLER: Yes.

Mr. BUELL: ·1732.

Mr. SOMMERVILLE: The average for the whole crop was 16 something, and your entire purchases represented ·1732, approximately 5 cents less than the previous year's average. And the profits of 1934 then, will be affected by the cheaper tobacco that you bought in 1932.

Mr. MILLER: To some extent.

Mr. SOMMERVILLE: Yes, the cheaper tobacco will be reflected in the profits of 1934.

Mr. MILLER: To some extent, yes.

Mr. SOMMERVILLE: In 1931 you bought fourteen million pounds.

Mr. BUELL: 14,448,000.

Mr. SOMMERVILLE: Say fourteen and a half million, and on a saving of approximately 10 cents a pound, that represented an additional saving to you of about $1,450,000.

Mr. BUELL: We did not keep all of that tobacco.

Mr. SOMMERVILLE: Well, you sold some of it. You sold that year—1931—a million pounds.

Mr. MILLER: 800,000 pounds.

By Mr. Sommerville (to Mr. Miller):

Q. Then you got 13,500,000 pounds?—A. Yes.

Q. And on that, a saving of 10 cents represented a saving to you of $1,350,000; that is correct?—A. It would amount to that.

Q. And 10 cents a pound represented approximately $100 an acre to the farmer, on a 1,000-pound average crop?—A. Yes.

Q. So that the reduction of 10 cents a pound represented a reduction in the return to the producer of $100 an acre in 1931, over 1930, approximately?—A. Yes.

Q. In 1932 you bought 15,469,000 pounds?—A. Yes.

Q. About fifteen and a half million?—A. Yes.

Q. Your saving, then, was some 14 cents over the price of 1930?—A. We sold 3,500,000 pounds to the British Leaf Tobacco Company.

Q. 3,000,000 did you say?—A. 3,500,000.

Q. That left you 11,000,000 pounds?—A. 11,900,000.

Q. Approximately 12,000,000 pounds, we will say?—A. Yes.

Q. On that your saving was 14 cents over the price of 1930?—A. Yes.

Q. That represented a saving to you of about twelve times fourteen; that would be $1,680,000?—A. Yes.

Q. That 14 cents a pound represented a difference to the producer of $140 an acre, on a production of 1,000 pounds?—A. At 1,000 pounds per acre.

Q. That is a very substantial reduction to the producer of any crop?—A. Yes.

Q. As a matter of fact, a difference of one cent a pound represents $10 an acre to the producer, on a thousand pounds?—A. On a thousand pounds, assuming a 1,000-pound yield.

Q. I understand the average yield for some years, according to government reports, has been somewhere between 800 and 850 pounds?—A. That is right.

Q. That is the government average?—A. Yes.

Q. About 800 to 850 pounds?

Mr. Buell: 850 pounds.

Mr. Sommerville: We will say 850 pounds.

By Mr. Sommerville:

Q. One cent a pound would represent, on the average, $8.50 per acre?—A. Yes.

Q. On the average crop of the flue-cured tobacco?—A. Yes.

Q. Let me put it another way. We will put it in pounds. In the year 1931 how many million pounds more did you get than in the year 1930?—A. Did we buy, you mean?

Q. Yes—A. Flue-cured?

Q. Yes. I have got it here. In 1930 you bought 8,878,633 pounds of flue-cured tobacco?—A. Yes.

Q. And for that you paid $2,832,680.24?—A. Yes.

Q. In 1931 you bought 14,378,259 pounds?—A. 14,448,000 pounds.

Q. Yes; and for that you paid $3,155,276.35?—A. Yes, approximately.

Q. And in 1932 you bought 14,560,000 pounds?—A. 15,469,000 pounds.

Q. All right. I am just taking this from Mr. Sutherland's report. You say 15,000,000?—A. 15,469,000.

Q. And for that you paid $2,000,000?—A. $2,678,859.60.

Q. That is to say, in 1931 you got approximately five and a half million pounds more of flue-cured tobacco than in 1930, for an additional price of $322,000; that is right?—A. Approximately right, yes.

Mr. Factor: It is a matter of mathematics.

By Mr. Sommerville:

Q. You got 44 per cent more leaf, and paid 10 per cent more money than in 1930?—A. Approximately.

Q. In 1932 you got 6,000,000 pounds more leaf than in the year 1930?—A. Yes.

Q. And you paid $306,000 less for it, for your entire purchases?—A. About $160,000 less; a little difference.

Q. $160,000 less?—A. Yes.

Q. You got an additional 6,000,000 pounds?—A. Yes.

Q. And there was no change in the prices to the consumer of your cigarettes or your tobacco?—A. Yes, sir.

Q. In 1932?—A. Well, during the whole period there has been a gradual reduction in prices all the way through. In the statement here—

Q. But that was due largely to excise?—A. No, fundamentally, without regard to excise.

Q. We will come to that, Mr. Miller. In other words, in 1932 you got 45 per cent more flue-cured tobacco than you got in 1930, and you paid 10 per cent less than you paid for the entire crop of 1930; is that not correct?—A. I didn't quite catch that.

Q. You got 45 per cent more tobacco?—A. More tobacco in 1931?

Q. In 1932?—A. In 1932, yes.

Q. Than you got in 1930?—A. Yes.

Q. And yet you paid 10 per cent less?—A. No, not 10 per cent less.

The CHAIRMAN: $160,000 less.

Mr. MILLER: Only a difference of $160,000. It would be about 6 per cent, roughly.

By Mr. Sommerville:

Q. All right, 6 per cent less than for the entire crop of 1930?—A. Yes.

Q. And in 1932 you got a very much better quality crop, didn't you?—A. Than in 1930?

Q. Yes?—A. Yes.

Q. And you got a crop which, because it was harvested in a different way—by priming rather than by splitting the stalk—was a better crop for your purposes?—A. Yes.

Q. And it cost considerably more to the grower to produce?—A. Some more, I think; not a great deal. I have dealt with that.

By Mr. Edwards:

Q. I think your statement dealt with that, where the grower gets more money for it?—A. Yes.

By Mr. Sommerville:

Q. Gets more money? ? Well, he got less money, at any rate, in 1930?—A. Gave him a better yield.

By Mr. Edwards:

Q. The lower leaves are harvested now, which were not harvested before, or were a loss?—A. Yes.

By Mr. Sommerville:

Q. You think he gets a better yield?—A. Better insurance, less risk from frost.

By Mr. Edwards:

Q. The story is that the top leaves are the only ones exposed to the frost?—A. Yes.

Mr. FACTOR: Would it not be well to go into that? Mr. Miller says the prices were reduced to the consumer. What was the reduction between 1930 and 1932?

Mr. SOMMERVILLE: 14 cents a pound, on an average.

Mr. FACTOR: That is on tobacco. I am talking about cigarettes.

Mr. MILLER: Page 45 of our brief.

Mr. FACTOR: It was reduced in 1930 to 3.8; in 1932, to 3.5.

The CHAIRMAN: Yes, 3.5.

Mr. FACTOR: That is .3 cents.

Mr. MILLER: It is reduced, less sales tax.

By Mr. Factor:

Q. Never mind the sales tax. Take sales value, excluding the sales tax. In 1930, according to your own figures, it is 3.8?—A. Yes.

Q. In 1932, 3.5?—A. That is right. That is 30 cents a thousand—32 cents a thousand, approximately, for cigarettes.

By Mr. Ilsley:

Q. At the close of the last day you were asked a question, whether on Turrets and other brands there was any reduction. You said, "No." Mr. Sommerville said we would let it rest at that for the moment. What was the reduction then in cigarettes?—A. Well, various other brands, a good many other brands of cigarettes—well, half a dozen prominent brands of cigarettes.

Q. Some brands were reduced?—A. Yes.

Mr. SOMMERVILLE: We will come to the question of reduction in prices in a very short time.

Mr. ILSLEY: All right.

By Mr. Senn:

Q. May I ask a question there? It is rather aside from the point, but it is in regard to the method of harvesting by farmers. You asked the grower, Mr. Miller, to undertake that different method because you thought it would furnish a better quality of leaf for yourself?—A. Well—

Q. For your use?—A. Well, for the general use, for the whole. For our use, for the other manufacturers' use, and for export purposes.

Q. That is the question I wanted to ask. Does the export trade prefer tobacco harvested in this new way, to that harvested in the old way?—A. Mr. Buell says some manufacturers in England would really do so.

Q. I was informed that the export trade preferred tobacco marketed in the old way. Are you prepared to express an opinion on that—A. Not without consulting Mr. Buell. I never discussed that particular point.

Mr. SENN: I was told that quite definitely.

Mr. BOULANGER: What is priming?

Mr. SOMMERVILLE: Removing the leaves as they ripen, and curing them as they are removed. The old method was to split the stalk and cure the whole thing together, and that left some of it wasted, your top leaves.

Mr. MILLER: Might I answer Mr. Senn's question?

The CHAIRMAN: Yes.

Mr. MILLER: Mr. Buell says that he understands that Messrs. Gallaher, Limited, who buy some of this tobacco, prefer probably the stalk cured method, but that the Imperial of Great Britain definitely prefer the priming.

Mr. SENN: All right.

Mr. MILLER: That is to the best of our knowledge and belief.

The CHAIRMAN: Let us get along.

By Mr. Sommerville:

Q. I understand the export trade can and does use the stalk cured tobacco? —A. The export trade can and does?

Q. Yes?—A. I understand so.

Q. And that in a large proportion of purchases they do prefer it to the priming method?—A. I understand that the bulk of the tobacco grown, for instance in the United States, is primed; and most of the tobacco outside of these new empire types, comes from the United States. So I would think they would prefer, on the whole, the primed tobacco.

Q. Will you tell me what happened with the crop of 1932? We have been dealing with the crop of 1931. In 1932 the farmers had grown Orinoco and Yellow Mammoth, at your suggestion, had they not?—A. Well, yes.

Q. And they had harvested it by the priming method rather than the split stalk method?—A. Yes.

Q. That meant that their crop was harvested a couple of weeks earlier than by the split-stalk method?—A. Yes.

Q. That meant that the crop was ready for the market two weeks earlier than ordinarily by the split-stalk method of harvesting?—A. Yes.

Q. That would mean that your market would open—you being the largest purchaser—two weeks earlier than you had formerly opened the market on the split stalk tobacco?—A. Naturally that would seem to follow.

Q. And as you had opened the market by October 6, for the two previous years, that would indicate that the market might reasonably open some time in the month of September?—A. Yes.

Q. Will you tell us why it was that you delayed the opening of that market till October 26, when the farmers had their entire crop harvested, cured and awaiting the purchaser in the month of September? The 26th of October was the date fixed in 1932?—A. Well, I think we tried to cover that very clearly with Mr. Sutherland, in his inquiry into that matter.

Q. Apparently you didn't do it with success, because Mr. Sutherland finds that not only did you delay your own purchases, but that you had in your possession in the month of September an order for 1,000,000 pounds from the Imperial of Great Britain.

Mr. Buell: 850,000 pounds.

By Mr. Sommerville:

Q. Let me see what Mr. Sutherland says about that. At page 13, in that first paragraph, Mr. Sutherland states:—

> From evidence obtained it appears that the Imperial Tobacco Company of Canada were mainly responsible for a delay of nearly three weeks beyond the usual time in opening the market for the purchase of the flue-cured tobacco crop of 1932. This delay caused much uneasiness and had a very disturbing effect upon growers of tobacco. Correspondence between the Imperial Tobacco Company of Canada and the Imperial Tobacco Company of Great Britain and Ireland shows that on September 23, 1932, an order was placed with the former company by the latter for the purchase of 1,000,000 pounds of flue-cured tobacco from the 1932 crop with the probability of an order for another 1,000,000 pounds the following week.

Then he goes on to say:—

> The correspondence shows conclusively that the Imperial Tobacco Company had instructions, before the usual time for opening the market, to purchase a substantial quantity of tobacco for the Imperial Tobacco Company of Great Britain and Ireland, yet the opening of the market was delayed.

Why did you delay the opening of the market for one month in the fall of 1932?—A. Well, I think that has been covered in our brief.

By Mr. Factor:

Q. But can you not make some short explanation, Mr. Miller?—A. Well, in the first place, there was no deliberate delay with any intention of trying to cause any trouble or uneasiness or worry by the farmers. It so happens—Mr. Sutherland didn't mention it, and I don't know how much bearing one incident in it had—that Mr. Buell who was handling all our leaf matters at that time really was laid up in the hospital and was in very bad condition. We had been negotiating and talking with the British—I mean, with the Imperial Tobacco

Company about orders for tobacco, and as to how much we ought to buy. We were in quite a quandry. There was a big crop, even bigger—as I remember it—than the previous year, the largest crop they had ever had. There seemed to be no reason for hurrying into opening the market sooner. We didn't want to rush in, or anything of that sort.

Q. You never rushed?—A. Sir?

Q. You never had rushed in your history. You opened after due deliberation always?—A. Yes.

Q. On previous occasions?—A. Yes.

Q. And why didn't you open with the same due deliberation a month earlier on this occasion?—A. Well, just as I tried to explain to you: we were waiting for these orders finally, and waiting for Mr. Buell, and there was not any particular reason for hurrying about it, and we just did not do it.

By Mr. Kennedy (Winnipeg):

Q. In what hospital was Mr. Buell confined?—A. In the Royal Victoria.

Q. In Montreal?—A. Yes.

By Mr. Sommerville:

Q. For ten days, I understand.

Mr. Buell: Something of that sort.

The Witness: I do not put that as the whole, but it had a bearing on it. Mr. Buell is our principal officer and he was in the hospital. We could not discuss the matter.

By Mr. Sommerville:

Q. Before he went into the hospital you had already made up your minds as to the quantities required. You had already had orders from the Imperial. You had Mr. Lea right there at Montreal to carry out the buying instructions, and you knew what your needs were. Now, do you want to tell the committee that the only answer you can give for delaying the buying was the presence of Mr. Buell in the hospital for ten days?—A. No. That was one of the contributing factors.

Q. Now, that is different. I am sorry to refer to it, but his condition was not such that he could not be seen?—A. No.

Q. And, as a matter of fact, he was consulted regularly?—A. Yes.

Mr. Factor: As a matter of fact, you wrote a letter on September 28 to Mr. Reed, manager of the leaf department saying, "We have not set any special date for opening the market, but in all probability it will be within the next two weeks." So, on September 28, there were negotiations about the opening of the market?

The Witness: Well, negotiations—

By Mr. Sommerville:

Q. Do you say, Mr. Miller, that the effect of delaying the market—perhaps I will put it to you this way: do you agree with Mr. Sutherland in his finding that the delay in opening the market will have a direct bearing on the effect of the prices being paid?—A. What page is that?

Q. On page 14. I will deal with the latter part of the quotation. I will read the whole quotation. Mr. Sutherland adopts the quotation from the report of the Federal Trade Commission of the United States on the tobacco industry dated December 11, 1920, containing the following under section 7, page 58:—

> According to the testimony of numerous tobacco producers, dealers, warehouse men, and buyers, as well as the correspondence of the large manufacturers and dealers, one of the most important causes of the

> decline in the price of leaf tobacco during the 1919-20 season was "holding off" the market and buying "under cover" indulged in by the large tobacco manufacturers. The effect of these practices varied, but was most apparent in those markets where the companies using the methods were important purchasers. As a general proposition, it is recognized by those experienced in the trade, that "holding off" the market, even temporarily, by any concern which purchases a substantial percentage of the tobacco sold on that market, will have a direct effect on the prices being paid.

Now, that is a statement of the Federal Trade Commission of the United States investigating the buying methods in certain big companies with which you were associated—with which your company is associated in the United States?—A. Well, don't you think it is fair to read on?

Q. I will read that afterwards. Do you agree that that had a direct effect upon the prices being paid?—A. As explained there, yes, in the United States.

Q. Now, is it not a significant thing—at least, it appears so to the growers, and we would like to have your explanation of it—that the very first year in which you have a southern buyer, Mr. Lea, in charge of operations completely and exclusively, this holding off the market is indulged in?—A. Well, it had no bearing, so far as I know, or believe, on the whole situation.

Q. Who suggested waiting until the 26th of October?—A. I do not think that anybody made any direct suggestion to hold off or to delay until the 26th of October.

Q. Surely, Mr. Miller, when you knew your crop and when you knew your quality and when you knew your requirements?—A. We did not know all our requirements.

Q. You knew your own?—A. Well, yes.

Q. And you knew just as much as you had even known them in the history of your company?—A. I suppose so.

Q. So that when you knew your own requirements and on top of this you had an order for a million from Great Britain?—A. Yes.

Q. Does it not occur to you as a very strange thing that your company should not, in the month of September, have been very seriously considering the question of going out and getting your requirements?—A. Well, we were. I believe this letter refers—

Q. You were considering, but why did you hold off the market if you were considering—why did you hold off for a month?—A. I cannot answer it.

Q. Who fixed the date for opening?—A. So far as the exact date, I think it must have been finally with Mr. Buell to make the final date.

Q. Mr. Buell, why did you fix the date as October 26, instead of September 26?

Mr. Buell: Well, our requirements, plus our orders we had, and in view of the largest crop that had ever been grown, we were trying to persuade the Imperial Tobacco company of Great Britain and Ireland to give us more substantial orders before opening the market.

Mr. Sommerville: Yes. You had all your own requirements which were ten millions or more; you had already a million from Great Britain, and that constituted a larger order than you had ever been given for tobacco in your history, except in the year 1931. Now, why did you hold off? You knew that Gallahers were here ready to buy.

Mr. Buell: I did not know anything about Gallahers.

Mr. Sommerville: Mr. Buell, Gallahers were here in 1930 and Gallahers were here in 1931.

Mr. Buell: I said the quantity—

Mr. SOMMERVILLE: I do not care what you knew about the quantity. You knew they were here to buy, and you knew they did not go into the market and never had and nobody else had gone into the market until you got started. Why did you deliberately delay the opening of that market for thirty days if it was not for the purpose of putting into effect the depressed price which you were then going to pay for the 1932 crop?

Mr. BUELL: It was not to depress the prices.

Mr. SOMMERVILLE: The immediate effect was to depress the price, was it not, Mr. Buell?

The WITNESS: You mean the price was lower?

Mr. SOMMERVILLE: Very much so, Mr. Miller; and the immediate effect of it was to make that market soft when you did go onto it and subject to easy pressure, was it not? Was not that the effect, Mr. Buell?

Mr. BUELL: That is what developed.

Mr. SOMMERVILLE: And, as a matter of fact, you bought tobacco cheaper that year than you had ever done in your history?

Mr. BUELL: That is under the protection—

Mr. SOMMERVILLE: And it was the finest quality you ever bought.

Mr. BUELL: Yes.

Mr. SOMMERVILLE: And may I suggest to you that you had at your left hand Mr. Lea, the buyer who had been purchasing for your people in the United States, and that he advised you to stay off the market until October 26?

Mr. BUELL: Mr. Lea was not responsible for that.

Mr. SOMMERVILLE: Well, who was responsible?

Mr. BUELL: There is no fixed date for opening the market.

Mr. SOMMERVILLE: Now, Mr. Buell, are we going back to that?—Do you honestly want this committee to believe that the reason you stayed off that market was because there was no fixed date for the commencement of the market—do you? I know it is embarrassing, but we want to know from Mr. Buell what were the influences that actuated you or your buyer Lea in staying off the market if it was not his knowledge of the practice in the United States that had resulted in the depressing of the price to 7 cents the previous year.

The CHAIRMAN: Can you not give us any information?

Mr. BUELL: In the face of the very large crop and the fact that at that time we did not expect to buy as much as we ultimately bought we did not want to go into the market and leave so much of it in the hands of the farmers which would have to be sold for depressed prices.

Mr. SOMMERVILLE: You were not thinking about the prices the farmers would sell his crop at; that is not the motive, is it? If so, why did you not raise the price to 30 cents and then he would not have had any depression?

Mr. BUELL: If we raised the price to 30 cents and we had taken up our requirements that would have made the situation worse because those that did not sell could not have sold their tobacco.

Mr. SOMMERVILLE: They did sell, didn't they? The whole crop was taken, was it not?

Mr. BUELL: Ultimately.

Mr. SOMMERVILLE: And it was taken at a price, and the price was set by you at the beginning, was it not?

Mr. BUELL: Yes.

Mr. SOMMERVILLE: And if the price had been 24 cents instead of 20 cents the crop would have been taken just the same?

The CHAIRMAN: There is no question about that, Mr. Buell, is there? Everything we have heard makes that so abundantly clear. I do not see why you should hesitate to answer that. You opened the market; it is admitted by all; and the price you set is the price really that others followed. Others will give evidence to that effect.

Mr. BUELL: The prices we paid for our purchases were higher than any other buyer paid.

Mr. SOMMERVILLE: Oh, yes, because you got the first chance; you got the higher quality.

Mr. BUELL: This is by the firm—

Mr. SOMMERVILLE: It does not amount to a cent a pound on the average more than was paid for the whole crop.

Mr. BUELL: In 1932?

Mr. SOMMERVILLE: In 1932. Your average was 17 and the whole crop sold at 16 cents. Now, is that a fair position to put the producer in after he has raised and finished his crop, has cured it according to your own suggestion, and has spent a lot more money to cure it that way—is that a fair position to put him in, and then go out and reduce the price still another 20 per cent?

Mr. BUELL: We had recommended in a circular letter that the crop be reduced, and instead of reducing it they increased it.

Mr. SOMMERVILLE: Yes, but Mr. Buell, your circular letter said one thing and your buyers went out and did another thing, and who could believe a circular letter when you did just the opposite? Let me give you an illustration: you sent a letter to ask the producers to reduce the crop in 1931, did you not? In 1931 when your producers came into the field with new crops, instead of sticking by your old farmers and instead of encouraging the reduction in the crop you went out and bought from the new farmers and left the old farmers high and dry; now, didn't you?

Mr. BUELL: The old farmers high and dry?

Mr. SOMMERVILLE: Yes. Lots of them. In other words, you bought the crop of the new men who came into the field.

Mr. BUELL: In 1932?

Mr. SOMMERVILLE: In 1931 and in 1932 also. Is not that a fact?

Mr. BUELL: We buy tobacco from—

Mr. SOMMERVILLE: From anybody that grows it.

Mr. BUELL: —the farmer that has got the best tobacco for our use.

Mr. SOMMERVILLE: Certainly. That is the point I make. And if your circular letter meant anything to those farmers it meant: if you will reduce your crop you will be better off for reducing your acreage; and then you go and buy from a man who does not observe that but comes along and starts to grow crops. Now, in that situation, what is the farmer to believe? There was your circular letter and there was your buyer; don't you see how the one was offsetting the other?

The CHAIRMAN: Of course, that does not explain the delay.

Mr. SOMMERVILLE: No, it does not.

The Committee adjourned, to meet at 4 o'clock.

AFTERNOON SESSION

The Committee resumed at 4 o'clock.

By Mr. Sommerville:

Q. Mr. Miller, at any rate, with reference to the staying off the market until the 26th October, and with reference to the reduction in price both in 1931 and 1932, there appears to be no reasonable explanation for either?—A. Well, there are one or two remarks I would like to make with respect to some of them Mr. Sommerville.

Q. You want to supplement what was said with reference to it this morning?—A. Or emphasize it, yes.

Q. If you will; because we are anxious to find if there was any reasonable excuse for either of those moves?—A. Well, I might explain that when we saw that the quantity of tobacco being grown by the farmers was increasing beyond the domestic requirements, we did try and had been trying to influence and interest the Imperial Tobacco Company of Great Britain in using some or a lot of this tobacco. They had shown an interest in this tobacco, and in our opinion we thought that they could be interested to a considerable extent; and we were faced with a big crop—I think it was the biggest crop we have ever had, 29,000,000 pounds.

The CHAIRMAN: What year?

The WITNESS: 1932, and one of the chief factors in determining when we should start buying, or what price we should pay for it, is the quantity that we see that we can buy, particularly in relation to the total crop that is going to be available, at the time, any time around the first of October. And, there was no set date for any opening of the market such as referred to. We had orders in hand from the Imperial Tobacco Company of Great Britain and Ireland. We had one dated September 22, for 851,000 pounds; another one dated September 27, for 500,000 pounds, and a further one for old tobacco for 500,000 pounds, which we were to supply out of our old tobacco, because they wanted to use it right away, and which we could replace out of that crop. We had hopes that we would get considerably further orders from them, and that, together with what I have mentioned about Mr. Buell, the principal officer concerned being ill in the hospital around that time, was the reason why we did not start buying sooner that we did. And we did receive later further orders from the British company, the Imperial Tobacco Company, one dated November 7 for 500,000 pounds, November 15, 1,000,000 pounds, and another one for 1,000,000 pounds of old tobacco, which we let them have out of our own tobacco, so as to further the export business of Canadian tobacco; and we think that had a good deal to do with our delay, or as it was referred to, as delay.

Q. Now, let us take these two reasons. First, the orders that you received in November had nothing to do with the delay?—A. No, we were looking forward to other orders, and we did get them, which proved we had interested them and there was some justification for it.

Q. And you had, by the 27th of September orders for 1,370,000 odd pounds?—A. 1,851,000.

Q. Is that all new tobacco?—A. It is the same thing. We, presumably, were going to replace it, otherwise we would not let them have it.

Q. You had orders, then, by the 27th of September for 1,851,000 pounds?—A. Yes.

Q. These were the largest orders you had ever had from the Imperial of Great Britain and Ireland up to that date?—A. Yes, I think so.

Q. That was received ten days before the ordinary date for the opening of the market, the 6th October?—A. Well, the market—

Q. Let me put it this way: Ten days before the date upon which you had opened the market for the two previous years?—A. There has never been any fixed day, sir. Here is the first date of the 1926 purchase. We opened on October 19.

Q. Come down to a period nearer those with which we are dealing?—A. 1927, October 12; 1928, October 18; 1929; October, 10; 1930, October 6; 1931, October 6.

Q. Yes?—A. 1932, October 26.

Q. So that at any rate for the previous two years having opened the market on October 6, you had in the year 1933 in your possession, the largest orders you had ever received from the Imperial Tobacco Company of Great Britain and Ireland and you had your own requirements to meet?—A. Yes.

Q. In other words, you had the largest requirements or the largest purchasing program in your possession on September 27, 1932, before you opened the market— —A. We also had facing us the largest stock or crop that had ever been produced?

Q. You had facing you the largest crop?—A. Yes.

Mr. Kennedy *(Winnipeg)*: And other substantial orders in prospect?

The Witness: Yes.

By Mr. Sommerville:

Q. You had in addition substantial orders in prospect?—A. Which materialized.

Q. Do you say to this committee that having to meet that requirement on the 27th of September, you deliberately delayed the opening market until the 26th of October because of some possible prospective orders of another million or two from Great Britain?—A. I do not say that was the only factor.

Q. And is it not a fact that having this requirement and withholding your purchasing from the market from the 27th of September to the 26th of October, it had a very serious effect upon the market itself?—A. You were speaking of there being a sort of panic condition prevailing before we started buying. I have no recollection of any such condition having prevailed.

Q. You have no recollection of that?—A. No, sir.

Q. That seems very strange, because that is the thing that is accentuated throughout the whole district?—A. I have inquired, and checking my own memory and from everything we know of, we have no recollection of any such panicky condition. We do not mean to say that there were not dealers and farmers, maybe, inquiring, when are you going to start buying, or something of that sort; but no panicky condition or anything of that sort, nothing approaching it. We have no recollection of any such condition as that, Mr. Sommerville.

Q. Have you any other explanation than that which you have now given us for either the reduction in price or the delay in opening the market, because we want to give you ample opportunity to make any possible explanation; or have you covered it all?—A. Well, it is hard to remember the whole subject, but I wanted to add to what has been said, this further information.

Q. I do not want you to think I have not given you every opportunity to explain everything?—A. That is very kind of you, that is why I appreciate it. I do not know whether you have read the report to the registrar, or not, but—

The Chairman: We are more concerned with your answer now; never mind the report.

The Witness: Yes; I think broadly speaking, that is all.

By Mr. Sommerville:

Q. When you did open the program, you fixed the price at an average of 17 cents?—A. May I make one or two other explanations?

Q. Yes, if they have any bearing upon the subject?—A. The holding off of the market which is referred to—more or less the same subject sir—I just thought it might be—you referred to the report of Mr. Sutherland, about the fact of holding off the market in the United States, and you referred to page 14, of the report sir.

Q. Yes; there was a paragraph I was going to read?—A. I think it should be read.

Q. At this time?—A. I would appreciate it, sir.

Q. Page 14, of Mr. Donald Sutherland's report.

> The term "holding-off" the market is not applicable in Canada in precisely the same sense as used in the United States. Strictly speaking, there is no market in Canada. The company making the first purchase, however, has come to be considered as opening the market, and the period of buying that follows is regarded as the market. When a grower has harvested his crop he awaits the arrival of a purchaser, and when a buyer appears there ensues the process of dickering as to price, with varying results, often influenced as was the case in 1932, by financial circumstances and the eagerness of the grower in making a sale. When asked for an explanation as to the delay until October 26th in opening the market, the Imperial Tobacco Company of Canada submitted the following, under date of February 2nd, 1933.

That is the paragraph?—A. Yes.

Q. That is to say, the holding off the market here is not the same as in the United States?—A. No, sir.

Q. In the United States, where there is a reference to holding off the market, the market is an auction market?—A. An auction market.

Q. And the leaf is graded and sold under grades in the auction rooms?—A. To the highest bidder.

Q. To the highest bidder?—A. Each pile.

Q. And the holding off the market there means that the bidders do not come in?—A. Do not come in.

Q. And bid?—A. Yes.

Q. And the result is a poor market?—A. Quite.

Q. Well now, if the bidder does not come into the farm for 30 days after the crop is ready, has not that the same effect of softening the market or making it more pliable when the pressure is put on?—A. I was not meaning—I only wish to add that observation of Mr. Sutherland's, to what had been previously read by Mr. Sommerville.

Q. I appreciate the way the marketing is done.—A. I did not know whether the other members of the committee appreciated it or not.

The Chairman: Yes, we had it all explained, Mr. Miller.

By Mr. Sommerville:

Q. The result is the same, is it not, Mr. Miller?—A. I do not think so sir. It has been stated that we make the top price, make the prices or the high prices.

Q. Yes.—A. Well, it seems to me—I am just making an observation to this question, sir—if we had wanted to force down the price, I would assume there was not much reason for our waiting. We could have forced it down on the 6th of October as well as we could on the 26th October, on that kind of basis.

Q. You think you would have?—A. I do not see it has any special bearing.

Q. You think the men would not have had more resistance on the first of October than you found on the 26th October?—A. No, sir.

Q. You do not think so?—A. No, sir.

Q. Apparently opinion throughout the district was that it had a very serious effect, and Mr. Sutherland in his report finds that it had a big effect upon the market?—A. Yes—that is a matter of opinion.

Q. Yes. When you did open the market, do you know the method adopted in buying that year as against the method adopted in previous years?—A. No, —well, before, if you do not mind, we had a lot of questions about this 1931 crop on this Birdsall affair that was mentioned. Could I make some observation upon that?

Q. Yes.—A. I have a copy of what is called, I think, the "Crop Book" that you mentioned before, the Birdsall Brothers, you remember them?

Q. Yes.—A. It had 25 cents, or 25 marked at the bottom.

Q. Yes.—A. Well, we have been trying to understand just what that did mean, or what significance there was with regard to that 25 cents, if any; and as near as I can find out, we do not know what it means. In most every other instance in that book, the pencil figure down there refers to the number of kilns.

Q. No, Mr. Miller. Wherever the pencil number refers to the number of kilns, it is opposite the number of kilns, and in Birdsall's case—A. Is it?

Q. Just look at it. In Birdsall's case it does not mean the 25 kilns. Look at it again?—A. I am trying to find an explanation, sir, but you will see at the top one possible exception—you will find it is marked 15 acres good, 5 acres medium light. Now, as I understand it, Birdsall Brothers and John Birdsall, who was one of the brothers, owned this farm together. There were two crops of tobacco raised on it. One was approximately estimated at 20,000 pounds which belonged to Birdsall Brothers. There was another small crop on the same farm, which belonged to John Birdsall himself, amounting to 3,500 pounds of tobacco, which is not referred to in the crop book. That is a matter I will explain later. I have a gentleman here who is familiar with that territory, and he will explain that to you. Now, that is a total of 23,500 pounds, which is roughly, 25 kilns. That may be the explanation. I am not trying to say it is, but it may be. We don't know what the explanation is. Well, of course each man has those crop books, or had at that time anyway, and they used them pretty well and wrote on the book what he thought would give him the best information about crop conditions. And they did it sometimes in all kinds of ways, made all kinds of memoranda in them. Now, it so happens that here we have the contracts which show that on October 17th there was purchased from Birdsall Brothers—mind you, it is all one farm, one of the Birdsall Brothers had raised a crop,—a crop, and on the same line we find another one by John Birdsall, 20,000 pounds, which is bought at 17 cents from Birdsall Brothers, signed for by John W. Birdsall himself, and on the same day 3,500 pounds bought from John W. Birdsall, at 25 cents, bought from the same man at a different price. Why? It is perfectly evident a difference in the values of the crop, the whole crop was not the same value.

Q. Is it not equally evident that that was the price that was offered by Imperial?—A. No. I tell you what it might have been; it might have been the price that we were going to offer John Birdsall for this little lot of 500 pounds.

Q. Over it are the words "all" and "covering"?—A. All right, we bought all of it, sir.

Q. But not at 25 cents?—A. I think that refers that we bought all, or were going to buy all—

Q. I think that is true?—A. You will find some places where we sold Canadian leaf to this person or that person.

Q. I think you are right. What you meant was that you were going to buy all the flue-cured at 25 cents; but when the buyer went to buy he bought the bulk of it at 17 cents, and some of it at 25?—A. He bought it from the same man although they were different interests. So I mean there is no reason

to think that there was any cut-down, except the quality; the man here was a man selling two crops out of the same barn.

Q. Yes?—A. I understand that that all has been inspected but not by—

Q. At any rate, you did buy that particular crop on that occasion?—A. Yes, sir.

Q. Now, Mr. Miller, when you were talking about having various grades from the same man, is it not common practice that when you go in you will offer say 20 cents for so many thousand pounds, and 5 cents for so many thousand pounds?—A. Sometimes I think that happens.

Q. Is it not a fact that that is the point of the contract which is referred to in Mr. Sutherland's report; and is it not a fact that these figures are just put in there so as to scale down the price paid for the crop; that is, the lower figure—5 cents?—A. No, I think it is a matter—without—this is just my idea, my explanation, sir; that you are going to a man and say you want to buy his crop; you say you are willing to give him, we will say you may be willing to give him 25 cents for his crop—I am just using this as a hypothetical case, you see—some of this tobacco is not as good as the rest of it; eventually you come to an understanding where we will buy some of it at 25 cents, some at 18 cents, and it will work out on an average to somewhere around—a matter of negotiation.

Q. But if you offered 20 cents for some and 5 cents for the balance, is it not a fact that you are not allowing the farmer to give you 5 cent tobacco without insisting on him giving you all of it?—A. I have not heard of that, sir. That is the tail-end of the crop.

Q. No, no; that is not the tail-end of the crop at all?—A. I mean, on the tail-end of his buying; that is more or less the nondescript part of the crop.

Q. Is that what you think it is?—A. I think so, yes.

Q. Mr. Miller, let me tell you this: if there is a condition of that kind in the contract and it applies we will say to 5,000 pounds at 5 cents a pound and 20,000 pounds at 20 cents a pound, the first 5,000 pounds delivered to your warehouse is paid for at the rate of 5 cents a pound, and it may be the best part of the whole crop; so I am told.

Mr. Lea says that is right. So then, it is not the nondescript part of the crop. It may be the very finest portion of his leaf; but you insist on getting at least the first 5,000 pounds of that crop at 5 cents?—A. Wait a minute. Excuse me a minute, sir. I have just got an explanation that I understand to that, Mr. Sommerville; that is true. I did not realize it myself, but as a matter of practice; and when the poorer tobacco does come in, he is paid 20 cents for that poorer tobacco for the amount of the 5 cent. It amounts to the same thing, and they tell me there is no objection on the part of the farmer.

By Mr. Ilsley:

Q. It indicates great anxiety on your part to get that cheap tobacco?—A. Would it work that way?

Q. What other reason would there be for it?—A. I was just trying to find out. Except the matter of keeping the books straight, clearing out these; because as I understand it what comes in later, say it was for 25,000 pounds at 20 cents and 5,000 pounds at 5 cents; suppose it was 27,000 pounds, he gets 22,000 pounds at the higher price. Of course, as to anxiety for cheaper tobacco, we have got to have cheaper tobacco as well as anybody else.

Q. That is the point Mr. Sommerville was making; your anxiety to get that 5 cent tobacco.

Mr. Sommerville: Why wouldn't you like to get the 5 cent tobacco? This is getting to be like the differential on hogs.

Mr. Ilsley: That is the reason for it.

The WITNESS: Pardon me, sir, I am awfully sorry to be taking up the time of the committee this way; you were asking about—

By Mr. Sommerville·

Q. Why would you not like to get 5 cent tobacco if it is of that quality?—A. I do not think we would particularly object to his getting more than 5 cents; we could buy probably some of the lower grades of tobacco without having bought these high grades all.

Q. I am told, Mr. Miller, that is the explanation; I am told that the rule is that you buy tobacco, and a man says, "Now that tobacco is just as good as the tobacco of my neighbour across the road, and you know it," and so to satisfy perhaps his pride in his tobacco, you will say, well, we will give you the same price as the man across the road for a certain amount of it, but the balance of it we will reduce to a price so low as to bring it down to our average?—A. I have not heard of it.

Q. Well, there are a lot of things you are coming to learn about now apparently?—A. I have been eight years trying to find out some of these things that I never heard of.

Q. But you knew about the panicky conditions that existed up there?—A. Yes, sir.

Q. We have a sworn statement here:

> Probably what led up to this, we knew in 1932 some crops were sold as low as 14 and 15 cents. Those were just as good as a few crops that were sold at 24 cents—a wide fluctuation in the market. This was one means of trying to correct the fluctuations in the market. We had panicky conditions in 1932. I have explained how propaganda was spread until the growers were in a state of panic, and how the market broke, and we appealed to Colonel Kennedy. We went to Colonel Kennedy and said, "Something has to be done; prices are dropping simply out of sight."

A. But this is after the opening.

Q. Ah, this is after it has opened. You had a panicky condition, then you opened under that condition and immediately prices dropped, and the farmers then got into such a condition that they went to Colonel Kennedy, the Minister of Agriculture, and he in the second week of your operations, made an announcement that the government would stand behind the growers to the extent of guaranteeing the processing of the tobacco; and then he goes on to say:

> Once the announcement was made that a system had been evolved whereby the growers could have their crop graded and processed, so that they didn't need to sell, the market started to stiffen.

Is that true?—A. I do not know, sir.

Q. Can any of your cohorts give us any answer as to whether or not that is a true statement?—A. As to whether the prices went up after Mr. Kennedy—

Q. Yes?—A. We haven't any information on it.

Q. You haven't any information on that at all, I see. By the way, you had this morning a list of the persons from whom you bought the 1931 crop, that would be helpful to us in our examination of these books—the 1931 crop, and the 1932 crop—the list of the names of the persons from whom these were bought, and the amounts paid for them?—A. We will furnish you with that.

By Mr. Kennedy (Peace River):

Q. The other day we were told that instructions were sent to the buyers that they were buying just a little too high on the average. They were instructed to buy more lower priced tobacco. It seems to me that the buyer has this book as a guide, and gets instructions of that kind the figures in there

must specifically refer to price, or there must be something else, there must be a specific reference to price.

By Mr. Sommerville:

Q. Might I suggest that we are going to go into the books to-night when we have a little more spare time. We may be a little more familiar with some of the features of it for further examination of it to-morrow. By the way, you had that statement this morning; it will help us in our study of these books to-night.—A. Very well, we will let you have it.

Q. If you will just leave it with us before we go?—A. Yes.

By Mr. Kennedy (Winnipeg):

Q. Mr. Miller, in this Sutherland report, at the bottom of page 14, and continuing on page 15 to the bottom, your company's report was there quoted as giving an explanation for the so-called hold-off or delay, your opening being for the 1932 crop (at the bottom of page 15): "Substantially, the factors recited above were mainly responsible for delaying our purchasing until the 26th October."—A. Yes, sir.

Q. Now, there is no mention made there whatever of the illness of your officer, Mr. Buell, as being a contributory factor?—A. I realize that.

Q. Well, you stress that to-day, but it does not appear in the Sutherland report?—A. No, sir, we did not like to bring in the personal side of the thing along these lines. We thought that it was not necessary; we thought it was justified without it.

Q. Did you not consider it a substantial factor in the delay in opening?—A. Frankly, we were—as we say there, there was no special time for opening the market; and we were quite well aware that there was no serious delay in opening the market, Mr. Kennedy.

Q. But they are pressing you there in that examination for explanations, because prior to that at the top of page 15, your report quotes the actual dates of the opening for a number of years, and they are apparently pressing for an explanation as to the so-called delay in the opening that year, October 26, 1932. The reasons are stated at the end, you say: "Substantially, the factors cited above were mainly responsible for delaying our purchasing until the 26th October" yet no mention at all is made of Mr. Buell's illness?—A. I fully realize that.

Q. Would it not have been fairly important at that time to have considered Mr. Buell's illness a substantial factor?—A. I do not think so. We seriously considered whether we should say anything of that matter at that time.

Q. There is no reflection on the man for being ill?—A. This is no question of reflection, it was just—in fact, it seems to me kind of unusual that the sickness of one individual in a corporation of our size would really have any particular bearing; and probably you might say it should not have any; I mean, a corporation has got to go on irrespective of some individual.

Q. May I suggest this, that this thought suggests itself to me; that now you stress Mr. Buell's illness as a substantial factor in the delay in opening, then you made no mention of it?—A. Yes.

Q. Well, this feature occurs to me, and I think it is a reasonable one, that this man Buell's illness was really an afterthought?—A. No, sir, I assure you of that; I think probably that we could have the proper thing to substantiate that.

Q. I am quite prepared to accept your word?—A. That is certainly true, but we did hesitate to bring it into this.

Q. I quite understand?—A. Only that as I explained there was a little hesitancy perhaps to say that because some individual was sick that a portion of the business did not continue on as it would otherwise; and as a matter of fact there was not any substantial delay in opening the market. I think I have

explained that we did not lay as much stress on it at that time, and thought it was not necessary to bring it out; but as it has not seemed to be satisfactory, I have now felt that I—

By Mr. Sommerville:

Q. That is should at least be mentioned?—A. Yes, because it was a substantial factor, strange as it may seem.

Q. Now, Mr. Miller, let us just consider that for a moment: Mr. Buell was in hospital ten days in Montreal?—A. Approximately that.

Q. And you were in daily touch with him?—A. We could be.

Q. His illness was not of that serious character that he could not discuss business. I happen to know the nature of it. As a matter of fact, you were in daily touch with him?—A. Of course, by telephone or otherwise.

Q. And you have there in the office Mr. Lea, who was his chief lieutenant in the purchase of tobacco in the field?—A. Yes, sir.

Q. And you had your own executive that knew what your requirements for manufacturing were?—A. Yes.

Q. And that had nothing to do with Mr. Buell?—A. No, not directly.

Q. So that I suggest to you that after all Mr. Buell's indisposition for ten days was not a serious factor in delaying that market for thirty days?—A. I meant to say it is only one, Mr. Sommerville.

By the Chairman:

Q. Mr. Miller, do you think it has really any bearing on it at all? Honestly, it looks to me pretty much like a joke, with all due regard to Mr. Buell, for whom I am sorry; as I look at these sworn statements, and we have many of them here, that the growers were in a panic, that they were so panicky that they not only appealed to the Provincial government, as Mr. Sommerville has read it—?—A. Is not that appeal afterwards.

Q. No, it was in the midst of the panic?—A. I mean, after it was opened; that appeal was after it opened.

Mr. SOMMERVILLE: Two days after it opened.

The WITNESS: After it was opened.

The CHAIRMAN: Furthermore, they wrote to the Prime Minister of Canada, according to the report of Mr. Sutherland, and as a result of their writing to the Prime Minister of Canada, Mr. Sutherland's investigation under the Act was ordered. But the point now, Mr. Miller, is that these growers because of the delay in the market were apprehensive—leaving panic out of it for the moment—they were filled with apprehension as to what was going to become of them in that year; and really for you to say that your company was unaware of that, and the explanation offered is Mr. Buell was sick, it looks to me most weak.

Mr. FACTOR: It seems almost to be insulting the intelligence of the committee.

The CHAIRMAN: It is a weak excuse, with all due regard to Mr. Buell; and then in the field you had Mr. Lea, a very competent man apparently.

The WITNESS: I did not mean to lay undue stress on that.

The CHAIRMAN: There are two things worrying us: now, there is this drastic drop in the price and we have no explanation of that; in 1932 the market is delayed, and the growers tell us one after the other that they were very much alarmed and they had to appeal to the Ontario government, and there is another drastic drop in prices. And during the period, this is what I cannot get away from, and during these periods—that is, 1930, 1931, 1932 and 1933—the Imperial Company which controls the whole situation earn handsome profits, I am merely citing that as abundant evidence that while the company was prosperous these poor growers were forced to become panicky and were

being driven to despair. And furthermore, we have evidence here indicating that business men, particularly the fertilizer men, have $250,000 out in accounts that they cannot collect; the evidence shows that many farmers left the land during this period of depression and during this period of depressed prices, and at the same time left their accounts and the fertilizer companies are not able to collect; the evidence shows that younger growers will not, in any case, sign the notes, therefore, they are left as it were holding the bag. In the face of these facts, what puzzles me is what was the policy that directed the Imperial Tobacco Company in two specific actions, namely, the cut in price in 1931, and the delay in the market in 1932, and there has not been an answer given that, in my estimation, would appeal to any business man's common sense; frankly, it does not appeal.

Mr. FACTOR: Mr. Chairman, may I draw your attention to page 41 of the Sutherland report, in the middle paragraph, where Mr. Sutherland says:

> In an interview which I had with Mr. H. P. Buell on February 27th he stated that his company's holding off the market in October last was due to the arrangements they were making to find out how much the Imperial Tobacco Company of Great Britain and Ireland intended to purchase from the 1932 crop.

Now, there is no mention there by Mr. Buell of any delay occasioned by reason of his illness.

Mr. MILLER: No. I would think that is covered by the same explanation I gave to Mr. Sommerville.

By Mr. Factor:

Q. And also Mr. Buell knew at that time that he had received an order for a million pounds from the Imperial Tobacco Company of Great Britain and Ireland?—A. Yes, sir.

Q. Your third explanation is, that you feared that once your requirements were satisfied the remaining balance would be dumped on the market with the natural result it would create distress among the growers. Personally speaking, Mr. Miller, it does not explain anything.

By Mr. Sommerville:

Q. Mr. Miller, as an indication of the panic—you may not have been aware of it at the time but doubtless you are aware of it now—due to the condition of the 1932 market, that even the Board of Trade of Tillsonburg within forty-eight hours of the opening of your market went to the extraordinary extent of telegraphing the Prime Minister of this Province in these words:

> Hon. R. B. BENNETT,
> Prime Minister,
> Ottawa, Ont.
>
> South Oxford and Oxford are now appealing to you for aid and protection in order to save the tobacco industry from ruin and to save scores of tobacco growers from going into liquidation.

A. That is quoted?

Q. That is quoted on page 5:

> The market has opened at 24 cents high with but a few getting it. We appeal to you to look into this matter and to save the situation by taking over the present crop or by placing a prohibitive duty on foreign tobaccos coming into this country or take some such immediate measure that will save the situation. We are firmly convinced that a combine exists.

And on October 31st, 1932, the Prime Minister gets this wire telling of the conditions:—

> Tobacco growers are panicky burning their crops three crops burned last night buyers reduced the price to 16 cents high for top crops holding a meeting at Arlington Hotel to-night to reduce further.—that is the growers—a ring is in operation cannot you do something.

And, as a result of this, a commission was appointed to investigate. Now, Mr. Miller, do you say that you were not aware that a panicky condition existed in the month of October within 48 hours after the opening of your market?—A. Well, in the first place, I understood you, Mr. Sommerville, to refer to a panicky condition that existed prior to the opening of the market.

Q. I did?—A. That is what I said, we had no knowledge.

Q. Well, they could not tell how serious that panic would become until you opened the market, but immediately you opened the market then the panic flared and it was widespread, and the Prime Minister of this country was appealed to for protection. Against whom? Did it ever dawn upon you that these people were appealing for protection against you?—A. The Imperial Tobacco Company.

Q. You. You are the president; you are the executive officer, you are the man carrying out the policy of this company?—A. Well, I happen not to have been in 1932.

Q. I beg your pardon. Then it was appealing for protection from the Imperial Tobacco Company?—A. All right, sir.

Q. Now, that is not a condition that ought to exist in a country that has been as generous to the Imperial Tobacco Company as Canada has been, should it, Mr. Miller?—A. Well, I am just going to say that I think, in fairness at any rate, you should realize that these crops—both 1931 and 1932—were extraordinarily high.

By the Chairman:

Q. Mr. Miller, all of the 1932 crop was purchased and marketed. That is not a reason, Mr. Miller. I agree with you this far, that there is a possibility of over-production, although the evidence of very eminent experts before us is this, that the area is very limited. However, we will not argue that. There is a danger, we will say, but it did not justify your company in 1932 taking the course that it did. Honestly, I am at a loss to know why it is that there is so much difficulty in getting a fair admission or an answer from you on these points?—A. Well, Mr. Chairman, on the subject of over-production I just got a rough memorandum here built up from the brief that we submitted.

Q. Of course, Mr. Miller, I do not think that will answer the question at all?—A. I rather gathered you thought there was not over-production.

Q. I did not say that at all. We have evidence from the growers themselves in which they indicate that they have agreed tentatively this year—and I think they would agree with you if they could get some sort of square deal to reduce their acreage 25 per cent?—A. We have been trying to get them to reduce it for the last three or four years.

Q. There was no need to reduce it three or four years ago because it was all sold.—A. According to those figures, the best we could estimate of an over-production taking into account the whole of the Canadian tobacco, and taking into account used and exported, is some forty-five million pounds.

The Chairman: I would not agree with that from the evidence we have before us.

By Mr. Sommerville:

Q. Mr. Miller, you took every pound of the 1931 crop that you wanted, and the whole crop was marketed was it not?—A. I think it was.

Q. Yes, and you paid for that a price. And the next year you took what you wanted and you paid a price, and in each year you reduced the price?—A. And last year we increased it. But I would like to refer you to page 29 of the brief, and while we may have paid a lower price our price was higher than that paid by anybody else.

Q. I agree with you?—A. In connection with the 1932 crop our price figured out at seventeen and three-tenth cents against what was paid by the others of fourteen and three-tenth cents.

Q. I agree with you, Mr. Miller, but you will also agree with me that the quality you got was above the other?—A. That is debateable. We do not know what the others got, Mr. Sommerville.

Q. You knew what the quality was of the whole crop?—A. Yes.

Q. And you got the best?—A. We try to get a good part of it, yes, sir.

Q. The whole basis of your buying, Mr. Miller, is because you get the pick of the crop very largely.

By the Chairman:

Q. But, Mr. Miller, that again does not answer the point at all. Take your page 11. Your price dropped from 32 to 20 in 1931, and to 16 in 1932?—A. That is the average of all, Mr. Chairman; that is the whole crop.

By Mr. Sommerville:

Q. Well now, Mr. Miller, perhaps you can tell us: In the absence of Mr. Buell in the hospital who fixed the low price of 16 or 17 for the crop of 1932?—A. We did not say we did not consult with Mr. Buell; between us all it was a joint responsibility; whatever the price was, I don't recall. The top price was 24 cents.

Q. Oh yes, but the 24 cents was very quickly lost sight of in getting down to 17 on an average, but who fixed the price?—A. The executive committee. You mean the names of them?

Q. Yes, who were the men that fixed that price?—A. Let me see the executive, which consists of the president and vice-presidents—at that time it consisted of Mr. Patterton, Mr. Townsend, Mr. Buell, Mr. Spafford, and myself.

Q. Yes, and what communication did you have with Mr. Harrison of the British-America for the price of the 1932 crop?—A. Well, I do not recall; but apropos of that, at the last meeting you raised some point with respect to Mr. Lea and Mr. Harrison, and I suggested that I draw up a statement on the subject and I would like to have an opportunity of reading it.

Q. You will have it, but you answer me the question. I was dealing with the 1931 crop but now I am dealing with the 1932 crop. Do you tell me now, as a member of that executive, that there was no communication with Mr. Harrison of the British-America in arriving at the price to be paid for the 1932 crop?—A. To my knowledge there was no communication with him.

Q. Do you say there was no communication at all with Mr. Harrison?—A. Well, you mean as to anything about the crop?

Q. As to the price to be paid for the crop?—A. No. I would say there was some discussion with him at some time or other, but it certainly had no influence on it one way or the other as to what price we should pay.

Q. What he said had no influence?—A. Except as I have tried to say before.

Mr. Ilsley: Your own evidence was directly to the contrary of that.

The Witness: I must have misunderstood your question then.

By Mr. Ilsley:

Q. Your evidence the other day was, that he did not designate the price but you discussed price conditions and market conditions, and that these discussions were taken into account in your fixing of the price, and that happened every

year?—A. I do not know that I disagree with that. You asked me about the specific year—1932—and I say I have no recollection of it.

By Mr. Edwards:

Q. I think you said, Mr. Miller, that Mr. Harrison was familiar with world conditions?—A. Yes, sir.

By Mr. Sommerville:

Q. Now then, Mr. Miller, Mr. Harrison is the man in charge of the leaf purchases for the British-America?—A. Yes, sir.

Q. And his brother is the president of the Universal Leaf Tobacco Company?—A. I think so. He was and I believe still is.

Q. In the United States?—A. Yes, sir.

Q. And the two brothers are big leaf operators in the United States?—A. Yes.

Q. For their two companies?—A. Yes, sir.

Q. And the representative of the Universal Leaf Tobacco Company of Canada is the Canadian Leaf?—A. Yes, sir.

Q. And what connection has the president of the Universal Leaf Tobacco Company with the British-America Tobacco Company?—A. The president of the Universal?

Q. Mr. Harrison of the Universal Leaf Company?—A. With the British-America?

Q. Yes?—A. None to my knowledge.

Q. What connection has he with the Tobacco Export Company?—A. None to my knowledge, sir.

Q. None at all?—A. None at all.

Q. What connection has the Export Tobacco Company with the British-America?—A. They are the buying organization for the British-America Company in the United States.

Q. In the United States?—A. Yes.

Q. And were you connected with that organization before coming here, Mr. Miller?—A. Which organization?

Q. With the Tobacco Export Company, Tobacco Products, is it?—A. Well, there was Tobacco Products—

Q. What is the name of that company?—A. Tobacco Products Export Corporation.

Q. And is that owned by the British-America?—A. No, sir. It may have had some stock interest at one time—I think it did—but I do not know whether they have now or not.

Q. And you were connected with them?—A. Yes.

Q. And with the Tobacco Products Corporation?—A. Yes, sir, and also Tobacco Products Corporation.

Q. And Tobacco Products Corporation is owned by the British-America?—A. No, sir. To my knowledge they never had any connection.

Q. And with them what position did you hold?—A. Vice-president.

Q. Vice-president of each company?—A. Of both?

Q. Of both companies?—A. Yes, sir.

Q. And was it through them that you took charge of the sales program for the British-America in Asia?—A. Oh, it was through the Tobacco Products Export Corporation.

Q. What was your position then, Mr. Miller?—A. My position was vice-president.

Q. Vice-president?—A. Yes, sir.

Q. And then did you take charge of sales in Asia?—A. Well, I took charge of sales throughout the world including Asia.

Q. But it was from the United States?—A. Yes, sir. Well, they had a factory in China.

Q. And then it was from that company that you came up to Canada?—A. Yes, sir.

Q. To the Imperial?—A. Yes, sir.

Q. And how long ago was that?—A. That was eight years ago.

Q. And took charge of the sales program here?—A. Yes, sir.

Mr. FACTOR: Mr. Chairman, we seem to be devoting a lot of time to this angle without getting anywhere.

Mr. SOMMERVILLE: I despair of getting any further on the question.

Mr. FACTOR: I do not think even if we sat for six months we would get a definite answer on the points we want answers on. We have spent three days of examination on them now. There are so many angles yet to be considered. I am not at all directing you, Mr. Sommerville, or anything like it.

Mr. SOMMERVILLE: I quite appreciate the difficulty, Mr. Factor.

By Mr. Sommerville:

Q. Now, Mr. Miller, among the statements which you have produced to-day is that showing the interest of the Imperial Tobacco Company of Canada in the B. Houde Company?—A. Yes.

Q. And that shows that you hold 4,352 shares in that company?—A. Yes.

Q. Perhaps you can tell what proportion that is of the whole?—A. 87 per cent approximately. It is on that sheet, is it not, Mr. Sommerville?

Q. Not on this sheet.—A. Well, it is 87 per cent. It is in a letter.

Q. Just let me get that letter. And that was acquired in 1908 by the Imperial Tobacco Company for shares to the value of $25,018.85?—A. Which is that?

Q. Look in your statement of the B. Houde Company.—A. Yes.

Q. The B. Houde Company was acquired in 1908 by the Imperial Tobacco Company, in that statement question number 8. Your letter to-day only deals with 1912. I am going back of that to 1908.—A. Oh, I see.

Q. In answer to a question that I had asked you, question number 8 on a statement forwarded you, you file this information:—

> Imperial Tobacco Company re shares transferred to the British-America Tobacco Company Limited.

And the statement is made by you:—

> In 1908 the Imperial Tobacco Company of Canada, Limited, acquired certain shares in the B. Houde Company Limited. There were issued to the British-America Tobacco Company ordinary shares to the value of $25,018.85 for their holdings in that company.

A. Question number 8, Mr. Sommerville?

Q. Yes.—A. Oh yes. I see that question, sir. What was your point about it.

Q. The point was, that in 1908 the Imperial Tobacco Company acquired the holdings in the B. Houde Company for the sum of $25,018.85.—A. Your question here, I believe, Mr. Sommerville, is " what amount of common shares have been issued from time to time to the British-America or its subsidiaries for purchasing trade-marks, good-will, or shares in the company "?

Q. Yes, and the answer that you make is:—

> In 1908 the Imperial Tobacco Company Limited acquired certain shares in the B. Houde Company, Limited, and there were issued to the British America Tobacco Company, Limited, ordinary shares to the value of $25,018.85 for their holdings in that company.

That is, in the B. Houde Company.—A. Well, I think that they held directly some holdings in the B. Houde Company, and those were bought from the British-America by issuing this stock; that was just a part of it.

Q. That was just a part of it?—A. A part of the whole of the B. Houde Company's stock, yes, sir.

Q. Are you sure that was not the payment made for the entire holdings that you had at that time in the B. Houde Company?

Mr. KENNEDY (*Winnipeg*): Mr. Sommerville, that appears to be referred to at page 72 of the brief filed by the Imperial Tobacco Company:—

> In July, 1908, the Imperial Company took over the businesses of the American Tobacco Company of Canada, Limited, and the Empire Tobacco Company Limited, which latter company was incorporated in 1898, and certain shares of the B. Houde Company Limited.

The WITNESS: Well, the total consideration that was given for the B. Houde Company was $324,758.13.

By Mr. Sommerville:

Q. The total consideration?—A. Yes, for 4,352 shares.

Q. Yes, but that consideration, Mr. Miller, was given to the 1908 company.—A. Some of it, $314,000 of it.

Q. The bulk of it?—A. Yes, sir.

Q. All but a very small amount.—A. Yes, sir.

Q. So that the 1908 company got $314,678.13 for the B. Houde Company holdings. But my point is, that the 1908 company acquired those holdings for $25,018.85 which they subsequently turned over to the new company for $314,678. —A. I do not think that is correct, sir. Mr. Sommerville, we are not trying to evade anything. We will be glad to look into that. We must have misunderstood your question here. Here is what you say on page 2 of your letter of April 30, your question number 8 is:—

> What amount of common shares have been issued to the British-America Tobacco Company or its subsidiaries for purchasing trade-marks, good-will, or shares in companies.

In other words, that $25,000 was issued to the British-America for certain shares that they had in the B. Houde Company; but the old company had some interest in the B. Houde Company itself.

Q. Will you please tell me then, and submit it to us again, what the old company paid for its holdings in the B. Houde Company, and what those holdings were, and what change has taken place since?—A. Will you let me give you a statement on it?

Q. Yes.—A. All right, I will be glad to.

Q. Then you say, that the price paid at any rate was $324,758.13?—A. Yes, sir.

Q. And for that $324,758.13 from the B. Houde Company you have received dividends for the last ten years which already are on the record?—A. Yes.

Q. Apparently running to an average of about $150,000 a year?—A. I do not recall, sir, I have not the figures.

Q. I am looking at them, approximately $150,000 a year on the investment of $324,758.13?—A. Yes.

Q. Then you also submit to us and file to-day a statement of the undistributed profits of your company and its subsidiaries?—A. Yes, sir.

Q. And these undivided profits are:—

National Tobacco Company Ltd.	$ 879,697 59
The B. Houde Company Ltd.	335,383 57
United Cigar Stores Ltd.	325,377 50
Liggett & Myers Tobacco Co. of Canada	142,054 45
Imperial Tobacco Co. of Can. Ltd.	8,138,486 66
Tuckett Tobacco Company	2,065,574 30

Those making a total of $11,886,573.97?—A. I do not know the total, Mr. Sommerville.

Q. I have read the figures correctly.—A. If you eliminate those deficits.

Q. Now then, there are certain items which are in the red?—A. Yes.

Q. Shall I mention them?—A. It is all right with me.

Q. The amounts are not very large.

The CHAIRMAN: Mention them, go ahead.

Mr. SOMMERVILLE: Quebec Leaf Company in the red, 670.61.

The CHAIRMAN: That is 670 dollars?

Mr. SOMMERVILLE: $670.61. I don't know how that would come in a statement of undivided profits, but nevertheless it is here.

Mr. FACTOR: What is that, undivided losses or something?

Mr. SOMMERVILLE: This is like a reserve set up against dividends.

The CHAIRMAN: Go ahead, Mr. Sommerville.

Mr. SOMMERVILLE: Scales & Roberts, Limited, $28,253.43; John Erzinger, $47,545.77; H. Fortier, $24,663.68; United Cigar Stores (Nova Scotia), $271.93; United Cigar Stores (New Brunswick), $226.07; Dominion Tobacco Company, $583.11; Empire Tobacco Company, $583.16; American Tobacco Company of Canada, Limited, $495.60. Those are the amounts that are shown as losses?

The WITNESS: Yes.

By Mr. Factor:

Q. Several of these companies are now dormant, as you call it?—A. Yes.

(Statement of Undivided Profits of Imperial Tobacco Co. and its Subsidiary Companies, as of December 31, 1933, filed and marked Exhibit No. 123).

By Mr. Sommerville:

Q. Then you have filed with us a statement of your daily contracts for purchases of flue-cured tobacco, 1931 crop?—A. Yes.

(Statement of Daily Contracts for Purchase of Flue-cured Tobacco, 1931 Crop, filed and marked Exhibit No. 124).

Q. That is in the Delhi district. Then you have filed with us a statement of daily contracts for purchases in the Leamington district?—A. Yes.

(Statement of Daily contracts for Purchases in the Leamington District, 1931 crop, filed and marked Exhibit No. 125).

Q. Then, you have filed with us the Delhi green leaf purchases for 1930, 1931, 1932 and 1933?—A. Those are by grades, yes.

Q. By grades?—A. Yes. That also indicates Leamington, and the total, a summary.

Q. Yes, this gives the total?—A. Delhi and Leamington, total flue-cured purchases.

Q. This gives the total of your flue-cured purchases?—A. Yes.

Q. In each of those years?—A. Yes.

Statement of green leaf purchases, Delhi and Leamington, filed, and marked Exhibit No. 126).

Q. Then you have filed with us a statement of net income and wages for six United Cigar stores in Toronto?—A. Yes.

By Mr. Factor:

Q. What is the average wage of a clerk in the United Cigar Stores, Mr. Miller?—A. I have not the figures. That statement shows it, under various rates. Just a minute, may be I can get it—I can probably get it for you, Mr. Factor.

(Statement of Income and Wages for six United Cigar Stores filed, and marked Exhibit No. 127).

Mr. FACTOR: Mr. Sommerville, do you intend to go into this wage question?

Mr. SOMMERVILLE: Yes. I just want to have these recorded now, and they will be handed back to me.

By Mr. Sommerville:

Q. Then you have filed with us a summary of the total factory pay-roll for the years 1931, 1932 and 1933?—A. Yes.

Q. For the Imperial Tobacco Company, the B. Houde Company, the National Tobacco Company, the Tuckett Tobacco Company, the General Cigar Company, Andrew Wilson & Company, Limited, and the Punch Cigar Company?—A. Yes.

Mr. FACTOR: Does it show the average pay, or is it lumped?

Mr. SOMMERVILLE: No, it is the gross sum.

(Summary of total factory pay-roll for 1931, 1932 and 1933 filed and marked Exhibit No. 128).

By Mr. Sommerville:

Q. Then you have filed a statement of the salaries and bonuses to the chief executives of your company?—A. Yes.

Q. And of the subsidiary companies that are named?—A. Yes.

(Statement of Salaries and Bonuses to Chief Executives filed, and marked Exhibit No. 129).

Q. You have also filed an agreement for the payment to the British American Tobacco Company of 400,000 shares of your common stock for certain trade marks and goodwill?—A. Yes.

(Agreement between British American Tobacco Co. and Imperial Tobacco Co. filed and marked Exhibit No. 130).

Q. And also an agreement between the Imperial Tobacco Company and Allen & Bowling, the trustees through whom the shares were issued to the chief executives?—A. And others.

Q. And others; that is 420,000 shares?—A. Yes.

Q. And that is to the trust account?—A. Sold to the trustees.

Q. Sold to the trustees, at par?—A. Yes.

Q. $5 each?—A. Yes.

(Agreement between Imperial Tobacco Company of Canada and Allen & Bowling, filed and marked Exhibit No. 131.)

Q. That is 420,000 shares altogether?—A. Yes.

Q. Then this provides how these shares are to be divided among a certain list of employees?—A. Yes.

Q. I observe that half of them, or 200,000 shares, are to go to Sir Mortimer Davis?—A. Yes.

Q. He was the president of the company at that time, I believe?—A. Yes.

Q. And towards this, the company contributed $2 a share?—A. Yes.

Q. And the employees, $3 a share?—A. Yes.

Q. Over a period of time?—A. Five years, I think.

Q. And in your inquiry into that, Mr. Miller, did you find that that was treated as a bonus for services rendered; I mean was the salary or the amount of the allowance to the various employees increased so as to take care of the $3?—A. No. There was no increase in salaries.

Q. That was among executives, I think some twenty-five names?—A. Something like that, twenty-five or thirty, or maybe more.

Q. Is it not a fact that at that time, and ever since, there has been a bonus provision in your by-laws, whereby a certain percentage of your profits would be divided among the executives?—A. Yes.

Q. And every year, to the salary of the executives there would be added a proportion of this bonus?—A. Well, paid as a bonus, yes.

Q. Paid as a bonus?—A. In addition to that they got salary.

Q. I beg your pardon?—A. In addition to that, they got salaries, of course.

Q. And the net result would be that the $3 a share would be paid out of the bonuses that they got from the company?—A. Well, I don't know. I am informed that that by-law of the general bonus goes back a long time prior to the arrangement for the purchase of the shares.

The Chairman: It goes back to 1924.

The Witness: We sent you a copy of it.

By Mr. Sommerville:

Q. I think perhaps we might just put that on the record at the present time. This is a by-law dealing with the amount of bonus that is to be allowed, to be divided among the executives?—A. Yes.

Mr. Kennedy (*Peace River*): Does it give anything to the rest of the employees?

Mr. Sommerville: No. Let me read it:

> Five per cent of the net profits as above defined shall be available for distribution among the president, vice-presidents and directors in such proportion as the president and vice-presidents may determine.

By Mr. Sommerville:

Q. Is that correct, Mr. Miller?—A. Yes, I think it is.

Mr. Lane: In substance; that is part of the by-law.

Mr. Sommerville: That is part of your by-law?

Mr. Lane: Yes.

Mr. Sommerville: Five per cent of the net profits go to the president, vice-presidents and directors.

The Witness: Well, after. Of course, there are certain deductions.

By Mr. Sommerville:

Q. Yes, there are certain deductions; I understand that.—A. Interest on capital.

Q. But just let us see how that operates?

Mr. Factor: I think you have a statement there of $140,000 reserved to bonuses in 1933.

Mr. Sommerville: I have not got that.

Mr. Factor: I made a note of it.

Mr. Sommerville: May I have your copy of it?

Mr. Factor: I have not got it. It is a recapitulation.

By Mr. Sommerville:

Q. I observe that in the year 1929, among twelve directors or executives there was paid out $428,894.42 for salaries and bonuses; is that correct?—A. Yes.

Q. And in the year 1930 there was paid out to eleven directors, and officers, a total of $507,099?—A. Six.

Mr. Kennedy (*Peace River*): That is nearly $50,000 each.

Mr. Sommerville: Oh, I beg your pardon, that is among six.

Mr. Factor: Yes.

By Mr. Sommerville:

Q. Let me go back; I see there are two amounts for each person and that is why I counted twelve. In 1929, among eight persons, was it?—A. Six persons, was it not?

Q. Seven persons in 1929, got $428,894.42. Six persons in 1930 got $507,099.

Mr. FACTOR: Mr. Sommerville, would it not be easier for you just to refer to each one of those and then total it up. We might as well know about it.

Mr. ILSLEY: There are seven in 1930.

Mr. FACTOR: Start with 1929.

Mr. SOMMERVILLE: You mean give the names and amounts?

Mr. FACTOR: Yes.

Mr. KENNEDY (*Peace River*): Salary and bonus together.

Mr. SOMMERVILLE: All right. In 1929, to D. C. Patterson, salary $40,000, bonus $75,744.91; 1930, salary $40,000, bonus $102,087.20; 1931, salary $40,000, bonus $67,364.93; in 1932, salary $40,000, bonus $53,899.74; then in 1933, salary to Mr. D. C. Patterson, $10,000.

By Mr. Factor:

Q. When did Mr. Patterson sever connections as president, Mr. Miller?—A. January 1, 1933.

By Mr. Sommerville:

Q. That is to say, in 1933 Mr. Patterson became chairman of the board?—A. Yes.

Q. And $10,000 is the amount of the salary for that position?—A. Yes.

Q. Then, the next is Gray Miller. In 1929, salary $25,000, bonus $45,446.94; 1930, salary $25,000, bonus $61,253.07; 1931, salary $25,000, bonus $40,419.56; 1932, salary $25,000, bonus $32,339.86; and 1933, salary $25,000, bonus $40,-487.48. Next is H. P. Buell. In 1929, salary $25,000, bonus $45,446.95; 1930, salary $25,000, bonus $61,253.07; 1931, salary $25,000, bonus $40,419.56; 1932, salary $25,000, bonus $32,339.86; and 1933, salary $25,000, bonus $34,017.40. Then we have P. R. Walters; 1929, salary $25,000, bonus $45,446.95; 1930, salary $25,000, bonus $61,253.07; and 1931, salary $25,000, bonus $40,419.56. Did Mr. Walters cease to be a director then?—A. No, he resigned as vice-president. He is still a director.

Q. He resigned as vice-president?—A. Yes.

By Mr. Factor:

Q. In other words, these amounts do not include the directors' fees?—A. There are no directors' fees.

Q. There are no directors' fees; these are salaries?

Mr. SOMMERVILLE: Salaries and bonuses.

By Mr. Sommerville:

Q. What was Mr. Walters' position, may I ask?—A. Vice-president.

Q. Then Mr. C. V. M. Townsend, 1929, salary $25,000, bonus $45,446.94; 1930, salary $25,000, bonus $61,253.07; 1931, salary $25,000, bonus $40,419.56; 1932, salary $25,000, bonus $32,339.86; 1933, salary $25,000, bonus $34,017.40. Then Earl Spafford, commencing in 1931. Previous to that Mr. Spafford had not been a director?—A. He had not been with the Imperial. No, he was not with the Imperial, he was with the Tuckett Company.

Q. And he came to the Imperial then as a director or as a vice-president?—A. He came as a director, to start with.

Q. He became vice-president at any rate, in the year 1931?—A. Yes.

Q. And entitled to a share in this distribution?—A. Yes.

Q. And in 1931, salary, $15,000, bonus, $11,250; 1932, salary, $20,000, bonus, $11,194.98; 1933, salary, $20,000, bonus, $20,000. Then to W. J. Brennan, in the year 1929,—A. Nothing.

Q. He didn't get anything; he had retired?—A. Yes.

Q. F. B. Jack—what is his position?—A. He was a director.

Q. In the year 1929 his salary was $20,000, and his bonus was $11,361.73; in the year 1930 he got just his salary of $20,000?—A. Yes.

By Mr. Factor:

Q. What about Mr. F. P. L. Lane, who was secretary, and Mr. Pilon, treasurer, who are not shown here?—A. I didn't know you asked for that.

By Mr. Sommerville:

Q. This just includes the directors, does it not?—A. Bonuses to chief executives. You are talking about chief executives in that question, Mr. Sommerville.

Q. Yes.

By Mr. Factor:

Q. Mr. Pilon and Mr. Lane are not chief executives?—A. They have not been included in the definition of that, no, sir.

Q. What was Mr. Lane's salary last year, do you know?—A. It is on this record that was given this morning, I think.

By Mr. Sommerville:

Q. P. L. Lane, secretary, 1924, salary $5,740; bonus $1,181.25; 1930, salary $9,000, bonus $1,575; 1931, salary $9,000; bonus $2,475; 1932, salary $9,000, bonus $3,412.50; 1933, salary, $11,000, bonus $7,500. Mr. Pilon. Is he the treasurer?—A. Yes.

Q. Salary 1929; $10,666.66; bonus $1,518.75; 1930, salary $11,000, bonus $1,525; 1931, salary $11,000, bonus $2,475; 1932, salary $11,000, bonus $2,362.50; 1933, salary $11,000, bonus $1,771.86.

By Mr. Factor:

Q. There are other directors, I note, mentioned in the list here that are not included in the chief executives. Do they get the salary?—A. I think some do. On this other list I have tried—

Q. Lieutenant Colonel Henry DesRosiers?—A. He got paid by the Imperial Tobacco Company.

By Mr. Sommerville:

Q. Colonel DesRosiers is head of the Houde Company and derives his salary from that company.

Mr. Factor: Have you an additional list?

Mr. Sommerville: We have an additional list of the executives of all the companies, Mr. Factor. That is filed as exhibit 129.

(List of executives of all companies filed marked exhibit 129.)

By Mr. Ilsley:

Q. Do these executives of the Imperial Tobacco Company get any additional salaries from the subsidiary companies?

The Witness: No, sir.

Mr. Kennedy *(Peace River)*: Do the wages of the rest of the industry compare with these salaries at all?

Mr. Factor: It may be interesting to know, Mr. Sommerville, as a comparison for the committee that from the Dominion Bureau of Statistics, issued under the authority of the Honourable H. H. Stevens, for 1932, which is the last

I have got, there is a statement showing that in the year 1930 in the tobacco industry there was the total number of employees, male and female, of 7,215 people receiving a total wage in that year of $4,976,302, or an annual average wage of $689 in 1930.

Mr. SOMMERVILLE: I have not seen it on this list. I am afraid those figures are missing in our exhibits.

Mr. FACTOR: I would like that. I could get from my personal research only this information showing this annual wage of $689 for employees, male and female, in 1930. I would like, Mr. Sommerville, if you could obtain the statistics either from the Imperial Tobacco Company or from the tobacco industry as a whole showing the number of employees male and female, and the wages received in 1931-32-33.

Mr. SOMMERVILLE: Well, I think we have that. There was a statement showing the gross. Well, I may say we can obtain the number of employees.

Mr. FACTOR: Has that gentleman got for me the average pay of a clerk in the United Cigar stores?

Mr. SOMMERVILLE: We will deal with that question of the United Cigar stores.

By Mr. Sommerville:

Q. There are six examples that you have furnished me. If you will look at that exhibit 127 I observe that with respect to store number 1 the direct wages in that store were $4,632.89 in the year 1931?—A. Sales of $42,000.

Q. And they were reduced to $2,991.99 in the year 1933?—A. Against sales of $33,000.

Q. Sales were reduced from $42,000 to $33,000?—A. Yes.

Q. And salaries were reduced—wages were reduced from $46,000—

The CHAIRMAN: Hundred.

Mr. SOMMERVILLE: Yes, hundred—I am afraid I am getting into the big money class. It is hard to get down to ordinary hundreds—wages were reduced from $4,600 to $2,900. Now, Mr. Miller, I observe similar reductions in each of the six stores that are mentioned?

The WITNESS: Yes.

By Mr. Sommerville:

Q. And, apparently, they are relative reductions. Have there been reductions of wages in the United Cigar stores from 1931 up to date?—A. Yes, there have been some reductions in wages, no special scale of anything like 10 per cent or 20 per cent or anything of that sort, but here and there there have been quite a few reductions.

Q. You say here and there?—A. I mean it has not been all inclusive, but there have been quite a few.

Q. It was not a single rate for everybody?—A. No.

Q. But there has been a substantial reduction in wages?—A. Yes.

Q. In the United Cigar stores during those years?—A. Yes.

Q. And has there also been a reduction in the number of employees in those stores during the same number of years?—A. I could not answer that off hand. You mean the same stores?

Q. Yes?—A. I do not know, Mr. Sommerville.

Q. My reason for asking is that my information is that there has not only been a reduction in weekly wages but there has ben a reduction in the number of employees?—A. Yes. I will inquire into it and advise you, sir.

Q. Has there been any reduction of wages of employees in the Imperial Tobacco factories?

Mr. Factor: May I get an answer to my question now before we leave the United Cigar stores. I want to get the average wage of a clerk working in the United Cigar stores in Toronto?

The Witness: The chief clerks' average salary is $25.45 per week.

Mr. Factor: How many hours a week does he work?

The Witness: 53·97. The maximum is $38.18 and the minimum is $15.27.

By Mr. Sommerville:

Q. Those are male clerks?—A. Yes, sir. Assistant clerks; the average salary is $19.79. The maximum is $36.28 and the minimum is $10.68.

Q. Now, how many employees have you at $10? Perhaps I am wrong in my deduction. Mr. Miller, but you have taken the maximum at $36 and the minimum at $10?—A. Yes. $10.68.

Q. Have you taken these two figures to make the average, or is that the average over the existing number of employees?—A. The total payroll.

Q. So that on your total number of employees the average is $19.79?—A. Yes, $19.79.

Mr. Factor: For 57 hours.

The Witness: For 54 hours. Approximately 53·97. The average of all employees of the company including the office, male or female is $25.09.

By Mr. Sommerville:

Q. That is the average for all the— —A. Clerical, store clerks, office, warehouse, excluding officials.

Q. That is excluding all the officials?—A. Yes, sir.

Q. Have you the figure as to how many you have at $10?—A. No, sir; I can give you the total number.

Q. The total number at $10?—A. No, sir—the total number making up the total quantity which establishes that average that you were referring to. It is not just an average between the two extremes. There are 199 assistant clerks, 167 chief clerks.

Mr. Factor: Have you got the number who got the maximum?

The Witness: No, it is not here.

By Mr. Sommerville:

Q. That will be worked out, Mr. Factor, I am sure. Then, Mr. Miller, has there been any reduction in wages of the employees of the factories of the Imperial Tobacco Company since 1930?—A. There was no general reduction, no, sir.

Q. No general reduction; what do you mean by no general reduction?—A. There has been no real reduction in average wages.

Q. Mr. Factor suggests that there is no flat reduction like members of parliament have to take. There has been a reduction?—A. Well, as I believe we explained to you in one of the letters, there was an old attendance bonus in our factory dating back from war times of 10 per cent for this attendance and we revised the rates some up and some down on piece work, and there was a net of that 10 per cent, I think the figure was 2 per cent—a net reduction of 2 per cent, I think.

Q. On that bonus basis?—A. Yes, sir.

Q. In other words, after the readjustment of this bonus basis you did not wipe out the whole 10 per cent?—A. No.

Q. You just wiped out 2 per cent of it?—A. Yes, of those affected.

Q. Of course, it would be only those affected. Then, I observe that your total payroll for 1931 in your own factories was $2,231,330.70. In 1932 it was down to $2,141,719.35. In 1933 it was down to $2,040,620.35. Is that the measure

in which the reductions would be reflected?—A. No, that change was only made —that referred to in July, 1933.

Q. So that only half of the reduction would be reflected in that figure up to 1933?—A. Approximately.

Q. I observe that wages in these plants are down a sum of approximately $200,000?—A. That is all four plants.

Q. Yes, on all four plants?—A. Yes, the Montreal factory.

Q. On what basis would you say the reduction in wages has been measured? —A. It is only a question of volume, I think.

Q. No, the reduction in wages?—A. I mean that the less business we have the less employees we have.

Mr. Factor: I thought it was piece work?

By Mr. Sommerville:

Q. I thought you said there was a reduction?—A. You mean this 2 per cent?

Q. Apart from the 2 per cent which is only a re-adjustment of this bonus basis, is there not a re-adjustment or a reduction in wages of employees?—A. You mean of our factory employees?

Q. Factory employees?—A. No, not in the rates.

By Mr. Factor:

Q. Let us take a concrete case, Mr. Miller. Take a cigar maker working in one of your factories in Toronto, we will say, on a 5 cent cigar, that, I understand, sells to the trade at $37 per thousand. What does the worker get working on that cigar?—A. That is mostly a machine made cigar.

Q. Yes, it is machine made?—A. I don't know.

Q. I have received the information that the worker gets 75 cents a thousand for those cigars; that four girls working on a machine get $3 for making a thousand cigars?—A. $3 a thousand?

Q. A thousand for 5 cent cigars?—A. How much a week?

Q. If they are doing this work I am not concerned with the week, I am concerned with the scale of wages paid to four girls working on a machine?—A. Weekly wages would be a guide.

Q. I am coming to that later. Four girls working on a machine producing 5-cent cigars are paid at the rate of 75 cents a thousand each or $3 a thousand for the four girls—for the four of them on the condition that those four produce a capacity of 3,700 cigars?—A. 3,700 in one day?

Q. Yes?—A. I haven't got the figures.

Q. Would you mind getting that information for me?—A. I will be delighted.

By Mr. Sommerville:

Q. Now, I observe, that the wages in the B. Houde company are down from 1931 from $86,575 to $62,426.22?—A. I think that is entirely due to volume, sir.

Q. Will you say there has been no reduction in the rates?—A. Yes. That was the same sort of adjustment in the attendance and most of that is due to lesser business, undoubtedly.

Q. Mr. Miller, will you just acquaint yourself with the exact information. My information may be wrong?—A. Yes, sir.

Q. But I am asking for this information. My information is that there was a wage cut to the employees of the B. Houde Company Limited, the National Tobacco Company, Limited, the General Cigar Company, Limited, and the Punch Cigar Company, Limited. Now, if you can, obtain the information for us upon these. That is, the total figures?—A. We will cover that later. I do not think that is right.

Q. The total figures for your wage scale for 1931 show $3,430,952.33, and for the year 1932, $3,234,548.67 and for the year 1933, $2,981,944.52—a drop from 1931 of approximately half a million dollars from a wage scale of $3,430,952.37?—A. Primarily due to a difference in volume, I am sure.

Q. Well I have no doubt you will be able to tell us just what amount of wage reduction has taken place in those few years.

Mr. FACTOR: I should like Mr. Miller to prepare a statement for the committee, taking the rates of the cigarmakers in Toronto and Montreal, to show the distinction between the hand-made cigar and the machine-made cigar, the different rates of pay.

The WITNESS: You mean the average earned on a machine?

Mr. FACTOR: If my information is correct, there has been a reduction in the scale of pay of hand cigarmakers.

The WITNESS: In Montreal?

Mr. FACTOR: In Toronto as well.

The WITNESS: We will get it all. Do you want a comparison between the net cost of making cigars by hand and machine?

Mr. FACTOR: Also the difference. If my information is correct, Mr. Miller, I understand that cigarmakers were able to earn and were earning a higher scale than they are now—the scale was reduced in the last three years?

The WITNESS: I will go into it and give you all the particulars.

Mr. YOUNG: I am interested in the consumer, and should like to know where he comes in, in this business.

Mr. SOMMERVILLE: We are going into that.

By Mr. Sommerville:

Q. Will you be good enough to let me have the statement you have prepared showing the names of the producers from whom you purchase tobacco, so that it may help us with the books to-night?—A. Here is one with regard to the 1931 crop, is it not sir?

Q. This is for the 1931 crop. Now, are the contracts separate so that we shall know which contracts are Leamington and which Delhi contracts?—A. That can be done and is done.

Q. Are they arranged alphabetically?—A. There is no order taken at all. Here are some stubs in a book. Here is an illustration. The only order is the date of execution.

Q. This one book would probably represent Wilson's purchases, would it not?—A. I do not know; one buyer.

Q. Will that be a guide to us?—A. I think so.

Mr. FACTOR: I do not know that I made myself clear, but I should like these gentlemen to produce to the committee the pay-rolls of 1930, 1931, and 1933.

The CHAIRMAN: Of what?

Mr. FACTOR: The Imperial Tobacco Company and all subsidiary manufacturing concerns. I should like to have the number of male and female employees, and their wages segregated, if possible.

The WITNESS: You do not want the individual employees?

Mr. FACTOR: No.

The WITNESS: You want one week?

Mr. FACTOR: I should like something the same as I get from the Dominion Bureau of Statistics, say for the year 1930, which shows so many male and

female employees. I should like you to produce statistical information along that line.

The WITNESS: That would be one week, or some given time, because it would be hard —

By Mr. Factor:

Q. The total for the year?—A. It is not totalled for the year. That is an average week given by the Dominion Bureau of Statistics.

Q. This gives the total for 1930?—A. The highest number of employees in any one week in a year.

Q. Could we have the total for a year?—A. You want it for one particular week? You would have to take a high week, or a maximum week—we can give you the same figures as that, if you wish.

Q. You mean some of them work only part of the year?—A. They are coming and going, seasonal.

Q. Is your cigarette manufacturing business worked on a piece-work basis? —A. Some of it is.

Q. Most of it?—A. A good part of it, about 50 per cent—the best part.

Mr. SOMMERVILLE: I think, Mr. Factor, if you were to accept the suggestion of a week or two weeks if you like at a certain season of the year, one in the spring, and one in the fall, that would accomplish the purpose.

Mr. LANE: Might I suggest, Mr. Sommerville and Mr. Factor, that we must compare the Imperial's experience with the figures published by the Dominion Bureau of Statistics. We can give you the figures which we supplied to the Dominion Bureau from which they in turn built up that particular record, then you will have comparable figures.

Mr. FACTOR: I want to get at the figures for 1931 and 1932.

Mr. LANE: But you want them comparable.

Mr. FACTOR: Comparable to the figures you supply for this report.

Mr. LANE: We can build it up on that return.

Mr. FACTOR: Also in piecework, I want the scale of wages that you pay.

Mr. LANE: To the particular operator.

Mr. FACTOR: Yes.

Mr. MILLER: We will work out something on that, sir.

By Mr. Edward (To Mr. Miller):

Q. I have before me this statement of the United Cigar Stores, the statement of income and wages for the year ended December 31, 1933, on six Toronto stores?—A. Yes.

Q. There is only one store of this group apparently that is in black; the others are all in red?—A. Yes, sir.

Q. Now, I presume that these stores being in a preferred class buy at the best prices?—A. Yes.

Q. If your stores, owned by you, six stores in the city of Toronto, the United Cigar Store, buy at the best prices from the Imperial Tobacco Company, there is not much chance for an independent dealer, is there?—A. You will find—we can give you full particulars on this—I was looking at these figures on the same basis. United have had leases on these stores for a good many years. There is one of them there, I think it is at Dundas and Keels, next to the bottom; they advised me that they have had that lease since 1921, and when they took that lease they were doing a $100,000 a year business there, and they took this lease on that basis—I think it must have been a 20-year lease, I do not know the exact dates—the lease feature is a very big feature, they

have a very expensive lease there and they can't get out of it, and they have to stand that, it is very expensive.

Q. I was wondering if that same condition would obtain pretty largely through the better class of cigar stores in the city of Toronto, the Independents I mean?—A. I do not know, I do not think it is quite comparable, Mr. Edwards. In the first place you take recently you probably have heard of it, owners can go to the landlord and get reduction in leases; but because the United Cigar Stores is interested with Imperial, they have not been very successful in getting anybody to reduce their lease.

Q. Just this point here: here are businesses, roughly speaking, doing around $33,000 to $40,000 a year, which works out in a very rough way to about $100 a day; I was just wondering what chance your independent fellow has of making any money on that basis?—A. I do not think it is really comparable. I will be very pleased to show you all the details of it. You asked for the figures.

The CHAIRMAN: Excuse me, gentlemen, it is now six o'clock and I think we will not open up that question to-night.

By Mr. Kennedy (Winnipeg):

Q. Pardon me, just a moment, Mr. Chairman. Mr. Miller's exhibit, filed as exhibit No. 123, showing the undivided profits of the Imperial Tobacco Company Limited and subsidiaries, as at December 31, 1933, their audited accounts; that statement shows for United Cigar Stores Limited undivided profits of $325,377.50?—A. Yes.

Q. Where did they get these profits; if they are fortunate enough to have these leases for a period of years, that is what is left there last year—speaking from recollection they lost about $200,000 on their operations, but they still have undivided profits?—A. From previous years.

Q. The question of losses is almost entirely dependent on the price at which you sell goods?—A. No, the cost of operation is a big feature.

The CHAIRMAN: We will go into that at a subsequent meeting, we will not pursue that now. We will meet again to-morrow morning at eleven o'clock.

The committee adjourned at 6 p.m. to meet again Wednesday, May 9, 1934, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,

May 9, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of yesterday record the names of the witnesses, exhibits filed and correspondence read. I declare the minutes approved.

GRAY MILLER, examination resumed.

By Mr. Sommerville:

Q. Mr. Miller, I want to file a statement that you have prepared, of the daily purchases of the 1932 crop. This is a statement that was filed with Mr. Sutherland. Just see if that is not the statement prepared by your company? —A. I presume it is the same. It looks like it.

Q. That is the document submitted to Mr. Sutherland?—A. Yes.

(Statement of Daily Purchases of 1932 crop, filed and marked Exhibit No. 133).

Q. I observe in the statement of the affairs of the Imperial Tobacco Company issued by the Financial Post Corporation Service as a service to brokers, this statement which I would like your comment on, as to whether or not it is correct: "The company produces and packs tobacco and manufactures cigars and cigarettes. The company controls approximately 90 per cent of the cigarette business and 60 per cent of the tobacco business in Canada." What do you say as to that?—A. I don't know. We made no such statement. We have never given out any such statement as that.

Q. What do you say is the amount of cigarette business of Canada which you control, if it is not 90 per cent?—A. About 75 per cent, cigarettes.

Q. And what about the tobacco business, about what per cent?—A. Cut tobacco, about 66 per cent.

Q. On cut tobacco, about 66 per cent, you say?—A. Yes.

Q. And what about other tobaccos; what about the other forms?—A. Plug tobacco, 49·8 per cent.

Q. Yes?—A. Snuff, 97 per cent.

Q. Yes?—A. Little cigars, 91 per cent.

Q. Yes?—A. Cigars, 57 per cent.

Q. Cigars, 57 per cent?—A. Yes, a total, we have estimated, something under 70 per cent.

Q. The total average of the whole is something a little under 70 per cent? —A. Yes.

Mr. KENNEDY *(Winnipeg):* What is included under the heading "Tobacco"? You referred to cigarettes, and then tobacco.

Mr. SOMMERVILLE: Cut tobacco.

The CHAIRMAN: Smoking tobacco.

By Mr. Sommerville:

Q. Package tobacco, I presume?—A. Yes, both for pipe and cigarettes, rolling your own, fine cut.

Q. Package tobacco?—A. That includes all the companies.

Q. That includes all your subsidiaries. I quite understand that?—A. Yes, whether they are 100 per cent owned or otherwise.

Q. May I clear this up. Perhaps you can tell us if this statement which I find in the Tobacco Journal is correct, that in the United States in 1933 the administration took charge of the situation and the tobacco companies agreed to increase the price to the growers by approximately 50 per cent over what they were paying before?—A. I don't recall the percentage; but as I understand it, it was to put the price up to 17 cents for bright, flue-cured tobacco.

Q. That is the average price?—A. For the domestic manufacturers, and for a specified amount limited to 250,000,000 pounds out of that crop, which was about 725,000,000 pounds.

Q. The price was raised from an average of about 10 cents to abont 17 cents?—A. I don't remember the increase.

Mr. LANE: From twelve cents and a fraction.

Mr. HEAPS: What year was that, Mr. Sommerville?

By Mr. Sommerville:

Q. That was for the 1933 crop?—A. Yes.

Q. In other words, the price of the 1932 crop, the average, was 12 cents; and by reason of the action of the government it was raised to 17 cents?—A. That would not be the average of the crop.

Q. Well, the average paid by those companies?—A. Yes.

Q. The same companies that had been buying then agreed with the government to pay 17 cents for what they had been paying 12 cents the previous year?—A. I think so.

Mr. BUELL: The 1932 crop was 11·3.

Mr. SOMMERVILLE: That is so, 11·3 for 1932; and it was raised to 17 cents.

Mr. BUELL: 250,000,000 pounds.

By Mr. Sommerville:

Q. Yes, 250,000,000 pounds in 1933?—A. Yes.

Q. And was there some amount that had to be paid back to the farmers on their 1932 crop?—A. Not to our knowledge, sir.

Q. Nothing of that kind?

The CHAIRMAN: I saw a report on that to the effect that the leading companies made the reverse of a rebate, paid some additional bonuses to those from whom they had previously bought at abnormally low prices.

Mr. BUELL: I understand that they had a form of what they call a processing tax that was to apply to the farmers who agreed to a 30 per cent reduction.

The CHAIRMAN: No, that is not it.

Mr. SOMMERVILLE: That is a different thing.

The CHAIRMAN: This was to properly compensate the farmers from whom they had bought, earlier in the season, a large portion of their crop at low prices, and to bring them up to the level of the higher price, is that right?

Mr. BUELL: I think so.

Mr. HEAPS: Are these the N.R.A. Codes in the United States you are referring to now, Mr. Sommerville?

Mr. SOMMERVILLE: No, this is something special.

Mr. Factor: It is under the Agricultural Adjustment Administration.

Mr. Sommerville: Under the Agricultural Adjustment Administration the president stepped in when the abnormally low prices were being paid at the beginning of the crop in Georgia, and succeeded in getting an agreement to pay 17 cents instead of about 11 cents on the previous year's crop. For those crops that had already been bought in 1933 at less than 17 cents, the companies had to rebate or had to pay a bonus, or reimburse those farmers from whom they had bought so as to bring their average price up to 17 cents.

The Witness: That is right, Mr. Sommerville, but I think you should mention here that that was only for the domestic manufacturers.

Mr. Sommerville: Oh, yes, I understand that.

The Witness: That gave an average on the whole crop, according to the information we have, of 15·2 cents.

By Mr. Sommerville:

Q. Oh, yes, they could only deal with domestic buyers?—A. Yes.

Mr. Kennedy (*Peace River*): You said the president persuaded them. How did he persuade them?

Mr. Sommerville: Ask the tobacco men.

Mr. Factor: He made an agreement.

Mr. Sommerville: An agreement was made.

By Mr. Sommerville:

Q. And that was followed up, was it not, Mr. Miller, by an agreement that the buyers of Burley and similar tobaccos would increase their price by 50 per cent?—A. I don't remember the figures—12 cents for Burley.

Q. 12 cents for Burley, from the previous price of about 7 cents?—A. I don't know the previous price. We have not any record of it.

Q. Is that not your recollection?—A. I might ask Mr. Lea.

Mr. Lea: I think that is quite right.

By Mr. Sommerville:

Q. So that that Burley price was increased from 7 cents to 12 cents approximately?—A. Yes.

Q. And on the flue-cured it was raised from 11 cents to 17 cents, approximately?—A. For domestic manufacturers.

Q. Then I find that the manufacturers made the announcement to the president that the tobacco company representatives declare that after paying the higher price under the agreement, it would not affect the price to the consumer?—A. I don't remember that. All right, it may be so. I just don't know.

Q. I thought perhaps you, being in the business, would be interested in knowing that you could pay 50 per cent more for your leaf and not increase the price to the consumer?—A. Well, my recollection is—you want to know what my recollection is?

Q. Yes?—A. As near as I know they were allowed to increase their price to the trade by whatever increased cost was produced by this increased price to the farmer, and I have heard—whether it is so or not, what with labour and what not—some 50 cents a thousand is my understanding of what they were allowed to increase their price to the trade.

Q. To the trade?—A. As to the question of the price to the consumer, as you may know the retail price in the United States has been in such a chaotic condition for years that I don't know that they could say what the price to the consumer was, so I am not sure. The standard price was 15 cents a package.

That was the original understood price, 15 cents for 20. I dare say that the trade and everybody would still sell at 15 cents, if they could establish a standard price, and be better off; that may be what they meant.

By Mr. Factor:

Q. Part of the arrangement, as I understand it, was that the manufacturer's price must be in direct relationship to the increased cost?—A. That is right; which I understand was about 50 cents per 1,000 for cigarettes.

By Mr. Sommerville:

Q. Apparently the difference was absorbed somewhere before it reached the consumer?—A. Well, some consumers paid it. Yes, the trade may have absorbed it.

Mr. KENNEDY (*Peace River*): How do prices of the finished product, in cigarettes, compare in Canada and the United States?

Mr. SOMMERVILLE: I might just follow that through.

By Mr. Sommerville:

Q. As I understand it, Mr. Miller, Lucky Strikes, Camels, Chesterfields and Old Gold, 20 in a package, sell at two for a quarter?—A. They sell at anything, as far as my knowledge goes, from probably 11 cents a package up to 15 cents a package.

Q. Originally it was a 15 cent package?—A. Yes.

Q. But generally speaking is it not fair to say that the average is two for a quarter through the States?—A. Well, that would be hard to say.

Q. What do you say was the average?—A. I frankly never tried to figure what the average is. You take all the big chain stores, take A. & P., they have sold them by cartons, as I have heard,—it is all hearsay and what I have read—with probably not more than 1 per cent or 2 per cent margin on them, and all the other chain stores have followed. The other little retailers have got to follow more or less, depending on their proximity to the chain stores. I don't know what it is.

Q. Let us start at 15 cents?—A. All right.

Q. They do not sell for more than that?—A. I don't think so, not the big brands.

Q. And they sell much less, I have been told?—A. Yes.

Q. So let us start with 15 cents?—A. All right.

Q. The excise tax in the United States is $3 a thousand?—A. Yes.

Q. That is 6 cents for 20?—A. Yes.

Q. That leaves 9 cents for the manufacturer, the jobber, the retailer, the grower and suchlike; that is, 9 cents is left to be distributed between the grower, the manufacturer, the jobber and the retailer?—A. 9 cents?

Q. Yes, 6 from 15?—A. Yes.

Q. And if they are being sold at two for a quarter, as I am told, then it is really 7 cents that is left to be distributed?—A. Two for a quarter would be 6.

Q. It would be 13 cents?—A. Yes.

Q. So that there is from 7 to 9 cents that is available for distribution between the various parties that take part in the production of the cigarette. In Canada similar quality cigarettes sell at what price, 20 for how much?—A. 20 cents.

Q. 20 for 20 cents?—A. Yes.

Q. And here you have a $4 excise tax?—A. Yes, and sales.

Q. That is 8 cents a package?—A. Yes, and 6 per cent sales tax.

Q. That is 12 cents per package?—A. And 6 per cent sales tax.

Q. All right, let us take 6 per cent sales tax; that is $1\frac{1}{5}$ cents on 20 cents?—A. Your sales tax is not on the consumer's price.

Q. It is not on the consumer's price?—A. No, on the manufacturer's price.

Q. For the purpose of argument let us say the sales tax amounts to $\frac{3}{4}$ of a cent a package?—A. 45 cents a thousand.

Q. Well, it is less than half?—A. No, 45 cents a thousand would be—

Q. Well, let us say a cent?

Mr. Lane: 45 cents a thousand, and $4 excise, and then take the duty.

Q. And there are fifty packages in a thousand?—A. Yes.

The Chairman: Less than one cent.

Mr. Sommerville: Less than a cent.

The Chairman: We will say a cent.

The Witness: I just wanted to be accurate.

By Mr. Sommerville:

Q. Let us say for purposes of argument, a cent?—A. All right, sir.

Q. Then, excise 8 cents a package, and the sales tax one cent a package, that is nine; and that leaves eleven cents in Canada for distribution between the grower, the manufacturer, the distributor, the jobber and the retailer?—A. Yes.

Q. As against from seven to nine cents in the United States for relatively the same thing?—A. All right, sir.

Q. That is approximately the position, is it Mr. Miller?—A. Yes. On page 77 of my brief there I show the split-up of a 25 cent package (25 for 25 cents), which you refer to. Out of the 25 cents the retailer gets 3·3 cents, the jobber or wholesaler 2·2 cents, the Canadian Government in excise and sales taxes 11·1 cents, and the manufacturer gets 8·4 cents. That is what he has with which to pay for labour, the farmer for the tobacco, and for advertising, selling expenses, and so on.

Q. That means that after paying the taxes, excise and sales, on that 25 cent package, there is 13·9 cents per package to pay for the manufacturer, jobber, retailer and grower?—A. What is that again.

Q. From the 25 cents take 11·1 cents?—A. Oh, yes.

Q. And that leaves 13·9 cents?—A. Yes.

Q. To cover the grower, the manufacturer and the distributor?—A. Yes.

Q. That is the breakdown?

Mr. Ilsley: Have you any comparable United States figures?

Mr. Sommerville: The only thing I think is the 7 to 9 cent figure.

The Witness: I think I have something, sir.

By Mr. Ilsley:

Q. Have you any figure to compare with the 13·9 cents?—A. I think so, sir. I see here is a statement comparable, at 15 cents to the consumer.

Q. In the United States?—A. In the United States the manufacturer has got $2.38 to take care of the other; the manufacturer has 31 per cent. At fourteen cents—

Q. Wait a minute now, Mr. Miller, what is that at 15 cents?—A. The manufacturer's proportion out of that consumer's dollar.

Q. Perhaps you will give us the consumer's dollar less the tax, to be comparable?—A. That is where there is a state tax of one cent. I will start at the beginning. The $12\frac{1}{2}$ cent package, that is what you spoke of: internal revenue tax $3; manufacturers $2.28, dealers $·87.

By Mr. Factor:

Q. Is that per hundred?—A. Per thousand. Or percentages: internal revenue, 48; manufacturers, 38; dealers, the trade, 14 per cent. At 20 for 13 cents: internal revenue tax $3, or 46·2 per cent; manufacturers $2.38, or 36·6 per cent; dealers $1.12, or 17·2 per cent.

Q. Is there any way you can break up a package of cigarettes comparable to the way in which you have broken it up on page 77?—A. I think we could, yes.

By Mr. Sommerville:

Q. I think if you would be good enough to do that and file it with the committee, we would appreciate it?—A. We will be glad to.

Q. For your 15 cent and 20 cent package?—A. Along the lines on page 77.

Mr. Factor: Yes, showing the retailer, the jobber and so on.

By Mr. Senn:

Q. Would it not be possible in your computation on page 77, the way you have it broken up, to have stated the amount which went to the producer?—A. It might be possible to get it.

Q. You have the comment following that about the statement by Professor Leitch that the growers would be happy if they received 1·75 cents per package? —A. Yes.

Q. Evidently that is more than they do receive?—A. Professor Leitch says the growers would be happy if they received—

By Mr. Sommerville:

Q. What you say in your brief is:—

> Professor Leitch stated that the growers would be happy if they received $1\frac{3}{4}$ cents per package, which, on the basis of his figuring, would be $23\frac{1}{3}$ cents per pound green weight to the farmer, which is equivalent to an increase of approximately 23 per cent in price to the grower.

In other words, $1\frac{3}{4}$ cent per package would assure a 23 per cent price increase to the grower?—A. Of the previous year's price.

Q. Of the previous year's price, that is right?—A. You have got roughly 20 cents there.

By the Chairman:

Q. $1\frac{3}{4}$ cents per package, which is the basis you say in your analysis of Mr. Leitch's figures would be $23\frac{1}{3}$ cents per pound?—A. Yes, sir, green weight.

Q. To the farmer, which is equivalent to an increase of approximately 23 per cent in the price to the grower. That is in your brief. It would bring the price to the grower up $23\frac{1}{3}$ cents from what was actually paid in that year?—A. In 1933.

Q. And the amount of the increase would be 23 per cent?—A. To the grower.

Q. Yes?—A. Yes, sir.

By Mr. Sommerville:

Q. In other words, $1\frac{3}{4}$ cents per package is 23 per cent more than he got the previous year?—A. That is right.

By Mr. Kennedy (Peace River):

Q. Referring to your argument on page 77: you say: "In our opinion this is slightly higher than is advisable, for the well being of the tobacco growing industry, because of their having an exportable surplus and it being necessary for them to meet world (Empire) prices, as previously dealt with?—A. Yes, sir.

Q. Why does the tobacco grower have to meet world prices, or export prices in our domestic market; why should he, you are having the advantage of the tariff, why should not he get the advantage of the tariff?—A. Well, sir, I would like to say that we feel certainly that the law of supply and demand has some bearing on the price to the farmer, and the export market has come into it, when they raise a surplus of tobacco—in our opinion there has been a surplus of tobacco, with due deference to opinions that differ, that is our opinion—we believe there has been, at least at the present time; that on the market including what we have bought from the 1933 crop which was more than we needed and we paid a higher figure, went into try and help and protect the market; we believe that there is even now 25,000,000 pounds of tobacco, flue-cured tobacco, on the market, and held by manufacturers that they do not need; that is more than their normal requirements.

Q. Why does it not affect the price of your finished products in Canada?—A. It has affected the price of our finished product.

Q. It has not brought it down to world prices?—A. What world price? Do you mean the world price of the manufactured article; naturally the world price of the manufactured article in every country is different. We are labouring—take the tax on cigarettes, $4 a thousand, and 6 per cent sales taxes, and all the other things. You must compare that—

Q. I do not think there is anything to that argument at all, Mr. Miller?—A. You must compare—

Q. But that difference would improve the price of 23¼ cents for the grower in Canada?—A. We are willing to pay any agreed price that the manufacturers get together on and are willing to pay.

Q. But you are the 80 per cent buyer?—A. No, sir, we are not the 80 per cent buyer.

Q. You were the 80 per cent buyer?—A. When we were buying 80 per cent, we paid a higher price.

By Mr. Sommerville:

Q. Now, Mr. Miller, as a matter of fact is not this just the situation: in the last five years your net profits have amounted to $32,477,166.07, from balance sheet you filed?—A. I haven't the figures, sir, you can add them up.

Q. I have had them completed from balance sheet you filed of the Imperial Tobacco Company alone; and in addition to them you have in the statement yesterday undivided profits of subsidiary companies of $3,748,087.66; making a total of $36,225,253.77?—A. I do not think that is just a fair statement, you have taken certain years there, Mr. Sommerville.

Q. I am taking the undivided profits from your statement?—A. But those undivided profits might, and probably were, earned prior to the period you mentioned.

Q. I am only taking these figures out of the report. We could show that you have added to your depreciation enough to cover 100 per cent on some of your subsidiaries. I am not breaking down these figures, I am just taking these as undivided subsidiary profits?—A. I just wanted to remind you of that feature, sir; it is all right, sir, quite.

Q. In addition to that, the amount that has been paid to six executives—five only in 1932 and 1933—in these five years was $1,861,923.68; or a total of $38,087,177.38; during which time you have reduced the price to the producer 50 per cent, and to the wage earner to whatever amount you say?—A. Reduced the price to the consumer, and paid enormous taxes to the government, too, sir.

The CHAIRMAN: No, no; that is all clear.

By Mr. Sommerville:

Q. Your net profit, after you have taken care of everything else.

Mr. MILLER: Do you say that out of this amount there was anything due by way of taxes to the government?—A. No, sir.

Q. You have taken care of every government tax, every excise tax; you have taken care of all the depreciation, and it has been plenty; you have set up reserves out of funds received as dividends; you have paid everything, all the wages owed to everybody, and you have paid this amount, and you have this amount that I have referred to—$38,000,000?—A. I would like to have an opportunity of checking that, sir.

Q. I am taking it from the statement you filed yesterday?—A. Yes, sir.

Q. And, Mr. Miller; having reduced your price to the producer by 50 per cent that just added to the depression until he finds himself down and out?—A. What price of 50 per cent do you mean.

Q. I mean the price that you reduced to the producer in 1931, on your own statement you paid 31 cents and a fraction, approximately 32 cents; and in 1932 you paid 17 cents, and that is a 50 per cent reduction?—A. I think it is fair to say that when we paid 17 cents the other people paid 14 cents for their tobacco.

Q. But they would not have paid 14 cents if you had not started at 17, and you knew it?—A. How did we know it, sir? Naturally we have to protect ourselves.

Q. You are doing it?—A. Against under selling by other manufacturers, if they are going to buy tobacco at a very low price.

By the Chairman:

Q. But, Mr. Miller, the lower average price paid by others is not comparable to yours, because, as you have yourself stated, the Imperial Tobacco Company buys the largest proportion of the higher-priced tobacco?—A. Yes, sir.

Q. And all these others mentioned in the general comparisons which you have made in your brief include the lower priced tobaccos?—A. Yes.

Q. And if one man has say 6 per cent lower and another man a 6 per cent higher price, then his average is going to be much higher than the other; and that is according to your own statement over the last three or four days, that is just what happens. That, of course, could be carried out with meticulous detail by going into his books. I do not think there is any need for that. I should think it would be admitted at once.

By Mr. Sommerville:

Q. At any rate, the situation of the grower in 1932 was about 50 per cent worse than it was in 1930, wasn't it?—A. Yes, sir.

Q. He was 50 per cent worse off in 1932 than he was in 1930?—A. One of the reasons was because he raised so much tobacco.

Q. And one of the reasons was because you reduced by 50 per cent and just added—?—A. Because of over production for one thing.

Q. And that just added to his depression.

By the Chairman:

Q. Why do you say, Mr. Miller, and why do you persist in saying over-production, when every pound of the 1932 production was liquidated?—A. We believe Mr. Stevens, that there was still 25,000,000 pounds more of flue-cured tobacco on hand here than was needed or wanted by the manufacturers.

Q. Now, wait a moment; that includes the 1932 crop?—A. Yes, sir.

Q. And it is still questionable, because you have admitted that you use the tobacco taken in one year about two or three years later in your manufacturing?—A. About 18 months after.

Q. You gave us that, from two to three years. So you do not take into consideration the 1932 crop with any surplus that you may have had over from the 1931 and 1932. The problem that arises regarding over-production is a present-day problem which can be frankly faced, but it does not justify your reduction in 1931 and in 1932 of the price, because then the condition that you now mention did not obtain?—A. Mr. Chairman, we have got on hand as on March 31st, 24,000,000 pounds of flue-cured tobacco.

Q. Wait a minute, March 31, 1934?—A. Yes, sir.

Q. After taking the crops of 1932 and 1933; but it was in 1931 that you made the big reduction in price. Can't you get that point, Mr. Miller?—A. Well, certainly; on reduced acreage, Mr. Chairman. Our inventories of 1931 were nothing comparable to what they are to-day.

By Mr. Sommerville:

Q. Mr. Millar, in 1931 before you had the big crop you deliberately reduced the price from a top of 40 cents to a top of 30 cents, which was a 25 per cent cut at once, and got down to a price that was away below anything that had ever been paid before; that was before there was ever a big crop.

Mr. Ilsley: There was 24,000,000 pounds in 1931 which was just as big a crop as in 1933.

The Witness: 1931 was a big crop, twice as much as it was in 1930.

By Mr. Sommerville:

Q. But you paid 22 cents?—A. That is, when the price went down there was twice as much raised.

Q. You paid 30 odd cents?—A. It was not 30.

Q. No, I beg your pardon, 22 cents.—A. That is when the price went down twice as much—

Q. Now then, in addition to reducing the price to the producer, which we have heard, you reduced wages to the employees?—A. We have not yet got our figures on that. There have not been any real wage reductions in our factories.

Q. You said at least two per cent?—A. That happened this year, last fall.

Q. Can you tell me Mr. Miller, with all these accumulating profits made on tobacco that gives you a great deal more than the tobacco you are using this year, because you are using this year what you bought in 1932, with all those accumulating profits, what has your great company done to relieve or assist this country through the present depression,—one single thing?—A. Well, we feel that we have done all we possibly could to warn the farmers against overproduction. It is a matter of record what we have advised them, not only through the newspapers but by circular letters through the Department of Agriculture at both Ottawa and Toronto. We have done everything we possibly could to see that they did not overproduce tobacco. If we wanted to put through low prices would we be trying to make them reduce their acreage and reduce their planting? The logical thing would be to let them plant what they wanted this year. We went into this market up there this year and paid everybody practically 20 cents a pound when we really did not need the tobacco, to try and help the situation. We have done everything we have known how to do.

By Mr. Factor:

Q. You originally encouraged the producer to increase his acreage?—A. To a reasonable extent sir, only a reasonable extent—slowly.

By Mr. Sommerville:

Q. When in 1931 he increased his acreage, you went out and bought from the new man?—A. Well, that statement is made. We were not aware of anything. We have discussed—

Q. When you were asked that question yesterday, Mr. Buell said they bought where they could get good tobacco?—A. We did not discriminate against the new raiser, no.

Q. We know that you did not discriminate. That is one way of putting it. You encouraged— —A. Fair way.

Mr. YOUNG: Why should he discriminate against the new grower?

By Mr. Sommerville:

Q. If you were discouraging the increase of acreage among the old growers, was it an inducement to the old growers to reduce their acreage when they found you going out and buying from the new growers who came into the field? —A. Mr. Sommerville, I ask you if we had wanted to try to force the price down and grind the farmer down, would we have gone to all the effort we have gone to, to try to get enforced this year a plan for the reduction of acreage by 25 per cent? Would we have advised it, when in our opinion it should be $33\frac{1}{3}$ per cent, would we have tried to do that, if we had wanted to grind the farmer down to a low price for his tobacco. That does not seem reasonable to me.

By the Chairman:

Q. Mr. Miller, the fact is you did unduly reduce the price and the farmers are suffering, because the farmer is suffering, other business concerns, fertilizer companies and machinery companies are not being paid. Why? Because the reduction in the price of tobacco in 1931 and 1932 was such that the farmer could not pay the cost of production?—A. Well,—

Q. Here is a thing that puzzles me. In the face of what Mr. Sommerville has read out here this morning, and pointed out to you in the way of the highly prosperous condition of your company—nobody is complaining particularly about that, if the other people are getting a fair share—in the face of the highly prosperous condition of your company the reduction in price to the consumer amounted to only $3.50 in 1932?—A. The cigarettes?

Q. On the cigarettes?—A. Look at tobacco.

Q. It is very small.—A. Cigarette tobacco business is a very important thing in the business.

Q. That is a very small reduction?—A. I think you are wrong.

Q. This is your own brief?—A. Look at the next page. What page are you looking at?

Q. Page 45. I am saying you only made a very small reduction, because $2 came off in the excise tax.—A. No, that is not the last case. Look at the page, sir.

Mr. FACTOR: I cannot appreciate the mentioning of those percentages when you take an ordinary package of cigarettes.

Mr. LANE: That is an error.

By Mr. Factor:

Q. Take an ordinary package of standard cigarettes, the 20 cent package, what was the retail price to the consumer, starting from the year 1930. What would the consumer have to pay for a 20 cent package of cigarettes in 1930?—A. He paid 25 cents for that package.

Q. That was due to the high excise?—A. For the big brands.

Q. With the high excise tax?—A. Yes.

Q. What did he pay in 1931 for the same package?—A. I forget. 1931, you say?

Q. Yes.—A. You had still a high excise, a package of 20 for 25 cents.

Q. What was the price that the consumer paid in 1932?—A. The excise tax was dropped from $6 a thousand, to $4 a thousand, $2 a thousand reduction there, and the price to the consumer was changed from 12½ cents—12½ a thousand, from 20 cigarettes for 25 cents, to 20 cigarettes for 20 cents, or ten a thousand, a reduction of 2½ to the consumer.

Q. Because the excise tax was reduced?—A. Primarily that.

Q. What was the price paid by the consumer in 1933?—A. It was 20 for 20.

Q. What did you pass on to the consumer in that package?—A. I am dealing with one brand. You were asking me to make a comparison. That is one brand, but other brands have been reduced. So far as we are concerned. the records there on that page show that we have reduced our price from 1930 to 1933 from $3.82 less excise sales tax to $3.46.

Q. To the jobber?—A. What we get.

Q. What I am trying to find out is, where did the consumer get a reduced price on the price of cigarettes? You have reduced the price to the grower. but the consumer has been paying the same price for his cigarettes from time immemorial, has he not?—A. No.

Q. Say from 1930. The consumer has been paying the same price for his cigarettes with the exception of the time when you increased the package from 20 to 25, and that was on account of the decrease in the excise tax?—A. Primarily, to the manufacturer, but there was more than that passed on.

Q. It would not be very much more, would it?—A. It would be more.

Q. How did you pass on to the consumer the lower price that you paid to the grower?—A. Well, it is all—for one thing, it is in the good tobacco.

Q. Well,—A. You have got a unit there of 20 cigarettes. You cannot change the price to 19½ cents or 18 cents.

Q. That is the unfortunate part?—A. Yes; it is taken care of.

Q. There has been no reduction to the consumer in that package of cigarettes?—A. There has been a reduction, and the jobbers have gotten more out of it.

Mr. SOMMERVILLE: You are retailer and jobber. Let us get this clear. You control the jobber in a number of the large centres in Canada.

The WITNESS: Less than 4 per cent of the whole business in Canada is the amount we control.

By Mr. Factor:

Q. As a matter of fact, you also control the selling price of the cigarette, do you not?—A. Yes, we try to encourage the maintenance of prices.

Q. I am not quarrelling with you on that, but you do control it?—A. We try to.

By Mr. Ilsley:

Q. On this question of cigarettes, I have tried several times to find out whether you did reduce the price on any brands? I understood first that you did not, then later on, you said on some brands you did, and now I understand that the price to the consumer was not reduced on any brand of cigarettes; is that true or not?—A. When do you mean?

Mr. EDWARDS: They were reduced from 30 to 25?

Mr. ILSLEY: That has reference to the excise tax. I thought everybody understood we were not talking about that. I am talking about whether this company reduced its price; apart from the excise tax reduction did this company reduce its price to the consumer?

The WITNESS: No, not during that time; it was not practical to do it.

By Mr. Ilsley:

Q. We can get that definitely?—A. Not on cigarettes, but it was on good tobacco.

Q. Then the reduction in price to the producer was not passed on in such a way that the consumer of cigarettes got any of the benefit at all?—A. There were some brands reduced in price during that time.

Q. What were they?—A. Sweet Caporal. I was just reminded of that, sir. There was quite a drop there.

Mr. SOMMERVILLE: Perhaps you would be good enough to tell us.

The WITNESS: Broadly speaking—

Mr. FACTOR: What was the price of Sweet Caporal in 1930?

The CHAIRMAN: Mr. Miller, need it be a difficult thing to say? Has there been a reduction in the price of the common brand of cigarettes? Good gracious., you have about a dozen men, and surely you can tell us that. It is pathetic, really.

The WITNESS: What is the question?

The CHAIRMAN: The question is, what has been the reduction in the price of Sweet Caporal cigarettes to the consumer? Good gracious, it is a simple thing to give us that.

The WITNESS: The same price as Players.

Mr. FACTOR: Do you mean to tell me you do not know the price?

The CHAIRMAN: A dozen men in the audience can tell you.

By Mr. Factor:

Q. Do you mean to tell me you do not know the price to the consumer?—A. Now?

Q. No, in 1930?—A. It was not a very big seller.

Q. You started to give us Sweet Caporal as an illustration of the reduction in price to the consumer; let us have it. What was the price in 1930?—A. We tried to get it for you, but it was certainly more than 20 for 25, and it now sells 20 for 25. There was certainly that much of a reduction, and I think it was really more than that.

Q. It seems very strange to me that the President of the Imperial Tobacco Company, assisted by half a dozen men here, cannot tell me what the price of Sweet Caporal was to the consumer in 1930?

By Mr. Ilsley:

Q. Mr. Miller, I do not want to add to all this questioning needlessly, but at the end of your evidence of last Friday, you gave evidence which I thought was very definite, and which seems to have been changed later. Mr. Sommerville asked you these questions:—

> Q. Now, I want to ask you this further question: When the price to the producer was reduced from an average of 32 cents in the year 1930 to an average of 16 or 17 cents in the year 1932, how much did you reduce the price of cigarettes to the consumer?—A. The price of cigarettes to the consumer?
>
> The CHAIRMAN: Take some typical brand.
>
> *By Mr. Sommerville:*
>
> Q. Give me a typical brand, Turrets, for instance?—A. Page 48?
>
> Q. That deals with the whole produce?—A. Well, so far as any reduction in cigarettes is concerned, that is, in Turretts itself?

Q. Yes.—A. Well, there has been no decrease in price because of any change in the price of tobacco, but there are a lot of governing factors in the situation.

Q. And does that also apply generally to the various brands of cigarettes, that same answer?—A. You mean throughout Canada?

Q. Yes.—A. Yes, sir.

Q. Then, the price paid for tobacco, if it is not passed on to the consumer, reflects itself in a higher profit to the manufacturer?—A. Of necessity, yes.

Mr. SOMMERVILLE: I will leave it at that point.

Now, I thought that concluded it, but since you seem to keep on talking as if some brands were reduced to the consumer. Now, if they were, what were they and how much?—A. With respect to Sweet Caporal, I put it this way: I am trying to clear up the whole situation. What I said with regard to Turrets at the time, the price to the consumer, because of the change in price of tobacco during 1930 or 1931, was not changed. The price to the consumer was not changed. The change in price of Turrets to the consumer was due to the excise tax change.

Mr. SOMMERVILLE: That confirms the evidence of Friday last?

The WITNESS: The statement we referred to on page 45 or 47, was for all the brands. We had a lot of brands at varying prices.

By Mr. Factor:

Q. Another situation— —A. Wait a minute, Mr. Factor, I am trying to clear that up, sir. Sweet Caporal cigarettes were not selling to any large extent, and they were selling at a higher price. I am sorry I cannot state at the moment what price. They were a very small brand, and they were being sold at a higher price, and we reduced the price to 20 for 20 cents, and 25 for 25 cents. Now, that reduction in price reflects in our average price, the same way. We have reduced the price to the consumer irrespective of the reduction in excise tax on our Millbank cigarettes, and several other brands, which affects the average price that we get for them, and the average price that, of course, the consumer gets. The consumers' price has been reduced too.

By the Chairman:

Q. Are you talking of the wholesale price, or the price that I pay for a package of cigarettes?—A. When I say "Consumers' price" I mean the price you have to pay, Mr. Chairman, for them.

Q. Is not this a fact, in 1930, you paid 25 cents for 20 cigarettes?

Mr. LANE: No.

The CHAIRMAN: That is what it was.

The WITNESS: 35 cents, I think it was, for Sweet Caporal.

The CHAIRMAN: To-day it is what?

The WITNESS: 20 for 20 cents, or 25 for 25 cents.

Mr. SOMMERVILLE: That is because of competition with other brands.

The CHAIRMAN: What are your chief sellers, Mr. Lane?

Mr. LANE: Mr. Stevens, Mr. Miller has said there has been no change in the price to the consumer. There has been a change in the swing of our trade from one brand to another.

The CHAIRMAN: Never mind that. What are the brands. Give us half a dozen.

The WITNESS: Turret. There is no change. On Sweet Caporal—

Mr. LANE: There is a change on Sweet Caporal.

The WITNESS: Winchester, no change.

The CHAIRMAN: What is another?

The WITNESS: Guinea Gold, no change.

The CHAIRMAN: Players?

The WITNESS: Players.

Mr. LANE: There is a change.

The CHAIRMAN: How much?

Mr. LANE: From 35 cents for 20 to 20 for 25 cents.

The CHAIRMAN: That is due to excise.

Mr. LANE: That is more than the excise.

The WITNESS: 18 for 25.

By Mr. Factor:

Q. May I suggest that Mr. Miller file with the committee a statement on each brand, and the comparative prices from 1929 to 1934.

Mr. LANE: I suggest you limit that to half a dozen prominent brands.

Mr. SOMMERVILLE: Make it ten leading sellers.

By Mr. Factor:

Q. What about the price of cigars? Did you get the information on the cigar situation for me?—A. No, sir; I have not been able to get it yet.

Mr. SOMMERVILLE: Have you any of the information asked for yesterday available?

The WITNESS: Not yesterday; but I have a statement here to file on our stocks of leaf tobacco by years, and by grades.

Mr. SOMMERVILLE: That will be exhibit No. 134.

Statement of stocks of leaf tobacco by years and grades filed and marked exhibit No. 134.

By Mr. Young:

Q. According to the evidence, you have 24,000,000 pounds of tobacco on hand?—A. Yes.

Q. You say that is more than your normal requirements?—A. Yes.

Q. How much more?—A. That is probably thirty-six months' duration. Three years' duration, based on what we have been using up, sir.

Q. If you had not to-day more than your requirements, what would you have on hand now?—A. Probably, I think—it would be hard to say—two and one-half years would be about four to five million pounds.

Q. You have four or five million pounds more than your normal requirements?—A. Yes.

Q. Why did you buy that additional tobacco?—A. Because of the general conditions, and we thought it was good tobacco, and to help the general situation with the farmers and to save any—

The CHAIRMAN: It is good stuff to hold, anyway.

The WITNESS: —to save any break in the market. We hope so, sir.

The CHAIRMAN: It improves with age?

The WITNESS: To a certain degree.

The CHAIRMAN: It is like whiskey in that respect.

By Mr. Senn:

Q. May I ask a question before it gets too far on. I am interested in this matter of overproduction, and the scheme that is on foot to reduce production. In estimating the amount of acreage that should be reduced, you said it should be 33⅓ per cent?—A. Yes.

Q. Instead of 25?—A. Yes.

Q. In making that estimate, have you taken into full account the prospect of the export trade?—A. Yes, in our opinion—our opinion of it.

Q. Can you tell us why there is no immediate prospect of an increase, a real increase, in the export trade, having regard to our Empire preference?—A. Well, we have been doing our best to interest one of the biggest British manufacturers in using Canadian flue-cured tobacco. We met with reasonable success for a time, but at the moment we understand that the brands that they were using have fallen off in sales so materially that they themselves are overstocked at the present time, with that type of tobacco. Of course, that does not mean that there are not other people who can and will use Canadian flue-cured tobacco.

Q. Is it not true that our Canadian flue-cured tobacco compares very favourably in quality with what is being purchased from the United States? —A. Well, compares favourably, yes, but it is not the same.

By Mr. Sommerville:

Q. I thought I had a statement by Mr. Cooper, Mr. Cooper is one of your directors, is he not?—A. Yes.

Q. And what is his position with the British American?—A. One of the directors.

Q. What is his position in the Imperial of Great Britain?—A. No connection at all.

Q. Perhaps I may have that this afternoon, his statement when he was here last year as to the position. That would clear up the situation on that?—A. All right.

By Mr. Young:

Q. Going back to the other point, you have on hand four or five million pounds more of flue-cured tobacco than you need?—A. Yes.

Q. I think you said a little earlier that in Canada there was 25,000,000 pounds more than required?—A. In the world. That is including the United States and here to.

Q. How much is there in Canada?—A. We figure that there is about 10,000,000 pounds—that is our estimate, our rough figures—in Ontario, which is being held by the Ontario government.

Q. In addition to what you are holding?—A. Yes.

By Mr. Sommerville:

Q. Of the 1933 crop?—A. The Ontario government, out of the 1933 crop, advanced money, as we understand it. Then also I believe the Canadian Leaf Tobacco Company have advanced them money in processing their tobacco; and what with these overstocks in the Imperial Tobacco Company of Great Britain—we are, of course, estimating that, but we feel reasonably sure that there is somewhere between twenty and twenty-five million pounds in sight that is more than is really necessary, already.

By Mr. Young:

Q. That is in the world?—A. Yes.

Q. I mean in Canada?—A. Well, here in Canada—

The CHAIRMAN: What is the total world's consumption?

Mr. YOUNG: Let me get an answer to my question, please, Mr. Chairman.

The WITNESS: I am sorry. What is the question?

By Mr. Young:

Q. I want to know what the over-supply is in Canada at the present time?——A. Well, it is an estimate, of course, but taking into account our position and what we believe is the position of the Ontario government, we believe that it is somewhere about fifteen to eighteen million pounds in Canada.

Q. In Canada?—A. Yes.

Q. For which there is no immediate demand?—A. To our knowledge there is no demand.

Q. That that is held by the government is in the hands of farmers, guaranteed by the government; is that it?—A. No. Two-co-operative societies hold it. As I understand it, it has been money advanced by banks to be paid to the farmers and guaranteed by the Ontario government. That is as we understand it.

Q. Have the farmers sold it or just taken an advance on it?—A. Taken an advance on it.

Q. It is still in their hands?—A. Yes, it is still in their title—they have title to it.

Q. Have other Canadian manufacturers got any?—A. I don't know what their position is.

By the Chairman:

Q. Before you leave that, I think it would be most unfortunate to allow a damaging impression to go abroad regarding the position. You say, in your opinion, there are about 24,000,000 pounds over-supply of tobacco in the world?—A. Yes, of flue-cured Canadian tobacco.

Q. What is the total production each year, or we will say, what is the total importation of importing countries each year of flue-cured tobacco?

Mr. SOMMERVILLE: Great Britain takes 197,000,000 pounds.

The WITNESS: You mean Canada?

By the Chairman:

Q. No, I mean of the total, Virginia and so on?—A. I don't know what the total is.

Mr. SOMMERVILLE: We had the figure.

The CHAIRMAN: You have a pretty good idea. I have a very good idea myself. I think it is 170,000,000 pounds or something like that they import from the United States.

Mr. SOMMERVILLE: Great Britain alone imports 197,000,000 pounds from the United States.

The CHAIRMAN: Mr. Buell gets about $85,000 a years to follow these things. What is it, Mr. Buell?

Mr. BUELL: I don't know.

The CHAIRMAN: You don't know. It is most pitiful.

By the Chairman:

Q. Before you leave that, won't you agree, Mr. Miller, that the weight of this alleged excess is not much compared with the annual consumption of importing countries, or Great Britain alone—take Great Britain alone?—A. Well, Mr. Stevens, yes, if you want to include American tobacco and flue-cured tobacco; 24,000,000 pounds is a comparatively small amount of the world crop of flue-cured; but they are not comparable, in our opinion.

By Mr. Sommerville:

Q. But, Mr. Miller, you to-day are using 60 per cent more of this Canadian Virginia leaf?—A. Yes.

Q. And replacing the American Virginia leaf to that extent?—A. Yes, something like that.

Mr. MONTGOMERY: Be fair in your questions.

Mr. SOMMERVILLE: I want to be fair, and I will be fair.

By Mr. Sommerville:

Q. But, Mr. Miller, you are using 65 per cent more of this Canadian leaf than you were using some few years ago?—A. I don't know.

Q. There is a steady increase in the amount?—A. We may be, sir.

Q. Is that not an indication that you, or at least the Imperial Tobacco Company of Canada, have found it suitable for their trade in Canada? You have, have you not?—A. Well, yes, sir.

Q. And Great Britain, which started only three or four years ago to use it, imported large quantities up to this year?—A. Yes, sir.

Q. Increasing quantities?—A. For a time, yes.

Q. And of the Virginia leaf, we have the evidence here the other day that they are importing as much as 197,000,000 pounds?—A. Yes.

Q. 24,000,000 pounds surplus, if it does exist in the world, is not a large surplus in view of even the consumptive power of Great Britain alone?—A. Do you want me to answer?

Q. Well, is that not self-apparent?—A. They are not using Canadian leaf. I think you are putting a wrong construction on the whole thing, Mr. Sommerville. Look, in England they have got a high protective duty on tobacco, around 8 shillings and two pence a pound. They have given a preferential to empire-grown flue-cured, or empire-grown tobacco.

Q. To the extent of 49 cents a pound?—A. Yes. That ought to try to encourage manufacturers in using them, but up to now it has not produced any very considerable result in increased usings of Canadian flue-cured tobacco.

Q. Well, we have the figures at any rate. They speak for themselves in that respect, Mr. Miller?—A. Yes. Just a minute, Mr. Sommerville. I would like to mention that in 1931 the total production of tobacco was 51,300,000 pounds.

By the Chairman:

Q. In Canada?—A. Green weight, in Canada, all kinds; and the consumption in Canada was 23,864,000, including exports.

Q. That is the consumption of Canadian flue-cured?—A. Yes, all tobacco, all Canadian leaf.

By Mr. Sommerville:

Q. Don't get confused with Burley, cigar leaf, heavy tobacco and that sort of thing. We are talking about flue-cured?—A. We have no statistics separately about flue-cured, as compared with the other. In order to get any fair picture of that, I think you have got to take the whole thing, and it is common knowledge that the priming—assuming that there is an over-production, which we believe there is, it is not particularly in the Burley, it is in the flue-cured tobacco.

Q. With respect to your figures of 24,000,000 pounds, which you have mentioned, that is 24,000,000 pounds of surplus of all tobaccos?—A. No, it is Canadian flue-cured, Canadian tobacco.

Mr. YOUNG: 24,000,000 pounds in your factories?

The WITNESS: You mean what we have got is 24,000,000?

By Mr. Sommerville:

Q. No, you were giving us the surplus which you said existed, of 24,000,000 pounds?—A. That is flue-cured.

Mr. YOUNG: No, 24,000,000 pounds was in your own factory.

Mr. SOMMERVILLE: They have that. He says there is a surplus of 24,000,000 pounds in the world.

The WITNESS: 20,000,000 to 25,000,000, that is flue-cured.

By Mr. Sommerville:

Q. Flue-cured?—A. In 1932, there were 54,000,000 pounds produced, and there is 27,000,000 used.

Q. Of all tobacco?—A. No—yes, all Canadian tobacco; and in 1933 there was a production of 39,400,000 pounds and the use was 31,000,000.

By Mr. Senn:

Q. Mr. Miller, let me ask a question just to clarify this 24,000,000 pounds of surplus; is that a world surplus or a surplus in Canadian tobacco?—A. Canadian tobacco. That is all we are talking about. Canadian flue-cured tobacco.

Q. Then it is not a world surplus; it is purely a Canadian surplus?—A. No, sir, it is a world surplus of Canadian tobacco, if you want to separate it, and we think it could be.

By Mr. Young:

Q. Might I ask another question in regard to the surplus of flue-cured tobacco in Canada. You have had four or five million pounds?—A. Yes.

Q. And through the Ontario government, other people are holding something like 10,000,000 pounds?—A. Yes.

Q. And altogether there is between fifteen and twenty million pounds?—A. Yes.

Q. What is to prevent the holders of this surplus from exporting it to the British market?—A. Nothing that I know of, except that the British market do not need it, and don't want it, in our opinion.

Q. If we want to sell it, maybe they will buy it anyway?—A. Maybe so.

Q. Why not sell it?—A. I don't know.

Q. These people are anxious to get rid of it; why not sell it?—A. We would be delighted for them to sell it, and hope they will. I don't know why they don't sell it.

Q. Is the price satisfactory?—A. I think the price is too high. We have said that all along. That is, in our opinion, one of the troubles.

Q. Is the price in Britain too high?—A. Yes, the price they are asking for it in Britain is too high.

Q. What about the price that Britain is offering for it?—A. I don't know that, sir, but I assume they must be offering lower prices. I don't know the prices.

Q. Could you get rid of your own surplus, this four or five million pounds on hand that you have, in Britain, and get your money out of it to-day?—A. I don't know, sir.

Mr. FACTOR: Don't worry about that; they don't need to.

By Mr. Edwards:

Q. You would have to give up orderly marketing, would you not?—A. At the present price we would probably have trouble in getting rid of it.

By Mr. Sommerville:

Q. About the question of surplus, as a matter of fact I see you have the flue-cured Canadian Virginia in your warehouses, some of it of 1925, some of it 1926?—A. No, for the year 1930, is it not?

Q. I am reading now.—A. It is 1930, March of 1930.

Q. Where do we get the present?—A. You turn over four or five pages there, next to the last one, March 31, 1934.

Q. March 31, 1934?—A. That is right.

Q. Then you got some of 1927, a small quantity, some 1929?—A. A very small quantity.

Q. And you have 1,904,018 pounds in 1930?—A. Yes.

Q. You have 4,749,705 of 1931?—A. Yes.

Q. You have 8,024,039 of 1932?—A. Yes.

Q. And you have 9,430,316 of 1933?—A. Yes. Those are redried weights.

Q. Of course they are redried, I understand that.

By Mr. Factor:

Q. The tobacco that you bought this year, the 1933 crop, is not used for eighteen months in actual manufacturing?—A. Approximately that.

Q. So that you have to keep it for eighteen months until it is used for manufacturing?—A. Approximately.

Mr. Sommerville: I think it is more than that, on the showing of 1931.

By Mr. Sommerville:

Q. Of tobacco bought in 1931, you have 4,749,000 pounds still on hand that is being used, as of March 31, 1934. That is what you have?—A. Yes.

Q. And of 1932, you have 8,000,000 pounds which is the bulk of your purchases of 1932?—A. Probably; I don't know.

Q. After deducting what you bought for the Imperial?—A. Probably.

Q. I got away from the question I was asking you by reason of the request made for certain information. I was asking you a very definite and plain question: With all this increasing accumulation of profits, what single thing have you done, as a company, to help this country in this depression; and the only answer you have given me so far is that you advised the farmers that they were producing too much tobacco. Now, is there anything else that you have done?

Mr. Factor: Personally, I really cannot understand the question. They are not a philanthropic institution. What do you mean by "help the country"?

Mr. Sommerville: I want to know if there is any phase of this in which either producer, wage-earner or anybody else has benefited?

The Witness: I say this, we have certainly maintained employment, and we believe we have had satisfied employees during the whole period, sir. I think we have stabilized the industry in the Imperial. We have not let a situation develop like it has in the United States, where the retailers are pretty well run out of business, through cut-price situations all through there. We feel that we have done our share, as a tobacco industry.

By Mr. Factor:

Q. Mr. Miller, look at this picture: You have accumulated a lot of profits, and you have drawn large salaries for your chief executives, on the one hand; and on the other hand you have decreased the price of tobacco to the grower, and I am informed—subject to your verification,—that you have also decreased wages?—A. We have also decreased prices to the consumer.

The Chairman: Very little.

By Mr. Factor:

Q. Yes, very little. You can't blame some people for feeling rather restless about a situation of that kind, can you?—A. Is that a fair question, sir?

Q. I think it is fair, Mr. Miller, when you consider the picture from both angles. We are not objecting to your accumulating large profits if you paid a decent price for your product to the grower, and paid decent wages?—A. I might say this: we have been criticized for all sorts of things; we have been criticized for failing to open the market, we have been criticized for opening the market, we have been criticized for the prices we have paid, we have been criticized for the prices we did not pay; where we have tried to do the best we could. Now, we have advised them against over production, quite irrespective of what you gentlemen may think, our opinion is that that is the crying trouble, particularly where there has been no governmental agency to help us try to do that. This year the Ontario government, as you gentlemen probably know, has stepped into the situation and without that we would not have got a 25 per cent reduction in this year's crop. Now, any time that there can be any agreement insofar as opening the market is concerned—we are willing not to open the market, we are willing to follow the lead in anything, and let someone else open the market. We do not think that is a practical proposition, I am not putting it out that way.

The CHAIRMAN: Mr. Miller, now just be reasonable on that; the only reason why the others stay out of the market is because you are the big buyers and they cannot compete with you.

The WITNESS: I am not making that as a serious suggestion; because, as a practical proposition I suppose we have got to, but we are criticized for it.

The CHAIRMAN: No, no, excuse me; the only criticism was about the delay in the opening of the market.

The WITNESS: We have tried to explain that, Mr. Stevens.

The CHAIRMAN: But you have not explained it at all.

The WITNESS: I would like to say that if this Committee or any committee will set a price for the other manufacturers to pay for tobacco, we will fall in line with what they pay, and pay just as much as they pay. I do not know how anybody could expect us to go out to do any more than we have. We have tried our best to keep over production down; but you gentlemen do not seem to agree with that. Our brief explains what we have done, but in addition to that we have done everything else we could do through the department. Now, if they want to emphasize the setting of prices, any price if it is an agreed price among manufacturers—but we do not see why we should have to pay a fixed price or a price higher than the other manufacturers go in and buy tobacco, if they buy at a lower price, they can undersell and tear down the whole business.

The CHAIRMAN: I do not think there is any use in our arguing about this.

Mr. SOMMERVILLE: We do not want to have you feel that we are not going to deal with some of the other phases, there is the phase of your price maintenance and merchandising practices that Mr. Factor has raised, but I would like to call Mr. Buell, if you would not mind stepping to one side, and Mr. Lea.

Mr. ILSLEY: Mr. Miller complained the other day that we had not given him an opportunity to present his brief. I just want to say that I have read his brief, and I think perhaps all the members of the committee have as well.

The WITNESS: I am glad to hear that, sir.

Mr. SOMMERVILLE: I want to make it perfectly clear, Mr. Miller, that if there is any phase you desire to present, you may do so. The whole intention was that you should present it after certain questions had been asked that have been very pertinently raised by the evidence.

Mr. KENNEDY (*Winnipeg*): Is the brief not entered in the record?

Mr. SOMMERVILLE: No, it is filed.

Mr. KENNEDY (*Winnipeg*): I think it is only fair to file it as an exhibit.

Mr. SOMMERVILLE: It should be filed.

The WITNESS: All right, sir.

Mr. KENNEDY (*Winnipeg*): Reading it into the record is not accepting it as gospel truth, any more than any other.

The WITNESS: It is our position.

Mr. KENNEDY (*Winnipeg*): It is a carefully prepared statement, and I would suggest that it be read into the record.

The CHAIRMAN: I am not going to suggest that the committee sit here and listen to the reading of that brief.

Mr. SOMMERVILLE: I want to speak of this phase of it, however; certain statements are made in the brief with which my information does not agree, and upon which I want to examine.

Mr. YOUNG: Better read it in, and question as you go along.

Mr. SOMMERVILLE: And question it as you go along, so that you will understand what is the weakness of a statement that may be made.

Mr. ILSLEY: It seems to me that the important part of a brief is on page 29, where Mr. Miller gives the reasons as to why the Imperial Tobacco Company of Canada reduced the price if they did in 1931, 1932; that is the important part of the brief. Now, he has been cross-examined with a fair degree of thoroughness about his action in that respect; and if (speaking for myself) he wanted to elaborate the reasons he gives on that page now, I would be interested in hearing him do so. That is what is complained of, essentially.

The CHAIRMAN: I hope we are not going to go back over all these three or four days' discussion. We have gone on, and on; and Mr. Miller has given us his answer, he does not seem to have any further answer to make. I think it is about time we were proceeding to some other phase of the inquiry.

Mr. FACTOR: I think Mr. Miller has some statement he wanted to make.

Mr. KENNEDY (*Winnipeg*): Mr. Chairman, we have had put in all sorts of exhibits—advertisements and other things—without reading this whole brief; why not have it filed as an exhibit.

The CHAIRMAN: Certainly, there is no question about that.

Mr. KENNEDY (*Winnipeg*): I really thought it was filed.

Mr. FACTOR: As far as I am concerned I am quite willing to have this brief read right into the record. It is just the same as the brief presented by the other phases of the inquiry. It does not necessarily mean that because it is read into the record, that every word of it has to be taken.

The CHAIRMAN: Let us settle the question: what do you wish to do.

Mr. FACTOR: I move that the brief be read into the record.

The CHAIRMAN: You mean, included and printed in the record.

Mr. FACTOR: Printed in the record.

On being put the motion was carried.

The CHAIRMAN: It is so ordered.

BRIEF SUBMITTED BY MR. G. MILLER, PRESIDENT OF THE IMPERIAL TOBACCO COMPANY OF CANADA, LIMITED

Mr. Chairman and Gentlemen:

The Imperial Tobacco Company of Canada, Limited, in common with the other representative interests who have already so expressed themselves, wishes to commend the efforts of the Chairman and members of this Committee in their endeavours to bring about some definite improvement in the methods and results of the marketing of their products which will contribute to the ultimate advantage and satisfaction of everyone concerned.

I hope and trust that our submissions on behalf of the manufacturing phase of the tobacco industry, coupled with our very definite efforts during the past week to bring about a satisfactory working agreement between the growers and manufacturers, may at least afford some convincing evidence of our genuine desire to contribute to the success of the efforts of this Committee, and to the establishment of a truer understanding of the various phases of this particular industry.

In order tc proceed in some logical order of sequence and in the belief that this submission will effectively clear up at least the greater number of points which present any difficulty in understanding, I would ask the indulgence of the Committee in being permitted the privilege of proceeding without distracting interruptions.

I should like to present the first part myself, following which Mr. Lane will present the second part dealing with certain phases of the evidence submitted at the previous hearings, and then I will deal with the various points outlined by Mr. Factor, at the conclusion of which we shall be glad to answer any questions which may still require any further explanation or clarification.

Before getting into details may I state in the premises that I believe it is not a misstatement of fact to say that the financial stability of Canada is one of our most precious possessions.

That there is a vast amount of foreign capital invested in Canada.

That destruction of the confidence of foreign investors in Canadian enterprises will work incalculable harm to each and every citizen of Canada.

That there are more than sixteen thousand shareholders of the Company resident throughout the world, of which three thousand five hundred reside in Canada.

That the Company's stock is held by residents of the following countries:—

Country	Number of share-holders	Preference shares	Ordinary shares	Per cent of shares in each country
Argentina	1	....	120	·001
Australia	11	1,030	9,373	·094

I respectfully suggest that the success of Imperial Tobacco Company of Canada, Limited, during the past few years of stress has contributed to some modest degree to the confidence of residents and non-residents in the financial stability of Canada as a whole.

While we are willing and prepared to assist this Committee in every way possible, we however respectfully suggest that the Committee be kind enough to permit us to preserve a degree of privacy in relation to those confidential details of our business which may have no bearing on the principles at issue, and a disclosure of which could serve no purpose.

Production

In order that you may have before you statistics on production I submit herewith "Table 1," which is a record of production of tobacco in Canada for the crop years 1924 to 1933 inclusive:

TABLE 1.—COMMERCIAL TOBACCO PRODUCTION IN CANADA SHOWING ONTARIO SPECIFICALLY AND BY TYPES

Year (calendar)	Produced in Ontario		All other provinces (chiefly Quebec)		Total Canada
	Bright Flue-cured	All other (chiefly Burley	Total Ontario	All grades	
	000 lb.	000 lb.	000 lb.	000 lb.	000 lb.
1924	5,479	6,656	12,135	6,576	18,711
1925	6,268	14,355	20,623	8,643	29,266
1926	4,331	17,733	20,064	8,760	28,824
1927	6,230	29,392	35,622	8,295	43,917
1928	8,718	24,548	33,266	8,690	41,956
1929	10,500	10,919	21,419	8,467	29,886
1930	12,384	16,233	28,617	8,100	36,717
1931	24,500	20,270	44,770	6,530	51,300
1932	27,615	18,145	45,760	8,334	54,094
1933	22,484	10,512	32,996	6,404	39,400

1929—Report of Tobacco Division—Officer in Charge—1927-8-9.
1933—Dept. of Trade and Comm. Canadian Tobacco Production, 1933.

I particularly direct your attention to the production of flue-cured tobacco as set out in the foregoing "Table 1," showing nine million pounds in 1928, ten million in 1929, twelve million in 1930, twenty-four million in 1931 and twenty-seven million in 1932; and while the production figures for the year 1933 used in the above Table are those of the Department of Trade and Commerce, it is, however, the Imperial Tobacco Company's opinion that there were 25,682,800 pounds of flue-cured tobacco produced in 1933.

The above figures represent green weight tobacco, and for the purpose of comparing the same with exports or that used in manufacture they should be reduced by ten per cent to cover moisture shrinkage.

I next submit for your consideration a table of Foreign and Domestic Leaf used in manufacturing in Canada, and showing the percentage of Canadian leaf used to the whole. Usings referred to include cigarettes, cut and plug tobaccos, snuff and cigars.

TABLE 2.—CANADIAN AND FOREIGN LEAF USED IN MANUFACTURE IN CANADA WITH PER CENT OF CANADIAN USED

Year (Calendar)	Used in manufacture in Canada			
	Canadian	Foreign	Total	Per cent of Canadian
	000 lbs.	000 lbs.	000 lbs.	
1920	8,226	18,428	26,654	30·9
1921	9,962	18,055	28,017	35·6
1922	19,262	16,816	36,078	53·4
1923	15,260	15,235	30,495	50·0
1924*	16,779	14,976	31,755	52·8
1925	16,199	15,484	31,683	51·1
1926	19,315	17,309	36,624	52·7
1927	20,685	16,485	37,170	55·6
1928	22,067	17,510	39,577	55·8
1929	25,559	17,673	43,232	59·1
1930	20,337	17,302	37,639	54·0
1931	19,007	14,963	33,970	56·0
1932	21,038	12,740	33,778	62·0
1933	22,589	11,898	34,487	65·5

Sources—
Used in manufacture: Census of Industry, Tobacco Industry 1919-1932. Estimated by I.T. Co., 1933.
*NOTE.—Census of Industry 1924 states quantities of Canadian and foreign leaf used were not obtained for that year. Figures used here for 1924 are estimates based on the report of the Dept. of National Revenue 1923.

You will observe from "Table 2" the constant increase in usings of Canadian leaf tobacco up to the year 1929, and the constant decrease in the usings of foreign leaf tobacco, but I should, however, point out at this time that the figures disclosed in "Table 2" in no manner indicate an increase in demand for Canadian leaf in any way approaching the increase in production indicated in "Table 1."

I now submit as "Table 3" a summary of the exports of unmanufactured Canadian leaf tobacco showing the proportion of such exports shipped to the United Kingdom. Care should be had in dealing with the table of exports as they do not necessarily represent sales or deliveries for use:—

TABLE 3.—CANADIAN TOBACCO EXPORTED AND PER CENT EXPORTED TO THE UNITED KINGDOM

Fiscal year ending March 31	Exported	Per cent of total exports shipped to U.K.
	000 lbs.	
1921	200	80·0
1922	472	72·0
1923	1,100	80·0
1924	2,055	56·0
1925	3,531	63·0
1926	2,860	95·2
1927	6,331	99·6
1928	6,080	99·6
1929	6,584	94·9
1930	6,811	77·7
1931	6,051	79·7
1932	8,223	96·7
1933	14,748	99·1
1934	8,000	99·0

Exported—Trade of Canada, 1926, 1929, 1932 (fiscal years) and March, 1933.
—Census of Industry, Tobacco Industry, 1925-6 and 1928-9.
1934 —Estimated by I.T. Co.

The particulars of exports as disclosed above likewise do not indicate any increase in demand to correspond with the increase in production, as set out in "Table 1" and whereas by far the larger proportion of our exports of unmanufactured leaf tobacco is shipped to the United Kingdom, I submit as "Table 4" a statement of clearances for home consumption in the United Kingdom of Empire leaf tobacco.

TABLE 4.—CLEARANCES FOR HOME CONSUMPTION IN THE UNITED KINGDOM OF EMPIRE TOBACCO SHOWING PRINCIPAL SOURCES, ALSO PERCENTAGE OF CANADIAN TO TOTAL EMPIRE AND PERCENTAGE OF EMPIRE TO TOTAL CLEARANCES.

Year (Calendar)	Canada		N. & S. Rhodesia	Nyasaland	British India	All other Empire	Total Empire	
	lbs.	Per cent of total Empire	000 lbs.	000 lbs.	000 lbs.	000 lbs.	000 lbs.	Per cent of total clearance
1920	69	1·5	39	2,090	1,298	1,351	4,757	3·2
1921	83	1·3	22	2,806	2,536	956	6,403	4·3
1922	298	3·5	153	3,798	3,251	912	8,412	5·8

Sources—

1920–31.—*Frank Watson & Co. Report—Progress and Development of Empire Tobaccos, June 1932.

1932–33.—*Frank Watson & Co. Report.—Monthly Empire Tobacco Reports.

*Reports by Frank Watson & Co. are issued by kind permission of the Controller of H. M. Stationery Office and H.M. Customs and Excise.

It will be noted that the years 1932 and 1933 indicate an abnormal increase in the withdrawals for consumption of Canadian leaf tobacco and, while dealing with "Table 4", it should be noted that the Canadian leaf withdrawn for home consumption in the United Kingdom represents under normal conditions approximately 15 per cent of the Empire leaf tobacco withdrawn for home consumption.

From "Table 4" it would appear that at no time has Canadian leaf been used so extensively as that of Nyasaland or British India and that since 1928 the usings of Rhodesian tobacco have consistently exceeded the usings of Canadian leaf.

In order to summarize the foregoing tables in their relation of consumption to production, I propose to tabulate the domestic leaf used in Canadian manufacture in Canada and the withdrawals for home consumption in the United Kingdom of Canadian leaf tobacco, and whereas the greatest quantity of Canadian leaf was exported in the years 1931, 1932 and 1933 and whereas 97 per cent to 99 per cent was exported to Great Britain, I propose to disregard other exports in this calculation.

I therefore submit "Table 5", which is made up from the Tables previously submitted. In the first column I show the green weight of Canadian tobacco produced in Canada; in the second column the redried weight of the same; in the third the total Canadian and foreign leaf tobacco used in Canadian manufacture; in the fourth the total Canadian leaf tobacco used in Canadian manufacture, and in the fifth, the total Canadian leaf tobacco cleared for home consumption in the United Kingdom.

It should be observed at this point that there is an undetermined quantity of leaf tobacco sold for consumption in Canada which pays no Excise and of which there is no precise record. However, we estimate that such quantities of tobacco may amount to five million pounds redried weight per annum.

TABLE 5

Year	Green weight	Redried weight	Total Canadian and foreign leaf used in Canadian manufacture	Total Canadian leaf used in Canadian manufacture	Cleared for home consumption in the U.K.
	000 lbs.	000 lbs.	000 lbs.	000 lbs.	000 lbs.
1924	18,711	16,870	31,755	16,779	980
1925	29,266	26,339	31,683	16,199	1,553
1926	28,824	25,942	36,624	19,315	2,863
1927	43,917	39,525	37,170	20,685	3,373
1928	41,956	37,760	39,577	22,067	3,781
1929	29,886	26,897	43,232	25,559	4,274
1930	36,717	33,045	37,639	20,337	4,329
1931	51,300	46,170	33,970	19,007	4,857
1932	54,094	48,685	33,778	21,038	6,720
1933	39,400	35,460	34,487	22,589	8,974

Source —Tables 1, 2 and 4.

I particularly direct your attention to the 1931 and 1932 crops exceeding the total consumption in Canada of manufactured tobacco (both foreign and domestic) by 36 per cent and 44 per cent respectively, which clearly indicates that if no foreign leaf were permitted entry to Canada, domestic production would then exceed domestic manufacture by 36 per cent in 1931 and 44 per cent in 1932.

Adding to the sum of Canadian leaf used for manufacture in Canada and Canadian leaf withdrawn for home consumption in the United Kingdom, five million pounds to cover leaf sold in Canada free of excise, it will be noted that the production in the following four years is less than the consumption as above determined:—1924; 1926; 1929; 1933; whereas crops for the six years 1925, 1927, 1928, 1930, 1931 and 1932 are in excess of apparent consumption.

The crop for the year 1931 (forty-six million pounds redried weight) was some 60 per cent in excess of apparent domestic and foreign consumption, and the crop immediately following for the year 1932 (forty-eight million pounds redried weight) is 49 per cent in excess of apparent domestic and foreign consumption. These two crops produced thirty-three million pounds redried weight in excess of apparent consumption.

On reference to " Table 1 " it will be noted that flue-cured tobacco indicates the largest increases in production for the past five years, and that the average production of flue-cured tobacco for the five years 1924 to 1928 was six and one-quarter million pounds, while for the five years 1929 to 1933 the average was twenty-three and one-half million pounds.

In view of the foregoing I submit that the annual production of flue-cured tobacco in Canada has been conclusively proved, in the past few years, to be considerably in excess of domestic as well as foreign consumption; in brief, we are producing considerably more than is consumed.

PRICES

I next propose to deal with prices in relation to the crops produced, and for your information submit "Table 6" which indicates the price paid for flue-cured tobacco in Canada and the United States in the years 1927 to 1933 inclusive:—

TABLE 6.—DOMESTIC CROP PRICES—BRIGHT FLUE-CURED CANADA AND UNITED STATES

Year	Canada	U.S.A.
	cents per lb.	cents per lb.
1927	33·9	21·3−1·5=19·8
1928	31·0	17·3−1·5=15·8
1929	29·0	18·0−1·5=16·5
1930	32·0	11·9−1·5=10·4
1931	20·5	8·5−1·5= 7·0
1932	16·0	11·3−1·5= 9·8
1933	19·8	15·2−1·5=13·7

Sources—
Canada—Dept. of Trade and Commerce, Canadian Production, 1930 and 1932.
U.S.A.—Messrs. Thorpe & Ricks from Commissioner of Agriculture of various States.
1933—I. T. Company—price only.

By reason of the United States tobaccos being grades and tied it is necessary to reduce the above American prices by the cost of such operations in order that the prices may be comparable to those paid in Canada, and we suggest that a deduction from the United States prices of $1\frac{1}{2}$ cents per pound, while probably low, will be sufficient for the purposes of comparison.

A further deduction must be made from the prices paid to farmers in the United States of America to cover warehouse charges, all of which would approximate 70 cents per 100 pounds. It therefore follows that the comparable prices for 1933 in Canada and the United States of America would be—Canada 19·8 cents per pound, United States 13 cents per pound.

In view of the fact that Canadian flue-cured tobacco is being used in substitution for United States tobacco, the foregoing comparison of prices should be noted for the years 1927 to 1930, when production was less than domestic requirements, and which indicates the substitute being sold at a higher price than United States tobacco.

The prices of Canadian leaf for the years 1927 to 1930 ranged from 71 per cent to 208 per cent higher than United States tobacco. For the years 1931 to 1933 when Canada was producing more than domestic requirements, we again find that the price of the substitute considerably exceeded the price of the United States tobacco. In those years the price paid for Canadian leaf tobacco ranged from 44 per cent to 197 per cent greater than the prices paid for United States leaf tobacco.

The high prices paid for Canadian flue-cured tobacco in the year 1930 and prior thereto was due to the effect of a duty of 40 cents per pound on imported leaf tobacco at a time when domestic consumption exceeded production. The effect of this duty will be dealt with hereafter.

In 1931, 1932 and 1933 conditions were reversed and production so exceeded domestic consumption that, if left to the usual results that follow a supply in excess of demand, the price level would have been reduced to a figure comparable, or even considerably lower than world prices had there not been an intervention by the principal purchaser paying a price for domestic leaf some-

what in excess of comparable world prices. Consequently, by reason of this intervention the prices paid for the 1931, 1932 and 1933 crops were still higher than comparable world prices, and the production and marketing of flue-cured tobacco was saved from complete disorganization and collapse, which usually follows an attempt to market a commodity produced so greatly in excess of requirements such as the overproduced flue-cured tobacco in the years in question.

Whereas something in excess of 97 per cent of Canada's exports are shipped to Great Britain, I now submit "Table 7," being a summary of prices paid for Empire leaf tobacco imported into the United Kingdom in the years 1927 to 1932 inclusive. The figures for the year 1933 have not been received at this time.

TABLE 7.—PRICES (PENCE) OF EMPIRE LEAF IMPORTED INTO THE UNITED KINGDOM SHOWING ALSO TOTAL FOREIGN COUNTRIES TOTAL IMPORTATIONS

1927–31— " " " " 1931"—Vol. 11.
1932 — " " " " 1932"—Vol. 11.

In the above "Table 7" it will be noted (after excluding North Borneo), that in the period of six years referred to there are ninety quotations on Empire leaf tobacco stripped and unstripped imported into Great Britain, and of the total ninety quotations in only eleven instances has the price paid for Canadian leaf been equalled or exceeded by that of other Empire leaf (North Borneo is excepted as its leaf is cigar wrappers and binders and therefore is not comparable).

The use of Canadian flue-cured tobacco in Great Britain is, as in Canada, in substitution for other types of leaf, and while Canada enjoys, in common with all other Empire producers, a preference in duty over leaf from the United States of America, it is therefore in direct competition with other Empire grown leaf.

A reference to "Table 4" indicates that Canadian leaf tobacco in Great Britain is in serious competition with other Empire leaf, and a reference to "Table 7" clearly shows that Canada is not meeting other Empire leaf prices; and whereas it is extremely unlikely that Canada can obtain from Great Britain a preferential duty for its tobacco as against other Empire leaf, it therefore follows that Canadian leaf tobacco exported to Great Britain must meet other Empire leaf both as to quality and price if Canada intends to continue to export, and to increase exports of leaf tobacco to Great Britain.

Duty on Leaf

The rates of duty on foreign leaf tobacco imported into Canada were in effect as follows:—

Prior to April 10, 1908.. .. .. 10c. per pound
Increased April 10, 1908 to.. .. .. 28c. per pound
and increased May 1, 1918, and thereafter to.. 40c. per pound

I suggest that while the original duty on imported leaf tobacco may have been imposed for the purpose of providing a measure of protection to the cultivators of Canada, the subsequent increases of such duty have been measures entirely for revenue and not for protection; but quite regardless of whether the original imposition of the duty or the subsequent increases were for protection or for revenue, the result and effect of such duties on production is identically one and the same, so that any further discussion at this time as to the purpose of the duty is entirely superfluous by reason of the fact that we are dealing with its effect on production.

I submit that, as a general principle and one that is amply confirmed by the present case under consideration, where production is less than domestic requirements, a duty upon a comparable imported commodity then operates as a protection to domestic producers and may enhance the price of the domestic commodity to the producer, but such enhancement of price is contingent upon the relation of the duty to the value of the product.

When, however, production is in excess of domestic requirements and results in an exportable surplus, the duty on imports of a comparable commodity no longer operates as a protection to domestic production, and the price for domestic consumption of the domestic commodity is then reduced to the comparable value of the domestic commodity in the export market.

The foregoing principles are fully confirmed by the tables previously submitted, wherein it will be noted that the prices paid for the crop of 1930 and crops prior thereto, being productions of less than domestic requirements, were considerably higher than prices paid in subsequent years when production considerably exceeded domestic requirements. Furthermore, the duty on leaf tobacco imported into the United States (other than cigar wrappers) is 35 cents a pound, while the prices of leaf tobacco in the United States are considerably less than this figure, as clearly disclosed in "Table 6".

Again, it is our information that Cuba imposes a duty of $5 per pound on imported leaf tobacco, while the Cuban domestic crops sold at somewhere in the neighbourhood of 25 cents a pound.

I submit that any line of endeavour which produces an extraordinary profit, as such is inviting trouble and is subject to the danger of exploitation and over-production with resulting disappointment and possible losses to those who have attempted to exploit such a commodity.

As Canadian flue-cured tobacco is used in substitution for United States flue-cured tobacco, it should be noted that the present Canadian duty of 40 cents a pound on United States flue-cured in relation to the prices for the United States as set out in "Table 6" indicate that in the years 1927 to 1933, inclusive, the Canadian producers were afforded a duty protection ranging from 202 per cent to 572 per cent for the years in question.

We submit that this extraordinarily high rate of protection to the domestic producer is primarily responsible for his present difficulties in finding a market for his production, by reason of the fact that so high a duty has placed the cultivator in the vulnerable position of being subject to the competition of speculators, who are encouraged to enter into the production of flue-cured tobacco solely by reason of the extraordinary profits that may be earned at times when production is less than domestic requirements.

This abnormal rate of duty invites trouble, speculation with consequent over-production, and price-cutting, and we suggest that when the rates were increased such increases may have been with a view to increasing National Revenue, but the effect to the producers arising from such increase in duties was obviously not foreseen.

I am not proposing to argue either for or against the principle of a protective duty, although we are in favour of protection, but we submit that the rate of duty should be protective and that the present rate of duty considerably exceeds protection. We therefore suggest that the present distress of the cultivators would no have arisen had the duty on imported leaf tobacco remained at 10 cents a pound, which would represent a protection of 50 per cent on comparable imported flue-cured tobacco.

Producers

I submit that the present overproduction has been brought about by speculators who have exploited the production of flue-cured tobacco. In considering this point we have some information as to those who produce flue-cured tobacco, and I have therefore prepared a summary of the Imperial Tobacco Company's survey of the cultivation of the 1933 crop, dividing the cultivators into five categories as follows:—

1. Proprietor Cultivator, being the production of proprietors who cultivate their own farms.

2. Tenants of proprietors of one farm. This category takes in the production of tenants only.

3. Tenants of proprietors of two farms. This category also takes in the production of tenants only.

4. Tenants of proprietors of three or more farms, and like categories two and three, takes up production of tenants only.

5. Corporation Producers. It is customary for corporations to divide their properties into farm units which are cultivated subject to conditions somewhat similar to those applying in the case of tenants.

This summary, referred to as "Table 8" indicates the number of proprietors, the number of tenants, the estimated acreage and pounds of tobacco produced in each category, and is as follows:—

TABLE 8.—CULTIVATORS OF FLUE-CURED TOBACCO—1933 CROP

—	Number of owners	Number of tenants (farms)	Acres planted	Per cent of total acres planted	Estimated pounds of tobacco produced	Per cent of total tobacco produced
1. Proprietor cultivator.....	502	502	9,787½	32·08	8,395,400	32·69
2. Owners of 1 farm tenant cultivated............	353	353	9,901½	32·46	8,378,000	32·62
3. Owners of 2 farms tenant cultivated............	35	70	2,010	6·59	1,733,900	6·75
4. Owners of 3 or more farms tenant cultivated................	17	77	2,485	8·14	2,078,200	8·09
5. Corporation producers...	10	172	6,322	20·73	5,097,300	19·85
	917	1,174	30,506	100·00	25,682,800	100·00

—	Acres cultivated	Pounds produced	Produced average pounds per acre
Average proprietor cultivator..................................	19½	16,724	858
Average tenant cultivator..................................	28¾	24,380	848
Average corporation tenant cultivator..........................	37	29,635	801

Without attempting to determine the number or proportion of speculators it is worthy of note that less than 33 per cent of the crop was produced by proprietor cultivators.

The proceeds from the sale of tobacco that has been cultivated by tenants, including the tenants of corporations, is usually shared between the proprietor and the tenant on a 50-50 basis, so that the proprietor of such farms unquestionably has a speculative interest in the returns from tobacco.

While there may be a case where the tenant has rented from a proprietor for a fixed cash sum, the fact remains that no such case has come to our attention.

I submit that we are familiar with this phase of production by reason of the fact that we are interested in the production of tobacco, being the largest purchasers, and that it is our practice when purchasing crops to obtain the consent of both the proprietor and the tenant to the price at which the crop is purchased, and to make payment jointly to the proprietor and the tenant.

I further submit that the potential profits to be earned in the production of flue-cured tobacco has not only encouraged expansion in production, but is the direct cause of overproduction.

In spite of the alleged poor prices we hear from reliable sources that there are thirty new farms being equipped to grow flue-cured tobacco for the season 1934.

IMPERIAL TOBACCO COMPANY OF CANADA, LIMITED

Production and Prices

The Imperial Tobacco Company of Canada, Limited having been given much publicity as a result of inquiries under the Combines Act, a further inquiry by a Committee of the Ontario Legislature and the inquiries before the present sub-committee on Price Spreads and Mass Buying, we think it not inopportune to submit for your consideration a few facts in relation to this Company.

The Imperial Tobacco Company, recognizing the plight that the cultivators of flue-cured tobacco were bringing upon themselves did its utmost to correct and alleviate the conditions being brought about, and to relieve the producers in their distress.

For your information I submit "Table 9," which discloses the Imperial Company's purchases of flue-cured tobacco for the ten years 1924 to 1933 inclusive, green weight, and shows the percentage of such purchases to the total crop, indicating that while the Imperial Company have bought substantial quantities, they by no means monopolize or control the marketing of the crop.

TABLE 9.—IMPERIAL COMPANY'S PURCHASES OF CANADIAN GROWN FLUE-CURED TOBACCO, GREEN WEIGHT

Crop	Quantity purchased	Per cent of crop
	000 lbs.	
1924	2,760	50·4
1925	3,579	57·1
1926	2,880	66·5
1927	5,003	80·3
1928	7,049	80·9
1929	8,890	84·7
1930	8,879	71·7
1931	14,448	59·0
1932	15,470	56·0
1933	11,961	53·2

It is the Imperial Company's experience that any increase in usings of Canadian flue-cured tobacco must be graduated so as not to disturb consumption and thereby destroy demand, and for your information I submit as "Table 10" a statement of the Imperial Companies' annual usings of Canadian flue-cured tobacco, redried weight, for consumption in Canada for the ten year period 1924 to 1933 inclusive:—

TABLE 10.—INDEX FIGURES OF ANNUAL USINGS OF CANADIAN GROWN FLUE-CURED TOBACCO BY IMPERIAL TOBACCO COMPANIES BASED ON THE YEAR 1924

Year	
1924	100·00
1925	120·55
1926	154·10
1927	188·83
1928	192·46
1929	257·80
1930	309·43
1931	313·70
1932	351·44
1933	400·29

The foregoing "Table 10" indicates a gradual and consistent increase in usings of Canadian flue-cured tobacco by the Imperial Companies rather than a sporadic increase which might disturb consumption and destroy demand. It also serves to confirm the conclusion of overproduction so very apparent in the figures quoted from public records.

That the Imperial Tobacco Company have from time to time cautioned the cultivators against overproduction is an undeniable fact, and in proof thereof I submit for your consideration the following article which appeared in the Simcoe "Reformer" of 20th February, 1930:—

DANGER OF OVERPRODUCTION OF FLUE-CURED TOBACCO

F. R. GREGORY OF THE IMPERIAL TOBACCO COMPANY CAUTIONS AGAINST TOO GREAT INCREASE IN ACREAGE—MARKET WILL NOT ABSORB SURPLUS PRODUCTION WITHOUT DEPRECIATTION IN PRICE—NO BRITISH MARKET YET.

"There is an imminent danger of overproduction of flue-cured tobacco in the County of Norfolk this year," declared F. R. Gregory, manager

of the Ontario Leaf Department of the Imperial Tobacco Co., in an interview with " The Reformer " last Friday.

Mr. Gregory, who has been in close touch with the situation in Norfolk, bases his judgment on the Company's experience in purchasing the crop in 1929 and on the probability of a considerably increased acreage during 1930.

" The Imperial Tobacco Company has handled 80 per cent of the flue-cured crop of Ontario," pointed out Mr. Gregory. " Candidly we are afraid of an overproduction especially in Norfolk. In this county last year a total of 11,500 acres were under production. Due to a very poor growing season, especially in the southern part of the territory, the yield was only eight million pounds. If a good season had been experienced, it would have been nearer ten million pounds."

Too Great an Increase

According to reports reaching us, an increase of about 3,000 acres in 1930 appears probable. Normally this would mean a production of thirteen million pounds as compared with eight million pounds in 1929. Judging by our experience last year, an increase of 1,000 acres would be all that the market could absorb. Therefore in my opinion those farmers who contemplate going into the flue-cured tobacco business and have not already committed themselves in regard to buildings, tenants, etc., would do well to stand by for another year and await developments.

" The policy of the Imperial Tobacco Company " continued Mr. Gregory, " is to keep its customers informed as to the state of the market. We prefer a steady supply at reasonable prices, rather than an overproduction with consequent disaster to many of the tobacco growers. We trust that the growers in Norfolk County will accept this advice in the spirit in which it is given, and thus a repetition may be avoided of of overproduction of burley experienced in Essex in 1928."

No Market in Britain

Asked about the development of a market in Great Britain for flue-cured tobacco, Mr. Gregory stated that no outlet of any consequence had been found for Canadian grown flue-cured tobacco in any country outside of Canada.

Mr. Gregory also explained the purpose of the new half million dollar drying and handling plant at Delhi. This was being erected in order to take care of a part of the industry now carried on at Granby, Quebec. He stressed the fact that this development should not be taken to mean that any great increase in acreage in Norfolk was warranted. The plant was being located at Delhi simply as a matter of convenience.

It will be noted that the aforementioned article has reference to the crop of 1929 which was ten million five hundred thousand pounds, and cautions the Norfolk growers to reduce their acreage for the 1930 crop; and that notwithstanding this caution the crop in 1930 was some 12,384,000 pounds.

I further submit for your consideration the Imperial Company's circular letter to the cultivators dated 18th March, 1932, which read as follows:—

It has been customary in the past to advise the growers from whom we buy tobacco as to the state of the market and the probable demand, both as to quality and quantity, for the coming season.

The production of Flue Cured tobacco in the Norfolk County district has increased very rapidly of late and there was produced last season

in Ontario enough of this type to give the Canadian Manufacturers a two years' supply, and at the same time take care of the export requirements.

It now appears that there will be an overproduction the coming season unless the export demand is far greater than it has been heretofore. We cannot forecast just what this demand will be, but in the event that the 1932 crop is of good quality, then a moderately increased demand from overseas is not unlikely.

The 1931 crop is conceded to be the best that has been grown in Canada so far, and for this reason we purchased a supply beyond our requirements. It will therefore naturally follow that our purchases from the 1932 crop will most likely have to be curtailed.

In view of this outlook we think the growers would be well advised to decrease their acreage twenty-five to thirty per cent as compared with the 1931 acreage. If this plan is not followed, an overproduction will be created, which will lead to disastrous consequences such as have occurred in the Southern States and South Africa for several seasons past, and it is to the interest of all concerned that this be avoided.

We believe, in order to establish the Flue Cured tobacco on a sounder basis, that the growers should pay more attention to the quality of the crop grown rather than the quantity produced. This can be brought about by decreased acreage, carefully selected light, sandy soils suitable for this purpose, intensive cultivation, and improvements in the types of seed planted. The demand, both for export and domestic purposes, is for a bright, thin cigarette tobacco and this can best be obtained from the priming type, such as White Stem Orinoco, old Tip, Yellow Mammoth and Bonanza, which we advocate rather than the Warne and Gold Leaf varieties. In our opinion, cutting of the stalks should be discontinued as this tends to give too large a percentage of unsuitable low grade leaf, whereas the priming of the leaves gives a more uniform product, and a higher yield of the more desirable grades.

The above recommendations are made in the best interest of the Canadian Flue-Cured tobacco industry and we trust, after due consideration, that the growers will see fit to act upon this advice.

It will be noted that the foregoing letter refers to the 1931 crop of 24,500,000 pounds, which, in spite of the warning, resulted in the 1932 crop of 27,615,000 pounds.

That overproduction has at last been recognized by the cultivators is evidenced by their undertaking to reduce acreage. I quote in part from the Simcoe "Reformer" of April 5, 1934, as follows:—

TOBACCO MEN RATIFY SCHEME TO REDUCE ACREAGE

Growers and Companies Agree on Scheme to Cut Acreage—Producers Who Co-operate Will Get Preference When Buying Opens—Special Committee Will be Named to Administer Agreement's Provisions.

Will Bring Industry Under New Market Act

Improvement of quality and reduction of the total crop is urged in a statement released at Toronto last week following a conference between tobacco association officials, manufacturers' representatives and government authorities.

It is stated that efforts will be made to reduce the acreage of tobacco planted in the Norfolk area by 25 per cent, the general feeling being that

this reduction will not only tend toward better methods of production but will aid in stabilizing both domestic and export markets.

Behind the agreement are the growers' own associations, the Ontario Department of Agriculture and the powerful buying companies. The Department is issuing an appeal to independent growers to enter into the spirit of the plan and to concentrate on producing a superior product.

Will Give Preference

Also stated at the meeting was that preference will be given in the purchase of this year's crop to those farmers who co-operate in the acreage reduction scheme.

I also quote the Imperial Company's circular letter of 2nd April, 1934, sent to all cultivators in the Norfolk District in support of the foregoing proposed acreage reduction scheme. This letter, in addition to being distributed to all cultivators was published as an advertisement in the following papers on 5th April, 1934:—

London "Free Press," M. & E. D.

London "Advertiser," M. & E.D.

St. Thomas "Times-Journal," E.D.

Tillsonburg "News," W.

Simcoe "Reformer," W.

To the Flue-cured Tobacco Growers of the Norfolk District, Ontario:—

We learn from reliable sources that members of the Flue-cured Growers' Organizations have agreed in principle that it is vitally necessary that the production of the 1934 crop of flue-cured tobacco be very materially reduced. We also understand that this proposed reduction is being endorsed by the Minister of Agriculture of the province of Ontario.

We take this opportunity of expressing our great satisfaction that this move has originated amongst the growers themselves, and as large purchasers of this type of tobacco, we are not only heartily in accord with this proposal, but strongly recommend that the acreage to be planted in the Norfolk district the coming season be reduced fully twenty-five per cent (25 per cent) as compared with the acreage planted in 1933.

It has always been our policy to advocate the production of tobacco of good quality and colour, that could be readily absorbed, rather than the production of larger crops of inferior quality for which there is necessarily a limited market, and at a lower price level. We feel reasonably sure that a reduction of twenty-five per cent (25 per cent) in the acreage should give an output that is ample for domestic requirements, and at the same time take care of any export demand that may develop.

In making our purchases of the 1934 crop, preference will be given to such growers who have co-operated with the Minister of Agriculture and the Flue-cured Growers' Organizations in reducing their 1934 production.

I now submit "Table 11" being the prices paid by the Imperial Tobacco Company of Canada, Limited, for flue-cured tobacco in the crop years 1927 to 1933 inclusive, and I particularly direct your attention to the relation of the prices paid by the Imperial Company to the prices paid for the total average crop as set out in Table 6.

Table 11.—PRICES PAID BY I.T. COMPANY

Crop	Price paid per lb.	Price paid by all others
	cts.	
1927	34·7	30·6
1928	32·3	25·5
1929	31·1	17·4
1930	31·9	32·3
1931	21·9	18·5
1932	17·3	14·3
1933	19·8	Not available

Dealing with the prices paid in the years 1931, 1932 and 1933, the Imperial Company, recognizing that the production of these crops substantially exceeded both domestic and export requirements and that the price must be ranged down to a figure nearer to a comparable price for Empire leaf; and contemplating the possibility of there being a substantial quantity of such leaf tobacco dumped on the market with no buyers, resulting in leaf in large quantities being made available to competitors at distress prices which they, in turn, could offer to the consumer at so reduced a price as to entirely disorganize the marketing of manufactured tobacco; and contemplating the possibilities of a vast quantity of Canadian leaf being offered at distress prices so discouraging the cultivators as to result in subsequent production inadequate for domestic requirements, the Imperial Tobacco Company effected purchases at prices which were still higher than comparable Empire leaf, but which it was hoped would not result in important quantities of Canadian leaf tobacco being sold at distress prices and which it is felt returned to the producer a fair profit on his investment.

Production Control

I next submit for your consideration a proposed means of controlling production of tobacco in Canada:

1. The Federal Department of Agriculture in Ottawa should issue a licence to each grower fixing the number of acres and the weight of tobacco by types (Virginia, Burley, etc.) that he may cultivate during a specific crop year.

2. The Department of Agriculture to fix the maximum of the crop to be cultivated in each year under licence.

3. Applications for licences to be filled with the Department of Agriculture by the 1st January, and they will be issued by the Department on the 15th February in each year.

4. Where the cultivator produces a quantity in excess of, or cultivates acreage in excess of that specified within his licence, the said licence shall then be terminated, but the cultivator may apply for a licence in the following year and such application to take its place as that of a new application.

5. Licences for the total crop shall first of all be allocated to applicants who operated under licence during the preceding year, and any increase in the crop shall be allocated to such applicants in ratio to their applications for increased acreage or pounds. If the proposed crop for cultivation exceeds the applications made by licensees of the previous year, the Department will then proceed to allocate such excess to applicants, firstly, who have cultivated tobacco in Canada in other years, and when all such applications have been satisfied may then allocate the balance to such applicants as are on file.

6. The Excise Act to be amended so as to provide that all wholesale dealers, packers, leaf handlers and processors shall be licensed under the Excise Act.

7. The Excise Act to provide that a duty comparable to that in effect on manufactured tobacco, be levied on all leaf tobacco sold for consumption.

8. The Excise Act to provide that licensees under the Excise Act may purchase, handle and deal in Canadian leaf tobacco produced only under licences of the Department of Agriculture. Any breach of this regulation to result in forfeiture of this licence.

8a. All exports of leaf tobacco to be licensed under the " Natural Products Marketing Act," and only leaf tobacco grown under licence, as hereinbefore provided, to be granted licence for export.

9. Licensed cultivators to report to the Department of Agriculture particulars of their sales as to quantity, price and purchaser.

10. Licensees under the Excise Act to report to the Excise Department, who will in turn advise the Department of Agriculture, all purchases and sales of Canadian Leaf Tobacco, as to quantity, price and purchaser.

11. When the average price paid to the cultivator is not less than the comparable prices paid to cultivators in the United States of America, the Department of Agriculture will then, for the following year, increase the proposed acreage by ten per cent.

It is submitted that the foregoing will effectively restrain over-production of leaf tobacco in Canada, and whereas Canadian leaf tobacco is a substitute for United States leaf tobacco and whereas the Virginia and Burley tobaccos grown in the United States of America are the governing world factors in comparable types of tobacco, it is suggested that the price of Canadian leaf tobacco should, by the operation of the foregoing proposals be held comparable to the price of United States leaf so that the price of Canadian leaf will not be advanced to the point where it will be impossible to compete with other comparable leaf when exported from Canada.

Conclusions

And now to summarize I submit the foregoing has established that—

1. In the past few years the production of Canadian tobacco has exceeded by 36 per cent to 44 per cent the total Canadian consumption of domestic and foreign leaf tobacco manufactured in Canada into cigars, cigarettes, plug, snuff, smoking and chewing tobaccos.

2. In the past few years the production of Canadian tobacco has been from 49 per cent to 60 per cent in excess of apparent world consumption of Canadian Tobacco.

3. Production of flue-cured tobacco for the five years 1924 to 1928 averaging six and one-quarter million pounds, has been increased to an average of twenty-three and one-half million pounds in the five years 1929 to 1933.

4. The problem of overproduction is primarily due to the increased production of flue-cured tobacco.

5. An important potential market for Canadian leaf tobacco exports may be found in Great Britain.

6. Canadian leaf tobacco must meet competition of other Empire leaf tobacco in Great Britain on an equal footing.

7. Canadian leaf tobacco constitutes only a small percentage of the total of leaf tobacco withdrawn for consumption in Great Britain, and represents approximately fifteen per cent of Empire leaf tobacco so withdrawn.

8. The high price of Canadian leaf in relation to prices of other Empire leaf has been an effective deterrent in extending the use of Canadian tobacco in Great Britain.

9. The duty of forty cents a pound on leaf tobacco imported into Canada ranging from 202 per cent to 572 per cent protection on comparable prices of

United States flue-cured tobacco has been responsible for the high prices paid for Canadian leaf tobacco in years when production was less than consumption.

10. Any commodity returning an unusual profit thereby encourages exploitation and frequently results in over-production.

11. Production of flue-cured tobacco in Canada has been exploited to the point of over-production.

The remedy to all of the foregoing is to be found in the control of production as suggested in the preceding paragraphs.

I submit that a real problem does exist, and that the whole problem, both cause and consequence, is made abundantly clear in the foregoing.

Opening the Market

For the sake of brevity I shall not quote even part of all that has been said or attempted to be construed from the dates on which the Imperial Tobacco Company made its first purchases of respective crops of flue-cured tobacco. I do, however, flatly deny any attempt or desire to dominate the market, or that any action has been taken by the Imperial Tobacco Company to intentionally, or otherwise, demoralize the producers, but in order to remove any further grounds for such absurd and ridiculous inferences and charges as have been laid to the Imperial Tobacco Company of Canada, Limited, I am authorized to state that we shall be pleased to meet all buyers for the purpose of determining a date on which all buyers will effect their first purchases.

However, I should point out at this time that if absurd and ridiculous inferences have been adduced to the buyers when they have never met to determine any concerted action, that from the suggested buyers' meeting for the purpose of determining the date of purchase there may arise in the minds of the producers, or others actuated by malicious motives, a suggestion that at such meeting of buyers to determine the date of opening, the buyers at that time fix and determined the prices to be paid, and I take particular pains to direct to your attention the probable consequences that may arise from such a meeting and to point out that while we do not propose that this meeting be held, we will however agree to attend and participate in such a meeting for the purpose of determining the date of opening only, providing that this committee and others who find fault with the present practice, assume the responsibility of recommending to the buyers that they adopt such a practice.

While dealing with the subject "Opening the Market," I desire to say, for the benefit of the uninformed, that leaf tobacco is not a perishable commodity such as peaches, pears, strawberries, etc., that must be disposed of within a very short time following their being offered on the market. The fact of the matter is that the Imperial Tobacco Company contracts for the purchase of practically all of its Canadian flue-cured tobacco within 45 days and the tobacco so purchased remains in the hands of the producer in precisely the same form as that when purchased until called for delivery by the purchaser. The purchaser is only able to take delivery in accordance with his capacity to handle the same, with the result that, while we may complete practically all of our purchasing within a period of less than 45 days, the fact remains that we take delivery of that tobacco over a period of approximately four months.

Under-Cover Buying

Reference has been made before this Committee, as appearing on Pages 1144 to 1149 and Page 1216, to the Imperial Tobacco Company of Canada, Limited having purchased leaf tobacco for the British Leaf Tobacco Company, Limited and the Imperial Tobacco Company (of G. B. & I.) Limited.

A full and complete description of our operations in this connection is set out under cover of our letter of 4th January, 1933, addressed to the Registrar of the Combines Investigation Act, pursuant of his letter of 14th December, 1932, which was in relation to the recent enquiry conducted by the Honourable Mr. Sutherland, whose report is now before this Committee.

We submit that our purchases of raw leaf tobacco for export were unquestionably of a direct benefit to the producer inasmuch as, in so doing, we were instrumental in obtaining for the producer a market for his product. If, however, it is the opinion of this Committee, the opinion of the Government, or the opinion of the public at large, that the Imperial Tobacco Company of Canada, Limited should disassociate itself from any effort to encourage the use of Canadian leaf tobacco in various parts of the world other than Canada, I am instructed to say that we shall be pleased to limit our operations accordingly; but, in the absence of such advice, we feel that, by reason of our more extended experience in the exportation of Canadian leaf tobacco and in the uses of Canadian and other leaf tobaccos, we are probably capable of more effectively extending in some quarters other than in Canada the use of Canadian leaf tobacco than those who have less experience in the exportation of Canadian leaf tobacco and probably less experience in its manufacturing uses and who, possibly, are actuated in endeavouring to curtail our exports in the hope that such exports will be diverted to their hands for their profit.

Stalk-Cutting Versus Priming

Prior to the introduction of priming, the tobacco plant was permitted to stand in the field until, in the opinion of the producer, it was sufficiently ripened to be harvested, and whereas the bottom or sand leaves ripen first, the middle leaves next, and the top leaves last, and whereas the middle leaves, being the most valuable part of the plant, ripen after the ground leaves, the result was that the ground leaves became over-ripe and in many instances were a total loss to the producer. It therefore followed that the plant was permitted to stand as late as climatic conditions would permit, with the frequent result that there were severe losses by reason of frost.

In harvesting the crop the stalk was cut close to the ground and the entire plant hung in the kiln to cure, after which the leaves were stripped from the stalk. Curing under this method required a much greater intensity of heat by reason of the leaves being attached to the stalk and as such resulted in a higher fuel cost to the producer. Briefly, harvesting a crop under the fore-going conditions resulted in practically a total loss to the producer of the ground or sand leaves, a fair return for the middle leaves and a substantial production of top leaves, which were usually green and unmatured.

Imperial Tobacco Company of Canada, Limited recommended that all producers introduce the practice of priming of the crop—which was put into effect for the 1932 crop season—which consists of pulling the leaves, when ripe, off the stalk while it stands in the field. The ground leaves, being the first to ripen, are the first to be pulled; the middle leaves, when ripe, are next to be pulled; and the top leaves are permitted to remain on the plant for a much longer period of time than would have been the case in stalk-cutting, with the result that these leaves are ripe at the time of harvesting. A further point to be noted is that in the priming methods the plant is topped higher than was practicable in stalk-cutting, with the result that more leaves are grown to the plant, and the whole practice results in increasing the ultimate production per plant by approximately 15 per cent to 20 per cent.

Under the practice of priming, harvesting is begun two weeks earlier and, as such, reduces by at least 40 per cent the hazards of frost, etc.

While the initial outlay in priming may be somewhat more than that of stalk-cutting, the fact remains that the ultimate saving to the farmer by reason of a higher yield returns to the farmer considerably more for his crop than the additional outlay in priming. With the practice of priming the producer is enabled to put in considerably more plants per acre which again increases his yield per acre and in being able to harvest his crop gradually extends the capacity of his pack house and kilns. In many instances the producer can now cure an approximate maximum of 2,200 pounds of leaf in a kiln, whereas in the past, when the stalks were cut, his capacity would not exceed an approximate maximum of 1,400 pounds of leaf.

Priming of the crop has without any doubt materially increased the revenue per acre of the producer.

At the risk of criticism for what may be termed our shortcomings, I might add that since priming has been introduced, many farmers have asked why we did not advise and insist that they adopt the priming of crops some years past as they claim that they are now able to dispose of, as good leaf, thousands of pounds of tobacco which has formerly been thrown away because under the stalk-cutting practice of permitting these leaves to remain on the plant, only the top leaves had become approximately ripened and the ground leaves had become so over-ripe as in many instances to be a total loss.

Warehouse Sales vs. Barn Buying

Much has been said about the method of barn buying in Canada and we quote from page 1139 of the Minutes of Proceedings and Evidence of the Session of Tuesday, 24th April, 1934:—

> The rapid growth and development of the tobacco industry in Ontario has apparently far outstripped the obsolete and antiquated method of marketing tobacco still practiced under what is termed the " barn buying system."

and again quoting from the same page—

> In recent years the barn buying method of marketing tobacco has outlived its usefulness and has proved unsatisfactory to growers and the majority of purchasers. In the words of an official of one Canadian tobacco company, " No other system lends itself to so much malpractice."

The Imperial Tobacco Company of Canada, Limited have amongst their employees those who are fully experienced and competent in purchasing tobacco at warehouse sales such as are conducted in the Southern States of the United States of America, and for many and various reasons it would be to the advantage of the Imperial Tobacco Company of Canada, Limited to purchase its Ontario leaf tobacco at such a sale; but it should be clearly pointed out at this time that never has this Company advocated warehouse sales for flue-cured tobacco in Canada, nor do we advocate its application to-day, and conditions being what they are we take this opportunity of putting ourselves on record to state in the clearest and most unequivocable language that we do not recommend this practice in Ontario and in fact, advise all cultivators against the adoption of the same by reason of the fact that the adoption of this practice will necessitate the cultivators grading and tying their crops before they are offered for sale, and if the practices as followed in the United States are to be applied the producer will be obliged to pay warehouse charges consisting of 2½ per cent commission on the value of his sales, auction fees of 15 cents per basket and weighing charges of 25 cents per 100 pounds.

Furthermore, at the time the crop is ready for sale the climatic conditions in Canada will differ so vastly from climatic conditions prevailing in the Southern States where warehouse sales are in practice, that it is entirely impractical to conduct warehouse sales in Canada.

For example, the much colder climate would result in tobacco being brought to the market in a dry and brittle condition, and the handling of the same through the warehouse would require the conditioning of such leaf by expensive equipment, which would in turn add to the cost of sale and this second conditioning and handling of the leaf would also result in considerable waste.

This conclusion would appear to be confirmed by the fact that in many of the Northern States, such as Wisconsin, Ohio, Connecticut, Pennsylvania, New York and Massachusetts, tobacco is sold in the barns similarly to the present practice in Canada, and while of course the tobacco produced in these States is principally cigar types, I am informed that climatic conditions are probably the prime factor in determining this method of marketing the crop.

It is quite true that the principal buyers take delivery of Canadian tobacco during the cold months, but they have properly equipped plants to condition the tobacco in order that the same may be handled, and the point is that the adoption of warehousing sales in Canada would necessitate the introduction of an additional processing and conditioning of tobacco, which would not only add additional cost from such processing, but would introduce a second operation from which there would be a considerable loss in shrinkage through handling, as each re-handling operation results in loss through wastage.

A further point to be considered is the fact that under the barn buying practice the purchaser effects practically all his purchases within a month and a half, and takes delivery over a period of four to five months, depending upon his capacity for handling the crop, whereas under the warehouse sale practice the purchaser would only buy in quantities limited to his capacity for handling from day to day, and this would result in extending the present period of purchase, now one month and a half, to probably four months or more.

In conclusion, I again reaffirm that while the Imperial Tobacco Company of Canada, Limited will not oppose the decision of the majority of producers if they desire to adopt the warehouse sale practice, it should be clearly noted that we do not recommend any such practice and accept no responsibility if such a practice is adopted in Canada.

Virginia

While the word "Virginia" may be, on one sense, geographical, yet in its application to tobacco it is our opinion that the word "Virginia" has attained secondary significance, and describes a particular type rather than tobacco grown in the State of Virginia. We have always employed this word as such and maintain that ours is the correct interpretation of its use.

We are authentically informed that not more than 11 per cent of Virginia Tobacco produced in the United States in the crop season of 1933, was grown in the State of Virginia.

All Canadian Cigarette

Mr. Kingston, in his evidence before this Committee, as reported on page 1213, states in part as follows: "But this is my opinion that a cigarette of all Canadian flue-cured tobacco would be very popular in Canada and it would be a good thing to decrease the excise by $2 on that tobacco so they could bring it out at 15 cents."

It is our opinion that if cigarettes were offered to the consumer in Canada at 20 for 15 cents, the drawing power of the price alone would probably create a very substantial demand for such cigarettes. For your information we have submitted to the Finance Department a recommendation to that effect. We believe, however, that it would not be necessary to reduce the present rate of excise on cigarettes nearly as much as $2 per thousand as suggested by Mr. Kingston.

Reduction in Prices to Producer and Consumer

Mr. Scythes stated before this Committee that there has been no reduction in the price to the consumer in any way relating to the reduction in the prices

paid to the producer. His precise words, quoted from page 1150 of the Minutes of Proceedings of 24th April, 1934, are as follows:—

> The manufacturers of tobacco in Canada have profited to the full extent from the decline in prices and the improvement in quality, since no appreciable reduction has taken place in prices charged for manufactured tobacco.

If for nothing else, Mr. Scythes should at least be commended for his consistency, because this charge, like many others, is diametrically opposed to the facts.

For your information I submit a statement of the average sales price of cigarettes, cut tobacco, plug and cigars. I submit the same in two forms, first, including the Excise Stamp Duty and Sales Tax, and, second, excluding the Excise Stamp Duty and Sales Tax. This table covers the period 1929 to 1933, inclusive, and a notation is made alongside each year of the changes in Excise Stamp Duty or Sales Tax that has been put into effect in the year in question:—

Excise duty	Sales tax	Year	Sales value including duty and sales tax	Sales value excluding duty and sales tax
		Cigarettes		
			$	$
$6 00	3%—2%	1929	10·0271	3·8209
6 00	2%—1%	1930	9·9451	3·8197
6 00	1%—4%	1931	9·8922	3·6361
$6 00—$4 00	4%—6%	1932	9·5692	3·5034
4 00	6%	1933	7·9058	3·4664
		Tobacco		
			%	%
·20c.	3%—2%	1929	1·2838	1·0572
·20	2%—1%	1930	1·2785	1·0523
·20	1%—4%	1931	1·2444	1·0120
·20	4%—6%	1932	1·2188	·9737
·20	6%	1933	1·2106	·9433
		Plug Tobacco		
·20	3%—2%	1929	·9387	·7194
·20	2%—1%	1930	·9314	·7195
·20	1%—4%	1931	·9213	·6976
·20	4%—6%	1932	·8972	·6640
·20	6%	1933	·9030	·6531
		Cigars		
$3 50 up to $40 00	3%—2%	1929	50·1059	44·6150
	2%—1%	1930	54·2191	49·3196
	1%—4%	1931	45·4111	40·1090
	4%—6%	1932	44·4322	38·0859
	6%	1933	43·5565	37·1312

EXCISE DUTY ON CIGARS EFFECTIVE 1929–1933 INCLUSIVE

Excise duty $3.00 per 1,000
and additiona tax of 50c. per 1,000 up to $40.00 value
$3.00 per 1,000 from $40.00 to $110.00
7.00 per 1,000 from $110.00 to $150.00
10.00 per 1,000 from $150.00 to $200.00
$16.00 per 1,000 over $200.00

It will be noted in the aforementioned Tables that in each and every instance for both cigarettes and tobacco, whether Excise and Sales Tax are included or excluded, there has been an annual reduction in the price to the consumer of cigarettes and cut tobacco, and with the exception of one year when the price was increased one-hundredth of one cent; the price of plug tobacco to the consumer has decreased annually; and excepting in the year 1930 the price of cigars to the consumer has decreased annually.

Within the period 1929 to 1933 inclusive the net price paid to us for cigarettes has decreased 36 cents per thousand, and based on an assumed weight of 3 pounds per thousand, reduced 13 cents per pound. Cut tobacco has been reduced 11 cents per pound; plug tobacco has been reduced more than 6½ cents per pound; cigars have been reduced $7.48 per thousand and on the basis of 22 pounds per thousand have been reduced 34 cents per pound.

All of the foregoing calculations are computed without making any allowance whatsoever for imported leaf tobacco included in the commodities referred to, which, if taken into consideration, would further accentuate the decline in the price paid to the manufacturer in relation to the decline in the price paid to the Canadian tobacco producer.

Briefly, the manufacturers' reduction in prices to the consumer has considerably exceeded the reduction in prices paid to the producer of leaf tobacco in Canada.

Cost of Production

In the hearing to date specific evidence of capital invested in farms and equipment to produce flue-cured tobacco, and evidence as to the actual cost of production, has been conspicuous by its absence. It would therefore probably not be inopportune at this time to direct to the attention of the Committee some pertinent facts relating thereto.

In submiting the following we desire to go on record that we do not object to the profits earned by the producers. That which is now to be submitted is not presented with a view to protesting the profits earned but is adduced for the sole purpose of putting on record a number of actual facts pertinent to evidence previously submitted to this Committee.

We have in our possession certain statements indicating the cost of production on various farms, the first of which, while not disclosing the total number of acres included in the farm, nevertheless indicates that an investment in land, dwelling, buildings, kilns, machinery, greenhouse and other equipment amounted to $16,000. On this particular farm 35 acres of land were cultivated to flue-cured tobacco in the season of 1933.

The cost of operations, which included interest at the rate of 5 per cent on investment in land, buildings, kilns, machinery and all other capital expenditures, taxes on property, depreciation on buildings, machinery, etc., horses, feed, fertilizer, fuel, seed, insecticides, twine and paper, oil and lubricants, repairs, hail insurance, building insurance, crop insurance, labour, $2,050, cost of boarding labourer and curer's wages, etc., amounted to a total of $5,670, which is equivalent to a cost of $161.97 per acre or 13·86 cents per pound.

After providing for all the aforementioned expenses and 5 per cent interest on capital investment, there remained a further profit or return profit or return of $2,900, which means that the total net return on the invested capital of $16,000 is some 23 per cent and before providing interest on invested capital the net profit is 43 per cent of the gross sales value.

The foregoing is no hypothetical case but is the actual experience of the operations of a flue-cured tobacco farm cultivating 35 acres of flue-cured tobacco, producing 40,902 pounds which sold at less than 21 cents per pound.

The second case deals with that of a proprietor of 33 acres cultivated by a tenant producing 34,400 pounds tobacco, which was sold to Imperial Tobacco Company at $19\frac{1}{3}$ cents per pound, yielding $6,650 or $201 per acre.

The various out-of-pocket expenses charged against this production cover seed, fertilizer, hay and oats, fuel, insurance on tobacco, curer's salary, bran and insecticide, steaming greenhouses and kilns, trucking, paper, twine, oil and grease and taxes, amounting in all to a total of $1,600, which is the equivalent to $4\frac{2}{3}$ cents per pound of tobacco produced or equal to $48.50 per acre.

Deducting from the gross revenue of $6,650 the out-of-pocket expenses of $1,600, there remains the sum of $5,050, equal to $153 per acre to cover insurance and depreciation on buildings and equipment, provide wages to the cultivator and profit.

In this particular instance the living expenses of the tenant and his family amounted to $1,150, which would leave $3,900 or $118 per acre for insurance and depreciation on buildings and equipment and profit on 33 acres of land.

$3,900 on the crop of 34,400 pounds is something in excess of 11 cents per pound.

It will be noted that this crop was sold at $19\frac{1}{3}$ cents per pound, and if we deducted 11 cents we have a residue of $8\frac{1}{3}$ cents per pound, which represents the cost of production to which must be added an amount to cover insurance and depreciation on buildings and equipment, in order to determine the net cost of production.

The proprietor of the land, after paying for his proportion of the out-of-pocket expenses of cultivation, received $2,375, which must cover insurance and depreciation on buildings and equipment, and profit on 33 acres of land.

The cultivator was provided with a house and in addition received $2,675, and after deducting the living expenses of the tenant and his family amounting to $1,150, there remains a surplus to the tenant of $1,525.

If in the foregoing case we take the total out-of-pocket expenses of $1,600 and add thereto $1,150 to cover the living expenses of the tenant and family, and add a further sum of $700 to cover depreciation, it will be noted that the total cost of production then amounts to $3,450, which apportioned on 33 acres of land equals a cost of $105 per acre.

The third case is that of a proprietor of 37 acres cultivated by a tenant producing 36,500 pounds flue-cured tobacco, which was sold to Imperial Tobacco Company at 20·85 cents per pound, yielding $7,600 or $205.40 per acre.

The various out-of-pocket expenses charged against this production cover seed, fertilizer, hay and oats, fuel, insurance on tobacco, curer's salary, bran and insecticide, steaming greenhouses and kilns, trucking, paper, twine, oil and grease and taxes, amounting in all to a total of $1,980, which is the equivalent to $5\frac{1}{2}$ cents per pound of tobacco produced or equal to $53.50 per acre.

Deducting from the gross revenue of $7,600 the out-of-pocket expenses of $1,980 there remains the sum of $5,620 equal to $151.90 per acre to cover insurance and depreciation on buildings and equipment, provide wages to the cultivator and profit.

In this particular instance the living expenses of the tenant and his family amounted to $1,600, which would leave $4,020 or $108.70 per acre for insurance and depreciation on buildings and equipment and profit on 37 acres of land.

$4,020 on the crop of 36,500 pounds is something in excess of 11 cents per pound.

It will be noted that this crop was sold at 21 cents per pound, and if we deducted 11 cents we have have a residue of 10 cents per pound, which repre-

sents the cost of production to which must be added an amount to cover insurance and depreciation on buildings and equipment, in order to determine the net cost of production.

The proprietor of the land, after paying for his proportion of the out-of-pocket expenses of cultivation, received $2,445, which must cover insurance and depreciation on buildings and equipment, and profit on 37 acres of land.

The cultivator was provided with a house and in addition received $3,075, and after deducting the living expenses of the tenant and his family amounting to $1,600, there remains a surplus to the tenant of $1,475.

If in the foregoing case we take the total out-of-pocket expenses of $1,980 and add thereto $1,600 to cover the living expenses of the tenant and family, and add a further sum of $700 to cover depreciation, it will be noted that the total cost of production then amounts to $4,280 which, apportioned on 37 acres of land equals a cost of $116 per acre.

The foregoing are not hypothetical cases, but are literally the actual experience of specific farms producing flue-cured tobacco during the 1933 crop season.

We next have the opinion of an experienced producer who, during the crop season 1933, produced 120,000 pounds flue-cured tobacco.

It is his experience that the capital investment to operate a farm to grow 30 acres of tobacco would necessitate an outlay of $10,000. His total cost of production, which includes living expenses and wages for all growers and before providing any return on capital investment, amounts to $147 per acre.

In his case the 30 acres of land yielded him $7,718, and if we deduct his cost of operating 30 acres amounting to $4,410, there remains a net profit of $3,308 on an investment of $10,000, which is a net return of 33 per cent on investment and is the equivalent to a net profit of 43 per cent on the gross sales value.

No. 5—dealing with a purely hypothetical case, contemplates the purchase of 100 acres of land at a cost of $6,500, on which we propose cultivating 35 acres of land and on which it is estimated that $3,500 would apply to buildings.

We estimated an expenditure of $500 to repair the house and barn, the construction of 6 kilns at $500 each amounting to $3,000, construction of a greenhouse $750, construction of a pack house $1,500, stripping the barn $150, and the erection of a shed $100, making a total investment in buildings of $9,500, which we contemplate depreciating at the rate of 5 per cent per annum.

The equipment will consist of two horses at a cost of $300 which we propose to depreciate at the rate of 20 per cent per annum, various horse-drawn equipment, tools, hose, sprayers, etc., etc., $700, which we propose to depreciate at the rate of 15 per cent per annum, pumping equipment at a cost of $155, to be depreciated at the rate of 25 per cent per annum, and miscellaneous equipment and supplies at a cost of $345 which we propose to depreciate at the rate of 15 per cent per annum.

The total capital investment as mentioned in the foregoing amounts to $140,000, and the depreciation thereon as set out amounts to $705 per annum, all of which we propose to load on 35 acres of land.

If, in this case, the 35 acres of land produced 1,000 pounds to the acre, and we sold at a price of $22\frac{1}{2}$ cents per pound, the gross return would be $7,875.

Estimating the cost of production at $175 per acre, the total of such charges would amount to $6,125 which, if deducted from the sales value would leave a residue of $1,750 as a return on capital, being the equivalent to 22 per cent profit on the gross sales value and the equivalent to $12\frac{1}{2}$ per cent return on the capital investment.

If, for example, the crop were sold at 18 cents per pound, the same would have resulted in a net profit of $2\frac{3}{4}$ per cent on the gross sales value of $1\frac{1}{4}$ per cent on the capital investment.

The foregoing hypothetical case estimates a capital investment of $14,000 in a farm to grow 30 to 35 acres of flue-cured tobacco, which we submit is considerably higher than is actually the case; for example, one experienced producer referred to, estimated the cost of such a farm unit at $10,000, and Mr. Freeman stated before this committee on Tuesday, 24th April, page 1185 of the Minutes, that "If I bought a farm of 50 acres and equipped it for the growing of 30 to 35 acres of tobacco, my cost would be around $10,000 to $11,000."

It will be noted that the Department of Agriculture in their Bulletin No. 168 dealing with the Cost of Producing Farm Crops in Eastern Canada, on page 126, estimates the cost per acre of producing bright flue-cured tobacco at the Dominion Experimental Farm, Harrow, at $166.15 per acre.

We now have six figures on the cost of production per acre, five of which represent the actual experience of producers. The sixth is purely a hypothetical case in which the estimated cost considerably exceeds any of the individual cases referred to above. The average cost per acre of production determined from the foregoing is $145 per acre.

On Tuesday, 24th April, 1934, this committee heard evidence from Mr. E. C. Scythes, President of the Vittoria Tobacco Plantations Limited From information to hand it would appear that the Company was incorporated under Ontario Law 15th December, 1927, with an authorized capital of $250,000, and was formed for the purpose of taking over some 963 acres of tobacco land at Vittoria. All the directors, the president, the secretary and the treasurer reside in Toronto.

Of the authorized capital $160,000 was offered to the public, the funds derived therefrom to be used for the purpose of purchasing the property.

It would appear that in January, 1931, their various equipment was valued at $16,000, buildings and kilns $95,000 farm improvements $1,200, land $80,000.

The last return of this Company filed with the Provincial Secretary indicates that the company hold real estate in Norfolk county with an assessed value of $53,100.

Our information is that in the crop season of 1933 the Vittoria Tobacco Plantations Limited had under cultivation to flue-cured tobacco approximately 406 acres of land, from which was produced 299,000 pounds of tobacco. Of this production the Imperial Tobacco Company purchased one crop produced from 30 acres of land by Camiel Lecluyse, who was the shareman in this crop.

This particular crop yielded $8,514.24 and if we deducted from this figure the highest cost as yet adduced, being an estimate of $175 per acre, we then deduct $5,250, which leaves a net profit of $3,264, which if we take the highest adduced investment cost of $14,000 per 100 acre unit, returns a net profit of 23 per cent on investment, and similarly the net gain represents a net profit of 38 per cent on the gross sales value.

While for the purpose of the foregoing I have employed the highest available operating cost per acre and highest capital investment per farm unit, they are, however, sufficient, I am sure, to clearly indicate that the crop in question was not actually sold at what could fairly be termed a loss in profits to the investor, and it should likewise be noted that we purchased this crop at a price of 24 cents per pound and in relation thereto I think it might be interesting if you were to refer to page 1167 of the Minutes of the Proceedings of this Committtee held Tuesday, April 24, 1934, from which I quote as follows:

By Mr. Kennedy (Peace River):

Q. What would you regard as a fair price for the last three or four years?—A. What would I regard as a fair price that the grower should get for his product?

Q. Yes. Approximately.—A. I think a price, a range of prices between—well, we were not any too prosperous when the market prevailed at 40 cents a pound. If we had good crops, a good season, we were able to make a small return on capital at 40 cents a pound.

If, for example, the crop that we purchased from Mr. Scythes and referred to above, had been purchased by us at 40 cents a pound, and we still employed the highest estimated cost of production per acre, this crop would then have sold at $14,190.40 and would have yielded Mr. Scythes "small return on capital" of $8,940.40 or a net profit of 63 per cent per annum on capital invested.

The return filed with the Provincial Secretary by the Ontario Tobacco Plantations Limited indicate that the Company was incorporated on October 19, 1927, with head office at Simcoe, Ont.

The capital is divided into 10,000 preference shares of $100 each, of which 4,146 have been issued fully paid, and 200,000 common shares of no par value, of which 100,000 were issued at a valuation of about $1 each; 99,994 of the common shares were issued for assets.

The Company is reported to hold about 1,400 acres in the Norfolk County valued at $185,843.59.

This Company issued a very interesting prospectus from which I propose to quote a few features that are pertinent to the present case.

The prospectus quotes from an article entitled "Canadian Tobacco at Wembley and Olympia, 1925," which reads in part as follow:

> It can definitely be said that Canadian leaf tobacco, clean and sound, well graded and well packed, is greatly preferred in every tobacco manufacturing plant of importance in the British Isles to leaf from any other part of the Empire.
>
> I am more and more satisfied that Canada will reach the 50,000,000 mark (in exports) within the next eight years.

The Extraordinary Profits Made by the Grower

> Essex was the first county in Ontario to take up tobacco farming in an intensive manner, then Kent, and, later, Norfolk and Elgin. In all of these counties the prosperity of the farmers is reflected on every side. Those who have been cultivating tobacco for a number of years have become wealthy. The profit in the growth of tobacco is well exemplified in the current land values. Farms in Essex that were worth less than $100 an acre only ten years ago, are to-day being sold for as high as $800 and $1,000 an acre.
>
> It is worthy of note that, in the three groups of largest size farms, tobacco supplied over 70 per cent of the total farm revenue although the acreage in tobacco represented only 10 to 15 per cent of the total farm area. This is a good indication of the relative revenue producing power of tobacco and other farm crops and products in a year of good prices such as 1925 was.
>
> Taking the business of the whole 33 farms, there (bright leaf tobacco farms including the inefficient) were profit items (return on investment) of $102.30 on each acre of tobacco. This is sufficient to yield 5 per cent on investment on the movable capital (machinery and livestock) and 11 per cent on the total land investment which average $579 for each acre in these farms. On the efficient farms profits amounted to $232.64 per acre, equal to 5 per cent on movable capital and 22 per cent on land investment of $821 per acre.

Returns 25 Times Greater than Other Crops

> It is doubtful if Canada can produce for years to come all that is required for the making of cigarettes. Should that be possible, there

still remains the great British market open to the Canadian producer, under the 25 per cent preference.

Dealing with "Estimated Earnings" they state—

It is estimated that more than one-third of the Company's lands, or, say, 650 acres, will be in tobacco production for 1928. It is expected that a further 1,100 acres will be devoted to other crops, such as clover, wheat, barley, oats and other grains. The Company's policy will be to observe a rotation of varied crops as the best means of obtaining the largest financial return and at the same time conserving the soil. On the above basis, it is estimated that earnings for 1928 will be as follows (assuming normal weather conditions to prevail):—

Six hundred and fifty acres in tobacco, producing an average of 800 pounds per acre, and selling at 35 cents per pound; revenue would be..	$ 182,000	
Est. Net Revenue from remaining 1,100 acres, estimated to average $10 per acre..	11,000	
		$193,000
Total operating costs in producing tobacco.. ..	......	65,000
Est. Net Revenue (before Depreciation and Income Tax) equal to more than three and one-half times Preference Stock Dividend requirements..	......	$ 128,000

CANADA'S CHIEF ADVISER RETAINED AS MANAGER

The Company has been extremely fortunate in securing the services of Mr. H. A. Freeman, B.S.A., as Manager. Mr. Freeman is recognized as Canada's outstanding tobacco growing expert. For the last eleven years he has been actively identified with the Tobacco Division of the Dominion Department of Agriculture, his present position being that of Superintendent of the Government Experimental Farm at Harrow, Essex County, Ont. Mr. Freeman enjoys the complete confidence of the industry in Canada, the United States and Great Britain.

I particularly direct your attention to the above reference of estimated earnings, from which you will note that 650 acres of land producing 800 pounds per acre returns a gross output of 520,000 pounds. This 520,000 pounds divided into their total operating costs of $65,000 in producing tobacco, results in a cost of 12½ cents a pound, before depreciation, to produce flue-cured tobacco.

For your information the Imperial Tobacco Company of Canada, Limited have this year purchased from Ontario Tobacco Plantations Limited, 220,265 pounds tobacco at an average price of 20·04 cents per pound, for which the Imperial Company paid the Ontario Tobacco Plantations the sum of $44.148.94. According to their own figures, as quoted from their prospectus, the cost of production is 12½ cents per pound, which would mean that, before providing for depreciation, the total cost to the Ontario Tobacco Plantations of the tobacco they sold to the Imperial Company would amount to $27,533.12, and whereas the Imperial Company paid $44,148.94 for the tobacco in question, this transaction omitting depreciation, resulted in a profit to the Ontario Plantations of $16,615.82, which is equivalent to a profit of 37 per cent on the gross value of their sales, and calculating their capitalization on the aforementioned estimate of $14,000 per 100 acre unit, the above profit of $16,615.82 is the equivalent to a net profit of 16 per cent per annum on capital.

Mr. Freeman, in testifying before this Committee on Tuesday, 24th April, is reported on page 1185 of the Minutes of Proceedings to have said: "I would gauge that on the price if he receives more than an average of more than 849

pounds and more than an average of 20 cents a pound he could, in my own experience that is, make a little money." Again quoting from page 1185, Mr. Freeman said: "My experience has been very similar to the results obtained by the Government. I have used their figures with respect to the rental of land, interest on investment, rates of wages, hours of labour and cost of fertilizer and fuel and curing."

For your information, the Imperial Tobacco Company purchased from Mr. Freeman two crops of flue-cured tobacco totalling 69,848 pounds, for which the Imperial Company paid the sum of $14,409.82. It is our information that these crops were the produce of 73 acres of land and, using the Government figures as adopted by Mr. Freeman, being a cost of $166.15 per acre, then the total cost of these crops to Mr. Freeman would be $12,128.95, which produced a net profit of $2,280.87, which is equal to a net profit of 16 per cent on the gross sales value and, using his figure above quoted of the cost of farms and equipment, is equivalent to a net profit of more than 10 per cent per annum on the invested capital.

The Lake Erie Tobacco Company, Limited is an Ontario company incorporated 7th December, 1927, and the returns filed with the Secretary of State indicate that this company is capitalized with 250,000 shares of no par value, and in 1931 it is reported that the cash consideration for the shares was $250,000.

From information to hand it would appear that the Lake Erie Tobacco Company, Limited are the proprietors of approximately 2,250 acres of land, which together with all buildings, is valued at $312,000. The investment in horses, implements, sundries and equipment is estimated at $14,000.

Mr. Kingston in his evidence before this Committee on Wednesday, 25th April, 1934, stated (page 1203 of the Minutes of Proceedings): "Last year I had in about 1,350 acres in actual crop."

> Q. And what was your production last year per acre?
>
> A. Well, we got between 1,100,000 and 1,200,000 pounds. Our land is light, lighter than most of it. It is what they call the plain field sand and it grows a thin type of cigarette tobacco. Only runs about 800 pounds to the acre.

Again quoting from page 1208 of the Minutes of Proceedings, Mr. Kingston states, "To make this a reasonable business matter giving me a small return on what investment I have, we ought to get an average of 30 cents a pound."

For your information the Imperial Tobacco Company purchased from the 1933 crop of the Lake Erie Tobacco Company 1,053,335 pounds of tobacco, for which was paid the sum of $209,903.21. Accepting their estimate of acreage and total pounds produced, we estimate that 1,125 acres produced that part of the crop sold to the Imperial Tobacco Company. 1,125 acres at the highest estimated cost of $175 per acre would amount to a total cost of production of $196,875 which, if deducted from $209,903.21, would return a net profit of $13,028.21, which is equal to more than 6 per cent net profit on the gross sales value. This net profit of $13,028.21 is equivalent to 5 per cent per annum on the paid-up capital of the company, namely—$250,000; but if, for example, the cost of production of Mr. Kingston is nearer the average cost of $145 per acre, as determined above, then the tobaccos which he sold to the Imperial Company for $209,903.21 cost him $163,125 and yields a net profit of $46,778.21, which is equivalent to more than 22 per cent net profit on the gross sales value and more than 18 per cent per annum on the paid-up capital stock of the Company.

Mr. Kingston, notwithstanding his argument on unprofitable prices, has acquired and put in two new farms for the 1934 crop season, which hardly seems consistent with his claim of lack of profit in the cultivation of flue-cured tobacco.

The aforementioned illustrations of actual purchases made by the Imperial Tobacco Company from various corporations and individuals have not been selected in any way whatsoever from the material at our disposal but represent

the first of a number of cases that are dealt with for the purpose of shedding some light on the poverty or otherwise of the producers, and so as not to belabour the issue we feel that the foregoing cases may probably suffice; but if additional particulars are desired, then as the Imperial Tobacco Company have purchased substantial quantities of tobacco from—

Norfolk Tobacco Plantations Limited
Windham Plantations Limited
St. Williams Plantations Limited
Southern Canada Tobacco Plantations Limited
Hillcrest Tobacco Farms
Simcoe Tobacco Plantations Limited

and others, we shall be pleased to prepare similar particulars in relation to the foregoing or any other producer from whom we acquired tobacco.

At this time a summary of our total purchases in the Norfolk district from the 1933 crop, the price paid, and the estimated profit to the producer would no doubt be of interest to the Committee. For your information, the Imperial Tobacco Company purchased in the Norfolk district from the 1933 crop of Canadian flue-cured tobacco 10,392,176 pounds, which was produced from 10,859 acres and for which we paid the sum of $2,069,115.82 or 19·91 cents per pound. The average yield per acre of tobacco purchased by the Imperial Tobacco Company was 957 pounds. It will be noted that the yield of tobacco purchased by the Imperial Tobacco Company is in excess of the Imperial's estimate of the average of 842 pounds per acre for the entire crop and that the Imperial's estimate of a total acreage of 30,506 is slightly in excess of the Department of Agriculture's estimate of 30,042 acres. In these calculations we have taken the actual pounds of tobacco delivered from each respective farm unit and the number of acres allocated to each of the respective farm units from which we obtained delivery of tobacco, such acreage being part of our estimate of the total of 30,506 acres of flue-cured tobacco. The estimated capital invested in the production of tobacco purchased by the Imperial Tobacco Company is based on the hypothetical case heretofore submitted, being the acquisition of 100 acres of land, of which 35 acres will be cultivated for tobacco at a cost for land and equipment of $14,000 which, on the average, is equivalent to $400.00 per acre under cultivation. It therefore follows that the capital invested to produce the flue-cured tobacco bought by the Imperial Tobacco Company amounts to $4,343,600.00.

If, for the cost of production, we employ the highest available cost, which is an estimated figure as set out above, namely,—$175 per acre, then the total flue-cured tobacco 1933 crop purchased from the Norfolk producers nets such producers the sum of $168,790.82, which is equal to a net profit of more than 8 per cent on the gross value of the turnover or approximately a net profit of 4 per cent per annum on the capital investment.

If, for the cost of production, we employ the Department of Agriculture's cost per acre of $166.15, then the total flue-cured tobacco 1933 crop purchased from the producers net such producers the sum of $264,892.97, which is equal to a net profit of more than 12½ per cent on the gross value of turnover or a net profit of more than 6 per cent per annum on the capital investment.

If, for the cost of production, we employ the average cost of $145.00 per acre, as determined above, then the total flue-cured tobacco 1933 crop purchased from the producers nets such producers the sum of $494,560.82 which is equal to a net profit of 24 per cent on the gross value of turnover or more than 11 per cent per annum on the capital investment.

In determining a fair price for flue-cured tobacco, it is first of all necessary to establish the cost of production. In evidence previously submitted much stress has been laid upon the hazards of producing flue-cured tobacco, namely,—frost, drought, hail and all other uncontrollable risks, without so far there

having been offered any definite suggestion as to a basis of computation which would provide for such risks. It should be noted, however, that the records of production do not indicate that there has been a total crop failure as a result of any such hazard in the past number of years, although it is probable that there may have been a total loss to one or more individual producers. A further factor, in adding to the difficulties of determining a production cost and contemplating the aforementioned hazards, is that, not only has the production of flue-cured tobacco materially increased in the past number of years, but the introduction of the priming of the crop has itself reduced by at least 40 per cent the loss hazard from frost and has also increased the yield in quantity and value of the crop within the past two years. The benefits from priming are very fully dealt with elsewhere in our present submissions; but, in order to arrive at some figure of yield which would contemplate all of the hazards of crop failure, including frost, drought, hail and blow-outs, I submit that, if the average yield per acre over a period of years is taken as the basis of production, such a figure, by reason of the fact that it takes into consideration losses from frost, hail, drought and blow-outs, is a sufficient and satisfactory basis upon which to estimate a cost of production, provision for the hazards above enumerated having been made in the quantity taken to represent the yield per acre. I would therefore suggest that we base an estimate on the average output of a number of years and for that purpose suggest that the basic yield for computing the cost of production should be 850 pounds per acre. To this figure I have made no addition resulting from the benefits to be derived from priming tobacco, which practice has only been in effect for the past two years, and it therefore follows that, had priming been in effect for a longer period, the average yield per acre would probably be much higher than the figure of 850 pounds, which I propose to use. I am sure that it is hardly necessary to mention that the higher the yield per acre, the lower the cost of production per pound; but I am quite satisfied to employ this figure simply for the purpose of arriving at some basis of cost, and I suggest that this figure of 850 pounds more than provides for all of the hazards of cultivation referred to above.

By reason of the fluctuations in the yield from various acres, I suggest that it would be advisable to determine the cost of production on an acreage basis because, in that, we have a fixed and determined quantity and from that we can calculate the cost per pound based upon the average yield per acre. Some figures on the cost of production per acre are quoted in the foregoing and if those costs per acre are converted into the cost per pound, based on the yield of 850 pounds per acre, I submit that the result will be the actual cost of production per acre, which would include all disbursements, depreciation, wages and provision for loss arising from the hazards of frost, drought, hail and blow-outs; and by reason of the fact that the yield per acre now proposed to be used does not make any provision for the further benefits arising from the practice of priming the crop, the result then determined will be, in fact, somewhat in excess of the actual cost of production. I therefore submit a table of costs of production per acre converted to the cost per pound on the basis above determined, which is as follows:—

Cost per Acre	Corresponding Cost per Pound
105·00	12·353
116·00	13·647
145·00	17·059
147·00	17·294
161·97	19·055
166·15	19·547
175·00	20·588

At this time it might be opportune to note that Mr. Scythes in his evidence before this Committee on Tuesday, 24th April, 1934, as reported on page 1175 of the Minutes of Proceedings and Evidence, appears very loathe to dwell on the relative costs of producing flue-cured tobacco in Canada and the United States.

Mr. Freeman appearing before your Committee on the same date and dealing with this subject, as reported on page 1190, while not attempting to account for the difference in cost in any specific manner, blithely circumvents the issue in a number of generalities to the effect that the cost of living in Canada is higher and we also have a much more efficient method of production.

It occurs to us that the Committee should probably be informed as to the various causes and the specific items and amounts that go to make up this difference in price. For example, the relative prices in Canada and the United States for the year 1933 were more nearly comparable than at any time within the past six years. At that time the price paid to the cultivator in Canada, as indicated on "Table 6" herein, was 19·8 cents per pound, whereas the price paid to the producer in the United States was 15·2 cents per pound, from which it is necessary to deduct 1½ cents per pound to cover the costs of hand-tying and grading, and to deduct a further 70 cents per 100 pounds to cover warehouse charges which must be paid by the cultivator, leaving a net price of 13 cents per pound. No doubt the Committee will call on the cultivators in Canada to explain why the cultivator in the United States can operate at a profit at 13 cents per pound, whereas the producers of similar types of tobacco in Canada cannot make a profit at 19·8 cents per pound, which is more than 50 per cent increase in price.

Reduction in Excise—Reduction in Price to Consumer

Mr. Scythes in his evidence reported on pages 1160 and 1161 remarked that with a reduction of 33 per cent in the rate of excise on cigarettes, the price to the consumer was reduced by 25 per cent, implying that the full benefit of the reduction in excise was not passed on to the consumer and that the Tobacco Companies retained some part of this reduction in excise. This is contrary to the fact. The fact of the matter is that the tobacco manufacturing companies not only passed on the whole of this reduction, but in the majority of cases further reduced their net price with the result that, while the excise on cigarettes was reduced by $2 per thousand, the price to the consumer was actually reduced $2.50 per thousand. The popular brands of cigarettes which previously sold at twenty for 25 cents were thereafter sold twenty for 20 cents.

Duty Free Leaf

Throughout the world, tobacco has been the subject of taxation for the purpose of providing National Revenue, and it has been proved by experience that when the tax burden exceeds the saturation point, the result is a decline in consumption and in National Revenue. It has also been found that the best results can be obtained from a rate of duty that is comparable to all forms of tobacco.

This last principle has not been adopted in Canada, as is evidenced from the difference in the rates of duty applicable to cigarettes, cut and plug tobaccos and cigars.

It is not my intention at this time to dwell at any length on the effect of taxation in Canada on consumption or revenue, but for the benefit of any of those who are interested in this subject I would refer them to the Record of Public Sitting of the Advisory Board on Tariff and Taxation, June and October, 1927, Reference 69—Cigarettes, adding that the argument submitted therewith still holds good.

I, however, direct your attention to the fact that in Canada tobacco in its manufactured form, when offered for consumption is subject to an Excise Duty, whereas tobacco unmanufactured offered for consumption is free of Excise duty. I am credibly informed that, of all countries in the civilized world so taxing tobacco for revenue purposes (possibly excluding China), Canada is the single exception where such a condition exists.

This discrimination operates to the detriment of the cultivator by reason of the fact that manufacturers, recognizing the necessity of maintaining his investment in established trade marks and brands, offers to the consumer the best of tobaccos obtainable in the range in which the brand applies, and in consequence creates a demand for increasing quantities of the better types of tobacco grown in Canada, but of recent years duty free leaf is finding a wider demand and is now being sold by store-keepers from coast to coast, side by side and in direct competition with duty paid manufactured tobacco.

In the majority of cases this duty free leaf is inferior to that put up by the manufacturers, and sells to the consumer at such a reduced price as to substantially cut into the manufacturer's trade.

We estimate that the duty free leaf sold for consumption is now equivalent to approximately 15 per cent of the total manufactured tobacco consumed in Canada in the form of cigarettes, plug, cut, snuff and cigars. It obviously follows that the manufacturer must take some steps to protect his investment and is thereby compelled to market the cheapest commodity within his power to meet the competition of such duty free leaf.

This situation is nothing more or less than price cutting in its most vicious form, because in forcing the manufacturer to merchandise a much cheaper commodity he must reduce his costs all along the line, and likewise reduce in his purchases of leaf tobacco from the cultivators.

Another alternative that the manufacturer is forced to adopt is the cultivation of the taste of the consumer to a type of tobacco that is not comparable to that offered for consumption in leaf form. This in turn results in diminishing the manufacturer's demand for that type of leaf tobacco which he cannot meet in price.

The net result of this vicious discrimination is losses to the vast majority of the cultivators of tobacco in Canada, and it is therefore submitted that this situation should be recognized and remedied by means of the application of an Excise duty on leaf tobacco sold for consumption equal to the duty for the time being exigible on manufactured tobacco.

Your attention is directed to the provisions regulating the sales of leaf tobacco in U.S.A., and we unhesitatingly recommend their practice for adoption in Canada, which is to the effect that leaf tobacco sold by the cultivator is not subject to Excise duties, but when sold for consumption by other than the cultivator is subject to a duty equal to that on manufactured cut and plug tobacco.

Relation of Producers to Manufacturers' Capital

Mr. Scythes, as reported on page 1159 of the Minutes of Proceedings and Evidence, quotes from a prepared statement, in part, as follows:—

> The amount of money invested by the growers of flue-cured tobacco alone in Western Ontario in land, buildings and equipment is around $20,000,000, whereas the total amount of money invested by the tobacco manufacturing concerns in Canada in land, buildings and equipment in 1932 was around $11,252,422.

and on page 1160:—

> Q. Your figures show that only $11,252,422 is invested by tobacco manufacturers in Canada. Where do you get those figures?—A. I believe

> our secretary took these figures from the final statistics of the Department of Trade and Commerce. That refers to fixed assets only.

and on page 1171, in replying to the question:—

> Q. And the comparison of investments between the investment of the growers and tobacco manufacturers; is that a fair comparison, \$20,000,000, against \$10,000,000?—A. I would not say that that was. I think the secretary in inserting that paragraph wanted to show the amount of fixed investment.

On referring to the report on the Tobacco Industries in Canada, 1932, issued by the Department of Trade and Commerce, Dominion Bureau of Statistics, Census of Industry, I find that they record the capital invested in the Tobacco industries for the year 1932 as \$42,351,650.

As previously submitted, we estimate there were 30.506 acres of land under cultivation of flue-cured tobacco, which, valued at a total of twenty million dollars as suggested by Mr. Scythes, would be equivalent to \$656 per acre, on the assumption that the total investment cost is loaded on to the acres under cultivation.

In the hypothetical case dealt with herein it is estimated that the total investment cost of 100 acres would be, at the maximum, \$14,000, which, loaded on to 35 acres under cultivation, is equivalent to \$400 per acre. On this basis the 30,506 acres of land would represent an investment of \$12,202,400, and whereas Mr. Scythes has been somewhat extravagant in his other claims and charges, it is conceivably possible that the valuation he has used is an estimated figure and somewhat in excess of the actual investment.

Capital Structure of Imperial Tobacco Company of Canada, Limited

Mr. Scythes in his evidence before this committee on Tuesday, 24th April, 1934, and reported on pages 1178, 1179 and 1180, proceeds to dwell on the capital structure of Imperial Tobacco Company of Canada, Limited, and I must confess to entertaining some difficulty in reconciling the statements that he has made with the actual facts. It therefore occurs to me that a brief summary of a simple and straightforward proposition might shed some light on Mr. Scythes' rather involved dissertations.

Firstly, the American Tobacco Company of Canada, Limited, was incorporated on 7th September, 1895, with an authorized capital of one million dollars, all of which was subscribed and fully paid for in cash.

The first Imperial Tobacco Company of Canada, Limited, was incorporated on the 11th June, 1908, with an authorized capital of eleven million dollars, which was divided into $1,027,397\frac{26}{100}$ preference shares of £1 (\$4.86$\frac{2}{3}$) each and 60,000 ordinary shares of the par value of \$100 each.

In July, 1908, the Imperial Company took over the businesses of the American Tobacco Company of Canada, Limited, and the Empire Tobacco Company, Limited, which latter company was incorporated in 1898, and certain shares of The B. Houde Company, Limited. In consideration of the assets and businesses taken over from the American and Empire Companies and the shares of The B. Houde Company, the Imperial Company paid 711,504 preference shares of £1 each at a value of \$3,462,651.05, and 54,005 ordinary shares par value \$100 each, amounting to \$5,400,500; in other words, for the total capital issued of \$8,863,151.05 the Imperial Company received tangible assets to the value of \$3,251,970.67, shares of The B. Houde Company, Limited, National Snuff Company, Limited, and the Joliette Tobacco Company, Limited, all valued at \$396,379.42, and goodwill, trade marks, etc., \$5,214,800.96.

In October, 1908, there were subscribed for and fully paid in cash 110,414 preference shares amounting to \$537,348.13.

The present company, Imperial Tobacco Company of Canada, Limited, incorporated 1912, now has an authorized capital of $63,733,309, which is divided into 1,999,995 cumulative 6 per cent preference shares of £1 each (4.86\frac{2}{3}$), having a total par value of $9,733,309, together with 10,800,000 ordinary shares of a par value of $5 each, with a total par value of $54,000,000.

At the present date the paid up capital of the company consists of $8,030,000 preference shares and $47,255,160 ordinary shares, making a total of $55,285,160.

Shortly following its incorporations the present 1912 company took over the business and operations of its predecessor, the 1908 company, paying to the shareholders thereon 821,918 preference shares to the value of $4,000,000.93, together with 5,400,500 ordinary shares at a value of $27,002,500. The Imperial Company received in consideration of the aforementioned shares tangible assets to the value of $3,825,821.84, shares of The B. Houde Company Limited, the National Snuff Company Limited and the Joliette Tobacco Company Limited, to the value of $359,878.13, and trade marks, patents and goodwill to the value of $26,816,800.96.

In September, 1912, there was subscribed and paid for in cash 410,959 preference shares amounting to $2,000,000.47.

In September, 1913, there was a further subscription, paid for in cash of 417,123 preference shares amounting to $2,029,998.60.

In July, 1921, there was issued 400,000 ordinary shares par value $5 each, amounting to $2,000,000, to the British-American Tobacco Company, Limited, for and in consideration of trade marks and goodwill pertaining to their business in Canada.

In July, 1921, there was issued to Sir Mortimer Davis, Inc., 65,580 ordinary shares of a par value of $5 each, amounting to $327,900, for and in consideration of their holdings in the capital stock of Scales & Roberts Limited, and The H. Fortier Company Limited.

In September, 1921, there was issued 420,000 ordinary shares of a par value of $5 each to the value of $2,100,000, which were paid for in full by cash.

Over a period of time ending 30th September, 1927, the company issued as fully paid 1,299,080 ordinary shares of a par value of $6,495,400, in full settlement and consideration of the company's bonded obligation of $6,495,400; in other words, ordinary stock of the company was issued for bonds on a flat exchange at par value.

In October, 1928, the directors determined that a portion of the undivided profits that had been accumulated during the previous sixteen years should be capitalized, and for that purpose issued as fully paid, out of surplus, 1,517,032 ordinary shares having a par value of $7,585,160.

In a period terminating November, 1930, there were issued as fully paid 348,840 ordinary shares of a par value of $1,744,200 in full settlement and consideration of 11,628 ordinary shares of a par value of $100 each of The Tuckett Tobacco Company Limited.

To summarize, the present outstanding capital of the company consists of $8,030,000 in preference capital, $47,255,160 in ordinary capital, which was issued in consideration of $24,036,380.91 in tangible assets, $2,431,978.13 shares in various companies and $28,816,800.96 for trade marks, goodwill, etc.

Control of Retail Trade

Quoting from Pages 1200 and 1201 of the Minutes of the Proceedings and Evidence submitted to this Committee on Tuesday 24th April, 1934, wherein Mr. Sommerville is recorded as questioning Mr. McKay as follows:—

> Q. Yes, will you continue?—A. Just one more sentence under that heading: in the case of tobacco there are practically no middlemen to divide the spread. That is the point I am making under that heading, that there are no middlemen to divide the spread.

In the matter of tobacco the product is sold to the ultimate consumer through retail channels by the same parties—the same persons or companies—who buy the raw leaf.

Q. And the retail channels are owned and operated by the same channels?—A. To a considerable extent.

In response to the foregoing the Committee will no doubt be interested to learn that the only distributing channels which are owned or controlled by the Imperial Tobacco Company of Canada, Limited, its subsidiaries and associates, consist of the United Cigar Stores Limited, which sells directly to the consumer and whose total sales of tobacco products represent approximately $4\frac{1}{3}$ per cent of the total tobacco business transacted in Canada, and in addition certain Jobbing Companies, Scales & Roberts Limited, The H. Fortier Company Limited, James Kirk Limited and John Erzinger Limited, whose total volume of business which is sold to the retail trade represents less than $4\frac{1}{2}$ per cent of the total tobacco business in Canada.

Mr. McKay's "considerable extent" of ownership of the retail channels is actually $4\frac{1}{3}$ per cent of the total; the difference or whatever he chooses to call it, and being that "apparent minority" and over which we have no control, represents $95\frac{2}{3}$ per cent of the trade.

Mr. Factor and Colleagues

Dealing with questions raised by Mr. Factor and his colleagues as reported on Page 1316 of the Minutes of Proceedings of the 26th April, 1934.

First. As regards price spread on a 25 cent package of cigarettes, previously mentioned before this Committee, the price is divided as follows:—

Retailer..	$3\frac{3}{10}$c.
Jobber or wholesaler..	$2\frac{2}{10}$c.
Canadian Government in Excise and Sales Taxes..	$11\frac{1}{10}$c.
Manufacturer..	$8\frac{4}{10}$c.
	25c.

Professor Leitch stated that the growers would be happy if they received $1\frac{3}{4}$ cents per package, which, on the basis of his figuring, would be $23\frac{1}{3}$ cents per pound green weight to the farmer, which is equivalent to an increase of approximately 23 per cent in price to the grower.

In our opinion this is slightly higher than is advisable for the wellbeing of the tobacco growing industry, because of their having an exportable surplus and it being necessary for them to meet world (Empire) prices, as previously dealt with.

Again, such a high price for the leaf would, we fear, encourage more farmers to go into the raising of tobacco and would make it more difficult to restrict the amount to be raised in accordance with the requirements of the domestic and foreign markets.

Second. Statements dealing with points suggested by the second question have been filed, and we trust such statements will be treated confidentially.

Third. The ownership or control of the various Companies will be disclosed in the financial statements already submitted.

Fourth. Dealing with the method of jobbing and retailing. Our preference is to have the distribution of our products handled by jobbers, as indicated by the fact that 75 per cent of our business goes through this channel while 25 per cent is done direct with the Retail trade. The distribution system through which our products eventually reach the consumer is composed of the recognized jobbing and retail outlets. This system has been built up over a period of many years and experience has proven it to be not only the best method of effecting and maintaining distribution, but the most economical. We are firmly of the opinion that the jobber, or middleman, serves a very useful and necessary need.

Distribution costs on cigarettes and tobaccos through this method have been reduced to a minimum and this distribution machinery has been perfected in most areas to the point where it is to-day about as practical as could be expected.

There are approximately 57,000 retail stores in Canada handling tobacco products. Approximately 5,000 buy direct from us—the jobbing trade serves the balance.

The question of whether a retailer shall enjoy the privilege of buying direct from a manufacturer is answered usually by one or more of the following reasons:—

1. Merchandising ability.
2. Size of community to be served.
3. Class of establishment maintained.
4. Advertising possibilities.
5. Financial responsibility.

There are certain sections in Eastern Canada where the jobbing trade has never been properly organized to look after the distribution of our products, and, in such sections, we have for years effected the necessary distribution by selling direct to a considerable number of retail stores. For many years our policy has been to discourage this type of distribution in these particular areas and at the same time encourage the jobbing trade to take over this business. Some progress has been made especially in Quebec, and it is hoped this progress will continue.

We have depots located in Vancouver, Calgary, Winnipeg, Montreal, Saint John, and Halifax, from which our customers are served, and strictly sales offices in other large centres. Our outside sales staff consists of 139 men. The greater majority of these men spend 90 per cent of their time contacting with the retail trade and from the indirect retailers solicit orders for our products to be shipped to them through the jobbers. This is a service that not only is of vital interest to our brands but is greatly appreciated by the retail and jobbing trade.

Method of Advertising

The basis of our advertising efforts is through the medium of window dressing and this activity is supported in other forms of advertising, such as outdoor and indoor signs, newspapers, magazines, trade journals, radio programs, and poker hand premium cards. During the year 1933 we dressed approximately 75,000 windows. Our outside advertising staff consists of 113 men, mostly composed of window dressers. The principle upon which we obtain these windows is that of offering the dealer, free of charge, efficient service and up-to-date merchandising displays. The average retailer appreciates the value of this service and is anxious to obtain it at all times.

Fifth.—In reference to price maintenance agreements amongst retailers, jobbers and wholesalers. We recognize the existence of Jobbers' Associations and co-operate with these bodies and their members in maintaining jobbers' selling prices on our lines.

Attached are copies of the various associations' agreement forms.

The sole purpose of a Jobbers' Association is that a group of jobbers who sign an agreement amongst themselves to maintain manufacturers' selling prices, bind themselves to the decisions of a Committee elected from amongst themselves. If the Committee recommends that one of its members be sold by the manufacturers at jobbers' selling prices for a period of time (usually 30 to 90 days), the secretary of the association passes this ruling on to the manufacturers, they having previously agreed separately to support the association.

Usually the recommendation goes to the manufacturer in this form:—

> We recommend that .... jobbing house, be sold by the manufacturers at jobbers' selling prices for a period of 30 days.

The manufacturer then immediately notifies the jobber that on the recommendation of the jobbers' committee, goods will be invoiced to him during this period at jobbers' selling prices.

The effect of uncontrolled prices recently existing in the United States of America are pertinent to the present case, particularly so with regard to tobacco. Legal restrictions in recent years prohibiting manufacturers from controlling, in any way, the resale price of their products, has resulted in indiscriminate price cutting which has ruined thousands of wholesalers and retailers throughout the community, and due to keener competition amongst manufacturers who in turn were obliged to reduce their costs were consequently forced to buy cheaper tobaccos and so reduce the price of the primary producer.

The authorities in the United States now recognize the viciousness of price cutting and are taking the necessary steps to correct this evil. We are informed that it will still be some time before the whole scheme of price maintenance in the tobacco trade will be fully effected.

In contrast to the conditions prevailing in the United States we would direct your attention to conditions in Great Britain, where price control in the tobacco industry is recognized. In 1931 the Lord Chancellor, the Rt. Hon. Lord Sankey, and the Rt. Hon. William Graham, President of the Board of Trade, appointed a Committee "to consider present trade practices which result in withholding from particular retail traders supplies of goods in which they wish to deal or which prevent the resale of such supplies, except upon conditions imposed by the suppliers, and to report whether in their opinion all or any of such practices are detrimental to the public interest."

This Committee reported their findings on July 7, 1931, being in favour of price maintenance. Copies of their report may be obtained from His Majesty's Stationery Office in London and elsewhere.

Particularly in view of the contrasting conditions in the tobacco trade in the United States of America and in Great Britain, we respectfully direct the Committee's attention to this report, which has been very painstakingly and carefully prepared.

The conclusions of the Committee set forth in the above report favour price control, and for the sake of brevity I shall omit quotations therefrom, but suggest that many of the arguments adduced therein are applicable to conditions as they exist in Canada and support our contention that price control is essential for the ordinary marketing of merchandise, and ultimately serves the best interests of the primary producer, the manufacturer and the consumer.

We do not close an account on the recommendation of the Association or anyone else. As a matter of information the following is an excerpt from our letter dated April 21, 1927, addressed to our Vancouver office on this subject:

> We emphatically deny any insinuation or inference that we either put on or take off our list any firm at the direction of the Vancouver Tobacco Jobbers' Association or anybody else. If they wish to make recommendations to us we of course listen to them, but we make our own investigations and if we decide that any person is acting in a manner which we consider detrimental to the trade we logically conclude that he is also acting in a manner detrimental to our own interests. We have to satisfy ourselves of this, however, from our own investigations and we make our own decisions.

We have on several occasions closed wholesale accounts for not respecting our jobbers' selling price list and have discontinued selling certain retail accounts for price cutting.

We encourage jobbers in their efforts to have their customers maintain standard retail prices on tobacco products. We have also, along the same lines, encouraged retail associations and their members. We are just as much in

favour of standard retail prices being maintained as we are in the maintenance of jobbers' selling prices and our policy is not to deal direct with a retailer who refuses to maintain standard retail prices.

Price cutting on cigarettes and tobaccos if permitted to become general would in a short period of time wreck the credit stability of wholesale and retail tobacconists and force thousands of such merchants out of business. There are approximately 57,000 retail stores in Canada serving the consuming public with tobacco products. It is vitally necessary in the interest of the consuming public that this wide distribution be maintained.

There are many vicious evils in price cutting and we have not been able to discover one sound economic virtue, and neither the manufacturer, the dealer nor grower can escape the effect of such practices.

It is a well-known fact that the wholesale trade in general is at present carrying a heavy burden caused by prevailing economic conditions and the lack of co-operation and unsound competition. However, because cigarettes and tobaccos are among the few lines on which the wholesale trade is earning a margin of profit sufficient to conduct business properly and give service to their customers, this department ranks in most cases first in importance.

The wholesaler's gross profit on cigarettes and tobaccos is at present between nine per cent and ten per cent and surveys have proved that they cannot exist on a smaller margin. It is a recognized fact, however, that if the present Tobacco Jobbers' Associations were not functioning properly discounts of five per cent and greater would prevail; in fact this was the situation before the Tobacco Jobbers organized their associations. Furthermore, the Secretary of any of the Tobacco Jobbers Associations to which we refer will tell you that constant vigilance is required in order to keep jobbers from giving discounts.

The following is a schedule showing the additional volume a price cutting retailer has to do in order to earn the same amount of profit he would had he maintained standard retail prices. It will be noted from this schedule that it is utterly impossible for retailers as a body to obtain this extra business:

CHART SHOWING AMOUNT OF INCREASED BUSINESS NECESSARY TO JUSTIFY PRICE-CUTTING

When the regular profit on selling prices is	And the price cut is	The dealer must increase his dollar sales by the following percentage in order to maintain his dollar profits
15%	5 %	50%
15%	10 %	200%
15%	12½%	500%
16⅔%	5 %	43%
16⅔%	10 %	150%
16⅔%	12½%	300%
16⅔%	15 %	900%
20%	5 %	33%
20%	10 %	100%
20%	12½%	167%
20%	15 %	300%
20%	16⅔%	488%
25%	5 %	25%
25%	10 %	67%
25%	12½%	100%
25%	15 %	150%
25%	16⅔%	200%
25%	20 %	400%

While it is true that when a Retailer cuts a standard price, for instance from 25 cents to 23 cents he is for moment giving a benefit to the consuming public but in doing so he is wrecking the foundation of his business and sound economics prove that a legitimate retailer cannot operate on such a policy and remain in business unless his standard of living and that of his family and clerks is lowered to a deplorable extent.

Therefore, if price cutting were allowed to become general, the retailers who buy Direct from the manufacturers would have a tremendous advantage over the indirect retailers—in fact, could sell at prices lower than the prices the Indirect trade would have to pay for the same brands. This would mean the rapid elimination of all Indirect Retailers.

Such a condition, were it permitted to exist, would force us to take over the present distribution system as handled by the Wholesalers and sell Direct to all retail accounts. This would increase distribution costs rather than decrease them and our prices would be increased accordingly, and in a short period of time the consumer would again be paying the standard price.

There is another most important feature in this price cutting situation that cannot be overlooked. Due to the wide and rapid sale of cigarettes and tobaccos, cut price merchants would sell such tobacco products at cost as a loss leader to bring customers into their stores so they could sell them products on which they enjoy a large profit. This is not theory for such is already in practice on certain merchandise.

The present method of distributing cigarettes and tobaccos through wholesale and retail outlets would fail if there were not some system of control over the Wholesaler and Retailer as at present exercised by the various Associations and our price maintenance policy.

Dealing with complaints in the city of Toronto from wholesalers and retailers; in our opinion there are sufficient reorganized Jobbers in the city of Toronto—in fact, we are inclined to believe that there are probably too many for the good of the Wholesale trade. We have fifty-nine in that city. Competition is very keen amongst them though to the best of our knowledge they are maintaining our Resale prices.

Our policy with respect to whether or not we shall sell direct to a person who contemplates entering the wholesale business or who is operating such a business, is governed by several factors, the chief one being whether or not in our opinion the territory which the jobber proposes to cover can stand further competition without eventually bringing about a cut price situation. The reputation of the proposed or "going" concern is considered also.

We have had no complaints from the Retail trade in Toronto to the effect they were not receiving satisfactory service on our lines from the jobbing trade at recognized jobbers' selling prices. We have a large staff of sales and advertising men who are constantly calling on the wholesale and retail trade in the city of Toronto; in addition, we have a principal sales office located there and in our opinion our merchandising policy is in the best interest of the trade as a whole and the consuming public.

Before concluding I would like to offer one additional observation on the question of control of retail prices in its relation to the price paid to the primary producer.

Illustrative of the necessity for the control of retail prices and that these prices should show a reasonable margin of profit for everybody in the trade, is the fact that in discussing with the producers the possibility of arriving at an increased price to them for their flue-cured tobacco, it was necessary to consider that recently there have been placed on the market in Canada several brands of fine cut tobaccos retailing at around $1.00 per pound, which cannot be produced by manufacturers with any reasonable profit if they have to pay any

such price as Mr. Leitch mentioned, viz: $·233 per pound, average for their flue-cured tobacco. In our opinion the development of brands in any such price class is positively destructive to a reasonable stabilization of the tobacco business in Canada. We believe that under present conditions the minimum that can be considered a safe price for tobaccos of this class is a rate of $1.20 per pound to the consumer.

Briefly, if a minimum average price to the primary producer is to be established, it necessarily follows that a minimum price to the consumer must be established having some relation to the minimum price established for the producer.

If, for example, a minimum price is fixed for the primary producer and no relative minimum is fixed for the consumer, it therefore follows that some manufacturers will sell at a price not in relation to the minimum price fixed to the consumer, which, in effect, is price cutting; and if such sales are prosecuted with any degree of success it necessarily follows that the Imperial Tobacco Company will be forced to defend itself by not only meeting, but probably underselling its competitive manufacturers.

This should not be construed as, and is not intended to be a threat, but is merely a simple straightforward explanation of one of the most elementary problems in the economics of merchandising, and whereas it is reasonable to presume that a large manufacturer, by reason of his volume may be able to merchandise at a lower cost per unit than another manufacturer conducting a lesser volume of trade, it would then be merely a matter of time before the smaller manufacturer is eliminated by reason of the consequent impairment of his capital, resulting from his endeavours to maintain his trade conducted at an operating loss.

I therefore submit that if a minimum price to the primary producer is to be established at something in excess of the average price paid by the Imperial Tobacco Company for its flue-cured tobacco in 1933 and less than the price of 23⅓ cents attributed to Prof. Leitch, it is necessary that manufacturers should establish a minimum resale price of this class of tobacco at $1.20 per pound.

If, on the other hand, it is determined to establish a minimum price to the consumer of $1 per pound, then I submit to you in all sincerity that the maximum average price to the producer that could be accepted by the manufacturers with any degree of security would be something between 10 cents and 15 cents per pound to the primary producer.

In the submission of evidence to this Committee on the subject of Tobacco some reference has been made to the Marketing Act, which I understand is now receiving consideration.

I frankly hesitate to comment on this measure at the present time, but it occurs to me that as some corrective is essentially necessary to effectively preserve tobacco, if this commodity is to remain a factor as a natural product and a revenue producer to the primary producer, the manufacturer, jobber, retailer and National Revenue, the requisite control can no doubt be effected through the provisions of such legislation.

I freely admit that some injustice, real or imaginary, may be claimed as a result of the administration of such legislation, and therefore with all humility I respectfully suggest that consideration be given to the establishment of some source of appeal which, for want of a better name, may I describe as a Commerce Court or Board.

I believe that business can best be conducted through voluntary co-operation rather than by restrictive legislative enactments, and I feel that those interested in the particular trade or industry might submit their concerted opinions and views as to the regulation of their trade to such a Commerce

Court for confirmation, and that any person or persons having a just grievance should be permitted to appeal to such a Commerce Court for redress, but in order to relieve such a tribunal from the necessity of considering unjust and unreasonable complaints, that all appeals to such Court should probably be confirmed by some public body such as a Board of Trade or Chamber of Commerce or an Association representative of the trade concerned.

In closing I trust that which has been submitted may be found of assistance to the Committee in arriving at their conclusions, and I thank you for the opportunity of presenting the foregoing for your consideration.

TO THE BRITISH COLUMBIA TOBACCO AND CANDY JOBBERS ASSOCIATION

1107 Dominion Bank Building,

Vancouver, B.C.

WE, the undersigned..............................hereby voluntarily undertake and agree, as long as we enjoy the benefit of the manufacturers' list prices for tobacco, snuff, cigarettes, little cigars, or cigarette papers:—

1. Not to sell tobacco, snuff, cigarettes, little cigars or cigarette papers at prices less than those respectively named and set out in the jobbers' selling prices as furnished by Tobacco Manufacturers, from time to time.

2. Not to allow a discount in any shape or form on any of the lines above mentioned.

3. Not to allow any cash rebate to any parties purchasing from us or to any of their employees.

4. Not to give gratis goods of any kind which would be the equivalent of a discount.

5. Not to give a discount on any line of goods, part of which discount might be applied to any of the lines above mentioned; and when at any time giving a discount on other goods, the lines above mentioned will not be included, but such lines will at all times and under all conditions be sold at net prices with no discounts for cash or otherwise.

6. It is understood that tobacco prices will be F.O.B. Jobbers Warehouse, but Jobbers will have the privilege of prepaying freight to all competitive Rail Points, Powell River, and Prince Rupert, and Jobbers are not permitted to prepay or make allowance for Cartage charges from any Rail Points.

7. That all sales of these lines are to be on the above basis with no exception of any kind to jobbers or retailers.

8. That we will be responsible for the action of our travellers and employees, and agree that all infringements or irregularities by them of this agreement shall be the same as if committed by us.

9. That we approve of the appointment of the British Columbia Tobacco and Candy Jobbers' Association of an Investigating Committee, whose constitution and functions are set out in the endorsement on the back of this agreement. We agree to be bound by the decisions of that Committee, and that if at any time in the opinion of the Committee we fail to fulfil any of our undertakings herein, we shall lose the benefit of the Manufacturers' list prices for a period to be decided by the Investigating Committee, not to exceed three months for the first violation, and consent that manufacturers may act upon such recommendation as may be made by the Investigating Committee, and during such period we further agree not to purchase or accept any of the above lines from one or more of the companies, firms or individuals with which we are or may become associated.

10. This agreement is entered into for the sole purpose of bettering trade conditions in regard to the above mentioned lines.

Dated this.................. day of...................... A.D., 1934, at.............................. in the Province of.....................

Witnessed: . *Signed:*

....

FORMATION POWERS AND DUTIES OF INVESTIGATING COMMITTEE

(*a*) The Investigating Committee shall be appointed by the Association, and shall be composed of four (4) wholesalers to be elected at the Annual Meeting, or any Special Meeting called for this purpose, and shall remain in office until their successors are appointed.

(*b*) When any wholesaler's connection with the Committee ceases from any cause, his place shall be filled by vote of the remaining members of the Committee.

(*c*) The Committee shall make enquiry into all complaints of alleged violations of the agreement.

(*d*) The enquiry or investigation shall be made in such manner as may be approved by the Committee, who may employ an Agent or Agents to interview Witnesses and obtain information regarding the said complaints, and may act on the information so obtained, but before so acting the party alleged to have violated the agreement shall be afforded an opportunity of appearing before the Committee in answer to said complaint.

(*e*) If, in the opinion of the majority of the Committee, a violation of the agreement has occurred, the Committee shall make a recommendation in accordance with Clause Nine (9) of the Agreement.

(*f*) In case the party being investigated is represented on the then existing Committee, that member of the Committee shall, for the time being, withdraw and in the investigation of that particular case, be replaced by another wholesaler chosen by the remaining members of the Committee.

TO MANITOBA TOBACCO JOBBERS ASSOCIATION

(Same form applies to Saskatchewan)

We, the undersigned, ... hereby voluntarily undertake and agree, as long as we enjoy the benefits of the manufacturers' list prices for tobacco, snuff, cigarettes or little cigars:—

1. Not to sell tobacco, snuff, cigarettes or little cigars at prices less than those respectively named and set out in the jobbers' selling prices as furnished by Tobacco Manufacturers from time to time.

2. Not to allow a discount in any shape or form on any of the lines above mentioned.

3. Not to allow any cash rebate to any parties purchasing from us or to any of their employees.

4. Not to give gratis goods of any kind which would be the equivalent of a discount.

5. Not to give a discount on any line of goods, part of which discount might be applied to any of the lines above mentioned; and when at any time giving a discount on other goods, the lines above mentioned will not be included, but such lines will at all times and under all conditions be sold at net prices with no discounts for cash or otherwise.

6. Not to prepay freight on tobacco, snuff, cigarettes and little cigars for country shipments, but that such goods shall be sold only f.o.b. shipping point, except that it will be in order to prepay freight to competitive points or equalize freight charges with the nearest competing point to which goods are sold.

7. That all sales of these lines are to be on the above basis with no exception of any kind to jobbers or retailers.

8. That we will be responsible for the action of our travellers and employees, and agree that all infringements or irregularities by them of this agreement shall be the same as if committed by us.

9. That we approve of the appointment by Manitoba Tobacco Jobbers Association of an Investigating Committee, whose constitution and functions are set out in the endorsement on the back of this agreement. We agree to be bound by the decisions of that Committee, and that if at any time in the opinion of the Committee we fail to fulfill any of our undertakings herein, we shall lose the benefit of the manufacturers' list prices for a period to be decided by the Investigating Committee, not to exceed three months for the first violation, and consent that manufacturers may act upon such recommendation as may be made by the Investigating Committee and during such period we further agree not to purchase or accept any of the above lines from one or more of the companies, firms or individuals with which we are or may become associated.

10. This agreement is entered into for the sole purpose of bettering trade conditions in regard to the above mentioned lines.

Formation Powers and Duties of Investigating Committee

(*a*) The Investigating Committee shall be appointed by the Association, and shall be composed of five (5) wholesalers to be elected at the Annual Meeting, or any Special Meeting called for this purpose, and shall remain in office until their successors are appointed. (A substitute member for each of the above to be appointed to act in the absence or inability to act of any of the regular members.)

(*b*) When any wholesaler's connection with the Committee ceases from any cause, his place shall be filled by vote of the remaining members of the Committee.

(*c*) The Committee shall make enquiry into all complaints of alleged violations of the agreement.

(*d*) The enquiry or investigation shall be made in such manner as may be approved by the Committee, who may employ an Agent or Agents to interview witnesses and obtain information regarding the said complaints, and may act on the information so obtained, but before so acting the party alleged to have violated the agreement shall be afforded an opportunity of appearing before the Committee in answer to said complaint.

(*e*) If, in the opinion of the majority of the Committee, a violation of the agreement has occurred, the Committee shall make a recommendation in accordance with clause nine (9) of the agreement.

(*f*) In case the party being investigated is represented on the then existing Committee, that member of the Committee shall, for the time being, withdraw and, in the investigation of that particular case, be replaced by another wholesaler chosen by the remaining members of the Committee.

By Mr. Ilsley:

Q. Does Mr. Miller want to say anything further about the reason why he lowered the price in 1930 and 1931?—A. I think that has been covered.

The WITNESS: Mr. Sommerville, on Friday when I was on the stand, there were points raised about the relationship that Mr. Harrison and Mr. Lea had, and I said I would prepare a statement. I would like to have the privilege of reading that statement at this time.

May 7, 1923.

Mr. CHAIRMAN:—When I was on the stand last Friday, you, your counsel and your Committee, were apparently under the pretty definite impression, from the evidence you had had, that the British-American Tobacco Company Ltd. and/or Mr. R. C. Harrison (I infer, perhaps with others) after forcing down the price of leaf tobacco in the United States to a very low figure, had sent Mr. T. L. Lea here, and with their, or his influence, had broken the price of flue-cured tobacco in Ontario. I think I denied this, but as you were persistent that I had not cleared up the situation, I asked for an opportunity to make a statement to-day.

I have had an opportunity of reading over that portion of the minutes covering this part of the situation, and while I find that I did deny this, I would like to now try to give you further details which I believe will substantiate it and satisfy you that such a feeling is not founded on facts. You will, of course, appreciate that for many of these details I have had to refer to the responsible heads.

The B.A.T. are very large stockholders in this Company and have two Directors on our Board, viz., Sir Hugo Cunliffe-Owen, Bart., Chairman of the Board of the British-American Tobacco Company, Limited with headquarters in London, and Mr. George Cooper, one of the Directors of the British-American Tobacco Company, with headquarters in Louisville, Kentucky. Also they naturally from time to time, have their officials, who are experts in various ends of the tobacco business, consult with us and discuss various matters.

Mr. R. C. Harrison, one of their Directors, in charge of their Leaf Department, spends considerable time in the United States each year where they buy large quantities of both flue-cured and air-cured types of tobaccos, and as Mr. H. P. Buell, Vice-President in charge of our Leaf Department, also buys flue-cured tobaccos in the States through Mr. Harrison's organizations, naturally there is considerable contact between these two gentlemen, and Mr. Harrison, as well as all the other Directors of the B.A.T. Co., is interested in the general welfare of the Imperial Tobacco Company of Canada.

After discussing the matter with all of our Directors, and Mr. Buell in particular, I can state positively that we have no knowledge or recollection of Mr. Harrison ever trying to instruct or in any way unduly influence us with respect to the prices that we pay for tobacco in Canada.

We had realized that the prices (taking into account in 1931 the quantity of tobacco that had been produced) should be lower than those paid for the previous crops, and in this connection believe that Mr. Harrison was of the same opinion.

There has always been a majority of the Directors of the Imperial Tobacco Co. Ltd. of Canada, located in Canada; the scale of prices to be paid is discussed with them by Mr. Buell and they decide amongst themselves as to what it should be; and with respect to the 1931 crop in particular, Mr. Harrison had nothing whatsoever to do with the quantities we purchased or the prices we paid, other than as I have previously mentioned.

As to the coming of Mr. Lea into our organization, and engaging in the buying of flue-cured tobacco in 1931, I might explain that we here in Montreal, in consultation with various of the B.A.T Directors, felt we should have someone in our organization to eventually succeed Mr. Buell—someone thoroughly experienced in leaf tobacco and particularly a man familiar with both Virginia and Burley types, as we use these various types of tobacco here, our principal usings being Virginia and Burley. It is not an easy matter to obtain a suitable man with this particular experience.

If you don't mind, might I interject there, as I explained to someone else, that just as it is a fact that wherever you find a marine engine you find a Scotchman; in the same way where you find tobacco you find a southern American—from below the Mason-Dixon line.

By Mr. Factor:

Q. As a matter of fact, most of the chief executives of your organization are American?—A. I have never compiled it, sir; I do not think that is true.

By Mr. Sommerville:

Q. There is Mr. Patterson?—A. He is a Canadian.

Q. He was formerly Mr. Duke's secretary, was he not?—A. He came from the United States orginally. Mr. Lane, a naturalized Canadian.

Q. Mr. Buell and yourself?—A. Yes.

Q. Mr. Townsend?—A. An Englishman.

Q. And who else is there?—A. Mr. Spafford and Mr. Lane, Canadians; Mr. Walters an Englishman, Mr. Skelton an Englishman; and Mr. DesRosiers, a Canadian.

This matter had been discussed several years prior to 1931, and Mr. Buell had selected from Mr. Harrison's organization Mr. T. L. Lea as the man whom he thought ideally fitted for this job and requested Mr. Harrison to let him come to our employ for this purpose. Mr. Harrison felt that he could not spare Mr. Lea from his organization and made several other suggestions, none of which suited, and eventually, in the fall of 1930, after persistent efforts on the part of Mr. Buell to secure Mr. Lea, Mr. Harrison felt that he could spare him, and Mr. Lea was engaged and started his employment with this company January 1, 1931, and proceeded to acquaint himself with conditions in Canada under Mr. F. R. Gregory who was then in charge of the buying of our tobacco in Ontario. Mr. Lea, although a special assistant to Mr. Buell, was operating in Ontario directly under the instructions to Mr. F. R. Gregory during the buying season of the year 1931.

Now, as to the reason for the lower price paid by us for the 1931 crop, than for previous crops, I would mention that the principal factors entering into the determination of prices to be paid are substantially as follows:

1. Quality of crop.
2. Consideration of the cost of production to the growers.
3. Volume of our own stocks on hand.
4. Our requirements in relation to the entire crop.
5. Volume of the crop and the domestic surplus in relation to our own requirements, involving the probable price to be paid by our competitors for their requirments out of such surplus.
6. Consequences of an exportable surplus.

As to:

1. The crop was good, generally speaking.
2. As to the cost of production, I can say that full consideration was given to this question. It is naturally a factor which varies accord-

ing to the yield and type of farm. It must not be forgotten that in 1931 the yield was abnormally high and the cost of production per pound would be correspondingly lower. I am sorry there are no official figures available as to our estimates for that particular year, but would draw attention to the figures given on pages 48 and following of our brief.

3. We had on hand, as of September 30, 1931, a total quantity of approximately 13,000,000 pounds Canadian flue-cured tobacco, which at that time was 26½ months duration.

4. Our usings were somewhere around five to six million pounds, although with a better stock of well matured tobacco, we saw prospects of gradually increasing these usings.

5. Our estimate of the crop produced was approximately 24,500,000 pounds—at least double the 1930 crop production—in face of our persistent advice to the planters, direct and through newspapers and Departments of Agriculture, not to over-produce.

6. With the large amount of this crop and the then small export market, it was quite evident that there was surplus production.

Having all these factors in mind, we felt that by paying a very high price we would be placed in an unfavourable position, as our competitors would then be enabled to obtain any part of balance at extremely low prices and sell manufactured goods on the market at very low prices, tearing down the whole price structure which would eventually reflect unfavourably on the farmer. We therefore determined that the top price of 30 cents with our average somewhere under 24 cents, all things considered, was a fair and proper procedure for the purchasing of the 1931 flue-cured crop.

Résumé of Methods of Purchases of Leaf Tobacco, Referring Particularly to Purchases of 1931 Crop, Norfolk District

As we require certain types of tobacco with requisite colour and necessary body and quality, our buyers know that any purchases of tobacco from the farmers in Ontario must be of a type especially suited to our particular manufacturing needs. A certain portion of every production of tobacco is very difficult to use; some is entirely unfit for use.

We have a staff of buyers, all of whom, each year, become thoroughly conversant as to the quality of tobacco that each individual farmer in their district has grown. These men are not only what is termed "buyers," but are experienced to a high degree in the actual growing of tobacco, and during the growing and curing season visit the farmer and give advice as to the growing and curing of his crop. During the month of July, by personal visit, they ascertain the acreage that has been planted by the individual farmer, and also as to how the tobacco is growing. When the tobacco has ripened sufficiently for the farmer to commence curing, these buyers again visit the farms once or twice a week so that they may see how each kiln of tobacco has cured out. Thus our buyers have a fair idea of what kind of tobacco the farmer should have for sale when the time for buying arrives.

It does not necessarily follow, of course, that when the time comes to purchase the tobacco that same may not have improved or deteriorated, as the case may be, in the intervening period. Factors which affect the quality of tobacco from a saleable point of view are neglect and carelessness on the part of the grower. This may be either in his method of harvesting, his method of curing, or of taking tobacco out of the kilns after same is cured, or his method of storing tobacco before delivering same to a redrying plant. Unless the farmer is careful, humid or rainy weather will cause the tobacco to become soft and damaged and lose colour, but such deterioration does not apply in the same sense as it does in fruit and vegetables.

When our buyers visit the farms first during the month of July, they record all information as to acreage and quantity in a book described as "Crop List Book." This information is entirely in regard to the condition of the tobacco as it stands growing in the field, and has nothing to do with regard to colour or quality of the tobacco when same is cured, nor with regard to prices at which the tobacco will be sold after it is cured.

During the visits, while the tobacco is being cured the buyer will list in a book known as "Grading Book," the name of the owner or grower, the number of acres, the estimated poundage, and how the tobacco looked to the particular buyer while same was growing. An approximate estimate of the grade of tobacco in each kiln is then entered in the grading book under the gradings "F" for fancy, "G" for good, "GM" for good medium, "M" for medium, "GC" for good common, "C" for common, and "P" for poor.

Of course this examination can only be very superficial as it is practically an impossibility for the buyer to inspect all of the tobacco hanging in the kiln due to its construction, or even after the tobacco has been bulked in the packhouse. Furthermore, the tobacco often changes in colour if left hanging in the kilns for a period of time, due to climatic conditions, and it further changes when it is taken out of the kiln into the packhouse where it is finally sold to the purchaser.

Whenever any perceptible change in the tobacco occurs, it automatically nullifies our classification in the Grading Book, and the tobacco is bought according to the grading in which it has finally developed. The Grading Book is used by our buyers merely as a guide as to where they can go to buy crops of different qualities. Our price range for different crops is not based on these Grading Books entirely. As previously explained, changes can and do take place in the colour and condition of the tobacco between the time the crop is classified in these Grading Books, and the time when the actual price is determined, therefore the buyer must examine the tobacco prior to making the grower an offer.

Before a price is determined on individual crops of tobacco, the buyer who has listed the quality of the tobacco in his grading book usually has another one of our buyers or a supervisor accompany him prior to making an offer for the crop, so as to have the benefit of the judgment of the other buyer or the supervisor, on the relative value of that particular crop. The matter is then discussed in our office and a tentative price determined there as to what we will pay for various representative crops before the buyer actually makes an offer and before the market opens.

By Mr. Sommerville:

Q. When that price is arrived at, is it not put in the top corner?—A. I do not think there is any standard of that at all.

Q. When you have arrived at that figure in consultation in the office, do you say it is not put down?—A. As far as I can make out there is no fixed rule, and there has been no fixed rule about that. You might term this book more of an individual record for the individual buyer who does it pretty well as he wants for his own information.

Q. My reason for asking is very definite, Mr. Miller. I find on this one book, which I picked up yesterday, that in the first day's buying the buyer—Wilson—paid for the crops which he bought the price that he had set in the corner.—A. That might have been, sir.

Q. And that after the visit of Mr. Lea to Montreal the same buyer paid for the crops, which graded at 24 and 25, 16 cents, 18 cents, and 15 cents.—A. As I say, as far as I can find out, there is no fixed way of their doing it at all.

Q. No, but if he is following a grade, Mr. Miller, and that grade is as you have indicated, and he has made his grade and his estimate, after he has made his grade and goes out and buys on those grades, he would follow through the second week on the same basis.—A. That is absolutely contrary to what we have found on examination.

Q. Have you changed any of those grades?—A. Yes, we have changed some of them. We have not changed them all, sir.

Mr. SOMMERVILLE: All right, we will go into that later.

The WITNESS: Very well:

> We pay highest prices for tobacco with bright colour and good quality, and require this type of tobacco for our particular needs, although in purchasing crops containing this type we naturally have to take other qualities as well. The matter of price on individual crops is based on the concensus of opinion of our various buyers, who compare the qualities available in their respective territories and the relationship between these qualities determines the price range from top to low.
>
> It might be stated that all of our buyers have an opportunity of visiting all of the territories in the district before a price is set on individual crops.
>
> Before the market opened in October, 1931, Mr. F. R. Gregory was called to Montreal during the last week of September, 1931, to talk over the matter of purchasing the 1931 crop of flue-cured tobacco with Mr. Buell and the other officials of the company. In view of the largely increased production, and the stocks of tobacco we had on hand, it was decided by the officials and Mr. Gregory who, at that time, in addition to being the Manager at Delhi and Leamington, was also a director of the Imperial Tobacco Company, that the top price to be paid for the 1931 crop would be 30 cents and the average price of our purchases should be under 24 cents. It was also decided that we would start buying during the week commencing October 5th. Mr. Gregory returned home on October 2nd, 1931.
>
> Mr. Lea left Montreal on Sunday night, October 4th, arriving at Delhi around noon October 5th. Messrs. Gregory, Lea and Taylor, local manager, Delhi plant, held a consultation in the offices of the Imperial Tobacco Co. at Delhi on Monday afternoon, October 5th, when a plan of procedure for opening the market the next day was decided upon. It was decided at that conference that the buyers would start out early the next morning, and confine their purchases for that day to crops of tobacco varying in quality and relative value from 24 cents to 30 cents. On that day we purchased 3,774,000 pounds (estimated) at an average price of 27.59 cents per pound. The buyers on the second day, October 7, were instructed to continue buying the balance of the most desirable crops which were left in their territories, and on this day they purchased 910,400 pounds at an average price of 26.20 cents per pound. Buying continued on the 8th, 9th, and 10th, our buyers purchasing tobacco of good quality, but not of as good quality as they purchased on the first two days. As the buying progresses the average quality, to a certain extent, becomes lower, and naturally the average price also becomes lower.
>
> On that day we started to purchase tobacco in the Norfolk district, namely October 6th. Mr. Lea accompanied one of our regular buyers, Mr. J. B. Wilson. Mr. F. R. Gregory bought in conjunction with his son, Mr. H. T. Gregory. Messrs. Lea and Wilson purchased 627,000 pounds at an average price of 27.79 cents. These two men worked the entire day purchasing tobacco. Mr. F. R. Gregory and his son worked half

the day and purchased 491,000 pounds of tobacco at an average price of 27.04 cents. Attached hereto are statements showing the individual crops purchased by Messrs. Lea and Wilson on that date, and the individual crops purchased by the Messrs. Gregory. These statements also show prices paid for the individual crops purchased, as well as the estimated quantities of the individual crops. The statements further show the total poundage of tobacco purchased by both buying parties, and the average price per pound for the total purchases.

As previously stated, Mr. Buell telephoned Mr. Gregory and Mr. Lea on learning of the first day's results, reminding them that to get the average below 24 cents they would have to buy more freely of lower grade tobaccos.

Mr. Lea returned to Montreal on Saturday, October 10th, and reported to Mr. Buell, vice-president and manager of the Leaf Department, who was lying sick in the Royal Victoria Hospital, Montreal.

It might also be added that while Mr. Lea was in Montreal, the Delhi organization continued buying, and on October 10th, which was Saturday, they purchased 213,000 pounds at an average price of 19.12 cents, and on Monday, October 12th, they purchased 585,000 pounds at an average price of 18.55 cents. Mr. Lea was not at Delhi, or conversant with operations on either of these two days, only arriving there about noon on Monday, October 12th.

On Tuesday, October 13th, we purchased 1,213,700 pounds at an average price of 19½ cents, that being from crops remaining unsold in the various territories, and classified as "medium" crops. From October 14th until October 22nd the buying continued in a limited way. On October 22nd we discontinued buying tobacco due to the fact that we had practically completed purchasing our requirements out of this crop in the Norfolk district.

On November 16th we received a request from the Imperial Tobacco Co. (of Great Britain and Ireland) Ltd. to let them have 1,000,000 pounds of toobacco (farmer's weight). We allotted them 1,000,000 pounds of tobacco out of our purchases which had been made prior to that date. They were only interested in tobacco of bright colour and good quality suitable for cigarette purposes. The allottment of this 1,000,000 pounds of tobacco to the Imperial Tobacco Co. (of Great Britain and Ireland) Ltd. left us short of that quantity for our own domestic requirements, and to complete our requirements and make provision for the added requirements of the Imperial Tobacco Co. (of Great Britain and Ireland) Ltd. we purchased 816,500 pounds of tobacco of various qualities from November 9th to December 31st at various prices, as per statement.

The CHAIRMAN: Well, it is pretty nearly one o'clock. I think we have had enough this morning. We will meet at 3.30 this afternoon.

The Committee adjourned at 12.55 p.m. to resume at 3.30 p.m.

AFTERNOON SITTING

The committee resumed at 3.30 o'clock.

GRAY MILLER, examination resumed.

By Mr. Sommerville:

Q. I think you have a statement that you read this morning, Mr. Miller?—A. Yes.

Q. May I have a copy of that, if you have one to spare?—A. Yes.

Q. I will just look it over, and if there are any questions to be asked, at a later date, we may ask them?—A. All right.

Mr. SOMMERVILLE: I would like, for the time being to proceed with the question of the crop purchases in 1931 and 1932, with Mr. Lea.

T. L. LEA, called and sworn.

By Mr. Sommerville:

Q. Mr. Lea, what is your position in the Imperial Tobacco Company?—A. I am manager of the leaf (Ontario) department.

Q. You are manager of the Ontario Leaf Department?—A. Yes.

Q. When did you become manager of that department?—A. In 1932, I think.

Q. When in 1932, before or after the crop?—A. Before the crop.

Q. Who had been manager of that department before you?—A. Mr. Gregory.

Q. When did you come to Canada?—A. January 1, 1931.

Q. Where had you been prior to that?—A. I was supervisor of purchases for the Export Leaf Tobacco Company.

Q. The Export Leaf Tobacco Company, you say?—A. Yes, in Georgia, South Carolina, and also buying in eastern Carolina; and when I would leave eastern Carolina, go to Kentucky, where I had charge of buying operations in Kentucky.

Q. For the Export Leaf Tobacco Company?—A. Yes.

Q. For whom did the Export Leaf Tobacco Company buy?—A. They buy for all the different companies all over the world.

Q. For the British American Tobacco Company?—A. Yes.

Q. You then, were supervisor for their buying operations?—A. Yes, in Georgia.

Q. From Georgia north to Kentucky?—A. Yes.

Q. And your buying in Georgia was of flue-cured tobacco?—A. Bright, flue-cured tobacco, yes.

Q. That is done on the auction basis?—A. Yes.

Q. It is all sold on the auction floor?—A. Yes.

Q. As I understand it, the growers send their crops in in piles or baskets?—A. Baskets.

Q. In baskets of 100 pounds?—A. It runs from 100 to 250 pounds.

Q. They send them in in baskets of from 100 to 250 pounds?—A. Yes.

Q. Already graded?—A. Yes.

Q. They are all on the floors in long buildings?—A. Long warehouses.

Q. The auctioneer proceeds down the piles?—A. Yes.

Q. And a group of buyers follow him?—A. Yes.

Q. They buy a lot at a time, don't they?—A. A basket.

Q. A basket at a time?—A. Yes.

Q. And that is knocked down to the highest bidder?—A. Yes.

Q. That is quite different and distinct from the barn method of buying?—A. Somewhat, sir.

Q. What is that?—A. Quite a difference, yes.

Q. How long were you engaged in that? How many years had you been engaged in that kind of buying prior to coming here?—A. I started in 1911. Before 1911 I did buy some tobacco in the country in South Carolina. That was for my own account, though.

Q. That would be in 1911?—A. No.

Q. Before 1911, you say?—A. Yes, 1909 was when that took place.

Q. Would that be bought by the barn method?—A. Yes, by the barn method.

Q. You would come in and buy?—A. Yes.

Q. I understand the farms in Georgia and South Carolina do not require to be equipped as fully as our farms?—A. I don't see very much difference. Some of the best-equipped farms I have ever seen were in eastern Carolina.

Q. I understand they don't require greenhouses?—A. No, they don't require greenhouses.

Q. I understand they don't do any steaming of their plant beds?—A. Well, some of the farmers down there do steam their plant beds, or burn their plant beds.

Q. You say they burn their plant beds?—A. Yes.

Q. That is for what purpose—burning their plant beds?—A. In other words, it does away with the grass that comes up with the plants. That is the reason they burn them. Some of them steam them down in eastern Carolina.

Q. With that experience, you came to Canada in January, 1931?—A. January 1, 1931.

Q. And you began your operations in buying in Simcoe?—A. Delhi.

Q. In Delhi?—A. Yes.

Q. With headquarters at Delhi?—A. No, I had headquarters in Montreal.

Q. Well, I mean in the buying season?—A. Yes.

Q. When did you arrive in the buying area for the opening of the market in 1931?—A. I arrived there on the fifth.

Q. On the fifth of what?—A. October 5.

Q. October 5, 1931?—A. Yes.

Q. What was your position at that time with the company?—A. To assist Mr. F. R. Gregory in buying.

Q. To assist Mr. Gregory in buying—A. Yes.

Q. —the crop of 1931?—A. Yes.

Q. Who had charge of the buying operations in 1931?—A. Mr. F. R. Gregory.

Q. Who settled the policy for the buying of 1931?—A. Well, that was settled in Montreal.

Q. By whom?—A. By the executive committee.

Q. By whom?—A. Well, Mr. Buell and Mr. Miller, and those people.

Q. Yes?—A. Mr. Patterson also; I believe Mr. Patterson was president at that time.

Q. What part did you take in settling that policy?—A. Well, they consulted me, sir.

Q. They did?—A. Yes.

Q. What knowledge had you at that time of Canadian tobacco conditions? —A. Well, I had made a number of trips up in the Delhi section, and I inspected a lot of crops.

Q. By the way, Mr. Buell does not buy crops out in the field, does he?—A. Well, I don't know, sir. He has not bought any since I have been up here.

Q. At any rate, you started in with Mr. Gregory?—A. Yes.

Q. You say that he was in charge of operations for 1931?—A. Yes.

Q. Is that a complete statement of the situation?—A. I think so.

Q. Were you not really there representing Montreal, and supervising the situation?—A. Well, I was doing my best to assist him; I will say that.

Q. Did that assistance take the form of supervision? I don't know what you may call assistance. But is that the fact, that while he was nominally the head, you were the man who was carrying the instructions from Montreal? —A. Conveying instructions from Mr. Buell to Mr. Gregory.

Q. To Mr. Gregory?—A. Yes.

Q. And to other buyers; were you conveying instructions to other buyers? —A. Mr. Gregory directed all the other buyers.

Q. If there was a panic in 1931 in the purchase of the crop, then was the fault due to Mr. Gregory or to you?—A. Well, it appears that he was in charge, sir.

Q. Well, I have just asked you the question, though?—A. There was no panic, as far as I know; not when it was opened.

Q. Well, how soon after it was opened did the panic develop?—A. How soon?

Q. Yes, because you limited your answer. You say there was no panic when it opened. How soon afterwards did it develop?—A. Well, the farmers were very much discouraged when they were receiving 28 cents, on the first day, because they had been accustomed to getting 40 cents the previous year.

Q. You, being familiar with conditions in the United States, can probably tell us why there was this reduction in buying, from 40 cents to 30 cents in the opening of the top for the 1931 crop. Why the reduction?—A. I could not say as to that.

Q. You could not?—A. No.

Q. You can't give this committee any light on that subject at all?—A. The only way I can answer it, sir, is that prices in 1930 were entirely too high. You had a larger crop.

Q. Who said they were too high? The Imperial Tobacco Company here, before your advent, paid 40 cents. They had been buying crops here for twenty years. Who said they were too high?—A. Well, our people thought they were too high.

Q. Your people thought they were too high?—A. The Imperial Tobacco Company, yes.

Q. Is it not a fact, Mr. Lea, that for the first time New York stepped into the situation and said the price was too high?—A. No.

Q. Was that the criticism of Mr. Harrison, that the price paid in 1930 was too high?—A. Not to my knowledge, sir.

Q. Didn't you ever hear that Mr. Harrison had criticized the purchase of the 1930 crop at 40 cents?—A. Possibly I have heard him say that.

Q. Yes; and it was as a result of that criticism, I suggest to you, that you were sent up to Canada?—A. No. I don't think so at all.

Q. What instruction or information was given to you by Mr. Harrison?—A. None whatever.

Q. Before the opening of the market in 1931?—A. None whatever.

Q. You know him pretty well?—A. Know him very well.

Q. You talked with him about 1931 prices?—A. No, I didn't.

Q. You didn't discuss it with him at all?—A. Not at all, sir.

Q. The conversations, then, were entirely with Mr. Buell?—A. As far as I know, sir.

Q. At any rate, you started out to buy on the basis of a top of 30 cents?—A. Yes.

Q. And you did buy?—A. Yes, I bought pretty heavy.

Q. Yes, bought pretty heavy the first day; and you accompanied Mr. Wilson—A. Yes.

Q. On that day you bought how much?—A. Six hundred and some thousand.

Q. Six hundred and some thousand pounds?—A. Yes.

Q. More than anybody else?—A. Yes, and paid the highest price.

Q. You paid the highest price, on the opening?—A. Yes.

Q. And the average was 27 cents?—A. 27.79, if I recall correctly.

Q. Yes, opened at 30 cents instead of 40 cents, and got down to 27.79 the first day?—A. Yes.

Mr. MONTGOMERY: No, that is not fair.

The CHAIRMAN: Excuse me, Mr. Montgomery, I see no unfairness about it.

Mr. MONTGOMERY: Saying that the top was 30 and got down to 27·79; that is not fair.

The CHAIRMAN: Mr. Montgomery, I cannot allow you to interrupt the proceedings.

Mr. MONTGOMERY: After all, the company is not represented here, nobody is; and for that reason the committee should see that the facts are fairly brought out.

The CHAIRMAN: I don't see that there is anything wrong with the question at all. Just repeat your question, Mr. Sommerville.

By Mr. Factor:

Q. I understand that the top price was 40 cents in 1930, and the top price was 30 cents in 1931?—A. That is correct.

Mr. SOMMERVILLE: The first day.

By Mr. Factor:

Q. The first day it was 27·79?—A. Average price

Mr. SOMMERVILLE: Yes, that is the average price. That is what I say.

Mr. FACTOR: No, I think you said top price.

Mr. MONTGOMERY: That is my objection.

Mr. SENN: I think we agreed that witness would not be represented by counsel. If they are to be, we will have to change our rule.

The CHAIRMAN: No, they are not going to be.

By Mr. Sommerville:

Q. I said that starting with the top price, opening on Monday— A. On Tuesday, sir.

Q. Well, on Tuesday, you got down that day to 27·79 for your purchases?—A. Yes.

By Mr. Young:

Q. Did you buy any at 30 cents that day?—A. As well as I recall, there are four crops.

Q. Four crops at 30 cents?—A. Yes.

By the Chairman:

Q. How many pounds?—A. I think you have that statement.

Mr. SOMMERVILLE: I have the statement here somewhere.

The WITNESS: We submitted that statement to you.

By Mr. Sommerville:

Q. Perhaps you can tell me. When you had the list of the best crops before you, and starting out with Mr. Wilson, the entire number of crops you bought the first day at 30 cents was four?—A. I think that is correct.

Q. Four?—A. Yes. In fact, I might call your attention to the fact that I bought five crops at 30 cents, but one was cancelled. Canadian Leaf had bought it at 29½ cents, and I paid 30 cents for it. Our contract book shows that.

By Mr. Young:

Q. Then you cancelled that later because they had bought it ahead of you?—A. Yes.

Q. Was the farmer agreeable?—A. No, he was not agreeable, but we never interfere with other contracts.

Q. They all observe that rule, do they?—A. All agree to that rule, sir. I think there is sixty some thousand pounds in that crop. The Canadian Leaf will bear that out. I bought 112,000 pounds at 30 cents that day.

By Mr. Sommerville:

Q. Out of six hundred and some odd thousand pounds of your purchases; and that was on the first day?—A. Yes.

Q. Setting out for their choicest crops in the district with Wilson—A. Well, I thought they were the choicest crops.

Q. Well, you had had thirty years' experience, and on that day you were assisted by having with you Wilson and.—A. Just Mr. Wilson.

Q. And he had his record of the crops, that day, that you were buying?—A. Yes.

Q. Just look at the crop that you bought from A. Vuylsteke on the first page of this sheet, Mr. Lea?—A. How far down the sheet?

Q. Pretty near the end of the sheet, about six from the bottom?—A. Vuylsteke, yes.

Q. You bought that crop, and you paid 27 cents for it?—A. Correct, sir.

Q. I observe in Mr. Wilson's book that he had put the note on his book 26 to 27 cents as the value of the crop?—A. I could not say. Those pencilled figures don't indicate anything in the world to me.

Q. They don't indicate anything to you?—A. No. You will also find further books that hadn't any pencilled figures at all on.

Q. I am just talking about this one?—A. I understand that.

Q. I want to see what they do indicate, because it is the first one I have picked up, just at random. Vuylsteke's figures at any rate, show the number of kilns, don't they?—A. Supposed to.

By the Chairman:

Q. "Supposed to." Do they or don't they?—A. Sometimes they do and sometimes they don't.

Q. That is not a very satisfactory answer. It is intended to show the number?

Mr. Lane: That is what the book shows. It is not a correct or accurate summary at all.

The Chairman: Well, his answers "Supposed to", and "It may and it may not", mean nothing.

Mr. Lane: All you have to do is add the kilns to the total and see that it is wrong.

Mr. Sommerville: All right, we will see.

By Mr. Sommerville:

Q. Just look at that page, Mr. Lea, because I am going to get to the bottom of the Vuylsteke purchase, just as a basis?—A. All right, sir.

Q. On that page, at the top of the page, you will find "34 acres, good". Do you see that wording at the top?—A. Yes, sir, "34 acres, good". I would think that would mean while it was growing in the field.

Q. Quite. I think that is true.

By the Chairman:

Q. The black book shows 34 acres?—A. 34 acres.

By Mr. Sommerville:

Q. In other words, Mr. Wilson has got into the kiln book or this—what do you call this book?—A. Supposed to be a grading book. I don't know whether it is.

Q. All right; he has got into the grading book the entries that he has had on his crop book, and at the top he says: "34 acres, good"?—A. Yes.

Q. Is that 36,000 pounds?—A. Yes.

Q. And just over that in red pencil are the figures "26, 27"?—A. Yes.

Q. You see that?—A. Yes.

Q. Underneath that he has the name August Vuylsteke, Norwich, R.R. No. 4?—A. Correct.

Q. And under that he has a list of grades?—A. Yes.

Q. Or initials?—A. Yes.

Q. "F" for what?—A. Fancy.

Q. "F" for fancy, and nothing opposite that?—A. Nothing.

Q. "G" for good?—A. Correct.

Q. And opposite that, "5 kilns"?—A. Correct.

Q. Then "GM" for good medium, is that right?—A. Yes.

Q. And opposite that, "12 kilns"?—A. Yes, sir.

Q. And below that, "M" for medium?—A. Correct.

Q. And opposite that "10 kilns"?—A. Yes, sir.

Q. And under that, "C" for common, and he has "3 kilns"?—A. Yes.

Q. That makes a total of 30 kilns of flue-cured tobacco on that man's farm?—A. I presume that is what it means.

Q. These numbers added together make thirty?—A. Yes.

Q. And the thirty can have no other reference, can it?—A. I would not think so; I really don't know, to be frank with you, sir.

Q. Well, that is what it signifies to you, does it not?—A. It appears that way, yes, sir.

Q. I have added the kiln numbers, the numbers on the pages, and that seems to be the figure.

By the Chairman:

Q. Is there any doubt about it?

Mr. Lane: Yes, there is. There are books there that show—

Mr. Sommerville: We are talking about this book.

By the Chairman:

Q. I mean this one recital. Please give us one straight answer. Is there any doubt about it?—A. Yes, there is a doubt about it.

By Mr. Sommerville:

Q. What is the "30"? It either refers to the top price or else it refers to 30 kilns?—A. It may refer to the top price. It may refer to the kilns. I could not say, sir.

Q. All right, I will leave it that way. I will just leave it that way.

By the Chairman:

Q. And may I ask this question with regard to the addition of these kilns that you have approved of as Mr. Sommerville read them out: Would you add them up and then we will know if it is right?—A. They add to thirty.

Q. They do add to thirty, do they?—A. Yes.

Q. Well, there is a singular synchronization there?—A. Some of these figures appear on some books and on some they don't.

Mr. Sommerville: We are only dealing with this book.

Mr. Young: If that "30" referred to the top price, it ought to be on every page of the book. Is it? That was the top price for that day.

Mr. Factor: That "30" referred to the kilns.

The Chairman: We are trying to get the witness to admit that it referred to the kilns, but he won't do it. He says, however, that it adds up to thirty.

Mr. ILSLEY: He suggests a reason why it may not refer to kilns, and that is that in some other pages it referred to something else.

The WITNESS: That is it exactly.

Mr. SOMMERVILLE: Wait a minute.

The CHAIRMAN: Let us please stick to this one thing.

By Mr. Sommerville:

Q. Let me get this clear. Can you point out any page in this whole book where it does not refer to the number of kilns?—A. I would have to check it up.

Q. Would you look at the opposite page? Perhaps we will take it this way—

The CHAIRMAN: I would not waste time on it. Let us stick to one thing and finish it.

Mr. ILSLEY: I don't know why the witness is not permitted to say why he has any doubt about it.

Mr. LANE: Ask him to refer to the page of Birdsall Brothers.

The WITNESS: Refer to the page of Birdsall Brothers and see if it has it.

Mr. SOMMERVILLE: I will come to that in a few minutes.

Mr. LANE: That is the point you are making now.

Mr. SOMMERVILLE: We will come to that. If I add 99 and they come to the number, although there may be an exception, I am not going to take the exception for the rule in this book.

Mr. LANE: It is not the exception.

Mr. SOMMERVILLE: We will find out if it is or not. On the opposite page you have got 23 kilns shown under Hagerman, the opposite page to Vuylsteke.

The CHAIRMAN: I can't see for the life of me what prejudice there is to your cause or your interests, Mr. Lea, to admit that. It seems so completely satisfactory. I don't know what your object is. It would save a lot of time.

The WITNESS: It is 23 there.

By Mr. Sommerville:

Q. Yes, on the page following that, the kilns add up to 23?—A. I have not counted them.

Mr. LANE: What is the name?

Mr. SOMMERVILLE: Vandenburger.

The WITNESS: That is correct.

By Mr. Sommerville:

Q. And on the page opposite Vandenburger they add up to 27 under the name of Jack Hunt?—A. That is correct.

Q. Let us go back to Birdsall.—A. All right, sir.

Q. Under Birdsall, how many kilns are there?—A. 14.

Q. And there is no figure opposite to that?—A. No.

Mr. LANE: Yes.

The WITNESS: There is 25 down there.

By Mr. Sommerville:

Q. Well, there is no figure opposite to the 14 kilns; it is blank?—A. Yes, it is blank. The same things applies all the way through, some are added and some are not, just as I said a while ago.

Q. And the figure 25 at the bottom of the page, I suggest to you, refers to the price, because there is no price on Birdsall's at the right hand corner?—A. I could not say. As I have said before, I didn't even know they had any price on their books, sir.

Q. All right. We will stick to Vuylsteke. The Vuylsteke figures at the top of the page show that crop of 30 kilns was worth 26 to 27 cents?—A. Those figures that he has don't mean anything to me.

Q. They don't mean anything to you. I will show you what they mean in a few minutes. Look farther on at the blank page at the back where he has an index as to how he arrives at the grades—

Mr. LANE: Can we borrow your book?

Mr. SOMMERVILLE: Perhaps you have not got it. Don't lose the place for me. Just tell me what are those figures on that blank page at the back of the book, or towards the back of the book that I handed to you, of Wilson's book. You have got that, have you?

Mr. LANE: Yes, that is correct.

By Mr. Sommerville:

Q. Now, on that blank page are these figures, F. 36?—A. Yes.

Q. G. 32?—A. Yes.

Q. GM 28?—A. Yes.

Q. And M 25?—A. Yes.

Q. And all other 20?—A. Yes, sir.

Q. Now then take Vuylsteke's figures on that basis. I will give you the sheet so that it is very simply compared, and you find that Vuylsteke had no fancy whatever?—A. No, no fancy.

Q. He had five "good" figured at 32, that would be 160; and he had 12 "good medium" at 28, 336; and he had 10 "medium" at 25, 250; and 3 "common" at 20, sixty; and that totals up to 806, and divided by thirty, gives you 26.9?—A. I could not tell sir, I did not even know these figures were in the back of the book.

Q. You did not know?—A. No.

Q. Well, that is the key to the whole book?—A. It will still give him a top price of 36 cents.

Q. Now Mr. Lea, that is not something you thought about yourself, Mr. Lane suggested that. There was no fancy in the whole book from beginning to end, so there was no top price of 36. This is the key by which he arrives at his price? —A. I could not answer that question, I do not know anything about the key.

By the Chairman:

Q. You were with Mr. Wilson?—A. I was with him, yes; but I did not pay any attention to the book.

By Mr. Sommerville:

Q. Did you not consult with him as to what was the price or the value of the kilns that you were buying?—A. I left it entirely with him.

Q. Then you were not doing the buying, he was doing the buying?—A. Of course he was.

Q. Certainly, he was buying according to his book?—A. As far as I know I do not know whether he was buying by his book or not.

Q. Well, let me have that sheet back and we will put that in?—A. I did not even know he had a key.

Q. We have got the key to the other books.

Mr. YOUNG: I do not understand where you get that 32 cents top price in 1930.

Mr. SOMMERVILLE: It is an arbitrary key by which the various buyers settled, for their own satisfaction, what was to be the value of a crop. Some may have 30, and the top price will be 30 between medium and good, and that is top price; but they pay something above for fancy, and something below.

Mr. YOUNG: That is a premium.

Mr. SOMMERVILLE: Yes. In arriving at their own estimate of what is the price; and having done so they put a pencil price on the book you see to guide them in the purchase.

Mr. YOUNG: Did they ever pay this premium?

Mr. SOMMERVILLE: Oh no; it is an average for the whole, and the average arrived at on that basis was 26.9.

Mr. FACTOR: You mean, it is a means of calculating an average.

Mr. YOUNG: I understood you to say that there is a 32 cents there; that 2 cents represented the premium that the buyer thought that tobacco was worth over the market.

Mr. SOMMERVILLE: No, I do not think that. I say, Mr. Young, in arriving at an average price which he will estimate for that crop he fixes in his own mind the top price as between medium and good, and then something above that and something below that for the various grades; and he notes the number of kilns in each grade which will enter into the calculation, and he arrives then at this figure of 26.90, being the price that ought to be paid for the whole crop on the average.

The WITNESS: That system won't follow all through, will it?

By Mr. Sommerville:

Q. Yes, with all of these it will follow through?—A. All of those books?

Q. Yes?

Mr. LANE: Not all of these books, Mr. Sommerville.

Mr. SOMMERVILLE: I am talking about this book.

Mr. YOUNG: It looks as though the head buyer is questioning counsel for the committee.

The WITNESS: It is all new to me, sir.

Mr. SOMMERVILLE: Oh Lord love me, he says this is all new to him.

Mr. YOUNG: I do not see the way they fix the top price between medium and good; why do they not fix the top price on fancy?

Mr. ILSLEY: Because there will be no crop that is fancy.

The CHAIRMAN: Gentlemen, let us proceed with the examination of the witness.

Mr. KENNEDY (*Peace River*): It seems to be like the premium on hogs.

The CHAIRMAN: Mr. Sommerville, go on with the examination.

By Mr. Sommerville:

Q. Whatever is the reason for it, that is the system, Mr. Young; what I propose to show is that this system has been followed in the purchase the first day and the second day, but after a certain visit to Montreal that system rapidly changed and the 24 cent crop was bought for 15 cents; and that is the object.

The WITNESS: I can also point out to you, sir, after the trip to Montreal I bought 68,000 pounds at 24.60.

Mr. SOMMERVILLE: And there is a reason for that, Mr. Lea, which I will point out to you later.

The WITNESS: All right, sir.

By Mr. Sommerville:

Q. Now, Mr. Lea, the Vuylsteke purchase was made on these figures of Mr. Wilson; he says from 26 to 27 cents on the corner of the page?—A. That is what he has there, sir.

Q. And he purchases that crop at 27 cents?—A. That is correct, sir.

Q. Now then, look at Vanderburger and you will find the same thing?—A. Is that on the opposite page or is it over further.

Q. Over further. Now, Vanderburger has 27 kilns, and the 27 kilns——

The CHAIRMAN: Is that right; you are not getting an answer.

By Mr. Sommerville:

Q. Is that right?—A. I am trying to find out, sir.

Q. Just the page beyond Vuylsteke?—A. Which one, Mr. Sommerveille?

Q. It is the very next page?—A. 27 acres of it.

Q. 27 acres "good," 27,000 pounds; and in the top of the page "25 to 26 cents" is the pencilled note of Mr. Wilson; and the number of kilns is 23, and you bought that crop for 26 cents?—A. Yes.

Q. 27,000 pounds?—A. That is correct, sir.

Q. Now, when you went to Montreal and came back again the following week, were you with Mr. Wilson then?—A. No, sir.

Q. You were buying alone then?—A. That is the only day I was with Mr. Wilson.

Q. You were buying alone then?—A. No, with another buyer.

Q. With another buyer; and did you give instructions then to Wilson as to what he was to pay for the crop?—A. I did not, sir.

Q. Who gave the instructions?—A. I could not tell you, sir.

Q. What instructions did you bring back from Montreal at the end of the week?—A. Instructions that I brought back from Montreal?

Q. Yes, as to keeping down the price?—A. I conveyed Mr. Buell's message, that we had agreed before we left Montreal to arrive at an average of less than 24 cents, we had to continue to buy some common or medium tobaccos at a much lower price to arrive at that average.

Q. Yes, and was it not a fact that you had to buy not common and medium, but good tobacco, to get down to that price?—A. That is a matter of judgment.

Q. Judgment. Well, we will see how good that judgment is. Now, look at Jack Furlong and Brother, October 20?—A. Is that just over?

Q. That is 8 to 10 pages before that?—A. I have it.

Q. Fifteen acres "good," ten acres "medium rough"?—A. Yes.

Q. 25,000 pounds altogether; and the price in the top corner in pencil, 24 cents?—A. I see the figure there. I do not know whether that indicates price or not.

Q. But you see a figure which is similarly placed to the others?—A. Placed similarly to the others, yes.

Q. And out of that there are 18 kilns; and you pay for that 15 cents?—A. Mr. Wilson did, I did not.

Q. Mr. Wilson paid 15 cents, for what had been his estimate of 24 cents when making up the books?—A. I can't say, sir, I could not say whether he had that estimate or not.

Q. Then look at Hagerman—two or three after that?

Mr. ILSLEY: Mr. Sommerville, does the key indicate that 24 cents will be the value of that crop?

Mr. SOMMERVILLE: The key indicates that 24 would be the value of that crop, the same key applied to the same grade.

The CHAIRMAN: In the same book.

Mr. SOMMERVILLE: It indicates that the value of that crop was 24 cents.

Mr. ILSLEY: Then there is no doubt in the world that the 24 figure refers to the value of the crop.

By Mr. Sommerville:

Q. Now, look at Hagerman?—A. I haven't found it yet.

Q. It is four or five after the one I gave you—Furlong.

Mr. LANE: Who is the other name on it?

Mr. SOMMERVILLE: This says H. Hagerman is the owner, and there is Lafollette.

Mr. LANE: Twenty-three kilns, is it?

By Mr. Sommerville:

Q. You have got it now; and H. Hagerman that page reads: 27 acres good, 30,000 pounds, owner H. Hagerman, 23 kilns graded; and the price indicated at the top of the page is 24 cents, and you paid that for it; is not that right?—A. I could not say.

Q. The figure at the top indicates 24?—A. Not as far as I know, sir; I do not know about these figures.

Q. There is a figure 24?—A. Yes, there is a figure there.

By Mr. Factor:

Q. I just wanted to ask him about that, I have no doubt in my own mind about it; did you not discuss with Mr. Wilson the estimate price for the crop? —A. I was not with him when this crop of tobacco was bought.

Q. You did discuss that with Mr. Wilson, didn't you?—A. I could not recall. I do not remember.

Q. But you went around with Mr. Wilson, didn't you?—A. Only on the first day, sir.

Q. Yes, and did you not discuss with Mr. Wilson the estimate of the price you were to pay?—A. Sure, I discussed it with him.

Q. And you did not arrive at a certain figure as an estimate?—A. Sure.

Q. And you did not know that Mr. Wilson put that estimated figure in his grading book?—A. No, sir, I did not.

By Mr. Ilsley:

Q. I imagine that when you and Mr. Wilson were talking together about what you were going to say that he would take his little book and would say, Now we can afford to pay this man 24 cents?—A. That does not apply all the way through, sir; only the opening day.

Q. When you were talking about how much you could afford to pay, he would surely pull out that little book?—A. We always look at the tobacco, not at the book.

Mr. SOMMERVILLE: Then there was not any object in keeping the book.

The CHAIRMAN: What was the object of the Imperial Tobacco Company keeping a large staff going all summer visiting these farms and keeping track of the growing crop?

Mr. SOMMERVILLE: And then going four weeks in succession and looking at the kilns.

The WITNESS: To locate the most desirable crop.

The CHAIRMAN: And getting a record on all the crops.

The WITNESS: Supposed to be a record; but there is such things as buyers grading altogether different. I have seen a crop—

By the Chairman:

Q. Is this, or is it not, an estimate of the officers of the company as to the condition of the crop?—A. Is this an estimate.

Q. On the condition of the crop reported in these books?—A. It is supposed to be, sir.

Mr. SOMMERVILLE: And by the accredited buyers and inspectors of the Imperial Tobacco Company.

The WITNESS: Sure, but all buyers make mistakes.

The CHAIRMAN: We know that, every human being does that; but why quibble.

Mr. LANE: He is not attempting to quibble, Mr. Chairman; simply this is foreign to the common practice of buyers, it will not be substantiated in any other product.

By Mr. Sommerville:

Q. Don't bother about the methods of other buyers, we will get that later if we can't get that here. I asked Mr. Gregory to come here and he refused to come, but we have subpoenaed him?—A. Maybe he could tell you more about it.

Q. Now, Hagerman's shows 27 acres "good"; 30,000 pounds; kilns all graded—23 kilns, and if you work these 23 kilns out by the key that is in the book you get a figure of 24 cents?—A. No, 25 cents.

Q. You are right, you get a figure of 25 cents; and they put at the top 24 cents; and you bought that crop for 18 cents---Why?—A. I can't tell you, sir, I was not with Wilson.

Q. Wilson was following instructions, and this was the day after you came back from Montreal?—A. Possibly if I had been with him he would not have bought at 18 cents.

Q. He would have bought at less?—A. No, possibly more.

Q. Did you reprimand anybody for paying less?—A. I have raised the price of lots of buyers.

Q. In 1931?—A. Yes, sir, I certainly have.

Q. I think Mr. Gregory was in charge of that buying? At any rate, on the day after you got back from Montreal, this was bought for 18 cents?—A. I think your record shows that.

Q. And Wilson's estimate was 24 cents. Now look at Roseheart, that is toward the middle of the book?

Mr. LANE: Did he read, that the crop had been bought at 14 cents? I don't see it.

Mr. SOMMERVILLE: If you don't I will show it to you on the record. I cannot tell you the number of the sheet, but here it is, and look at the next one.

Mr. LANE: The next one to it.

By Mr. Sommerville:

Q. Settle on that Hagerman, you paid 18 cents for?—A. 18 cents for 30,000 pounds.

Q. Now look at Roseheart while it is there and agree on the price that you paid for him. What amount did you pay Roseheart. Look at the sheet?—A. Roseheart 16 cents.

Q. Roseheart you paid 16 cents on the same day; and you bought 32,000 pounds from Roseheart of Aultsville at 16 cents; and if you work it out on the grading in the book according to the key which Wilson has provided, the price that Wilson would put on that is 24 cents?—A. I could not tell you on that key, sir, I did not even know it was there.

Q. Can you tell me why a 24 cent crop was bought for 16 cents?—A. No sir, I cannot tell you, because I was not there when he bought it; possibly I did not agree it was a 24 cent crop.

Q. All right, you will work it out and then if you do not agree we will see what it is?—A. I could not say it until I see the crop.

Q. Then you can't agree even if it works out on this basis?—A. As I told you, sir, the key did not mean anything to me, I did not know the key was in the book until you brought my attention to it.

Q. I think there are a lot of other things that you did not know were there. This statement is an exhibit showing the working out of that. At any rate, it is quite apparent Mr. Lea that the price of that crop dropped very rapidly after your return from Montreal?—A. From Wilson's book it appeared that way.

Q. From all of your purchases?—A. No sir, our average is more than that; we can show that.

Q. What would you figure the first week?—A. The top price of 30 cents.

Q. You got down, your average the first week was how much?

Mr. Lane: Is that the first day, or the first week.

Mr. Lea: The first day was 27.59.

By Mr. Sommerville:

Q. No, it is the first week I am asking about. But, all right, we will take it on the first day and follow through that week. Take it on the first day, Mr. Lea?—A. 27.59.

Q. On your second day?—A. 26.20.

Q. Your third day?—A. 23.02.

Q. And the fourth day?—A. 20.26—that was October 10.

Q. That is, in four days you got your average of 27 down to an average of 20?—A. You must remember that we always try to buy the best crops on the first day—in the first three days.

Q. But even excepting that you did not pay your top price the first day?—A. No two crops are exactly alike.

Q. Now then, what was the average the next day?—A. We bought 54 per cent of the total in the first few days.

Q. In the first week you bought 57 per cent?—A. No, 63 per cent.

Q. All right, the first week you bought 63 per cent; what price did you get down to on the fourth day?—A. 19·12 it seems here, I was not there that day.

Q. Where were you that day?—A. I was going to Montreal, sir.

Q. Yes, and then?—A. On Monday, the 12th, I was right back at Delhi, I was at the factory that afternoon—we were opening the following day and I did not go into the country.

Q. What was the average on the Monday that you arrived back from Montreal, that is the sixth day?—A. 17·86; on the 13th it was 19·90.

Q. And then the next day?—A. 16·67.

Q. And the next day?—A. 16·26.

Q. And the next day?—A. 17·25.

Q. And the next day?—A. 17·44.

Q. And the next day?—A. 16·71.

Q. And then the next?—A. Up to here we got 90 per cent of our purchases in the Delhi district.

Q. In the Delhi district, you had not transferred your operations to Leamington then?—A. No, sir.

Q. And the next day?—A. I gave you the 20th, didn't I?

Q. Yes. Now, the next day?—A. 15·60.

Q. And the next day?—A. 16·89.

Q. And the next day?—A. 23·23.

Q. What date was that?—A. On November 11th.

Q. Now, you entered your purchases for a time on the 21st October; on the 21st, when you ceased purchasing what was the average price you paid on that day, October 21st?—A. 15·60. Our average up to that date was 23·09.

Q. All right, we will get that in. You had 15·60 when you ceased on the 21st. You did not buy the following week?—A. Yes, sir.

Q. For that week, and after that week, you did not buy?—A. It is split between the 21st and the 29th, we resumed; we began buying in Leamington.

Q. On the 9th?—A. Yes, sir.

Q. And between these dates you had received an order for a million pounds from the Imperial of Great Britain?—A. Yes, sir.

Q. And having received that order you went out and bought an additional amount, you bought altogether about 800,000 pounds?—A. Approximately.

Mr. KENNEDY *(Winnipeg)*: Can you place the date of that order, Mr. Sommerville?

Mr. SOMMERVILLE: The order was received during the early part of November.

By Mr. Sommerville:

Q. Apparently there was not very much of a surplus then when you found it necessary on receiving an order for a million pounds to go out and buy another million pounds?—A. Yes, sir, there was lots of tobacco, lots. And there is a lot of tobacco you have reference to, there is the tobacco that I bought from the Lake Erie Tobacco Company. I had never seen this tobacco and I had been advised that it was the best tobacco grown in the north, which I found contrary to my judgment.

Q. And that was Mr. Kingstone's tobacco you went down and saw?—A. I purchased that in November and paid as high as 27 cents.

Q. Yes, I know you did. After ceasing your buying operations then—from the average prices that you paid on your day-to-day purchases, you stopped at 15·60. Now, what did you start in again at?—A. November 9, 16·89; November 10, 23·22; November 11, 16·42; November 12, 14·58; November 13, 23·96; November 21, 21 cents; November 28, 25 cents; December 2nd, 22·80.

Q. Now, Mr. Lea, I suggest to you that the condition has become generally worse in the buying season of 1931, and when you got down to 15·60 the growers appealed to the Department of Agriculture in Ontario and they announced they were going to help the growers, and that was the reason that the market stiffened?—A. Was that 19—.

Q. 1931?—A. I thought that was in 1932.

Q. In 1932 they gave the money; but in 1931 you had the direct announcement that the Department of Agriculture would intervene; I suggest to you that that is the reason you increased the price?—A. It did not have any affect on me.

Q. It did not have any affect on you?—A. No, sir.

Q. All right, then, what was the reason? What was the reason you went from 15 cents to 23 cents?—A. Because we found better tobacco in the field than we thought was left there.

Q. If that is so, why did you buy "24" for 24 cents instead of paying 16 cents and 18 cents, during the first week according to Wilson's book?—A. I have stated to you, I was not with Wilson when he bought it.

Q. You knew what was being done by your buyers right along the line?—A. I did not have every buyer?

Q. Did you not bring back instructions from Montreal that they must keep down the price, that the average was too high, and they must reduce the price paid?—A. I just stated that we had to get under 24 cents average; and we had to buy more common and medium tobaccos to bring it from where we started at.

Q. And I suppose you would not resist the temptation to buy good tobacco at a price that would bring it down to 23 cents?—A. I never fail to buy good tobacco, I like good tobacco; but if you have got common tobacco you have always got common prices for it.

Mr. FACTOR: What kind of tobacco is this "24 cent estimate" that is sold for 18 cents?

By Mr. Sommerville:

Q. Yes?—A. I do not recall ever seeing that crop, sir.

The CHAIRMAN: The record will show it.

By Mr. Sommerville:

Q. You are talking about common tobacco: let me show you what you bought in that crop in 18 cents -and that should be common tobacco, shouldn't it?—A. I think that is pretty high for common tobacco, 18 cents.

Q. Let me tell you what you got: you got 5 kilns of good tobacco, you got 12 kilns of good medium tobacco, you got 10 kilns of medium tobacco, and you only got 3 kilns out of 30 of common tobacco; and for that you paid 18 cents? —A. Whose crop?

Q. I am speaking about Hagerman's crop.

Q. You are not buying any common tobacco for 18 cents?—A. Evidently Mr. Wilson thought it was common if he did not pay over 18 cents.

Q. You do not expect us to believe that.

By Mr. Sommerville:

Q. Do you mean to tell me, after Mr. Wilson had examined every kiln and written the grade in the book that he went out and thought he was buying common tobacco?

Mr. FACTOR: Do not try to give an explanation for that.

Mr. SOMMERVILLE: I do not think there is any use in following that any further.

The CHAIRMAN: Not a bit.

Mr. SOMMERVILLE: Well, I have only taken one book, and it was picked up at random. The others, I am told, figure out on different scales, and different methods, but they arrive at the same result.

WITNESS: Here is one that has not got anything at all on it.

By Mr. Sommerville:

Q. No, it has not, but there is another basis for arriving at it?—A. No other basis in this book.

Q. You do not know it, at least?—A. No.

Q. Some of the growers are in a position to know, apparently, what the indices are in the book that show us what the values are. Now Mr. Lea, when you came back from Montreal, I am told that you announced to the buyers that you were going to show them how to buy tobacco, and they must buy it cheap?—A. I don't remember.

Q. Is that true?—A. That is without foundation. I do not remember anything about it. I might have sir, but I doubt seriously whether I did say it.

Q. What would you say to them, after coming back from that conference in Montreal; in your own language, what would you say?—A. I have just stated to you, sir, that we have to buy common and medium tobacco, to arrive at an average under 24 cents.

Q. When you found they were buying 27 kilns out of 30 that were better than common, did you suggest for a moment that the farmer be given a squarer deal?—A. Surely.

Q. Hagerman, for instance?—A. As I said, I did not see the Hagerman crop; I do not remember anything about it.

Q. You knew they were buying better than common for the price they were paying?—A. I hope so.

By the Chairman:

Q. Is it not clear that Mr. Wilson had noted 24 cents as a fair price for good medium and medium kilns?—A. His book appears that way.

Q. It appears that way?—A. Yes.

Q. That is a reasonable assumption. The fact is he paid 18 cents?—A. Yes, sir.

Q. And it included good, good medium and medium?—A. Before the tobacco is got out, sir.

Q. Well—A. This tobacco has to be taken to the plant.

Q. The notation of the price is on the book?—A. That is only a guide, sir, that book there.

By Mr. Sommerville:

Q. It was a pretty good guide for 20 years, but not a good one in 1931?—A. I was not here before that.

Q. Thank goodness for that. I say that from the bottom of my heart, Mr. Lea. I want to ask you did you— —A. I was not asked—in other words, I did not ask to come up here either, sir.

Q. I would like to know who sent for you and the growers would like to know.

Mr. LANE: The Imperial Tobacco Company sent for him.

Mr. SOMMERVILLE: I see, Mr. Lane.

Mr. LANE: That is the answer.

By Mr. Sommerville:

Q. Did you, in Tillsonburg, walk into the hotel where your buyers were gathered, with a sample of tobacco in your hand, and say to your buyers: "What do you think of that?" Wait a moment until I finish.—A. All right.

Q. You can answer as you wish. "What do you think of that"? And they said, "It looks like 22 cents." And did you say to them, "I just bought that from a boy who is putting himself through college for 14 cents, and you fellows had offered him 24 cents, and he refused it, and he took his medicine like a man." —A. I do not remember ever making such a statement as that.

Q. Will you swear you did not say it?—A. Yes, I will swear it.

Q. Mr. Robbins, will you step up here? Mr. Lea, you just step aside for a moment, and we will clear up one thing at a time?—A. I do not recall it.

The CHAIRMAN: You said you did not say that.

Mr. SOMMERVILLE: Did you say that?

The WITNESS: No sir, as far as I remember, I did not say that.

Mr. KENNEDY (*Winnipeg*): That is a different answer. First you said you do not remember; then you said on oath you swear you did not say it. These are two different statements.

The WITNESS: Well, I do not recall it at all.

Mr. KENNEDY (*Winnipeg*): That is another story.

By Mr. Sommerville:

Q. You may have said it?—A. I might have said it, but I do not recall it at all. I do not think I did say it sir. Furthermore, I do not remember ever taking any samples to Tillsonburg; of course I usually take samples to the office.

Mr. KENNEDY (*Winnipeg*): I draw the attention of the committee to this: He does not change his statement until there is a witness called to give direct evidence.

Mr. SOMMERVILLE: Just sit down, Mr. Robbins, because it may be necessary to have your evidence.

By Mr. Sommerville:

Q. Then, may I put this to you, Mr. Lea: Did you make this statement: "I do not see why these tobacco growers drive up to see me in a Buick car; they have got no business doing so"?—A. No, sir.

Q. "I will put them back on their feet"?—A. No, sir; I do not recall ever saying that.

Q. Will you swear you did not?—A. Yes, I will swear I did not say that.

Q. Did you say, "I will have the tobacco buyers going back driving horses and buggies"?—A. No, sir, I did not say so.

Q. Can you tell me—

Mr. SENN: Tobacco growers.

Mr. SOMMERVILLE: Did I say tobacco buyers?

Mr. SENN: Yes.

By Mr. Sommerville:

Q. Did you say any such thing about the growers?—A. No, sir, I never.

Q. Can you give me the slightest reason why anybody should repeat such a thing on you?—A. I cannot tell you, no sir. You can hear most anything up in that country.

Q. Can you?—A. You bet your boots you can.

Mr. KENNEDY (*Winnipeg*): Is it he does not remember saying it, or that he swears positively he did not?

By Mr. Sommerville:

Q. Do you remember saying that, or is it just that you do not remember saying it?—A. I will swear I did not say it, sir.

Q. You will swear you did not say it?—A. Yes.

Q. Did you say to the tobacco buyers, as you brought in your samples, "I will teach you fellows how to buy tobacco," as you showed them the 25-cent tobacco that you had bought for 15 cents?—A. I might have said that, sir, at the factory, but not at the hotel.

Q. I do not care where you said it. Is that what you said to your buyer?—A. No, sir, not 25 cents at 15.

Q. 22 cents at 15 cents?—A. Well, 15 cents is all it is worth, if I paid 15 cents for it.

Mr. FACTOR: That is not an answer.

The CHAIRMAN: You do not deny having said it?

The WITNESS: What is the question?

Mr. ILSLEY: I do not understand that question.

By Mr. Sommerville:

Q. Did you go into your crop buyers and show them tobacco which they said was worth 24 cents, or 25 cents, and say to them, "I will show you how to buy it; I bought it for 15 cents"?—A. I recall showing some tobacco to Mr. Gregory at the plant in the office, and I think he priced it at 18 cents, 20 cents, 22 cents. I said I bought it for 18 cents.

Q. That is a new one. I will have to ask Mr. Gregory about that one, but I have heard a good many others. Is there anyone else you showed it to?—A. Not as far as I remember.

Q. Was it not your practice during the whole buying season to take those samples to your buyers and impress upon them that they must buy that tobacco on your basis?—A. I did that, certainly, to get uniform buying throughout the district.

Q. Uniform buying down to your level; is not that a fact?—A. That is unfair, sir. I had to carry out instructions, you see.

Q. Whose instructions, Mr. Gregory's?—A. Mr. Buell, and assist Mr. Gregory.

Q. I beg your pardon?—A. And assist Mr. Gregory in buying.

Q. Now, then, let us clear up the 1931 matter. There was a good deal of complaint that year, was there not, about the buying methods and the prices being paid?—A. I think it is still being complained of.

Q. There was in that year, 1931?—A. As far as I know. I understand there is considerable.

Q. Was there in 1931?—A. I understand so.

Q. And did it become acute in 1932?—A. No; I think the tobacco was bought nearer to the value in 1932.

Q. Although you bought it on an average of 17 cents nearer to the value, the value of what?—A. The value of the product, considering the quality sir.

Q. The quality?—A. Yes.

Q. The finest quality ever produced in Canada was produced in 1932?—A. I think so; the best I have seen up here.

Q. The better the quality the lower the price?—A. It appears that way sir, due to over production.

Q. No. You were saying it was bought according to quality? Do you want to change it now and say it was bought according to quantity?—A. On account of so much tobacco being up here.

Q. Which of them do you want to stick to, the one or the other?—A. Quality.

Q. Quality?—A. And quantity too.

By Mr. Ilsley:

Q. What top price were they working on in 1932?—A. 24 cents down, and in 1932 we bought four and a half millions around 20 cents. We tried to hold the price until some other buyers came in and put their price to 18, and naturally we had to come up to buy along with them.

Mr. SOMMERVILLE: You must have been ruined by those other buyers?

By Mr. Factor:

Q. Did you receive any complaints from the farmers about the 1931 crop and the low price you were paying them—you personally?—A. No, sir, I did not, personally.

Q. They never appealed to you about receiving a low price?—A. Never came to me about it.

By Mr. Sommerville:

Q. Mr. Lea, when you went in to buy from the farmer and his wife, did you find that the women actually wept at the price you offered?—A. One of my buyers was telling me of one of those Belgian women who wept when she was offered 28 cents for it the first day. Naturally they like to get the top price or—

Q. I am asking you about your experience?—A. Possibly I have seen some of them weep.

Q. Did you ever buy any tobacco from those Belgian women?

Mr. Factor: You do not think the Belgian woman is a human being?

Witness: Yes, I do, I think they are the best people up there. They are very good growers.

By Mr. Sommerville:

Q. Did you get to the point where you said to the husband, "You will have to have your wife go into the house—"?—A. I might have said that.

Q. "—because I cannot stand her weeping."—A. No, I never like to see a woman weeping.

Q. There is something at any rate, that touches your heart. Now then, in 1932, the crop was ready a couple of weeks earlier than usual by reason of the new type that was being grown?—A. Yes.

Q. And it was cured and ready for harvesting, is that right?—A. Yes.

Q. And did you, at that time, delay the opening of the market with a view to depressing the market?—A. No, sir, I did not.

Q. And when you did open the market, you opened it at a top of 24 cents?—A. Correct.

Q. On the first day the average price was 22·40 cents?—A. Correct.

Q. The second day you got it to 20·90 cents?—A. Correct.

Q. The third day to 18·54 cents?—A. Yes, sir.

Q. The fourth day to 16·2?—A. That is the statement.

Q. On October 31, to 16·04 cents. Did you consult with Mr. Harrison about the price of the crop at that time?—A. No, sir.

Q. Did you consult with him at any time?—A. No, sir.

Q. Did you discuss the matter with him at any time?—A. No, sir.

Q. On the 31st October did you talk with Mr. Harrison about the price of the crop?—A. Possibly I did that, for he was in Canada at that time. He made several visits up to Delhi.

Q. As a matter of fact, Mr. Lea, Mr. Harrison registered at Tillsonburg with you that day, did he not?—A. I think so. He made several visits up there.

Q. He came up with you and Mr. Buell on the 31st October?—A. I think that is correct.

Q. On that day. You had then the market open for five days with a top of 24 cents, and you had got it down to 16 cents, and on November 1, 16·61 cents, and that was the day that Mr. Harrison went away, was it not?—A. I presume so.

Q. And the next day you went out and celebrated it by bringing it down to 15·51?—A. No, it was not a celebration; it was a sad state of affairs.

Q. And the next day you got it to 14·02?—A. The statement shows that that is so.

Q. And the next day to 13·42?—A. That may be true.

Q. And the next day 14·22?—A. That may be true.

Q. The next day 13·64?—A. That may be true.

Q. We will finish this list. Next day 13·64 and the next 14·58; is that right?—A. I think that is so.

Q. Now, there was another practice indulged in in connection with the buying of the crop. Is it not a fact that you sent men out to buy the crop and then they came in. Instead of sending them out for the day to buy throughout the day, you sent them out to buy a crop here, and a crop there, and then they came in and you sent them out on another day to buy a crop here and there?—A. I have a policy for that. On the opening day sales, I remember we bought 1,000,000 pounds.

Q. Yes, you did, you bought 1,300,000 pounds.—A. About 22 cents, was it not?

Q. Twenty-two cents.—A. Yes. Then the next day, as I recall it, we bought around 2,000,000 pounds.

Q. Yes, 1,900,000 pounds. Your memory is better on figures than it is on some facts.—A. 21 cents.

Mr. LANE: Figures are facts.

WITNESS: Figures are facts.

By Mr. Sommerville:

Q. On the next day you bought a million and a quarter?—A. Yes.

Q. From then on you bought small quantities?—A. Some of our friends cr competitors started to buy at 18, and naturally it weakened the market.

Q. You had been buying on the second day of your buying at 18 cents?—A. There were bought some tobaccos, I think, on the first day at 7 or 8 cents.

Q. You got your average on the second day or the third day, at 18 cents?—A. It depends altogether on the quality of the tobacco.

Q. But Mr. Lea, you were just opening the market for the finest crop that had ever been grown?—A. Mr. Sommerville—

Q. On the fourth day you got an average of 18 cents?—A. The biggest that was ever grown, and besides that, when you open the market, you find some common tobacco in the best crops there.

Q. You were talking now about buying poorer quality on the 3rd day, but I am suggesting to you that you had not touched 10 per cent of the best of the crop?—A. Well, sir, you can buy some common tobacco in the best of the crops up there. In a good crop at 24 cents, you will get some tobacco out of that crop —we took some at about 4 or 5 cents.

Q. You see, there was a 29,000,000 pound crop?—A. We bought 31 per cent in the first three days.

Q. Four days really?

Mr. LANE: Three days.

By Mr. Sommerville:

Q. You had a 29,000,000 pound crop or something like that, of the finest quality tobacco, and in the first three days you had about 4,500,000 pounds purchased?—A. Something like that.

Q. You do not want this committee to believe that on the third day the reason for your drop was because you were buying a poorer quality of tobacco. It was because you were buying a good quality tobacco at a lower price?—A. Not as good tobacco as we bought on the first day. We tried to take up the finest crop. Some crops up there, the frost had killed the tips, and these are the crops we went after the first day.

Q. You had then adopted the policy of buying a few crops?—A. We formulate the policy before we open the market, of buying so much each day. We knew when we started we could not lift but so much of the tobacco. Every buyer does the same thing, sir.

Q. I know, but in 1931 you bought 63 per cent the first week?—A. I was not directing the buying that year.

Q. You bought most of it on the first day you did buy? Is it not a fact that if you prolong your buying over five or six weeks' time, you soften the market, and make it easier— —A. It is a matter of opinion.

Q. What is your opinion?—A. No.

Q. Is that your opinion, or Mr. Lane's, that he has passed on to you?—A. That is my opinion.

Q. What is the effect then of prolonging the purchases over a period of six or seven weeks on a big crop? Is that done to steady the market or to reduce the market?—A. It is to steady it. Supposing we were to come up and do the whole purchases for that year in a weeks' time, and get out of the market, where would the rest of the crop of tobacco go?

Q. Well— —A. The other buyers knew we could not handle all that crop of tobacco.

Q. There was enough for everybody?—A. That is right.

Q. That effect would depend upon what you opened the market at?—A. Somewhat, but you will notice our average, and notice there is—

Q. I do notice your average, and it is the lowest average ever paid for a crop of tobacco, and it was the finest crop of tobacco ever grown in this country.

Mr. Lane: Others had paid a lower average.

Witness: Mr. Sutherland's report states that.

The Chairman: Mr. Lane, we have no objection whatever to the witness referring to you for information about documents, and so on, but the witness must answer for himself.

Mr. Sommerville: You never bought tobacco in your life.

Mr. Lane: No, I have not.

Mr. Sommerville: Let us talk to the man who has been buying tobacco; he is an expert.

Witness: Not buying; I just want to correct you.

Mr. Sommerville: I do not think it was buying.

Mr. Factor: You were the head buyer?

Witness: In 1932, yes, sir, I was in charge of the buying.

By Mr. Sommerville:

Q. Then Mr. Lea, as a result of this panic that did exist in the tobacco fields, you had meetings of the Chambers of Commerce, you had wires to the Prime Minister of Canada and to the Department of Agriculture in Toronto, all protesting— —A. I understand so.

Q. You would be thoroughly familiar with what was going on?—A. No, sir, I took all my time to look after our business.

Q. It didn't bother you in the slightest what they were doing?—A. No, sir, it did not.

Q. Then, the Ontario government stepped in, did it not?—A. Yes, sir.

Q. What did they do?—A. They did not do anything as I know of; they did not buy any tobacco that year?

Q. What did they do?—A. They did not buy any tobacco, to my knowledge, in 1932. They have some tobacco on hand now.

Q. Did they then definitely agree to support the farmers?—A. That is the opinion I have through the newspapers, sir.

Q. As a result of that, is it not a fact that the price went up on the 9th November from 14 cents, on the 12th November from 15 to 17— —A. Not necessarily, sir. It depends altogether on the quality of tobacco that was being sold at that time.

Q. By this time, Mr. Lea, everybody was in, and they were buying at a very much lower price, everything was going down?—A. Yes.

Q. How do you account for the increase in the price to 17 cents on the 12th November, and then to 18 cents on Monday, the 14th?—A. The only answer I can give you, sir, is quality.

Q. Quality?—A. Sure.

Q. The quality was improving?—A. I do not hesitate to tell you sir, I bought crops of tobacco that the farmer said he was offered 14 cents for it, and I could have bought it for 16 cents, and I gave him 18 cents late in the season.

By Mr. Factor:

Q. I thought you said the best quality was purchased at the opening?—A. Quite so, Mr. Factor, but you cannot pick up every good crop of tobacco in that great big district down there.

The CHAIRMAN: You cannot have it both ways, Mr. Lea. You cannot have it that the reason the price fell was that the good tobacco was gone and you were buying a lower grade tobacco; when the price rose two weeks after, it was because a lot of good quality tobacco was being bought; it is not consistent.

Mr. ILSLEY: He said he discovered some new high quality tobacco that he did not know was there, the southern crop, the Lake Erie crop.

Mr. SOMMERVILLE: That was 1931.

The WITNESS: That was 1931. It is a matter of impossibility to find every good crop in that section the first few days.

By Mr. Sommerville:

Q. At any rate the price did rise to 18·50?—A. What price?

Q. The average.—A. Some few crops were bought on that day.

Q. Let us see some of those good crops. On the 21st you purchased 578,000 pounds at 18·24. These are purchases you had made after two weeks, so it is not a small crop.

Mr. KENNEDY (*Winnipeg*): Are there other crops?

Mr. SOMMERVILLE: 367,000 pounds at 14·02; 844,000 pounds at 13·40; 330,000 pounds at 14·40; 413,000 pounds at 14 cents.

Mr. KENNEDY (*Winnipeg*): That is plenty. It shows clearly it was not just the tail end of the tobacco.

The CHAIRMAN: I do not think Mr. Lea would want any intelligent person to believe that.

The WITNESS: It was that.

By the Chairman:

Q. Were those quantities of tobacco that Mr. Sommerville just quoted of inferior grade?—A. No, it was not inferior tobacco by any means. There was some splendid tobacco sold at 14 cents, as I just stated. I came in contact with a number of crops that other buyers had offered 14 cents for, and I offered 18 cents.

Q. I suggest to you that there were only two things you did— —A. All right, sir.

Q. —that season that affected the market. The first was to delay the opening for a month?—A. I did not delay it, sir.

Q. You were in charge of the purchasing then. Who instructed you on that? —A. No one instructed me to delay the opening, none whatever. I had no instructions.

Q. Who instructed you to open it?—A. Mr. H. P. Buell.

Mr. FACTOR: When did you first come to Delhi to open the market?

The CHAIRMAN: 1932?

The WITNESS: As I remember, it was a couple of days before I opened the market.

By Mr. Factor:

Q. That was your first time in Delhi?—A. That is correct, sir.

Q. In 1932?—A. I was up there a number of times, right through the country, all during the season sir.

Q. When the crop matures—I understand it matures and is ready for the market at the end of September? Now, how soon after that did you go to Delhi to make arrangements for opening the market?—A. As well as I recall, I was there two or three days before the market opened.

Q. Was that the first time you came up after the end of September?—A. No, I think I was up there the last of September, as well as I can remember; I cannot recall that.

By Mr. Sommerville:

Q. Can you tell me this: I am looking at a letter which Mr. Buell wrote to Mr. Reed, of the Imperial Tobacco Company of Great Britain and Ireland?—A. Yes.

Q. Mr. Reed is the representative at Richmond, Virginia?—A. The Imperial Tobacco Company of Great Britain and Ireland has headquarters in Richmond.

Q. He goes on to say that they are going to open their buying next week?—A. October 18.

Q. They are going to open the buying next week, and he suggests Mr. John Hutson meet you at Hamilton, and that you then go from Hamilton together?—A. Yes.

Q. Then he says, I think they should begin operations not later than October 16. "Our Delhi organization will only be notified of these plans a day or two in advance." Can you give me any reason for the secrecy in not letting the Delhi organization know anything about it?—A. We never let anyone know what our plan is going to be, until the time comes.

Q. Remember now, you are a month later in opening, everybody is anxious. The whole area is in a state of wonderment. Here is the letter. It says, "Our Delhi organization will only be notified of these plans a day or two in advance." Why the secrecy in letting your Delhi organization know nothing about the opening day?—A. I cannot—it is a custom of the company, as far as that is concerned.

Mr. KENNEDY (*Peace River*): Who is Mr. Hutson?

The WITNESS: Representative of the Imperial of Great Britain and Ireland, sir.

By Mr. Sommerville:

Q. You give it as the custom, but they are calling attention to the fact that they are keeping it a secret when they were going to open the market?—A. We always do that.

Q. You always do that?—A. Yes, since I have been up here, always kept it a secret until the night before they notified the buyers.

Q. But other buyers had been in Delhi registered at the hotel and waiting there for weeks, for the opening of the market?—A. I cannot tell you sir, I was not there.

Q. At Tillsonburg?—A. I was, at the time.

Q. You had heard?—A. I had heard.

Q. Here is the whole list of the buyers who were registered there, and waiting four weeks for the opening of the market, and you were keeping that a secret, but you cannot give any reason for it?—A. No, sir. The custom of the company is never to notify the buyers until the day before the market opens.

Q. And the second thing I suggest to you that you did, with a view to depressing the market in that year, was to delay purchasing and only buy a

small quantity each day over a period of five weeks, instead of cleaning it up like you did the previous year?—A. No, sir; the reason for doing that was simply to try to steady the market. I did not want to fill our requirements in a week's time.

Q. Would you get the product cheaper by staying off five or six weeks rather than filling it in one week?—A. Would you do what?

Q. Would you get your product cheaper by buying over a period of six weeks rather than buying in two weeks?—A. I do not think it has anything to do with it.

Q. You do not think it has anything to do with it?—A. With our average, no, sir.

Q. In other words, a keen buyer cleaning up in two weeks would not pay more than a sluggish buyer over six weeks?—A. It is a matter of judgment.

Q. Well, as a matter of fact, now, did it not work out in this way, that when you did not clean up in two or three weeks as had been your custom, did you not have the growers come to your door begging you to come and buy their crop?—A. Possibly, some of them, yes.

Q. Possibly. You were there on the spot?—A. Yes. We had a number of them.

Q. Yes. Lots of them. I am told there never was a day pass that you did not have plenty of them coming back?—A. I do not think there were many in 1932, Mr. Sommerville.

Q. Was it worse in 1933?—A. It was worse in 1931, as I remember.

Q. You were only ten days. You would have 63 per cent in 1931?—A. I recall very well in 1931 these people broke their necks coming in. It had been a practice. The crop was small.

Q. You bought very fast, 63 per cent in the first week. You were living up to your reputation in 1931. Now you are buying in such a way that you only bought 32 per cent the first week, 20 per cent the second week, 14 per cent the third week, 10 per cent the fourth week, 16 per cent the fifth week and the last week you bought 2 per cent?—A. Well, as I said a few moments ago it was an enormous big crop of tobacco. We felt we would have a better market if we had gone through with it. If we had completed our requirements in a couple of weeks' time what would the tobacco sell for.

Mr. Kennedy (Winnipeg): Do you mean that your concern was for the growers?

The Witness: Yes, sir; it certainly was.

Mr. Ilsley: How could it help the growers to drag the buying out?

Witness: In other words, we are large buyers as you know. You take our buying power out of the market a week or ten days, say a week, and had twice as much tobacco as we need don't you think it would weaken the market if that got out?

Mr. Sommerville: Not if you buy it nearly all.

Witness: We could not buy it all. We could not buy over half of that crop—did not buy half of it.

Mr. Kennedy *(Peace River):* Could you buy it by spreading it over the season?

Witness: No, sir, I do not think we would.

Mr. Ilsley: What good did it do to the buyer to drag it out if you were buying the same quantity?

Mr. Sommerville: All right. That will do, Mr. Lea; that is enough.

SYLVESTER ROBBINS, called and sworn.

By Mr. Sommerville:

Q. You were for many years a representative of a plough company doing business in the Tillsonburg tobacco area?—A. Yes, for 22 years.

Q. And in that area you have carried on business until 1932?—A. Yes, December 31, 1931.

Q. And, as such, you had occasion—.—A. No, 1932. I am wrong.

Q. And, as such, you had occasion to visit the farmers through that area in connection with sales of machinery?—A. Continuously.

Q. In making your collections?—A. Collections and sales and credits.

Q. You were interested, therefore, in what the farmer was getting for his crop?—A. Yes, sir; vitally so.

Q. Vitally. And up to 1931, I understand, your sales and collections were very satisfactory?—A. They were, very.

Q. And when it came to the month of January, 1931, there was very little on your books in that Ontario area?—A. Yes. January 31st. That is right.

Q. Did you have occasion to visit the tobacco growing area in the buying season of 1931?—A. Yes, sir.

Q. And were you in the Arlington hotel in Tillsonburg on any occasion when Mr. Gregory and Mr. Lea were present in the fall of 1931?—A. Yes, a good many times.

Q. Now, will you please tell this committee what you heard on any of the occasions when either Mr. Gregory or Mr. Lea was present? First of all, take Mr. Gregory. By the way, you made notes of some of these things, did you?—A. Yes, I usually made notes of any occurrences from time to time because I was reporting to our office continuously about the outlook and the prospects and so on. We had to keep in very close touch.

By Mr. Factor:

Q. You made those notes at the time— A. At the time I heard the statements.

By Mr. Sommerville:

Q. What did you hear as far as Mr. Gregory was concerned?—A. I heard Mr. Gregory. I was not eavesdropping. I was sitting at a desk writing one night at 11 o'clock and I was close to the telephone booth and there was probably no one else in the hotel without it might have been the proprietor and the night man. Mr. Gregory was close to the door so I could not help but hear his end of the conversation. He called Montreal and he was appealing very strongly to someone at that end about the price that was to be paid for tobacco.

Q. For 1931?—A. The 1931 crop. He evidently was very determined that it should start out at 35 cents high and he worked away from half to three-quarters of an hour—perhaps an hour—and he came out of the booth without getting any satisfaction. That was very evident from the conversation I heard.

By Mr. Factor:

Q. Have you got the exact conversation?—A. The actual conversation. Mr. Gregory called Montreal. It is just notes as you would make them. I have not got the letter that I wrote the house concerning this. I no doubt wrote the house the same thing anyway.

Mr. YOUNG: You were writing this down while the conversation was going on?

The WITNESS: After the conversation, immediately.

By Mr. Ilsley:

Q. What was the date of this?—A. It is October 1931, the first of the month. It is a few days before Mr. Lea came into the hotel with some tobacco that he had bought. Just a few days previous to that. I have not the date—the day.

Q. You haven't the date marked on that?—A. No.

By Mr. Sommerville:

Q. Please proceed?—A. Mr. Gregory called Montreal, and my notes say. "The condition is panicky here and we have got to do something very shortly and I, in my opinion, 35 cents should be the price that we should start at as high."

Mr. Young: What date was that?

The Witness: October 1931, the first of the month. Some time about the first of the month of October. "It is my opinion that 25 cents is about right. It is an excellent crop" and that is the gist of what I noted. He, apparently, —I could tell by the sound of his talk—he was not getting much satisfaction. He came out. He left the booth, and he made a remark, "I am leaving tomorrow morning for Montreal."—I think he addressed the hotel proprietor—"my feeling in the matter is that we should pay a little more for tobacco than what is being contended at the other end."

Mr. Factor: To whom was that statement made after the telephone conversation?

The Witness: That information? I believe it was to the proprietor. I am quite sure he and the night man were the only ones there, and myself—were the only ones there in the office at that late hour. He said, "I am going to Montreal in the morning." He says, "My heart is in this business; you know I am a grower as well as a buyer, and I hope I will return but probably when I do I may not be the manager."

By Mr. Sommerville:

Q. He might not be the manager?—A. Yes. Now, that is all of my knowledge of it at that time—of Mr. Gregory's conversation.

Q. What conversation did you hear of Mr. Lea?—A. Mr. Lea came into the hotel in the late afternoon, if I remember right. I happened to be sitting at the desk and there was a number of people around, and he had a sample of tobacco in his hand and he was adressing some of his own men, I assume.

Q. Buyers?—A. Yes. I did not know any of them. I did not know Mr. Lea at that time. I had never seen him before.

Mr. Kennedy (*Winnipeg*): The Mr. Lea you are referring to is the one who has just finished his evidence?

The Witness: Yes, the gentleman who was here a moment ago. There he is over there. I had never seen him before. But he produced this tobacco, and he said, "Boys, there is a sample that I bought for 14 cents."

Mr. Ilsley: When was this; what is the date of this?

The Witness: That is October, about a week later than the other conversation.

The Chairman: Shortly after the opening of the market?

The Witness: Yes, shortly after the opening of the market.

By Mr. Sommerville:

Q. Yes, go on?—A. He said, "I bought this crop for 14 cents though more money had been offered by one of my own men during the day." He said, "The

young fellow is putting himself through college and he is taking his medicine like a man." That is the conversation I heard. That is all I heard.

Q. That one of his own men had offered more money for it?—A. He said one of his own men had offered more money for it.

Q. Have you a note of what his own man had offered?—A. 24 cents is the note I have here.

Q. One of his own men had offered 24 cents and he had bought it for 14 cents?

Mr. ILSLEY: That very day?

The WITNESS: Just a moment. No, a few days previous.

By Mr. Sommerville:

Q. Is there any other conversation that you overheard of Mr. Lea?—A. Yes. He says, "You have got to drive the market down for us."

By Mr. Factor:

Q. When was that?—A. The same time.

Q. Addressing his own men?—A. Yes, his own men. "This market has got to come down; those are my orders."

By Mr. Sommerville:

Q. "This market has got to come down; those are my orders"?—A. Yes.

Q. Is there anything else you heard him say?—A. No, that is all I heard him say. That is the sum total.

Q. That is the sum total of that. Now, later on, did you hear him or any other buyers of the Imperial talking about that market situation? —A. Yes. I heard two Imperial tobacco buyers talking in a dark corner of the street in Tillsonburg, the next day after word came from the Provincial House at Toronto that they were going to be assisted in the marketing of their crop. Colonel Tom Kennedy had been up to Simcoe the night before and he had held up some inducement—I do not remember the nature of it—and one of those buyers said to the other—

Mr. FACTOR: Was that about the 1931 crop?

The WITNESS: This was the 1931 crop. That is probably in December—November probably.

By Mr. Sommerville:

Q. This is later on?—A. That is a little later on.

Q. Mr. Lea was not present then?—A. Mr. Lea? No.

Q. Was there any other conversation with Mr. Lea?—A. No. I had no conversation whatever with Mr. Lea at any time—never spoke to the gentleman until to-day.

Q. Now, Mr. Robbins, what was the effect—

Mr. KENNEDY (*Winnipeg*): He started to tell about two buyers he heard in conversation.

The WITNESS: Oh, yes.

Mr. SOMMERVILLE: I do not know that we ought to introduce the evidence of some buyers. I wanted to have presented the evidence of Mr. Lea. I think it would be well to restrict ourselves.

The CHAIRMAN: Yes, I think so.

By Mr. Sommerville:

Q. What was the effect upon the machinery collections of the drop in price of 1931?—A. Very bad.

Q. And what was the effect upon the sale of machinery in 1931 and 1932 as the result of the drop in price?—A. The sales dropped off to a mere nothing in 1932.

Q. And what was the general condition of the farmers as the result of the price they obtained; what was the general condition prevailing which you found? —A. You mean of a panicky nature?

Q. Whatever it was.—A. It was of a panicky nature, of course. They were very unsettled, and many of the Belgium fellows, whom we are sorry to lose because they are good fellows, gave up their holdings and left.

By the Chairman:

Q. That was after the opening of the market or the sale of the 1931 crop?—A. The 1932 crop that was.

By the Chairman:

Q. That was after the opening of the market or the sale of the 1931 crop? —A. The 1932 crop that would be.

By Mr. Sommerville:

Q. Had any of the parties left as the result of the 1931 market conditions?—A. Yes, there were some left.

Q. Some?—A. Yes.

Q. In 1932 were there some?—A. Yes, I believe that there were, yes. I know that there were.

Q. As the result of the conditions that prevailed?—A. Why I am so sure about that, we had to repossess a lot of machinery that was left behind which we had never had to do before.

Mr. Young: Is this the witness that heard about the automobile incident?

The Witness: No, no. That is not any information of mine. That is current gossip. You can get anything up there. I am going to agree with Mr. Lea that you can get anything up there. According to the country in general up there, for a time Mr. Lea and all members of machine companies should have been hung.

Mr. Ilsley: Before the witness goes, it seems to me that if Mr. Lea or Mr. Gregory want to ask him any questions they ought to have a chance to do so.

The Chairman: Mr. Lea can.

Mr. Gregory: I will take care of myself on that, Mr. Chairman.

Witness retired.

Francis E. Gregory—Sworn.

The Witness: At the outset, Mr. Sommerville, before we start, I suppose I will be here at length, and I just want to say one thing. I believe Mr. Robbins was mistaken about that conversation, I think he was wrong.

Mr. Sommerville: Perhaps I had better locate Mr. Gregory first of all.

By Mr. Sommerville:

Q. Mr. Gregory, you come from Leamington?—A. Yes, originally from North Carolina.

Q. And you still retain some of the home properties in North Carolina?—A. Yes, sir.

Q. And you are familiar with conditions there and here?—A. Yes, sir.

Q. And you were, for many years, in charge of the buying operations of the Imperial Tobacco Company?—A. Either as assistant or manager for thirty-two or thirty-three years.

Q. Your brother was manager?—A. He was manager until 1918 and during that time I was assistant. His health was bad. I was a good deal more than assistant there, and from then on I was manager until 1931, I would say.

Q. Yes, and during that whole period you have seen the tobacco industry develop in western Ontario?—A. Yes, very decidedly.

Q. And for the Imperial Tobacco Company you have had charge of the buying operations?—A. Yes, and the development. There was very little tobacco grown here when I came; there was only a little burley, no flue-cured.

Q. Well now, Mr. Gregory, you have heard the statement of Mr. Robbins that he had overheard a telephone conversation and which he communicated to his company. You think he is mistaken about that. Now, what is your statement with reference to it?—A. Well, I am sure that I was never so indiscreet as to talk about price before the market opened. It is possible I had a telephone conversation somewhere, but I don't remember that one.

By Mr. Factor:

Q. Did you call Montreal that night? Let us get down to brass tacks; did you call Montreal that night?—A. I cannot say.

Q. You cannot say?—A. Three years is a long time. I think I will tell you before I get through. Three years is a long time, but I will definitely swear that I would not be so indiscreet to talk about price before any market was established. I will definitely swear to that. I think Mr. Robbins got his dates crossed or mixed up. It might have been some time during the buying operations; there was telephoning I would say after the buying started, but I will definitely and absolutely swear that at no time did I call anybody and say when I went out of the booth, Well I think they are wrong and I am right. I think I am a little better business man than that.

Q. Now, you say you may not have had a conversation of that kind before the opening of the market, but did you have a conversation during the opening of the market, or immediately upon the opening of the market?—A. Well now, Mr. Sommerville, excuse me, let us go back. You want a true picture of this business?

Q. I want you to tell me what happened in 1930 and 1931?—A. 1930 is the year that more significance attaches to, for your purpose, than any other. In 1930, sometime about August, I would say, Mr. Buell wanted me to come down to Montreal. I went down, and he told me that the directors were considering putting a brand of tobacco, wholly Canadian, out at a decreased price, and he said "You were in this country before I was when we used to have two or three prices for different kinds of tobacco, and I want you to tell them about it." So they talked it over with me. I told them that the 1930 crop was a very poor crop, and a short crop, and instead of putting out a Canadian tobacco as a special Canadian brand at a reduced price, that I considered an enhanced value because of the poor crop, that I would not do that, that the 1930 crop was a very poor crop, and short.

By Mr. Young:

Q. Poor in yield and quality?—A. In both, and that I would not take that tobacco and put it out as a special Canadian product and sell it cheaper.

By Mr. Sommerville:

Q. Because the crop that was grown in 1930 was likely to be dear because of the shortness of it?—A. Yes, sir.

Q. Well now, just go on and tell us what happened?—A. We talked over that condition, and it was then somewhere near the purchasing season and they

said to me, "We want you to get things together, get them lined up, and buy a large percentage of this crop, we have not got very much Canadian tobacco on hand and we have quite severe competition on cheaper tobaccos and so forth, and we want you to buy a large percentage of the crop." Well then, I do not know a great deal, Mr. Sommerville, until that crop was cured till I was called down to discuss the price and their requirements, and I still found they wanted to buy a large portion of that crop. I asked what their minimum requirements would be, and they told me that what they would like me to buy as a minimum amount would be nine million pounds. I went back, and without much more instructions, or much supervision—practically none—lined up the organization to buy the crop. I had expected if it had been a good crop to buy it say at a top price of say 35 cents, but being a short crop and them wanting to get a good sized quantity, I decided 40 for the top. We went through that campaign and I bought, the records here will show, I think, either two hundred thousand pounds short of nine million pounds or two hundred thousand pounds over.

Q. You got 8,878,000 pounds?—A. Something about 9,000,000 pounds. I think I had it about nearly right, and it was a stiff market. The Imperial Tobacco Company had not at that time acquired the Tuckett Company. They made quite warm competition, and I noted through the buying campaign, that if I really made an offer—probably I am speaking too exactly—to a farmer and left him I never saw him again. He sold to somebody else. After finishing buying, and looking back I did not see how I could have done any better, although I was told that the New York management thought the price was too high.

Q. You paid an average price then of $31\frac{9}{10}$ cents?—A. Yes, sir.

Q. And you got 71 per cent of the entire crop?—A. Yes.

Q. And bought nearly 9,000,000 pounds?—A. Yes, sir.

Q. And then you were told after the purchase was completed that New York said you had paid too much?—A. Mr. Buell said to me sometime afterward—he did not seem to think so—but he said, that New York think—"Think" I believe was the word, although I do not remember whether he said Mr. Harrison or not. I think he said "They think in New York that this crop was too high." I said "Mr. Buell, looking back over it I do believe I could buy probably somewhat cheaper, but I declare that if I had to do it over again for flue-cured I could not have done any better, having regard to your instructions that you wanted 9,000,000 pounds."

Q. Yes, and was this the first time that you had heard of New York interests having anything to do with the price that you paid for the flue-cured tobacco?—A. Well, I must say that probably ten years before Mr. Harrison had been to Leamington, but I had never heard very much, and they always had seemed to be well satisfied and complimentary of the way the business was handled; and it was now growing to larger proportions and that, I must say, was the first time that I ever, you might say, was criticized from New York.

Q. That is, Mr. Buell did not think you had paid too much, but New York thought so?—A. He did not seem to think so. He did not say he thought so, and I took it from his conversatioon that he thought we had done the job just about right.

Q. Well then, Mr. Gregory, following that purchase what was the next condition that arose in the crop of 1931, what happened?—A. Well, a great deal has been said about Mr. Lea. Mr. Lea came on the scene, I think, in January of 1931. Mr. Lea come out when we were handling the 1931 crop.

Q. That is to say, when you were processing?—A. When we were grading and processing both, the two operations together.

By Mr. Factor:

Q. The 1930 crop or 1931 crop?—A. The 1930 crop, in January of 1931. We had officials from New York, and I believe probably one from England, and I had always told them it was a very common crop, and in looking it over they thought it was not quite as common probably as I had represented it to be, that it was fairly suitable. However, they needed tobacco then and common tobacco did not look too bad.

Q. They thought it was fairly suitable?—A. Yes.

Q. In other words, they thought you had rather discounted the crop?—A. They thought I had not been sufficiently conservative in estimating quality.

Q. And then what happened, Mr. Gregory, with Mr. Lea, what position did he take, or how did he function?—A. Well, at that time I would say that Mr. Lea did not assume a very important position, or did not assume too much authority, during that time I am speaking of—early in 1931.

Q. Then you had the crop of 1931 planted and growing, and that was a better crop than 1930?—A. That was a crop nearly twice as large and much better in quality.

Q. Yes, and what happened when you were coming to the buying season then in 1931?—A. Well, I think probably no doubt Mr. Lea, Mr. Buell, and others, together with myself, got talking price in the summer, and so forth, and when it came to the time to consider buying I went down to Montreal and had a conversation. I went down sometime, I would say, in September, probably the latter part of September or maybe the first of October. I went first to Mr. Buell to discuss the buying operations, and that year was the first time they had primed tobacco, and we were anxious to get the growers to prime. Priming is breaking off the leaves.

Q. Yes, we know the priming method.—A. I believe there were about a million pounds of primed tobacco, and a great part of that was, I would say, fancy, and I suggested paying 35 cents for the better part of the primed tobacco and 30 cents for the good tobacco.

Q. Yes, as the top?—A. As the top. And we had also been instructed or asked to segregate these crops worth from 25 cents up. They wanted the better end of the crop, you understand, and that was impressed on my mind that they wanted the best tobacco, so in the talk I suggested 35 cents for top price for the best primed tobacco, and 30 cents for the good tobacco, and an average of what we would probably buy of 25 cents a pound. Now, I might say no man can intelligently say what a crop is going to average until you get your average or the quality. Mr. Buell considered it over at length, very much at length, and he said that in New York they thought that the price ought not to be within 25 per cent or 30 per cent of the previous year, 25 per cent or 30 per cent lower than 1931. What was the average that year?

Q. 31·9?—A. Yes. That would indicate an average of possibly 22 or 23 cents, I believe.

Q. Yes, that New York said——A. It should be at least 25 per cent or 30 per cent less.

Q. Less than the average price paid in 1930?—A. Yes.

Q. That was 1931, bought in 1930, and that would bring you down to 22½ cents for 1931?—A. Yes. Well, then, just at that time representatives of English buyers had been very busy in the Delhi district looking over crops, and I understood from all the information that I could gather that they seemed pleased with the crop and wanted to pick off a good part of the better tobacco. Unfortunately, England went off the gold standard just about the time I was talking to them and, like the Arabs of old, they folded their tents and silently stole away.

Q. Yes, that is 1931?—A. Yes.

Q. They were here, but they vanished with the gold standard?—A. They vanished with the gold standard, and it was just about the time I was talking to them. I wanted 25 cents and probably that was quite all right at the time. Then there was not quite as much competition as we expected.

Q. When they vanished there was not quite as much competition as you expected?—A. No. So then that was our talk, and I was finally instructed that we would start in at 35 for the primed crop, and 30 cents was to be the top—

Q. Thirty cents was to be the top, and that would be for that primed tobacco?—A. And cut, and that we were to try to reach an average of about 22 or 23 cents.

Q. Those were your instructions then?—A. That was it.

Q. To reach an average of 22 or 23 cents?—A. Yes. And Mr. Buell said to me just before I was leaving "What time do you want us to come up there", referring to himself and Mr. Lea.

Q. Yes.—A. I think he said "What time do you want us to come up there, next Sunday?" I believe we were to start Tuesday, and he meant the following Sunday. I felt quite a responsibility. It was a large crop. I said "Well, why wouldn't it be all right for Mr. Lea to come on back with me." So it was arranged for him not to come back with me but a day or two afterwards before we started buying; and we were talking about the method of buying and I said "Well, we have twelve men at Delhi and some of them are new, and I intend to team them two together and make six buyers instead of twelve". Mr. Lea spoke up and said "You have old men at Leamington, why not send them down and send the entire twelve out". Mistake number one. When I said "Yes" I made a blunder, but I said Yes to him.

Q. Not every man knows how to count his blunders.—A. So then I went back and we got ready, and Mr. Lea came, and so forth. I must say we all expected considerably more competition than developed; we all did, and before we went out a good many of them were talking about how much we would buy and that they did not believe they were going to sell, but I said I believe they are going to sell. So I did not know whether to send the twelve men or not, but we brought down some Leamington men, and I think we sent out if not twelve at least ten, and I took one territory myself, and after buying three of four crops I saw that the buying was very easy.

Q. Buying it for a reduced price was very easy?—A. Yes, sir. The buying at 30 cents top was very easy. I figured not so much competition. I said to the men that were with me, at eleven o'clock, "Turn round and let us go back to the office." And when I got back I called in every buyer that I could see to come in for dinner, and either phoned or sent messengers out for those that did not come in, telling them to come in. I felt that in buying those big crops of tobacco with ten or twelve buying instead of six that my better judgment had told me before, we were going to buy too much tobacco that day, although we were buying the best.

Q. What difference would that make? Did not that help to maintain the price?—A. Well, it was not doing the very best under the circumstances.

Q. For the Imperial?—A. Yes, sir, whom I represented at the time.

Q. That was your job?—A. Yes. So after I had got nearly everybody else in, to wait until we were going to consider that thing that afternoon and go slower, Mr. Lea came in with Mr. Wilson, and he took the position that he did not see what I was uneasy about in buying the type of tobacco the company wanted and he bought, as the figures show, more than anybody else, and that he did not think there was anything to be alarmed about, we had better go ahead that afternoon. So I said "Well, we will go ahead this afternoon but let us be a little more careful." I do not know what I said, but my meaning was

this: The crops look like 27, 27½ and 26, just be a little kind of gradual, not anything drastic, be down a dollar or two.

Q. We are getting on the inside now.

By Mr. Factor:

Q. Are you still employed with the Imperial Tobacco Company?—A. No, sir.

By Mr. Sommerville:

Q. You are largely interested in them though, you have a very large investment?—A. I have some stock, yes sir.

Q. And you are a grower?—A. Yes, sir. So that afternoon we came in and the figures indicated 3,600,000 pounds at an average of 27.50.

Q. What happened that night now as a result of your buying operations of that day?—A. I think now, if I remember right—and I will say I do remember right—Mr. Clifford Geary, Mr. Buell's assistant called up saying he thought we were buying a little fast.

Q. You had not told them?—A. No. Well, probably yes; probably we wired them, I don't remember.

Q. At any rate, you got a call from Mr. Buell's office?—A. Yes.

Q. That you were buying too fast?—A. Yes; and I told them that I didn't know so; that Mr. Buell's special representative, Mr. Lea, bought more than anybody and he thought we were buying all right. So we went ahead next day, the second day, a little more cautious yet. I won't swear as to the date, but I think it was the second day. I had a call from Mr. Buell that night. Mr. Buell was in a highly nervous condition and said he was in the hospital. He said a great deal over the 'phone, that we bought too fast, that we bought too much, that New York had called him and he was worried about it, and so forth.

Q. On that day, the second day, New York had been complaining that you were buying too much on the first day?—A. My understanding from Mr. Buell was that someone in New York thought that we were buying too fast; and he said he was in the hospital and didn't feel very well, and they had him all worked up, and he was in a highly nervous condition.

Q. What had New York to do with it, with the buying? You had been buying for twenty years and had not been interfered with from New York?—A. Probably they wanted to show me just how to do it.

Q. That was the first time, at any rate, that Lea was up there?—A. That was his first year purchasing.

Q. That was the first year he had purchased, and he had come up from the British American in New York?—A. Yes.

Q. Then you say Mr. Buell said that New York said that you were buying too fast. Then what happened?—A. Well, I talked to Mr. Buell quite a while over the phone; and finally after talking quite a while, saying to him that probably we had bought a little faster than if I had it to do over again, but still we had a lot of tobacco to buy, and I felt sure the average would be just right. We bought the best tobacco at an average of 27 cents, I think. We had a great deal more to buy, and I think our average—I had been figuring we would get it down to the right place. Finally, after you might say I had not satisfied him or something, I said, "Your man, Mr. Lea, is here; he has conducted a large part of the operations. Let him talk to you." So they talked quite a while then.

Q. Then, following that, did Lea appear to have the supervision of the buying, really, although you were in that position in name?—A. I will say from that time on that Mr. Lea gradually assumed the reins, and I was more or less ignored, and more so as the time went on; and that I could not say who was in charge after that. I certainly was not.

Q. Well, that is very frank. At the end of the week, I understand Mr. Lea returned to Montreal?—A. Yes, sir.

Q. When he came back, what were the instructions?—A. Well, I can't—

Q. Let me put it to you this way: Did he say that the instructions were that the market had to come down? Is that the gist of it?—A. I think the whole gist was that we had bought too much tobacco at this price, and that it had to get down to 22 or 23 cents, average, when we got through.

Q. When you got through, yes?—A. And from then on, for a period of probably a week, there was a panicky market and very improperly conducted, I would say.

Q. What do you mean by a panicky market improperly conducted?—A. Well—

Q. What was panicky?—A. As I have said, then it was hard to say who was managing the business; and I don't think those who were managing it were acquainted with that kind of buying; and while I felt that in the end the average would be satisfactory, it seemed they wanted it so right then, or very quickly.

Q. What do you describe as panicky? Who were panicky, the buyers or the growers?—A. Both.

Q. Both the buyers and the growers?—A. Yes.

Q. How was that manifested in the marketing? You said the market was improperly conducted. What do you mean by that? A. Well, if I had been doing it alone I probably would not have dropped it so fast. Instead of going right down, I would have—

Q. Gone down gradually?—A. Yes, a little slower.

Mr. Senn: Prolong the agony.

The Witness: Probably this will elucidate the point I am trying to get at. I went down, I believe, when Mr. Lea returned to Delhi; I think I left Leamington Sunday, or Monday morning, and was to get there Monday at noon. Prior to his going to Montreal, I had stated in figuring how much tobacco we had to buy, and having regard to what we might buy—12,000,000, I think,—that it was only necessary to buy the balance of the tobacco at an average of 18½ or 19 cents, and that would put the total average at the right place. He went to Montreal, and I went down and expected to meet him in Delhi at two o'clock, or one o'clock—had dinner in Tillsonburg. When I got over to Delhi I found Mr. Taylor or one man—there was only one man left on the premises of the organization in the office. I said, "Where is Mr. Lea and the buyers?" He said, "Well, Lea has sent them all out in the country with instructions to buy tobacco at an average of 18½ cents." Well, take young men, send them out to buy on an average of 18½ cents and try to buy the best tobacco—of course, they don't know just what to do. You would see them sit down on the roadside, after buying one crop at 22, and say they have to go and buy another at 16 cents in order to get the average right.

Q. In order to make it up?—A. Yes.

Q. I am going to ask you pretty directly; in that process was it not a fact that 24-cent crops were bought for 16 and 18 cents?—A. I would say that that probably is a fact. 30 was the top; and 24 down to 18, I would say, yes.

Q. Is it not a fact that when one grower compared his crop with another, that the other man had received 24 cents for, and this man was being offered only 18 cents for a similar 24-cent crop, there was consternation in the district?—A. Yes.

Q. Is not that the fact?—A. Yes.

Q. In other words, the average was being brought down by buying equally good crops at 25 per cent lower than had been paid for them?—A. Considerably lower.

Q. Instead of averaging up gradually by buying a lower quality of tobacco, they were buying good quality of tobacco at lower prices, is that it?—A. Often times, yes.

Q. Is not that the effect of the marketing operations of the second week of 1931?—A. Yes.

Q. And is that what resulted in there being panicky conditions?—A. At one time I was out myself, in the second week, and I found a real good crop of tobacco, and we had been buying that kind. It was a very good crop. We had been buying that kind of tobacco from 21 and 22 cents.

Q. When you say a good crop of tobacco, you mean one that was worth 26 cents or 27?—A. Or 27 or 28.

Q. And you had been buying that at 21 cents?—A. Yes.

Q. In the second week?—A. Yes. Here is the idea. I went into the telephone office at Tillsonburg. I was personally buying right north of Tillsonburg, and I saw this real good crop, a crop that was worth, as you say, 27 or 28 cents, the first day, and the average had to come in. I never heard as much about average. It was average, average, every day. So I went in to call Mr. Buell up at Montreal. I started to talk to him about this, that I didn't like the way things were going, that we always prided ourselves on each crop falling in its logical place of value, and we had the goodwill of the farmers and had always dealt that way with them, and have tried to make them deal accordingly. I said this crop out there—I got about that far and Mr. Buell was still nervous, probably worried a great deal, and said, well if you are going to take the part of a farmer or something like that. I said, Mr. Buell, please, please listen to me a minute, it is a crop of tobacco out here that would have sold for 27 cents, or 28 cents—I forget now the price, it was a good crop—and I did not think it was good business for the Imperial Tobacco Company to pay 18 to 20 cents. I said, what would you think. He said, give him a quarter, or something like that. I said, you are just right, I am very glad I called up, and thank you for the consideration; I am glad we have come to an agreement. And I gave him a quarter, and then after that I bought similar crops at 25 cents, and worked on that.

By Mr. Factor:

Q. Was this a conversation with Mr. Robinson?—A. No, that was in a hotel, I went in to Tillsonburg to telephone, and I stood up and I remember it took a long time and it was very disagreeable.

By Mr. Sommerville:

Q. Then the whole operation in 1931 was to a large extent supervised by Mr. Buell's representative, Mr. Lea?—A. Yes, sir.

Q. Now, we have heard some evidence to-day about Mr. Lea bringing in a sample of tobacco and saying, I bought this from a boy at 14 cents and he took his medicine like a man; do you remember anything about that? It may be embarrassing, but I want to know?—A. Quite frequently Mr. Lea would come in with a sample and state the price he paid—ask somebody what it was worth, or what he bought it at.

Q. He would ask somebody what it was worth; they would say what?—A. And he would say he bought it for fourteen, fifteen, seventeen, or eighteen cents, as the case might be; and I have to say that I do remember hearing him say about the boy.

Q. You do remember him saying about the boy?—A. I remember.

Q. That he bought the tobacco from this boy at 14 cents, and that the boy took his medicine like a man?—A. Yes, sir.

Q. And do you remember him saying that?—A. However, you can pick a good sample of tobacco from almost any crop. I thought Mr. Lea probably was

advertising himself as a super-buyer, quite a wizard, you know. You can go into any crop and pick a good sample.

By Mr. Factor:

Q. He was sort of puffing a little bit?—A. Yes, Mr. Lea was gradually assuming the ascendency.

By Mr. Sommerville:

Q. Well then, it is not true that you are the man who is responsible for the failures and the troubles of that campaign?—A. It is only true to this extent: that I was hampered with too many obstacles in buying, too many bosses, too much supervision. Mr. Lea was never, as you probably would think, a subordinate of mine. He came first from the United States to Mr. Buell, and then was Mr. Buell's special agent I would say, or something of that kind.

By the Chairman:

Q. Then it is not true that Mr. Lea came from Montreal as a messenger boy conveying instructions?—A. Oh, no.

Q. You heard him say that to-day?

Mr. FACTOR: He did not say "messenger boy."

The CHAIRMAN: He said he just conveyed a message.

Mr. ILSLEY: He said he came to assist.

The WITNESS: I would say more than assist; a super-necessity—to supervise.

Mr. SOMMERVILLE: Well then now, what about the statements that have been made that Mr. Lea was surprised—

The WITNESS: It is a long time between drinks.

Mr. SOMMERVILLE: I know, you are from Carolina; there you are, help yourself.

By Mr. Sommerville:

Q. What do you say, Mr. Gregory, as to whether or not Mr. Lea made any statement that when he got through buying the farmers would not be riding in automobiles, that they would be either on their feet or they would be driving buggies?—A. I do not recall having heard any such statement.

Q. You do not recall any statement of that kind?—A. No, sir.

The CHAIRMAN: It is nearly six o'clock and I do not think we had better open up any new ground. We will meet again to-morrow morning at 10.30.

The Committee adjourned at 5.55 p.m. to meet again on Thursday, May 10, 1934, at 10.30 o'clock a.m.

House of Commons, Room 368,

May 10, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 10.30 a.m., Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The Chairman: Order, gentlemen. The minutes of yesterday record the names of the witnesses and a certain list of documents that were filed, and that is all. We will declare the minutes approved. There are two or three witnesses in the committee from the province of Quebec, and I think some of these witnesses would prefer to give their evidence in French. We have a French reporter and also an interpreter present, and I suggest to the interpreter and witness that if the witness is unable to speak English at all he will give his whole testimony in French so that the record may be clear.

Joseph Marion, called and sworn.

J. C. Beauchamp, Interpreter, sworn.

(Examination conducted in English and interpreted by the official interpreter, Mr. Beauchamp.)

By Mr. Sommerville:

Q. You are a citizen of Saint-Jacques L'Achigan?—A. Yes, sir.

Q. And you represent the tobacco growers of your district?—A. Yes, sir. That is to say I am a dealer in leaf tobacco and am also a farmer.

Q. Would you express your opinion to the committee respecting the general tobacco situation in your district or in the province of Quebec?—A. I am pleased to appear before this committee in the interest of all and in my own interest. The Canadian tobacco business in the province of Quebec, particularly in our own district, is not prosperous. That is to say the grower has stocks on hand which he cannot sell.

The Chairman: From the standpoint of a producer?

The Witness: Yes. I mean from the standpoint of the grower. The low prices which have been paid since 1924 have certainly hampered the grower who has continued to produce, and, unfortunately, during the past three consecutive years we have had poor crops. The large manufacturers, the Imperial Tobacco company purchased in 1921 a portion of the tobaccos which the growers had on hand at that time. The post war conditions certainly contributed to a lowering of the prices of tobacco just as they resulted in the lowering of the prices of other commodities. In 1924—the beginning of 1924 and in 1925, prices improved. The Imperial Tobacco company and other large companies such as Rock City Tobacco had encouraged the growers, already making fairly large purchases. Competition between the dealers was advantageous to the grower in 1924. Since then the big manufacturers have not made

any large purchases. They probably secured their supplies elsewhere. Ontario is, perhaps, more clever than Quebec—I cannot say—but at all events Ontario increased its production.

By Mr. Sommerville:

Q. Are you speaking of leaf tobacco, Mr. Marion?—A. I am speaking particularly of pipe tobacco, and I also wish to speak of cigar tobacco, of the quality which we call the Comstock.

Q. The committee would like you to examine these figures, Mr. Marion. They relate to cigar tobacco and leaf tobacco. The average prices paid in 1928 were 11·3; 1929, 15 cents; 1930, 9 cents; 1931, 5 cents; 1932, 4 cents. Now, with respect to pipe tobacco, the heavy tobacco in 1928—the average price was 8·2 cents; 1929, 12 cents; 1930, 10 cents; 1931, 5 cents; 1932, 3 cents. Would you like me to quote you the prices of what they call petit tabac?—A. Yes.

Q. In 1928, 27·8 cents; 1929, 24 cents; 1930, 16 cents; 1931, 8·5 cents; 1932, 7 cents. Do the government's official figures represent approximately the decrease in the price of tobacco to which you have referred?—A. In your official report for 1928, you have what?

The CHAIRMAN: That is a slight variation.

The WITNESS: I wish to put in the figures that I use in my own business.

The CHAIRMAN: Are they approximately correct?

By Mr. Sommerville:

Q. Are they nearly correct?—A. You have, in 1931, an average price of five cents.

Q. The table that you are looking at, represents the price for all the province of Quebec, You may be dealing in your own mind with prices in your own district. Give me the prices in your own district then, the prices for 1929, and the price last year, just those two years?—A. In one case, you have an average price of 4 cents for No. 1 tobacco.

Q. In what year?—A. 1932, sir.

The CHAIRMAN: Give us your figures for 1929 and 1930 so that we can get the picture of your own district; never mind anything else.

The WITNESS: 1929, the prices in my district ranged from 4 cents to 13 cents a pound; that is, these prices related to inferior tobacco.

By Mr. Sommerville:

Q. From 4 cents to 13 cents?—A. When we purchase tobacco, there is about 20 per cent which represents inferior tobacco.

Q. Is this leaf or pipe tobacco?—A. I refer to two brands or two types.

Q. What is the next figure?—A. 1929, according to my figures, the average price paid ranged from 4 cents to 13 cents a pound.

Q. What about 1932 or 1933?—A. In 1933 the prices ranged from 3 cents to 8 cents a pound.

Q. Now, proceed?—A. I understand the gentlemen of the committee desire to know the reasons why the tobacco business is in a more or less stationary condition.

Q. Yes?—A. As condition are to-day, the tobacco grower cannot cover the cost of production. One of the causes is due to the fact that our manufacturers have stopped purchasing tobacco. In the second place, the banks have considerably restricted their line of credit, which used to enable the tobacco grower to carry over or hold his crop for a certain period until prices picked up. The tobacco growers who used to secure a line of credit from the banks, were compelled to sell their tobacco at a sacrifice price, in order to pay their costs.

Mr. EDWARDS: It is the same old story, liquidating their inventory.

By Mr. Sommerville:

Q. Is it a fact the farmers are in the hands of the bank to the extent that the credit of the bank affects them in their carrying of the crop?—A. In the past, certain farmers secured a certain line of credit in the banks by giving a lien on their crop.

Q. Have you a system in the province of Quebec by which the fertilizer men sell the fertilizer for the crop and take a lien on the crop, and then you have to sell to the fertilizer men the amount necessary to pay him?—A. There is no such system.

Q. Proceed?—A. The farmer, not having a line of credit, and compelled to meet his commitments, has to sell his tobacco at a sacrifice price, and has sometimes sold it for two or three cents.

By Mr. Baribeau:

Q. Have you much tobacco on hand that represents a carry over?—A. A few million pounds. Some of it represents part of the crop of 2 and 3, and even 4 years ago.

Q. Still being carried over?—A. Carried over.

By Mr. Sommerville:

Q. Is that in the hands of the farmers, or the hands of the leaf company?—A. Some of it is in the hands of the farmers and a certain quantity in the hands of the traders.

By Mr. Baribeau:

Q. Is there a larger proportion of pipe tobacco than cigar tobacco?—A. There is a larger proportion of pipe tobacco because of the poor crops and the condition of the tobacco itself. For several months past the large tobacco manufacturers have launched a campaign to induce the farmers to sign a petition asking for an excise duty tax of 20 cents a pound to be put on tobacco.

By Mr. Sommerville:

Q. On the loose leaf tobacco?—A. On the loose leaf tobacco. That is, that there would be a tax of 20 cents a pound on all tobacco whether it is sold by the retailer or the farmer.

By the Chairman:

Q. What is your reaction to that?—A. In our district it was the agent of the Imperial Tobacco Company who had this matter in hand.

By Mr. Baribeau:

Q. Mr. Marion, do you believe, the large tobacco manufacturers are interested in having such a tax imposed on tobacco?—A. If I am to judge by the work of the company's representative, and the means he took to secure signatures on the petitions, I know of instances where ten cents a name was paid for signatures.

By Mr. Boulanger:

Q. To the agent? Have you any idea how many persons signed those petitions?—A. The people signed the petitions on the first representations that were made, because it was represented to them that this tax would eliminate the small producers and small traders who were producing or selling tobacco of a very inferior quality.

By Mr. Baribeau:

Q. Is it to your knowledge that counter petitions were signed?—A. Yes, sir.

By the Chairman:

Q. You have not answered my question, what is your view as to that?—A. The procedure was repugnant to me.

Mr. BOULANGER: He means the procedure of the agent getting the signatures.

The WITNESS: It is true that the paper that was submitted to prospective signers contained particulars. The party who was approached and asked to sign a petition took the verbal representations as they were made and did not read the particulars printed on the petition.

By Mr. Baribeau:

Q. The Chairman's question is, I think, are you in favour of the tax?—A. That tax hits the consumer; such a tax would hit the consumer. It hits the two parties, the one who wants to purchase good quality tobacco and the one who wants to purchase tobacco of a lesser or inferior quality. Translated literally, the small traders would experience difficulty to secure the capital required in connection with the imposition of that tax. That is the literal translation.

By Mr. Sommerville:

Q. We have had filed with the committee, so that you may know it, petitions from many thousands of farmers from the province of Quebec against such a tax, as filed at page 1438 of the proceedings.

By Mr. Ilsley:

Q. Ten cents a name was paid for signing petitions, and for signing a petition against the tax?—A. Yes, to sign the petition.

By Mr. Young:

Q. Not paid to sign a counter petition?—A. No. They paid ten cents a name to the canvasser.

By Mr. Edwards:

Q. Who paid the ten cents?—A. The agent of the Imperial Tobacco Company paid that, that is Mr. Fontaine.

By Mr. Ilsley:

Q. How would this twenty cents a pound excise help the producer? What argument was advanced why it would help the producer?—A. In this way, that the agent of the company, the canvasser for names, stated that if the parties signed these petitions they would at once purchase the balance of the supply of tobacco on hand and at an increased price. 95 per cent of those who signed the petitions in good faith also then signed the counter petitions. The canvassers also represented to the parties whom they asked to sign these petitions, that in Ontario conditions were very much improved, where some years ago only a few acres were grown they were now growing thousands of acres or had thousands of acres in cultivation, and they produced millions and millions of pounds of tobacco, and had no trouble selling it and were prosperous.

Mr. SOMMERVILLE: Far off fields look green.

The WITNESS: If I judge the situation well, certain producers were not favoured to the extent that these parties represented.

By Mr. Ilsley:

Q. When were these petitions circulated?—A. I think they started to circulate these petitions about December or January.

By Mr. Sommerville:

Q. Within the last six months at any rate?—A. Yes, within the last six months.

By Mr. Baribeau:

Q. Undoubtedly, Mr. Marion, it was not the producers but the manufacturers who launched this campaign to secure petitions?—A. Yes, sir.

Mr. SOMMERVLLE: It was not a spontaneous move.

By Mr. Ilsley:

Q. How would it help the manufacturers, what was the secret of all this?—A. One effect would be to eliminate a large number of parties handling the tobacco, manipulators, that is, the imposition of that tax would have the effect of eliminating a large number of these dealers in our leaf tobacco.

By Mr. Kennedy (Winnipeg):

Q. Would the effect be to concentrate the control of the processing of the tobacco in the hands of the large manufacturers?—A. The elimination of the smaller average dealer would naturally tend to place more control in the hands of the powerful manufacturer.

Q. And was that the purpose of asking for this excise tax?—A. Certainly.

By Mr. Young:

Q. Where had those small dealers been in the habit of selling this tobacco when they got it?—A. To the retailer.

By Mr. Baribeau:

Q. Do you not think, Mr. Marion, that the imposition of an excise tax of 20 cents a pound on our leaf tobacco would encourage the sale of cut tobacco?—A. In the province of Quebec very many of our people are still accustomed to smoke leaf tobacco.

By Mr. Edwards:

Q. Is that the quality of tobacco the peddlers handle?—A. As a rule, these peddlers sell tobacco of an inferior quality. That is why I have been asking for the last twenty-five years that there should be some control over the sale of leaf tobacco.

By Mr. Factor:

Q. Do you favour the imposition of the tax for that purpose?—A. I have not favoured it.

Q. What other control do you suggest?—A. The province of Quebec has done something on our behalf. Last January the Provincial Legislature passed an Act respecting the processing and the sale of leaf tobacco.

By Mr. Sommerville:

Q. By the way, Mr. Marion, you have a brief prepared, the translation of which has just been handed to me, and it is now being distributed to the members of the committee. Could we not just read that brief and the translation of it.

Mr. BOULANGER: Where is the French text?

The CHAIRMAN: The witness can proceed and read the brief.

TOBACCO DISTRICT, L'ASSOMPTION-MONTCALM

The requests hereby submitted to the committee of investigation are on the same grounds as those expressed in the petitions signed by the tobacco-growers from the Northern District of Quebec, including the Counties of l'Assomption-Montcalm, Berthier and Joliette.

We beg that no tax be levied on leaf tobacco sold to others than manufacturers and that these be not prohibited.

Half of our production is sold in raw condition, directly from the producer to the consumer, through the medium of merchants, without passing through the factory. As this kind of trade represents a great portion of the tobacco consumption in our Province, the manufacturers are likely to object to it in order to have pipe tobacco go through the factory; this is quite natural, hence the fight . . . The growers hold to this outlet which means 15 or 20 purchases against one.

In the course of the present investigation, the Ontario growers complain of being at the mercy of the tobacco trust. Such remarks are not likely to change its views.

It has been said here that a pipeful of Canadian tobacco is out of style and that one must be modern. It would be interesting to make inquiries from Quebec Federal Members and find out how many bags of Canadian tobacco are still being used throughout the Province, and the latter must be posted on this matter. We might be amazed, as was the case, about the lottery tickets to which Hon. Mr. Taschereau was referring some time ago.

Undoubtedly, the leaf-tobacco trade is affected by the depression, but it is quite evident that no improvement is to be expected by blocking the marketing of our production; our growers want more freedom for their sales.

Our suggestions are very much along the same lines as those of the Ontario growers, viz: organization of official classification by way of a central drying storage and public auction sales.

At present, the market is overloaded with too many varieties of tobacco. Official classification and public auction sales would bring about a more regular and guaranteed market for the pipe, aromatic and other blends of tobacco, and would also help the production and sales of our cigar-tobacco and enable the exportation of a certain quantity of these tobaccos. We consider these means the most adequate for the producing and marketing of cigarette-tobacco which we hope to handle soon.

In our District the culture of tobacco is being done on a rather small scale. We figure that we can make reasonable profits at ordinary prices if we can keep a free market for our leaf-tobacco and secure the necessary help to build up a drying storage and improve the classification and public auction sales system. With these objectives, we join the formulated requests of the growers of Ontario.

By Mr. Boulanger:

Q. I understand that apart from being a tobacco grower you are also a dealer in tobacco?—A. Yes.

Q. Can you tell us approximately how many pounds of raw leaf tobacco you purchased yearly from the farmer?—A. In 1929 I purchased almost 1,000,000 pounds of tobacco.

Q. You purchased that from the growers?—A. I purchased that from the growers.

Q. And in 1930?—A. In 1930 I purchased approximately 400,000 pounds of tobacco.

Q. And in the following year, 1931 and 1932?—A. In 1931; I was compelled to reduce my purchases in the last few years on account of the conditions that prevailed.

By Mr. Baribeau:

Q. Do you mean that less tobacco was offered to you?—A. That is why I would like to see some control over the tobacco business, for the raw leaf tobacco business; but I am not in favour of the imposition of a tax.

Q. The witness has just stated that in 1929 he purchased 1,000,000 pounds of tobacco; and in the following year, 1930, he purchased only 400,000 pounds; why did you buy the much smaller quantity in the following year?—A. In 1929 we paid the growers from 4 cents to 13 cents a pound, and they felt they were fairly well paid; but since then the price dropped, partly due to the fact that the large manufacturers were not purchasing the tobacco. As the sale of leaf tobacco was not controlled, and the grower did not consider the price satisfactory, he tried to dispose of his tobacco himself.

By the Chairman:

Q. How would you control, or improve? You do not like the tax, what would you like to improve conditions?—A. The setting of a minimum price on tobacco of the first quality.

By Mr. Sommerville:

Q. For the first quality?—A. Yes. Secondly, that only one grade or type of tobacco be grown on each separate farm; some growers are in the habit of growing 5 or 6 separate varieties on the same farm.

By Mr. Edwards:

Q. That is just the point I was going to try to bring out; in your brief in the second last paragraph you state that at present the market is overloaded with too many varieties of tobacco; well then, in the brief which we had the other day from the Imperial Tobacco Company in which they endeavour to improve crops in the Norfolk district, they recommended the planting of certain types of plants—for instance, they recommend the white-stem orinoco, yellow mammoth and so forth; would that be a solution? Of course, I mean flue-cured, the same principle; in other words, to standardize the type of plant?—A. Quite so, certain standards of tobacco might be growing, but owing to climatic conditions some types of tobacco would be more suitable for one district than for another.

By Mr. Boulanger:

Q. What quantity of tobacco—?—A. You must bear in mind that I had a carry-over of 350,000 pounds from 1928-1929.

Q. How many tobacco dealers like yourself are there in the Joliette district?—A. I could not say definitely, in my own district, possibly 60.

Q. Then, how much tobacco did they purchase yearly?—A. I do not know.

Q. You could not even state approximately?—A. It is very difficult.

Q. What proportion of the purchases are made by the dealers?—A. The largest proportion—half and half—it is rather difficult to answer that question.

Q. These dealers who purchase tobacco from the growers do so in competition with the tobacco manufacturers?—A. We have not seen very much competition in the last few years; there are possibly five or six purchasers.

Q. Is that competition favourable to the growers? Is there any such thing as competition?—A. Certainly.

Q. Should these profits be eliminated by the imposition of a tax of 20 cents a pound, that would be very detrimental to the growers, would it not? —A. Well, certainly, but possibly 75 per cent of the small growers would be eliminated, but those who remain in the business, in the growing business—

By the Chairman:

Q. You said the small growers would be eliminated; do you mean small buyers?

Mr. BOULANGER: Dealers

The WITNESS: Yes, small dealers.

By the Chairman:

Q. Small dealers?—A. Not only small dealers, but some fairly substantial, big dealers.

Q. The dealers would be eliminated?—A. Yes, the traders—the dealers would be eliminated.

By Mr. Boulanger:

Q. Would the elimination of the dealers not place the control in the hands of the large manufacturers?—A. That is a means of eliminating the retailer in the raw leaf tobacco business.

Q. As another result, would the imposition of such a tax not compel the consumers to cease smoking raw leaf tobacco, and then have to go to the manufacturers for prepared or processed tobacco?—A. That is rather difficult to answer. The suggestions I have to make are in the best interests of the grower, the dealer and the manufacturer, if I may be allowed to give them.

The CHAIRMAN: Let him proceed with his suggestions.

The WITNESS: I had reached the stage where I was speaking of the growing of only one variety of tobacco on one particular farm. In the third place, if it were possible for the growers to secure better credit facilities at the bank. That is, the sale of tobacco would be controlled under a permit system.

By Mr. Sommerville:

Q. A licence system?—A. Yes, a licence system.

By the Chairman:

Q. That is, the growing?—A. The sale.

By Mr. Senn:

Q. Who would be licensed, the buyers? Would you license the buyers?—A. The permit would apply to every person processing tobacco. The Quebec legislature passed an act recently which tends to improve the quality of the product. The law requires that the name of every dealer, or each dealer, shall be placed on the package, or rather, the tobacco.

By Mr. Baribeau:

Q. Mr. Marion, should the name of the grower or vendor appear on the package that is sold over the counter?—A. The name of the person who processes the tobacco or sells it, should appear on the package.

By Mr. Sommerville:

Q. Not the producer?—A. Not the producer, no; the person who processes the tobacco or retails it. This act is a good beginning, but I see in it two defects. No law is perfect. The first requirement is that the package shall indicate whether this product is from Quebec or Ontario. There should be an indication on the label that it is from Ontario or Quebec; the genuine name of the variety. The act makes no reference to the quality or the grade. The act states that the package must contain the name and address of the dealer or retailer. That is quite satisfactory. I would suggest that every dealer pay a fee or licence.

By the Chairman:

Q. You mean the dealer who buys from the grower?—A. The dealer. While to-day the grower of an inferior brand of tobacco is required under this act to put a label on the tobacco. This act would tend to favour the grower of inferior tobacco to the extent that while the act requires the mentioning of the genuine name of the variety, there is no reference to the quality of the tobacco itself.

Q. That, you think, ought to be indicated?—A. Yes, certainly, the quality should be indicated. I know of cases where certain farmers, in order to improve their situation, and acting, perhaps, in good faith, have labels printed. On those labels appear the names, sometimes, of their children or grandchildren. But I blame the dealers more than I do the farmers in connection with this practice. While they were required seemingly to comply with the act, the label should have had a permit number on it. There should have been a permit number on the label. If there were a permit system, if the dealer or retailer were licensed, and the producer was not satisfied with the prices which that dealer or retailer offered he could take out a licence himself and retail his product.

The CHAIRMAN: Have you any other suggestions to make?

The WITNESS: I have no other suggestions to make.

Mr. BARIBEAU: Are there any companies which purchase tobacco in Joliet, Berthier, L'Assumption and Montcalm counties which are controlled by the large or the big tobacco companies?

The WITNESS: It is rather difficult to answer that question because sometimes the dealers or the agents are big dealers.

The CHAIRMAN: Quite so.

The WITNESS: I only see the outside. I do not know the inner workings.

The CHAIRMAN: Quite so.

Mr. YOUNG: In this brief it states you expect soon to grow cigarette tobacco. We had evidence from the Ontario cigarette growers that they had a natural monopoly. I want to know on what grounds you base your hope.

The WITNESS: Well, I agree with the memorandum I read. I did not draft it and I do not believe the climatic conditions in our district favour the growing of cigarette tobacco, but, however, the provincial government through its agricultural representatives has been making certain experiments with fairly satisfactory results.

By Mr. Boulanger:

Q. I understand that a witness stated before this committee that a tobacco dealer purchasing tobacco in your district said that the tobacco was only trash or remnants?—A. I believe that the witness was ill-informed.

Q. As a rule, Mr. Marion, when you purchase tobacco from a producer you purchase his whole crop including good, average and bad tobacco?—A. To answer the first part of the question I must state that in January, the first man—the first dealer or purchaser to go on the road and start purchasing tobacco was an agent or a representative of the Imperial Tobacco company and he was offering 2 cents a pound for common tobacco, that is, tobacco of the 1933 crop, and he was not purchasing any good tobacco.

The CHAIRMAN: He was purchasing only inferior grades?

The WITNESS: He was purchasing inferior tobacco, and he was only purchasing that tobacco and paying 2 cents a pound.

Mr. BOULANGER: And he was the agent of the Imperial.

The CHAIRMAN: That is 1933.

Mr. Boulanger: In January last he was purchasing?

The Witness: This dealer started to purchase tobacco in January, 1933, of the 1932 crop. I do not know that that agent was purchasing that tobacco —that dealer was purchasing that tobacco for himself—at all events, he was an agent or representative of the Imperial Tobacco company.

By Mr. Baribeau:

Q. Would you tell me what was the total production of tobacco for 1932-33 in Berthier, L'Assomption, Joliette and Montcalm counties?—A. If I judge by the reports made by certain agricultural representatives who made a survey in the district the total production amounted to about 4,000,000 pounds. Personally, I think the production was larger.

Q. I am advised that the production is larger; that it is about ten or twelve million pounds?—A. Well, tobacco is produced in a large area—not only within the limits of those four counties.

By Mr. Boulanger:

Q. What would be the effect of the imposition of a general or flat tax of 20 cents on all varieties of loose tobacco? Would it increase the price which the consumer would have to pay?—A. Yes, it would increase the price and the imposition of that tax would not tend to improve the quality of the tobacco grown.

Q. Would that tax be in the interest of the producer?—A. Not at all.

Q. In these times of depression would you be in favour of doing anything that would cause or compel the farmer smoking leaf tobacco to give up smoking that tobacco and start to smoke cut tobacco?—A. Certainly not. There are not only farmers who smoke that tobacco; other people smoke it as well.

The Chairman: Thank you very much indeed, Mr. Marion.

Witness discharged.

Charles Frenette, called and sworn.

By Mr. Parry:

Q. You represent the growers in the counties of St. Charles and Bellechasse? —A. I beg your pardon. I do not represent any growers.

Q. In what capacity are you making representations?—A. I can supply the committee with certain information regarding the prices I paid for tobacco purchased from the growers.

The Chairman: Is he a dealer or a buyer?

Mr. Boulanger: A dealer.

The Witness: I am a dealer. From the 1st of January, 1933, to 31st December, 1933, I purchased from the farmer approximately 807,000 pounds.

Mr. Baribeau: What amount?

The Witness: 807,000 pounds; and the average price which I paid to the farmer in 1933 was $5\frac{1}{2}$ cents a pound. I also purchased approximately 100,000 pounds from the co-operative organization.

The Chairman: For whom were your purchasing?

The Witness: Myself.

By the Chairman:

Q. To whom do you sell?—A. I sell quite a large quantity to the retailers, approximately 90 per cent.

Q. In what form?—A. I sell the leaf tobacco.

Q. The raw leaf?—A. The raw leaf. I purchased 800,000 pounds in 1933 and the average price I paid the farmer is 5½ cents. In regard to the tobacco I purchased from the co-operative society of the district, I purchased about 50 per cent for 4½ cents, and about 50 per cent of armomatic tobacco at 7 cents.

Mr. EDWARDS: Of what quality is this tobacco that he pays from 4 to 6 cents for?

The WITNESS: It was tobacco of a good quality.

The CHAIRMAN: No flue-cured or cigarette tobacco at all?

The WITNESS: None of the tobacco was processed.

By Mr. Sommerville:

Q. That is cigar or pipe tobacco?—A. I purchase only pipe tobacco.

Q. What do you call aromatic tobacco; is that pipe tobacco also?—A. That is also pipe tobacco. Here is a statement of the tobacco sold in 1933.

Q. 708,066 pounds. At what price do you sell it? A. I sold it at an average price of 11½ cents.

Q. At an average price of 11½ cents?—A. Yes.

Q. After buying it, do you put it in packages and label it, or do you sell it in bulk?—A. The processing cost me two cents a pound, and then there are freight charges, because I do not live in the district where I purchased the tobacco.

Q. In what manner do you process the tobacco?—A. Well, we process it by steaming it, and putting it up in small bundles, a pound, or half a pound.

Q. When you purchase that tobacco from the growers, you purchase it in large bales? What is the weight of those bales?—A. It is 10, 25 and 50 pounds. We undo those bales and steam the tobacco.

Mr. BOULANGER: In order to prevent breakage?

By Mr. Sommerville:

Q. Was there anything else you wanted to present to the committee?—A. I have no personal representations to make, but I saw a memorandum which I believe was prepared by a notary, and I agree with—

The CHAIRMAN: With what Mr. Marion says?

The WITNESS: With the suggestion. I agree with him when he says that he is opposed to the imposition of a special tax, but I might not agree with him in all other details, because some of those details are somewhat complicated.

By Mr. Boulanger:

Q. Last year you purchased 800,000 pounds from the growers, 100,000 pounds from the co-operative society of Joliette, and 50,000 pounds from dealers generally. Then your total purchases in 1933 would aggregate 950,000 pounds? —A. Yes.

Q. What quantity of tobacco did you purchase in 1932?—A. About 600,000 pounds.

Q. What quantity did you purchase in 1931?—A. About the same quantity. I purchased about the same quantity in 1930, but I purchased a larger quantity last year because I found the prices were more satisfactory.

Q. How long have you been in this leaf tobacco business?—A. For the past 32 years.

Q. As a rule, do you purchase about the same quantity every year?—A. Well, I used to purchase far less years ago. I only recall the first year when I purchased 50,000 pounds, and last year when I purchased the quantity I have mentioned.

Q. How many tobacco dealers like yourself purchase tobacco in the Joliette district?—A. It would be rather difficult to say; there might be 25 or possibly 30.

Q. Can you say approximately what quantities these dealers purchase every year from the growers?—A. It would be rather difficult to estimate the quantity.

Q. Can you state what proportion of the tobacco produced in that district was purchased by dealers?—A. The yield and production in the Joliette district would amount to about eight or ten million pounds.

Q. Have you any idea what portion of that production dealers like yourself would purchase in that district?—A. It would be difficult to say. I would like to tell the committee if I cannot give more information, it is due to the fact I am unable to read or write.

Q. Mr. Frenette, you heard the questions that I put to the previous witness —Mr. Marion—and you also heard his answers, so I need not repeat those questions. Are you in general agreement with what Mr. Marion said?—A. Well, I agree with him when he states that he is opposed to the tax of 20 cents on tobacco. I am absolutely opposed to that tax. Such a tax would be detrimental both to the growers and the consumers, because the growers stand to benefit to a greater extent when 25 or 30 or more dealers are competing one against the other for their product.

By the Chairman:

Q. What proportion of the tobacco that you buy is sold back to the people in bunbles without paying the tax?—A. I sell all my tobacco without being required to pay a tax.

By Mr. Baribeau:

Q. When you purchase tobacco in the districts where you deal do you meet with any competition from the Imperial Tobacco Company, or any other large manufacturers?—A. Well, I cannot purchase to the same advantage as those companies because I do not live in those districts, and the companies as a rule, have an agent or representative on the spot; and the average price I paid for the tobacco I purchased in 1933—5½ cents—bears me out in that regard.

Q. Is there an overproduction of tobacco in your district?—A. I do not think so.

The CHAIRMAN: Are there any further questions, gentlemen?

By Mr. Boulanger:

Q. Just one question, Mr. Frenette. What do you think of Mr. Roch's statement, that the dealers purchase only very inferior tobacco?—A. My answer to that will be found in the quantities of tobacco that I purchased from different parties.

By Mr. Sommerville:

Q. You have already said you buy good tobacco.—A. Yes. One would have to obtain the average prices paid in that district to determine whether the growers were paid a higher price than I paid to them. The price I paid for the tobacco I purchased was larger than the price received by the growers from this co-operative organization.

The CHAIRMAN: Now, are there any other questions gentlemen? Thank you very much Mr. Frenette.

Witness discharged.

Ernest Forest, sworn.

By Mr. Sommerville:

Q. You are a notary of L'Epiphanie, Mr. Forest?—A. Yes.

Q. And that is in the heart of the tobacco country?—A. Yes.

By the Chairman:

Q. Do you wish to speak in English?—A. I would much prefer to speak in French. It will be better for you and better for me.

By Mr. Sommerville:

Q. I think you thoroughly understand our questions, Mr. Forest. Will you present your views with respect to the conditions and the suggested improvements for the conditions in the tobacco industry in your area, please.—A. Whatever suggestions I have to make are contained in the memorandum, of which this is a translation.

By the Chairman:

Q. The same one as Mr. Marion presented?—A. Yes. This is the memorandum which was read by the previous witness.

Q. Do you agree with the memorandum which Mr. Marion submitted to the committee?—A. I approve of it. It is the memorandum I prepared a draft of.

The Chairman: If any of the other gentlemen of the committee wish to examine on the memorandum, they are at liberty to do so.

By Mr. Young:

Q. Do you agree with this statement in the memorandum, that you can grow cigarette tobacco in your country?—A. Yes. The ability to produce cigarette tobacco in our district was proven last year in my own parish, that is, representatives, agricultural experts from the Experimental Farm made a successful experiment.

By Mr. Senn:

Q. But it has not been grown on a commercial scale, I understand?—A. No. What tobacco is grown is more as an experiment. This year though, Mr. Montreuil advises me that he is going to construct a dryer in my district.

Q. Is the acreage extensive on which it can be grown there?—A. There is a large acreage from what I understand, from what I am told. I can understand that the Ontario growers do not approve whole-heartedly of this inundation; but in our district this production will be largely what one might call a home production, a family enterprise, so the production will never be undertaken on an extensive scale.

Q. Why not, if you can do it and get so much for it?—A. Because we have no large land owners in our district. The average farm contains about 100 acres. The farmer has to make his living out of that farm and diversify his production to some extent, and he has ten acres which he sets aside for the growing of tobacco.

Q. He will never consume 10 acres of tobacco in his own family, he will surely have some to sell.

The Chairman: He would not consume all his milk either.

The Witness: Obviously not. This tobacco that is grown is for the trade.

By Mr. Young:

Q. The cigarette tobacco that he is going to grow, is that for his own use or for the trade?—A. Obviously it is for the trade.

The CHAIRMAN: Local use, Mr. Young, is what he says.

By Mr. Young:

Q. Will it go into the market?—A. It is for the market, general trade.

The CHAIRMAN: Are there any other questions, gentlemen?

By Mr. Boulanger:

Q. Do you agree with the views of the two previous witnesses who stated their opposition to the tax of 20 cents?

The CHAIRMAN: I have a suspicion that Mr. Boulanger does not agree with that.

The WITNESS: I have been fighting this tax proposition for the last ten years.

By the Chairman:

Q. You are absolutely opposed to it?—A. Absolutely.

By Mr. Boulanger:

Q. Is there any general feeling of opposition to that tax in your district?—A. Certainly. The only setback comes from those petitions which our people were induced to sign without full knowledge of the facts, and which they signed when conditions were considerably depressed.

By the Chairman:

Q. You also assert, do you, that the petitions were signed under a misunderstanding?—A. Certainly; they were deceived because that is what induced them to sign a counter petition. They felt they were deceived so they signed a counter petition.

The CHAIRMAN: Are there any other questions? Thank you very much, Mr. Forest.

Witness discharged.

VICTOR CHARTRAND, sworn.

By Mr. Sommerville:

Q. What are your qualifications, Mr. Chartrand?—A. Vice-President and General Manager of Forest Limited, cigar manufacturers.

Q. Where are you from?—A. L'Epiphanie.

Q. And you manufacture a large quantity of cigars per year?—A. I at one time manufactured as many as 7,000,000 cigars in one year.

Q. You are an independent manufacturer then?—A. Yes, sir.

Q. Well now, what has been your experience, Mr. Chartrand, in your sale of the cigars, and your competition, your conditions?—A. Some years ago we manufactured 5,000,000 or 6,000,000 cigars a year. Last year I manufactured 1,100,000.

By Mr. Factor:

Q. Do you manufacture by machine or by hand?—A. By hand.

By the Chairman:

Q. What happened to reduce your output?—A. Because of the influence or pressure exerted by the Imperial Tobacco Company on our jobbers, retailers and dealers; our production is lessened.

Q. Will you please explain what you mean by influence?—A. From what the jobbers state. The jobbers say that the Imperial Tobacco Company more or less compel them to carry the Imperial Tobacco Company line of goods.

Q. We want to get that clear. Did the jobbers inform you that they cannot buy your stock because the Imperial Company objects to them carrying other than Imperial Tobacco Company's stock?—A. They do not tell us openly but they give us that impression, in more or less veiled terms.

Q. And they will refuse to buy?—A. Yes, they refuse to buy.

Q. That is pretty effective, is it not?

By Mr. Baribeau:

Q. You sell all your output through the jobbers?—A. Yes, to the jobbers.

By Mr. Sommerville:

Q. And your production has been reduced from 5,000,000 or 6,000,000 five years ago to a million and a half last year?—A. Yes, sir.

By Mr. Factor:

Q. Do you have any difficulty in advertising your product in competition with the Imperial product, that is, difficulty in having your products advertised in competition with Imperial.—A. Certainly.

By Mr. Sommerville:

Q. What are the difficulties?—A. One difficulty is, that when we put up any advertisements or posters they are removed. We are told that the travellers who visit these different shops to sell place their own posters over ours.

Q. That is, the posters you are referring to, the circulars or the advertising you are referring to is advertising in the stores of the merchants that are selling your goods?—A. Yes. These signs or posters are of metal, and they might be placed on the inside of the store or outside, or on doors, or around the premises within and without.

By Mr. Factor:

Q. Has any merchant complained to you that a traveller of the Imperial Tobacco Company forced him to take down your sign?—A. I have no personal knowledge, but the merchants tell me that the Imperial Tobacco Company representative visits or calls on those stores and simply tacks up his own advertising sign over mine and the merchant says "What can I do about it."

Q. Has that merchant ever received a threat from that representative that he cannot get Imperial products unless he is permitted to do that?—A. Well, the statement is repeatedly made but we cannot prove it. It is hard to prove it.

By Mr. Kennedy (Winnipeg):

Q. Did the representatives selling their products ever reciprocate in the same spirit, by putting your signs up over the other fellow's?—A. No, we would be killed.

Q. I know that is done in an election campaign.

The CHAIRMAN: Well, this is not an election.

By Mr. Sommerville:

Q. Have you found, Mr. Chartrand, that on occasions merchants have been required to take your goods from a prominent position and put them behind the counter or under the shelf?—A. Thousands and thousands of times that has been done.

The CHAIRMAN: Good Lord.

By Mr. Sommerville:

Q. That is a general practice?—A. The general practice all over.

Q. And that is required by the Imperial Tobacco Company's representative?—A. That is what we are told.

By Mr. Factor:

Q. Do you know of any agreement that the Imperial representative exacts from the merchant to display Imperial products to the extent of 80 per cent?—A. I do not know whether there is any understanding or agreement, but I know that the merchants are compelled to do it.

By Mr. Sommerville:

Q. Have you had, or do you know of, a case in which window displays of your goods have had to be taken out and Imperial put in at the request of the Imperial Tobacco Company?—A. We never went in for any window displays.

By Mr. Boulanger:

Q. Mr. Chartrand, did you ever hear it said that the Imperial Tobacco Company compel merchants to make a monthly return to the Imperial Tobacco Company of the goods or lines sold by competitors—goods of their competitors which the merchant sells?—A. I have heard said, that I could offer no proof in that regard.

The CHAIRMAN: Are there any other questions?

The INTERPRETER: He says he has one last statement to make.

The WITNESS: Some years ago the Imperial Tobacco Company approached him with the intimation, or told him, that his company would have to sell out to the Imperial Tobacco Company. He said he would not sell out. The Imperial Tobacco Company told him that he would have to dispose of his enterprise on their own terms, because they were going to set up an establishment at that point where the witness had his own plant or business.

By the Chairman:

Q. In opposition?—A. In opposition.

By Mr. Kennedy (Winnipeg):

Q. When was that?—A. I could not state definitely, it was around about 1923.

Q. They have set up a factory in opposition?—A. They have set up a factory, and said to me, if you do not sell you will be out of the market.

Mr. FACTOR: Out of the picture.

By Mr. Boulanger:

Q. Did you ever hear that the Imperial Tobacco Company determined the quantity which a merchant was to buy from the Imperial Tobacco Company, and the proportion which the same merchant was to buy from the Imperial Tobacco Company's competitors?—A. I never heard anything to that effect.

By the Chairman:

Q. What brand of cigars do you make?—A. We manufacture cheap cigars. We have to do that. We make 2 for 5 cents, 3 for 10, and 5 cent cigars.

By Mr. Factor:

Q. How much do you pay your workers for manufacturing 1,000 cigars?—A. On the two-for-five we pay cigar makers $3; on the three-for-ten, $4; on the five cent, $6 to $10.

Q. Let us get this right. You say that on the two-for-five you pay $3 a thousand?—A. Yes. On the three-for-ten, $4; and on the nickel cigars, $6 to $7.

By Mr. Sommerville:

Q. And they are all hand made?—A. Yes. And that is beside stripping, packing, wrapping, and everything like that; that is only the cigar makers.

By Mr. Boulanger:

Q. What proportion of Canadian tobacco do you use in the production of your cigars?—A. 96 per cent is Canadian tobacco.

By Mr. Edwards:

Q. What is the average quantity of cigars a man will make in a day, say 5-cent cigars; how many will he make in a day—A. I could not give you an average, because that depends on the speed and ability of the operator.

Q. Will he make a thousand?—A. No.

Q. Half a thousand?—A. Make about 400 to 500 cigars in a day.

Q. So he will make about $3.50 to $4 a day?

By Mr. Ilsley:

Q. Is your help all male help?—A. We employ girls, women, boys and men.

By Mr. Sommerville:

Q. Just a moment, I want to ask you a question: you said the Imperial said you had to sell out—what further was said about that, or what notice was given to you at the time when they were pressing you to sell out?—A. One of the managers, Mr. Levine, sent for me and told me that they were going to establish themselves in my town and I would have to sell.

Q. And did he say on what terms you would have to sell?—A. No, you have to sell—that is all.

Q. Did he say to you, take your inventory to-night we are going to take you over?—A. He simply said, you will be well advised to sell out.

By Mr. Factor:

Q. Can you tell me how much it costs to pack the cigars, say the nickel cigars?—A. Nickel cigars would be $1; this includes wrapping and cellophane.

Q. The dollar includes packing, banding and cellophane?—A. No, no, not banding, wrapping in cellophane and packing in a box.

Q. A dollar a thousand?—A. A dollar a thousand.

By Mr. Senn:

Q. Mr. Chartrand, do you purchase your supplies directly from the producer or from the dealer?—A. I buy my supplies from the grower.

Q. Would you be in favour of the suggestion made in favour of this recommendation, that it would be better to do it by public auction than in the way it is done at the present time?—A. Under present conditions it is almost impossible to purchase what might be termed a uniform variety of tobacco. The suggestion I would make would be that the government should control the tobacco business through some method of classification, but without levying any tax whatever on the tobacco.

By Mr. Baribeau:

Q. You are opposed to the tax of 20 cents a pound?—A. Certainly. If this tax were put on tobacco, there would not be the same freedom regarding

trade and production. Why should people be required to pay 20 cents to 30 cents more a pound if the leaf tobacco were classified and cut; the Imperial Tobacco Company would have complete control, as it has it to-day, on cigars and cigarettes.

The CHAIRMAN: Thank you, Mr. Chartrand.

Witness discharged.

(The French version of the foregoing evidence of Messrs. Joseph Marion, Charles Frenette, Ernest Forest and Victor Chartrand follows immediately.)

M. J.-C. BEAUCHAMP est assermenté comme interprète:

M. JOSEPH MARION est appelé et assermenté.

M. Sommerville:

D. Monsieur Marion, vous êtes de Saint-Jacques-l'Achigan?—R. Oui monsieur.

D. Vous représentez les producteurs de tabac de votre région?—R. Oui monsieur. C'est-à-dire que je fais le commerce du tabac en feuilles et je suis cultivateur moi-même.

D. Voulez-vous exprimer votre opinion au comité sur la situation générale du tabac dans votre région ou dans la province de Québec?—R. Il me fait plaisir de paraître devant ce comité, dans l'intérêt commun comme dans mon propre intérêt. Le commerce de tabac canadien dans la province de Québec, surtout dans notre région, n'est pas prospère, c'est-à-dire que le producteur a de la marchandise en main qu'il ne peut pas vendre.

Le président:

D. Du point de vue du producteur?—R. Oui, du point de vue du producteur. Les bas prix, qui ont été payés depuis 1924, ont contribué certainement à nuire au producteur, qui a continué à produire, et malheureusement, depuis trois années consécutives, nous avons des mauvaises récoltes de tabac. Les gros manufacturiers, l'Imperial Tobacco, achetaient en 1921 une partie des tabacs que les producteurs avaient en mains à cette date. L'après-guerre avait certainement contribué à faire baisser les prix de cette marchandise, comme d'ailleurs le prix des autres marchandises. En 1924, dès le début de 1924 et de 1925, les prix sont devenus meilleurs. L'Imperial Tobacco avec d'autres grosses compagnies, comme la Rock City Tobacco, avaient favorisé les producteurs par des achats assez considérables. La concurrence entre les manufacturiers, entre les manipulateurs a avantagé le producteur en 1924. Depuis cette date, il n'y a pas eu d'achats considérables de faits par les gros manufacturiers. Probablement qu'ils se sont approvisionnés ailleurs. Ontario, peut-être plus habile que Québec, je ne sais pas, s'est mis à augmenter sa production.

M. Sommerville:

D. De quelle sorte de tabac en feuilles parlez-vous, M. Marion?—R. Je veux parler du tabac à pipe surtout, et je veux parler aussi du tabac à cigare, de la qualité que nous appelons le "Comstock".

D. Le comité voudrait que vous examiniez ces chiffres, M. Marion, il s'agit de tabac à cigare et en feuilles. Les prix moyens payés en 1928 étaient de 11.3 c.; en 1929, de 15c.; en 1930, de 9c.; en 1931, de 5c.; en 1932, de 4c. Maintenant vous avez le tabac à pipe, le gros tabac, en 1928, le prix moyen était de 8.2c.; en 1929, de 12c.; en 1930, 10c.; en 1931, 5c.; en 1932, 3c. Maintenant voulez-vous les prix du petit tabac?—R. Oui.

D. En 1928, 27.8c.; en 1929, 24c.; en 1930, 16c.; en 1931, 8.5c.; en 1932, 7c. On vous demande maintenant si les prix moyens du rapport officiel du Gouvernement représentent à peu près le fléchissement ou la diminution dans les prix du tabac dont vous parlez?—R. Vous avez, vous, en 1928, combien?

Le président:

D. La variation est bien minime?—R. Il y a une différence dans les prix que j'ai payés moi, pour faire mon commerce.

D. Ces chiffres sont-ils à peu près exacts?—R. Vous avez en 1931, combien, 4c.?

D. 5c.—R. La majorité du tabac produit dans la province de Québec, qui était de bonne qualité, s'est vendu plus cher que cela.

D. Ces prix-ci représentent les prix moyens de toute la province de Québec, pour ces trois qualités, vos chiffres se rapportent peut-être à la production dans votre région?—R. Oui. Mais vous avez des années où la moyenne est de 4c. la livre pour du tabac de première qualité.

Le président:

D. En quelle année?—R. En 1932.

D. Occupez-vous seulement de votre district, donnez-nous les prix de 1929 et de 1933 seulement.—R. En 1929, les prix dans ma région étaient de 4c. à 13c. la livre, 4c. pour ce que nous appelons qualité inférieure. Lorsque nous achetons une récolte de tabac il y a toujours environ 20 p. 100 du tabac qui est de qualité inférieure et que nous payons un prix moindre.

D. Est-ce la feuille à cigare ou le tabac en feuilles?—R. Je parle des deux qualités de tabac; en 1929, la moyenne payée fut de 4c. à 13c. la livre.

M. Sommerville:

D. Maintenant, en 1933?—R. En 1933, c'était de 3c. à 8c. la livre.

D. Continuez votre exposé, monsieur Marion.—R. Ces messieurs tiennent à trouver les raisons pour lesquelles le tabac est stationné chez les cultivateurs. Avec les prix qui sont offerts, il ne peut certainement pas le vendre et rencontrer ses dépenses, faire honneur à ses affaires. Premièrement, par le fait que les gros manufacturiers ont cessé d'acheter. Deuxièmement, la ligne de crédit a été retirée par les banques. La ligne de crédit que le cultivateur avait obtenue autrefois lui permettait de garder son tabac dans l'espérance de trouver un meilleur marché. Les cultivateurs qui autrefois avaient une ligne de crédit à la banque ont été obligés de vendre leur récolte à sacrifice pour rencontrer le coût de la production.

D. Etes-vous redevable à la banque, à cause de l'attitude des banques au sujet de la ligne de crédit? L'attitude des banques et la diminution de la ligne de crédit influencent-elles la production?—R. Seulement, un grand nombre de cultivateurs avaient des facilités par les années passées, ils obtenaient toujours un certain montant de la banque, je suppose en donnant leur tabac en garantie.

D. Est-ce qu'il existe un système, dans la province de Québec, en vertu duquel les marchands ou les commerçants d'engrais chimiques prennent une hypothèque ou obtiennent une garantie sur le tabac qui est produit?—R. Non.

D. Continuez à exposer vos vues, M. Marion.—R. Les cultivateurs qui, auparavant, obtenaient une ligne de crédit à la banque ont été obligés de vendre leur récolte à sacrifice afin de rencontrer leurs affaires. Pas tous les cultivateurs, mais un grand nombre ont été forcés de vendre à un prix de 2c., 3c., et quelquefois 4c. la livre.

M. Baribeau:

D. Est-ce qu'il y a une grande quantité de tabac de la dernière récolte qui n'est pas encore vendu?—R. Il y en a quelques millions de livres, de vieux tabac, je ne pourrais pas mentionner les chiffres exacts. Cela, c'est du vieux tabac, de 2, 3 et même 4 ans.

D. Qui est encore en entrepôt?—R. Oui.

M. Sommerville:

D. Ce tabac est-il entre les mains des cultivateurs ou des compagnies?—R. La plus grande partie est encore entre les mains des cultivateurs, et une partie est entre les mains des manipulateurs.

M. Baribeau:

D. Est-ce que la proportion de tabac à pipe non vendu est plus grande que la feuille à cigare?—R. C'est certain que la proportion de tabac à pipe est plus grande par le fait que nous avons eu de mauvaises récoltes et qu'il est impossible d'employer ce tabac-là pour faire des cigares. Par conséquent, ce tabac reste entre les mains des cultivateurs qui attendent de meilleurs prix. Il est impossible de le vendre aujourd'hui.

M. Sommerville:

D. Continuez votre exposé.—R. Maintenant, depuis plusieurs mois surtout, le commerce fut immobilisé. Il s'est fait une campagne, par les gros manufacturiers. Ils faisaient signer des requêtes par les cultivateurs, pour l'imposition d'un droit de 20c. par livre, sous le prétexte que cette taxe...

D. Sur le tabac en feuilles?—R. Oui monsieur... un droit de 20c. par livre sur tout le tabac en feuilles qui se détaillerait, qui serait vendu soit par le manipulateur ou par le consommateur, c'est-à-dire, sur toute vente de tabac en feuilles il y aurait un droit de 20c. par livre.

Le président:

D. Quelle est votre opinion sur ce point?—R. Les producteurs qui signaient ces requêtes le faisaient sous la sollicitation et sous le prétexte que cette taxe améliorerait la vente de leur tabac.

M. Boulanger:

D. Qui vous a fait des représentations au sujet de cette taxe?—R. Dans notre région, c'était contrôlé par un agent de l'Imperial Tobacco.

M. Baribeau:

D. Croyez-vous que les grosses compagnies ont quelque intérêt à faire imposer cette taxe sur le tabac?—R. Si je m'en rapporte aux déboursés que les agents, les acheteurs de l'Imperial, faisaient dans notre région, ils ont dû obtenir 10c. par nom pour recueillir les signatures.

M. Boulanger:

D. Maintenant, M. Marion, avez-vous une idée du nombre de personnes qui ont signé ces requêtes?—R. Sur les représentations qui leur ont été faites, beaucoup de producteurs ont signé ces requêtes, seulement ils n'avaient pas beaucoup de renseignements. L'idée était que c'était pour éliminer le petit cultivateur ou le petit commerçant qui offre au consommateur du tabac de qualité inférieure.

M. Baribeau:

D. Est-ce à votre connaissance qu'il y a eu des contre-requêtes signées?—R. Oui monsieur.

Le président:

D. Que pensez-vous, vous-même, au sujet de cette ligne de conduite? De l'imposition de cette taxe?—R. La manière dont ils ont procédé me répugne. Il est vrai que la requête qu'on présentait contenait des détails, mais le producteur qu'on sollicitait ne se donnait pas le trouble de lire ce qu'il y avait sur cette requête, à cause des représentations verbales que faisait le solliciteur.

M. Baribeau:

D. Etes-vous en faveur de l'imposition d'une taxe telle que proposée?—R. Voici: en réalité cette taxe frappe le consommateur, elle frappe celui qui veut avoir une qualité supérieure comme celui qui est obligé de se contenter d'une qualité inférieure. C'était 20c. la livre sur toute livre de tabac qui allait sur le marché.

Deuxièmement, les petits, les marchands moyens auraient pu difficilement disposer du capital pour mettre cette taxe de 20c. par livre sur chaque livre de tabac qui aurait été sur le marché. Cela en éliminait un grand nombre.

M. Sommerville:

D. L'avocat du comité vous signale qu'il a en main plusieurs requêtes portant des milliers de signatures de gens opposés à l'imposition de cette taxe.

M. Ilsley:

D. On a payé 10c. par nom pour induire les gens à signer la requête et non pour signer la contre-requête?—R. Pour signer la requête. On ne payait pas 10c. à celui qui signait, on payait 10c. au solliciteur,—pas à celui qui était sollicité, au solliciteur.

M. Edwards:

D. Qui payait ce 10c.?—R. L'agent de l'Imperial Tobacco, M. Fontaine.

M. Ilsley:

D. Est-ce qu'on vous a exposé ou expliqué comment l'imposition de cette taxe d'accise de 20c. aiderait le producteur?—R. Oui, en ce sens que l'agent de l'Imperial Tobacco et ceux qui sollicitaient des noms de porte en porte leur disaient que, si la taxe de 20c. était appliquée, tout de suite ils achèteraient la balance de leur tabac à un prix supérieur.

M. Kennedy (Rivière-la-Paix):

D. Ont-ils acheté le tabac?—R. Non, parce qu'il y a eu des contre-pétitions. Quatre-vingt-quinze pour cent de ceux qui avaient été trompés, ou pas suffisamment renseignés, ou de trop bonne foi, ont signé les contre-requêtes.

Si vous voulez me le permettre, je m'en vais vous donner mon impression d'hier. En plus, ceux qui sollicitaient des signatures disaient: "Les producteurs de tabac de l'Ontario ont tout vendu leur tabac, ils sont bien payés, ils sont riches. Il y a quelques années, ils plantaient seulement quelques arpents de tabac; aujourd'hui ils en récoltent des millions et des millions de livres. Ils ont leur argent, ils sont bien heureux avec les grosses compagnies."

Hier, si j'ai compris quelque chose, il y a des producteurs qui n'ont pas été aussi favorisés, comme le disaient certains intéressés.

M. Ilsley:

D. A quelle époque a-t-on fait circuler ces requêtes dans votre région?—R. Ils ont commencé, je crois, dans le mois de janvier,—décembre ou janvier.

M. Sommerville:

D. Depuis les derniers six mois?—R. Oui.

M. Boulanger:

D. Il n'y a aucun doute, M. Marion, que ce ne sont pas les planteurs eux-mêmes qui ont parti le mouvement, mais que le mouvement a été parti par les manufacturiers de tabac?—R. Certainement.

M. Ilsley:

D. Comment l'imposition de ce droit d'accise aiderait-il les manufacturiers? —R. En ce sens que c'est de nature à faire disparaître un grand nombre de manipulateurs de tabac,—ils auraient le contrôle.

M. Kennedy (Winnipeg-Centre-Sud):

D. Est-ce que cette taxe aurait pour effet de limiter, ou de placer le contrôle de la préparation du tabac entre les mains des gros manufacturiers?—R. Bien, certainement qu'en éliminant tout ce qu'on appelle les petits et les moyens manipulateurs, les commerçants moyens de tabac, c'est de nature à donner tout l'avantage aux puissants, aux plus forts, aux très forts.

D. Est-ce cela qui poussait les individus à demander l'imposition de cette taxe, l'idée de concentrer le commerce entre les mains des grands manufacturiers? —R. Certainement.

M. Young:

D. Où ce petit commerçant avait-il l'habitude de vendre son tabac? A quel endroit le petit commerçant avait-il l'habitude de vendre son tabac—R. Au détail.

M. Baribeau:

D. Ne croyez-vous pas qu'en imposant une taxe de 20c. par livre sur le tabac en feuilles, cela favoriserait beaucoup la vente du tabac en paquets.—R. Vous me demandez, monsieur ?

D. Si l'imposition d'une taxe de 20c. par livre sur le tabac en feuilles favoriserait la vente du tabac en paquets?—R. Dans la province de Québec, vous savez que les gens sont habitués, pour un grand nombre, à fumer du tabac en feuilles.

M. Edwards:

D. Est-ce la qualité de tabac que vendent les colporteurs?—R. Les colporteurs vendent en partie du tabac en feuilles. C'est la raison pour laquelle je voudrais un contrôle, moi; depuis vingt-cinq ans, je voudrais un contrôle sur la vente du tabac en feuilles.

M. Factor:

D. Etes-vous en faveur de l'imposition de cette taxe?—R. Non, monsieur. Je puis donner beaucoup d'autres raisons.

D. Quel autre contrôle ou réglementation favoriseriez-vous, M. Marion?—R. La province de Québec nous a fait quelque chose; c'est un gros commencement: en janvier dernier, ils ont mis en vigueur une loi concernant la préparation et la vente des tabacs en feuilles.

M. Sommerville:

D. Nous venons de distribuer aux membres du comité un mémoire qui est censé avoir été soumis au comité par vous-même: Est-ce bien...

M. Barrette: Lisez-le à haute et intelligible voix. (Le témoin donne lecture au comité du mémoire suivant.)

> La demande que je viens mettre devant le comité d'enquête est la même que celle qui fait le fond des requêtes signées par les planteurs de tabac du district nord de Québec comprenant les comtés de L'Assomption-Montcalm-Berthier et Joliette;

Nous demandons qu'il ne soit pas imposée de taxe sur le tabac vendu en feuilles à d'autres qu'aux manufacturiers, que ce commerce ne soit pas prohibé.

La moitié de notre production se vend, en feuilles, à l'état brut, directement du producteur au consommateur, par l'intermédiaire des commerçants, sans passer par la manufacture. Comme cela représente une forte partie de la consommation de tabac de notre province, il s'ensuit que le manufacturier voudrait prohiber cette vente pour arriver à faire passer tout le tabac a pipe par la manufacture; c'est naturel, là est la lutte.

De son côté, le planteur tient a ce débouché, grâce auquel il a 15 et 20 acheteurs pour son tabac, au lieu d'un seul. L'enquête actuelle, au cours de laquelle le planteur de l'Ontario s'est plaint d'être à la merci du trust du tabac, n'est pas pour le faire changer d'idée.

On a dit ici même que la pipée de tabac canadien était passée de mode, qu'il fallait être de son temps; il serait curieux de faire une enquête auprès de nos députés fédéraux de Québec, on serait surpris—comme dans le cas du billet de loterie dont parlait M. Taschereau—de voir le nombre de sacs de tabac canadien naturel qu'il y a; et pourtant ils doivent être à la page...

Sans doute le commerce de tabac en feuilles, comme tous les autres, est affecté par la crise actuelle, mais il est bien évident que ce n'est pas en fermant un débouché pour une bonne partie de notre production que nous aurons une amélioration; nos planteurs veulent garder leur vente libre.

Nos suggestions ressemblent beaucoup à celles des planteurs de l'Ontario: organisation de la classification officielle au moyen d'un entrepôt central de séchage, de classification et de vente aux enchères publiques.

Nous avons trop de variétés de tabac; la classification en réduirait le nombre; la classification officielle et la vente aux enchères publiques donneraient un marché régulier et certifié pour nos tabacs à pipe, tabacs aromatiques et autres régulariseraient la production et la vente de nos tabacs à cigares, rendraient possible l'exportation d'une certaine quantité de ces tabacs; enfin c'est à peu près le moyen essentiel pour la production et la mise sur le marché des tabacs à cigarettes que nous espérons produire sous peu.

Dans notre district, la culture est à base familiale; nous pouvons nous contenter de prix ordinaires et y trouver notre profit; qu'on nous laisse notre marché libre de tabac en feuilles; qu'on nous aide à organiser un poste de séchage, de classification et de vente aux enchères et notre industrie remontera la côte.

Et sur ces terrains, nous rejoignons les demandes formulées par les planteurs de l'Ontario.

M. Boulanger:

D. Monsieur Marion, à part d'être un planteur de tabac, je comprends que vous êtes aussi un commerçant de tabac?—R. Oui, monsieur.

D. Pouvez-vous dire approximativement combien de livres de tabac vous achetez des cultivateurs, par année?—R. En 1929, j'ai acheté près d'un million de livres de tabac.

D. Des planteurs?—R. Des planteurs de tabac.

D. En 1930?—R. En 1930, j'ai acheté seulement environ 400,000 livres de tabac.

D. Les années suivantes?—R. L'an dernier...

D. Avez-vous 1931?—R. 1931, je ne l'ai pas.

D. Avez-vous 1932?—R. Depuis 1932, j'ai réduit mon commerce, j'ai été dans l'obligation de le réduire parce que, à cause des bas prix, le cultivateur s'en va vendre lui-même son tabac, malheureusement.

M. Baribeau:

D. Est-ce que cela veut dire que vous aviez moins de vendeurs, que moins de tabac vous était offert?—R. A cause des bas prix. C'est la raison pour laquelle je veux un contrôle, c'est une des raisons pour lesquelles je veux un contrôle, si c'était possible, sur la vente des tabacs en feuilles. Mais il n'est pas nécessaire, pour contrôler la vente du tabac en feuilles, d'imposer une taxe de 20c. par livre.

D. Voici où je veux en venir: Vous dites qu'en 1930 vous avez acheté un million de livres de tabac?—R. En 1929.

D. En 1930, vous en avez acheté 400,000 livres?—R. Oui.

D. Pour quelle raison en avez-vous acheté 600,000 livres de moins en 1930?—R. En 1929, nous payions le tabac de 4 à 13c. la livre et le cultivateur trouvait qu'il était assez rémunéré, il nous le vendait; mais, depuis, par le fait que les gros manufacturiers n'ont pas pu acheter, les prix ont diminué et la vente du tabac en feuilles n'étant point contrôlée, le cultivateur, le producteur, qui ne trouvait pas les prix offerts suffisants, fait l'essai d'écouler sa marchandise lui-même.

Le président:

D. Quelle sorte de contrôle proposeriez-vous pour améliorer la vente du tabac?—R. La fixation d'un prix minimum pour la première qualité. Deuxièmement, la plantation d'une seule variété sur une même ferme. Il y a des cultivateurs qui plantent cinq ou six variétés de tabac; ils cultivent cinq arpents de tabac et ils plantent cinq variétés de tabac.

M. Edwards:

D. Dans votre mémoire, vous dites qu'il y a trop de variétés de tabac sur le marché?—R. Ce n'est pas mon mémoire, cela.

D. Dans le mémoire que vous avez lu?—R. C'est le mémoire d'un ami.

D. Un mémoire a été présenté au comité l'autre jour au nom de l'Imperial Tobacco. Dans ce mémoire, l'Imperial Tobacco suggère de limiter la variété des tabacs cultivés et cette compagnie mentionne certaine variété particulière de tabac qui devrait être produite dans le comté de Norfolk, dans l'Ontario. En d'autres termes, il s'agirait d'uniformiser la variété, ou d'avoir certaines variétés uniformes?—R. Seulement, il y a des variétés qui, à cause de la différence des climats, peuvent se produire dans l'Ontario et ne peuvent pas se produire dans notre région.

M. Boulanger:

D. Combien de tabac avez-vous acheté dans les trois dernières années?—R. Une moyenne de 300 à 400,000 livres. Il ne faut pas oublier que j'avais en stock 350,000 livres de tabac qui m'étaient restées de l'année 1928 et 1929.

D. Combien y a-t-il de marchands de tabac comme vous dans la région de Joliette?—R. Je ne peux pas le déterminer.

D. A peu près?—R. Dans mon district, dans le district de Joliette?

D. Oui.—R. Une soixantaine, à peu près.

D. Quelle quantité, à peu près, achètent-ils, par année?—R. Je ne peux pas le dire.

D. Vous n'avez pas même l'idée approximative?—R. C'est assez difficile à dire.

D. Quelle proportion de la production, les achats des commerçants représentent-ils?—R. Ah! la plus forte quantité. C'est une question à laquelle il est très difficile de répondre.

D. Les commerçants de tabac qui achètent le tabac en feuilles des planteurs, achètent ce tabac en concurrence avec les agents de l'Imperial Tobacco et des autres manufacturiers, n'est-ce pas?—R. Oui, mais on ne les a pas vus beaucoup nous faire de la concurrence depuis plusieurs années; ils n'ont pas acheté.

D. Cette concurrence, à supposer qu'elle existe, est-elle avantageuse pour les planteurs de tabac?—R. Certainement.

M. Boulanger:

D. Maintenant, si les commerçants de tabac se voient imposer une taxe de 20c. par livre sur le tabac en feuilles, est-ce que cela ne serait pas au désavantage du planteur?—R. Certainement. Si 50 p. 100 ou 75 p. 100 des manipulateurs de tabac qui font les achats chez les producteurs sont éliminés, cela sera de nature à favoriser ceux qui vont rester, avec la possibilité d'acheter et à des prix moindres. Plus il y a de concurrence, plus il y a d'excitation.

Le président:

D. Le petit commerçant serait éliminé?—R. Pas seulement le petit, il y en a qui sont assez puisants aujourd'hui, vous savez.

D. Le commerçant serait éliminé mais non pas le producteur?—R. Non, le producteur ne serait pas éliminé.

M. Boulanger:

D. L'élimination des commerçants aurait-elle pour résultat de mettre le marché du tabac en feuilles entre les mains des gros manufacturiers?—R. C'est le moyen d'éliminer le commerce du tabac en feuilles.

D. Un autre résultat ne serait-il pas de forcer le cultivateur ou le consommateur de la province, qui achètent du tabac en feuilles, qui le coupent eux-mêmes, de forcer ces gens-là à s'approvisionner de tabac préparé, en paquets, chez les manufacturiers?—R. C'est assez difficile, ça; dans les temps qui courent, surtout dans les temps de crise, cela est difficile. Si les chômeurs sont obligés de payer 20 ou 25c. la livre de plus pour le tabac, cela n'améliore pas la qualité, cela la détruit plutôt. Le moyen que je suggère serait à l'avantage du producteur, du consommateur, du manipulateur et à l'avantage du manufacturier, car le producteur serait forcé de tenter de produire une meilleure qualité de tabac, et si vous me le permettez...

Le président:

D. Exposez vos suggestions.—R. J'en étais rendu à la production d'une seule variété sur une même ferme. Troisièmement: S'il était possible de faciliter le crédit des cultivateurs par les banques. Quatrièmement: Le contrôle de la vente serait fait par une licence.

M. Sommerville:

D. A qui le permis s'appliquerait-il, au vendeur?—R. A toute personne, à tout manipulateur de tabac. Voyez-vous, dans la province de Québec, on a mis une loi en vigueur qui est de nature déjà à améliorer le produit. Sur chaque colis de tabac, il faut mettre le nom du manipulateur ou le nom de celui qui le détaille.

M. Baribeau:

D. Vous dites que sur chaque livre de tabac vendu au comptoir, le nom du producteur doit être écrit, ou est-ce le nom du vendeur?—R. Le nom de celui qui le prépare ou le nom du vendeur, ou de celui qui l'écoule.

D. Sur chaque livre?—R. Oui, sur chaque livre, la loi est en force depuis le mois de janvier. Maintenant, il y a deux lacunes pour moi, dans la loi,—il n'y a pas de loi parfaite, mais c'est un bon commencement. Premièrement, on exige

de marquer: "Produit de Québec ou Produit d'Ontario"; le nom authentique de la variété, et on a oublié de mentionner la qualité. Deuxièmement, il faut marquer le nom et l'adresse du manipulateur ou du détaillant. Cela est très bien. Maintenant, je suggère un droit, une licence à tous les manipulateurs de tabac. Pour plusieurs raisons, surtout...

Le président:

D. Vous voulez dire le manipulateur qui achète du producteur?—R. Le manipulateur. Aujourd'hui, le méchant producteur, malgré qu'il soit obligé, s'il veut écouler son tabac, de mettre une étiquette dessus, à cause de la loi qui est en vigueur, peut être encore favorisé par le fait que la loi ne parle pas de la qualité.

D. La qualité devrait être indiquée sur le paquet?—R. Certainement. Maintenant, j'ai connu des cultivateurs, même de bonne foi assez, qui jugeaient leur situation impossible et qui voulaient la rendre meilleure, qui font imprimer des étiquettes au nom de leur petits-fils ou de leurs fils, et puis il y a des manipulateurs de tabac qui l'ont fait. J'attaquerai surtout les manipulateurs, pas les producteurs, car des producteurs je n'en connais qu'un. Ces gens ont vendu, en se servant de la rigueur de cette loi, du tabac de qualité inférieure portant des étiquettes. S'ils avaient été obligés de mettre sur leur étiquette le numéro d'une licence, qui serait de $50, cela aurait été impossible, car, par une licence du manipulateur ou du détaillant de tabac, le producteur de tabac serait dans l'obligation de vendre son tabac à un homme licencié, et s'il n'est pas satisfait du prix qui lui est offert, il pourrait prendre une licence lui-même.

D. Avez-vous d'autres suggestions à faire?—R. Non monsieur.

M. Baribeau:

D. Y a-t-il, dans les comtés que vous représentez, L'Assomption-Montcalm, Joliette et Berthier, des compagnies qui achètent du tabac et qui sont contrôlées par l'Imperial Tobacco ou d'autres compagnies?—R. Il est très difficile de répondre à cette question car les agents sont quelquefois des manipulateurs de tabac. Je ne connais pas leurs opérations intérieures, je ne vois que l'extérieur.

M. Young:

D. Tout à l'heure, vous avez dit que vous aimeriez à produire du tabac à cigarettes. Les producteurs de tabac d'Ontario ont soumis un mémoire dans lequel ils disent qu'ils ont le monopole de la production du tabac à cigarette?—R. Je pense qu'ils disent vrai.

D. Sur quoi fondez-vous l'espérance que vous pourrez produire du tabac à cigarettes dans la province de Québec?—R. Moi, si j'avais rédigé ce mémoire,—quoique je n'y suis pas opposé, et je n'ai eu l'occasion de le lire que ce matin,—je crois que notre climat ne favorise pas beaucoup la production du tabac à cigarette. Seulement le gouvernement provincial par l'entremise de ses agronomes est à faire des expérience et ils ont eu des résultats assez satisfaisants, paraît-il.

M. Boulanger:

D. M. Marion, un témoin a laissé entendre, ici, que le tabac, acheté par les commerçants dans votre région, n'était que des déchets, qu'est-ce que vous avez à dire à ce sujet?—R. Je crois que ce monsieur fut mal informé.

D. Est-ce que ce n'est pas votre pratique, M. Marion, quand vous achetez du tabac d'un producteur, d'acheter toute sa récolte, le bon, le moyen, le mauvais, vous achetez tout?—R. A la première question, je répondrai que celui que j'ai vu, dans le mois de janvier, le premier sur le chemin pour acheter voulait acheter seulement le tabac le plus commun de la récolte de 1933. Je ne sais pas si c'était pour lui ou pour l'Imperial Tobacco, mais c'était un agent de l'Imperial Tobacco, qui a commencé à offrir 2c. la livre pour le tabac commun de la récolte de 1933. Je suis sous serment ici et je jure cela. Il n'achetait pas le bon.

Le président:

D. Il achetait le tabac de qualité inférieure?—R. Oui, monsieur, il achetait le tabac de qualité inférieure, seulement ça. Je ne sais pas si c'était pour lui-même, c'est un manipulateur de tabac, mais il est agent pour l'Imperial Tobacco.

M. Baribeau:

D. Quelle a été la production totale du tabac dans les comtés que vous représentez, L'Assomption-Montcalm, Berthier et Joliette, durant les années 1932 et 1933?—R. Si l'on tient compte des rapports des agronomes qui ont fait un certain recensement, on prétend que la quantité est d'environ 4 millions de livres, mais, moi, je crois que c'est plus que ça.

D. Nous avons des rapports que la production est d'environ 10 à 12 millions de livres?—R. Pour moi, il y en a plus que ça, dans les comtés que vous m'avez nommés. Il s'en produit aussi dans le canton de Saint-Césaire.

M. Boulanger:

D. Quel serait l'effet, sur le prix du tabac au consommateur, de l'imposition d'une taxe uniforme de 20c. par livre sur le tabac en feuilles de toutes catégories, est-ce que cela ferait monter les prix?—R. Certainement, mais seulement pour le consommateur. Cela n'améliorerait pas la qualité.

D. Est-ce que cela serait avantageux pour le producteur?—R. Du tout.

D. Dans ces temps de crise que nous traversons actuellement, M. Marion, seriez-vous en faveur de forcer les cultivateurs à laisser le tabac en feuilles pour fumer le tabac en paquets?—R. Non, monsieur, il n'y a pas que les cultivateurs qui fument du tabac en feuilles, il y a aussi les autres individus.

D. Il n'y a pas que les cultivateurs qui fument du tabac en feuilles?—R. Non, monsieur.

Le témoin est congédié.

M. Charles Frenette est appelé et assermenté.

M. Parry:

D. Vous représentez un groupe de producteurs de la région de Saint-Charles-de-Bellechasse?—R. Pardon, je ne représente pas de producteurs.

D. Alors, à quel titre venez-vous faire des représentations, aujourd'hui, au comité?—R. Moi, je viens donner les quantités de tabac que j'ai achetées des cultivateurs cette année et la moyenne des prix que j'ai payés.

Le président:

D. Etes-vous commerçant ou producteur?—R. Je suis commerçant.

D. Alors, donnez vos renseignements.—R. Du 1er janvier 1933 au 31 décembre 1933, j'ai acheté des cultivateurs 807,000 livres de tabac et le prix moyen que j'ai payé en 1933, fut de 5c. 5. la livre. J'ai acheté 800,000 livres de tabac des cultivateurs et 100,000 livres de la Coopérative de Saint-Jacques-de-l'Achigan.

Le président:

D. Pour le compte de qui achetez-vous du tabac?—R. Pour moi-même.

D. A qui vendez-vous votre tabac?—R. J'en vends une grosse partie aux marchands détaillants,—à peu près 90 p. 100.

D. Quelle sorte de tabac vendez-vous? C'est du tabac en feuilles?—R. C'est du tabac en feuilles seulement.

D. Du tabac en feuilles à l'état brut?—R. A l'état brut, pour être fumé; je le vends en feuilles pour être fumé tel qu'il est; je n'en vends pas aux manu-

facturiers. En 1933, j'en ai acheté 800,000 livres des cultivateurs. La moyenne du prix que j'ai payé aux cultivateurs a été de 5½c. Ce que j'ai acheté de la Coopérative, je l'ai payé 4½c.,—à peu près, je suppose, 50 p. 100,—et dans les tabacs aromatisés, j'ai payé 7c.

M. Kennedy (Winnipeg-Centre-Sud):

D. Quelle est la qualité de ce tabac que vous avez acheté? Vous avez dit que vous en avez acheté à... —R. A 4½c.

D. Quelle était la qualité de ce tabac-là?—R. Bonne qualité dans les grands tabacs, la variété des grands tabacs, tels que Connecticut, le grand Havane...

Le président:

D. Il ne s'agit pas de tabacs séchés à l'air chaud?—R. Aucune préparation.

M. Sommerville:

D. Est-ce qu'il y avait du tabac à cigare?—R. Non, il n'y en avait pas.

D. Simplement du tabac à pipe?—R. Oui.

D. Qu'est-ce que vous entendez par le tabac aromatisé? Est-ce que c'est du tabac à pipe aussi?—R. C'est du tabac à pipe.

Voici un état du tabac que j'ai vendu en 1933:

VENTES EN 1933

	livres
Janvier	10,389
Février	24,659
Mars	31,115
Avril	27,684
Mai	65,096
Juin	103,180
Juillet	102,389
Août	101,501
Septembre	57,912
Octobre	70,779
Novembre	68,894
Décembre	34,508
	708,066

D. A quel prix avez-vous vendu votre tabac?—R. La moyenne, 11½c.

D. Est-ce le prix moyen ou la qualité moyenne du tabac?—R. La moyenne.

D. Vendez-vous votre tabac comme vous l'achetez, en vrac, ou le mettez-vous en paquets?—R. La préparation me coûte 2c. par livre. Il y a le fret. Moi, je ne reste pas dans le district.

M. Boulanger:

D. Quelle préparation faites-vous subir au tabac avant de le vendre aux détaillants?—R. On le passe un peu à la "steam" pour le mettre en paquets d'une livre ou d'une demi-livre et en balles de vingt-cinq ou cinquante livres.

D. Quand vous achetez du tabac du cultivateur, vous l'achetez en grosses balles?—R. Oui.

D. Combien pèsent ces balles-là, à peu près?—R. Dix, vingt-cinq et cinquante livres.

D. Ensuite, vous défaites ces grosses balles et vous mettez le tabac en paquets?—R. On défait ces balles pour mettre le tabac en mains, pour le faire "steamer" et, ensuite, il est pesé par demi-livre ou par livre.

M. Sommerville:

D. Avez-vous d'autres suggestions à faire au comité concernant l'amélioration de l'industrie du tabac?—R. Non. J'ai pris connaissance du rapport et, franchement, j'approuve ce rapport préparé par M. le notaire Forest. Je n'ai rien autre chose à ajouter.

Le président:

D. Vous approuvez les suggestions de M. Marion?—R. Franchement, j'approuve quand il dit qu'on pourrait se passer de la taxe de 20c., mais il peut y avoir des détails que je ne pourrais pas expliquer parce qu'il y a des détails assez compliqués.

M. Boulanger:

D. Monsieur Frenette, l'année dernière vous avez acheté 300,000 livres de tabac des cultivateurs?—R. 800,000.

D. 800,000 livres des cultivateurs et, à part cela, 300,000 livres?—R. J'ai acheté, à part cela, 100,000 livres de la Coopérative, à peu près,—j'ai les factures, —et 50,000 livres des manipulateurs du district.

D. La Coopérative de qui vous avez acheté ce tabac-là, comment s'appelle-t-elle? C'est la Coopérative des planteurs de tabac de Joliette?—R. Oui.

D. Le total de vos achats pour 1933 s'élève à 950,000 livres, alors?—R. A peu près.

D. Combien en avez-vous acheté en 1932?—R. Je n'ai pas mon état.

D. A peu près? Avez-vous une idée?—R. J'en ai acheté en 1932 à peu près 600,000 livres,—600 à 700,000 livres.

D. En 1931?—R. A peu près la même chose.

D. En 1930 aussi?—R. C'est toujours à peu près la même quantité, excepté l'année dernière où j'en ai acheté plus parce que je trouvais les prix favorables.

D. Depuis combien d'années êtes-vous dans le commerce du tabac en feuilles?—R. Cela fait trente-deux ans.

D. Avez-vous toujours acheté à peu près la même quantité chaque année, pendant tout ce temps-là?—R. Non, j'en achetais beaucoup moins autrefois. Je me rappelle seulement de la première année, 50,000 livres, et la dernière.

D. Combien y a-t-il de marchands de tabac qui achètent du tabac des cultivateurs dans le district de Joliette?

Le TÉMOIN: De commerçants de tabac?

D. Comme vous, oui.—R. Ce serait difficile de les compter.

D. A peu près? Une idée?—R. Il peut y en avoir vingt-cinq, trente,—trente ou quarante.

D. Pouvez-vous dire quelle est la quantité approximative de tabac que ces commerçants achètent des cultivateurs chaque année?—R. Ce serait difficile à dire.

D. Pouvez-vous dire quelle proportion de la production les achats des commerçants peuvent représenter? Est-ce 50 p. 100, ou moins, ou plus?—R. Je comptais que dans le district de Joliette, il pouvait se récolter au moins 10.000,-000 de livres,—8 à 10,000,000.

D. Et, là-dessus, savez-vous combien les commerçants comme vous peuvent en acheter, à peu près?—R. Non.

D. Est-ce la moitié, ou plus, ou moins? Vous ne le savez pas?—R. Non. Je dois dire au comité que si je ne donne pas plus de renseignements au comité c'est que je ne sais ni lire ni écrire.

D. Vous m'avez entendu tout à l'heure poser des questions à M. Marion au sujet de l'effet ou du résultat que pourrait avoir l'imposition d'une taxe de 20c. sur le tabac en feuilles?—R. Oui.

D. Vous avez entendu ses réponses?—R. Oui, monsieur.

D. Je n'ai pas besoin de vous poser les mêmes questions. Etes-vous de la même opinion que M. Marion à ce sujet-là?—R. Au point de vue de la taxe, absolument; je l'approuve entièrement. C'est au détriment des producteurs et au détriment des consommateurs, parce que trente ou cinquante acheteurs en compétition, les cultivateurs en retireront plus de bénéfices que quand ils seront à la merci de deux ou trois compagnies seulement.

Le président:

D. Quelle proportion du tabac que vous achetez est revendue en colis ou en paquets, sans que vous soyez obligé de payer une taxe?—R. Je le vends tout sans être obligé de payer de taxe.

M. Baribeau:

D. Quand vous achetez la récolte des producteurs de votre district, est-ce que vous avez à subir la concurrence de l'Imperial Tobacco ou d'autres grandes compagnies?—R. Je m'aperçois que, ne restant pas dans le district, alors que ces compagnies ont des agents dans ce district, alors je suis supposé payer plus cher qu'eux autres. Et je peux prouver ce que je dis par la moyenne que j'ai payée sur les tabacs que j'ai achetés.

D. Y a-t-il surproduction de tabac dans votre district?—R. Je ne le crois pas.

M. Boulanger:

D. Monsieur Frenette, qu'est-ce que vous avez à dire de la suggestion de M. Roch, que les commerçants de tabac n'achètent que des déchets?—R. Par la moyenne du tabac que j'ai acheté des cultivateurs à $5\frac{1}{2}$c., en ayant acheté 800,000 livres, et prenez la moyenne des tabacs que j'ai achetés de la Coopérative, vous allez avoir la réponse.

M. Sommerville:

D. Vous avez déjà dit que vous achetiez du tabac de bonne qualité?—R. Oui, je l'ai dit. En ayant une moyenne de $5\frac{1}{2}$c. pour le tabac, les 800,000 livres que j'ai achetées des cultivateurs, et prenez la moyenne de l'argent que les cultivateurs du district ont reçu de la Coopérative et vous verrez s'ils ont acheté une meilleure qualité que moi ou s'ils ont donné plus d'avantages aux cultivateurs. La moyenne de l'argent qu'ils ont reçu de moi pour leur tabac doit être plus élevée que la moyenne de ceux qui ont porté leur tabac à la Coopérative.

Le témoin est congédié.

M. Ernest Forest est appelé et assermenté.

M. Sommerville:

D. Vous êtes notaire à L'Epiphanie?—R. Oui.

D. Vous demeurez dans la région même où on produit beaucoup de tabac?—R. Oui, au centre.

D. Voudriez-vous, monsieur Forest, nous présenter vos suggestions concernant la situation de l'industrie du tabac et les remèdes que vous proposez pour améliorer cette industrie?—R. J'avais préparé un rapport là-dessus. Je suis arrivé en retard, on l'a fait lire tout à l'heure par un autre témoin. Les suggestions que j'avais à faire sont contenues dans ce rapport.

Le président:

D. Approuvez-vous le mémoire que M. Marion a lu au comité?—R. Je l'approuve. C'est celui-là que j'ai préparé.

M. Young:

D. Approuvez-vous cette affirmation que vous pouvez produire du tabac à cigarette dans votre région?—R. Oui. La preuve en a été faite l'an dernier, dans ma paroisse, sous l'empire du gouvernement fédéral, par la ferme expérimentale de L'Assomption.

M. Senn:

D. On n'a pas produit de tabac à cigarette dans votre région sur une base commerciale?—R. C'est sur une base d'expérimentation. Mais, cette année, M. Montreuil, gérant de la ferme, me dit qu'il bâtit un séchoir dans ma paroisse.

M. Young:

D. Est-ce que la superficie où on peut cultiver ce tabac dans votre région est assez vaste? —R. Certainement. D'après ce qu'on me dit. Je comprends que les producteurs de l'Ontario ne voient pas cela d'un bon œil. Chez nous, ce sera toujours la culture familiale. Alors, on n'en produira jamais de grandes quantités.

D. Si vous réussissez sur une petite échelle, pourquoi ne réussiriez-vous pas sur une plus grande échelle?—R. Nous n'avons pas de propriétaires de grandes fermes, chez nous. Un homme qui possède cent acres de terre, c'est le maximum. Sur ces cent acres, il faut qu'il prenne sa vie; alors, il peut donner à peu près dix acres pour le tabac; c'est le maximum.

D. Votre fermier ne consommera pas tout le tabac que vous produisez sur votre ferme—R. Evidemment non. C'est pour le commerce. Ce que je veux dire, c'est que ce n'est pas sur une grande échelle.

D. Le tabac à cigarette que vous produiriez chez vous serait surtout destiné au commerce?—R. Au commerce, certainement.

D. Ce tabac-là serait destiné au commerce en général, serait mis sur le marché?—R. Certainement.

M. Boulanger:

D. Monsieur le notaire, êtes-vous de l'opinion des deux autres témoins qui vous ont précédé au sujet de la taxe de 20c. sur le tabac en feuilles?—R. Ah! oui. Cela remonte à dix ans, la lutte que j'ai entreprise contre la taxe.

Le président:

D. Vous êtes absolument opposé à cette taxe?—R. Absolument.

M. Boulanger:

D. Est-ce le sentiment général des cultivateurs dans votre district?—R. Sans aucun doute. La seule différence, ce sont les requêtes qu'on a fait signer. Dans le marasme actuel des affaires, on est parvenu à contourner les gens, à leur faire croire qu'ils avaient avantage à cela.

D. Et, ensuite, ils ont signé des contre-pétitions?—R. Oui.

Le président:

D. Vous affirmez aussi que les gens qui ont signé cette requête avaient été déçus ou trompés?—R. Absolument. La preuve, c'est qu'ils ont signé une contre-requête.

Le témoin est congédié.

M. VICTOR CHARTRAND est appelé et assermenté.

M. Sommerville:

D. Quelle est votre occupation?—R. Je suis vice-président et gérant de la manufacture de cigares Forest Limitée, à L'Epiphanie.

D. Vous fabriquez une assez forte quantité de cigares par année?—R. Oui. J'ai déjà manufacturé jusqu'à 7,000,000 de cigares.

D. Vous êtes un manufacturier indépendant?—R. Oui, monsieur.

D. Voulez-vous expliquer au comité ce que vous avez constaté, ce qui vous est arrivé dans le commerce, dans la vente des cigares?—R. Sur la vente du cigare, il y a cinq ou six ans, on manufacturait 6,000,000 ou 7,000,000 de cigares. L'année passée, j'en ai manufacturé 1,100,000.

M. Factor:

D. A la machine ou à la main?—R. A la main.

Le président:

D. Qu'est-ce qui a réduit votre production?—R. C'est l'influence exercée par l'Imperial Tobacco sur les "jobbers", les détaillants, qui réduit notre production actuellement à ce montant-là.

D. Qu'entendez-vous par l'influence exercée par l'Imperial Tobacco?—R. D'après ce que les "jobbers" nous disent, l'Imperial Tobacco les forcent à porter leur marchandise.

D. Soyez bien précis, expliquez ce que vous voulez dire. Est-ce que ces commerçants que vous appelez "jobbers" vous ont dit qu'ils ne pouvaient pas acheter vos produits parce que l'Imperial Tobacco ne voulaient pas que ces commerçants vendent d'autres produits que les leurs?—R. Ils ne le disent pas ouvertement, ils le laissent sous-entendre.

D. Et puis ils refusent d'acheter?—R. Certainement.

M. Baribeau:

D. Vous vendez toute votre production par l'entremise des "jobbers", vous ne vendez pas aux marchands-détaillants?—R. Nous vendons aussi aux marchands-détaillants.

M. Sommerville:

D. Et votre production est tombée de 5 à 6 millions, qu'elle était il y a 5 ou 6 ans, à 1,100,000, l'an dernier?—R. Oui monsieur.

M. Factor:

D. Est-ce que vous éprouvez des difficultés à annoncer votre produit en concurrence avec les produits de l'Imperial Tobacco?—R. Certainement.

M. Sommerville:

D. Quelles sont ces difficultés?—R. La difficulté est que, quand nous posons nos annonces, on nous les enlève.

D. Qui enlève ces annonces-là?—R. D'après les marchands. . . naturellement, ce sont les voyageurs qui nous rapportent cela, leurs voyageurs posent leurs annonces par-dessus les nôtres.

D. Ces annonces dont vous parlez sont des annonces que des marchands vendant vos produits affichent dans leurs propres magasins?—R. Ce sont des tôles, ce sont des annonces en dehors, des annonces à l'intérieur comme à l'extérieur.

M. Factor:

D. Est-ce que quelque marchand s'est plaint à vous que l'Impérial Tobacco ou ses représentants leur disaient d'enlever vos affiches?—R. Voici ce que les marchands nous disent:—naturellement ce n'est pas moi qui ai constaté cela—seulement ils nous disent: L'Imperial Tobacco est venue et a posé des annonces par-dessus les vôtres; qu'est-ce que vous voulez qu'on dise.

D. Est-ce que des marchands vous ont déjà dit qu'on les avait menacés ou qu'on leur avait dit qu'ils ne pourraient pas obtenir de produits de l'Imperial Tobacco s'ils n'agissaient pas de cette façon-là ou si on ne les laissait pas faire? —R. Cela s'est répété peut-être cent mille fois, mais on ne peut pas le prouver.

M. Kennedy (Winnipeg-Sud-Centre):

D. Est-ce que les représentants de votre compagnie remettent le change aux représentants de l'Imperial Tobacco?—R. Non, on se ferait bien tuer.

M. Sommerville:

D. Dans certains cas, M. Chartrand, est-ce que des marchands vous ont dit qu'il avait été question de mettre vos produits à l'arrière plan ou sous le comptoir? —R. Mille et mille fois.

D. Et les représentants de l'Imperial Tobacco contraignent les marchands à suivre cette pratique?—R. C'est ce qu'on m'a rapporté.

M. Factor:

D. Savez-vous s'il existe un accord ou une entente, entre les marchands et l'Imperial Tobacco, à l'effet que les marchands doivent étaler les produits ou les annonces de l'Imperial Tobacco dans une proportion de 80 p. 100?—R. Je ne crois pas qu'il existe d'accord. Je sais bien qu'ils sont forcés par la compagnie.

M. Sommerville:

D. Avez-vous connaissance de cas où les marchands se sont vus contraints d'enlever vos produits ou vos annonces qui étaient étalés dans leurs vitrines et de les substituer, de les remplacer par des produits de l'Imperial Tobacco, à la demande de cette compagnie?—R. Dans les vitrines? Nous n'avons jamais fait ce genre d'annonces.

M. Boulanger:

D. Avez-vous entendu dire que l'Imperial Tobacco oblige les marchands à lui faire un rapport mensuel des produits qu'ils vendent de leurs concurrents?—R. Je ne peux pas le prouver, mais je l'ai entendu dire. J'aimerais à mentionner un autre fait. Il y a quelques années, l'Imperial Tobacco me faisait demander pour m'acheter. Ils m'ont dit que je devrais vendre. Je leur ai dit: "Non". Ils ne voulaient pas m'acheter, ils voulaient m'écraser. "Vous allez nous vendre à notre prix". Parce qu'ils sont venus s'établir à L'Epiphanie où j'ai ma manufacture.

Le président:

D. En opposition à votre entreprise?—R. Oui, en opposition à mon entreprise.

D. En quelle année était-ce ça?—R. Je n'ai pas la date exacte, cela peut être en 1923, je crois.

M. Kennedy (Winnipeg-Sud-Centre):

D. L'Imperial Tobacco a-t-elle érigé une manufacture pour vous faire compétition?—R. Oui et elle m'a dit que si je ne vendais pas je n'aurais pas de marché.

M. Boulanger:

Q. Avez-vous entendu dire que l'Imperial Tobacco fixe aux marchands la quantité qu'ils doivent acheter de leurs marchandises et la quantité qu'ils peuvent acheter de leurs compétiteurs?—R. Non, je n'ai pas entendu parler de cela.

Le président:

D. Quelles marques de cigares fabriquez-vous?—R. Je fais des cigares bon marché: de 5c., de 3 pour 10c. et de 2 pour 5c.

English (Mr. Factor and Witness).

M. Boulanger:

D. Quelle est la proportion de tabac canadien qui entre dans vos cigares?—R. 96 p. 100.

(Mr. Edwards and witness, in English.)

M. Kennedy (Rivière-à-la-Paix):

D. Employez-vous seulement des hommes à votre manufacture?—R. Non, des filles, des garçons, des femmes et des hommes.

M. Sommerville:

D. Est-ce que la compagnie vous a donné un avis quelconque que vous deviez vendre?—R. C'est un des gérants qui m'a fait venir. Sachant qu'ils devaient s'établir à L'Epiphanie, M. Levine m'a fait venir.

D. Est-ce qu'il vous a mentionné des termes?—R. Non, je lui ai dit que je n'étais pas à vendre.

D. Est-ce qu'il vous a dit: "Faites votre inventaire, demain nous allons acquérir votre commerce"?—R. Non, il m'a dit que je serais mieux de vendre.

(English follows: Mr. Factor and witness.)

M. Senn:

D. Achetez-vous votre tabac chez le détaillant ou chez le producteur lui-même?—R. Chez les producteurs.

D. Seriez-vous en faveur de l'achat du tabac à l'enchère ou suivant le régime d'achat actuel?—R. Ce serait mon point de vue... Sous le régime actuel, il est presque impossible d'avoir une variété de tabac uniforme. Ma suggestion serait que le tabac soit contrôlé par le gouvernement qui ferait une classification sans charger de taxe.

M. Baribeau:

D. Etes-vous opposé à la taxe de 20c. par livre?—R. Certainement. A quoi servirait-il de faire payer au consommateur 20c. de plus par livre de tabac? Si le tabac en feuilles était contrôlé... C'est que l'Imperial Tobacco aujourd'hui ne peut pas mettre la main dessus, parce qu'il est mis sur le marché quand il est en feuilles. Le tabac canadien en feuilles est toujours du tabac canadien, tandis que le tabac manufacturé est un tabac qui porte une marque de commerce et qu'on annonce. Si tout le tabac était mis sur le marché, contrôlé et haché, l'Imperial Tobacco en prendrait encore le monopole.

The CHAIRMAN: Thank you, Mr. Chartrand.

Witness discharged.

The Committee adjourned at 12.55 p.m. to meet again this day at 4 p.m.

AFTERNOON SESSION

The committee resumed at 4 o'clock p.m.

The CHAIRMAN: Let us proceed.

Mr. SOMMERVILLE: I will ask Mr. Stewart of the Macdonald Tobacco Company to come forward.

WALTER STEWART, called and sworn.

The WITNESS: May I make a statement? Have I got the right to speak?

Mr. SOMMERVILLE: Oh, yes.

The WITNESS: Have I got the right to call three members of the government and question them before this committee?

The CHAIRMAN: No.

The WITNESS: Well, you are a member of the government yourself.

The CHAIRMAN: Mr. Stewart, may I make it clear to you from the start that we want to treat you with the utmost of courtesy and consideration. We are calling you as a witness under the order of reference of parliament. By the way, I will indicate to you what the order of reference is so that you will not be under any misapprehension:—

> That a select special committee of eleven members of the House be appointed to inquire into and investigate the causes of the large spread between the prices received for commodities by the producer thereof, and the price paid by the consumers therefor; the system of distribution in Canada of farm and other natural products, as well as manufactured products, and, without restricting the generality of the foregoing, more particularly to inquire into and investigate,—
>
> (*a*) the effect of mass buying . . . "

I will not read the full details . . .

> (*b*) the labour conditions prevailing in industries supplying the requirements of such department and chain store organizations . . .
>
> (*c*) the relation between the flour milling industry and the bakeries of the country . . .
>
> (*d*) the methods and system prevailing in the marketing of live stock and animal products for domestic consumption and export, and the extent to which the present system affords or restricts opportunity for fair returns to the producers.
>
> That the committee shall have power to send for persons, papers and records, and further to request the appointment of a commission or commissions under the Inquiries Act, to secure evidence to be presented to the committee by such Commission or Commissioners.
>
> That the committee shall report to the House from time to time its findings, together with recommendations of such measures as in the opinion of the committee may be considered necessary, etc.

You are called, Mr. Stewart, as the head of the Macdonald Tobacco Company for the purpose of examination in connection with the tobacco business. We try to extend to any witness reasonable courtesy. If you wish to make any statement pertinent to the order of reference and to the subject under discussion we will be very glad to hear you.

The WITNESS: Yes, Mr. Chairman, I had reference to it. You have been speaking of buying tobacco. I say, what about buying the government? I would like to ask these questions before this committee.

The CHAIRMAN: We are not here to be examined.

The WITNESS: What about a royal commission? Do you pay for that? There was one some time ago.

The CHAIRMAN: We are not here to discuss any subject with you at all

The WITNESS: Some of the government have had something to do with this—very high officials in the government too.

The CHAIRMAN: We are not here to argue or discuss these things with you.

Mr. YOUNG: If there are any members of the government who can give us any helpful information on this the committee can call them.

The CHAIRMAN: Certainly; but we shall be the judges.

Mr. STEWART: Will you call them to-morrow if the House sits and ask them three or four questions? What are you? A Liberal?

The CHAIRMAN: Order, order. Now, Mr. Stewart, let me put you perfectly in your place. You are not at liberty to question the committee. You are not at liberty to discuss what this committee or any member of it is in or anything else, so you will please confine yourself. Now, proceed. Mr. Sommerville will direct the examination.

By Mr. Sommerville:

Q. Mr. Stewart, you are the president of the Macdonald Tobacco company?—A. Yes, sir.

Q. And you have been president since the organization of the company, in, I think, 1917 or shortly afterwards?—A. Well, it has changed its name once or twice.

Q. It has changed its name once or twice?—A. Yes.

Q. This was the business which was built up by the late Sir William Macdonald over a period of many years?—A. 1858.

Q. From 1858 and conducted by him until the time of his death in 1917? —A. Yes, sir.

Q. And this is a business which came into the possession of yourself and your brother in 1917 and later you acquired your brother's interest?—A. Yes, sir.

Q. And you are the sole owner of the business?—A. Yes sir.

Q. You manufactured plug tobaccos up to when?—A. Up to 1917 or 1918.

Q. And after that you added to that the manufacture of— —A. Cut tobacco.

Q. And at a later date, cigarettes?—A. Cigarettes.

Q. So that to-day you are manufacturing cigarettes as well as cut and plug tobacco?—A. Yes.

Q. And you have filed with me the financial statement of your company from the year 1929 to last year?—A. Yes.

Q. Together with the statement of your operations in each year?—A. Yes.

Q. And your business has been running at approximately ten or twelve million dollars a year?—A. Yes.

Q. For some time. And you have been using a substantial quantity of Canadian leaf?—A. Yes.

Q. Of late you have been using a substantial quantity of Canadian leaf, have you not, Mr. Stewart?—A. Just since the death of Sir William, because he did not use any.

Q. He did not use any?—A. No.

The CHAIRMAN: How long is that?

The WITNESS: 1917.

By Mr. Sommerville:

Q. Then all imported leaf had been used in connection with this plug tobacco business?—A. Yes.

Q. Then, the flue-cured tobacco of Ontario that you have used during the past five years is, I understand, as follows: 1929, 1,246,000 pounds; 1930, 1,225,000 pounds; 1931, 1,556,000 pounds; 1932, 1,802,000 pounds; 1933, 2,065,000 pounds. These have been your usings of flue-cured tobacco?—A. Yes.

Q. Would you be good enough to let us have a statement of the amount of these tobaccos that you have on hand in the various grades, Mr. Stewart? That is, your flue-cured tobacco?—A. I have not got anything with me, sir. We have a very very small stock.

Q. You have a small stock?—A. Yes.

Q. When you say a small stock, would you say 100,000 pounds?—A. No, I say about a year's stock.

Q. And that last year there were about two and a half million pounds that you used—no, 2,065,000. You have a stock of about that quantity on hand?—A. We have to-day.

Q. At the present time?—A. Yes.

Q. Do you buy direct from the growers?—A. No, sir; we never have.

Q. You buy from the leaf companies?—A. Yes.

Q. They do handle the leaf?—A. Yes.

Q. And, therefore, you have not a buying staff out among the growers? —A. No.

Q. In order to clear up a misapprehension which you have asked to be straightened out, it was stated in evidence that the Hodge Tobacco company were your buying agents in the field. I understand that is not true?—A. It is a separate corporation. We have nothing to do with it. We have control of the stock. We have nothing to do with the management of the company, and the stock that we hold bears no dividend.

Q. I want to clear up that situation. You feel perfectly free to buy from any organization that has leaf for sale?—A. We do buy, sir.

Q. You do buy?—A. Yes, sir.

Q. Sometimes you buy from the Hodge Tobacco company and at other times you buy from other owners?—A. Yes, sir.

Q. Now, with reference to the Hodge Tobacco company, I understand that was a company which was owned by you at one time?—A. Not outright.

Q. Not outright?—A. No.

Q. And in which you still have 51 per cent of the stock?—A. Yes, sir.

Q. But with respect to that 51 per cent you neither exercise control nor receive any share of the profits?—A. No, sir. We have nothing to do with the management.

Q. You have nothing to do with the management of the company; do not elect any directors?—A. No, sir.

Q. Are there any voting rights on that stock?—A. May I ask Mr. Lockwood about that, sir?

Mr. Lockwood: Yes.

By Mr. Sommerville:

Q. At any rate, you have not, for a number of years, exercised any voting rights or dividend rights in connection with that company?—A. I give Mr. Lockwood a proxy each year he goes—I don't know—when they have the annual meeting. They send us a statement which I decline to look at. I do not know anything about it.

Q. Then, the whole management of that company is in the hands of the holders of the 49 per cent?—A. Yes.

Q. And these are the Hodge interests of the United States?—A. Owensboro and Henderson, Kentucky. That is their two places.

Q. The Hodge company are large buyers?—A. In western tobaccos.

Q. In the United States?—A. Yes, sir.

Q. And they acquired this interest in Canada for the purpose of buying in Canada?—A. For export.

Q. For export purposes?—A. Yes, sir.

Q. I think, in fairness to you, that situation should be cleared up, Mr. Stewart, because it was generally accepted they were your buying agents?—A. No, sir.

Q. And in connection with this company, as you say, you do not receive any dividends?—A. No, sir.

Q. As a matter of fact, it is part of your arrangement with them that you get no dividends on the 51 per cent?—A. I think it is on the stock; it is on the stock certificate. I have not seen it for several years.

Q. You share neither in the management—

Mr. Lockwood: Non-dividend bearing.

By Mr. Sommerville:

Q. What is the use of having stock if it does not pay dividend?—A. When the government brought down the budget in 1918 they put a duty on foreign leaf of 40 cents—we had never used a pound—we had to jump into the market on the 1918 crop which was the first crop we bought.

By Mr. Ilsley:

Q. You had never used a pound of Canadian tobacco?—A. No, sir. The duty before that was 28 cents a pound. We entered in 1918 in a small way, and in 1919 a plant was built up, and we had to go in in 1919 and buy a tremendous quantity because we had no reserve.

Q. You were talking about this Hodge company?—A. They asked to come in. I didn't ask them. They came and asked me.

By Mr. Sommerville:

Q. They asked to go into the company?—A. Yes, and I think they have added to their facilities by machinery. I have not been there for some years myself. This is in Kingsboro.

Q. You turned over the control of this company and the management of this company and the plant to the Hodge people?—A. I turned it over? They bought 49 per cent of it, but not through me.

Q. Not through you?—A. No. I had nothing to do with it.

Q. I thought you had it all?—A. No, sir; I had not..

Q. When you had the 51 per cent who had the other 49 per cent before them?—A. Mr. Lockwood is familiar. He has been the secretary of the company and I was the president. I had nothing to do with the sale. I do not know what price or anything about it.

By Mr. Ilsley:

Q. I do not know whether it makes any difference, but why is it you do not have any dividends? Why do you own stock in a company on which you get no dividends?—A. We wanted protection.

Q. Against what?—A. There were only two or three people in dry tobacco and they were competitors. We could not give them our business. This was sometime—

By Mr. Factor:

Q. It was a drying plant?—A. Yes, a drying plant.

Q. Which was established by you?—A. Indirectly. I had something to do with it.

By Mr. Sommerville:

Q. Had you part of it?—A. Yes, sir.

Q. But 49 per cent was sold to the Hodge people in the United States?—A. Not by me. They picked up 49 per cent.

Q. They took up the 49 per cent?—A. Yes.

Q. Of the stock. Now, they control the drying plant and they sell dry tobacco to you?—A. They don't control it; they control the management, at least, as long as Mr. Lockwood owns that proxy.

By Mr. Ilsley:

Q. You have 51 per cent of the stock?—A. Yes.

Q. You control the company?—A. Yes.

Q. This is peculiar stock on which there is no dividends?—A. I said I did not want to have anything to do with it.

Q. You refused to take dividends?—A. I refused to take dividends; it was nothing to do with the management.

Q. You refused to read the annual statement?—A. I have nothing to do with it; I did not get anything out of it.

Mr. Young: Your money is in it.

The Witness: We have written that out; we do not count that worth anything, but it is there for protection.

By Mr. Sommerville:

Q. Protection against what? –A. There are half a dozen new plants since we entered the market, and when we entered the market the price naturally for a year or two rose.

Q. And then, this was a company— —A. To rehandle dried tobacco.

Q. Through which you handled dried tobacco, and in order to protect yourself so that you may be able to get it at that time, you had this control of the company?—A. The 40 cent duty forced us in the market.

Q. Since then a number of other companies— —A. Many other companies. Mr. Lockwood can tell you.

Q. Several other companies have come into the field?—A. Yes.

Q. That were not there at the time?—A. That were not there at the time.

Q. And the situation has changed since you have had this 51 per cent non-dividend paying stock, and without any obligation on your part to buy from them.—A. They also improved the plant. I did not put any more money in it. I think they put in a new drying machine, a big one from the States.

Q. They engaged in a general export business and shipped overseas?—A. That was the reason for acquiring an interest in it.

Q. I think that is satisfactorily cleared up. You wanted that made known on the record?—A. Please.

Q. Then, with reference to your own company. In 1930 a new company was formed?—A. Yes.

Q. And up to that time your company generally had a capitalization of two and a half million dollars?—A. Yes.

Q. Of that you had the entire amount?—A. Yes.

Q. And at that time you had undivided profits of $3,917,529.35. Then you organized a new company?—A. Yes.

Q. Previously to that, your profits had been running up to approximately $1,000,000 a year?—A. No, between $600,000 and $700,000 after very heavy advertising and selling expenses.

Q. Prior to 1929?—A. I mean for the seven years previous.

Q. Then subsequent to 1929 you organized a new company?—A. Yes.

Q. And at the time of the reorganization you took out undivided profits to the extent of $2,500,000?—A. Yes.

Q. And the new company that you then organized had a capitalization of $2,500,000. Since then you have continued the business under the name of the new company?—A. Which was the same as the old company was.

Q. Which was the same as the old company?—A. Yes.

Q. And in that new company since 1930 you have been making net profits of $500,000 or $600,000?—A. Not quite; between $400,000 and $500,000.

Q. Between $400,000 and $500,000 a year?—A. We are not trying to make profits.

Q. You were trying to build up a cigarette business, I understand?—A. Yes, cut tobacco and cigarettes.

Q. And because of that you spent a large amount of money in the development of that end of your business?—A. Yes.

Q. You have found it rather stiff opposition, have you not?

By Mr. Ilsley:

Q. Do I understand you are not trying to make profits in your business? —A. Net profits.

Q. Net profits?—A. Yes.

Q. They are profits, are they not?

By Mr. Sommerville:

Q. I think what the witness had in mind is not with a view to withdrawal, but to build up these brands?—A. Yes.

Q. Of cigarettes?—A. There is a big gross factory profit, but we are spending our money to try to develop our business because we were left the plug business only; had no cut business and no cigarettes. Besides that, I am not drawing anything out of the business.

Q. You draw no salary?—A. No salary.

Q. Your overhead is maintained at a very low figure?—A. Yes.

Q. And out of your gross profits you expend it largely in development of your own brands?—A. Yes.

Q. Cigarettes and cut tobacco?—A. Yes.

By Mr. Ilsley:

Q. Advertising?—A. We spent about $7,000,000 so far since the death of Sir William Macdonald. He did not spend a cent, had no travellers and did no advertising. His factory gross profit was practically his net profit, because outside of about five people everybody was paid by the week.

By the Chairman:

Q. You could not of course put out a cigarette and cut tobacco without heavy advertising in face of present competition?—A. No, sir. I have probably helped the business, because competition has been keen.

Q. Quite so?—A. We have sold quite a few—

Q. You did about 17 per cent?—A. Yes, we sold 720,000,000.

Q. Cigarettes?—A. Cigarettes.

By Mr. Sommerville:

Q. You have been making a steady advance with your cigarette and tobacco business. Then, I observe at the end of the period, end of 1933, under this reorganization company, you have undivided profits of $594,032.96?—A. Yes, sir.

Q. Now, the price paid for your flue in 1930 was approximately 40 cents, with an average price of 31 cents. Then, it dropped in 1931 to an average of 22 cents, and dropped in 1932 to an average of 16 cents; is not that so?—A. I think those figures are correct, sir; they have been given several times.

Q. In connection with those various drops in prices, did you have anything to do in fixing the price paid for the crops of those years?—A. Well, we met market conditions.

Q. Who sets the price?—A. What company sets the price?

Q. Yes?—A. I do not know sir. We follow the lead. Mr. Lockwood rings up and asks us if we want any tobacco. We say, "what is the price to-day? I think I can get so much at a certain price." If it is favourable, we state we will buy so much, and ring up to-morrow; then, while he is buying we never tell him what we are going to buy because we may be buying through somebody else in another section.

Q. You follow the lead. If somebody is paying 40 cents you have to pay 40 cents. If the large buyer is paying 30 cents, you follow at 30 cents, and if the large buyer is paying 16 cents, you are buying at 16 cents. I presume, as long as you are paying the same as your competitor, the question of whether you are paying 20 or 30 cents makes little difference to you?—A. If the crop is shorter, we cannot help it; we just both pay. And if we were short, we might put the price up or try to, rather.

Q. What I mean, is not it a fact that as long as you are competing on those terms, your are willing to pay what your competitor is paying?—A. Well, short crop, yes.

Q. For any crop?—A. We are always afraid of loading up, and having a large surplus. What are you going to do with it?

Q. I do not know. What do you do? We have not had that condition yet?—A. We try not to load up too quickly, so as to be able to stick with the market until the end of the market. The more slowly the crop is bought, it suits us better.

Q. Suits you better?—A. Yes.

Q. Why?—A. We supply by quality; we do not supply rubbish. The longer I have to buy and look over those crops, the better. Quality enters into it. It is not just a case of going out and buying wheat.

Q. You buy quality, comparable with anybody?—A. We try to.

Q. You try to?—A. Yes.

Q. Can you tell me what the average price was you paid for the 1932 crop?—A. I cannot tell that, because he invoices it dry, sir. We do not get any invoices for the wet.

Q. The Hodge Tobacco company?—A. And the other companies.

Q. They sell to you at the price which they pay the farmer, plus a certain definite sum for drying, or processing; is that the basis?—A. If we buy from another company, we do not ask them to make up their expenses; they send us samples, with a price.

Q. But I am talking now about the Hodge Company. Do they sell to you at the price which they pay for the green— —A. No, the redried price?

Q. —plus a certain sum for redrying?—A. Yes, but I have nothing to do with the spread.

Q. You have nothing to do with the spread?—A. I have nothing to do with the spread.

Q. Do you know what the spread is?—A. I think last year $7, including shrinkage.

Q. That is to say last year, you paid the Hodge Company $7,000?—A. No, that was not the price.

Q. That was not the price?—A. $7 a hundred over the price which they paid for the green.

Q. Seven cents a pound?—A. We would not know that sir. He does not send us invoices for the green tobacco. He only invoices it after it is graded. I do not know what he has thrown out. We get invoices for dry tobacco.

Q. Perhaps I misunderstood you. I thought you said Mr. Lockwood would call up and ask you if you wanted to buy some tobacco, you would ask him the price, and he would say that we can probably buy it at such and such a price?—A. That is only the first cost, sir; that is only the first cost.

Q. That is what I mean?—A. I have nothing to do with the first cost, outside of telling him to buy or not to buy.

Q. He does not tell you his cost, plus the cost of buying; he just gives you one price that it will cost you?—A. Yes; because to that you add shrinkage. We give him so much for buying, so much for drying, and then so much for grading. All these things go on it.

By the Chairman:

Q. Which average is 7 cents a pound?—A. Last year, over $7 a hundred.

Q. Well now, Mr. Stewart if you find that the big buyers are willing to pay for this season's crop, the sum of 25 to 30 cents, are you willing to do the same thing as a buyer?—A. We do not buy from the growers.

Q. You do not buy from growers, but you buy the leaf. Are you willing to buy on the basis of that?—A. If he rings up, we won't buy from him at all; we won't buy from him at all, that is all.

Q. What?—A. We do not buy it first hand, sir.

Q. We know that.

Mr. SOMMERVILLE: I know that.

By the Chairman:

Q. What we are talking about is this. If for instance, the Imperial, who are the big buyers, are out in the field buying at 25 cents— —A. You are speaking about the 1934 crop?

Q. Yes, this coming crop.—A. Do you want us to name the crop when the crop is not planted—no, we do not.

Q. What we are asking you is, if you are agreeable to a certain principle of buying. Let me put it this way: Would you be willing to pay the same price as your main competitor, the Imperial Tobacco Company, for tobacco grown in Canada?—A. Why don't you ask the rehandling houses. That is not our business. There are many rehandling houses we buy from. Ask them.

By Mr. Sommerville:

Q. Mr. Stewart, you are a user of a couple of million pounds; the Imperial are users of twelve million pounds, we will say?—A. Excuse me, they said seven and a half million pounds. We used two million pounds and they used over seven million pounds.

Q. May I put it this way: They bought last year upwards of ten million pounds, and you bought last year upwards of two million pounds. Now, if they are buying on the same basis as you, are you willing to pay for tobacco on the same basis for 1934 as they are willing to pay, that is the whole question?—A. Suppose the crop is not a good one.

Q. Then they would be in the same position, would they not?—A. If they do, we have not got to follow them. You do not want us to promise to do something that we don't know anything about.

Q. That is not the question at all.—A. Why don't they cut the crop out for this year?

Q. Well then, you would be out of luck.—A. Where would we be out of luck?

Q. You have not got your supply.—A. We can get it. There is too much tobacco; you have heard that from the other side, and yet they are trying to raise another crop on top of it.

Q. I suppose we would cut out manufacturing tobacco this year.

Mr. BELL: Too many cigarettes.

The WITNESS: How do you mean too many cigarettes?

By Mr. Sommerville:

Q. Perhaps I will come to it this way, Mr. Stewart: Do you regard it as reasonable that the growers of this tobacco should get 31 cent average in 1930, and then be reduced to 22 in 1931, and then be reduced to 16 cents in 1932; do you regard it as fair that there should be that wide fluctuation in the raw product which you are handling?—A. They raise too much tobacco. The 1932 crop was too big.

Q. Ah, but then you had a 25 per cent cut. a 25 per cent reduction in 1931. Now, is that a fair thing for the grower to have to carry? I am putting it to you as man to man?—A. Yes, but that is not my end of the business, sir.

Q. You do not handle any other raw product but tobacco; that is your raw product, and I am asking you, as a manufacturer if you think it is fair? —A. We can buy tobacco in the United States, and we do not set the price. When we want to buy tobacco there we go and buy it and pay the market price.

By the Chairman:

Q. Mr. Stewart, may I put it this way to you: Are you, as the second largest user of tobacco in Canada, willing to co-operate in the stabilizing of the market so that the grower can get a fair price for his tobacco?—A. How are you going to protect us if we say yes?

By Mr. Sommerville:

Q. How do you want protection?—A. What about the competition of those farmers from London down? They are manufacturing tobacco. Some of the growers—I won't name anybody—are growing tobacco and then putting it out. How are we going to meet that condition?

By the Chairman:

Q. You are referring, of course, to the Quebec practice?—A. No, sir, Ontario. In the aggregate, they say the quality is lower.

By Mr. Sommerville:

Q. Mr. Stewart, was not the fact of paying the 16 cent price the thing that forced them into the field to try and get a little more for their product, when they were getting so much less than the cost of production? The whole question comes back to the Chairman's direct request to you.—A. Might I ask the Chairman two questions?

The CHAIRMAN: The Chairman is not a witness.

The WITNESS: No, sir, but you are a government official, and there are two direct questions I would like to ask which have a direct bearing on what you are asking me.

The CHAIRMAN: Well, we want to humour you, Mr. Stewart, if I may put it that way. Now, ask your two questions.

The WITNESS: One, in 1932, in the Fall you reduced the cigarette duty from \$6 to \$4 a thousand. Our competitors knew about it but we went along manufacturing. We got a letter the day before the change was made. A party had gone through our factory just before and said, "You are still manufacturing, we are stopped manufacturing." He knew the excise duty was to be reduced, and it was reduced from \$6 to \$4. That is one time that we were not considered, we were never consulted on that. Why are you bothering with us to-day? You have always treated us as being of no importance. You did the same thing in the budget of 1933.

By the Chairman:

Q. You raise the point then that your competitors received information which you did not receive? Do you make that assertion?—A. Yes.

Q. On your responsibility as a prominent manufacturer?—A. And I can go further than that if you will allow me.

The CHAIRMAN: Note will be taken of that statement.

By Mr. Sommerville:

Q. What you want the government to do then is to advise you when they are going to change their excise duty?—A. If anybody knows why shouldn't we know?

Q. Now then, we are getting away from the question, Mr. Stewart. Are you prepared to help stabilize the market for raw leaf so that the growers can get a fair return for their product?—A. How are we going to do it.

Q. I am asking you, first of all, are you prepared to do—

Mr. ILSLEY: Well now, I think that this witness' question is a fair question to you, Mr. Sommerville.

The WITNESS: I am glad that somebody is taking my part.

The CHAIRMAN: Just a minute.

Mr. ILSLEY: I think that is right.

The CHAIRMAN: Just a moment please. Obviously we are getting nowhere if the witness can answer questions by merely asking another. I want to be as fair and courteous as I can to Mr. Stewart. The question we have put to Mr. Stewart is this: Is he willing to co-operate in an effort to stabilize the market for the grower?

Mr. ILSLEY: He wants to know what the proposition is.

The CHAIRMAN: Just a minute.

The WITNESS: You make a suggestion, sir. What do you want us to do?

By the Chairman:

Q. I will put it this way: Assume that a suggestion is made, would you be willing to sit in and consider it, put it that way?—A. Sit in with whom?

Q. Well, with those interested in the business?—A. You are asking us to do that. If we had acted before with them then you would have said it was in restraint of trade.

Q. That is another way of putting it?—A. Because some years ago, in Hamilton, we were sued for restraint of trade, and it cost us $5,000 or $6,000 to clear ourselves in connection with that charge, and we were about the only people that had nothing to do with restraint of trade, still we were named.

Q. Am I to take it, as your answer, that the reason you are not willing to commit yourself at the present time is because you found that such an action in the past was interpreted as restraint of trade, and you are not willing to put yourself in that position again?—A. No sir, because we had never acted with anyone.

Q. You are not willing then to act?—A. I did not say that. We have never acted with anyone.

Q. I am just asking you?—A. In what way though? You are making a suggestion. You want me to say yes but you do not tell me what it is you want me to say or do.

By Mr. Sommerville:

Q. Mr. Stewart, may I put it this way: Supposing other manufacturers of tobacco are prepared to increase the price to the grower for the tobacco of this year to a sum which is larger than you paid last year, are you willing to tell this committee that you will agree to the same price that they agree to pay?—A. How can I say that when we do not deal first hand.

Q. Well, Mr. Stewart, surely that is not an answer.—A. Yes sir, it is. What about the firms we buy from? They are the people that deal with the growers.

Q. Still, if you say that you will buy on the same basis then they will carry out that arrangement, I have no doubt. If you say to this committee

that you will buy on the same basis as other competitors of yours manufacturing tobacco, then I have no doubt they will carry out that arrangement. -A. Who are you naming when you say that, or how many are you thinking of?

Q. Well, you have got the Imperial; you have got Rock City; and Grothe, and MacDonald Tobacco Company. Now you have got the chief ones, have you not?—A. The chief domestic ones, yes, and what about the exporters?

Q. Who are exporting?—A. A lot of them are exporting.

Q. You are not exporting your cigarettes?—A. No, no, but the people that are handling other exports.

Q. You are manufacturing for domestic purposes?—A. Yes, but there are other people buying for export.

Q. That may be.—A. You are speaking of the buying end, you are not speaking of the manufacturing end.

Q. I am asking you, as a manufacturer, Mr. Stewart, if these other manufacturers are willing are you prepared to say to this committee that you will do what they will do?—A. The other manufacturers have got their own plants, we have not.

Q. Their own plants, what do you mean?—A. Some of the companies you have named have their own drying plants, they buy directly in their own name. Naturally we do not buy directly from the grower.

Q. But you have got 51 per cent of stock in another company?—A. We cannot tell him what to do, in fact we do not have to buy tobacco from him.

Q. That is getting away from the question, Mr. Stewart. You know exactly what I mean, and I am asking you now as a large manufacturer, if these other companies are willing to buy, are you willing to say to this committee you will pay what they will pay, on the same basis, for the same product?—A. Tell me on what basis you are asking me to say that?

Q. On whatever basis your competitors, which I have mentioned, agree upon?—A. I am not going to discuss everything with our competitors. We buy tobacco and pay market price, and our competition is worth a lot to the growers.

Q. Well, it was not worth much in 1932 when they got 16 cents?—A. Well, you know the quantity we bought. What do you expect us to do?

Q. I am asking you again, Mr. Stewart, if the other chief buyers in Canada, the other chief manufacturers in Canada are prepared to pay for their leaf on a better basis than has been paid in the past, for the past two years say, are you willing to say to this committee that you will cooperate to stablize the market and pay on the same basis they are paying?—A. I have told you we have nothing to do with first hand buying.

Q. I do not care whether you buy first hand or tenth hand. The question is, are you willing to pay on the same basis as your competitors? Don't you see, Mr. Stewart, supposing the other competitors agree, for the purpose of argument, to pay 40 cents and you say No, I will do nothing of the kind, I can go out and buy at 20 cents?—A. How could we buy at 20 cents if they pay 40 cents?

Q. You say there is a surplus?—A. I said there was a surplus.

Q. Well then, you go out and buy out of this surplus at 20 cents then you are in a position to compete with them on tobacco that cost you half the price they are willing to pay?—A. What are you going to do with the 20 cent tobacco?

Q. If the domestic manufacturers will agree to pay the domestic price for the domestic trade, then I ask you, are you willing to agree to buy similarly on a similar basis as they, or are you going to say No, I will do nothing of the kind?—A. I tell you again we do not buy from the grower

By the Chairman:

Q. As a matter of fact, Mr. Stewart, my information is that you are willing to do this. We would like you to help the committee. Please get this in your mind: We are not out to harass you or anyone else, but we do feel—and I think the committee agrees with me in this—that the grower in the past few years has not received a fair deal, and we are anxious—this committee is anxious—that out of this investigation shall come something that will give to the grower, the fellow who is growing his tobacco on the farm a little better deal, and we believe it can be done with the co-operation of the manufacturers. You are the second largest manufacturer in Canada, and it is surely essential that we have at least a measure of co-operation from you, and that is why we are at the moment asking you this question.

Mr. SOMMERVILLE: May I add to that, Mr. Stewart, that we have just that much confidence in you and the reputation of your firm, that if you were to say to this committee you are willing to co-operate, then your word is better than your bond; that is all that is required from you.

The WITNESS: If I say yes what am I pledging myself to?

By Mr. Sommerville:

Q. Just to be on the same basis as the other manufacturers that I have mentioned?—A. For any stipulated quantity?

Q. For whatever may be the quantity, the quantity you bought last year if you want to put it on that basis, or your requirements, whichever you like; that is in your hands. Supposing we say two million pounds?—A. And have I got to say from whom I am going to buy that two million pounds?

Q. No, no.—A. Suppose I buy from somebody else other than Mr. Lockwood, how am I going to tell him what the price was?

Q. That will be taken care of, Mr. Stewart. The mere answer that you are prepared to buy on the same basis as the rest will do more to stablize this market than anything else that I can think of.

Mr. ILSLEY: I don't know much about this. Are you going to get all the manufacturers in Canada before this committee and ask them to swear publicly that they are going to sign a certain agreement?

The CHAIRMAN: No.

Mr. ILSLEY: I do not know. It does not sound much like evidence to me, it sounds like something different. I do not know just the purpose of it myself. I think, as a member of the committee, I should know something about it. It is not in pursuance of any plan.

The WITNESS: I do not know any more than you do. I would like to know too.

Mr. SOMMERVILLE: Perhaps you will remember that the committee, through the Chairman, made a special appeal to the manufacturers to sit in with the growers and see whether or not a basis might be arrived at that would give them a more adequate return. To that conference the MacDonald Tobacco Company were invited. Mr. Stewart takes a position, to which he is perfectly entitled, that he does not want to sit in with anybody to make an agreement, that they do their business in their own way. Now then, we are asking him, if those others agree is he willing to do the same, and make a statement to the committee.

The WITNESS: May I say something?

Mr. YOUNG: Are you asking him to agree that if the others will pay a certain sum he will do the same?

Mr. SOMMERVILLE: Yes, for domestic purposes.

Mr. YOUNG: And are you going to bind him to that by an agreement? I do not think this committee has any such power.

The CHAIRMAN: It is not a question of binding anybody down to anything of the kind. It is a question of whether there is a willingness to co-operate to solve a very difficult problem with which we are confronted. I do not want to review the evidence, every member of the committee has heard it, and there is, without doubt, a possibility of some such thing being done which will be in the interest of the growers, which will enable the committee later in its report to formulate the suggestion. It is only a question of whether or not Mr. Stewart would be willing to enter into such an arrangement.

Mr. YOUNG: It looks to me as if something were being done that this committee has no right to do.

The CHAIRMAN: Certainly not, I do not agree with that.

The WITNESS: It looks to me as if you are trying to ring us in on something that we do not want to have anything to do with.

By Mr. Edwards:

Q. If you are not willing to co-operate to help the condition of the grower, I would say that is a sufficient answer.—A. Who said that?

Q. The grower is the one that is bearing the burden.—A. I have not heard many mention the consumer in this affair.

By Mr. Sommerville:

Q. He has not been getting any of the reduction in the price of tobacco.—A. Then you do not know, sir.

Q. Well, if he has we should like to hear, Mr. Stewart, if there has been any reduction in the last two years in the price of cigarettes as the result of the reduction of 50 per cent in the price of tobacco.

The CHAIRMAN: Other than from excise.

The WITNESS: Certainly there is.

By Mr. Sommerville:

Q. Take your cheap brands.—A. Our average price last year, if it had not been for the government putting on the duty which was put on, and which we knew nothing about, an awful duty on cigarette booklets, we sell a package of fine cut for 10 cents, and there is a two cent tax on every booklet, 36 cents tax on the books and 20 cents on the tobacco, 56 cents, sir, and we knew nothing about it, and it has cost us thousands of dollars. I would like to ask a question of one of the members of your cabinet.

By Mr. Sommerville:

Q. We are asking you now a question as to what change has taken place in the price of your cigarettes in the last two years. What is your leading brands?—A. British Consols is our leading cigarette, we sell between 500,000,000 and 600,000,000, one of the largest brands in Canada.

Q. What do they sell for now?—A. A cent a piece.

Q. What did they sell for?—A. A cent and a quarter before.

Q. Before the tax was taken off?—A. Yes.

Q. That is 20 for 25 cents?—A. Yes.

Q. And with the tax of 4 cents—or, what was it?—A. $6 a thousand reduced to $4 a thousand.

Q. That is the equivalent of 4 cents on 20 cigarettes, isn't it?—A. Yes, 12 against 18.

Q. And when the tax was reduced from $6 to $4, then there was 4 cents taken off the price; that would leave the cost price 21 cents and you reduced that to 20 cents; is that right?—A. No, it is not right.

Q. All right then, what is right?—A. Further than that, our duty was reduced in October, or so; it was not brought down in the budget in the regular way—and I would like to ask the Chairman why it was reduced.

Q. We are not here to examine the government. All I am asking you now is, what reduction has taken place in the price of British Consol cigarettes since 1931?—A. They are a cent apiece, instead of $1\frac{1}{4}$ cents.

Q. And the one-quarter cent included the reduction in the excise tax?—A. How are you going to pass it on.

Q. Did it include the reduction in the excise tax, the reduction from $1\frac{1}{4}$ to 1 cent?—A. That is what makes the reduction, how do you think it could be done otherwise?

Q. Of course it did. When the price of tobacco was reduced from 31 cents to 16 cents, was that reduction passed on to the consumer in these consol cigarettes?—A. You could not pass it on, sir.

Q. Could not?—A. How could you?

By the Chairman:

Q. The question is, it was not?—A. It takes about 3 pounds of tobacco to make a thousand cigarettes. In British Consol roughly one quarter is domestic, so it brings you down so that you only have a saving on a quarter of your cigarette—a saving of a pound on the three pounds going into the whole thing.

Q. It would be about three quarters of a pound?—A. Yes.

Q. That is the explanation, Mr. Stewart; and it is sufficient?—A. It is so small, people won't pay odd cents. If you try to sell 20 for 19 they would not buy it.

Q. That is the explanation, and it is a very good answer?—A. It is a very small fraction in the cost.

By Mr. Sommerville:

Q. Then, it not being passed on, it just added to your gross profits on the manufacture?—A. Gross profit, yes; but we spent probably more money in trying to advertise it.

Q. Then if you had spent a little more money for the tobacco, the grower would have been more suitably rewarded, would he not?—A. Certainly, the higher the price the better for him.

Q. Since you must pass on that fraction of 50 per cent saving in the tobacco —?—A. Oh, no.

Q. Well, 30 per cent saving?—A. No.

Q. I don't care, make it 20 per cent?—A. Well, there was a small saving.

Q. Make it twenty, that will do, I don't care which it is; since you cannot pass it on to the consumer, why not pass it on to the producer who needs it?—A. Why does not the government help us out and reduce the tax a bit.

Q. You are a manufacturer and a buyer, why not pass it on to the producer? —A. You are speaking about a crop that has already been used.

Q. Yes. Then there is no suggestion that you care to make to this committee?—A. There is the suggestion I have already given you. We have reduced the tobacco price. I do not know whether any of you men come from the West, we have big sales on tobacco.

By the Chairman:

Q. Smoking tobacco?—A. Fine cut, sir; and the slogan is "Half as much tobacco for the same money as other brands," that is very largely the tobacco you are speaking about. Pardon me, my mistake; half as much more tobacco for the same money.

By Mr. Boulanger:

Q. That is cigarette tobacco?—A. Cigarette, and very largely this flue-cured they are speaking of.

By Mr. Sommerville:

Q. Perhaps Mr. Stewart might file with the committee a statement showing the reduction that has taken place in the price of his product?—A. You don't have to, it is ten cents down; the average was 93 cents for six months last year against $1.03. Then it went up the last six months on account of the tax on the book. We did not raise our price on tobacco, but we paid thousands of dollars for the little 2 cents for our booklet that goes on the package. I think somebody in the government made a mistake, and when they found out what revenue they got, they left it alone.

Q. Would you be good enough to file these statements on your various brands, as the Imperial are doing, with a statement of the price of that brand in 1930 and in each of the following years?—A. There was no such brand, the brand is only out. You cannot compare them.

Q. All right, give us all your brands with the price from 1930 to 1934?—A. The ones that have gone up is due to the duty on the booklet, it has nothing to do with the tobacco.

The CHAIRMAN: State that, Mr. Stewart.

Mr. SOMMERVILLE: Make that statement, because we want that file to be complete.

By Mr. Young:

Q. You said that this reduction in the price of raw tobacco enabled you to sell your finished tobacco to the consumer at a lower price?—A. Yes.

Q. I ask you this question: if you paid more for your tobacco in 1932, would it have raised the price to the consumer?—A. On the brand I am speaking of, yes.

By Mr. Sommerville:

Q. What brand is that?—A. Zig-zag, a tenth for 10 cents. The West has taken a lot of it.

Q. A tenth of a pound for ten cents a package; when did you start to produce it?—A. A few months ago, sir.

Q. And was that just because the price of flue came down to 16 cents?—A. Well, partly because our book average—we have a perpetual inventory, we do not keep one year's stock separate from another—we have our book and we have our stock.

Q. What proportion of Canadian leaf is in zig-zag?—A. A very large per cent.

Q. 80 per cent to 90 per cent?—A. Fully.

Q. Fully that?—A. Yes.

Q. Perhaps it is one of those we are hoping for 100 per cent Canadian leaf?—A. Very close to it.

Q. And it is a new product of yours?—A. Yes, sir.

Q. And that is $1.00 a pound?—A. To the consumer.

Q. Yes, $1.00 to the consumer, and 16 cents to the producer?—A. Yes, and 20 cents to the government.

Q. 20 cents to the government, and that leaves—?—A. Plus sales tax.

Q. And that leaves 16 to 80 less sales tax for the spread between the producer and the retailer?—A. You have to stem tobacco. Somebody has to manufacture it. There is the cost of the packages. There is 20 cents duty. Somebody has to make a profit.

Q. Somebody has to make a profit, that is quite apparent?—A. Yes.

Q. And having taken out your profit of $2,500,000 in 1930, you have in the meantime—?—A. That has not got anything to do with it, because that is not a fair statement.

Q. Which is not a fair statement?—A. Just go on, say what you did again.

Q. Having taken out your accumulated profits of $2,500,000 in 1930?—A. That was permitted by the government, earnings prior to; that has got nothing to do with the 1932 crop. You were trying to link up these profits with the low prices the farmers got, that is not right.

Q. That is not what I was trying to do at all?—A. You did emphasize the amount then, just after saying about the spread.

Q. If you will just wait till I get through, you will see what I was trying to do. Having taken out the accumulated profits in 1930—?—A. Yes.

Q. Having taken them out then you have at the present time at the end of four years accumulated profits of $594,432.96?—A. That is only book-keeping.

Q. Well, this is in your statement?—A. Look at the price we have our stock extended at. It might be capital stock, it might be there would not be any surplus at all.

Q. These are the undivided profits?—A. What is the capital extended at, sir.

Q. The capital, $730,000?—A. Yes, we put a valuation of $36.50 a share on it.

Q. What difference does that make?—A. It would make a big difference. If you put the capital in at the full price, there would be no surplus.

Q. I am talking about profits?—A. What you are speaking about is not a profit.

Q. At any rate, at the end of four years you have accumulated profits of half a million dollars approximately?—A. I would say it was merely book-keeping.

Q. Merely book-keeping?—A. Yes.

Q. Well, it is represented somewhere there, because you have been making from $400,000 to $500,000 a year net?—A. Yes.

Q. And your overhead is negligible, so it must be somewhere. Perhaps it is more than that, Mr. Stewart?—A. Perhaps it is less.

Q. I would like to find out. These are your financial statements, are they not?—A. Yes.

Q. Well, we will see what they disclose later?

By Mr. Kennedy (Peace River):

Q. You mentioned two or three times, and it seemed to have a bearing on the question, as to whether you would co-operate or not, that some information regarding the proposed budget changes was given to your competitor before they were to you?—A. Yes.

Q. Who was your competitor, and how do you know?—A. I tried to name one man—that was when the Liberals were in power.

Q. Who was it?—A. Do you want me to use names or not, because I do not want to get anybody in trouble.

Mr. EDWARDS: I do not think that is necessary.

The WITNESS: We were told that.

By Mr. Kennedy (Peace River):

Q. There is no use in hiding this thing?—A. We were asked, do you want your cigarette duties reduced the same as your big friends; and the answer was, we did not contribute to the campaign funds of either party, we did not play politics.

Mr. SOMMERVILLE: Some one apparently was talking loosely.

The WITNESS: I do not think so, this was a man very close to the Prime Minister.

The CHAIRMAN: The present Prime Minister.

The WITNESS: Yes, sir. These men are very high up that I have got. If you want me to name them --I do not want to name them unless you want me to.

Mr. KENNEDY (*Peace River*): As far as I am concerned you can name them if you like. We won't press you if you don't want to name them.

Mr. SOMMERVILLE: Mr. Stewart's information comes from such sources that I would hesitate very much to accept the same just at present.

By Mr. Heaps:

Q. How many employees have you?—A. About 1,200.

Q. What do they earn there?—A. A great deal of work is on piece-work basis.

Q. Are they mostly women employed there?—A. Yes, about two-thirds.

Q. What are the hours of labour?—A. From 8 to 12, and 1 to 5.

Q. Eight hours a day?—A. Yes.

Q. What do they earn per week?—A. There are so many different rates, there is plug, cigarette, and cut tobacco.

Q. Can you give us the various rates they earn from the lowest to the top?—A. We can give them to you all right. Of course you know there is a minimum wage law in the Province of Quebec.

Q. Do you observe the minimum wage rate?—A. Yes, we did before it was put into effect.

Q. Can you file with the committee the rates of wages earned by the employees of your company?—A. Yes.

Mr. EDWARDS: In what year?

Mr. HEAPS: From 1930 on to 1931, 1932 and 1933.

The WITNESS: Yes, sir.

By Mr. Heaps:

Q. Has there been any reduction in the rates of pay in the past four years in your firm?—A. In one department there might have been, where we can't give steady work. And in some where—take one lot will come in and work for a week and then they are out, and another lot will come in next. Our plug tobacco has been cut down from the total of around 7,000,000 to 9,000,000, to around 4,000,000 pounds a year, so that a lot of the old employees we could not give full time work to.

Q. Did that apply to the cigarette department particularly?—A. No, that is all in the business.

Q. They are working pretty steady there?—A. Yes.

Q. Short time is only in the other section of the factory?—A. Yes.

Q. You will give the committee a list?—A. Yes.

By Mr. Edwards:

Q. You have not put in a percentage wage cut in your factory?—A. No.

By Mr. Ilsley:

Q. You said something about the export of tobacco. I don't know whether you said Great Britain or not. Let me understand this. You say that if you agree with the other Canadian manufacturers to pay a certain price for tobacco, that there would be a surplus? Is this what you say, that there would be a surplus left over which would be exported at a very much lower price?—A. Yes.

Q. That is what you say, is it not?—A. Yes; at least it would be if there was no demand. If there is a big demand abroad, I presume they would get a high price.

Q. Is that what you fear? Is that one reason that you are advancing for that?—A. All we ask is for you or the government to protect us, that somebody else does not get tobacco for less than we are going to be bound to pay. That is all. That is all I ask, Mr. Sommerville and Mr. Stevens.

Q. What I was asking is this, if the Canadian purchasers agree to pay a certain price for tobacco, who would get it at a lower price? What purchaser would get it at a lower price?—A. I didn't hear the beginning. Will you repeat it?

Q. If the Canadian manufacturers of tobacco all agree to pay a certain price for tobacco—which is suggested as I understand—what competitor of yours would be getting it at a lower price?

Mr. Kennedy (*Winnipeg*): You mean surplus?

By Mr. Ilsley:

Q. What competitor would be getting any tobacco at a lower price?—A. We have brought tobacco back from England. We have been offered Canadian tobacco from England, and bought it.

By Mr. Sommerville:

Q. That was just one lot?—A. No, it was not one.

Q. That was some of the China-American?—A. I am not speaking of that; Burley tobacco and other tobacco.

Q. They failed and passed out of the picture.

By Mr. Ilsley:

Q. Would it hurt you if any foreign manufacturers or British manufacturers did buy tobacco at say half what you are paying for it in Canada? —A. No, not as long as you are sure it won't come back.

Q. If it does not come back?—A. To a Canadian manufacturer.

Q. That is what I want to get at. Is there any real danger in this from your standpoint, for not agreeing to this proposal?—A. Yes, there is.

Q. Is that the danger, that there would be a surplus, assuming that the present production is maintained, which you say is over-production? Is that the danger, that there may be a surplus bought or sold from somebody out of the ring?—A. Yes.

Q. That is being set up?—A. Yes.

Q. And that that purchaser will flood it back to some of your competitors in Canada; is that the danger you fear?—A. Yes, because we are one factory only. We have no connection with any other factory. If other factories have connections with export companies, what protection have we got?

Q. All right, that is one thing.

By Mr. Sommerville:

Q. If they do agree to do that, how is there danger?—A. The surplus may come back.

By the Chairman:

Q. How could the surplus come back, except by paying the 60 cent duty? —A. No, we get this tobacco without duty. There is no duty. Five years, I think, is the limit.

By Mr. Ilsley:

Q. If it comes in from Great Britain there is no duty?—A. On any Canadian tobacco that goes to Britain and you re-import it within five years, there is no duty. It comes back into the country duty free.

Q. That is one thing you are afraid of?—A. Yes, because there are millions of pounds over in England.

Q. Would there be any danger in this, that the manufacturer of cigarettes in Great Britain would send cigarettes here?—A. No.

Q. What stops that?—A. They would be competing with themselves if they sent cigarettes here.

Q. Why would they be competing with themselves?—A. The Imperial in Great Britain has a large interest in another company that was mentioned here somewhere, and as this company has got the largest sale in Canada, there would be no object in coming back and competing with them.

Q. It would be the Imperial of Great Britain competing with the Imperial of Canada, which would be competing with themselves?—A. Through the other company that was mentioned.

Q. What is the duty on cigarettes?—A. Imported?

Q. Yes?—A. The number imported is very small.

By the Chairman:

Q. Negligible?—A. Yes.

By Mr. Ilsley:

Q. Are there other manufacturers of cigarettes in Great Britain that are not connected with the Imperial of Great Britain and Ireland and the Imperial of Canada?—A. Yes.

Q. There would be no danger of cheap cigarettes coming in from them if they bought their tobacco or raw material at half?—A. No, the duty would protect that.

Q. It would protect you from that ?—A. Yes.

Q. So the only danger you can suggest is that there might be some leaf or some raw tobacco— —A. Yes.

Q. —coming in from somebody to whom it was sold at a very cheap price? —A. Yes.

Q. Through there being over-production?—A. Yes, because nearly all these Ontario firms are exporting, or trying to export.

By Mr. Young:

Q. Mr. Stewart, you said something about paying 40 cents a pound duty on your imported leaf. How is that paid, and when?—A. We pay it every ten days. We withdraw it daily, and pay the tenth, twentieth and last day of the month.

Q. Do you pay it as duty?—A. It is paid as excise. It is customs duty paid as excise.

Q. That is to say, the tobacco comes in and goes into bonded warehouses? —A. Yes.

Q. And as you draw it out you pay this 40 cents duty?—A. Three times a month.

Q. When you manufacture that into cigarettes, do you pay an excise duty on it also?—A. Yes, we buy the stamps. The stamps are put on the packages.

Q. It is taxed twice, then?—A. Yes.

Q. And the Canadian-produced article is taxed once?—A. Yes, once.

By Mr. Ilsley:

Q. You said something about another matter. I don't know whether we should follow it up or not, but I think we might as well get it cleared up. You said you were invited to contribute to campaign funds with a view to sharing in the benefits of a duty, is that it?—A. That was what was said at the time the man asked for it. He just said, "I presume you would like the cigarette duty reduced, the same as your friends."

Q. The cigarette duty reduced?—A. The excise duty.

Q. The excise duty reduced, the same as your friends?—A. Yes.

Mr. SOMMERVILLE: What difference does it make to you?

By the Chairman:

Q. Just a minute—the same as your friends. There is no discrimination in the reduction of the duty. It applies to everybody in Canada?—A. Well, he referred to a particular friend, sir.

Q. But it applies to anyone in Canada?—A. No, the inference was given that somebody else would like a reduction, if we would like to chip in on the party funds.

Q. That was some third party that made the proposition to you?—A. A man very close to the Premier.

By Mr. Ilsley:

Q. The present Prime Minister?—A. Yes.

Q. When was that proposition made?—A. Shortly before the election.

Q. Which election?—A. The last election.

Q. The 1930 election?—A. I don't remember the year, but the last election.

Q. The last general, federal election?—A. Yes. And further than that, the reduction, when it was made, was not made in the regular way when the budget was brought down. It was made in October.

By the Chairman:

Q. But it was made by parliament, in a special session of parliament?—A. And further than that, we passed on the reduction to the public, and our cigarette sales doubled. We put 20 for 20 cents into effect immediately. I think that is known all the way through Canada.

By Mr. Ilsley:

Q. Let me get what you are saying correct. You some way or other link the fact that you did not contribute with the fact that you did not get information that your competitors got?—A. We have been ignored all the time, because we don't play politics.

Q. Is that correct? Do you, in your own mind, link the fact that you did not contribute to party funds with the fact that you did not get information, advance information, that your competitors got?—A. Yes. And in addition to that, we didn't have anybody lobbying up here for us. I will say that. We don't keep in touch with the politicians because we are seeking no favours.

By the Chairman:

Q. Do you make the statement, Mr. Stewart, on your own responsibility and of your own knowledge, that the reduction in the duty on cigarettes was made as a favour to your competitors, and because of campaign funds? That is the inference you are leaving?—A. Somebody close to the government must have suggested it—I mean, that you might get more revenue if you reduced it. Five billion roughly is about the maximum of the cigarettes sold in Canada.

That is $6. That is $30,000,000 of excise. It might show in better business when they reduced it. You would have to sell seven and a half billion cigarettes for the same income, on that tax alone. Instead of that, last year's sales were slightly over four billion, instead of seven and a half billion.

Q. That has nothing whatever to do with the point. You are making a very damaging statement, that someone told you so and so. I am asking you the question, if you, of your own knowledge, know that the reduction in the duty on cigarettes was due to a desire to favour some individual?—A. It was not favouring any individual.

Mr. SOMMERVILLE: No, of course not.

The WITNESS: If it came down, we got the same. If there was any benefit, naturally we got it. We didn't get it at the time. We were working right up to the day before the duty was reduced, while other factories were closed.

By Mr. Sommerville:

Q. Do you say, on your personal responsibility, that somebody told your competitors that this excise tax was to be lowered?—A. I can't say that.

Q. No. As a matter of fact, was there not an application by a lot of the manufacturers to the department, making representations that it would be helpful both to the growers and to the revenues of the country if it were reduced, that more cigarettes would be sold at the lower price?—A. I don't know, sir.

Q. Don't you know, as common knowledge, that there were these representations?—A. Who were the lot of manufacturers? How many manufacturers do you think there are? Just read out the figures of the other manufacturers.

Q. Well, how many are there?—A. There may be four or five or six.

Q. Then you have got nothing to fear?—A. But the others are small. We are small, but they are smaller.

Q. What difference does it make? Were there not representations made to the government that if the excise were reduced from $6 to $4, there would be a reduction in the price of cigarettes, there would be an increase in the sale of cigarettes, and that that would compensate for some reduction? Was not that representation made?—A. I don't know.

Q. You don't know?—A. No. I know we were not considered important enough to be asked by the government, and now you are asking us to agree with our competitors.

Q. Is it not a fact that you stayed away from every manufacturer?—A. For a very good reason.

Q. Yes; and you never go near them, never consult with them or never join with them in any representation which any of them ever make to any government?—A. Do you think we should?

Q. I don't know. Is it not a fact that you do, and if you do, then how can you know what is going on?—A. Because we have got some very good friends. We know what is going on.

Q. I see.—A. Yes.

Q. Well, you do get your information, then. So the net result of it is that you don't know that your friends were advised in advance?—A. I know one factory was closed. They were not manufacturing the day before the change was made, and the man said, "I am sorry, but we expect a change to-morrow."

Q. Some man said that?—A. Well, I am not naming people. I don't want to name people.

By the Chairman:

Q. Yes, but you are pretty free with innuendoes, Mr. Stewart?—A. No, sir, because I asked you—I can name three cabinet ministers; if you have them here I would like to ask them three questions.

Q. That is not the point. If you have any statement— —A. Yes, I have something to say to them, too.

Q. If you have any statement to make, now is the time to make it, but you make your statement on your responsibility?—A. Well, have I got any protection if I say anything.

Q. Protection?—A. I mean, this is a parliamentary commission.

Mr. ILSLEY: I would say you are not liable to any prosecution or suit for slander. You have the same privilege as any witness in court has.

By Mr. Sommerville:

Q. Yes, but I would think, Mr. Stewart, that a man of your standing would hesitate about slandering anybody or making a statement that was slanderous? —A. What is the definition of slander?

Mr. SOMMERVILLE: All right.

The CHAIRMAN: You used the word "slander."

The WITNESS: I did?

Mr. SOMMERVILLE: No, I don't think so.

The WITNESS: I didn't, I don't think.

Mr. SOMMERVILLE: No. I guess that is hopeless. He does not know what it means.

By Mr. Ilsley:

Q. Mr. Stewart, there is one thing that I think you should be asked. You say a man very close to the Prime Minister asked you for this contribution. I think you might just as well tell the committee the name of the man, instead of letting it go that way. I should think the majority of the committee would want that stated. I don't know why the minority does?—A. Do you want me to answer?

Q. I think you should be allowed to?—A. Mr. Ward Pitfield of Montreal. He was collecting campaign funds for the Conservative party in the last election.

By Mr. Kennedy (Peace River):

Q. What about the other case you mentioned some time previously about the advanced information?—A. On that one our representative in Toronto—a customer from St. Catharines was motoring through to Toronto and he dropped off at Hamilton at a factory which belongs to somebody else, and this man was wholesaler, and he called at the factory and the man said, "Would you like to look around?"—we have the letter on record where they were not working.

Mr. SOMMERVILLE: That is not the point.

The WITNESS: The man said, "I am sorry. We are not working because we expect a reduction in the duty to-morrow."

Mr. SOMMERVILLE: That is not the point Mr. Kennedy is referring to; you are referring to a previous request about campaign funds for the Liberal party?

The WITNESS: The Liberal party?

Mr. SOMMERVILLE: Well that is what you said in your evidence?

The WITNESS: I did not.

Mr. ILSLEY: He said when the Liberal party came in power, and they were in power prior to the last election.

By Mr. Sommerville:

Q. It was not a contribution you were asked for from the Liberal party? —A. No, sir.

Q. The Liberal campaign fund?—A. No, sir.

Q. You said it was when the Liberal government was in power?—A. Yes.

Q. That was when?—A. Mr. Stevens knows when they came into power. I do not know. You know.

Mr. ILSLEY: I have a vague idea.

By Mr. Kennedy (Winnipeg):

Q. Mr. Stewart, the election you refer to when you say that Mr. Pitfield asked you for a contribution to the campaign funds, was the election held in July of 1930?—A. If that was the last election, sir, yes.

Q. That was the last election. Was it just prior to that election that you were first asked for campaign funds or had your company been asked for campaign funds in previous elections?—A. No. As I say we do not take any interest in politics.

Q. You do not contribute to the campaign fund?—A. No, sir. That is why we are not—

Q. I understand that. You do not wish to be associated with political parties and you do not contribute to campign funds and never have?—A. No, sir.

Q. But you say you were asked by Mr. Pitfield immediately prior to the last election?—A. Yes.

Q. Well, on any occasion prior to that had your company been asked for campaign funds?—A. I do not remember, because I mean—I do not think we have ever been asked by the Liberals. I do not know.

By Mr. Sommerville:

Q. Then, Mr. Stewart, is it not a fact that in 1930 or in 1931 the sale of cigarettes dropped off very considerably and people were buying tobacco for roll-your-own?—A. Not in our case, because our sales have gone up.

Q. Has there not generally throughout Canada—

The CHAIRMAN: He made the statement they dropped to four billion.

The WITNESS: That is the country's business.

By Mr. Sommerville:

Q. That is the country's business. Yes, I am not talking about your business. Is it not a fact that the country's business had dropped; that the cigarette business of the country had dropped very substantially and people, on account of the depression, were rolling their own?—A. They are rolling their own to-day.

Q. Yes, but did not that condition that began in 1930 and continued in 1931 continue still further in 1932?—A. I think so. I think it continues to-day.

Q. And it continues to-day. And it was more than two years after the present government came into power before any change was made in the excise tax?—A. I do not know the dates.

Q. On cut tobacco?—A. On cut tobacco or cigarettes.

Q. The excise from $6 to $4?—A. As I say, I do not know the dates. In connection with the election, I do not follow politics.

Q. You follow business. What was the date when the excise reduction took place?—A. I think it was in the fall of 1932.

Q. The fall of 1932?—A. Yes.

Q. Was that not a direct result, two and a half years after the election, of representations that there had been such a steady decline in the sale of manufactured cigarettes that there would be a return of the sale if the price were reduced?—A. That is what they thought.

By Mr. Kennedy (Peace River):

Q. You have not said anything to me that has shown me how you are discriminated against in connection with that change in the excise tax. The tax applied to your cigarettes the same as in the others. You implied that your competitors got some advantage?—A. Only in knowing that—just in the knowledge of when it was coming down.

The CHAIRMAN: Now, Mr. Stewart, I think it is necessary for you to make that point clear. You say that your competitors knew that the change was to be made. Explain please. You are on oath, and you are here before this committee; explain exactly what you mean by that, because it is a very serious charge?

The WITNESS: If I can find the letter I will produce the letter.

By Mr. Sommerville:

Q. That letter does not mean anything other than information to you. Where did you get that information?—A. I got it from Toronto.

Q. And somebody at Toronto was motoring through Hamilton?—A. No. A St. Catharines man was motoring through to Toronto and he dropped off at Hamilton on the way and he went through the factory there.

Q. He went through what factory?—A. Well, another factory.

Q. Whose factory?—A. Tucketts.

Q. And in Tucketts factory this man from St. Catharines heard something from a man in Hamilton?—A. No. He is a buyer, and in passing the factory he was asked if he would like to look around, and the man said he was sorry. He said, "We are not working, we expect a reduction in the cigarette duty to-morrow."

Q. To-morrow?—A. To-morrow or the next day.

Q. And this man passed that information on to you or somebody else?—A. No. He called on our Toronto man.

Q. And this man passed this information on to you through the man in Toronto?—A. No. He called on our representative in Toronto.

Q. He told your representative in Toronto?—A. So he said.

Q. So your representative said; and then your representative passed that on?—A. He wrote to us, and the day we got the letter the duty was either reduced the same day or the day after.

Q. Now, that is the whole story. What is your complaint?—A. I am not making any complaint.

Q. What is the object in your telling us this then?—A. I am saying we were working full. Outside of that letter all we knew about it was in the newspaper, so there must have been something going on.

Mr. HEAPS: How long had that Hamilton factory been closed?

The WITNESS: They were running down their stocks.

By the Chairman:

Q. How long were they closed?—A. I don't know.

Q. One day as far as you know?—A. They said they were not working.

Q. Is that all the grounds you have for the statement that information had gone out to your competitors that the duty would be reduced?—A. I think it was reduced because somebody asked them to reduce it.

Mr. SOMMERVILLE: Of course, everybody asked them to reduce it but you.

The CHAIRMAN: I may say I asked for it time and time again in parliament for the last ten years. I took a strong objection to the high rate of duty on cigarettes and always did.

The WITNESS: And suppose the American duty goes down, what are you going to do here?

The CHAIRMAN: That does not mean anything. That is merely one man's opinion.

By the Chairman:

Q. I am asking you is the recital you have just made the grounds upon which you based the very serious statement that information was given out to your competitors that the duty would be reduced? A. You are asking me that question?

Q. Yes.—A. I say I do not know. We got the letter. The company knew they were not working.

Q. Please answer the question. Is that all you based your statement upon? —A. Yes.

Mr. ILSLEY: Tucketts are owned by the Imperial of Canada?

The WITNESS: Yes, they have been for years, although it was not generally known.

By Mr. Kennedy (Peace River):

Q. You say that the Tucketts factory man said to your representative that they expected a reduction?—A. This is a customer, a St. Catharines man. He was motoring to Toronto. He dropped off in Hamilton on the way.

Q. And going through the factory in Hamilton he was told they expected a reduction?—A. That is the explanation because they were not working.

Q. He did not say they knew, though?—A. Oh, no. This was only a letter.

Mr. ILSLEY: You were depending upon their actions rather than upon their words?

The WITNESS: Yes, sir.

By Mr. Sommerville:

Q. Mr. Stewart, just before we leave this financial statement. You filed this financial statement with me as being the true statement of your affairs?—A. Yes.

Q. And are they true and correct?—A. Certainly.

Q. Why do you say that they are just book-keeping entries?—A We do not pay any dividends.

Q. No, you do not.—A. We have no shares or bonds or anything in the hands of the public.

Q. No.—A. The Quebec succession duty is very very high. If anything happened to me, it pays us better to show a low valuation than a high valuation; otherwise, where is the money coming from to pay the succession duties?

The CHAIRMAN: We will leave that to the Quebec government to deal with.

By Mr. Sommerville:

Q. And in the meantime, you say you do not draw any salary?—A. No.

Q. What do you draw?

Mr. BELL: Breath.

By Mr. Sommerville:

Q. What do you draw from the company?—A. Nothing in the way of salary.

Q. What do you draw?—A. I drew out unearned surplus; I was allowed to by the government by the income tax.

Q. You draw that at the rate of how much a week?—A. $5,000 a week.

Q. $5,000 a week?—A. Yes.

Q. Since the beginning of 1930?—A. Yes.

Q. Every week?—A. Yes.

Q. $260,000 a year?—A. Yes.

Q. And after drawing that out— —A. Excuse me though, that is not subject to income tax?

Q. Why not, explain that.—A. That is the only reason I draw nothing on top of that.

Q. That is why you do not draw any salary?—A. Yes.

Mr. Heaps: No income tax paid on the income?

Mr. Sommerville: No, depreciation on capital that appreciated before 1930, and which under the law can be divided and withdrawn as depreciation.

By Mr. Sommerville:

Q. Then, on top of that there is this accumulation of undivided profits of $594,000?—A. I say the reason for that is, if you write the capital up, the undivided profits would come down.

Q. Every year you have dropped your capitalization from $2,500,000 in 1930, and you got it down now to $700,000, and that has all happened in the period of four years?—A. Under the company's by-laws, I have the right to value shares.

Q. I am just taking the statement— —A. Yes?

Q. —and trying to get a picture.—A. Yes.

Q. It presents us somewhat of a picture.

Mr. Ilsley: These profits cover what period?

The Witness: Prior to 1930.

Mr. Young: Since the death of Sir William Macdonald.

By Mr. Ilsley:

Q. I am speaking about this $500,000 odd. That is for what period?—A. If you write the capital down, the surplus is bigger. If you put the capital in at a higher rate, the surplus would be less.

Q. I think there is a difference between a profit and a surplus, I may be wrong.—A. We may have the wrong word.

Q. Your statement shows profits of $500,000 odd for a certain period, which, I understand, began in 1930, but I should like to get the exact period.

Mr. Sommerville: Quite.

Mr. Ilsley: The net profit of the new company.

Mr. Sommerville: Let us take it year by year. Let us start with 1931.

The Witness: That is not altogether fair, what Mr. Sommerville is asking me.

Mr. Ilsley: I do not see why not.

The Witness: We filed our statements with the income tax department. We are a private company. These are private figures. There is nothing taken from the public; they have no bonds or stock.

Mr. Ilsley: It is not my place to enter into an argument with you, but this committee is examining price spreads to find out whether companies are making excessive profits out of what they are paying the producer and charging the consumer, and therefore, I think it is a matter of public interest to know what your profits were.

Mr. SOMMERVILLE: Here is 1931. There were no net profits at the beginning of 1931, but at the end of 1931 the undivided profits amounted to $54,756.43.

Mr. ILSLEY: For what period?

Mr. SOMMERVILLE: The year 1931. For the year 1932, the statement shows undivided profits at the beginning of the period of $54,756.43, and at the end of the period $580,125.18. Then, in 1933 it shows at the beginning, undivided profits of $580,125.18, and at the end of the period $594,432.96; so that they are the undivided profits that have accumulated in three years of operations.

Mr. ILSLEY: On a capitalization of $2,500,000?

Mr. SOMMERVILLE: Yes; which has been steadily reduced and shows now $750,000, at the end of the three-year period.

The WITNESS: Would it be proper to invite two or three of these gentlemen to come to Montreal, at our expense, and we will show them anything they want, of the works?

The CHAIRMAN: I am sure they would be delighted to go down, but I do not know whether they would go at your expense or not. It is up to them. It is quite all right, Mr. Stewart, to invite anyone to see your plant.

Mr. ILSLEY: We would be very pleased to do it, or I would, as I go through Montreal.

Witness retired.

NORMAN A. LOCKWOOD, called and sworn.

By Mr. Sommerville:

Q. Mr. Lockwood, what position do you hold in the Hodge Tobacco Company of Canada, Limited?—A. I am manager and president of it, also treasurer.

The CHAIRMAN: Secretary?—A. No, not secretary.

By Mr. Sommerville:

Q. Salaries all combined?—A. Salaries all combined.

Q. And it also has proxy for all the stock held by the Macdonald company?—A. No; we have proxy naturally for the capital held by Mr. Walter M. Stewart.

Q. That represents some 51 per cent?—A. Yes.

Q. Now, I have asked you to file a statement showing your purchases in 1933 of flue-cured tobacco?—A. I think I gave it to you.

Q. I have a statement here?—A. Yes.

Q. Your plant is located at Kingsville, Ontario?—A. Yes.

Q. And is a branch of the Hodge Tobacco Company in the United States?—A. Not exactly.

Q. Well what is the relation?—A. The Hodge Tobacco Company of the United States own 49 per cent—within a fraction of that—of the stock of our company, and there are two directors, Mr. Charles and Mr. W. G. Hodge, of Henderson, Kentucky, besides myself.

Q. And Mr. Stewart has no representation on the board?—A. No.

Q. And he takes no part in the management?—A. He takes no part in the management.

Q. Nor in its operation?—A. Nor in its operation, and gets no part of any earnings that we may make.

Q. So that both management, profit and directorship are all in the control of the Hodge Company?—A. And myself.

Q. And what were the total purchases for the crops of 1932, 1933, and 1934, Mr. Lockwood?—A. I have a copy here of my return to Mr. McGregor, of the Combines Investigation Act. I think I can give it to you from that. The first year, you say.

Q. 1931: Perhaps you will tell us 1930 if you have it there?—A. Quantities purchased from growers?

Q. Yes.—A. 1,568,000 pounds off.

Q. In 1930?—A. 1930 crop.

Q. And the average price paid?—A. Well, I have 1,505,000, which is only a difference of approximately 60,000 in the total, bought at an average price of $31.85 green weight.

Q. 31 cents a pound?—A. 31·85, nearly 2.

Q. Then in 1932?—A. 1931; we are skipping a year.

Q. I beg your pardon.—A. 1931, quantity purchased from growers, 2,001,581 pounds.

Q. Yes, and the average price?—A. $18.73 a hundred—18¾ cents you might say.

Q. 1932?—A. That was made up during the packing season of 1932 and I will have to go elsewhere for that information. You are speaking now, Mr. Sommerville, of tobacco purchased from farmers, tobacco growers, producers. We dry tobacco—

Q. I am talking of what you bought from growers?—A. The year 1932, pounds delivered, 3,154,694 pounds.

Q. At an average price of?—A. 15·32.

Q. Yes, and in 1933?—A. 587,822 pounds at an average of 17¾ cents or $17.75 per hundred.

Q. Yes, down from three and a half million pounds in 1932 to 578,000 pounds in 1933, and the average price was?—A. The average price to the farmer for that tobacco was $17.75 per hundred.

Q. Now, to whom did you sell your tobacco?—A. Principally to W. C. Macdonald Incorporated.

Q. In the year 1930, how much did you sell to them? Give me the amounts in each year.—A. That is flue-cured tobacco. 1930 we sold them 1,378,935 pounds.

Q. That was what proportion of the whole, approximately?—A. Practically all of it.

Q. Practically all of the whole?—A. That was the redried. We get at least anything from 10 to 14 per cent.

Q. There is a shrink of from 10 to 14 per cent?—A. You might say from 9 to 14 per cent.

Q. So that you sold practically all of your 1930 purchases to Macdonald?—A. Yes.

Q. Now 1931?—A. 1,768,815 pounds.

Q. And what proportion of the whole was that?—A. Practically all of it.

Q. And in 1932?—A. 2,778,690 pounds.

Q. And that is practically all of 1932?—A. Yes.

Q. And in 1933?—A. 517,960 pounds.

Q. And that is practically all of that?—A. Yes.

Q. Well then, you have not been selling to anybody else but Macdonald for the past four years?—A. We have sold some tobacco to the Canadian Leaf Tobacco Company.

Q. You have sold some tobacco to the Canadian Leaf Tobacco Company?—A. Yes, a very nominal quantity.

Q. Let us have the quantity that you sold to anybody other than Macdonald in the last four years?—A. I am looking here for some information in this report. I have not looked at it for some time; I should have, not to delay you. In 1930

we sold to the Imperial Tobacco Company 49,783 pounds of low grade flue-cured tobacco, very common.

Q. At what price?—A. Some at $3 a hundred and some at $2.50 a hundred.

Q. And that was after processing?—A. No.

Q. In its raw condition?—A. Raw condition, practically rejects. And we sold the Canadian Leaf Tobacco Company, Chatham, that year, 14,324 pounds at similar prices, I have not got the figures here.

Q. And it would be similar quality?—A. Yes. And we sold to a Mr. Faubert, in Chatham, 8,196 pounds at a very low price.

Q. At what price?—A. It was in the neighbourhood of $1 a hundred, and some fellow in Kingsville bought a lot of culls from us. I did not keep the weight. The transaction was $300.

Q. For whatever you got?—A. Yes.

Q. Now, that is the total in 1930 that you sold outside the Macdonald Company?—A. Except for some possible transactions we had with the Hodge Tobacco Company of Kentucky. We bought on account of the Hodge Tobacco Company of Kentucky, with their money, 47 hogshead of tobacco which went to England.

Q. But that was not included in the raw leaf purchases that you have already given us?—A. No.

By Mr. Kennedy (Winnipeg):

Q. What were your total raw leaf purchases for that year?—A. For 1930, 1,568,000 pounds green weight.

By Mr. Sommerville:

Q. Now then next year?—A. I do not know that I have got any figures available on that.

Q. Well, I think you told us that you sold practically all of it to the Macdonald Company?—A. We sell practically all our entire production to the W. C. Macdonald Company. We are not speculators. As the Hodge Tobacco Company of Kingsville, Ontario, or Canada Limited, we are not speculators in tobacco. We do not buy with a view to holding and selling it at an enhanced price.

Q. And how do you buy for the Macdonald Company, what is the procedure then?—A. The procedure is this, when the market opens I call up Montreal and I say, "Tobacco is selling, to the best of my knowledge at so much."

By Mr. Young:

Q. Dry?—A. Green tobacco, farmers tobacco, from weight, and they may say they wish us to buy so much within a market range, such as I have quoted. Then I go and buy it, but if I do not get an order I do not buy it.

By the Chairman:

Q. You really are agents for the Macdonald Company?—A. We work for them and they are our best customers.

Q. They are virtually your only customers?—A. We do not class ourselves as agents for them because they won't acknowledge us as agents. They have other means of acquiring tobacco.

By Mr. Sommerville:

Q. And then do you get your orders daily from them?—A. If the market is on and I call up daily I get orders.

Q. But you do not get one order to buy two million pounds at the beginning of the season?—A. No.

Q. You get them from day to day?—A. Yes.

Q. And you go out and buy from day to day whatever you have orders for?—A. As nearly as I can.

Q. And that is the system that has been in operation since 1930?—A. Yes, sir.

Q. Then, when you buy it, you process it, do you?—A. We open the factory after the market is over, or about the time the market is finished, and we take it from the farmers throughout the winter months, grade it and pack it in hogsheads—grade and rehandle it.

Q. You do not process it?—A. Yes. Rehandling is the term for redrying the tobacco, the operation from the farmer to the hogshead.

Q. You put it into hogsheads and that is shipped to Macdonalds, then in the processing there is a percentage of what you call shrink, from 9 to 14 per cent?—A. Yes.

Q. What is your charge for processing, apart from that?—A. You are speaking now of 1931.

Q. If there has been any change in the price, let us have it?—A. Prior to 1930, I would say from memory, we did not do as much work on the tobacco as we have been doing in the last few years, due to the fact that we do what we call leaf grading—putting the leaves leaf by leaf in various grades. We have had an additional charge for that work in the last few years. In 1930—our usual charge is the value of shrinkage alone. A dollar a hundred has been the commission for buying tobacco.

Q. For buying?—A. That is, establishing field forces, following all through the country and buying the leaf. I can allocate part of that dollar to any head I like. Two dollars a hundred for handling through the factory, redrying and putting into hogsheads. And the actual cost of the expenditure for the purposes of leaf picking, which is done on a piece-work basis and I know from year to year how much it costs me.

Q. What do you mean by leaf picking?—A. Leaf grading, that is in the plant. It is an operation which we did not do 6 or 7 years ago. Whatever the actual cost is I add to my selling price.

Q. You add that to your selling price; in the year 1933 what did it amount to?—A. That was the year of an average crop.

Q. In 1933, last year?—A. I beg your pardon, in 1933 the spread between the price paid the producer and the price we sold the tobacco at was $7.55 per hundred pounds.

Q. $7.55?—A. Yes, and I can give you an analysis of the cost of the various things that entered into that.

Q. You add the specific items which you have given us?—A. Plus the actual cost of the raw material.

Q. And that comes to $7.55?—A. Our selling price is $7.55 over our cost, the price of the raw material.

Q. $7.55 made up of the items you have given us?—A. Yes, the shrinkage item is the biggest individual item.

Q. Last year it was, how much?—A. 1933 worked out to $2·394 per hundred.

Q. And the next item was?—A. The commission for buying, that is based on the 100 pounds on the re-dried weight.

Q. On the re-dried weight?—A. No, excuse me, it is based on the green weight. It works out on the re-dried weight at 1·13, and 2 cents a pound for handling—that covers all our factory operation, $2 a hundred, and the cost of the leaf grading and re-tying this tobacco into hands and preparing it for the machine was $1.78.

Q. And that made up a total of?—A. Wait a minute, including freight—freight from the farm to the factory, we are located 150 miles from the main belt now, and we charge 24·1 a hundred.

Q. Now then, Mr. Lockwood, what were the profits of the Hodge Tobacco Company during these years?—A. I think you have the statements, haven't you, Mr. Sommerville; I mean the year 1930.

Q. Yes, you could give them to me in succession, one after another?—A. In the year 1930 we had a loss of $9,193.66. In 1931 we had a loss of $763.33.

By the Chairman:

Q. What do you do with these losses, put them in reserve?—A. Charge them up to the little surplus which we had before that, sir.

By Mr. Sommerville:

Q. Yes, then 1932?—A. 1932 we had a profit of $29,593.58.

Q. That was the year of the low prices?—A. It was the year of a large volume of turnover, and this $2 to $3 for handling on more tobacco made the profit.

Q. Yes, and the next year?—A. We had a profit of $35,664.25. May I tell you what our profit was as at April 30, 1934.

Q. All right, if you have it?—A. I have not got the figures here but the statement was made up to the first week in May. We were showing a loss of between $20,000 and $25,000.

Q. On this year's operations?—A. Ending April 30 last.

By the Chairman:

Q. What are your total salaries, including executives?—A. They run from —let me see—about $19,000 to $20,000.

Q. Around $20,000?—A. Somewheres. We lost a high priced man through death in 1932, and we replaced him with a younger man with a smaller salary. They average around $20,000.

By Mr. Edwards:

Q. Are there bonuses in addition to salary?—A. Sometimes if we have a good profit the employees get from 5 to 10 per cent, sometimes $100.

Q. Are there any bonuses to executive officers in addition to salary?—A. Yes. In the year 1933 last year, I myself had a bonus of $1,000 for the year 1932 and the year 1933—$2,000 all told, I got it in a lump sum.

By the Chairman:

Q. You are the President, aren't you?—A. It was voted by the shareholders.

Q. Quite all right, I mean it is really very modest to what we have been used to.

By Mr. Young:

Q. This $20,000 includes the little salaries and everyone?—A. That is correct.

The CHAIRMAN: That is the total.

By Mr. Sommerville:

Q. What about the dividends paid?

The CHAIRMAN: This peculiar stock, this non-dividend stock held by the Chairman.

The WITNESS: The dividend paid—I do not think I have the whole detail of it, but they have been nominal. The Hodge Tobacco Company of Kentucky have received—we figure on giving them about 6 per cent on their investment.

By the Chairman:

Q. About what?—A. About six per cent. We figure that is a fair return on the money they spent on our plant. And if I remember correctly, we have paid them six per cent since 1925. But you must subtract from that three years they didn't get it. In other words, if we owed them seven payments of six per cent,—if we owed them seven, they have only had four.

Mr. EDWARDS: Not accumulated.

By Mr. Sommerville:

Q. Your accumulated surplus is what?—A. Accumulated surplus? I think that is modest, too. It would be less now than in the last statement I had. April 30, 1933, was $61,952.83.

Q. What was that date?—A. April 30, 1933.

Q. I didn't get the amount?—A. $61,952.83; and we now have to write off that about $23,000 or $24,000.

Q. I understand the Stewart stock is non-profit bearing?—A. Non-dividend bearing.

Q. It is non-dividend bearing; and therefore no declaration of dividends on that. The six per cent you referred to is six percent— —A. Owned by Hodges.

Q. Owned by Hodges, and it is not six per cent on their shares?—A. Six per cent dividend on their investment in the company.

By the Chairman:

Q. Is that surplus ear-marked?—A. For what purpose?

Q. What you mentioned, $60,000; is that ear-marked for anything?—A. No, nothing in particular. We use it.

By Mr. Sommerville:

Q. Is it ear-marked in such a way that it goes to the Hodge Company?—A. If we wound up the business, they would get it.

By the Chairman:

Q. All of it?—A. I think so. Wait a minute, now—I don't think so, no. They would get it in relation to the 51 and 49 per cent, I would think.

Q. In other words, if there are any profits accumulated over the years... —A. If we declare any dividend, we pay it to them.

Q. It would stand on your books as a surplus, distributable to the stockholders, whomsoever they were?—A. I would think so.

By Mr. Sommerville:

Q. I presume you could declare a dividend of practically that now?—A. We could declare a dividend and wipe that out.

By Mr. Young:

Q. In buying tobacco, do you follow the same procedure as the Imperial, and have your men going through the fields from time to time, keeping tab on the crop?—A. From what I heard of the way they conduct their procedure, ours is very similar.

Q. It is very similar?—A. Yes.

Q. You have a pretty good idea of each man's crop?—A. No, we don't cover them as thoroughly. We are very much smaller buyers; and it is a rather expensive operation to have to keep about nine men in the field for three months, you might say, supply them with cars and have them running all over the country keeping track of tobacco you know you will never buy.

Q. Have you any idea in your mind as to whether or not it would be practicable to establish standard grades and uniform spreads between grades, not fixed for all time, but have the spread uniform between No. 1 grade and No. 2 grade, and so on?—A. That is a matter of opinion between users of tobacco; and I would not say it would be possible or practicable, because there is a wide variation in opinion as to quality of certain tobaccos.

Q. Do you think it would be practicable to make standard grades?—A. I don't think you could make standard grades—at least, you could make standard grades, but whether it would suit the various people who were going to ultimately use that tobacco, I don't know. You could make standard grades, yes. You would need about seventeen or eighteen.

The CHAIRMAN: Now, gentlemen, it is six o'clock. We will adjourn until eleven o'clock on Monday.

The committee adjourned at 6.05 p.m., to meet on Monday, April 14, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,

May 14, 1934.

The Special Select Committee on Price Spreads and Mass Buying met at 11 a.m., the Hon. H. H. Stevens, presiding.

Mr. NORMAN SOMMERVILLE, K.C., of Toronto, appeared as Counsel for the Committee.

The CHAIRMAN: Order, Gentlemen. The Minutes of the last meeting simply record the names of witnesses and certain documents filed, that is all, and we will order the minutes approved.

All right, Mr. Sommerville, who are you calling.

Mr. SOMMERVILLE: I want to file the financial statements for five years of L. O. Grothe.

(Statement filed as Exhibit 137.)

And the financial statement of the Rock City Tobacco Company for five years.

(Statement filed as Exhibit 138.)

And the financial statement of the Canadian Leaf Tobacco Company.

(Statement filed as Exhibit 139.)

And the financial statement of the British Leaf Tobacco Company, also for five years—1929-1933.

(Statement filed as Exhibit 140.)

This is all for the purpose of preparing a statement of the whole situation in the tobacco industry.

Mr. Francis Gregory, recalled.

By Mr. Sommerville:

Q. Mr. Gregory, in the evidence of Thursday last we left off at that point where you intimated that Mr. Lea on his return from Montreal sent out buyers to buy at an average of 18 cents?—A. That was before my return to Delhi; yes, sir, at an average of 18½ cents.

Q. Yes, an average of 18½ cents; that was before you got back to Delhi on the Monday morning?—A. Yes, sir.

Q. And when you came back you found that this was the condition that existed?—A. Yes, sir.

Q. Well, what does that mean, then, in terms of buying tobacco; was tobacco being bought on its value at all, or was it just a price that was fixed?—A. No, sir. As conditions developed over the next several days I felt quite ashamed of it. We have taken pride in the value of tobacco. If you say a top price of 30 cents for a crop, that crop falls into its logical place. The growers have been educated to our way of doing business for the previous 25 years, and they had felt confident when we place a value on a crop of tobacco that it was about right; and in a market of that kind when there was some tobacco over—more than

would be taken—it was like shooting chickens in a barnyard. That is, you could buy tobacco for almost any price; therefore I felt responsible even more. If it was a market where a farmer could take care of himself—with some competition—why then sometimes you had to pay too much, and consequently you would try to buy on the under side; but when it got near to the point that practically nobody else was buying much tobacco, I thought there should be some standard of value—if you got, as I said to Mr. Buell, say 25 cents for the best crops and then let each crop fall in its place.

Q. Then do I understand, following this return of Mr. Lea from Montreal, that the price paid had little relation to the quality of the tobacco bought?—A. Quite often.

Q. That is a fact, is it?—A. Yes, quite often. I was striving to get the business back to some reasonable basis.

Q. And you found that Lea was offering 18 cents for tobacco that was worth more than 25?—A. Yes, sometimes. Better crops had quite largely been taken up, but there were good crops left.

Q. And as a result of that you finally did get Mr. Buell to consent to letting you pay for some crops at 25 cents?—A. Those crops when they were worth it.

Q. When they were worth it, yes. There were a large number of crops that were worth 25 cents or better, that were bought for 18 cents or less?—A. Yes, they were bought down, I can't remember—we will say that we were buying considerably under 25 cents—yes, we bought at 18 cents, 20 cents, and so forth.

Q. Well now, perhaps you knew Wilson, one of the buyers—J. B. Wilson?—A. Yes, sir.

Q. And I have before me Wilson's buyers' grade book, and I observe that on his grade book an owner, Ed. McMullen is described as having 16 acres of "good" tobacco, 18,000 pounds, which grades as follows: "fancy" 3 kilns, "good" 2 kilns, "good medium" 6 kilns, and "medium" 1 kiln; a total of 12 kilns. And I observe that the price which is fixed on the right hand corner of the page at the top is 30 cents?—A. Yes.

Q. And that would be a top price; that was for a top crop?—A. Yes.

Q. And that description would describe a top crop?—A. Yes.

Q. In other words, a top crop would not be all "fancy"?—A. That would be impossible.

Q. And the top crop would not be all good?—A. I would say a top crop would have an average better than "good medium"—"good medium" and "good", and some "fancy"; and, of course, you would have a "medium" kiln or two as well.

Q. In other words, a top crop would have enough different grades right down the line that the average would be somewhere between "medium" and "good"?—A. Yes, sir.

Q. And that is what you describe as being a top crop for which a top price was paid?—A. Something like that.

By Mr. Factor:

Q. And that figure up in the corner of the page is the estimate that the buyer put on as an indication of the price to be paid for that crop?—A. I think that is the figure we put on prior to the market opening; we went over and valued each crop.

By Mr. Ilsley:

Q. Not for a top crop, but for that crop?—A. Yes, that is right; 30 cents for a top crop, and on down for the crop.

By Mr. Sommerville:

Q. I observe in the statement showing daily contracts for purchases of flue-cured tobacco, 1931, on the first page Ed. McMullen, Otterville, was paid 30 cents for 17,000 pounds; that is the man?—A. Yes, sir.

Q. So that on that day he got 30 cents for the 17,000 pounds that were in that crop?—A. Yes. Now, in that book there the commoner—I think in some cases we valued on the high side, the value of the book, we bought at times on the low side—they were valued—there is no doubt if I had been doing it myself that on the commoner crops there I would have reduced the price some.

Q. Let us take VanKeribrook, of Norwich?—A. Yes, sir.

Q. I observe on the page in this book that he had a crop which is described as 34 acres "good", 38,000 pounds; and that crop is graded, 31 kilns of it?—A. Now, the "good", when it says 34 acres good that meant the tobacco growing in the field. It may have turned out, of course, from the flue—as people tell you it would be possible for a "good" crop to turn out not so good.

Q. Not so good in the grading?—A. Yes, sir.

Q. That is true?—A. Yes, sir.

Q. Now then, we have this same crop graded: "good" 4, "good medium" 6, "medium" 13, "common" 6; a total of 31 kiln. And I observe the price in the right hand corner at the top of the page was 24 cents. Will you look at that? That is correct, is it not?—A. I think so. In Mr. Wilson's judgment. He was a pretty good man. That would indicate that the crop was worth 24 cents, I think; that is the price he has on it.

By Mr. Senn:

Q. What does that 24 cents indicate to you, Mr. Gregory, as a buyer? You heard what Mr. Lea said here, that it would not indicate anything to him?—A. That was the price Mr. Wilson put on the crop, prior to the market being opened evidently, if we take the outside top price to be 30 cents. It is quite evident after we decided on a 30 cent top price that Mr. Wilson had valued this crop accordingly. I think in some cases "medium" and "common" crops are valued a little on the high side than if I had been buying it myself. I would have reduced some, but not to the extent to which they did.

Q. You heard Lea say that he paid little or no attention to these estimates, that as a buyer, or head buyer, he did not pay any attention to them?—A. Oh yes. If I were out with a buyer, and we bought this crop, before we got to the next crop I would say, let us see the book; and while we were going from this place to the next, we would have our information and knowledge of the crop before we got there.

Q. Then you do think that the estimate contained in these books were of real value?—A. Oh yes, we had spent some years getting them up.

By Mr. Sommerville:

Q. Then I observe on the statement showing the daily contracts of purchases for the 1931 crop, and October 13; now, that was the day after Mr. Lea's return from Montreal, that Henry VanKeribrook was paid 19 cents for 32,000 pounds, and 5 cents for 6,000 pounds?—A. 5 cents for 6—that would be about 16½ cents.

Q. That would be about 16½ cents average?—A. Yes.

Q. So that all he got was 16½ cents for this crop which was valued at 24 cents?—A. And might have been probably marked down a couple or three cents.

Q. And you say it might probably have been marked down a couple or three cents; well, let us say a couple of cents, and that would make a difference of at least 5 cents or 6 cents a pound to him?—A. Yes.

Q. And that would make a difference on 38,000 pounds at 6 cents of about—.—A. $2,280.

Mr. Factor: The 5 cent crop must have been of an inferior quality.

Mr. Sommerville: I was just going to ask him about that.

By Mr. Sommerville:

Q. Tell me, Mr. Gregory, what this "5 cents" means in the system?—A. That may mean a number of different things. To begin with: 31 or 32 years ago in buying burley tobacco from Canadian farmers we discovered that, say the top price was 6 cents and a man had a real good crop, and you wanted to give him 6 cents, and that was the price at that time; the next neighbour, maybe a brother, would have a crop which might stand at 6 cents, but you go to the next neighbour and he would have a crop not worth 6 cents, but he had a good deal of pride in his farming. He might be a relative, they would be going to church on Sunday, and, of course, they would talk about their tobacco. We considered giving him 3,000 pounds at 2 cents, and a certain amount at 6 cents—we would bring the average price to what we thought it was worth, but we would buy some at 6 cents, and he could tell then that he got 6 cents for his tobacco.

Q. But, of course, you paid an average?—A. That is one way.

Q. And J. B. Wilson was one of the buyers who was with you for a great many years?—A. Yes.

Q. Then he had used this method for years in arriving at an average on a crop?—A. Yes, sir. It may be though that there were times—it is used more often in the manner I have described, but there were times when a man would have, we will say, two definite lots of tobacco, or he may have 3 kilns of very poor tobacco, and if you stick to the amount estimated in these kilns, and pay a different price on it, that is a reasonable economic thing to do.

By Mr. Young:

Q. Is not that the proper way to buy? Why should you buy a crop on an average? Why should you not say, you have so many pounds "fancy," we will give you so much; then you have so many "medium," we will give you so much for that. Is not that the proper way to buy it?—A. It can't be done. After all, it is largely on our judgment and experience looking it over. You take 40,000 pounds of tobacco and these different kilns, all you can do is make an estimate. If you were to buy, say 6 kilns at one price, and 8 or 10 at another price, a great many of the farmers would take the good tobacco out of the commoner prices and put them in the other. After all, the thing to do is to look over the crop and try to arrive at as good a conclusion as you can as to its value.

By Mr. Senn:

Q. Would you prefer then a system of buying by auction, as practiced in the United States?—A. This system was ideal as long as the domestic—it is a unique system, a different practice from any other place I know of. I started with it when 19 years old and grew up with it, and I would say it was ideal as long as these Canadian manufacturers—the Imperial Tobacco Company especially and largely—could take and needed all of the Canadian tobacco. It is unique and different from anything else being done. We were accustomed to it and the farmer had been accustomed to it, but when the business grew to the proportions that half or more than half of the tobacco has to be exported, it is out of date; in other words, can you expect, with 800,000,000 of 400,000,000, 500,000,000, 600,000,000 more than they need—and the English manufacturers

and manufacturers all over the world are accustomed to buy through that way, and in that channel of trade, and it is rather hard to get them to change their method; to give away twenty-five million.

By the Chairman:

Q. That is for the export trade?—A. Yes.

Q. Auction buying similar to that practised in the United States would be preferable?—A. I think so.

By Mr. Senn:

Q. Would there be much difficulty in changing the system? Is it feasible to change the system?—A. I would think so, yes. I don't see any insurmountable difficulty.

By Mr. Ilsley:

Q. Mr. Gregory, you heard Mr. Miller state, did you, that the Imperial Tobacco Company did not lower their top price below 30 cents during that buying season, and that the later purchases at apparently much lower prices were due to differences in quality? Did you hear that evidence?—A. Yes, I heard part of it.

Q. What you say is that that is not true, because Mr. Buell told you— —A. I think Mr. Miller is mistaken.

Q. Just a minute, I want to get it straightened out in my own mind, at least. You say that is not true because Mr. Buell fixed a 25 cent top price in a telephone conversation with you from Montreal, is that correct?—A. Yes.

Q. That is the conversation where he said, "Pay them a quarter"?—A. I don't remember that he used the word "top", but I told him it was a nice crop of tobacco, and probably the first day it was worth 27 or 28 cents, and after discussing the matter, he said to give them a quarter.

Q. Yes, I had in mind the conversation where he said to give them a quarter. That meant to give them a quarter for the top price, did it?—A. I took it for that, yes. I think the record will show whether we paid more than 25 cents after that or not.

Q. As I understand it, you say even if those instructions had been followed, to pay 25 cents for the top crops— —A. In an intelligent manner.

Q. —in an intelligent manner, the farmers would have got more than they did. As I understand your answer to Mr. Sommerville this morning, it was to this effect, that the top crops were purchased at much lower than 25 cents despite Mr. Buell's instruction to pay 25 cents for top crops. Is that the effect of your evidence?—A. I think that happened quite often. The record there will show. Three years is quite a time. I think—yes, I am sure of that. There seemed to be no top or bottom to it. It was chaotic for a while.

Q. I was trying to test what Mr. Miller said, because he was very emphatic. He went away and he took time to consider it, spent a night on it, and came back next day and said, "We never dropped that 30 cent top price." You say they did, because Buell said to pay them a quarter. You say even that was not adhered to, because these irresponsible buyers went out and bought for 18 and 16 and 15 and so forth when they should have bought on a 25-cent basis, and they should have paid a lot more?—A. The buyers were very frightened, and in a predicament, having regard to the instructions they had from Mr. Lea, and they were demoralized as well as the farmers.

By Mr. Sommerville:

Q. What do you mean by "they were in a predicament", the Imperial buyers; what do you mean by that?—A. Well, prior to my arrival there, they had very definite instructions from Mr. Lea. I said to the only man left at

the factory when I got in—I think it was Mr. Taylor—"Where are the buyers?" He said, "They are in the country. Mr. Lea instructed them to go out and buy tobacco, and come back with an average of 18½ cents." Where I think that was all wrong, they were trying to buy the better tobacco. If you go out to buy tobacco at 30 cents, buying 30 cent tobacco, good tobacco, and buy that type of tobacco and your average is 30 cents, you come into a medium tobacco which is 25 cents, and you never get your average until you get through. It is ridiculous to go out and try to get an average of 18½ cents when you are trying to buy the best tobacco.

Q. As a result, the growers suffered?—A. Yes.

Q. Then as a matter of fact, I think you did take Mr. Buell out with you, and showed him some crops of tobacco that you wanted to pay more than 18 cents for, didn't you, when he came up later?—A. I remember taking him to one crop after buying had progressed quite a while. I believe it has been stated, and I think it is a fact, that we got an additional order from G.B. to buy—the Imperial of Great Britain and Ireland. They wanted more real good tobacco. There was a crop owned by one Mr. H. A. MacDonald, I think it was, that Mr. Lea had offered probably 18 or 20 cents for. He would not take that. In discussing where we could go and buy better tobacco—he wanted some good tobacco—I took Mr. Buell out to Mr. MacDonald's and we looked the crop over. I think in discussing it with Mr. Buell after we looked at it—he didn't put a price on it, he hadn't done the buying, but nevertheless I talked to him, got his opinion, and I think he agreed—we offered Mr. MacDonald 25 cents and he would not take it, if I remember right. He eventually did take a price not less than 25; whether it was 26 or 27 I don't remember. You can find out in the books.

Q. In any event, that was the crop for which Mr. Lea had offered 18 to 20? —A. 18 or 19 or 20, something like that.

Q. Did you see Mr. Harrison on the field in 1931?—A. I cannot say on the field. Mr. Harrison came up—yes, that is right. He went with me out to see the crop we were buying at the time. He was in the factory, and we went out in the country.

Q. Did you have any discussion with him about conditions?—A. Well, I talked to him some about conditions, and Mr. Harrison, as you know, is from the south, although he does travel as has been stated, world wide. But I think his experience has been in the auction market in the south. In fact, I think every tobacco man who has experience in flue-cured tobacco, has had that. I tried to explain the difference in auction buying, where there is no responsibility—it is on the last bid—and the condition such as this. I told him that there was a different standard of living here. I remember saying that these people very much resented being put on a level in regard to standard of living, prices and so forth with the southern pauperized tobacco growers; that they were not hard to handle; but you could not figure it on that basis, there were different costs here and a different standard of living.

Q. Did you think that was what the system was leading to, a pauperized industry here?—A. As I remember it, Mr. Harrison then was reasonable in his talk. I wanted to explain that things were different here, that probably I would go sometimes and buy a crop of tobacco at 18 cents or 20 cents when I could have bought it for 14 or 15. Where there was great power, it brought great responsibility, and if you followed the practice to buy each crop just as cheap as you can get it, and to bear down all the time, yes, it would lead to that condition.

By Mr. Young:

Q. Did Mr. Harrison make any remarks about the prosperity of our tobacco growers?—A. I can't recall him.

By Mr. Senn:

Q. Mr. Gregory, you advocate the system of buying by auction. That practice is followed on the other side of the line, and yet you say the industry is pauperized over there?—A. It was at that time.

Q. Why prefer the auction buying then?—A. Right now it is not. They got very good prices last year, and did in the war times and immediately thereafter. No system is ideal. But if they had this system there, I think it would have been much worse than it has been.

By Mr. Sommerville:

Q. In other words, the barn buying system leaves it entirely in the hands of domestic buyers?—A. The barn buying system naturally will work. I don't think for a minute there was ever any collusion between the Imperial Company or any other company in my time. They are buying for the Imperial of Great Britain and Ireland, but leaving that out, there has been no combine in any way, shape or form that I have known of. Yet this system of buying works in the hands of a large company or one which is large enough to dominate. It is an unwritten law that nobody else now will raise the Imperial top price. That is not by combine or agreement, but it is good business on the others' part. In the auction system, there is no such thing as top price. One pile will bring 75 cents and one 3 cents, and so on.

By Mr. Factor:

Q. The market price paid for the 1933 crop in the United States averaged 15·2 cents?—A. Well, a good part of that tobacco was sold before the rates were raised by government action in Washington, and that has figured in it. I believe that after that was done, a large part of the crop sold in the old part averaged 17 and 18 cents.

By Mr. Sommerville:

Q. After the government intervened and insisted upon the price being made higher?—A. This company, in my opinion, was very fair to the growers, and there was good relationship between the growers for thirty odd years until the change came about that I have told you of. We had investigations before, and we came out in good shape.

Q. At any rate, you did have a discussion with Mr. Harrison who was there in 1931, in the course of which you represented to him that these growers could not be put in the same position as southern growers?—A. I told him I thought it would be bad for anybody to try to do it. I thought it would lead to a condition such as you have here to-day. I predicted it—I don't know whether I predicted it to Mr. Harrison or not, but I predicted it to a great many people, members of the company. My brother, W. T. Gregory, did too.

Q. Your brother and you predicted this condition that has come about to-day?—A. Yes.

Q. By reason of the practices that were adopted?—A. Yes.

Q. Did you discuss that chaotic condition with Mr. Buell?—A. Yes, I did.

Q. What was Mr. Buell's explanation for the chaotic condition of the buying?—A. Too many fingers in the pie.

Q. Too many fingers in the pie; that was his statement. What did he mean by that?—A. I inferred that it had gotten somewhat out of Mr. Buell's and my hands. We understood this little, unique, individual way of doing business; and the other officers in the company superior to himself, or the British Amercian Tobacco Company—in other words the New York management or London, whichever you want to call it—I guess the headquarters over here are in New York—were having too much to say about something that they didn't just exactly understand.

Q. And his intimation was that there were just too many fingers in the pie?—A. Yes.

Q. Did you discuss with him the policy that was being put into effect by Mr. Lea, and the chaotic condition that it produced?—A. Yes, sir. Mr. Buell seemingly didn't want to hear too much about that.

Q. Apparently not?—A. I covered that as well as I could, and showed him that crop that he and I gave 25 cents for had been offered 18 and 19; and other occurrences such as that.

By Mr. Factor:

Q. When did you leave the service of the Imperial Tobacco Company?—A. My resignation was demanded on May 1, 1932, at the finish of the 1931 crop.

Q. It was after the 1931 crop was marketed?—A. Yes.

Q. You resigned May 1, 1932?—A. Yes.

By Mr. Young:

Q. Why did they demand your resignation?—A. Well, it is a long story.

Q. Has it anything to do with buying tobacco, your attitude toward the farmers?—A. Well, I would not say just the attitude towards the farmers. There was a question of my handling fertilizer involved, and that could be explained. It would take a couple of hours.

The CHAIRMN: We will spare you that.

The WITNESS: I think the main reason was this: We have seen that Mr. Lea came from Montreal, back and forth, and I think it was through representations of his that he wanted me out of the job and himself in, largely.

By Mr. Young:

Q. What I want to get at is was it because you were paying too much for tobacco? Was that the trouble?—A. Well, I don't know whether I could say that or not.

By Mr. Sommerville:

Q. You don't know that that was the reason. There was some reason, at any rate, and as a result you resigned?—A. Yes.

Mr. HEAPS: His resignation was demanded.

The WITNESS: Demanded, yes.

By Mr. Sommerville:

Q. In 1931 the purchasing program was not an orderly purchasing program at all, according to your evidence?—A. No, sir.

Q. How would you describe it, to put it very briefly?—A. Well, I think it was bungled.

The CHAIRMAN: That is a good, old word.

By Mr. Sommerville:

Q. Bungled; that is a good, old English word. And as a result, the growers suffered. We have had the evidence before of Mr. Hagerman's crop, which was marked in the book as 24 cents. Just look at Hagerman's crop there. (Handing book to witness.) It is marked 24?—A. Yes.

Q. I observe that 30,000 pounds are bought at 18 cents on October 13, the day after Lea's return from Montreal; that means a drop of 6 cents a pound on 30,000 pounds, or $1,800?—A. From the description of the crop there, it looks like it was priced a little high, even at 24 cents.

Q. A little high even at 24 cents?—A. Yes, not even, but at 24 cents. I think it was priced a little too high in the beginning.

Q. On the key it works out at 24. As a matter of fact, it works out at 25 on the key?—A. Yes.

Q. The price 24 is a little less than the key indicates; but you think it was a little high. When you say "a little high," what do you mean, one cent or two cents?—A. Oh, we try to buy these crops first, and getting into a crop like that I would think, in the natural sequence, to revise one like that to 21 or 22 cents.

By Mr. Ilsley:

Q. Why would you have lowered it to that, on a 30 cent basis?—A. Well, I would think from just looking at that quickly there, there was not any question if the bought amount and the key worked out. There was a medium crop of tobacco over in that section, if I remember, that year.

By Mr. Sommerville:

Q. According to the key, it had worked out at 25 cents and then it had been priced at 24 cents?—A. Yes, I doubt in the key if we had made enough difference there in the best crops, and one such as that—as I say, it is largely a matter of judgment. You can't get it right to a cent.

Q. But on buying orders in the second week, after Lea's return from Montreal, the price would be affected?—A. Very largely. What was given for it?

Q. 18 cents; that was the price that was quoted by Lea on his return?—A. Yes.

By Mr. Factor:

Q. What would you have paid for that crop if you had charge of the buying, from the picture as you see it now?—A. Well, I saw the necessity of lower prices on medium and common tobaccos, something lower. I guess I would have given him about 20 or 21 cents—21 cents. You have to be affected somewhat by how much you are buying. If you are going to buy 100 horses and you have bought 80, you are not going to be so keen about the next twenty.

By Mr. Sommerville:

Q. I understand that you had earlier intimated to the farmers that there was likely to be an over-production?—A. Yes.

Q. And you had prepared an article for the Simcoe newspaper?—A. Yes, nearly every year, for several years.

Q. The first one apparently was in 1930?—A. Yes.

Q. And that year there was a short crop?—A. Yes, nullifying our recommendation.

Q. So with that short crop it was not necessary then to follow that up?—A. No.

Q. Then in 1931 there was the larger crop. By the way, had any of those intimations come from Montreal headquarters, about warning the farmers as to any likelihood of overproduction, or was it entirely on your own?—A. On my own, but I talked to Mr. Buel about it, and maybe after I wrote an article I sent it to him. He left things largely in my charge; he concurred in it anyway.

Q. However, nothing initiated in or was announced from Montreal with regard to notifying the farmers, that you had heard of; they had sent out no circulars up to 1931?—A. No.

Q. Or no announcements?—A. No.

Q. Then in 1931 when you had a fair crop, did you buy from those who had been your old customers, or was the policy changed?—A. That was a bone of contention. In 1931 they wanted to make what I thought was a radical departure. I had dealt with people this way: You see, we promoted this business from nothing up to its present proportions, and they were treated as customers,

that is, a farmer, you might say a good farmer and an efficient farmer, one who had used his farm for tobacco growing, and who for nine times out of ten, or eight times out of ten, would have a good crop, would be treated as a customer, and furthermore, that whenever I knocked on his door to buy his crop he would sell it at the price I offered him. I think he would be a customer, don't you.

Q. Well, I would think so.—A. We had regard to our responsibility, but we had to try and give him a fair price. Then in 1931 when apparently there was too much tobacco, I strongly advised that we would buy first from those customers, those who had put their money in the business because of their past association with us, and those whom we had bought from in previous years, and then when we needed more tobacco we would go to those new growers.

By Mr. Factor:

Q. That would be discriminating against the new growers?—A. No, we would be assisting those who had put there money into the business because we had advised them to. I think that man should be taken care of first rather than a new man who never had grown any tobacco, or never had sold any tobacco. We would not be discriminating against the new fellow by taking care of the old fellow first. But they took the position,—Mr. Lea pointed out that wherever tobacco was to be bought we had to buy it regardless of any past association. I disagreed with that for two reasons. I thought there was a moral responsibility to deal with those who had put their money in the business because of their faith in us, and secondly with the idea of stopping new growers we would put these pieces in the paper advising them not to grow tobacco, and because of having done that then to go and buy whatever they did grow, well then you might as well never have put your advice in the paper.

Q. In other words, you were advising against over-production and to buy from people who were new producers would simply be encouraging them?—A. Yes.

Q. And the result was, that that year some of the old growers were left with their tobacco while some of the new growers sold their first crop?—A. That is right, and the new growers would come up every year, and they knew that their neighbour had sold his first crop the previous year and they would say they were going to do the same.

Q. And that added to the difficulties of the farmers during that year?—A. Yes. That would add to the difficulties next year; that would encourage more growers to come in next year and add to the difficulties of those old ones.

Q. And that would encourage increased production?—A. Yes, sir.

Q. Now next year 1932. You have given us a picture of the panicky condition in 1931. What do you say as to the buying practices in 1932?

Mr. Factor: I thought he had resigned in 1932.

Mr. Sommerville: Yes but he was there on the grounds.

By Mr. Sommerville:

Q. You had lots of tobacco?—A. I had eight farms.

Q. And what do you say as to the buying in 1932?—A. Well, of the three years 1931-1932-1933—I think the farmer has much more cause for complaint—he has cause for complaint, as we said, in 1931, but 1932 was the best crop of tobacco, even better than 1931, and I think that was just too bad.

Q. What do you mean by "Just too bad"?—A. In so many cases good tobacco sold below the cost of production, to a greater extent than it did in 1931.

By Mr. Ilsley:

Q. What about the methods? You are being asked about buying methods?—A. Oh, the buying methods.

The Chairman: Start out with the question of delay in opening.

By Mr. Sommerville:

Q. What was the effect of the delay in opening that market? Orinoco and Yellow Mammoth were grown largely at the request of the Imperial, I understand, and now you had a large quantity that was being primed instead of being harvested by the old method, and we have the evidence that it was ready for market about two weeks earlier. Now, what effect had the delay in opening the market till the 26th October have upon the situation, Mr. Gregory?—A. Of course, it would make the farmers very anxious and very nervous, but I do not say that that would contribute very much, because the Imperial Tobacco Company could have started in at 18 instead of 24 that year. They could have gone out and bought it as cheap as they wanted to, only the Agricultural Department stepped in just as they did.

Q. But it all added to the panicky condition of the farmer?—A. Yes.

By Mr. Ilsley:

Q. There has been a lot of talk about the panicky condition of the farmers. Would it lead them to think that they were not going to buy the crop at all?—A. Well, they get so nervous after the tobacco is harvested; they stay at home waiting all the time expecting somebody to call.

By Mr. Senn:

Q. I suppose their commitments were coming due too, were they not?—A. Yes.

By Mr. Sommerville:

Q. They have to pay their grocer, and so forth?—A. There was so much hardship in the fact that they delayed it. I always try to get them to open the market earlier because we want warm weather if we can get it for our operations.

By Mr. Factor:

Q. The year before it opened on October 6th; there was only twenty days' delay in opening?—A. Yes.

By Mr. Sommerville:

Q. Yes, but you had a crop that was harvested two weeks earlier?—A. I think it was just bad business on their part not getting ready sooner and buying it, but I do not believe that they did it to depress the market because, as I say, I do not see any sense in it as they could have bought it at any price anyhow.

By Mr. Ilsley:

Q. These farmers knew they were coming some time?—A. Yes.

Q. And they are intelligent, I take it; they impressed me as being a very intelligent class of farmers?—A. They are a very intelligent class of growers.

Q. Then what would a two or three weeks wait add to their panic?—A. I suppose they would figure that the buyers should have been out earlier. You see, they put their whole year's work into it and each day looks like a week, I imagine, to them.

Mr. SOMMERVILLE: Well, apparently Mr. Sutherland thought, when he was going down there interviewing the dirt farmers, that it had some effect on them.

The WITNESS: If now there was a very competitive market and not quite enough tobacco and the farmer had a big price in his head, it would be a good thing to do, wait until he got down to earth.

By Mr. Sommerville:

Q. But when you were getting down to an average price of 16 cents, which was about 50 per cent of the price of 1930, then would it not have an effect in softening the market for the blow that was to come?—A. It would make them easier to deal with.

Q. And then when the market did open at the price that was mentioned, what was the immediate effect when they got down to the top price of 24 cents?—A. Oh, I don't think the farmer felt so badly then. They may have expected more, but when good tobacco, not top tobacco but good serviceable tobacco is being bought for 15 cents, as it was, then they were in a very very bad condition.

Q. Yes, and that is the condition that did exist?—A. That condition did exist, when tobacco sold from 12 to 15 cents. Now, I do not mean top fancy tobacco, but I mean good, ripe serviceable tobacco.

By Mr. Factor:

Q. And did Mr. Lea have charge of the buying of the 1932 crop?—A. He had had charge of it since I resigned, and before too.

By Mr. Sommerville:

Q. Now, what was the method of buying that season? Was it by the old method that had been practiced for some years, or was it through a changed method of just sending out the men to buy the crops and bring them in, or extending the buying over a number of weeks?—A. I hadn't anything to do with it. That was probably the cause, but I would not censor them too much for that, or any for that if they paid a reasonable price when they did buy it.

Q. Now, can you say whether there was any uniformity in the price paid for the different grades that year, or do you know?—A. Well, I sold the Imperial two crops that I considered A1 crops, at 20 cents. One was, I would say, an extra crop, a crop that I think was worth within a dollar of the top of the market. That was one, but I could only get 20 cents for it.

Q. You could only get 20 cents for it?—A. Yes.

By Mr. Senn:

Q. Did you sell different crops of the same grade at different prices, were you forced to do that?—A. I think this crop that I have in mind right now was bought at two prices, but I think it averaged about 20 cents. And then I had a second crop as good. It was a real good one and I got 20 cents for that. But those are two crops, if I am any judge of tobacco, that were worth say, a dollar or a dollar and a half of the top.

By Mr. Sommerville:

Q. Now then, what was the combined effect of the delay in the market, and the price at which they were buying good serviceable tobacco—12 cents. What was the effect upon the farmers that year of these combined conditions? Describe it to the committee in your own way, Mr. Gregory?—A. Well, the farmers felt very badly; they were not getting the cost of production, and I believe that they appealed to the Agricultural Department of Ontario, and at that time Colonel Kennedy, the Minister, announced the intention of providing financial assistance, and said that they did not have to sell their tobacco at those prices. The market went up, and I believe it was on account of making the threat of providing financial assistance.

Q. That is, the market went up following his announcement?—A. Yes.

Q. And his assurance to the farmers?—A. Yes, and the price went up, and the end was about like the beginning in price.

Q. Yes, I understand the price went up 25 per cent or further after that announcement was made?—A. Yes, sir. Mr. Lea, I remember, offered me 14 cents for a crop and I told the tenant no he must not take 14 cents, that I would give him 17 cents myself and he could take 17 cents, or I would have it packed and finance it and he could take half of what it brought less expenses, and he decided to take the 17 cents, and I sent it up to the Canadian Leaf Tobacco

Company to be processed; and as soon as it got there they offered 17 cents for it but I did not take that; I merchandised it, and I realized nearly 20 cents having regard to green weight tobacco at the farm.

Q. And that was a tobacco for which you had refused 14 cents from Mr. Lea?—A. Yes sir. The Canadian Leaf then offered me 17 cents, and they have to buy it and sell again, you know.

Mr. Sommerville: Yes. Thank you, Mr. Gregory.

By Mr. Young:

Q. It seems to me now, Mr. Gregory, that this system of buying tobacco, stating to the buyers you shall pay a top price of 30 cents and an average price of 24 cents, is bound to result in the very condition you have described, especially where you have buyers who are not absolutely sure of themselves; is not the buyer bound to make his average regardless of the quality of the tobacco?—A. We never had before that any set average to go by; we never had, prior to that time, any set average. We would start out with 30 cents, 35 or 40 cents, in the past as top price, and let the average fall where it may.

Q. You spoke of going out with Mr. Buell to look over a crop. Where was that crop when you looked it over, was it in the shed?—A. This particular crop had been stripped, it was in the bales.

Q. Can you see it in the bales?—A. Yes, sir. You can go over to the bales and take any bale and bring it to the light and go and get another one.

Q. Is it possible to buy tobacco that way, that is to say, to go to the farmer and say, Now, we will buy your tobacco on that basis, we will pay you 30 cents for your fancy, 20 cents—if that be the cost—for your good, 25 cents for your good medium, and 23 cents for your medium, and so on down the line? —A. No sir.

Q. And then grade it as you take it?—A. That would not work out.

Q. Why would it not work out?—A. Because this tobacco is all in bales, in a big bale, and in each bale there is a certain amount mixed.

Q. In each bale?—A. Yes sir. Well not necessarily in each bale, but to some extent, some in each bale.

Q. Could not the farmer be tempted to bale up his good tobacco in one bale?—A. The farmer does not grade tobacco in this country.

Q. There is no possibility then of grading this tobacco?—A. Not in the barn. It must be done largely by judgment and experience.

Q. What did you do before this averaging business started?—A. Just looked over each crop of tobacco and offered the farmer whatever we thought it was worth.

Q. And it did not matter so much about your average so long as you got your moneys worth in each case?—A. That is it, and the average would fall in the right place. You see, the average in the South—they average every day. I was a bookkeeper there once and we had to make an average every day and an average every week. But these people are accustomed to that in the South, but I never heard so much about average as I did in 1931.

Q. That is, when they instruct the buyers to buy at a certain average, but if you could get away from that you would eliminate a lot of trouble?—A. Well, I think it is quite wise to have some average in your head. If you have seen all the crops of tobacco it is quite wise to consider that before you start to buy. I think it is largely a question of experienced buying, looking the crops over and getting your moneys worth in each case.

By Mr. Factor:

Q. What do you think of the government grading crops and fixing the price for each grade, something like they do with hogs?—A. I believe in the school of individuality and not so much regimentation as that.

Q. Rugged individualism then.—A. It can be worked out undoubtedly, but this situation needs looking into.

Q. What do you think of this government grading of tobacco?—A. Commercial organization would be better than government grading. If you are going to adhere to the barn buying system you might try something like that, and I would not be surprised if ultimately the barn buying system will be discarded, but I will be willing to say it will be reasonable to try it for another year or two.

By Mr. Sommerville:

Q. If you departed from the barn buying system then what?—A. The auction system.

Q. If you departed from the barn buying system and adopted the auction system, and you graded your tobacco and packed it in hogsheads— —A. You do not pack it. You see, the packer is another man, he has another place.

Q. Well, it is brought in and put in the barn. If you had that system then your crop would be sold, your whole crop would be sold by auction.—A. You can sell a small portion at a time.

Q. At a time, yes.—A. And your whole crop eventually would be sold by auction.

Q. And your export buyer would be in the market obviously as your domestic buyer?—A. Yes, sir.

Q. To buy his exact grade?—A. Under that method anybody can walk in and buy, but under this present method you have eight or ten inspectors going round the country looking at the crops, but under the auction system it is an excellent thing. The humblest farmer can take in a load of tobacco and I can buy it from him, he can do that instead of having to wait, wait, wait until the buyer comes along to buy his whole crop. With the auction system he can sell a part of it.

Q. And they sell to the domestic buyer too?—A. Yes, sir.

Q. But you think the greatest advantage is in the fact that after the crop is then prepared for sale he has a world market, he can sell to anybody?—A. Yes, and to get away from the personal equation. In the South they have been following that channel of trade for years and years, and the export business has developed on that sytem.

Q. We have had some evidence about the Imperial Tobacco Company buying for the Imperial Tobacco Company of Great Britain some three and a half million pounds in the year 1932. Did the Imperial of Great Britain buy their Burley independently of any competition from the Imperial of Canada?—A. Yes, sir.

Q. And when you were buying for the Imperial of Canada were the Imperial of Great Britain really buying the Burley?—A. Yes, sir. Not at first. We bought the Burley for a few years but then they started to buy Burley. I would say it was very commendable on the part of the Imperial Tobacco Company of Canada to do what they did, but I think they should have stopped after that. I believe that the little competition that they have here should not be squelched.

Q. That is, you think that the Imeprial of Canada should not represent the Imperial of Great Britain in the buying?—A. No, not of the flue-cured.

Q. Of the flue-cured?—A. No, sir.

Q. You say that it ought to be bought independently just as they buy their Burley?—A. Yes, and as they buy in the South.

Q. As they buy in the South, in a competitive way?—A. Yes.

By Mr. Young:

Q. Would you say then that the Imperial of Canada should not sell any surplus they may have to the Imperial of Great Britain?—A. I think that would be all right occasionally when they had some tobacco bought honestly for their

own use with the expectation of using it, and as I say, I think it was commendable of them to do what they did in selling to the Imperial of Great Britain, but I do not think that practice should be continued. Gracious knows we have little enough competition without having these two large companies buying up the tobacco and then dividing it.

Q. You say it was commendable. Is it not a fact that that action was taken in order to get the benefit of the 49 per cent preference on Virginia Leaf, and that it was really an economic necessity that brought them in, that is, the Imperial of Great Britain?—A. Well, I think a company that have probably made enough money anyway, and are rolling in wealth, are slow to change; probably that economic necessity you speak of was a circumstance, but I do say that I think the practice should not be continued, and that the two of them should compete with each other.

By Mr. Young:

Q. How are you going to prohibit such a thing as that, especially if they have a surplus?—A. I do not think it is right that they should be permitted to do so. They are not allowed to do that in the States. I believe the Federal Trade Commission has issued an order saying that they cannot do that very thing, and they are competitors all the time in so far as I know.

By Mr. Heaps:

Q. You said you were in favour of the tobacco being sold by auction?—A. I said I believe if some way can be worked out, such as some schemes that are now under way, then I would say it would be the practical thing to do, to try this maybe another season or two.

By the Chairman:

Q. When you say that, you mean the present barn buying system?—A. Yes, and if we cannot make it work different then to discard it and adopt the auction sales similar to the manner and system they have of selling the tobacco in the Southern States. The system here is something entirely different from the practice anywhere else in connection with flue-cured tobacco. The trade has been built up and every channel of trade has developed along the auction line, which is entirely different from this.

By Mr. Heaps:

Q. If you sold tobacco by auction what would determine the price?—A. Competition.

Q. Supposing there was an overproduction of tobacco what would happen?—A. I think you would get more competition with the tobacco sold under the auction method, a method that the trade is accustomed to.

Q. Supposing there is overproduction how would that affect prices?—A. If there was a large crop of flue-cured tobacco why, of course, prices would be low.

Q. Supposing there was an overproduction of tobacco and the prices were lower again to the farmer would there be any improvement over what you have had in the past few years?—A. I would think so.

Q. How is it worked in the Southern States?—A. It is worked down there on the auction method.

Q. You told us something about the very low conditions of living in the South?—A. Well, down there with the negro labour, and a country that can build a tobacco kiln for $100—you can hire labour for 50 cents a day, and there are eight to twelve States down there that can grow tobacco.

Q. It has not taken those negroes out of the semi-slavery conditions at all?—A. At times they have done well.

Q. Who have done well, the negro labour?—A. Yes. In the war time and after that when tobacco was high. It was low for two or three years. Last year

I would say he did pretty good. Everybody was pretty well satisfied. No system is that perfect that it suits everybody. Everybody thinks they have a better one—barn buying or the auction system.

Q. How would you differentiate between the domestic and export trade?—A. Then?

Q. If you did it by auction?—A. They are doing it either way. I think last year the domestic buyers were in agreement—an average of 17 cents.

Q. Suppose there is no agreement?—A. Oh, you could not differentiate then at all.

Mr. BELL: The bad conditions are not entirely due to tobacco; cotton and other things enter into the matter, don't they? They enter into the demoralization of conditions?

The WITNESS: Yes.

By Mr. Heaps:

Q. Suppose there is no fixed agreement or fixed price for tobacco, how can you differentiate between the domestic and export trade?—A. You cannot.

Q. Then, the auction system would not be successful in that case?—A. In the auction system there are anywhere from five to ten buyers and this tobacco is sold at auction, export or domestic.

By Mr. Factor:

Q. Where would you get your five or ten buyers on the Canadian market? —A. The Imperial Tobacco Company—

Q. Buys most of it?—A. I think the Macdonald Tobacco Company would have—I do not know what they would do, but I would say that they would probably have a representative buyer, probably the Imperial of Great Britain and Ireland; then there would be independants to buy for small concerns, take orders from Godfrey Phillips and Carrera and different ones in England and smaller concerns in Canada.

Mr. SENN: This matter of premiums seems to be one of the most serious phases of the situation. Why is it that when we have such a small surplus and when we have a premium of 49 cents a pound in the markets of Great Britain that our surplus is not readily absorbed in the export trade?

The WITNESS: Well, this is called Empire tobacco. When they started to grow flue-cured around Danville, Virginia, and South Boston that was considered a type of tobacco—Virginia tobacco, and when North Carolina started to grow tobacco two or three hundred miles away the manufacturers shook their heads and said that that was not as good as the old tobacco and didn't know whether they could use it or not. So North Carolina took to producing by far the greater part—I guess five times as much as Virginia. It went to South Carolina. That was worse. They could not see South Carolina. Well, that was taken in and now it has gone to Georgia and Florida. From Danville, Virginia, to Florida, the number of miles I believe—I think it is a farther distance than from Danville to Delhi. In other words, if the Niagara River ran west of Tillsonburg this would be considered Virginia tobacco from the States and would be taken the same as—

By Mr. Senn:

Q. It is only a matter of reputation?—A. Largely, I think. I do not say this tobacco is just the same, but I believe it compares favourably with the southern tobacco, and I believe by putting this tobacco in a cheaper product called Empire Product you cheapen it. Against that you put it in something different and advertise it as it is

Q. How does the quality of flue-cured compare with the tobacco that is exported to Great Britain from the United States?—A. I think the better part of this tobacco here—I take this as a whole—compares very favourably with the tobacco down there as a whole.

Q. Don't you think that some method of publicity, or something of that nature, could be arranged to place our tobacco on a better footing on the British market?—A. That would be very ideal, I would say. I remember the times in Canada thirty years ago. I believe the excise law was that Canadian tobacco must have one colour stamp on it, imported tobacco manufactured another colour and a blend a third colour. The result was they looked in the showcase and they saw this tobacco that was stamped as Canadian tobacco and everybody wanted the imported article, and that held the price of it down. We never got a very fair show for Canadian tobacco until that law was changed —until you could put any kind of tobacco in the mixture and let it sell on its merits. I believe we have that to contend with in England to-day. The Empire tobacco—South African and Canadian and so forth goes on a different line of business.

By Mr. Heaps:

Q. You still continued competitive buying of the tobacco?—A. Yes.

Q. Do you know what percentage of Canadian tobacco is purchased by the Imperial Tobacco company?—A. I think right now, not 50 per cent.

Mr. SOMMERVILLE: 56 per cent last year.

By Mr. Heaps:

Q. It was higher in previous years, somewhat higher?—A. Yes, as the crop was smaller. As the crop goes larger more of it has to find its way out of the country.

Q. Would you be in favour of a fixed price to the producer?—A. Well, under this system of sale I think it hampers export business, but having regard to the fact we have gone on increasing and increasing, and looking at it right now I would say yes, that some agreement as to what he was going to get the next year would be better.

Q. If you favour a fixed price to the producer you cannot very well have the competitive system in buying?—A. A fixed minimum price, would you say? How would that be?

Q. No. I say a fixed price on grades.

Mr. SOMMERVILLE: A fixed average is what they are working on at the present time. Perhaps you might mean a fixed average price.

Mr. HEAPS: Apparently, if they have a fixed price on grades it is the same thing as if they have a fixed price on the tobacco, average or otherwise; you cannot have the competitive system in buying, can you?

The WITNESS: Well, I talked to some of them about that and they believe that that can be worked out. It would require some thought, and a great many angles arise which would have to be thought over and worked out.

By Mr. Sommerville:

Q. That is to say you would continue your buying but you would fix your top price at such a figure as would arrive at an average for the whole crop? —A. Yes.

Q. You think some basis can be worked out—that an average purchase can be made upon that basis?—A. I would think so.

Q. Thank you Mr. Gregory. Now, Mr. Miller wants to produce some wage scales for us.

Mr. Gray Miller recalled.

By Mr. Sommerville:

Q. Mr. Miller, you have some statement?—A. Some various statements.

Q. Would you be good enough to let us have them?—A. On the wage scale, I might say we have been working in that, Mr. Sommerville, but we have not got them all completed, sir. We have some other statements.

Q. You have not got the wage scales all completed?—A. No, sir, it is quite a big undertaking.

Q. Have you them for the Imperial factories—your own factories?—A. No, I have not got it completed at all.

By Mr. Factor:

Q. You are not producing to-day—A. No. We are working on them and we will produce them.

Mr. Sommerville: Are you likely to have them to-morrow?

The Witness: They are working as fast as they can.

By Mr. Factor:

Q. May I ask what system you are following in preparing these statements of wages? Are you grading the different workers like strippers and packers?—A. As I recall it, you asked for all of the piece work rates that we are giving, and we are trying to give every piece work and every wage scale, and where there is any change. It is a terribly big undertaking, and in order to do it we ought to give some idea of what earning there could be under that wage scale.

Q. How far back are you going to go?—A. Three years, I think.

Q. You mean for the last three years?—A. Yes, any changes that were made. That is the way we understood the question.

Q. Yes, quite so.

By Mr. Sommerville:

Q. Now, there are some other statements you were preparing?—A. Yes. There is a statement you asked for of all the changes in important brands of cigarettes and tobacco.

(Statement filed market exhibit 141.)

You will see quite a few changes downward in both the tobaccos and the cigarettes.

Mr. Factor: Is that exclusive of the excise tax?

The Witness: It is included in there, but in addition to that the additional changes—other changes in addition to that.

By Mr. Sommerville:

Q. This does not give the selling price to the consumer?—A. Yes, sir, in the last column. "Retailers" That shows retailers' price, Old Chum, Fine Cut, on the second page.

Q. Take the cigarettes here: Turret, $12.50. What does that mean?—A. That means twelve and a half a thousand, which means twelve and a half for ten or twenty for twenty-five cents.

By Mr. Factor:

Q. That is what the retailer sells it to the consumer at?—A. Yes. It was only changed to the consumer on a $10 basis by reason of the excise, but, as explained, we could not make any small changes of half a cent a package or anything like that, that cannot be passed on. You see "Sweet Caporal" from 1929, 18 cents for ten down to ten.

By Mr. Sommerville:

Q. Sweet Caporal was a cigarette that was lying dormant for a number of years?—A. Yes, quite true.

Q. And now has been brought to life on a $10 basis—on the same basis as Turrets?—A. Quite.

Q. Is not that the situation?—A. Yes, to a large extent.

Q. It is hardly comparable. You would not put it forward as an average reduction?—A. No, sir, the only way to get an average is as we put in our brief, sir. I tried to make that point clear the other day.

Q. Perhaps I should say it was not a representative reduction. With regard to Sweet Caporal there was a situation there that differs from all the others?—A. No. I think it varies perhaps. Take Millbank—

By Mr. Factor:

Q. Is there a popular brand in that list for which the price has been reduced to the consumer irrespective of the excise tax?—A. It depends on what you would call a popular brand, Mr. Factor. Take Millbank, for example, that has been a big brand—a relatively fast seller. It is hard to tell what you would call a popular brand; but this statement, frankly, as we give it, is a fair indication of what the manufacturer did, and it is hard to get at what the average reduction to the consumer was, but there was an average reduction to the consumer. Then, in addition to that, the higher priced brands decreased in sales and the lower priced increased in sales, and the consumer paid less. If we had a big brand, say, selling at fifty million a month and selling 20 for 25 cents and we put out other brands at 20 for 20 cents it is equivalent to a reduction.

By Mr. Senn:

Q. What about your bulk tobaccos; is there any reduction in the price of those in packages?—A. Oh, yes, on the next page; there was considerable.

By Mr. Sommerville:

Q. Will you deal with the cigarettes first of all. You have "Gold Flake" which sold at $12.50 in 1932?—A. Just a minute, sir. Yes, but you go back on that. It sold in 1929 at $30, 1930, at $17.50, and we have made a reduction just prior to the reduction in excise from $17.50 to $12.50, hoping there would be some reduction in excise. We have been trying to get the government to reduce the excise for many years.

Q. But your reduction from $17.50 to $12.50 took place in April 1932?—A. That is right.

Q. That was some six months before the change in excise?—A. Yes.

Q. And that was with a view, was it not, to increasing your sales on Gold Flakes?—A. Yes, quite.

Q. And when the change took place in the excise and $2 was taken off the excise tax on 1,000 cigarettes Gold Flakes continue at $12.50; no change took place?—A. And decreased in sales tremendously too.

Q. Well, I want to deal with each concern?—A. That was the result.

Q. That is to say Gold Flake was at $12.50 for six months prior to the change, and since the excise was reduced there has been no change?—A. Yes.

Q. Take Guinea Gold at $12.50 for several years prior to April 19— —A. November 1932.

Q. And in November 1932 it was reduced to $10?—A. That is right.

Q. Per thousand?—A. Yes.

Q. That is to say, a reduction of $2.50, and the reduction in the excise was?—A. Two dollars.

Q. And that meant a 5 per cent reduction approximately?—A. A what?

Q. A 5 per cent reduction apart from the $2 of the excise tax?—A. I cannot understand your figures.

Q. The excise reduction was $2?—A. Yes.

Q. And 50 cents on $10 represents 5 per cent, does it not?—A. Oh, well, on $10. I do not know how you figure that.

Q. $10 a thousand?—A. I do not know what you are driving at at all, sir.

Q. At any rate, you added to the reduction of $2 for excise tax a 50 cent reduction?—A. Yes. We reduced $2.50. The excise tax was reduced $2. Any way we reduced more than that, but the consumer got that.

Q. The consumer got that. I think that meant that if you had not reduced to $10 the consumer would have to pay 21 cents. If you just reduced it by the amount of the excise tax the consumer would have paid 21 cents instead of 20 cents for his package?—A. Yes, I suppose. I do not know how you are figuring that.

Q. I beg your pardon?—A. I do not quite understand your point about that.

Q. Well, that is the amount of the reduction?—A. If we had reduced it only $2 under the price, yes?

Q. It would have been 21 cents?—A. Yes. There was no intention—

The CHAIRMAN: The point is that there is a reduction in addition to the excise tax reduction?

The WITNESS: Oh, yes, quite.

By Mr. Sommerville:

Q. Of 50 cents a thousand?—A. Yes.

Q. And the same thing applies in Millbanks. From $12.50——A. Previously it was $14.

Q. And reduced to $12.50?—A. Yes, in November, and in June of last year it was reduced to $10.

Q. And Player's were reduced from $16.67 to $13.88?—A. Yes.

Q. All those are eighteens?—A. I think there was some odd quantity. I think eighteens for a quarter. That figures out to $13.88.

Q. This reduction in Player's was a reduction of $2?—A. And 79 cents.

Q. $2.79. In each of these cases, Mr. Miller, showing these reductions was the same quality of cigarette carried through into the new?—A. Well, these figures indicate per thousand, and that would correct it. There are some changes.

The CHAIRMAN: Everything was the same throughout?

The WITNESS: Well, on that statement it shows where we changed the size. Take Player's. We were selling fifteen for 25 cents and we changed them eighteen for 25 cents, which gave a reduction of $2.78 to the consumer.

The CHAIRMAN: But you increased the number in the smaller size?

The WITNESS: Yes.

Mr. YOUNG: Was the size of the cigarette reduced?

The WITNESS: No, sir; the same cigarette.

By Mr. Sommerville:

Q. Player's remained the same price but you added three more cigarettes?—A. The same price per package.

Q. You added three more cigarettes?—A. Yes. It is all adjusted in the retail price.

Q. Is that the system that has been followed generally? You increase the number of cigarettes in the package?—A. Not always, no; where it was a unit that could be changed, as, for instance, twenties. Where it was twenty for 25 cents we could make the reduction twenty for 20 cents, and there was no change in the number of cigarettes, but the change in price per package—but it could not be worked out with a fifteen package or odd packages.

Q. Were Rex cigarettes treated the same as Player's?—A. Yes, sir.

Q. And the reduction was from $13.88 to $11.11?—A. Yes.

Q. And that sells at what price?—A. It is a very small brand. I will have to look that up. Eighteen sold for 20 cents. They must have been previously selling for a quarter; yes, they were selling previously 18 for a quarter.

Q. Then, Turrets were reduced from $12.50 to $10?—A. Yes. Sweet Caporal—

Q. We have had the Sweet Caporal changed. Then Turrets was changed from $12.50 to $10?—A. Yes.

Q. And Viceroy from $12.50 to $10?—A. Yes.

Q. And Winchester was changed from $12.50 to $10?—A. Yes.

Q. These last three brands were 20's?—A. Yes.

By the Chairman:

Q. In each case 50 cents is the excise reduction?—A. Yes, to the consumer.

Q. So the difference to the manufacturer in reduction was even a little more than $2, including the difference in sales tax to the retailer, and the jobber was given a little better margin.

Mr. FACTOR: The consumer paid 50 cents less per thousand for cigarettes in the form of getting, in certain cases, extra cigarettes in the package, and in other cases, a reduction in the price.

The WITNESS: Over and above the excise reduction.

By Mr. Sommerville:

Q. Now, let us take the ten leading price changes in your ten leading cut tobaccos?—A. Yes.

Q. Dominion?—A. That is a new brand, comparatively.

Q. A new brand in 1932 which sold at $1.40?—A. All Canadian tobacco.

Q. It is still $1.40?—A. Yes.

Q. Then Ogden's 12's were $1.80?—A. Yes.

Q. In June, 1931; that was changed to 16's at $1.60?—A. Yes.

Q. I think we should have the reporter copy this in the record.

Wills' Cigarette Tobacco	13s	1932	1·3260	1 47	1 95
" "	18s	Aug. 1933	1 3464	1 50	1 80

Then, 16's on April, 1932, were changed to $1.60?—A. The same price, but the sales tax changed there, sir.

Q. There is no change in Ogden's by reason of the excise tax change?—A. No, no excise tax change—

Q. On tobacco?—A. On tobaccos.

By Mr. Factor:

Q. What is the excise tax on tobacco?—A. Twenty cents a pound.

Q. On all brands?—A. Yes, all types.

By Mr. Senn:

Q. Cigarette, as well as pipe?—A. Yes.

The CHAIRMAN: That is, roll-your-own stuff?

The WITNESS: Yes.

By Mr. Sommerville:

Q. Then, Old Chum was reduced in April, 1932, or in April, 1932, it sold at $1.95 a pound and in July, 1933, it was reduced to $1.80 a pound?—A. Yes.

Q. Old Virginia, C.P., cut plug?—A. Yes.

Q. Was sold up to April, 1932, at $1.50?—A. Yes.

Q. In February, 1934, it was reduced to $1.40?—A. Yes.

Q. Picobac sold up to April, 1932, at $1.50, and in August, 1933, it was changed to $1.30?—A. Yes.

Mr. FACTOR: Per pound?

The WITNESS: Per pound to the consumer. That is an All-Canadian tobacco, too.

By Mr. Sommerville:

Q. That change was made by putting in three ounces more tobacco or some more tobacco?—A. No, putting in less tobacco in the individual unit, but selling it also at a lower price. It was ten to the pound at 15, and we sold it 15 to the pound at 10 cents, which makes the net price to the consumer $1.30 as against $1.50 previously.

Q. The Rex mixture was reduced. Up to January, 1934, it sold at $1.95? —A. Yes.

Q. It has been reduced to $1.60?—A. Yes.

Q. Rosebud Cut up to April, 1932— —A. No change in that.

Q. It sold at $1.20?—A. Yes.

Q. Sweet Caporal Fine cut up to September, 1932, sold at $2.40?—A. Wait a minute—

Q. For the previous two years?—A. Previously it had been $3.

Q. In January, 1932, it came down to $2.40?—A. And stayed at that until September, 1933.

Q. When it was reduced to $1.50?—A. Yes.

Q. Turret Fine Cut was $1.80 in 1929?—A. Yes.

Q. And was reduced to $1.60 in 1932?—A. Yes.

Q. In September, 1933, it was reduced to $1.50?—A. That is right.

Q. Wills' Cigarette tobacco up to August, 1933, sold at $1.95?—A. Yes.

Q. And it has been reduced to $1.80?—A. Yes.

Q. Are these the ten leading tobacco brands of the Imperial Tobacco Company?—A. Yes.

Q. Are these the ten leading cigarette brands?—A. Yes.

By Mr. Ilsley:

Q. So that a fair summarization of your cigarette reduction to the consumer, irrespective of the excise tax, would be 5 per cent between 1930 and 1933?—A. Are you figuring on the new price? You are referring to that 50 cents on $10.

Q. I am figuring on the percentage, 5 per cent?—A. Over and above the excise tax reduction?

Q. Yes?—A. Yes, I think so.

Q. The difference in the price you paid the consumer was between 31·9 cents in 1930 and 19·8 in 1933, which was a reduction of 40 per cent?—A. Well, I cannot think that that is hardly a fair comparison, I would say, Mr. Ilsley.

Q. Perhaps it is not?—A. You have the excise tax in the case of the consumer, and you have the profit to the trade.

Q. I have not got the excise tax in it. If there is anything unfair in that comparison, I want it pointed out. You got a larger reduction— —A. I mean, making a comparison of the reduction of 5 per cent in the price to the consumer —any reduction that was made in the price of the tobacco is a long way from a fair comparison, it seems to me.

Q. So far as cigarettes are concerned, it is a case of a 5 per cent reduction to the consumer, not taking into account the excise tax, and there was a reduction in that period—I am talking of 1930 and 1933, because that is a more favourable comparison to you than 1930 and 1932, because there was nearly a 50 per cent reduction in the price paid the consumer in 1930 and 1932, and I figure that is somewhere near 20 per cent?—A. In the first place, as you realize, there is a much larger percentage of imported tobacco used in cigarettes than there is in any other types of tobacco, and in addition to that,—I am not trying to be ridiculous—there may have been an increase in something that cost us, we will say, a cent a thousand, and there might have been a decrease of 50 per cent, which would have been half a cent a thousand in cigarettes. Do you see what I am getting at? I do not think it is any comparison, Mr. Ilsley, at least that is the way it appeals to me.

By Mr. Factor:

Q. The price you pay for imported tobacco was changed, too?—A. Probably, but you see the point I am trying to make. You are trying to pick out one unit that goes into the cost and figure up the percentage, and the change in the price of that, and then try to compare that with the change in price to the consumer. I do not think that is fair. I mean, one is very far removed from the other, as it appeals to me.

By Mr. Ilsley:

Q. You say the raw material is only a small part of the cost?—A. A comparatively small part.

Q. It looks to me like a big discrepancy. You reduced what you paid the producer in that period by 40 per cent, and the consumer only gets the benefit of a 5 per cent reduction in that same period?—A. We may have reduced the price, as the price of a lot of things have come down in the previous years.

By Mr. Sommerville:

Q. I have no doubt other elements that enter into the manufacturing end came down?—A. It only made a very small proportion of the whole cost of the consumer's dollar.

By Mr. Ilsley:

Q. You cannot tell us to-day how much your wages or your labour costs came down?—A. Very, very little, sir, per thousand cigarettes, if any, and only because of probably changes in machinery and efficiency production. There was no fundamental change in our labour at all, sir.

Q. The cost of your imported tobacco came down in the same proportion, I suppose, as the domestic, or perhaps more?—A. No. We were not taking advantage of it. I do not think so. Our average price was better, but there was no material reduction or no very big reduction in the imported tobaccos.

By Mr. Sommerville:

Q. There is a drop in the price of the imported tobacco?—A. It does not mean a drop in our price of imported at all.

Q. In 1929 the price of imported tobacco was 16·5?—A. We do not buy every year. As a matter of fact, we have been buying very little in the last year.

By Mr. Senn:

Q. You have a stationary figure per unit?—A. Naturally we buy other tobaccos, a lot of tobaccos at cheap prices, but we have not been in the American market in the last few years, because we have been trying to buy Canadian tobacco. We have had and used Canadian tobaccos. We have not bought any other to any extent, and the cost of imported tobaccos has changed very little.

By Mr. Ilsley:

Q. Is there any way you can give us your percentage? Is there any way you can give us a percentage figure covering cut tobaccos, comparable to the 5 per cent reduction in the price of cigarettes to the consumer?

Mr. Lane: A per pound basis instead of percentage because the selling price to the consumer is out of relation to the cost of leaf tobacco. The selling price to the consumer does not bear the same relation as the reduction in price of leaf tobacco to the producer, and again on to the consumer. There are fixed charges in the price to the consumer, such as duties, and all of our other expenses, and costs of operation, which do not fluctuate in the same ratio as the reduction in the price of leaf tobacco.

By Mr. Ilsley:

Q. You can arrive at a percentage?—A. Take the excise, $4 on cigarettes, and roughly 3 pounds to the thousand. That is $1.33 a pound. On tobacco the excise tax is 20 cents a pound, the excise tax on manufactured tobacco. You see what I mean.

Q. I do not. I can just follow one idea at a time. We have a figure now of 5 per cent reduction in the price of cigarettes to the consumer apart from the reduction he got due to the excise tax reduction. We have that?—A. Yes.

Q. Now, then, you sold cut tobacco which went to the consumer; and if I could get a figure comparable to that 5 per cent, I think it would be higher than that, from following the figures given by Mr. Sommerville. Instead of 5 per cent I fancy it would be more like 10 per cent or 15 per cent. Can you give us that to show how much benefit the consumer got, what percentage of benefit, not per pound, he got between 1930 and 1933 on his purchases of cut tobacco?—A. We tried to work that out. We have only got a figure on our own tobacco. You would have to take into account, as near as I can understand your question, you would have to take into account the sales of all brands of tobaccos, find out what the retail price was, and compute it for the whole country in each year and then work it down.

By Mr. Sommerville:

Q. No; we are only dealing with your company, the Imperial Tobacco company.—A. Yes.

By Mr. Young:

Q. Take the brands that you have mentioned, Dominion, Ogden's, Old Chum, Old Virginia, Picobac, Rex, and so on. Suppose on one pound of each, the reduction would be from $14 for ten to $12. That would be a reduction of 15 per cent?—A. Which brand?

Q. Dominion, Ogden's, Old Chum, Old Virginia, Picobac, Rex, and so on?—A. Take one?

Q. Suppose you took one pound of each and totalled up the price of a pound of each, both before and since the reduction. Now, the reduction would be, according to your figures, from $14 for ten, to $12 for ten, or approximately 15 per cent?—A. Don't you think you would have to take into account the quantity that was sold?

Q. Yes, you would.—A. Illustrated by Sweet Caporal?

Q. Assume you sold the same quantity of each?—A. We do not do that, of course. They are very very varying quantities from year to year, and month to month.

Q. Your biggest reduction was in Sweet Caporal, and that is a heavy seller?—A. It has now got to be a fairly heavy seller.

By Mr. Ilsley:

Q. What is your heaviest seller?—A. Turret fine cut.

Q. What is the percentage reduction in that?—A. From $1.80 to $1.50 that would be—

Q. $1.60 to $1.50?—A. What period?

Q. I took 1930 and 1933.—A. Ten cents.

Q. You did not make a large reduction there in your heavy seller?—A. Ten cents a pound is considerable. Take 10 cents a pound. It seems to me that is a pretty big reduction.

Q. As Mr. Young says, it is 7½ per cent on your cigarettes, and on your heavy selling cut tobacco you did not make much of a reduction to the consumer although you made a reduction to the producer of 40 per cent; that is the point I am getting at.—A. Do you not think that the statement on page 45 of our brief indicates the ratio in the price to the consumer? Take the tobacco prices for 1931. There was a reduction of $1.01 and 94 cents.

Mr. SOMMERVILLE: On what page?

The WITNESS: Pages 45 and 46.

By Mr. Ilsley:

Q. The only trouble about that statement, Mr. Miller, is that it does not give the price to the consumer; it gives the price you got, selling in many cases to your own subsidiaries?—A. Well, that is true, but it has a definite relation to the price to the consumer. So far as selling to our own distributors is concerned, the amount of business handled by our own distributors is so small I do not think it would affect the situation at all. I mean, to the jobbing outfits generally. They handle less than 4 per cent, or about 4 per cent of the whole business of the country and ourselves to our retailer outfits around 5 per cent.

By Mr. Factor:

Q. The fact remains that on a popular brand of cigarettes there was a reduction of 5 per cent, and on the best selling tobacco, Turret, there was a reduction of 7½?—A. I do not think that is a fair picture of the situation at all, Mr. Factor

Q. Why?—A. Because, as I have said, you are trying to pick out one factor, tobacco, and figure the percentage on that, and compare it with the percentage of reduction that is given to the consumer, but on an entirely different and higher scale. If you want to talk about the price per pound, or the price per thousand, the price per pound is the only way you can make a fair comparison.

Q. The price per pound was 10 cents?—A. On what?

Q. The best seller, Turrets,—from $1.60 to $1.50.—A. What was the reduction to the producer, 10 cents a pound?

Q. Yes.—A. Ten cents a pound; on your basis, that is passed on.

By Mr. Sommerville:

Q. The drop to the producer was from 31 cents to 16 cents in 1932, when you made your reduction?—A. In 1932 we made our reduction, didn't we? The price we paid for the 1933 crop was 20 cents, approximately; so that is a difference of 10 cents.

By Mr. Young:

Q. But, Mr. Miller, we had a witness here the other day who cut his price 33⅓ per cent on fine-cut tobacco?—A. I do not know what brand it was. Nobody could—

Q. "One half more tobacco for the same price" I think he said was the slogan?—A. I understand it right, he was not talking about some brand, if it was it was just about like if you would compare the sweet caporal cigarettes reduction, which was a very similar brand, at that time. There was no big reduction in any big brand, but if you take—you could just say in the same way, sweet caporals were reduced from 18 cents to 10 cents; you could figure an 80 per cent reduction on that basis. I do not like to criticize, but as I understand it—I would be glad to be corrected if I am wrong—I suppose I am at liberty to say, zig-zag cigarette tobacco, I do not think there was a big reduction in it—not in my recollection that is.

By Mr. Senn:

Q. Might it not be, Mr. Miller, that the price was fairly high at the beginning?—A. Yes, probably it was.

Q. And the reduction only brought it down to a parity with other prices?—A. As I remember it is something he bought cheap—tobacco—and he put out cheap tobacco. But I do not like to be discussing anybody else. That is the way I read it and understand it.

Mr. ILSLEY: He had so many things to talk about when he was giving his evidence.

The WITNESS: We will try to work out something, Mr. Ilsley. I do not know what Mr. Lane has been able to work out.

Mr. ILSLEY: I do not insist that it is altogether necessary for my purposes. Is there nothing in the evidence to show what are the factors entering into the cost of your product to the consumer; that is, how much is labour, how much is raw material, how much is overhead, how much is taxes, and so on—is that represented?

The WITNESS: As a total, yes, sir.

By Mr. Sommerville:

Q. Is it broken down?—A. In the statement that we have filed, Mr. Sommerville.

By Mr. Factor:

Q. Have you taken the price of cigarettes and broken it down into these different elements?—A. It is, on the total business, in the statement.

By Mr. Ilsley:

Q. There is abroad the feeling that when you reduce the price to the producer 40 per cent, the consumer ought to get a proportion of the benefit; have you anything to say about that, to indicate that he has?—A. We maintain he has, from these figures, Mr. Ilsley.

By Mr. Sommerville:

Q. Well, if you will just work that out if you can, on the percentage, and when we return after adjournment?—A. Might I have a few minutes? Would you bear with me for a few minutes?

Q. Yes, Mr. Miller, what is it?—A. I hate to mention personalities and get into personalities, but I feel that in order to clear some misunderstandings that Mr. Gregory has made, I would like to briefly say that Mr. Gregory was for a long time manager of this department up in Ontario, and irrespective of whether we didn't seem to have been able to convince you gentlemen, but Mr. Lea's coming had nothing to do with Mr. Gregory's going; it wasn't arranged for, or had anything to do with it. Mr. Lea, as I stated, came up with the idea of being assistant to Mr. Buell; and for a long time Mr. Gregory had been dealing in fertilizer, selling fertilizers to the farmers, and had farms—he had eight or ten farms, some such number—which was rather embarrassing; and we tried to get Mr. Gregory, to get over to him that he had to get out of either the Imperial Tobacco Company, or he had to get out of selling fertilizer to these same farmers that he was buying tobacco from, and selling the tobacco to us; an unfortunate situation, and we were not going to stand it. And we told Mr. Gregory that he had to do one or the other, and as he—we knew he was making money out of the fertilizer business. We offered Mr. Gregory a very substantial increase in salary to compensate him for giving up his fertilizer business, and he said he would not go into that any more, and he gave us his word that he would not do it. And as to the farms he would gradually get rid of the farms—we could not expect him to dump them on the market—next year we found out, and Mr. Gregory admitted, that he had not given up his fertilizer business, although he was taking an increased salary from us; and his resignation was asked for. I am sorry to deal with personalities. I was trying to keep out of that.

Q. He had been in the fertilizer business for twenty years, had he not?—A. Yes. And it was unfortunate—partly our fault, perhaps because we allowed him to make the mistake; but that was no reason why it should not be corrected.

Q. And he had been in the fertilizer business with your knowledge over 20 years?—A. Yes, absolutely and unfortunately.

Q. And he built up your business through the aid of the fertilizer business?—A. I did not tell you that, not at all.

Q. He did develop it with the farmers?—A. He seems to have taken full credit of developing it, and we were perfectly willing to give him his share of the credit; but we do not think that he had any right to the full credit.

Q. Well then, this system which had been in existence over 20 years with your knowledge, and the knowledge of your officials, apparently did not become objectionable until after the Lea business of 1931?—A. That is a misconstruction, sir. I do not think—you are jumping to a conclusion that is not fair.

Q. Mr. Miller, is this not a fact: that the first time any suggestion was made from the Imperial offices in Montreal that Mr. Gregory should not be

engaged in the fertilizer business; was not that made after Lea came into the campaign in 1931?—A. I could not answer that definitely, sir, as to when we had him up. It probably was some where around that time. I would not say; but as to its having anything to do with Lea's going up there, it had nothing to do with that, sir—nothing to do with it.

Q. I quite believe you?—A. All right, sir, thank you.

Q. But you had no idea of Mr. Gregory giving up the fertilizer business?—A. Had no idea—he gave his word he would.

Q. Wait a minute now. With Lea coming to Canada, it was after the disastrous buying campaign of 1931, I suggest to you, that was the first time that it was ever suggested to Mr. Gregory that he give up the fertilizer business?—A. I do not think—

Q. Ask Mr. Buell, he is the man that suggested it? Now, was not that the fact, that there never was a complaint of any kind from the Imperial to Mr. Gregory about his connection with the fertilizer business until—?—A. There were complaints from outside about it.

Q. But, was there any complaint from the Imperial headquarters at Montreal; was he ever asked to give up the fertilizer business until after Mr. Lea's entry?—A. As to when he was asked to definitely give it up, it probably was; but it had no bearing on the other situation.

Q. You agree then that it was after Lea's arrival in Canada, and after the buying campaign of 1931?—A I cannot recall the date, sir.

Q. Mr. Lea came in 1931?—A. The point I am making is that it had nothing—Mr. Lea's coming up here had nothing to do with the whole thing; and as I have said to Mr. Gregory myself, if he didn't—if he got out of that fertilizer business he would have been with us to-day, so far as I know or believe.

By Mr. Senn:

Q. Just one question: Do you think that your relations between your buyers and the growers are as good, and in as good a condition to-day, as they were when Mr. Gregory was there?—A. That may be worthy of investigation. We certainly thought so until all that has been stirred up. We certainly had believed it was better.

Q. I am afraid—?—A. Perhaps not, sir.

By the Acting Chairman:

Q. There is just one matter before we adjourn: referring to your immediate past evidence, about the position that Mr. Gregory occupies; to sum it all up, your contention is that you came to the conclusion—whether rightly or wrongly—that his dual capacity as a seller of fertilizer and as a buyer of tobacco—?—A. Quite, sir.

Q. Were inconsistent; that was your view?—A. Yes, sir.

Q. And to put it into a phrase, you came to the conclusion that he could not serve both God and Mammon?—A. Exactly. And raising tobacco on his eight farms.

By Mr. Sommerville:

Q. But he had done that for twenty years with the knowledge and approval of your company?—A. We did discuss it with Mr. Gregory, about discontinuing the fertilizer, before Mr. Lea came up here.

Q. You will present yourself at 3.30 again?—A. Yes, sir.

The Committee adjourned at on o'clock to meet again this day at 3.30 o'clock p.m.

AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

Examination of Mr. Gray Miller continues.

The CHAIRMAN: Order, gentlemen.

By Mr. Sommerville:

Q. At adjournment, Mr. Miller, we were dealing with the question of Mr. Gregory's business in selling fertilizer as well as his buying tobacco?—A. Yes.

Q. Just a few questions relating to that. I think it has been established that he has been in business from 20 to 25 years?—A. Some years, yes.

Q. And is it not a fact that in the year 1931 it was arranged that he would turn over the fertilizer business to a company to be known as the Gregory Fertilizer Company?—A. Never to my knowledge—no name mentioned—he was to turn it over to an incorporated company, over to his brother.

Q. That is, his brother is the President of that Company?—A. And to divest himself of any financial interest in it, or operation of it.

Q. Let us get first: perhaps you had better consult with Mr. Buell and probably you can find out from him some of the details—first, it was to be turned over to a company to be known as the Gregory Fertilizer Company; that is my understanding?—A. All right. I don't remember the names there, but a company.

Q. Secondly, his brother was to be made President of that company?—A. I do not think there were any particular details as to how he was to do it. He was to divest himself of financial interest.

Q. Were there not details? I am informed that there were details, and these were the details: that it was to be done in this form of a company, known as the Gregory Fertilizer Company; this brother was to be president of it; and that was to be submitted to New York, and met with the approval of New York before it was finally done; is not that true?—A. He was to divest himself of the fertilizer business in such a way that he would have no further financial interest in it, or have no active interest in it.

Q. Yes?—A. And he was to get, if he did that, he was to get a salary of $20,000 a year instead of the $9,000 a year that he had been drawing before.

Q. Yes?—A. And he was gradually to divest himself of his interests in the farms; but we did not expect him to try to make a forced sale of it, and take a heavy loss out of it. Either that, or he was to retire from the Company in any active way; carry on with his fertilizer business and his farming business, and we would continue to give him a salary of $9,000 a year in an advisory capacity. These were the two propositions that we put to him, and he accepted the first.

Q. Yes. Now then, perhaps you will come back to the question: Was it not submitted to New York for their approval that the business he turned over to a company of this particular name, with his brother as president. Was that not submitted?—A. That particular phase of it—I don't know, sir.

Q. Well, we will enquire from Mr. Buell, because I understand that that was actually the case.

Now, Mr. Lane, you do not need to prompt the witness at all, because Mr. Buell is the man that did the business; and this witness, if he wants the information, can get it from the source from which that information is available.

Was it not a fact that Mr. Buell submitted this arrangement to New York for their approval, and they approved of it?—A. I do not recall anything at all about the question of what was to be the name of the company, or who was

to head it, or what not. As to his brother's being interested in it, yes; we understood that, but he was to divest himself of any financial and personal interest in the management of that business.

Mr. KENNEDY (*Peace River*): This New York, how does that come into it.

By Mr. Sommerville:

Q. I want you to ask Mr. Buell.—A. I will tell you, I do not know why he called it New York. The British American Tobacco Company has Sir Hugo Cunliffe-Owen, and Mr. Cooper, who are two directors; and our Mr. Harrison, whom someone talked about before. They realized this situation as well as we did, about Gregory being in the fertilizer business, and they did not think it was right, and we did not, either. We thought it should be corrected and naturally we conferred with them along those lines, just the same as we would on any proposition. They were directors of the company. But as to saying about New York—they might have been in New York, or they might have been in Louisville, or Richmond—I do not know where they were.

At the request of the Chairman, Mr. Kennedy (Winnipeg) took the chair.

By Mr. Sommerville:

Q. Was it not a fact that you sent this whole proposition down from Montreal to the British American in New York to ascertain whether they would approve of this arrangement? -A. I do not think it was just that way at all, Mr. Sommerville. It was, as I have said, that they had objected to it as well as we had, and we had agreed as to the best way out of it, and as to whether they thought—and we both agreed on this. Yes, they knew what the arrangement was going to be; but to say it was to be called the Gregory Fertilizer business, and that the brother was to be president; I do not think all these details were dealt with.

Q. Perhaps you will recall, Mr. Buell, because I am instructed that that was so.—A. The principal points that you want to know: you want me to inquire now as to what are the principal points, whether it was to be called the Gregory Fertilizer Company.

Q. Whether his brother was to be put in as president?—A. Yes.

Q. And a separate manager was to be obtained for the business, but there was no suggestion, or no question of his parting with any financial interest he had in the business; it was a separation in name?—A. That was not understood at all.

Q. Well then, find out for me how far it was understood, was it to be the Gregory Fertilizer Company, and was the brother to be put in as President?—A. All right, sir, excuse me.

Mr. KENNEDY (*Peace River*): Why does this thing have to be referred to New York?

Mr. SOMMERVILLE: It just indicates where the control is.

The WITNESS: Mr. Buell confirms what I state, that so far as the name of the company was concerned, that we had no interest or particular knowledge of what it was to be called. As to his brother, it was understood that his brother, it was understood that his brother, he was going—I do not know he was going to work it, sell it or give it to him—but as to whether his brother was to be President of it, Mr. Buell has no knowledge of it as to whether it was or not.

By Mr. Sommerville:

Q. Mr. Buell knew, and you knew, that the brother had for years been an invalid and could not manage any business?—A. That is very true, but he was named manager of it.

Q. And a manager was obtained for it?—A. All right.

Q. An independent manager?—A. Perhaps.

Q. Was not that a fact?—A. I do not know, sir. I do not sir, truthfully. May I ask Mr. Buell? Was there a manager obtained, Mr. Buell? Yes.

Q. And then, subsequently, Mr. Gregory was asked to resign—the next year? —A. Yes, because he had not lived up to his arrangement and he admitted it.

Q. He had not parted with his shares in that company, I presume?—A. And he was soliciting business for the Fertilizer Company, and doing various things—being active in the fertilizer business.

Q. Is it not a fact that you encouraged him in the Fertilizer business, and that Mr. Buell had declared that for every 5 cents he made in the fertilizer business, the Imperial Tobacco Company made a dollar?—A. Well, I don't know. Certainly the development of the fertilizer business undoubtedly helped develop the tobacco business, there is no question about that.

Q. And until 1930 or 1931 the fertilizer that was used came from the United States, was a kind that the Imperial Tobacco Company recommended?—A. Yes, we thought it was good fertilizer.

Q. And it was handled through your—?—A. Yes.

Q. And it was to the advantage of the Imperial Tobacco Company?—A. Well, only indirectly in that it raised the quality of the tobacco we believe; that was the only interest we had in it.

Q. Now, Mr. Miller, just departing from this phase of the situation—I do not know whether you want to pursue your enquiry, Mr. Kennedy.

By Mr. Kennedy (Peace River):

Q. My point is: these matters refer to New York; now, Mr. Miller has made the point that they are referred to New York because there are two directors of the British American Tobacco Company associated with your company?—A. That is right, sir.

Q. Why do you have to refer this matter to New York to the British American at all?—A. We did not have to refer it, Mr. Kennedy.

Q. Why did you not deal with it in Montreal?—A. Well, we did. I have tried to point out that the British American Tobacco Company have a big interest in this company. 84 per cent of our stock is held in Great Britain, and here are two directors who are directors of this company. They have had a lot of experience in the tobacco business, and they are interested in the welfare of this company as well as of a lot of other companies that they are interested in; and they consult with us from time to time about it. But as to any dictation I mean very certainly that is not from New York in particular. I mean, the inference of being from New York, as if it were an American—I take it that is the point?

Q. As if you were subsidiary almost?—A. That is your point, being from New York—by the authority of an American company, or an American influence.

By Mr. Sommerville:

Q. Controlled from New York?—A. But, it is not. In the first place, I do not think the British American Tobacco Company have any office in New York at the present time, and have not had for some years. They have offices in Louisville, and this is the British American Tobacco Company that we are dealing with. It so happens that they sometimes come over to New York, just as they will come over to Canada. But I mean it is unfair, I think to make the suggestion that it is just New York, as it just happens to be that they come over. It is English, if you want to know, the influence is British; it is not an American influence, which is the inference drawn from that. Our stock certificates are in pounds sterling, originally issued on the English market, and they have been traded in on the English market for years.

By Mr. Kennedy (Peace River):

Q. When this matter was referred to New York, was it referred to these two directors, or to the British American Tobacco Company?—A. It would be to the individual director probably, not the British American Tobacco Company. It was to Mr. Cooper, as a matter of fact, so far as I know, who is also one of the directors of our company.

By Mr. Ilsley:

Q. Mr. Gregory said in his evidence that at the end of the first day of buying in 1931, Mr. Buell telephoned him that New York thought they were buying too fast in Ontario; rather conveying the impression to the committee that New York was dictating the rate of buying and the price to be paid, and keeping in very close touch with it?—A. That is wrong. I think Mr. Gregory has gotten a wrong inference from any conversation that might have referred to anything in the way of Mr. Harrison, or anything of that sort. There is no domination by New York with respect to any matters of that sort, and certainly I know nothing you can say is American domination.

By Mr. Sommerville:

Q. Mr. Miller, I suggest to you that you have been endeavouring to give to this committee the impression that the Imperial Tobacco Company is controlled absolutely within Canada, and is not controlled in its policy or in its practice from the United States?—A. Yes.

Q. I suggest to you, that not only is its policy controlled, but the appointment of its officers comes by way of suggestion from the United States?—A. What do you call United States? What is your inference? There are American stockholders. Who appoints the directors of the company? The directors, don't they? Who appoints the officers; the directors, don't they?

Q. You know exactly what I mean, Mr. Miller?—A. I do not know what you mean, sir. I do not know what you mean in the inference that this company is American controlled. 84 per cent of the stock of this company is owned in Great Britain.

The Hon. H. H. Stevens resumed the Chair.

By Mr. Factor:

Q. I was under the impression that the British American Tobacco Company owned over four million shares?—A. That is part of the British American Tobacco Company that is in England. It is an English company. It is not an American company. Their head office is in London. I do not know if they have an office in New York at all.

By Mr. Sommerville:

Q. But for certain reasons, incorporated in London?—A. You mean to say that you think that this company is controlled by American interests, Mr. Sommerville?

Q. Largely, Mr. Miller.—A. Of course, we cannot analyse what the stockholding is of the British American Tobacco Company.

Q. I do not care anything about an analysis of the stock-holdings. I am suggesting to you that the British personnel is from the United States; its policy is dictated by certain people in the United States?—A. I think you are wrong, sir; I do not know just on what you are basing your idea, or your inference.

Q. I am giving you an opportunity to be as frank as you like?—A. I am being frank.

Q. But my information, I may tell you, comes from very very direct sources; and I am really surprised at the answers you have made as to the position that the British American has taken with respect to your company;

or, rather, the impression that you have given to this committee in your evidence?—A. In what particular regard.

Q. As to the influence and control of this company by the British American. —A. You mean you do not think it is controlled by the British American?

Q. I think it is.—A. Don't you think the British American is an English Company?

Q. In name, yes.—A. Only in name.

Q. Yes.—A. Why do you question that it is in fact?

Q. I am leaving that to you now.—A. I do not know how—if you want to draw an inference of that sort, Mr. Sommerville—I do not know how I can disabuse you.

Q. By the way, you gave us a statement the other day as to the moneys that were paid out by your company by way of dividends?—A. A statement—what do you mean, our answer to a letter of yours that about 7 per cent was paid?

Q. You gave a list of the shareholders and I think you stated the proportion of the money that went to various countries. Is it not a fact that the dividends declared by you to the British American have been deposited in the United States?—A. Well, not recently, they have not. I believe that perhaps in years gone by they probably have been deposited. I understand that they have, by the Leaf Tobacco Company or some other financial arrangements of their own. But since the drop in sterling I understand they have, so far as I know, been taking their money in sterling, taking it to England. That has no bearing on it.

Mr. Factor: I don't see any particular object in pursuing this line of investigation. As far as I am personally concerned, I am interested in the methods adopted in the purchase of tobacco, and the methods adopted in the retailing or selling of tobbaco.

Mr. Sommerville: We will deal with that in a moment, Mr. Factor.

By Mr. Sommerville:

With reference to the statement you presented to the committee this morning, of the reductions in price to the consumer, that statement which is submitted shows the net selling price by you to the jobber, the net selling price by the jobber to the retailer, and the net selling price by the retailer to the consumer?—A. Yes.

Q. That is correct, is it not?—A. Yes.

Q. May I ask this, looking at that statement, Mr. Miller, did the Imperial Tobacco Company take the full $2.50 reduction in the price to the consumer, or did they require the jobbers and retailers to take a substantial portion of that?—A. No, the $2—it is shown here. We reduced our price. Take Turret, we reduced our price $2.13.

Q. Yes, you reduced your price?—A. And the reduction we got in tax was $2.

Q. The reduction in the tax was $2?—A. Yes.

Q. The Imperial Tobacco Company contributed 13 cents towards a further reduction to the consumer?—A. Yes—well, let us see. Was it 13? Well, about that, yes.

Q. Then the jobber reduced the price by what amount?—A. Well, whatever the figures are.

Q. $2.38.

Mr. Lane: $2.28.

The Witness: $2.28. They all work on a percentage basis.

By Mr. Sommerville:

Q. So that you contributed 13 cents of the additional 50 cent reduction over and above the excise; the jobber and the retailer contributed 37 cents?—A. 37 cents?

Mr. FACTOR: Making it half a dollar.

Mr. SOMMERVILLE: Yes, making it half a dollar.

The WITNESS: Yes. It is on a percentage basis. Presumably with the lower price, the more goods sold and the greater turnover.

By Mr. Sommerville:

Q. I am just getting at what the facts are?—A. Yes.

Q. That is the fair way of putting it?—A. Well, I don't know. It is your way of putting it.

Q. Well, is it not the fair way of putting it?—A. Well, we made a fair reduction. We got a $2 reduction in excise tax, and we reduced our cigarettes by more than $2 to the trade.

Q. Yes, in Winchesters, you reduced them to the trade $2.13?—A. Yes.

Q. In Viceroys, $2.15?—A. That is right.

Q. In Turrets, $2.13?—A. Yes.

Q. A similar scale in Guinea Golds, $2.13?—A. Sweet Caporal.

Q. Sweet Caporal. I am trying to get these all together, all of one type. Dixies, $2.13. Gold Flakes, you reduced the price 44 cents—was it $9.94? What do you say Gold Flakes were, 44 cents?—A. There had been a previous reduction.

Q. There had been a previous reduction?—A. Yes. from $13.70.

Q. That was six months before the tax came off; but at the time when the tax came off you reduced it 44 cents?—A. Yes.

Q. With reference to Millbanks, at the time the tax came off you reduced them?—A. $2.47—no, $1.47.

Q. You reduced them $1.47?

Mr. FACTOR: Is that excluding excise tax?

Mr. SOMMERVILLE: No.

Mr. FACTOR: It is including excise tax?

Mr. SOMMERVILLE: Yes.

The WITNESS: Then we reduced it $1.69, so that there is a total reduction of $3.16.

By Mr. Sommerville:

Q. At the time the tax came off I am talking about?—A. Yes.

Q. That was in November, 1932?—A. Yes.

Q. Up to that time they had been selling for $10.97?—A. Yes.

Q. Then you reduced it to $9.50?—A. Yes.

Q. That was a reduction of $1.47?—A. Yes. Then we reduced it to $7.81 in June, 1933, last year.

Q. In June, 1933?—A. Yes.

Mr. FACTOR: Between those two periods the reduction was less than the excise tax.

The WITNESS: That particular brand. But you will find some other brands.

Mr. FACTOR: Yes, but I am talking about that brand.

By Mr. Sommerville:

Q. What other factors entered into the reduction of price in your cut tobacco, when you reduced the price; for instance, did you take cigarette papers out of the packages?—A. Not altogether, not on all of them by any means.

Q. Was that done in the majority of cases?—A. No, some of them.

Q. The bulk of them?—A. No, I would not say that. You take Turret fine cut, the reduction from \$1.80 to \$1.60 had nothing to do with the cigarette papers.

Q. That was in 1929?—A. 1930.

Q. Between 1929 and 1930?

Mr. FACTOR: A reduction was made from \$1.60 to \$1.50.

By Mr. Sommerville:

Q. What about when it was reduced from \$1.60 to \$1.50?—A. The cigarette papers had come out, but the papers were a comparatively small part of the cost, very small.

Q. What other brands did you take the papers out of?—A. We took the papers out of all except Wills' cigarette tobacco.

Q. All except Wills' cigarette?—A. The papers are still in Wills' cigarette tobacco. We reduced that also 15 cents a pound, besides.

Q. Now, will you explain to the committee, Mr. Miller, what the merchandising policy is?—A. Well, we have got some statement here—I don't know whether it is what Mr. Ilsley wanted. We tried to clear up that point that Mr. Ilsley was talking about. I don't know whether you want to go into that.

Q. Yes, go ahead?—A. I will try to explain that as near as we can, Mr. Ilsley.

By Mr. Ilsley:

Q. I wish you would?—A. Take a brand of fine cut tobacco, Old Chum for example—or rather, Ogden's fine cut. The previous price was \$1.80 a pound. It was reduced to \$1.60 a pound; that is 20 cents a pound reduction.

By Mr. Sommerville:

Q. In June, 1931?—A. Well, I don't remember the exact date, but according to the statement—that is good enough, yes.

Mr. FACTOR: When was it \$1.80, 1931?

Mr. ILSLEY: Prior to June, 1931.

The WITNESS: Up to June, 1931. It was reduced to \$1.60, that is a difference of 20 cents. That is equal to $11\frac{1}{10}$ per cent of \$1.80. You have got to come to some common denominator, I suppose you would say, or one figure, to figure your percentage on. I just took that resale price of \$1.80. That would be $11\frac{1}{10}$ per cent. In 1930, we bought leaf for around 31·9, and in 1933 it was 19·8, which is $12\frac{1}{10}$ cents lower. That is $12\frac{1}{10}$ cents against 20 cents reduction to the trade; and on a percentage, it is $6\frac{7}{10}$ per cent, which was the reduction.

By Mr. Sommerville:

Q. On what?—A. Figured on the same \$1.80.

Q. That is 60 per cent?—A. No. The only way to figure is on a common denominator. You cannot compare percentages if you are not going to work with a common denominator.

By Mr. Ilsley:

Q. Just go over that again. I got you up to the point of the $6\frac{7}{10}$ per cent. You have $12\frac{1}{10}$ cents reduction a pound?—A. Yes.

Q. What is that?—A. That is figured on the same common denominator of \$1.80 a pound to the consumer.

Mr. FACTOR: No, you have got to figure that $12\frac{1}{2}$ cents percentage to arrive at an accurate percentage; figure it on 31·9.

The WITNESS: Oh no, that is not fair.

Mr. LANE: All right, Mr. Miller, let him go ahead and then compute your 20 cents reduction to the consumer on the same 31·9, and you will find your reduction to the consumer is about 50 per cent more than the reduction to the producer.

Mr. FACTOR: Oh, no.

By Mr. Sommerville:

Q. Don't let us get off on this. The fact of the matter is it was you that bought tobacco in 1930 and 1931?—A. What do you mean, the Imperial Tobacco Company?

Q. Yes?—A. We bought some.

Q. When you sold it, you didn't sell it at 20 cents a pound less. You sold it at ·06 cents a pound less. Look at your sheet?—A. Well, if you are going to—

Mr. FACTOR: The rest was absorbed by the jobber.

Mr. SOMMERVILLE: The jobber and retailer had to take less profits.

The WITNESS: Mr. Ilsley's point was the consumer, I understand.

Mr. ILSLEY: Yes. It is hardly fair to do that. He is flooring me now; and to switch him off before he does is hardly fair.

Mr. SOMMERVILLE: All right.

The WITNESS: We tried to get your point, Mr. Ilsley. If you are going take your percentage, for comparison, you have got to work it to a common denominator, take a common denominator. When you want to make a comparison, it has got to be divisible by the same thing or worked on the same thing. You can't compare two entirely different lines of items.

By Mr. Factor:

Q. Let me interrupt you; is it not a fact when you want to arrive at a percentage, to say that 20 cents reduction on $1.80 is $11\frac{1}{10}$ per cent?—A. Yes.

Q. That is the reduction to the consumer?—A. Yes.

Q. And when it comes to taking the other phase of the thing, the reduction on your tobacco, you say it is a reduction of $12\frac{1}{10}$ cents from 31·9?—A. Yes.

Mr. ILSLEY: Which was 40 per cent.

The WITNESS: I don't dispute that $12\frac{1}{10}$ cents is 40 per cent of 31·9; but I say it has no relation to the price, to the percentage of reduction of the price to the consumer.

Mr. ILSLEY: I think there is a lot in what you say, in view of the fact that a large number of other factors enter into it.

The WITNESS: Yes, all sorts of things.

Mr. LANE: 6 per cent is not comparable with the 11 per cent.

Mr. ILSLEY: There are so many other factors enter into it.

The WITNESS: Quite.

Mr. FACTOR: Provided there are no reductions in the cost of production in the other factors.

Mr. SOMMERVILLE: Labour and everything coming down, it would be less.

Mr. ILSLEY: That is different. I am not satisfied at all that you pass it on, but I think as you say, just giving those two figures does not prove that you have.

The WITNESS: I might point this out: it is not, in our own opinion, always good business, to take every brand every year, because there is a change in the price of tobacco, and reduce the price of all those brands; and the next year because the price of tobacco goes up, increase the price of those brands, or change them around continually. I mean, it is not practical business, in our opinion, to do that. You have got units of different sized packages of tobacco. You must generally sell in even nickels, 5, 10, 15, 20 or 25 cents packages. The public don't like 9 cents, 8 cents and 11 cents, odd cents. They don't like that.

By Mr. Sommerville:

Q. Is it fair to infer that the reduction in price of your finished article was 20 cents a pound?—A. To the consumer.

Q. Was that attributable to the reduced price at which you bought?—A. Yes, that is fair; on the whole; the reduced cost all the way through, including the reduced price of tobacco.

Q. You didn't reduce the price to the consumer because you bought the tobacco cheaper?—A. Well, that was a factor, the price of tobacco; and as I say, being able to use more Canadian tobacco. We have had to try to use Canadian tobacco, increase the amount of Canadian tobacco gradually and we have had to try to bring these prices down gradually.

Q. As a matter of fact, does the price you pay for the raw tobacco have much relation to the price you charge for the finished article?—A. Oh yes, it is bound to.

Q. To what extent?—A. Well, it is an important factor, an important part of the cost of making the article; one of the most important parts, after you take off excise tax paid to the government.

Q. May I put it another way: If you had paid the same price for that tobacco that you had paid in previous years, when it was say 12 or 14 cents higher, would you not still have quite a reasonable profit on the finished article? —A. There is always a question of what is a reasonable profit. I mean, it is a very big subject.

The CHAIRMAN: There would not be much trouble in discerning it.

The WITNESS: We would not have reduced prices probably—we would not have been in a position to—unless other materials had come down to offset it.

By Mr. Sommerville:

Q. I am trying to get your opinion as to whether the cost of tobacco, the raw material itself, is one of the prime factors, one of the greatest factors in the sales?—A. It is, in the cost, in the selling price of our goods. It is, yes. It is bound to be.

By Mr. Ilsley:

Q. You say that has some influence on the price you charge the consumer? —A. Bound to. Yes, it does.

Q. That is not what I would think would be the case. I would think you would charge the consumer what you could get, and pay the producer what you can get the tobacco for. I think that is what you do?—A. I am sorry you feel that way about it, sir. We tried to do all we could to assure you it is not so.

Q. Nearly everybody does it?—A. Well, in the first place, competition does make some difference, one way and another, on the price that we sell for. Certainly I think it has something to do with it.

Mr. FACTOR: 70 per cent profit.

The WITNESS: Well there is still 30, anyhow.

By Mr. Sommerville:

Q. Let us get at exactly what the reduction is that you make, the Imperial Tobacco Company; the reduction of the jobber in his lessened profit, and the retailer in his lessened profit. Take your list there, Dominion C.C.—what is that?—A. Coarse cut and fine cut.

Q. Coarse and fine cut?—A. That is a new brand. There is just an illustration. That is a new brand in a lower priced category than the others. It is at a lower price, which is in line with what we will do, gradually giving the consumer an opportunity to buy at a lower price; and all that affects the average price that we got for the goods.

Q. That was 97 cents a pound you sold for to the jobber?—A. Yes.

Q. Then in July, 1933, you increased that to $1.03 a pound to the jobber?—A. Yes, that is right.

Q. Then Ogden's fine cut and C.P.—what is that?—A. Cut plug; fine cut and cut plug.

Q. In 1929 you sold that at $1.23 a pound?—A. Yes.

Q. Then in June, 1931, you sold that to the jobber at $1.17 a pound?—A. Yes.

Q. Then in April 1932, you increased it to $1.19 a pound?—A. Yes.

Q. So that in April, 1932, you were selling it at 4 cents a pound less than in 1929?—A. 4 cents less than in 1929, yes.

Q. And 2 cents more than in June, 1931?—A. Yes.

Q. I think you paid about 40 cents for your 1929 tobacco, didn't you?—A. I don't remember the price now.

Q. Well, we won't stop for that just now.—A. I thought it was less than that.

Q. The next figure here is for Old Chum. You sold it in 1929 at $1.47 a pound?—A. Yes.

Q. Then in April, 1932, you increased it to $1.49 a pound?—A. Yes.

Q. Then in July of 1933 you reduced it to $1.39 a pound?—A. Yes.

Q. The next is Old Virginia; you sold it in 1929 at $1.13 a pound?—A. Yes

Q. In April, 1932, you increased it to $1.15 a pound?—A. Yes.

Q. And in February, 1934, you reduced it to $1.05 a pound?—A. Yes. All these changes in April, 1932, were due to an increase in sales tax, an upward increase in sales tax.

Q. An upward increase in sales tax?—A. Yes.

Q. A 2 per cent increase?—A. A 2 per cent increase.

Q. Then Picobac you sold at $1.13 in 1929?—A. Yes.

Q. And in April, 1932, you sold it at $1.15?—A. Yes.

Q. And in August, 1933 you sold it at 98 cents?—A. 99 cents practically.

Q. Then Rex Mixture, in 1929 you sold it at $1.47?—A. Yes.

Q. And in April, 1932, you sold it at $1.49?—A. Yes.

Q. And in January, 1934, you sold it at $1.19?—A. Yes.

Q. Sweet Caporal, in 1929 was $2.28?—A. Yes.

Q. And in January, 1932 it was $1.82?—A. Yes.

Q. And in April, 1932 it was $1.85?—A. Yes.

Q. And in September, 1933 it was $1.12?—A. Yes.

Q. And Turret, in 1929, it was $1.23?—A. Yes.

Q. And in 1930 it was $1.17?—A. Yes.

Q. And in April, 1932 it was $1.19?—A. Yes.

Q. And in September, 1933 it was $1.12?—A. Yes.

Q. And Wills Cigarette Tobacco, in 1932 was $1.32?—A. Yes.

Q. And in August, 1933 it was $1.34?—A. Yes.

Q. Now, that actually indicates the amount of the allowance that you, as a manufacturer, have made in the price of these various tobaccos?—A. The changes in them, yes.

Q. Then in addition to that he got less profit?—A. The same percentage of profit.

Q. How could he if you got a reduction all through? The retailer made his contribution, and the jobber made his contribution towards a reduced price to the consumer?—A. Well, it is directly the same percentage of profit. If the price goes up he gets the same percentage; he gets a bigger profit.

By Mr. Young:

Q. Are all those brands made of Canadian tobacco?—A. No, sir.

Q. A percentage of imported is included in these brands?—A. Varying percentages.

The CHAIRMAN: I do not think the witness should be asked to disclose those percentages.

By Mr. Young:

Q. In order to know whether you pass the reduction on we should know how much Canadian tobacco you use?—A. Dominion Fine Cut has got 100 per cent; Rose Bud has got 100 per cent, and Picobac has got 100 per cent. We have spent, I think, $400,000 on Picobac trying to develop it as a particular Canadian product.

By Mr. Factor:

Q. What about the price paid for American tobacco in the years 1931 and 32?—A. We bought very little American tobacco in recent years because of the increasing usings of Canadian tobacco, and a good big stock of imported tobacco brought about by reduced using and reduced business. The whole volume of business in Canada has been less.

Q. Then in 1931 it was 8·5, and in 1932, 11·3?—A. Those are not our prices. That has no bearing on our prices at all. I have not really tried to look into what it was, but we have purchased very little imported tobaccos in the last few years.

By Mr. Senn:

Q. Mr. Miller, apropos of the question I was asking a little while ago, I can readily understand that the price paid for Canadian tobacco may have a bearing on the retail price of the fancy article, but does it have the same bearing with respect to cigarettes?—A. Yes, sir. Well, of course, cigarettes are not as easily adjusted.

Q. I think you made the statement a few days ago that it was impossible to pass the lowered cost of the raw product on to the consumer?—A. The small difference, Mr. Senn.

Q. Well then, in fact I suppose one may infer that the cost of the raw material has very little effect upon the price of cigarettes to the consumer; is not that a fair assumption?—A. Well, you see it has relatively lesser effect because you have got a very heavy excise tax on cigarettes.

Q. But leaving aside the excise tax altogether?—A. It is bound to be taken into consideration in arriving at the price you sell to the consumer.

Q. You said you could not reflect it in the price because there was only a cent or a cent and a half in a package of 20 cigarettes?—A. That is not right; I do not think that can be right.

By Mr. Sommerville:

Q. Professor Leitch said he would be glad to get $1\frac{3}{4}$ cents for the amount of cigarette tobacco in a package of Turrets—20 cigarettes?—A. We are used to figuring in thousands rather than a unit package.

By Mr. Senn:

Q. As a matter of fact, you say it is difficult to reflect it in the price to the consumer?—A. It is very difficult to reflect the small difference in the price of tobacco in the price of a package of cigarettes. They are generally sold in packages of five, ten, fifteen and twenty, and sold at prices of five, ten, fifteen and twenty-five cents. Well, it is very difficult to make any small change, that is, in the cost of the raw material.

By Mr. Senn:

Q. Well then, I would like to ask a further question. A difference of 10 cents a pound in the raw material entering into cigarette manufacture would make very little difference to your profits in cigarettes?—A. Profits in cigarettes?

Q. Yes?—A. 30 cents a pound to the farmer?

Q. 10 cents, a difference of 10 cents?—A. 10 cents a pound to the farmer, you must remember is probably equal to—there is a 10 per cent shrinkage, and handling and rehandling charges; it would probably make a difference of 13 or 14 cents a pound to us before we could get the tobacco in hand. Say that it is 3 pounds to the thousand, that is 39 cents or 40 cents a thousand cigarettes. Well, that is a big profit. You take 40 cents per thousand cigarettes on a production of four billion per year that figures at $1,600,000, so at 10 cents a pound it does make a big difference.

Q. Even if that were reduced from your actual profits, do you not think you would have a reasonable profit left?—A. Of course, that is another question.

By Mr. Sommerville:

Q. Did you have another statement for me, Mr. Miller?—A. Yes, sir, a statement showing quantities and grades of Canadian grown leaf used during the twelve months ended 31st March, Canadian Virginia, and also a statement showing quantities and grades of Canadian Burley used during the twelve months ended 31st March. And I believe some mention was made of that being done by crop years. It was also said that if we did not have it then not to bother with it. Well, we did not have it, and it was a very laborious job to get it, but I hope that will answer your purpose.

Q. Then this represents?—A. The usings each year of all the years' crops that happened to have been used.

By the Chairman:

Q. Take what you use in a given year, some of it may be the previous year's crop, some of it may be two years and some three years?—A. Some of it.

By Mr. Sommerville:

Q. In other words your total usings for 1934 amounted to 8,158,449 pounds?—A. Yes.

Q. Is that correct, of Canadian flue-cured tobacco?—A. Yes.

Q. And your total usings of Burley for 1934 was 6,243,386 pounds?—A. Yes, sir.

The CHAIRMAN: That is for the year ended what date?

Mr. SOMMERVILLE: That is the year ended 31st March, 1934.

By Mr. Young:

Q. Can you give us the imported tobacco you used in the same period?—A. We will make a note of it and se if we can get that for you.

Q. The total is all I want?—A. A. We will be glad to give it to you sir.

By Mr. Sommerville:

Q. In other words you used last year 14,391,000 pounds odd of flue-cured tobacco?—A. The two together, yes. Answering your question, Mr. Young, we used roughly about 7,000,000 pounds.

By Mr. Young:

Q. That would mean then about 40 to 50 per cent of the tobacco you put out is imported?—A. The flue-cured.

Q. And the balance is Canadian leaf?—A. Roughly that. Does that answer your question.

Mr. YOUNG: Yes, thank you very much.

By Mr. Sommerville:

Q. And does this include the use by your subsidiary companies, Mr. Miller?—A. Yes it does, Mr. Sommerville.

Q. For both these kinds of leaf?—A. Yes.

The CHAIRMAN: Those statements will go in the evidence.

The WITNESS: Then you asked for a statement on the cost of purchasing B. Houde Company stock.

By Mr. Sommerville:

Q. Oh yes, on the cost of purchasing the B. Houde stock, the consideration given for the shares you got from the American Tobacco Company?—A. The American Tobacco Company bought from Messrs. J. A. and J. E. Dusseault in

March, 1903, and paid cash $137,155.52 for 4,000 shares; and they sold two small lots to sundry individuals including M. B. Davis, and got cash for them; and then it purchased further stock from Messrs. Dusseault which left them with 3,650, shares or an investment of $123,438.02. Well then, that was taken over by the Imperial Tobacco Company Limited, and at that time they had a surplus in the B. Houde business, and there were apparently preference shares, you see, amounting to a total of $165,406.94, which represented tangible assets in the business at that time, and the difference was ordinary shares for trade marks, goodwill, and so forth.

Q. That it to say, when the Imperial Tobacco Company took over the Houde shares in 1908 they issued $143,065.23 of preferred shares?—A. Yes.

Q. And that was for the investment of $123,438.02?—A. Well, not exactly that. Yes that is right, with assets behind that.

Q. And in addition, the Imperial Tobacco Company gave ordinary shares to the value of $160,680.19?—A. Yes.

Q. And then subsequently obtained further shares from the individuals?—A. Yes.

Q. And altogether gave preference in common shares for each of these?—A. Yes.

Q. And they gave altogether in preference shares $165,406.94 for their entire holdings?—A. Yes.

Q. And that was the price apparently at which they bought plus $185,772.48 in ordinary shares?—A. Par value.

Q. Par value, yes.—A. Ordinary shares?

Q. Yes, and that represented a total value, including common and preferred in the end of $314,678.13?—A. Yes.

Q. And then when the Imperial of 1908 sold to the Imperial of 1912, the new company, the present company, they acquired 4,352 shares?—A. Yes, they acquired 4,250 shares.

Q. 4,250 shares for which they paid $314,678.13?—A. Yes.

Q. In cash, or was that in shares?—A. Exchange of shares and part of the assets.

Q. Do you remember whether that was common or preferred?—A. It would be some of both. It would be in relation to the assets of the 1908 company.

Q. And then it acquired further shares; the new company acquired further shares?—A. Yes.

Q. And the total cost of your present holdings of 4,352 share was $324,758.13?—A. That is right, sir.

Q. That is the present cost?—A. Yes.

The WITNESS: Then you asked for a statement showing the spread from the consumer's cost—the amount to the government, the amount to the dealers, and the amount to the manufacturers, Canada and the United States.

By Mr. Sommerville:

Q. This is a comparison of a popular package sale, showing the distribution to government, dealers and manufacturers between Canada and the United States?—A. Yes.

Q. And you are referring to 20 cigarettes for 20 cents as the standard sales value in Canada?—A. Yes.

Q. And per 1,000 cigarettes the consumer's cost is $10?—A. That is right.

Q. The government, in excise tax gets $4.—A. Yes.

Q. And the government duty on imported leaf is 90 cents?—A. Yes.

Q. And sales tax 44 cents?—A. Yes.

Q. So that the government gets a total of $5.34, or 53·4 per cent?—A. Yes.

Q. The dealers get $2.19?—A. Yes.

Q. Or 21·9 per cent?—A. Yes.

Q. And the manufacturers get $2.47?—A. Yes.

Q. Or 24·7 per cent?—A. Yes.

Q. These are the proportions?—A. Yes.

By Mr. Factor:

Q. You do not show what the retailer gets.

By Mr. Sommerville:

Q. That is jobber and retailer together?—A. Yes.

By Mr. Factor:

Q. You have not split them up. When a dealer buys from a jobber, can you tell me what percentage he gets?—A. The jobber operates generally on 10 per cent. I have not got the basis here, we would have to figure it out.

By Mr. Senn:

Q. You have not divided the $2.40 between the producer, and labour and other costs?—A. No, I have not. I understood this was a comparison with the United States.

By Mr. Factor:

Q. I am informed that the retailer gets 2 cents a package on cigarettes? Can you confirm that, on a 20 cent package.—A. It is about 3 cents on a 20 cent package.

Q. Closer to 3 cents?—A. Yes, sir.

Q. I have several letters in which they say they only get 2 cents on a package of cigarettes, on a 20 cent package.—A. A 20 cent package?

Q. Yes.—A. I don't know how it could be.

By Mr. Sommerville:

Q. Now then, Mr. Miller, the manufacturer gets $2.47?—A. Yes.

Q. For a thousand cigarettes?—A. Yes.

Q. That is correct is it?—A. Yes, sir.

Q. And that is for 3 pounds of tobacco?—A. Yes, sir.

Q. In terms of tobacco that would be approximately 82 cents a pound?—A. Yes.

Q. Then, of course, that includes all manufacturing costs of every nature that enters into it?—A. Yes, and advertising, and selling.

Q. But the spread is reflected in what you have given me ?—A. Yes.

Q. Between what is paid the producer and the ultimate price at which you sell it, 82½ cents or 82⅓ cents?—A. Well, the dealer and manufacturing costs.

Q. All the costs entering into it?—A. Very good, come out of the $2.47, yes.

Q. And if tobacco is sold at 20 cents a pound, 3 pounds 60 cents, that leaves a margin of 67 cents for the manufacturer.—A. I don't think you are right.

Q. $2.47 is 82 cents a pound, for 3 pounds of tobacco?—. Yes.

Q. And if you are paying 20 cents for your tobacco that leaves 62 cents?—A. A pound?

Q. Yes, a pound.—A. Yes.

Q. Yes, for your manufacturing costs?—A. Yes.

By Mr. Young:

Q. Providing it is all Canadian tobacco?—A. Yes, quite.

By Mr. Factor:

Q. Can you tell me how much of the $2.47 will go into labour in those thousand cigarettes?—A. We have not got that, sir. Cigarettes are made by machinery, you know, and they are packed by machinery.

Q. I quite appreciate that.

By Mr. Sommerville:

Q. But there is a profit?—A. Oh yes, but I do not know offhand how much it is.

By Mr. Factor:

Q. Do you think you can get that information without any trouble?—A. Yes.

Mr. SOMMERVILLE: What you want is a breakdown of that item of $2.47?

Mr. FACTOR: Yes.

The WITNESS: In the United States the manufacturers' figure is $2.26 against our figure of $2.47.

By Mr. Sommerville:

Q. Yes.—A. And following that out, 15 cents for leaf would leave 60 cents for the manufacturer in the United States against 62 cents here, or your basis of calculation.

Q. Yes, so that in the United States as against the government getting $5.34 here the government gets $3.12 over there?—A. Yes.

Q. And as against the dealer getting $2.19 here the dealer over there gets 87 cents on the two for a quarter packages?—A. That is right.

Q. And in the United States the government gets $2.26?—A. Yes, for either the 12½ cent package or the 15 cent package. I have talked with some of our people. You were talking about the percentages of the purchases in the United States. The percentage in the United States, I understand, is at 12½ cents, or under, perhaps.

Q. Then this $2.47 that the government gets will depend upon the amount of Canadian tobacco that is used?—A. Yes.

Q. So do I take it that this $2.47 that is referred to is on a popular priced cigarette that uses most of the American tobaccos?—A. Yes, it is worked out on 75 per cent of imported tobacco and 25 per cent of Canadian tobacco.

Q. Yes, but if you worked it on a 50-50 basis then there would be more to the government?—A. Yes.

Q. And in those cigarettes in which you have more than 50 per cent, of course, it would be substantially increased again?—A. Yes, proportionately, of course, in that proportion that is used, but remember that as against that the price of Canadian tobacco is certainly higher than the price of American tobacco.

Q. Oh, yes.

By Mr. Sommerville:

Q. Will you be good enough to describe to the committee your sales policy, your sales system, and your program of dealing with jobbers and retailers in the Imperial Tobacco Company here?—A. Well, Mr. Spafford, our vice-president in charge of our sales and advertising is here, and he is much more intimately familiar with the details of that, and I will be glad if you will let him speak.

By Mr. Young:

Q. Before Mr. Miller leaves the stand, I would like to know whether in buying tobacco here from our Canadian growers you pay the same price as is paid in other countries for the same kind of tobacco?—A. We pay a higher price, sir.

Q. Can you give us the relative prices of flue-cured tobacco in the principle producing countries?—A. Oh, I thought you were referring to the United States. I do not know that we have got a very intimate knowledge of comparable qualities and prices in other parts of the world, sir.

Q. We got the American prices, and I would like it for other countries as well.—A. The only other price we have is the price in England of Empire Leaf, on page 13. That is the only information we have got, and then, of course, it is a question of comparable quality.

By Mr. Sommerville:

Q. And then, Mr. Miller, it is a question as to whether or not these are flue-cured leafs?—A. Yes quite, absolutely.

Q. So that the only comparable figure you have is the United States figure? —A. Yes.

Q. Because there you are comparing Virginia flue-cured with the similar product in Canada?—A. Yes.

By Mr. Young:

Q. Then can you give us comparable retail prices of this tobacco when it is manufactured in the various countries?—A. Well, that again depends upon the excise in the various countries, which is always pretty high in every country.

Q. You can make allowance for that though.—A. I do not know how we could work it out. We could, of course, make an attempt at it, but we are not familiar with all the various prices.

The Chairman: Not only excise but various other duties. The taxes take different forms, and it would be quite a task, I admit; it would be rather difficult for them to give you that, Mr. Young.

The Witness: And then the question of formula comes in, the type of tobacco used. It may be Havana tobacco or any sort of tobacco. That is a very difficult question.

By Mr. Young:

Q. Do you pay 40 cents a pound?—A. For all flue-cured and Burley?

Q. Yes, all tobacco. What is the total duty you pay in a year?—A. Well, on a seven million pounds using it would be about $2,700,000.

Q. That is on your flue-cured only?—A. Yes, that is true.

By Mr. Sommerville:

Q. About fourteen million pounds using?—A. Imported, all told.

Q. No, your usings, and you only pay on your imported as you use it?—A. Yes. It would be about probably three and a half million dollars.

Q. Wait a minute, you only pay on your usings of imported leaf?—A. Yes, sir. Well. withdrawals.

Q. And you have withdrawn about seven million pounds?—A. Yes, but then that is flue-cured. You see, there are a lot of other types of tobacco that are imported. $2,800,000 is the figure here for the year ended March 31, 1934.

Mr. SOMMERVILLE: Mr. Young, you have that from all the manufacturers set out in that schedule that was filed at the very outset of the tobacco inquiry.

By Mr. Young:

Q. And then have you got the excise you pay?—A. Excise stamps on manufactured tobacco and cigarettes?

Q. Yes?—A. $17,200,000.

Q. That is only stamps. Do you pay it any other way?—A. The total tax here is about $24,290,000.

By Mr. Factor:

Q. Is that for one year?—A. One year, 1934, $24,290,000.

By Mr. Young:

Q. That is apart from the duties?—A. No, that is including all tax—

Mr. FACTOR: Paying out so much money, what would you think of the idea of the government taking over the tobacco industry as in France and Italy, or is that a matter so preposterous as to be laughed at?

By Mr. Senn:

Q. May I ask you one question before you leave. This matter of over production, it seems to me, is one of the most serious aspects of the whole situation?—A. You are right, sir.

Q. And there must be one way or, at least, two ways of overcoming it: one is to curtail production and the other is to increase our export trade?—A. Yes.

Q. Have you any suggestion to offer to the committee as to how our export trade particularly with Great Britain, in view of the preference we have, can be increased?—A. Well, the only way I know of is to try—we know is to try to get other manufacturers as a whole actually interested in Canadian flue cured tobacco, and I might say that we have planned that Mr. Buell and probably Mr. Townsend, who is an Englishman and has been in England a lot and knows a lot of those manufacturers over there, to go over to England this summer with the idea of doing our best to sell the Imperial Tobacco Company of Great Britain the idea of using Canadian flue cured tobacco, and, in addition to that if the Canadian Trade Commissioner wishes us to be free to go and interview other manufacturers, to try and help them—we have genuinely the welfare of the farmers at heart, irrespective of the criticism—we think we have. We certainly want to try to do that. We are perfectly willing to do that. If we cannot—perhaps it has been a question of whether we could sell the British Imperial Tobacco company or any of these people any leaf. I do not know whether we will have to get permission to do it. That is our idea. We believe we can help. The producers here think we can help. And we told the Ontario Department of Agriculture that some little time ago, and we intend to do it. If it had not been for this investigation, Mr. Buell would have been on the water now, over to England, among other things—that wasn't the whole object of his trip. He was going over to the manufacturers in Holland—cigar tobaccos—and that is one way, and we hope we can do something.

Q. One witness to-day, Mr. Miller, said that the production of flue cured tobacco might be increased to probably 50,000,000 pounds. In that case a considerable portion of it would have to be exported?—A. Yes, sir.

Q. Would there be anything detrimental to the interests of your company if that export did take place?—A. It would be to our advantage, sir; we would be pleased to see an export of flue cured tobacco. It brings money into Canada; it helps the farmer; and helping the farmer and helping Canada helps us. We

are going to try to encourage the use of flue cured tobacco in England, and we are going to make a proper effort to do so. I hope we may meet with success. We are certainly going to try.

Q. I wanted to state those two points, because it seems to me they represent the whole crux of the situation?—A. I think you are quite right, sir, and limiting the production; if they will only reduce their growing to a reasonable figure.

Q. I do not like that idea of curtailment if it is possible to accomplish this in any other way?—A. I quite agree, sir. We do not either; but there is no good of their producing the tobacco if there is not a market for it, is there?

By the Chairman:

Q. I should like to ask you this question. I have it here somewhere, but you probably have the details in your mind. What quantity of this flue cured tobacco is imported into Great Britain, apart from Canadian?

Mr. Sommerville: 197,000,000 pounds.

By the Chairman:

Q. From the United States. Is it something like 180,000,000 pounds?—A. I think you mentioned that the other day. I am sorry I did not think to check that.

Q. Anyway, it is a very large amount?—A. Yes, sir.

Q. And the amount we have in excess for export is so comparatively small that it strikes me that there should be no difficulty for these three great corporations, the Imperial of Great Britain, the British America and the Imperial of Canada, in co-operation easily providing for that absorption?—A. Exactly what we have been trying to arrange. We have talked about it—I hate to mention whom we talked to about it because you might criticize—to our British American directors; we have talked about it to them, and if they would talk about it over there—

Q. Can we be assured of this in a very definite way that there is no prejudice on the part either of the British American, or the Imperial of Great Britain against the development of this export of Canadian flue-cured tobacco to Great Britain?—A. I do not think I could answer at the moment; certainly not on the part of the British America Tobacco Company, I can speak for them, Mr. Stevens. I do not know of any real prejudice. They have taken some of it. They are very conservative, Mr. Stevens. I am talking—

Q. Here is a situation which is impressed upon my mind: your consumption here annually of Canadian tobacco is about 14,000,000 pounds?—A. Yes.

Q. You have expressed some alarm at the accumulated surplus, but you said your surplus is now about 24,000,000 pounds?—A. Our total stock.

Q. Inasmuch as your stock is made up of two or three year's production it does not seem that it is much out of line with your normal requirements? —A. It is a little on the large side.

Q. A little?—A. Probably four or five million pounds. It is not serious. We, however, have increased business.

Q. Having in mind that it is not a perishable article— —A. It is quite all right. We are not worried about it.

Q. What I am getting at is that it does not really present a serious problem insofar as the production of Canadian tobacco is concerned, because you have rather over-emphasized the reduction of Canadian production.

Mr. Young: Is there not a lot in the farmers' hands?

The Witness: Oh, 10,000,000 pounds, and there is another big crop coming on.

By the Chairman:

Q. I am speaking of Mr. Miller's own statement regarding their requirements and their surplus, and I am putting it to him now, that there is not any

real alarming surplus?—A. Well, if they can move those 10,000,000 pounds that are on the market our surplus is not worrying us because we hope to increase the users of our flue-cured tobacco, and that whereas at the moment it is more than we would normally wish, there is nothing to be worried about. We think it will work out as far as we are concerned all right. In other words, we can go into the market next year, certainly on a basis of buying annual usings of this year—a year's usings.

Q. In addition to what you will have there is something like 10,000,000 pounds on hand in Canada?—A. Yes, sir.

Q. And you still have about six months or more before the new crop comes on.

Mr. SOMMERVILLE: That is, 4,000,000 more pounds will be used?

The WITNESS: Yes, approximately.

By the Chairman:

Q. So that with Great Britain importing around 175,000,000 pounds, we will say roughly of American flue-cured tobacco and 10,000,000 pounds in the hands of our farmers that does not constitute a serious problem, does it?—A. If the manufacturer, Mr. Stevens, wants to use this tobacco; but up to now my opinion is—the best we have been able to get—that some of the big manufacturers are not enthusiastic about increasing their usings. We are going to try to persuade them.

Q. Due substantially to a natural reluctance to change sources of supply? —A. Yes, that is it.

Q. And quite naturally; but we have the three big companies again. Now, we cannot escape this that the British American and the Imperial of Great Britain and the Canadian Imperial are closely allied?—A. All right, sir.

Q. I have no complaint about that. I am not criticizing. Now, they are the big users?—A. Yes.

Q. They are the big handlers of our tobacco?—A. Yes.

Q. I submit again that it does not constitute a problem which would warrant us in saying to the growers in Canada that the situation is alarming. That is the point I wish to put to you and, if possible, get that admission to those questions?—A. Well, if they would reduce their crop as they have indicated—that is cut it by 25 per cent—and judging by our conversation with Mr. Leitch and others as to their prospects of selling these tobaccos, and having heard at least one statement of stock on hand of other manufacturers here—it, perhaps, does not, Mr. Stevens. I would like to give it consideration. Offhand I do not think it is anything very alarming if they will reduce their crop. The price has been a big factor.

Q. I know, but you have a 49 cent preference?—A. Yes.

Q. Within 49 cents there is a wide range of manipulation—shall I say of variation in 10 cents a pound extra to the grower in Canada. In any case, I take it from what you yourself have volunteered that you will earnestly cooperate in the endeavour to enlarge this market and solve the problem?—A. If you do not wish us—or will permit us, we will be glad to do it.

Q. I might say that as far as the department of Trade and Commerce is concerned and its agencies they are always at the service of the trade?—A. Yes, sir.

Q. Of all branches?—A. Yes, sir.

By Mr. Sommerville:

Q. Of course, there has been quite an extensive increase in the export to Great Britain from 1930 of 4,000,000 pounds to 14,000,000 pounds in 1933?—A. I think it has dropped off, and they have stocks on hand. Another thing,

Mr. Stevens, is in our opinion that although there is a difference between Canadian flue-cured tobacco and Rhodesian tobacco and Nyassaland tobacco—and we will admit that Canadian flue-cured tobacco may be better for the sake of argument, and I am impressed with this from the little I have seen—although I am not an expert I think it is—however, they have got to meet these prices somewhere. It may not be exact; it may be that you can get a little more money for the Canadian flue-cured, but we have always got these other tobaccos which have got that same preference which you refer to, which means it is going to hold down to a price all Canadian tobacco somewhat. It may not be. Maybe we can always get a higher price for Canadian flue-cured on the English market than these others, but these factors certainly have to be considered.

By Mr. Senn:

Q. I understand you to say that our tobaccos in the Old Country enter into competition with Empire tobacco rather than with United States tobacco?—A. Well, they come in competition with Empire, or, to put it the other way, probably the Empire tobaccos compete with Canadian tobacco, if you will. They sell a little bit under.

Q. I understand that our tobacco in grading quality compares more closely with United States tobacco than that of other Empire tobaccos. Is that true?—A. That is my own opinion. Some people feel that way about it, I think. and some people will tell you no.

Q. You have the impression quite definitely?—A. I, personally think that Canadian tobacco is better than most—certainly most of those I have seen, but I have not seen very much of it. Mr. Buell will be able to enlighten you on that.

By the Chairman:

Q. We have evidence here from reliable sources that our tobacco does more closely resemble the Virginian than the South African tobacco; but what Mr. Miller is emphasizing now is that no matter what you may say about that there is still the competition within the Empire in Empire products?—A. That is it, yes.

By Mr. Kennedy (Peace River):

Q. Last Thursday there was a witness before this committee who suggested that the Imperial Tobacco or one of it subsidiary companies had received advance information regarding proposed duties in sales tax or excise tax. What have you to say about that?—A. We did not get any advanced information about anything like that.

Q. The other suggestion was that you had been asked to contribute to certain campaign funds?—A. I have no knowledge of any contribution to campaign funds since I have been head.

Q. You say your company has not contributed?—A. I will say since I have been in charge of it and its executive we have not, and any particulars, I will be glad to get them. As far as I know we will be glad to get any particulars on it. I have no personal knowledge of the situation at all.

Mr. CHAIRMAN: Now, that this question has been brought up by Mr. Kennedy, I might say that the other day Mr. Stewart made a statement—I think, under a good deal of excitement and distraction of mind on his own part—yet it was a statement which, while the evidence indicates that in reply to a direct question of mine he said he had no personal knowledge, left a bad impression. The evidence naturally came to the attention of the Prime Minister who, during the noon hour, handed me a letter which I have before me, and during the morning sitting a letter came to me through counsel of the committee signed by Mr. Stewart; and in view of the fact that there was most

unusual publicity given to the statement of Mr. Stewart I think it is fair to those who are indirectly referred to that I should read these communications to the committee and the committee should have them before them with the view of taking necessary action in regard thereto. I will first read the letter that Mr. Stewart has addressed to Mr. Norman Sommerville, K.C., counsel of the committee. It is dated at Montreal, May 11:—

MONTREAL, QUE., P.O. Box 1929.

May 11, 1934.

NORMAN SOMMERVILLE, Esq., K.C.,
Price Spreads and Mass Buying Committee,
House of Commons,
Ottawa, Ont.

DEAR SIR,—I told you after my examination yesterday that I was sorry for some of the things I had said, I would have liked to have asked the Minister of Finance, the Minister of Excise and the Montreal Minister, Mr. Cahan, if they could tell why other manufacturers had advance information of the changes in excise duty.

I should not have said what I did about buying governments and commissions. I wish to retract it. I was exasperated by what seemed an unwarranted intrusion into my own affairs and somewhat bewildered by unusual surroundings. I ask you to convey my apologies to the committee. I do not wish to impugn the motives or the conduct of any member of the government.

You may read this letter to the committee and make it public if you choose.

The two statements which I said would be sent to the committee are being prepared; they will be finished to-morrow when I shall enclose them.

I am interested in the Growers receiving as high prices as possible but the draft agreement you submitted to me is not sufficiently definite to ensure fair treatment to all. I have therefore hesitated to sign.

Yours truly,

(Signed) WALTER M. STEWART.

In fairness I ask that this letter be given as much publicity as was given to Mr. Stewart's statement.

Now, in regard to the first paragraph, he said he would have liked to have asked the Minister of Finance, the Minister of Excise and the Montreal Minister, Mr. Cahan if they could tell why other manufacturers had advance information of the change in the excise duty. This gave to the Prime Minister, very naturally, considerable disturbance of mind, and the Prime Minister has written to me. This letter is dated May 12. It was written on Saturday but did not reach me until noon to-day. The letter is as follows:—

OTTAWA, May 12, 1934.

Honourable H. H. STEVENS, M.P.,
Chairman,
Special Committee on Price Spreads and Mass Buying,
Ottawa.

MY DEAR COLLEAGUE,—I have had an opportunity to look through the evidence given by Mr. Walter D. Stewart before the special committee on price spreads and mass buying on the 10th instant.

It appears to me that, while at the end his evidence is somewhat uncertain, nevertheless it is quite clear that he insinuated that the gov-

ernment, or some members thereof, have given advance information to his competitors regarding pending changes in the excise taxes on tobacco and cigarettes. May I ask you to be good enough to have him recalled for the purpose of naming the Cabinet Ministers whom he desired to examine and giving all information in his possession with respect to his allegations that Ministers of the Crown have been unfaithful to their trust.

Yours faithfully,

R. B. BENNETT.

Now, the committee will determine the recalling of Mr. Stewart to deal with the matter as suggested by the Prime Minister; but while Mr. Miller is on the stand, I should like to ask him this very direct question. Did any Minister of the Crown or anyone else give the Imperial Tobacco company any advance information of changes in the excise tax?

The WITNESS: No, sir, never, never.

The CHAIRMAN: You can answer that quite definitely?

The WITNESS: Yes.

By Mr. Heaps:

Q. Mr. Miller can tell us, I suppose, if any other firms that he owns actually closed down their establishments just prior to the change in the excise tax? A. So far as the reference to Tucketts' is concerned, I did not take knowledge of all the particulars, but just to-day over the phone I heard a letter from Mr. Ambrose with reference to the remark that Mr. Stewart made, the Tucketts' factory and Mr. Ambrose—I have not got the letter here, it was sent to me in Montreal, but it was read to me, and the purport of it was that they had investigated their records, and they could not find that the factory was closed down at the time referred to, November, 1932.

Q. Yes?—A. October or November, 1932. With all the records up there, and all the recollections they have, he says, they were not closed down. They have checked up their payroll records and their purchases of revenue stamps, production records, and everything, and so far as they can find out, there was nothing in that.

The CHAIRMAN: I think the committee will agree with me that it is a little unfortunate this should be interjected into our deliberations; because, as a matter of fact we are not here to investigate this sort of thing; also, Mr. Stewart seemed to me to be under considerable strain, and I would not like to say he was irresponsible, but he was rather reckless in some of his statements.

Mr. BOULANGER: His statements were not solicited at all.

The CHAIRMAN: No.

Mr. BOULANGER: They were voluntary.

The CHAIRMAN: Yes. And he has indicated here very clearly, as he says, that he was exasperated at what he thought was an unwarranted intrusion into his affairs.

Mr. BOULANGER: He said that there was one question that was put to him.

The CHAIRMAN: Yes. We have the answer of Mr. Miller. The committee, I presume, will desire to act on the suggestion of the Prime Minister and ask Mr. Stewart to appear. Of course, the courtesy should be given to the ministers to whom he refers, to come before the committee and make any statements they desire.

Mr. YOUNG: If Mr. Stewart has apologized for the statement and said he should not have made them, what further is there to do?

The CHAIRMAN: Personally, I do not see anything else.

Mr. FACTOR: It would just probably give him the chance to make some more statements.

Mr. KENNEDY (*Peace River*): He has not withdrawn the statement about advance information.

The CHAIRMAN: May I suggest this to the committee. The Prime Minister did not have this letter, addressed to Mr. Sommerville, at the time he wrote the letter to me. I only handed this to the Prime Minister about 2.30 this afternoon. I had not had the opportunity to show it to him before, which gives the information upon which it was suggested we should recall him for. Would it be satisfactory to the committee if we asked the ministers to whom he referred to come before the committee and state their views on the subject?

Mr. SENN: Mr. Chairman, he has not withdrawn his statements in that letter?

Mr. YOUNG: He says, I should not have made them.

Mr. SENN: He has not withdrawn the statement—

Mr. KENNEDY (*Peace River*): About advance information.

> The CHAIRMAN: He says I should not have said what I said about buying governments and commissions. I wish to retract it. I was exasperated by what seemed an unwarranted intrusion into my own affairs, and somewhat bewildered by unusual surroundings. I ask you to convey my apologies to the committee. I do not wish to impugn the motives or the conduct of any member of the government.

I do not see what more you can ask.

Mr. SOMMERVILLE: You remember what he said was that some man told a second man and the second man wrote to his office and his office told him.

Mr. BOULANGER: About the factory?

Mr. SOMMERVILLE: About the factory being closed down. That was the basis of the information. Now, I know he came to me in very great distress and intimated that he had made statements that were entirely uncalled for under the circumstances.

The CHAIRMAN: Then, I shall take the opportunity of asking my colleagues to come to the committee and make a statement to make the record clear on this matter.

Mr. KENNEDY *(Peace River):* Don't you think Mr. Stewart should be brought here or asked to come at that meeting when the ministers come; because I am afraid he will think there is just one side, if he is not—

The CHAIRMAN: We can notify him.

Mr. KENNEDY *(Peace River):* I think it would be well.

Mr. BOULANGER: In the first paragraph he does say—

The CHAIRMAN: He puts it in the past tense. He says, "I would have liked to have asked—"

Mr. BOULANGER: Give him the chance.

Mr. ILSLEY: Did Mr. Stewart come to Mr. Sommerville, or did Mr. Sommerville go to Mr. Stewart, in connection with the writing of the letter?

Mr. SOMMERVILLE: It came as a complete surprise to me. I may say, that the first indication I had was afterwards, when someone very close to Mr. Stewart came to me and expressed very great regret at the statements that he himself had made; saying that he was very, very sorry, and then he discussed it with me after that.

Mr. ILSLEY: Was it a solicitor of the W. C. Macdonald, Incorporated, who came to you?

Mr. SOMMERVILLE: No, it was not. For the information of the committee. it was his wife who came, and expressed very great regret, and said he had no thought or intention or dreamt of making any such statement and was very apologetic and sorry for the statements made; that they were unwarranted insinuations.

EARL SPAFFORD called, and sworn.

By Mr. Sommerville:

Q. What is your position in the Imperial Tobacco Organization?—A. Vice-president in charge of sales and advertising.

Q. Your company has a definite policy in regard to its sales?—A. Yes, sir.

Q. Would you be good enough to explain to the committee what that policy is?—A. Well, sir, we referred to that in our brief, and if I may read our reference, perhaps it will give you the information you asked for, and then I shall be glad to answer questions.

The CHAIRMAN: What page?

The WITNESS: In answer to Mr. Factor's question, page KK 2.

The CHAIRMAN: Page 77. Now Mr. Factor, you will pay particular attention to this.

Mr. FACTOR: I do not see why you should not pay as much attention to this as I should.

The WITNESS: Page 78 in our brief, answer 4:—

> Dealing with the method of jobbing and retailing. Our preference is to have the distribution of our products handled by jobbers, as indicated by the fact that 75 per cent of our business goes through this channel while 25 per cent is done direct with the retail trade. The distribution system through which our products eventually reach the consumer is composed of the recognized jobbing and retail outlets. This system has been built up over a period of many years and experience has proven it to be not only the best method of effecting and maintaining distribution, but the most economical. We are firmly of the opinion that the jobber, or middleman, serves a very useful and necessary need.
>
> Distribution costs on cigarettes and tobaccos through this method have been reduced to a minimum and this distribution machinery has been perfected in most areas to the point where it is to-day about as practical as could be expected. There are approximately 57,000 retail stores in Canada handling tobacco products. Approximately 5,000 buy direct from us, the jobbing trade serves the balance.
>
> The question of whether a retailer shall enjoy the privilege of buying direct from a manufacturer is answered usually by one or more of the following reasons:
>
> 1. Merchandising ability.
> 2. Size of community to be served.
> 3. Class of establishment maintained.
> 4. Advertising possibilities.
> 5. Financial responsibility.
>
> There are certain sections in eastern Canada where the jobbing trade has never been properly organized to look after the distribution of our products, and in such sections, we have for years effected the necessary distribution by selling direct to a considerable number of retail stores. For many years our policy has been to discourage this type of distribution in these particular areas and at the same time encourage the jobbing trade to take over this business. Some progress has been made, especially in Quebec, and it is hoped this progress will continue.

We have depots located in Vancouver, Calgary, Winnipeg, Montreal, Saint John and Halifax from which our customers are served, and strictly sales offices in other large centers. Our outside sales staff consists of 139 men. The greater majority of these men spend 90 per cent of their time contacting with the retail trade and from the indirect retailers solicit orders for our products to be shipped to them through the jobbers. This is a service that not only is of vital interest to our brands but is greatly appreciated by the retail and jobbing trade.

By Mr. Sommerville:

Q. How many men?—A. 139, sir—I should correct that sir. In 1932, it was 133, and in 1933, it was 127.

Mr. FACTOR: Are you going to examine on that, Mr. Sommerville?

By Mr. Sommerville:

Q. You refer to 133 men?—A. 127 in 1933, sir.

Q. Is that in Eastern Canada or is that throughout Canada?—A. Throughout Canada.

Q. Throughout Canada?—A. Yes.

Q. And they call upon the retail stores?—A. Yes, and the jobbers, anyone handling tobacco.

Q. And then, the orders that they get from the retail store, do they turn them over to the jobber?—A. Yes, those who buy through jobbers.

Q. What is the distinction in those who buy direct from you?—A. Well, the man who buys direct from us gets the same price as the jobber.

By Mr. Factor:

Q. What is that discount?—A. It is 10 per cent, on the average.

Q. So that the retailer who purchases direct from the jobber has to pay 10 per cent more?—A. Yes.

By Mr. Sommerville:

Q. You say the jobber gets an average of 10 per cent discount?—A. Yes.

Q. And some retailers get that?—A. Yes.

Q. And do your 5,000 retailers get that 10 per cent?—A. Yes.

Q. What is required to get into that class, because all retailers would like to get into it?—A. Well, they are all enumerated. Shall I go over them again?

Q. Those five?—A. Yes.

By Mr. Factor:

Q. Who determines whether they are possessed of those five qualifications? —A. Usually our branch manager.

Q. Your branch manager?—A. Yes, of which we have 11 in Canada.

Q. And does he notify the head office?—A. Yes.

Q. And then if he feels the retailer does not possess those qualifications, he cannot get merchandise direct?—A. That is right, he cannot.

Q. Is there any other qualification? Is there a condition that they are only to handle a limited percentage of other products?—A. No, sir.

Q. No such thing?—A. No, sir.

By Mr. Sommerville:

Q. I notice one thing is missing, in going through this list of five qualifications, and that is the quantity. Apparently you do not make that one of the conditions for sale to the retail trade?—A. We have different quantities in different territories.

Q. You have not intimated that in any of those five divisions that are referred to?—A. No, sir. The question of shipping expense and other things

enter into that. In Montreal, for example, we have our headquarters, and practically no quantity shipments.

Q. What do you mean, no quantity?—A. No minimum requirements.

The CHAIRMAN: Stipulated.

By Mr. Sommerville:

Q. Irrespective of the quantity they buy, a retailer in Montreal may get 10 per cent?—A. Practically so, yes.

Q. If your branch manager at Montreal decides that a retailer is to get into that class?—A. Yes.

By Mr. Factor:

Q. May I ask a question in regard to the qualification, merchandising ability. Would you consider a man who has been in the tobacco business for 19 years within that qualification?—A. Oh, it depends on his ability. He might be in business for 20 years, and yet we might consider that he did not have merchandising ability to qualify him.

Q. You say "Financial responsibility". What about the retailer who is able to pay you cash?—A. That is the last consideration, financial responsibility, because there are many dealers who would pay C.O.D.

Q. Well then, the retailer who wants to get within this preferred class, offers you cash for the merchandise, and in that case there is no financial responsibility involved?—A. No, sir.

Q. Why do you refuse to sell that retailer who offers you cash for the merchandise?—A. Because he probably has not got the other qualifications.

Q. In other words, you are the one who determines those qualifications?—A. Yes.

Q. You pass on the qualifications?—A. Yes.

Q. You see that these qualifications are possessed by all the retailers?—A. To the best of the ability of our managers, yes.

Q. What about the wholesale end of it?—A. The same thing applies.

Q. Would not—A. We have to consider the territory that the proposed wholesaler has to cover; whether we think it is adequately taken care of or whether it can stand another jobber.

Q. May I put this question rather bluntly to you? I have received, personally, and I suppose Mr. Sommerville has, many complaints from retailers whom I have investigated personally, and I know they are experienced merchants and are financially responsible, and I find they cannot get merchandise from you. Why is that?—A. Well sir, because we think they have not the other necessary qualifications.

Q. I beg your pardon?—A. We feel they have not the other necessary qualifications.

Q. What are they? "Size of community to be served". The city of Toronto is a pretty large community, is it not?—A. Yes, but communities are segregated.

By Mr. Young:

Q. What harm would it do you if they never sell the goods, as long as you got paid?—A. It would do our goods harm if our customers went in say, in six months time, and bought a package of cigarettes that were dry.

By the Chairman:

Q. Is this part of your system of orderly marketing?—A. Yes, sir.

Q. I wish you would explain it to the committee, because I think it would not be only interesting but helpful, if would make it clear to the committee just what the theory is upon which that system is based?—A. It is based on price maintenance.

Q. Yes?—A. Primarily.

Q. Elaborate that. In other words, justify your theory on that basis. I understand it thoroughly, but I think it would be a good idea to get it clear on the record.—A. Well, we feel sir, it is a bad business practice for either the wholesaler or the retailer to cut prices. In the first place, if the wholesaler cuts prices he probably in due time will fail. If the retailer cuts prices, probably the same thing would come about.

Q. You are referring now to the jobber end of the business, in which an individual will take an article, and use it as a loss leader?—A. Yes, sir.

Q. It is to avoid that practice that you have this system?—A. Yes, sir.

Q. Your position, as I understand it is, that it works satisfactorily, and at the same time does not injure the handler or the consumer?—A. Yes, sir.

By the Chairman:

Q. Now, there is one question which has been intimated before, it is this: if there is a bona fide dealer who wants to get your products, it is alleged (I do not say it is true because it is not in evidence, it is just alleged) that he is denied the right of securing your products unless he will, for instance, give it prominence in display over others. Now, that is a serious statement, or allegation.

Mr. Factor: It was in evidence, we had the evidence of the cigar manufacturer the other day.

The Chairman: I thought it was in evidence. That is quite true.

The Witness: To the best of my knowledge, sir, that is not true.

By the Chairman:

Q. Would you countenance it or permit it, if you knew it?—A. No, sir. All we ask is the display of our merchandise in proportion to the total business.

By Mr. Factor:

Q. This committee has received numerous complaints from dealers all over the country.—A. Probably because they want to get on our direct list and we won't sell them.

Q. No, irrespective of the direct list, allegating that you insist upon, in one case 80 per cent advertising?—A. I am sure I do not know, sir, that is news to me.

By Mr. Senn:

Q. Do you contract with each one of this preferred class?—A. No, sir.

Q. No signed contract?—A. No.

Mr. Factor: With whom?

Mr. Senn: The preferred class.

By Mr. Factor:

Q. Yes, the jobber has a signed contract, hasn't he?—A. Only amongst themselves. They agree amongst themselves on the maintenance of prices.

Mr. Sommerville: Just go ahead and let us hear your statement as to the reasons for this price maintenance.

The Chairman: You see Mr. Spafford, we are not as well posted in these details as you are; and the mere statement "price maintenance" does not always convey the full import of the theory.

By Mr. Senn:

Q. And I take it that that is one of the questions before you pass on an agent, as to whether they are following the requirements in regard to the display of your goods?—A. The branch manager.

Q. He visits these stores regularly?—A. I could not say regularly, he does periodically, as best he can.

Q. Is that the only thing that you require from these people?—A. Or the salesman who covers this ground?

Q. Is that the only requirement that you ask from this preferred class?—A. Yes.

Q. That they would give you a certain proportion of advertising and display?—A. Yes.

By Mr. Young:

Q. But, Mr. Spafford, you insist upon a share of the publicity or advertising in proportion to the share that you have of the business, and the bigger the share of the business that you have the bigger the share of publicity you want?—A. Yes.

Q. When you get 99 per cent, then the other fellow would only get one per cent of the advertising?—A. But I hope we never get 99 per cent.

Q. But once you get above 90 per cent there won't be much chance for the other fellow getting anywhere, for he will have to put his goods under the counter, as was said here the other day.

By Mr. Senn:

Q. Have you any figures showing the percentage of the whole?—A. They were given by Mr. Miller the other day.

By Mr. Sommerville:

Q. About 70 per cent?—A. Yes, sir.

By Mr. Senn:

Q. Among the preferred class?—A. No, of the total business in Canada.

Q. Among the preferred class, he must have a larger percentage?—A. I would not think so, no.

By Mr. Factor:

Q. In other words, Mr. Spafford, you control the number of retailers who can buy direct?—A. That is true.

Q. In the second place you control the number of wholesalers of tobacco?—A. That is true.

Q. And in the third place there is an agreement between the jobbers as to the maintenance of prices, and that is controlled?—A. That is true. We do not control that, that is voluntary on their part.

Q. Oh yes, I know; but if any jobber infringes any of the rules the association notifies you and he cannot get his supply?—A. That is judged by a committee elected by the jobbers themselves.

Q. Quite so, and if the investigating committee finds that a manager infringes any of the rules it notifies you and you refuse to supply him?—A. Correct.

Q. So you have the method of distribution pretty well controlled for yourselves, haven't you?—A. Yes, we have.

Q. And you say that is the best method?—A. So far as we know up to the present.

Q. For the Imperial Tobacco Company?—A. For the tobacco trade as a whole.

Q. You control 70 per cent of the tobacco business?—A. We control the business, we do not control the individual.

Q. But you control 70 per cent of the business?—A. Well, if I might be permitted at this point I would like to read one or two telegrams that I have here.

By Mr. Sommerville:

Q. Yes Mr. Spafford?—A. Just on this point that Mr. Factor brings up, here is a telegram from the President of the British Columbia Tobacco Company Jobbers' Association:—

> Jobbers and retailers are both necessary for equitable and economic distribution and reasonable profit must be assured only means of accomplishment in price maintenance stop tobacco products are being sold by both on closest possible margin commensurate with service Imperative that nothing interferes with price maintenance and present orderly method of distribution.

By Mr. Factor:

Q. What profit did the retailer make on a package of 20 cigarettes?—A. Which retailer, direct or indirect.

Q. The retailer who buys from the jobber?—A. Two and two-third cents.

Q. What does the jobber make on that?—A. He makes 9·99 per cent; they cost him $15\frac{2}{3}$ and he sells them for $17\frac{1}{3}$ cents.

Q. Tell me, Mr. Spafford, as a man of experience, do you expect the retailer to make any revenue on that margin of profit—the independent retailer, I do not mean the United Cigar Stores.

The CHAIRMAN: You would not object to their charging more.

By Mr. Factor:

Q. No, the price is fixed; they cannot charge more or less?—A. We had rather he did not charge more, and still we do not want him to charge less.

Q. I mean, in the last two days we have taken up the problem of the growers; there are hundreds of retailers who are absolutely complaining that they cannot make a living because of the market?—A. And at the same time we are putting our biggest effort out to keep these retailers from cutting prices. Right in Toronto I could name, yes, a dozen retailers, who have been selling 20-cent packages of cigarettes for 18 cents.

Q. But don't you think the profit to the jobber is rather out of proportion compared with the retailer?—A. No.

Q. You do not?—A. No.

By Mr. Sommerville:

Q. Let us get your basis: have you got your basis of sales here?—A. How do you mean, sir?

Q. You have a regular list of prices for jobbers; have you not got it in printed form as you give it to the jobbers?—A. Yes, sir.

Q. Let us have that. And that is a direct allowance to the jobber of approximately 10 per cent?—A. Yes, sir.

Q. And then the jobber sells to the retailer on approximately—what is the allowance to the retailer?—A. I would say from 13 per cent to 15 per cent, sir.

Q. From 13 to 15 per cent?—A. Yes, sir, the indirect retailer—that is the man we classify as buying from the jobber.

Q. Well then, how do you get $2\frac{1}{3}$ cents on a 20-cent package of cigarettes as a 13 to 15 per cent profit?

Mr. YOUNG: That is $18\frac{1}{2}$ per cent.

The CHAIRMAN: It costs him 17 something or other.

The WITNESS: It costs him 17·36.

By Mr. Sommerville:

Q. Yes, and he sells at 20 cents?—A. We take it on the selling price of 20 cents.

Q. And that makes 13 per cent?—A. About 13·20.

By Mr. Factor:

Q. What does the jobber get for selling?—A. 9·99 per cent.

Q. He sells them in volume. Then what does the retailer who buys direct from you make in the way of profit?—A. He makes 21·87.

Q. 21·87 per cent?—A. Yes, sir.

Q. On the sale price?—A. Yes, sir.

Mr. Factor: He gets approximately 10 per cent.

By Mr. Sommerville:

Q. Then it is a very distinct advantage to the retailer to be able to buy from you direct?—A. Yes, sir.

Q. And is that advantage used by you to require him to advertise your goods rather than those of rival companies?—A. Well, sir, in return for the privilege of buying direct, we expect co-operation.

Q. What do you mean by co-operation? Is that exclusion of the other fellow? No, sir.

Q. What does it mean?—A. We expect counter advertising. We expect to be able to put a window bill up on his window. We expect to trim his window periodically, and perhaps put a sign on the outside of the building.

By the Chairman:

Q. Put a wooden Indian up?—A. Yes, put a wooden Indian up, if we could find one.

Q. That is a little out of date, is it not?—A. Yes.

By Mr. Sommerville:

Q. What else?—A. I think that about covers the requirements.

Q. What about the man who buys indirectly through the jobber? Do you require the same thing from him?—A. We don't require it, but we ask it.

Q. You really expect it?—A. Well, he who expecteth little receiveth much. We try and get as much as we can, naturally, but we can't enforce it.

Q. You can't enforce it?—A. No.

Q. But don't you attempt to enforce it?—A. I would say the salesmen who did not attempt to enforce it, we would probably fire him.

Mr. Factor: I would not call that attempting, either in law or fact.

Mr. Sommerville: That is co-operation.

By Mr. Sommerville:

Q. What are the means you adopt to enforce this policy upon this retailer? —A. The personality of our salesman.

Q. The personality of your salesman. What else does he carry with him besides personality?—A. lot of advertising and sales helps and ideas to help the dealer get more business.

Q. We have had a great many complaints, Mr. Spafford, and I am sure you don't want any complaint on your merchandising methods?—A. No, we don't.

Q. We have had a great many complaints from coast to coast. Here is one of them:

> I have been buying merchandise from the Imperial Tobacco Company for over twenty-five years, and have always paid my drafts when due, and my credit rating at the present time is good; but because I do not display Imperial Tobacco products to a degree that it will be detrimental to other Canadian manufacturers, I have been refused any further of their goods.

What do you say as to that?—A. That sounds like Mr. Watson of Saint John.

Q. That is Mr. Watson of Saint John, and he encloses his correspondence for us. What do you say?—A. Well, we have known that gentleman for twenty-five or thirty years, and if I might read the latest report of one of our advertising supervisors, that will perhaps give you a whole picture of what we think of him.

Q. I don't care what you think of him. Is it a fact that you have refused to sell to him?

Mr. BELL: What is that man's name?

Mr. SOMMERVILLE: Edward P. Watson, King square and Sydney street, Saint John, New Brunswick.

By Mr. Sommerville:

Q. Is it a fact that you have refused to sell him your goods because he will not display Imperial Tobacco products to a degree that will be detrimental to other Canadian manufacturers?—A. No, that is not the reason.

Q. He goes on further:

> I have always tried in my business to use all tobacco companies the same, but am being penalized at the present time because I have tried to give the smaller tobacco companies' lines a share of my business.
>
> I am enclosing copies of my correspondence with the Imperial Tobacco Company to date. You will please note that in each instance they have referred me to Mr. Farry (their local branch manager) and he told me personally on May 1st that the Imperial Tobacco Company have closed their books to me.

Now, is it true that his business rating has been good for twenty-five years, that he has always paid his drafts?—A. Yes.

Q. Is he a direct buyer or an indirect buyer?—A. A direct buyer.

Q. He is a direct buyer. You won't even let him buy indirectly?—A. Oh, yes. We have no control over that.

Mr. FACTOR: That is, over the jobber.

By Mr. Sommerville:

Q. We will see about that, whether you have any control over the jobber or not. At any rate, you won't sell him direct. What is your reason?—A. For one reason, he has a record of being a price cutter. He has a record of supplying the trade at cut prices, and in every way being a very unsatisfactory and very difficult man to get along with.

Q. He says that the only reason that you have refused to sell to him has been because he would not display goods?—A. That is not so, sir.

Q. That is not so. Was your reason for cutting him off this time because he is a price cutter?—A. We had reason to believe that he was supplying other dealers at cut prices.

Q. Did you write and tell him that?—A. No; our manager, Mr. Farry, told him.

Q. What did he say to that?—A. Well, I think he used very profane language, and told Mr. Farry to get out of his store.

Q. Here is another one:

> We wish to draw your attention to the arbitrary methods of the Imperial Tobacco Company. We are running a wholesale and retail tobacco business in Saint John, and before they would sell us their products, they ordered us to give them both our windows for advertising purposes, and to display their goods only, in spite of the fact that we were under contract to another tobacco company for one of our windows, which contract

> we were forced to cancel under penalty of not being able to buy their goods direct.

What do you say as to that?—A. Well, I would have to know the case, sir.

Q. But you surely have had a lot of complaints, have you not?—A. I have a whole book of them here, yes, sir.

Q. Is this not a general complaint?—A. No.

Q. It is not a general complaint?—A. No.

Q. Do you approve of your traveller taking this position, that they must cancel their contract with another company?—A. I doubt very much if he did.

Q. But do you approve of it?—A. No.

Q. You disapprove of any such practice?—A. Yes.

Q. And if that were done, it was done entirely without your authority?—A. Yes.

Q. And it would not be permitted by your sales branch?—A. No, sir.

Q. That is a correct statement of your policy, is it Mr. Spafford?—A. Yes, sir.

Q. He says further:

> Most all tobacco stores doing business in Saint John are subject to the above conditions.

That is somebody else in Saint John, New Brunswick?—A. Well, I have a telegram here from what is reputed to be a leading retailer in Saint John; may I read it?

By Mr. Factor:

Q. What date is that?—A. May 13th, the lucky day.

Mr. FACTOR: That is to-day?

Mr. SOMMERVILLE: No, yesterday.

By Mr. Factor:

Q. Did you know of these complaints before the telegram came?—A. I knew of the Watson complaint, yes.

Q. Did you know of the Saint John complaint?—A. Well, Watson is in Saint John.

The CHAIRMAN: He does not give the name of that one.

By Mr. Senn:

Q. Were those telegrams solicited in any way?—A. Yes, they were. May I read a telegram from our sales manager. This a telegram sent out by the sales manager of our company on Sunday night:—

> As there is possibility of Mr. Spafford's and Imperial's attitude towards price maintenance and orderly merchanising in general being presented before Stevens commission would appreciate your telegraphing collect Earle Spafford care Chateur Laurier Ottawa to-night or Monday morning at latest honest opinion yourself and your associate on this subject.

By Mr. Sommerville:

Q. And these were sent out to those who were direct buyers from you in most of the provinces of Canada?—A. Retailers and wholesalers, yes, sir.

Q. Direct buyers?—A. Yes, sir.

Q. Let us have the telegram from Saint John?—A. This is the telegram we received from Saint John:—

> Have always felt that the Imperial's stand for price maintenance and proper merchandising methods was the steadying influence of the retail

> trade in this province and trust your policy will not change. Confidently feel that I am voicing the opinion of the better retailers in New Brunswick and hope you may continue the good work.

Q. That is price maintenance?—A. Yes, sir, and orderly merchandising.

By Mr. Factor:

Q. Well, is this ordering a man to give up his windows orderly merchandising?—A. I don't believe we did, sir.

Q. I have received thousands of complaints, Mr. Spafford, from people who refused to display your merchandising?—A. Well, for every complaint you have received I could give fifty cases.

By Mr. Sommerville:

Q. Of what?—A. In favour of our policy.

Q. Of what?—A. Of price maintenance.

Q. We are not dealing with price maintenance. Does price maintenance include intimidation?—A. Well, with some class of dealers, yes.

By Mr. Factor:

Q. In other words, you believe in the policy of intimidation with some class of dealers?—A. Well, if a dealer will not maintain prices.

Q. Your price maintenance policy.

By Mr. Sommerville:

Q. Let me read you another.

The CHAIRMAN: Mr. Sommerville, I think Mr. Spafford should explain his last statement. Just make that clear.

By Mr. Sommerville:

Q. Yes, I want to get that clear. You are referring to price maintenance? —A. Yes, sir.

Q. And you refer to the fact that it may be necessary to use intimidation on a price cutter?—A. Yes, sir. We would say to a retailer who was buying our goods, when he started to cut the price, if you continue to do that we will not supply you with our goods.

Q. That is what you mean by the question of intimidation?—A. Yes, sir.

Q. You would cut him off?—A. Yes, sir.

Q. And that is part of the plan?—A. Of price control.

Q. Followed in some cases in price maintenance.

The CHAIRMAN: It might be better to use the word "disciplining" instead of using the word "intimidation." Intimidation has a rather invidious meaning.

By Mr. Sommerville:

Q. Supposing a man maintains prices, do you approve of your travellers saying to a man that he must take down certain displays of other products and put your displays in place or he will not get your goods?—A. No, sir.

Q. You do not approve of that?—A. No, sir.

Q. You have heard of those complaints?—A. Yes, sir.

Q. Very frequently?—A. No, sir.

Q. We have had an awful lot of them in this committee, Mr. Spafford, and it has been from coast to coast.

By Mr. Factor:

Q. Yes. Let me read you a few:

> Should a merchant display competitive lines of cigars, cigarettes and tobaccos, the Imperial Tobacco Company will threaten him by saying that it will no longer sell directly to him. It will intimidate him in the

same manner should he allow other companies to place advertising matter in his shop window or on his building, or on his vehicles.

By Mr. Sommerville:

Q. Now, is that right?—A. That is not our policy.

Q. Well, whether or not it is your policy, is that what is done by your travellers?—A. Not to the best of my knowledge.

By Mr. Factor:

Q. Well, is it done by the travellers of the jobbers that you control?—A. No, it is not.

By Mr. Young:

Q. What do you do when you get a complaint like that?—A. We usually go and see the man, send our branch manager to see him.

Q. And what results do you get?—A. Sometimes favourable, sometimes unfavourable.

Q. What do you call favourable results?—A. Well, we try to pacify him, we try to leave him in a happy frame of mind. Regarding Mr. Watson of Saint John, we sent one of our men from Montreal down to see him last week, and I understand that he reported over the telephone yesterday that Mr. Watson is quite happy.

By Mr. Sommerville:

Q. Then you have allowed him to use the windows for other manufacturers, have you?—A. I have not the details, sir.

Q. That was the only complaint he had. It was not a question of price and it was not a question of his credit, but a question of his using his window in the way that he saw fit to sell whatever goods he wanted.—A. Yes, sir, and I said that was not our reason for taking him off the list.

Q. Then what do you think of this one, here is another one from Montreal:—

> Should a merchant allow a company to display its own goods in one of his windows, the Imperial Tobacco Company immediately sends a representative to the store and he resorts to every possible means to prevent him from favouring any other manufacturer. It also requires the distributors to supply it with a monthly report covering the competitive lines sold by each one.

A. No, sir.

Q. First of all, with reference to your representative going to his store and using every possible means to prevent him from favouring any other manufacturer in his advertising.—A. Well, he might go to the retailer and try to persuade him to continue to give us his window, or whatever form the advertising was.

Q. And would the persuasion take the form of saying "You cannot have our goods unless you do"?—A. No, sir.

Q. Are you sure of that?—A. Yes, sir. I cannot put words in the mouths of our representatives.

Q. No, but you can take them out.—A. Not after they have been said.

Mr. Factor: Prevention is always the best possible cure.

The Witness: That is what we try to do, sir. That is not our policy.

By Mr. Factor:

Q. I personally have had many complaints that that is the case, Mr. Spafford.

By the Chairman:

Q. Let me read, if I may interrupt you, Mr. Sommerville, and I read this because it is a matter of public record. This is from the evidence the other day of Mr. Victor Chartrand, at page 1698 and 1699; this is his sworn statement:—

> Q. What happened to reduce your output?—A. Because of the influence or pressure exerted by the Imperial Tobacco Company on our jobbers, retailers and dealers; our production is lessened.
>
> Q. Will you please explain what you mean by influence?—A. From what the jobbers state. The jobbers say that the Imperial Tobacco Company more or less compel them to carry the Imperial Tobacco Company line of goods.
>
> Q. We want to get that clear. Did the jobbers inform you that they cannot buy your stock because the Imperial Company objects to them carrying other than Imperial Tobacco Company's stock?—A. They do not tell us openly but they give us that impression, in more or less veiled terms.
>
> Q. And they will refuse to buy?—A. Yes, they refuse to buy.

And then there is a further question:—

> Q. And your production has been reduced from 5,000,000 or 6,000,000 five years ago to a million and a half last year?—A. Yes, sir.
>
> *By Mr. Factor:*
>
> Q. Do you have any difficulty in advertising your product in competition with the Imperial product, that is, difficulty in having your products advertised in competition with Imperial?—A. Certainly.
>
> *By Mr. Sommerville:*
>
> Q. What are the difficulties?—A. One difficulty is, that when we put up any advertisements or posters they are removed. We are told that the travellers who visit these different shops to sell place their own posters over ours.
>
> Q. That is, the posters you are referring to, the circulars or the advertising you are referring to is advertising in the stores of the merchants that are selling your goods?—A. Yes. These signs or posters are of metal, and they might be placed on the inside of the store or outside, or on doors, or around the premises within and without.

Now, the indication by that evidence is, that your representatives use rather rough methods by which, shall I say, to prejudice or reduce the opportunity of doing business with your competitor. What have you to say regarding that, Mr. Spafford?—A. I do not know what date that goes back to, sir.

By Mr. Sommerville:

Q. That exists continuously for several years.

By the Chairman:

Q. I can tell you by memory, his sales dropped from seven million to one million one hundred thousand since 1929 or 1930. It is all during the last three years.—A. Where is his plant, sir?

Mr. SOMMERVILLE: L'Epiphanie.

The WITNESS: I think the reason he lost his business was that we went down and opened a factory there and paid the workers a dollar more a thousand for the cigars.

By Mr. Factor:

Q. The reason is, you tried to dictate terms to him and he would not sell. Now, is that right?—A. That is before my time with the Imperial.

By the Chairman:

Q. That is not the point I am raising, Mr. Spafford. I am not making any comment on this other than to say here is a sworn statement. Now, what have you got to say about it?—A. I would say within the last three years, which is the period I have been with the Imperial Tobacco Company, that the statement he makes there is absolutely contrary to our policy.

Q. And would you go further and say that would not be permitted by yourself?—A. And would not be permitted to-day under any circumstances.

By Mr. Factor:

Q. Just let me read you another typical complaint:—

> Should a merchant allow a company to display its own goods in one of its windows, the Imperial Tobacco Company immediately sends a representative to the store and he resorts to every possible means to prevent him from favouring any other manufacturer. It also requires the distributors to supply it with a monthly report covering the competitive lines sold by each one and will even send employees to examine their vehicles and trucks in order to see what lines other than their own are contained therein.

A.—I say that is not what our instructions are.

Q. Oh yes, I know, but that is not answering my question.—A. There are three points there. Would you ask the three questions you would like answered.

Q. The first complaint is, that the representative of the Imperial Tobacco Company resorts to every possible means to prevent him from favouring any other manufacturer.—A. Not to prevent. I would say to persuade.

Q. Oh I see, you draw this fine line of distinction?—A. Why not?

Q. What form of persuasion takes place?—A. Salesmanship.

Q. Do you think that we are children here, Mr. Spafford, to try to answer in that way?

By Mr. Sommerville:

Q. Do you know that they threatened to refuse to allow Imperial goods to be sold unless they fell in line with the salesman's request?—A. No, sir.

Q. You say not?—A. I say not.

Q. Let me give you this one, and this is right in your own home town of Montreal: does your representative go to a retailer and require the retailer to give him a statement of the amount of the other fellow's goods that that retailer is selling?—A. Not on our request. He may on his own initiative do that, sir.

Q. I would not expect you would send out a request every time. Do you allow any such thing as that to go on in your sales organization?—A. Yes. We know it goes on. We do not ask them to do it, no.

Q. But, Mr. Spafford, when that is accompanied with the statement that they will not get your goods unless they supply that information, do you not think that is intimidation?—A. I doubt if that statement is made, sir.

Q. That is made; and it was made in the presence of other manufacturers who were in the very shop and heard it.—A. That is a surprise to me, sir.

Q. But it was brought to the attention of the Imperial Tobacco Company?—A. I have not heard of it.

Q. Now, that sort of thing we are told is going on all over the country?—A. Well, sir, I can show you telegrams from jobbers and retailers from coast to coast.

Q. On price maintenance, quite?—A. No, on the general attitude of the Imperial Tobacco Company sales and advertising policies.

Q. Let me give you this one: within the last two weeks, since we began the enquiry on tobacco, one manufacturer who put up his literature in the city of Hull, just across the river, found within three hours that 60 per cent of it had been destroyed or covered up by your man. Do you approve of that?—A. No, sir.

Q. And that is within two weeks in the city of Hull while this inquiry was going on?—A. We absolutely do not countenance that.

Q. What steps do you take to prevent this sort of thing, because the complaint is so general?—A. I have never heard of that case.

Q. It is two now. This is within the last two weeks; but I have it recorded from coast to coast that this is the regular practice?—A. I do not admit that, sir; in fact, I deny it.

Q. Then, Mr. Spafford, what about the practice of going into a store and saying, "you had better take those cigarettes off the showcase and put them under the cases if you want to get our goods." Have you heard of that?—A. I have heard it reported.

Q. Do you approve of that practice?—A. No, sir.

Q. Why does it go on from day to day and year to year from coast to coast?—A. I do not think it does, sir.

By the Chairman:

Q. Did you ever issue instructions, Mr. Spafford, that such practice was not to be indulged in by your salesmen?—A. Yes, sir; instructions have gone out, and I believe we could produce them.

Q. Have you disciplined the salesman who has been reported as having resorted to that practice?—A. I could not name any specific case.

By Mr. Factor:

Q. Did you ever cut out a single jobber whose representative was guilty of tactics of that kind?—A. I have never heard of any jobber salesman being guilty of this practice.

Q. I beg your pardon?—A. I have never heard of any jobber's salesman being guilty of this practice.

Q. There are hundreds of complaints?—A. You gentleman have all the complaints in your hands. If you had wished to be fair with me I think you might have warned me and I might have got my files which we probably have on every one of these cases.

By Mr. Sommerville:

Q. Well, then, you must know about them if you have your files?—A. We probably do.

Q. Why don't you tell me about them?—A. You are tackling me—

The CHAIRMAN: Of course, he has not got his files with him, and he cannot recall those cases, and we are not giving him the names of every one. It might be well to turn over some of these.

Mr. FACTOR: It is not a matter of an individual name or an individual firm, it is a question of a practice having been established in merchandising their products which is a most vicious thing, and I would like this witness to enlighten us.

The WITNESS: These are cases, and if they are complaints that you can make I can give you 50 or 100 dealers who are perfectly happy and satisfied with our method of merchandising, our demands upon them, and if I could place these telegrams on the record I think they would substantiate what I have said.

By Mr. Sommerville:

Q. I haven't a doubt in the world that you could produce a thousand telegrams in support of a price maintenance plan, but can you provide one telegram in support of a program or of any of the practices I have referred to as complaints from coast to coast?—A. Well, sir, they do not refer to these practices, but they say they are absolutely satisfied with our attitude towards the trade and the general administration of our business.

Q. Wholesalers and retailers?—A. Retailers.

The Committee adjourned to meet Tuesday, May 15, at 11 o'clock, a.m.

HOUSE OF COMMONS, ROOM 368,

May 15, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. We have before us the minutes of yesterday, which recite the filing of a certain number of exhibits and the examination of certain witnesses. The minutes will be declared approved.

I also have, in response to a request by the committee of a few days ago, a file of petitions received by the Department of Finance in opposition to a tax on raw leaf tobacco in the hands of the producer, I presume. It is from the province of Quebec. It will be attached to Exhibit No. 120, which has already been filed, as it is merely an enlargement of that subject.

EARL SPAFFORD, examination resumed.

The WITNESS: Mr. Chairman, may I make a statement?

The CHAIRMAN: Yes, Mr. Spafford.

The WITNESS: Yesterday, we were accused of using unfair methods of merchandising. I would like, if I may, to read a letter from Mr. Tingle. Mr. Tingle is a director of our company, in charge of our outside advertising. He says:—

> . . . I can certify from my knowledge that it has always been the company's policy to respect other manufacturers' advertising, and we have asserted this on many occasions to our representatives.
>
> There have been times when complaints have been made to us that an infraction had been made of this policy, and in all cases we took steps immediately to reprimand if the fault was with us; but from my experience I have found that an over-zealous representative of any company is apt at times to outstep the bounds of propriety, and we have had as many occasions to complain about other manufacturers as we have had to answer complaints which have been made to us.

By Mr. Sommerville:

Q. Mr. Tingle is the man in charge of the United Cigar Stores, is he?—A. No, he is a director of our company, in charge of our outside advertising representatives.

Q. What was his former association? With which group of companies was it?—A. Well, he has been twenty-five years with the Imperial Tobacco Company.

Q. Was he at one time connected with the United Cigar Stores?—A. No; and he is still with the Imperial.

By the Chairman:

Q. You have some telegrams that you wished to file last night?—A. Yes.

The CHAIRMAN: What I will do, Mr. Spafford, is this: if you will hand me the telegrams, I will just read out the names. They are virtually, I would imagine, all the same in the file. There is no need to take them individually.

The WITNESS: Well, they represent about 600 jobbers; and the one from the city of Montreal where we have about 6,000 retailers, while I cannot say it represents the opinion of every one of them, it represents the opinion of every, what we consider, honest and reputable retailer.

By Mr. Factor:

Q. You mean of every retailer to whom you sell direct?—A. No, sir.

Q. Are there any independents there?—A. Well, it is the secretary of the retailers association.

The CHAIRMAN: I will read the names. I think it is only fair to the company that these should be read. I am not going to read all the telegrams. The first is John C. Conway, of Conways Limited, Calgary, Alberta.

Mr. EDWARDS: What is the gist of that?

The CHAIRMAN: I was just going to say that these telegrams are from various parts of Canada in response to a message sent out by Mr. Spafford. I will read this first one. I think the others are similar. This first one reads as follows:—

> Tobacco and confectionery jobbers Calgary and Alberta district deeply appreciate all tobacco manufacturers efforts to maintain price for both jobbers and retailers. It is our earnest wish present investigation will not disturb orderly marketing of our merchandise. Without your assistance in maintaining price, large mail order jobbing houses would seriously jeopardize our business and capital invested. My personal opinion from twenty years experience is that if tobacco manufacturers had not assisted us to maintain prices we could not have continued in business.

This is similar to other wires that were received that were read yesterday, and I understand that practically all of them have about the same theme. Is that not so, Mr. Spafford?

The WITNESS: Yes.

Mr. FACTOR: Of course, the complaints that we are investigating now are not so much in regard to the maintenance of prices. It is the question of refusing to sell.

The CHAIRMAN: You are quite right, Mr. Factor, and we will proceed with that. But in my opinion it is only fair to the company that we should permit them to at least present these telegrams.

Mr. FACTOR: Quite so.

The CHAIRMAN: I will not read them. I will read the names. The first one I have read, from John C. Conway of Conways Limited in Calgary. The next is from Col. P. E. Belanger, Montreal.

The WITNESS: Secretary of the retailers association.

The CHAIRMAN: Then we have one from O. W. Rorke, secretary of the Montreal Tobacco Retailers Association; H. B. McKelvie, president of the B.C. Tobacco and Candy Jobbers Association, Vancouver; D. R. Butt, Kelowna, B.C.; Western Canada Jobbers Association, Bruce Flavin, president, Edmonton, Alberta; Harry Smith, of Harry's News and Tobacco Shops of Montreal.

The WITNESS: Calgary, sir.

The CHAIRMAN: It is dated at Montreal.

The WITNESS: Yes, he was in Montreal, but his place of business is in Calgary.

The CHAIRMAN: That is right—Boston Hat Works and News Company, Calgary; but it is dated at Montreal. Then there is one from B. J. Beveridge, secretary of the Northern Saskatchewan Jobbers Association, Saskatoon; Southern Saskatchewan Tobacco Jobbers Association, Regina; Manitoba To-

bacco Jobbers Association, Winnipeg, thirty jobbers; J. P. Laberge, Verdun; Thomas Burns, Quebec; Edgar Langlois, Quebec; Chevalier & Pauze, wholesale grocers, Joliette; Cyrille Labelle & Company, Sorel; Royal Cigar Company, R. P. Helsby, Halifax; G. A. McDonald, Halifax; Ontario Wholesale Tobacco Distributors, Toronto; National Grocers Company Limited, Cornwall Branch, Cornwall, Ontario; the Ottawa Retail Tobacco Merchants Association, Bert Aitkens, W. H. Irvine and T. A. Ritchie, Ottawa; Ottawa and Hull Wholesale Tobacco Jobbers Association, A. E. Provost, M. Loeb, H. Aubry, Ottawa; Salois Limited, Sherbrooke.

Mr. Factor: Most of them are from jobbers?

The Chairman: Jobbers and retailers' associations. They will be filed as Exhibit No. 142.

(Telegrams, filed and marked Exhibit No. 142.)

Mr. Edwards: They all deal with the idea of price maintenance?

The Chairman: Yes.

Mr. Edwards: Nothing dealing with the spread between jobber and retailer?

The Chairman: No; everyone, as far as I can see, was referring to price maintenance. Is that right, Mr. Spafford?

The Witness: Well, and the general policy of the Imperial Tobacco Company.

By Mr. Sommerville:

Q. Mr. Spafford, do you have any trouble with regard to price cutting on the part of chain stores or departmental stores?—A. Yes and no. Only last week we cut off Simpson's of Toronto and Montreal for running a deal which we considered similar to price cutting.

Q. What would that be, giving premiums?—A. Well, they gave a cigarette rolling device with a tin of tobacco. In other words, if the tin of tobacco sold ordinarily say at 50 cents, and the cigarette rolling device at 20 cents, making a total value of 70 cents, they would offer that perhaps at 62 cents, the combination.

Q. Have you had any trouble with the chain stores using tobacco as loss leaders?—A. Yes, sir.

By Mr. Senn:

Q. In what way?—A. Well, they will take cheap brands and advertise them at a very low price—we think in some cases practically at cost,—in order to get people into their stores.

By Mr. Young:

Q. Your brands?—A. No, sir.

Q. Not your brands?—A. No, sir.

By Mr. Sommerville:

Q. If they advertise your brands, they don't get them again?—A. That is right.

By Mr. Senn:

Q. What action have you taken in regard to the use of other brands?—A. There is the case of Simpsons. We cut them off the list.

Q. Was it your tobacco?—A. No.

By Mr. Young:

Q. Do you cut them off your list if they sell some other brands cheaper?—A. Yes.

Mr. Factor: It is a great business.

The Witness: If it is below the advertised price. In other words, all we ask a dealer to do, is this, if he buys a line of merchandise from another manufacturer, if he says that line is 59 cents for a half pound tin, so long as he sticks to that basis, we are quite satisfied.

By the Chairman:

Q. That is the very essence of the price maintenance system, is it not?—A. Yes.

By Mr. Sommerville:

Q. Do you apply this method of discipline to all firms that break this price maintenance plan?—A. Yes.

Q. Whether they buy your own goods or those of other manufacturers that are associated with you in maintaining a price?—A. Yes.

By Mr. Young:

Q. Are there other manufacturers associated with you in maintaining a price?—A. No, sir; only that I believe that most of them believe in it as a principle.

Q. Has any attempt been made to get them together to maintain a price?—A. In Montreal they had a meeting not long ago which the manufacturers attended, or the retailers of the manufacturers; and the manufacturers have agreed separately to assist the retail association in maintaining prices; and I think that happened in Toronto, too.

Q. Will you kindly explain that expression "They all agreed separately"?—A. Yes. That is exactly what I mean.

By Mr. Edwards:

Q. In other words, you filed your selling price?—A. Yes.

Q. Each individual filed his selling price?—A. Yes.

Q. No collusion there, no combination?—A. No, sir.

Mr. Factor: It goes farther than that.

By Mr. Factor:

Q. It is not a fact that the jobbers of your product enter into this agreement? Look at this?—A. I don't know which one you mean.

Q. Just look at it (handing to witness)?—A. Yes, I will be very pleased to. Yes, that is the recognized agreement; but these are not our jobbers any more than they are anybody's else's.

Q. I quite understand that, but they are the jobbers dealing exclusively with your products?—A. Not exclusively.

Q. No, not exclusively?—A. With anybody else's products.

Mr. Factor: I think perhaps this had better be put in as an exhibit, Mr. Sommerville.

Mr. Sommerville: Yes.

Mr. Factor: This is an agreement that the jobbers enter into collectively, to maintain prices.

Mr. Sommerville: In Ontario. Perhaps we will put it in.

The Chairman: The telegrams were No. 142.

By Mr. Sommerville:

Q. As part of your system of distribution, Mr. Spafford, the Imperial Tobacco Company are interested in seeing that there are jobbers' associations in each province?—A. Yes, for orderly merchandising.

Q. And with the assistance of the Imperial Tobacco Company and others—A. And others.

Q. And other manufacturers?—A. Yes.

Q. These jobbers associations are organized in each province?—A. Yes.

Q. And they do exist in all the provinces of Canada?—A. No, sir.

Q. In what provinces do they not exist?—A. In the maritimes.

Q. They exist from Quebec to British Columbia?—A. Yes.

Q. And I presume they are all run upon the lines indicated in the agreement that is submitted in your brief?—A. Yes. There are one or two clauses that might vary, but the substance is the same.

Q. These jobbing associations are supported in their merchandising methods by the manufacturers?—A. Yes.

Q. Does the Imperial Tobacco Company contribute to the funds to pay the salary of the secretary of the association?—A. No, sir.

Q. Well, does it contribute funds to the association?—A. We have at times, yes.

Q. Does it do it regularly?—A. No, sir.

Q. It does not do it regularly?—A. No.

Q. It makes no contribution towards the amount that may be used for the salary of the secretary?—A. No, sir.

By Mr. Factor:

Q. May I interrupt, just here—do you know Mr. J. J. Ivy?—A. I know him very well.

Q. What position does he occupy?—A. He is secretary of the Ontario Wholesale Tobacco Association.

Q. Who pays his salary?—A. The jobbers who belong to the association, the members of the association.

Q. Have you ever contributed towards the payment of his salary?—A. No. We have contributed to the association.

Q. And part of that went in payment of his salary?—A. I don't know how they used it.

By Mr. Sommerville:

Q. In what years did you make that contribution to the jobbers' association? Is it not a regular thing, Mr. Spafford?—A. No, sir. If they get hard up and some of the members are behind in their payments, why, they call on us, and I believe they call on other manufacturers. We are not alone in subscribing.

By Mr. Factor:

Q. Does Mr. Ivy report regularly to you as to the activities of the association?—A. He does not. He reports to his committee.

Q. And the committee reports to you?—A. They do not, except if we should happen to meet one of them we ask them how things are getting along; they are not obligated or asked to report to us at any time.

Q. But they do report any infringement by any one of the jobbers?—A. That is their duty.

Q. And then you cut off the jobber from supply?—A. Depending upon the nature of the committee's recommendation.

By Mr. Sommerville:

Q. Well then, on this basis the jobbers' association in each province is organized.—A. Yes, sir.

Q. And this one refers to the Ontario Wholesale Tobacco Distributors?—A. Yes, sir.

Q. That is what it is called?—A. Yes, sir.

Q. This reads as follows:—

> In consideration of our being or becoming a member of the Ontario Wholesale Tobacco Distributors and of enjoying the privilege of buying direct from tobacco manufacturers, we agree with the said Ontario Wholesale Tobacco Distributors and each and every member thereof:—
>
> 1. Not to sell tobacco, snuff, cigarettes or little cigars at prices less than those respectively named and set out in the lists furnished by tobacco manufacturers from time to time.
> 2. Not to allow a discount in any shape or form on any of the lines above mentioned.
> 3. Not to allow any cash rebate to any parties purchasing from us or to any of their employees.
> 4. Not to give gratis goods of any kind which would be the equivalent of a discount.
> 5. Not to give a discount on any line of goods, part of which discount might be applied to any of the lines above mentioned; and when at any time giving a discount on other goods, the lines above mentioned will not be included, but such lines will at all times and under all conditions be sold at net thirty days from statement date, such statement to be issued at least once each month, with no discount for prepayment or otherwise.
> 6. All sales of these lines to be on the above basis with no exception of any kind to jobbers or retailers.
> 7. It is agreed and understood that we will be responsible for the action of our travellers and employees, and agree that all infringements or irregularities by them of this agreement shall be the same as if committed by us.
> 8. We agree and approve of the appointment of an investigating committee and of the powers, privileges and duties of said investigating committee as set out in the endorsement on the back of this agreement, and agree to be bound by the decision thereunder.
> 9. We agree that violations of this agreement by us will involve our being supplied by tobacco manufacturers only at jobbers' resale prices for a period to be decided upon by the Investigating Committee not exceeding three months for first offence, and hereby agree and consent to the manufacturers acting upon receipt of the report and recommendation of the Investigating Committee.
> 10. This agreement is entered into with the sole purpose of bettering trade agreements in regard to the above mentioned lines.

And then that is signed by the jobber?—A. Yes, sir.

Q. Now, if a jobber does not sign this he does not become a member of the association?—A. No, sir.

Q. And then the manufacturers do not deal with that jobber?—A. Oh yes we do, sir, so long as he maintains prices. We have one of the largest distributing houses in western Canada—Macdonald Consolidated; they are not members of the Jobbers' Association, but they maintain prices, and we sell them our goods.

Q. Yes, but that is the exception; the general rule is— —A. Yes, sir.

Q. That is to say, if a man wanted to start in the jobbing business in the Province of Ontario to-morrow, had his truck and his equipment, and was going out to convass trade, he could not get your goods?—A. Yes he could, sir.

Q. He could?—A. Yes, sir.

Q. How is that?—A. We cannot say to a jobber you must join the association. All we can say to him is you must maintain our prices.

Q. Yes?—A. And it is up to the jobbers themselves to sell this jobber on the idea of becoming a member.

Q. Well now, is it not a fact that you have cut off jobbers who would not sign and join up with the Ontario Wholesale Tobacco Distributors?—A. Not for that specific reason.

Q. Not for that specific reason?—A. No, sir.

Q. Well, we have a number of complaints of that character.—A. I would be very pleased to give you the history of any complaint. You are speaking of generalities. If you can give me the names of them I can produce satisfactory reasons why we have not sold them.

Q. Well, the generality of it was such that I thought at once that it was a fact that you helped the Ontario Wholesale Tobacco Distributors by refusing to sell goods to those who would refuse to join their association?—A. No, that is not the case, sir.

By Mr. Edwards:

Q. Does the independent jobber purchase his supplies on the same basis as the association jobber?—A. When you say "independent" you mean?

Q. I mean one who is not a member of the association?—A. Yes, sir.

By Mr. Sommerville:

Q. Now then, on this same agreement, and forming part of it, are the Formation, Powers and Duties of Investigating Committee:—

> 1. The Investigating Committee shall be composed of three wholesale grocers and three wholesale tobacconists. The committee is at present constituted of the following wholesale grocers:—
>
> T. H. Kinnear of National Grocers Co. Ltd., Toronto; F. R. Parnell of F. R. Parnell Co. Ltd., St. Catharines, Ont.; J. Watson Young of Elliott, Marr & Co., Ltd., London, Ont., and in the absence or inability to act of any of the above named, then of H. L. McNally of National Grocers Co., Ltd., Toronto, or Charles Watt of Geo. Watt & Sons, Ltd., Brantford, or Allan Gilmour, of Gilmour & Co., Brockville, and of the following wholesale tobacconists:—
>
> Thomas McPhail of McPhail Bros., Brantford, Ont.; Jeremiah Gibbs, Hamilton, and M. M. Auerbach of Consumers Wholesale Tobacconists and Importers, Toronto, and in the absence of or inability to act of any of the above named, then of B. McAuley of McAuley Bros., Toronto, or J. J. MacCallum, Kitchener, Ont., or E. J. Harris, 83 York Street, Toronto.
>
> 2. The committee shall make enquiry into all complaints of alleged violations of the agreement.
>
> 3. The enquiry or investigation shall be made in such manner as may be approved by the committee, who may employ an agent or agents to interview witnesses and obtain information regarding the said complaints, and may act on the information so obtained, but before so acting the party charged as having violated the agreement shall be afforded an opportunity of appearing before the committee in answer to said complaint.
>
> 4. If, in the opinion of a majority of the committee, a violation of the agreement has occurred, the committee shall make a report of its finding to that effect, together with a recommendation as to the penalties to be inflicted, which report and recommendation shall forthwith be forwarded to the Tobacco Manufacturers.
>
> 5. In case the party being investigated is represented on the then existing committee, that member of the committee shall, for the time being, withdraw and in the investigation of that particular case, be replaced by another member chosen by the remaining members.

6. When any members' connection with the committee ceases from any cause, his place shall be filled by vote of the remaining members.

Now, that is the general machinery that is adopted for the functioning of the Ontario Wholesale Tobacco Distributors?—A. Yes, sir. I understand they had a meeting in Toronto last week, and I understand there was some change made in the personnel.

Q. But that is the general principle?—A. Yes, sir.

By Mr. Senn:

Q. Do you assign any particular territory to any jobber?—A. No, sir.

Q. And two or more jobbers can canvass the same territory?—A. Yes, sir.

Q. Well, I would like to know very much just what are your reasons for refusing certain applicants.—A. Because the chief reason is, that we believe in that case there are sufficient jobbers in that territory to take care of the trade, and if other jobbers are permitted, or if we put them on the list to cover the same territory, competition will probably be so keen that it will lead to price cutting.

Q. Well, I know of certain complaints that have been made just along that line.—A. I will be very glad to give any complaint my personal attention.

Q. I will hand you the name later.—A. All right, sir.

By Mr. Factor:

Q. That is not the principle, it is the system that we are trying to ascertain, the system that prevails, whether that system is for the good and to the advantage of the people as a whole, not to the Imperial Tobacco Company.—A. Well, sir, of course my opinion is that that is the right system, but who shall judge as to whether it is or not I cannot say.

Q. I quite see your argument about distributing your products with the jobbers perhaps, but take in the last three or four years people have been going through a depression and suffer a great deal. Now, you maintain retail stores in Toronto?—A. Yes, at a considerable loss, too.

Q. Yes. Now, there are independent retailers there that you are forcing to go to the jobbers and pay 10 per cent more for their goods.—A. Mr. Factor, may I ask you a question: Would you like us to sell every retailer in Canada direct?

Q. I certainly would have liked to see you, especially in the last three years of depression, helping out the independent retailer instead of asking him to pay 10 per cent more for his product and enable him to make a little money. —A. Would you have us sell to every retailer direct?

Q. How many jobbers have you got in Toronto?

Mr. SOMMERVILLE: 59 I think it is.

The WITNESS: Yes, sir.

By Mr. Sommerville:

Q. And 5,000 retailers?—A. No, sir, 3,000.

By Mr. Factor:

Q. And how many of the independent retailers are able to maintain a living with the margin of profit that they are getting when they have to pay 10 per cent more for their product?—A. They would maintain a living if they did not cut prices.

Q. I am talking about the man that maintains prices.—A. He maintains a living.

Q. On a margin of $2\frac{2}{3}$ cents?—A. Talking percentage.

Mr. SOMMERVILLE: 13 per cent.

By Mr. Factor:

Q. What position is he in to compete with the man that buys from the jobbers on the basis of 10 per cent less for his goods?—A. Compete in what way?

Q. Buying direct from the manufacturer?—A. Competing in what way?

Q. In selling his merchandise?—A. Well, he has a certain clientele that he serves.

Q. Yes, I know, but the man that has to pay 10 per cent more for his merchandise has got the same overhead as the man that buys direct.—A. No, very seldom so.

Q. Take an ordinary retailer that buys from the manufacturers direct, he pays 10 per cent less?—A. That is right.

Q. But the other retailer who buys from the jobber pays 10 per cent more? —A. That is right.

Q. Well then, the profit of the independent retailer is 10 per cent less?—A. Well, if he has sufficient volume to warrant his buying direct he would get the 10 per cent.

By Mr. Edwards:

Q. Mr. Spafford, is not that plan followed the same as it is with any other line of business? It is the convenience which the wholesale distributor gives to the man who buys a small quantity every day and who is not in the position to pay express charges and so forth?—A. That is true, sir.

Q. And that is why the 10 per cent is there?—A. Yes, sir.

Q. For the convenience of the small retailer?—A. Yes, sir.

By Mr. Senn:

Q. You have those jobbers within the association checking up the operations of the jobbers association. Have you any similar check up on the retailers who are getting this 10 per cent cut, any system of check up on their operations? —A. Well, only through our own representatives.

Q. It would not be nearly so efficient as the other, would it?—A. We know immediately a retailer cuts prices. I mean, if he is a direct account of ours, or if he is not, we know he is cutting prices; he must do it openly.

By Mr. Sommerville:

Q. Well now, Mr. Spafford, in addition to this jobbers association you have in Quebec, Ontario and Manitoba your own jobbers; you have got your own jobbers?—A. Yes, sir.

Q. Kirk in Hamilton?—A. Yes, sir.

Q. And Scales & Roberts in Toronto?—A. Yes, sir.

Q. And Fortier in Montreal?—A. Yes, sir.

Q. And then you have your commercial travellers out selling your goods? —A. Yes, sir.

Q. And the Imperial Tobacco Company have their men out?—A. Yes, sir.

Q. And then the Tuckett Tobacco Company have their men out?—A. Yes, sir.

And Houde have their men out?—A. Yes, sir.

Q. And when these three take orders from the independents they pass them through a jobber?—A. Yes, sir.

Q. And do you keep the jobbers in line by the distribution of these orders that you take?—A. Well, I do not quite get your question, but our men are instructed to take an order from the dealer and have it shipped through whatever jobber the dealer designates.

Q. Through whatever jobber the retailer designates?—A. Yes, sir.

Q. Then do you sometimes, in spite of the fact that he may designate a certain jobber, ship them through your own owned and controlled jobbing house? —A. Not if the dealer designates the National Grocers of Toronto.

Q. No, but if he designates some others?—A. No, sir.

Q. Well, the statement has been made, that if certain jobbers don't do certain things for the Imperial Tobacco Company then the orders that would ordinarily go to that jobber go to the owned and controlled Imperial house, and that one means of holding that jobber in line is by giving your owned and controlled house the orders that come from your commercial travellers?—A. Well, I would say—

Q. Is there any truth in that statement?—A. I would say that it is a very exaggerated and unfair statement without any foundation of fact.

Q. I see. Then you have not had that experience?—A. No, sir. I might say that for seven years I was with the Tuckett Tobacco Company before they were taken over by the Imperial and I fought the Imperial tooth and nail and I know both sides of the question probably better than most people.

Q. Yes. Well then, with respect to your program of displays, is it a fact that your travellers are sent out to get as much display space in a store as possible?—A. Yes, sir.

Q. And then do they do this sort of thing: The traveller for the Imperial will go into a town where there are three or four retailers and talk to one man and say "We will make you the agent for the Imperial in this town . . ."—A. No, sir.

Q. "We will make you the agent for the Imperial in this town if you will give us your store for display"?—A. Not to my knowledge.

Q. And then the Tuckett Tobacco Company come along and say to the next man "We will make you the agent for the Tuckett Tobacco Company in this town if you will give us your store for display"?—A. Not to my knowledge.

Q. And does the Houde man come along to the third man, the third retailer and say "Now, we will give you our goods if you will give us all the display possible"?—A. Not to my knowledge.

Q. And that does not leave very much out of four men in a town, does it? —A. No, sir.

Q. You do not know of any case of that kind?—A. No, sir.

Q. Well, those are statements that come to us.—A. I would be very glad to investigate any one that you will give me the details of.

Q. Perhaps you will hear more of that this morning from those who are in the business.—A. All right, sir.

By Mr. Kennedy (Winnipeg):

Q. Mr. Sommerville, I think it would be only fair that where there are accusations being made against any firm or representative that if they are here they should be given ample opportunity to meet them.

Mr. SOMMERVILLE: The other manufacturers are here and will give us the evidence with respect to it later, because of statements that I understand are being made, so that Mr. Spafford will have an opportunity to tell us about them.

Mr. KENNEDY (*Winnipeg*): But if accusations are made, I presume that a witness like this will have an opportunity.

Mr. SOMMERVILLE: A full opportunity to answer any statements made by manufactures or others.

Mr. KENNEDY (*Winnipeg*): I am trying to put myself in the position of a business man who has to meet what is currently called gossip.

By Mr. Sommerville:

Q. Now Mr. Spafford, in charge of sales you will know of the reduction that took place when the excise tax was taken off in November of 1932?—A. Yes, sir.

Q. And yesterday we were given to understand, that with respect to a substantial number of cigarette brands the price was reduced from $12.50 to $10 a thousand, or a reduction of $2.50 a thousand?—A. Yes, sir.

Q. And that $2 of that represented the excise tax and 50 cents represented a reduction to the consumer that came from the manufacturer?—A. Yes, sir.

Q. As a matter of fact, Mr. Spafford, is it not so that not one copper of that reduction came out of the manufacturer? On the $2 reduction you had, $2 was taken off by the excise tax?—A. Yes.

Q. The 6 per cent sales tax on $2 took off 12 cents; that made it $2.12. Was not the remaining 38 cents made up by the reduced profit of the retailer and the jobber?—A. No, sir.

Q. I am talking now of the $2.50 reduction?—A. At the time of the changed prices the retailer's margin of profit was increased.

Q. Well, I do not care if it is of the retailer or the jobber.—A. And the jobbers too.

Q. And the jobbers?—A. Yes, sir.

By Mr. Edwards:

Q. What is the average on the retail gross?—A. The direct buyer?

Q. Yes?—A. He would get about 23 per cent.

Q. Can you maintain a store on 23 per cent?—A. Yes, sir.

Mr. Edwards: I don't think it.

By Mr. Sommerville:

Q. Wait a minute now, please. You say the independent, or at least the retailer who buys direct gets about 23 per cent?—A. The retailer who buys direct, yes.

Q. Yes, and the retailer who buys through the jobber has to operate on 13 per cent?—A. Approximately that.

Q. It used to be 20 per cent I understand a few years ago?—A. The indirect man?

Q. The indirect man, yes.—A. Well, that is news to me sir.

Q. Was it not a good deal higher than 13 per cent?—A. Those figures do not show that, and they go back to 1925.

Q. Now, you say when the change took place in 1932—in November, 1932—the retailer and the jobbers were given a larger margin of profit?—A. Yes, sir. Take Turret cigarettes. The jobber prior to the duty, his profit was $9.26; after the duty his profit was $9.99 The direct retailer's profit was $20.44 and after the duty it was $21.87.

Q. How do you account for that when you got the same money for your cigarettes from the manufacturers as you were getting before?—A. From the manufacturer?

Q. From the jobber that you were getting before?—A. We did not, sir.

Q. Take Turrets. You sold them up to November, 1932, at $9.94; is that right?—A. Yes.

Q. And after the excise tax came off you sold them at $7.81?—A. Correct, sir.

Q. Which was $2.13 less, was it not?—A. That gave us 13 cents then.

Q. Now, did you?—A. According to this.

Q. Two dollars represent the excise tax, and on $2 the sales tax is 12 cents. So that your $2.12 came off by reason of taxation, did it not? Is not that the fact?—A. May I figure it my way?

Q. Is not that the fact?—A. Would you mind repeating that?

Q. I said when you sold the cigarettes for $2 less that $2 represented the excise tax? That is right.

Q. And when you sold the cigarettes for $2 less you paid 12 cents less on sales tax?—A. Yes.

Q. So that altogether you sold for $2.12 less by reason of a reduction in taxation. Is not that right?—A. Your figures would seem right. I would like to quote mine. I cannot reconcile those to mine.

Q. Is not that the fact? You took $2.12 off by reason of the reduction in excise and sales tax?—A. Yes, that is right.

Q. And since November, 1932, you have been getting $2.13 less for your cigarettes than you were getting before?—A. Yes.

Q. Of which $2.12 represented the tax I referred to?—A. Yes, we lost 1 cent.

Q. Per thousand?—A. That is right, sir.

Q. And the jobber and the retailer lost the other 37 cents?—A. But his percentage increased.

Q. I do not care how his percentage increased; he lost the other 37 cents?—A. Well, sir, if you sell an article at $20 and the discount is 10 per cent you make $2, don't you?

Q. Yes?—A. And if you sell the article at $8 and the discount is 10 per cent you only make 80 cents.

Q. That is sound mathematics.

By Mr. Senn:

Q. These percentages you have quoted are on the selling price rather than on the purchase price?—A. On the selling price, yes.

Q. Why do you figure it in that way. Are not the profits estimated on the purchase price?—A. That seems to be the custom in the wholesale and retail trade—to figure their margin of profit that way.

Q. If the selling price is reduced it would increase that percentage?—A. Yes, sir.

Q. So that you are reckoning in that peculiar way to show an increase in percentage?—A. It is not peculiar.

Mr. EDWARDS: That is right. 25 off is 33⅓ on.

The WITNESS: Yes.

By Mr. Senn:

Q. Is that the recognized principle in business that you reckon your cost on selling price rather than on purchase price?—A. It is in the tobacco business.

Q. Is the tobacco business alone in that?—A. I do not know, sir. I say that is so in the tobacco business. I have been so busy with my own business I have not worried about the other businesses.

By Mr. Sommerville:

Q. That same principle you have just referred to accounts for the reduction in 1932 in Dixie cigarettes, Guinea Gold cigarettes, Millbank cigarettes, Turret cigarettes, Viceroy cigarettes and Winchester?—A. In a general way it applies to all those brands.

Q. Those exact figures apply in the same way?—A. Yes.

Mr. FACTOR: So the actual reduction of the Imperial Tobacco Company was one cent per thousand.

Mr. SOMMERVILLE: Or less.

Mr. FACTOR: It may be on that figuring of the tax; it may be nothing.

By the Chairman:

Q. Mr. Spafford, it strikes me that what Mr. Sommerville says is quite true. It is a question of fact, and it seems to me there is not much use labouring the question; it could be frankly admitted, because with the reduction of the $2 excise you get an additional reduction in tax of 12 cents on your sales. There is no question?—A. No, sir.

Q. That accounts for the total reduction; and the sales tax reduction and the excise tax reduction account for the total reduction that you made, for instance, in Turrets and a number of these others?—A. Yes, sir, within a cent.

Q. Within a cent?—A. Yes.

By Mr. Sommerville:

Q. Then, with respect to cut tobaccos, you made a reduction at the time that you took out the cigarette papers from a number of brands?—A. Yes.

Q. Now, let me understand. The cigarette papers go into each package, or they did?—A. Yes.

Q. And if there were 15 packages in a pound that represented 15 packages of cigarette papers to a pound of tobacco?—A. Yes, sir.

Q. And I am told that these 15 packages in themselves would represent a cost of anywhere from 5 to 8 cents a pound if included in the cigarettes?—A. I think that is a little high; it would be 3 or 4 cents.

Q. 3 or 4 cents. All right, I will take your figures. 3 or 4 cents was the price for those papers?—A. Yes.

Q. And then by reason of the excise tax being put on 2 cents would have to be added for each package of papers?—A. Yes.

Q. And if there were 15 in a pound that would be 30 cents, that would be added?—A. Yes, sir.

Q. Added to a pound of tobacco?—A. Yes, sir.

Q. By reason of the excise. And if there were 18 packages in the pound it would be 36 cents?—A. Yes.

Q. That tax would figure out at from 30 to 40 cents a pound according to the size of the package in which you divided the pound?—A. Yes, 36 cents was the highest price.

Q. Yes. At that time you took off, I understand, from 4 to 6 cents a pound on your cut tobacco; the statement is here?—A. You have the pages there?

Q. Yes, I have, Mr. Spafford.—A. 7 cents down through.

Q. So that by cutting out the papers you would save 3 to 4 cents?—A. Yes.

Q. And the additional amount would be represented by a reduction from the manufacturer?—A. Yes.

Q. Less whatever reduction there was in the sales tax?—A. Yes, that would be fractional—7 cents a pound.

Q. Thank you. I just wanted to have that situation cleared up. That is all, Mr. Spafford.

By Mr. Young:

Q. There is something here which has been puzzling me. I do not know whether you can straighten it out or not?—A. I will do my best, sir.

Q. I see from the trade of Canada that we exported last year some 853 pounds of cigarettes valued at $894, or approximately $1 a pound. Then I find that we imported from the United States some 4,335 pounds of cigarettes valued at $12,889 or an average of $2.97 a pound. I want to know how it comes that the cigarettes we import are worth so much more than the ones we export?—A. Well, it is the duty, sir.

Q. No, the duty on a pound of cigarettes would be about $4.85 at these values, and that is added to these importations.

The CHAIRMAN: That is the price before duty you are quoting?

Mr. YOUNG: Yes.

The WITNESS: Well, I am sorry I could not answer that offhand. I would be glad to get the information for you.

By Mr. Young:

Q. Now, we were told yesterday that it takes 3 pounds of tobacco to make a thousand cigarettes?—A. That is approximately right, sir.

Q. Then if they are worth $2.97 a pound that brings 1,000 cigarettes before the duty is paid up to $8.91 and the duty would be about $14.55 which would bring the imported cigarette to an enormous price?—A. It is an enormous price. I think a package of Chesterfield or Lucky Strike imported from the United States, if they sold at 12½ cents in the United States, I believe the retail price here is something like 35 or 40 cents.

Q. Yes. I figured it would be $23.46 duty paid value on 1,000 cigarettes? —A. I have not figured it out.

Q. I find that the total exports of cigarettes from the United States—these are American figures— —A. Exported where, sir?

Q. To the world from the United States—the total exports were 2,771,296,000 valued at $5,722,661, approximately $2.06 a thousand. That is the value of cigarettes exported from the United States to all countries, but the value of cigarettes exported from the United States to Canada figures at $8.91 a thousand? —A. I do not question your figures, sir, but it does not look right to me.

Q. It does not look right to me either. I want an explanation.—A. I think your figures are wrong.

Mr. FACTOR: You do not know Mr. Young. He never figures wrongly.

Mr. YOUNG: These figures are from the Bureau of Statistics, except the exports which came from the American Embassy.

The CHAIRMAN: They are the ones that are wrong.

The WITNESS: I know this, sir, that we do what we call a ship storage business—ships coming in, say, at Vancouver, and we have an inbound warehouse and we carry American cigarettes, and our price to these ships, if I am not mistaken, is $2.35 in bond. Now, that is what we make—you know, the usual small margin of profit.

By Mr. Young:

Q. In your brief, at page 1619 of the record, I find that your value for 1,000 cigarettes, excluding excise tax and sales tax in 1933 was $3.46⅔ per thousand?—A. May I ask Mr. Lane to answer those questions. He is the chief statistician.

Q. The point is this that your value of cigarettes, apart altogether from taxes, is $3.46, while the American value of cigarettes apart altogether from taxes is $2.06, and I want to know why it costs $3.46 to manufacture cigarettes in Canada when they can be manufactured for $2.06 in the United States?

Mr. LANE: You figure $2.46 in the United States?

Mr. YOUNG: $2.06.

Mr. LANE: The comparable values of cigarettes in Canada and the United States were covered in that statement filed yesterday, Mr. Young. This $3.46 is the manufacturer's selling price.

Mr. YOUNG: Is not the export price the manufacturer's selling price?

Mr. LANE: The manufacturer's export price? Not necessarily.

The CHAIRMAN: What you are asking, Mr. Young, is to account for an alleged difference between the selling price of American cigarettes and Canadian cigarettes?

Mr. YOUNG: Yes.

The WITNESS: Exported and imported into Canada.

Mr. YOUNG: The Americans export to the world and their factory selling price is $2.06 and your factory selling price is $3.46 according to your figures.

Mr. LANE: That is our selling price.

The WITNESS: Excluding duty and sales tax.

By Mr. Young:

Q. Here is the manufacturer's selling price. That is the export price of cigarettes in the United States, apart altogether from duties and taxes, $2.06 a thousand whereas in Canada it is $3.46. Now, Mr. Miller tells me that out of that $3.46 you must take the duty that he pays on the raw leaf that goes into the manufactured article?—A. That is right.

Q. Which, I understand, amounts to about 90 cents. That would bring the price then to $2.56 instead of $3.46, leaving a difference of 50 cents a thousand between the American price and the Canadian price?—A. The sales tax, sir, comes off that.

Q. The sales tax is already taken off?—A. The sales tax—

Q. That is already allowed for. That would leave a discrepancy of 50 cents a thousand between the American manufacturer's price and the Canadian manufacturer's price.

Mr. LANE: Your figures are based on the reports of the Department of Trade and Commerce. We are not familiar with them at all. We will be glad to get them if you wish and submit a memorandum on it.

By Mr. Sommerville:

Q. Before you leave I want to have you, the same as for the Imperial, submit to the committee a breakdown of the elements entering into the cost of manufacturing one of your brands of cigarettes. I do not want to know the name of the brand, but take one of them. Pick out one of your brands of cigarettes. Give us the brand that has most United States leaf in it and the one that has most Canadian leaf in it, and give us the various elements that go into the manufacture of the cigarettes?—A. We will supply that to you, sir.

Q. And, similarly, two samples of your cut tobacco?—A. You mean the figures?

Q. The figures?—A. You do not want the samples of tobacco?

Q. Oh, no.

Mr. FACTOR: Well, Mr. Sommerville does not smoke.

The witness retired.

CHARLES W. THOMAS, called and sworn.

By Mr. Sommerville:

Q. Mr. Thomas, you represent the Canadian Leaf Tobacco Company, Limited?—A. Yes, but I am not an officer of the Canadian Leaf Tobacco Company.

Q. You are not an officer?—A. No, just a buyer of tobacco.

Q. You are the buyer?—A. Not "the", one of them.

Q. You have been asked to represent them here?—A. Well, I am merely down here observing. Mr. Jackson, the head man of our company was up here

about two weeks ago, and he understood from either you or Mr. Stevens, I think, that we, being packers, possibly would not be called; is that right?

Q. No.—A. I understood that from him.

Q. At any rate, we have been furnished by the Canadian Leaf Tobacco Company through Mr. Jackson, who is the president of the company—?—A. Yes.

Q. —a financial statement, which was sent from Richmond, Virginia, of the past five years. You recognize Mr. Jackson's letter?—A. Yes.

Q. Your company is the Canadian branch of the Universal Leaf Tobacco Company of the United States?—A. Yes.

Q. And that is quite a large buying organization, is it not?—A. Well, I do not know exactly how large it is, I never asked; for they had been there before I came up here. It is one of the largest leaf dealers.

Q. In the United States?—A. Yes.

Q. Up here you have a plant at Kingsville?—A. Chatham.

Q. There you buy leaf and process it?—A. Well—

Q. What is your method of doing business?—A. Most of the tobacco we buy is grown around Delhi. We buy from the Delhi district, ship to Chatham, and process it there.

Q. And then sell it to the manufacturers?—A. Well, most of our—

Q. Or do you buy it on commission orders from the manufacturers?—A. Most of our tobacco is bought on order.

Q. Bought on order?—A. Yes.

By Mr. Edwards:

Q. You do buy some on speculation?—A. I think we have bought some, sir. I am not familiar with what it is bought for or who it is bought for.

Q. You just buy it?—A. That is about it.

The Chairman: He says clearly most of it is bought on order.

The Witness: Yes, I think so.

By Mr. Sommerville:

Q. Are these orders domestic or foreign?—A. Most of them, to the best of my knowledge, would be from England.

Q. From England?—A. Yes.

Q. Who are the domestic buyers from you?—A. Well, most of these small manufacturers, the people who are not large enough to have their own buying organizations in the field.

Q. When you refer to that, who are the manufacturers that buy from you in Canada?—A. We have supplied the Royal Canadian Tobacco Company, Toronto, I think, with some little tobacco, and Grothe.

Q. Of Montreal?—A. Yes.

Q. The Macdonald Company?—A. Not to my knowledge, sir.

Q. The Rock City Company have their own organization?—A. Yes.

Q. Well now, I observe that for the year ending June 30, 1929, your net profits on handling tobacco was $42,594.33, and in that year you handled 585,000 pounds at an average cost to you of 32·85 cents a pound. This is the statement you furnished me with yesterday?—A. Well, I will probably find out more about profits here than I will down there, not being an officer, but anyway, if the profit was $49,000 odd as you say—

Q. According to the statement filed, the profit that year was $42,594.33?—A. On approximately half a million pounds of tobacco?

Q. On approximately half a million pounds of tobacco?—A. I think we packed more tobacco that year than that. That will be flue-cured tobacco. We packed a certain amount of dark and some burley tobacco.

Q. Burley and other tobacco as well?—A. Yes.

Q. But the bulk of your tobacco would be flue-cured?—A. Oh, yes, it would now; it would back then, possibly.

Q. It would then?—A. I would not say, I am not sure, but I do not think the bulk was.

Q. Would you give me a statement then, of your purchases of other than flue-cured?—A. All that is flue-cured.

Q. Will you be good enough to send in a statement showing the purchases of tobaco for the years 1929 to 1933 inclusive?—A. Yes.

Q. Then the next year I observe your profits were $48,571.69 on a purchase that year of flue-cured tobacco amounting to 2,319.950 at an average of 32·80 cents per pound. That was your purchase of flue-cured?—A. Two and a half million pounds; if that is there, it is right.

Q. We shall keep the purchases separate. The profits the second year were $48,571.69. In 1931 they appear to be $59,406.34; in 1932, $113,506.12 and in 1933, $138,199.74. These profits were on the purchases of leaf. There is a statement here as to the total amount of leaf handled each year. In the year 1929 the total amount of leaf handled was 4,433,000 pounds. In 1930, the total amount of leaf handled was 2,643,500 pounds; in 1931, 5,042,600; in 1932, 6,972,500, and in 1933, 7,771,900. Then, I observe in addition to those profits, that are shown here, reserves have been set up which amounted to $10,688.28 in 1929, and they have increased to $68,028.38 in 1933. Your total reserves are $68,028.38; plant and equipment was $81,082.56. I think I shall have this financial statement copied in the record at this stage.

The CHAIRMAN: That will be exhibit 139.

Financial statement of the Canadian Leaf Tobacco Company, Limited, for the years 1929 to 1933 inclusive filed and marked exhibit 139.

Q. In 1929, according to your statement, you bought 518,500 lbs. of flue-cured at an average of 32.85 a pound. In 1930 you have your figures divided into two lots. First you purchased 2,319,950 pounds at an average price of 32.30, and then culls purchased from the grower, not including the above, 98,319 pounds, at an average of 2.82 cents a pound. What are culls?—A. Culls would be tobacco that—suppose I buy a man's crop of tobacco, we will say, at an average price of 20 cents, we would ask him to throw out all green and black or the dead, and that would constitute cull.

Q. I observe on the first day of 1930, October 6, you bought 8,774,505 at an average price of 35.17. This is your statement?—A. Yes.

Q. Do you remember what the high price was that year?—A. The top price, yes.

Q. 1930?—A. Forty cents, I think.

Q. On that first day you bought on the average of 35 cents. Then, the price dropped until on the 22nd October your final purchase of 5,000 was an average of 24?—A. Yes.

Q. In 1931 you bought a total of 1,824,000 pounds, at an average of 23.20 cents?—A. Yes.

Q. In addition you bought some culls from growers, not included in the above, 49,900 pounds at an average of 5.88 cents?—A. Yes.

Q. On the first day of the market, the 6th October, I observe you bought 401,000 pounds at an average of 28.35. The top that year was 30 cents?—A. Yes, that is right.

Q. I observe that more than half your purchases were at an average better than 25 cents.

The CHAIRMAN: What year?

Mr. SOMMERVILLE: 1931.

The WITNESS: You mean half the tobacco we purchased averaged more than 25 cents?

By Mr. Sommerville:

Q. Yes. Look at the statement.—A. It possibly did in 1931, yes.

Q. Look at the remaining figures further down. The next week I observe a very sudden drop to 16 cents and thereabouts. How do you account for the serious drop at that time, Mr. Thomas? Were you following your competitors, or were you affected by the conditions that had been created?—A. In what way do you mean?

Q. In what way do you account for a very serious drop in prices?—A. That was the year that there was some of the tobacco that was, what you might say, signed up under option by some other growers, and I also think—I am not sure—but I think the pound sterling had something to do with it, and this drop would naturally come about by an inferior quality of tobacco.

Q. We have had evidence of the 1931 debacle in the market. You know of the conditions that prevailed?—A. Yes.

Q. There was a very sudden drop the second week, and there was a good deal of confusion in the minds of the growers, was there not?—A. A little, I guess.

Q. That is a good deal from a buyer. Let me see that statement again.

Mr. SENN: I understood the 1931 crop was an exceptionally good crop, and now the witness has stated it was an inferior crop.

Mr. SOMMERVILLE: The 1932 was the best crop but 1931 was a good crop.

The CHAIRMAN: So the other witnesses say.

The WITNESS: It was a good crop.

Mr. SOMMERVILLE: The 1931 crop was a good crop?

The WITNESS: Yes.

By Mr. Senn:

Q. I understood Mr. Thomas to say one of the reasons for the low price was the inferior crop?—A. What I mean by that is the tobacco we were buying then was not as good as the tobacco we had been buying. There is always a range from the top to the bottom.

Q. Earlier in the year?—A. That is right, sir.

By Mr. Sommerville:

Q. We have not got the 1932 figures, but they are contained in the report of Mr. Sutherland at page 30. This report shows your total purchase of flue-cured to be 4,524,000 pounds at an average of 14·08 cents in 1932?—A. Yes.

Q. In 1933 the figures you have given me are 1,229,400 pounds at an average of 17.56 per pound, and culls from growers not included in the above 513,749 pounds at 4.47 cents?—A. Yes.

Q. That is to say, the good tobacco you bought was 1,229,400 pounds and culls were 513,749 pounds?—A. Yes.

By Mr. Boulanger:

Q. What do you do with culls?—A. We pack them and try to sell them, and do sell some of them.

Mr. YOUNG: That is a trade name.

The WITNESS: Very inferior tobacco.

The CHAIRMAN: You were quite successful in selling it too, I should judge from your statement.

By Mr. Sommerville:

Q. In 1933 you handled a quantity of tobacco for growers, did you not?—A. Yes.

Q. What is the basis upon which you are handling that?—A. We make a cash advance when they bring tobacco to us, green weight; that is before it is redried, and before the tobacco has been graded, largely, and I think the advance will vary from possibly 7 cents up to 10 cents or from 6 to 10, I do not know exactly. That is just an advance, and the grower still retains a title to his tobacco, and we will sell that tobacco for the grower and with the grower's consent. They have to agree on the price that is made when this tobacco is sold, when the grower gets the balance.

Q. You receive the tobacco?—A. Yes.

Q. Then you grade it?—A. Yes.

Q. You re-dry it?—A. Yes.

Q. You pack it in hogsheads in the various grades?—A. Yes.

Q. And sell it upon those grades?—A. Yes, sir.

Q. And when it is sold it is sold at a price that is approved of by the grower?—A. Yes.

Q. In other words, you submit the price to him?—A. Yes, sir.

Q. Then, what remuneration do you get for your services?—A. We got a handling charge.

Q. What is the handling charge?—A. Our handling charge is $5 a hundred on that tobacco.

Q. $5 a hundred on the tobacco?—A. Yes.

The CHAIRMAN: Does that include shrinkage?

The WITNESS: Yes, that is re-dried weight.

By Mr. Sommerville:

Q. The handling charge is not upon the green weight the farmer delivers to you?—A. No, sir.

Q. It is on the re-dried weight after it has been made ready for the hogsheads?—A. Yes.

Q. And the shrinkage is what?—A. It will vary, depending on the grade of tobacco, possibly from 10 to 14 per cent.

Q. As much as 14 on flue-cured?—A. I say from 10 or about 11½ to 12 per cent, possibly.

Q. Then, for the services that you render after it is sold you take $5 a hundred?—A. Yes.

Q. For the charge?—A. Yes.

Q. I observe that at present you have in hand for the farmers 4,511,640 pounds of leaf, which you are handling in this way?—A. I think that is correct.

Q. And that the average advance on this leaf to this date is 8·62 cents to the grower?—A. That is right.

By Mr. Factor:

Q. May I interject at this point? I have received a complaint from Delhi, from one of the growers there, in connection with this transaction, Mr. Thomas. After the Imperial Tobacco Company stopped buying, you went to the growers and contracted their crops of tobacco last winter?—A. Not necessarily after the Imperial stopped, after everybody stopped, as far as we knew.

Q. You agreed to advance them between 6 and 10 cents per pound?—A. Yes.

Q. This particular grower tells me you are now coming around and trying to get growers to sign up an option on tobacco for $10\frac{1}{4}$ cents a pound?—A. Not an average; maybe on that particular crop.

The CHAIRMAN: Is that the final figure, Mr. Factor?

Mr. FACTOR: Yes.

By Mr. Factor:

Q. I shall read the letter:—

> ....To contract their tobacco with the Canadian Leaf Company, and have it processed and gave the growers in advance on their crops from 6 to 10 cents per pound. Now they are coming around and trying to get the growers to sign an option on the tobacco for $10\frac{1}{4}$ cents a pound net. I have received 9 cents advance on my tobacco; now they say if I sign this option and the worst comes to the worst, I will accept $10\frac{1}{4}$ cents per pound, but they make the growers a promise they will try and get the growers more money, but do not give the growers any signed agreement to that effect. So now if the growers sign for the amount I have mentioned, we cannot expect to collect any more than the option calls for; but they promise the growers definitely that they will pay more money, but do not guarantee they will now.

Q. What do you say about this?—A. That is exactly right.

Q. That is exactly right?—A. Yes, sir. We will try to give them more, but there are other folks who have some tobacco also to sell, and if worst comes to worst—that is exactly what he said—we would like to be in a position to get the growers as much for their tobacco as we possibly can. We do not guarantee to get them any price when we sign them up.

By Mr. Kennedy (Winnipeg):

Q. Do you give any consideration for such an option; do you pay any money, or give any consideration?—A. Absolutely not, sir.

Q. It is binding on them, but not binding on you?—A. I understood you to say, do you pay them to sign these options.

Q. Do you give any consideration?

The CHAIRMAN: They have already given them 9 cents.

The WITNESS: We have already advanced them some money on the market.

By Mr. Kennedy (Winnipeg):

Q. That is a consideration?—A. We have paid that much money.

Q. It is an option to buy on the market?—A. It is not an option for us to buy tobacco, it is an option for us to sell tobacco.

By Mr. Factor:

Q. I understand that, but is not the system this: that you say you will sell the tobacco for at least $10\frac{1}{4}$ cents on the market?—A. We might have to sell it for that, but we do not intend to sell it for that.

Q. For the option?—A. For the option. We have a fairly good reputation down there and we would like to keep it. To do that we have got to get the growers all the money we can. We do not intend to take advantage of a man. I do not know what the associations' prices are, but I think our prices that we are offering for tobacco will compare very favourably to those of the association.

By Mr. Sommerville:

Q. In this case you are acting as agent for the grower; you are grading it, treating it, you are going to sell it in the market?—A. Absolutely, sir.

Q. In this particular instance this man has received 9 cents already on his tobacco, and he gives you an option to sell at $10\frac{1}{2}$ cents; and you charge him 5 cents a pound for treating it—he owes you money, doesn't he?—A. No, that means above.

Q. That is, $10\frac{1}{2}$ cents over and above all charges?—A. Yes, sir.

Q. In other words, it is $15\frac{1}{2}$ cents; or perhaps there are other charges in addition to the five cents?—A. With the exception of the broker's commission in England, and I do not know what that is exactly; and the interest charge—it is the same plan as the two associations have with the government for financing their tobacco along these lines.

By the Chairman:

Q. Before you get away from that: is not that 5 cents a pound a pretty stiff charge?—A. Well, I could not tell you exactly what it costs to re-dry tobacco, Mr. Stevens.

Q. Yes, now, I am taking it that you have deducted the evaporation—the loss in re-drying— from the farmer's weight; you do not credit him with his green weight, you credit him with the re-dried weight?—A. If we charged him, the green weight, it would be more, possibly $12\frac{1}{2}$ per cent.

Q. But if a farmer had 10,000 pounds of tobacco, and assuming that there is a 10 per cent shrinkage, you would credit him with 9,000 pounds of tobacco? —A. That is right.

Q. Then you would charge him 5 cents a pound on that for processing or treating.

By Mr. Senn:

Q. On the 9,000 pounds or on the 10,000 pounds?—A. On the 9,000 pounds.

By the Chairman:

Q. On the 9,000 pounds, that is all right; that would be \$4.50 instead of \$5.00. But you only pay him 9 cents a pound on 9,000 pounds?—A. No sir, we paid him green weight when he delivered his tobacco at our factory.

Q. You paid him 9 cents a pound on the 10,000 pounds?—A. Yes.

By Mr. Young:

Q. When you make final settlement, is that on the green weight basis?—A. That is on the green weight.

Q. The farmer is going to get paid for green weight in the end?—A. Yes, sir, this option about which Mr. Factor speaks means green weight at the farm.

Q. And the 5 cents you are collecting is going to be added in paying for this water you dry out; you are going to pay for it.

Mr. SOMMERVILLE: No.

The WITNESS: Paying for the water; we don't. We advance him 9 cents a pound.

By Mr. Sommerville:

Q. He is getting a price from the purchaser, and he gets 5 cents irrespective of what the purchaser pays?—A. There is a set charge for handling.

Q. And the other charge based on the dried weight?—A. Yes, sir, that is right.

By Mr. Young:

Q. That is a set charge, but on this basis the farmer is going to get 10¼ cents for his green weight?—A. That is right.

Q. And if you sell the tobacco for 12 cents, over the price you named him; if you get 12 cents he is going to get his 12 cents on the green weight?—A. We are selling dried weight, but it is averaged back.

Mr. EDWARDS: I do not think you would get that 12 cents on green weight.

Mr. YOUNG: It said so.

The CHAIRMAN: Oh, no.

By Mr. Factor:

Q. Where does the handling charge come in?—A. Well, under this option we pay him 9 cents for his tobacco when he brings it in, but after processing and handling it will probably average about 18 cents in the hogshead and average back more than about 10 cents to the grower.

By the Chairman:

Q. After you deduct your $5?—A. Yes, sir.

Q. Plus shrinkage?—A. Yes, sir.

Q. Then the handling, including the loss in weight, cost the farmer about 8 cents a pound?—A. About 6 cents I should imagine. I do not think it would be quite 8 cents.

Q. Darned near it. Well, that is a pretty stiff charge?—A. $5 a hundred.

Q. Yes. The farmer it seems to me is getting the short end of it again.

By Mr. Senn:

Q. How do these prices compare with the prices of the other associations that are being financed by the banks?—A. I think we were the first up here. Although we charge $5 a hundred there—I think we were buying tobacco for the Tillsonburg Association in Tillsonburg and we bought over a contract which called for $5 a hundred for handling tobacco.

By Mr. Sommerville:

Q. Yes, but you have handled it for less money than that?—A. Yes, we have handled it for less—where we get large quantities from one individual.

By Mr. Edwards:

Q. In addition to the 5 cents the farmer also has his carrying charges while it is in your barn?—A. He has to pay storage and insurance.

Q. That does away with your financing through the bank, presuming you bought a crop?—A. Yes, sir, if we bought his crop.

By Mr. Sommerville:

Q. Perhaps you can file with this committee a statement showing the cost of handling that tobacco, breaking it down. Your actual cost?—A. Well, Mr. Sommerville, if I might: in handling tobacco I know this much that, we will

say the handling cost is $5 a hundred for a quantity of half a million pounds or a million pounds of tobacco; but if you had to start up your plant, I do not think you could handle tobacco for $7 a hundred.

Q. But you got four and a half million pounds there?—A. That is right.

Q. And with that volume your costs ought to be substantially less than $5?—A. But we did not know we would get four and a half million pounds. We did not know whether we would get half a million, or a million, or how much.

Q. But you have been following this practice for some years, have you not?—A. In 1932 I think we processed some tobacco for Mr. Kingstone, one or two crops; and for Mr. Gregory one or two crops; and in 1931 we processed some tobacco for Mr. Leitch, and I think some for Mr. Scythes.

By the Chairman:

Q. But you are only operating in a large way this past year?—A. We did not have many orders. Our orders amounted to but very little, and there was a lot of tobacco in the country, and we were out on our own to buy tobacco and speculate, and you might have to pay a little less than what you would like to and it might tend to demoralize things. We tried to do our bit in the market and stabilize as much as we could. I might mention here that we have had an opportunity to buy out some of these contracts at that price, and the growers have been to us to sell them, but we have not bought them.

By Mr. Factor:

Q. When do you make the advance to the grower?—A. When he brings in his tobacco.

Q. And what he gets— —A. Depends on the quality of the tobacco.

Q. When does he get the balance?—A. When it is sold.

By Mr. Edwards:

Q. Is not that really co-operative selling on a commission basis; that is what you are doing?—A. That is right. We are handling tobacco for the farmers just like the associations.

Q. In other words, they are carrying the stock with you instead of selling it outright, hoping to get a better price?—A. That is right.

By Mr. Young:

Q. When you take the farmer's tobacco you give him so much money, you also give him some kind of a statement?—A. A contract.

Q. What does the contract say?—A. I do not exactly remember the wording of it, I wish I had one here.

Q. Does it describe the tobacco you take in?—A. No sir, it does not describe it.

Q. You say you are going to pay him according to grade. Do you keep his tobacco separate?—A. After we grade the tobacco, we send the farmer the grade—so many pounds of this particular grade, and so many pounds of another grade.

Q. You are really taking it in on grade?—A. We take in the whole crop, regardless of whether it is the best grade or one of the poorest.

Q. Yes, but you take it on grade; you grade each shipment as it comes in—so many pounds of one, so many pounds of the other, and so on?—A. Maybe this will make it a little simpler: we take in a crop for 30,000 pounds from a grower; we advance the grower we will say 8 cents; we grade that crop of tobacco in the factory and out of the 30,000 pounds we might get so many pounds of this grade, so many pounds of that, or so many of this, and so on;

and then we will give the grower a grade sheet showing the grower exactly how many pounds of tobacco he had in each particular grade.

Q. Then you have this contract to buy tobacco on grade, according to grade; it is to be sold on grade?—A. Yes, sir.

By Mr. Edwards:

Q. It has to be sold on grade?—A. Yes, sir.

Q. Why would it not be practical, Mr. Young asks, to buy it on grade?—A. Do you mean, buy it by the hogshead?

By Mr. Young:

Q. I mean, when you buy a farmer's tobacco is it practicable to buy it in this way: so many pounds of one grade, so many pounds of another, and so many pounds of another, and so on; is it possible to buy that way, is it practical?—A. No, sir, I do not think so.

Q. Are you doing it?—A. We do it in the factory still, but a farmer—maybe he will strip his crop in two grades, or one grade; maybe this particular farmer is a good stripper, he might have a medium or a good crop of tobacco, and he might put out a grade of tobacco that we will say is good or bright; but a good many others pull the leaf in such a way as to hurt the grade.

Q. I do not want to take the farmer's grade, but it is practicable for the farmer to bring in the tobacco load by load after load, and you grade it as you buy; is that practicable?—A. I could not say, sir; it might be.

Q. You are practically doing it?

By the Chairman:

Q. Of course, the point of the whole thing is this: the farmer accepts your grade anyway?—A. Yes, sir.

Q. There is no supervisor or inspector?—A. Well, no, sir. We ask the farmers to come in when we grade the tobacco, but it has to be left in our hands.

Q. Your judgment determines the grade?—A. Yes, sir.

Q. Well, it can be sold that way?—A. It might be.

Q. It is being sold that way, you are doing it?—A. We are trying to do it. I do not think we have sold any of it yet; when it is sold that is the way it will be sold.

By Mr. Kennedy (Peace River):

Q. What grades do you use?—A. You mean, the names of the grades?

By Mr. Sommerville:

Q. I think there are 16 of them and they are set out in the Sutherland report?—A. Our grades vary, they change from year to year. It might be that sometimes we would use numbered grades, and at others we might use letters.

Mr. Kennedy (*Peace River*): Do you use numbers, 1-2-3-4-5-6, or do you use any particular name?

The Chairman: Such as "fancy," "good," "medium" and so on.

Mr. Sommerville: On page 36 of the Sutherland report there is a list of 12 or 15 grades—A, B, C, D, E and F; that is the consolidated grading which gives an idea of the type of grading that is done—whatever that means.

The Witness: I think A would be the best grade, B the next and so on, down.

By Mr. Young:

Q. And the farmers seem to be pretty well satisfied with that way of doing it, don't they?—A. I believe the farmers would rather sell tobacco green at the farm, providing the price was within reason.

Q. But these other buyers buy on the average of the crop?—A. Yes, and he gets his money for it when he brings it in; and he would rather do that than wait—we do not know how long they will have to wait.

By Mr. Senn:

Q. I think it will be of interest if the witness would file a copy of the contract that he has with the farmer?—A. I do not think I have one with me.

By the Chairman:

Q. Will you see that a copy is forwarded to us?—A. Absolutely, I will.

By Mr. Sommerville:

Q. And a statement showing the break-down of the cost of treating and processing this tobacco?—A. You mean that particular lot.

Q. This year's lot?—A. Yes.

The CHAIRMAN: Thank you Mr. Thomas.

The Witness was discharged.

Mr. BOULANGER: Before we close, there is a little matter I would like to bring up. One of the witnesses we heard last Thursday, Mr. Frenette, wrote me a letter of explanation. I have translated it the best I could, and I have sent a copy to all members of the committee.

The CHAIRMAN: Was it a correction?

Mr. BOULANGER: It is rather an explanation of his evidence; and I wonder if there would be any objection to having that letter included in the minutes.

The CHAIRMAN: I do not think so, no. It is quite all right, Mr. Boulanger.

Mr. Boulanger filed a letter from Mr. Charles Frenette, reading as follows:—

Monsieur Oscar Boulanger, M.P.,
Chambre des Communes,
Ottawa.

Cher Ami,

Au sujet de mon rapport devant le Comité d'Enquête concernant le tabac. Le Comité peut être resté sur l'impression qu'il y a beaucoup de profit et c'est pourquoi je vous envoie tous ces détails:

La moyenne du tabac acheté est de $0 \cdot 05\frac{1}{2}$ et je n'ai jamais calculé au juste la préparation qui est de $0 \cdot 02$ à $0 \cdot 03$, le fret que l'on paie pour St-Charles $0 \cdot 75$ pour 100 lbs, ce tabac ne se vend pas à St-Charles et la moyenne du fret payé pour shipper ce tabac aux clients est encore de $0 \cdot 75$ à $1 \cdot 00$ du cent. Dans une récolte on est obligé d'en perdre en le classifiant au moins de 10 à 15%. Ces tabacs sont vendus à crédit avec un délai dont le minimum est de 90 jours souvent 6 mois et beaucoup ne paie pas du tout. La vente du tabac par les voyageurs coûte au moins $0 \cdot 02$ la livre. Il y a à part cela toutes les dépenses de bureau, les frais de voyage pour voir à l'achat et beaucoup d'autres dépenses que ça entraîne dont ce serait un peu long à énumérer.

Donc dans les circonstances nous vivons très pauvrement avec ce commerce, et forcé à discontinuer ou à être ruiné si les choses ne changent pas.

Si vous trouvez opportun de donner ce rapport au Comité, veuillez le faire s'il vous plaît, je vous serais très obligé.

Toujours à votre service,

Chas. FRENETTE,
par B.

P.S.—Je faisais le commerce de Cigares et la compétition que nous avons eu de la Royale Tobacco m'a forcé de discontinuer. Les clients sont forcés d'acheter double et le pourquoi le Comité le sait.

The CHAIRMAN: Are there any other witnesses you wish to call, Mr. Sommerville?

Mr. SOMMERVILLE: I think not this morning.

The CHAIRMAN: We will meet again this afternoon at half past three.

The Committee adjourned at 12.35 p.m. to meet again this day at 3.30 p.m.

AFTERNOON SESSION

The Committee resumed at 3.30 o'clock.

The CHAIRMAN: Order, gentlemen. Mr. Boulanger has asked that a letter from Mr. Frenette should be read into the record. Will you read that, for us, Mr. Clerk? It can be incorporated in the record.

The CLERK: (Reading):

CHARLES FRENETTE

WHOLESALE TOBACCO MERCHANT

ST. CHARLES, May 11, 1934,
County of Bellechasse.

Mr. OSCAR BOULANGER, M.P.,
House of Commons,
Ottawa.

DEAR FRIEND,—With regard to my testimony about tobacco before your investigation Committee, you may have remained under the impression that I might make great profits, and for this reason I send you the following particulars.

The average price of the tobacco which is purchased is ·05½, and I have never figured out exactly the cost of preparation which is from ·02 to ·03, the freight to St. Charles, which is ·75 per 100 pounds and the freight from St. Charles to my clients, costs another ·75 per 100 pounds, as this tobacco is not sold at St. Charles the average loss in bundling and classifying is at least from 10 to 15 per cent. This tobacco is sold on credit at a minimum of 90 days, and extending often to six months, and many clients do not pay at all. The sale of the tobacco by travelling salesmen costs at least ·02 a pound. In addition to that there are the office expenses, travelling expenses for the purpose of purchasing, and many other incident expenses, which it would be too long to enumerate in detail.

Under the circumstances we live very poorly with that business, and if this does not change we will be forced to discontinue, or we will be ruined.

If you deem it advisable to give these explanations to the Committee, will you please do it and I will be very obliged to you.

Always at your service,

(S.) CHARLES FRENETTE,

P.S.—I used to trade in cigars, but the competition which was made by the Royal Tobacco (evidently he means the Imperial Tobacco) has forced me to discontinue. Clients are forced to purchase double quantity and the Committee know about that.

C.F.

Mr. SOMMERVILLE: I will call Mr. Hughes of the Grothe Company.

JOHN HUGHES, called and sworn.

By Mr. Sommerville:

Q. Mr. Hughes, what is your position in the company?—A. Secretary-treasurer.

Q. Secretary-treasurer of what company?—A. L. O. Grothe Limited.

Q. And your company are manufacturers of tobacco, located in the city of Montreal?—A. Cigars, cigarettes and tobacco.

Q. You have been in business for a long period of years?—A. Been in business for about 55 years, but in cigars only until about three years ago.

Q. Three years ago you went into the manufacture of cigarettes and——A. Cigarettes and tobaccos.

Q. Cut tobaccos?—A. Yes, cut tobaccos.

Q. The business has been conducted by Grothe, the father, and then by his sons?—A. By the sons.

Q. During the period of some fifty odd years?—A. Yes.

Q. At the present time you have a full line of cigars, cigarettes and tobaccos?—A. That is right.

Q. We are dealing at the present time with some of the merchandising practices in the tobacco industry. As secretary-treasurer of that company, I want to ask you if you are familiar with the merchandising practices with which you meet in your trade?—A. Quite so.

Q. Do you do business throughout Canada?—A. Throughout Canada, from coast to coast.

Q. Perhaps you will be good enough to tell the members of the committee what are the practices that you have found militating against the development of your business for those years that you are familiar with?—A. Pardon me for just getting things in order for a second, first.

Q. That is all right. Will you just speak up, so that the members at the end of the table may hear just what you say?—A. Yes, I will. First of all, I would like to express myself on behalf of our establishment as being absolutely in favour of price maintenance. I would not like the impression to become known amongst the trade that because our big competitors express themselves in that behalf, that we are opposed to it, because the contrary is the truth. We have always been in favour of price maintenance in the interests of the trade in general; and we have always tried to contribute in every way we could to see that it was carried out. I also received a telegram last night on arriving at the hotel, from the secretary of the Montreal Tobacco Retailers' Association, approving of our help in the past. Just of recent months we have had occasion to co-operate with them to stamp out or practically stamp out a grievance among the trade in general, which was really becoming very grievous and detrimental to the whole trade. I might mention that this telegram was absolutely unsolicited.

Q. Yes, I understand?—A. I always have in my mind when you solicit something you can expect what kind of answer you get back.

Q. At any rate, you do support and your company has supported a price maintenance plan, as being the best method of merchandising in your industry?—A. Absolutely.

Q. And that has been your experience for years?—A. Absolutely.

Q. In your price maintenance plan, what allowance do you make to the jobber?—A. Well, the jobbers work on a 10 per cent basis.

Q. What allowance is made to the retailer?—A. The direct retailer who buys at the same price as the jobber, works on the basis of about 23 per cent, more or less; and the indirect retailer who buys through the jobber works on a basis of about 13 per cent.

Q. Has that 13 per cent been the percentage of allowance to him for some years, or has it been reduced to that?—A. It is the generally accepted allowance amongst the trade, and has been for years. I think on cigars it is a little better than that, not an awful lot, but a little better. But on cigarettes and tobacco it is that.

Q. May I ask you this, Mr. Hughes: When the excise duty was reduced from $6 to $4 on cigarettes, was there really any reduction by the manufacturers in the price of cigarettes, beyond the reduction of the tax?—A. Not for ourselves. We didn't. We remitted what we received, and that was all.

Q. You remitted what you received, and that was all. That is, you reduced— —A. Reduced the price in proportion of the exact amount of rebate of tax we received—reduction in tax.

Q. And that was on the excise, $2; and on the sales tax it was 12 cents?—A. 12 cents.

Q. So that the reduction that was made by your company was a reduction of $2.12 to the jobber?—A. Well, it may have been $2.13. I am not sure exactly. But there is a fraction of a cent that enters into the sales tax that you can't very well split.

Q. So that the reduction of $2.13 may have been just the passing on of the exact amount of the tax?—A. That is what we considered it.

Q. That is the way you considered it?—A. Yes.

Q. Is that the condition that existed throughout the industry; other companies did the same?—A. I can't very well speak for others, but I know they were selling merchandise at the same price we were before, and are selling at the same price to-day, so it must apply, I imagine.

Q. Then there was a reduction in a large number of the brands of cigarettes to the extent of $2.50 a thousand?—A. That is right.

Q. And the $2.12 or $2.13 was the reduction brought about by the tax. By whom was the 37 cent reduction borne?—A. Well, seeing as we didn't take it, it must have been the dealers.

Q. That is to say, there was not anything that came out of the various manufacturers?—A. I might mention this, if I might be allowed to elaborate on it: The percentage to the trade was slightly increased, a fraction. That is the percentage of profit on the actual sale, both as regards the jobber and the retailer, I believe also. But in actual dollars and cents, naturally they suffered a little.

Q. That is, the reduction in price may have given them a fractional increase in percentage?—A. Yes.

Q. But in actual dollars and cents they did suffer to the extent of 37 cents a thousand, at least?—A. Well, that is they suffered on the actual profit, in dollars and cents profit per thousand cigarettes; but then again I think it has been somewhat offset by the fact that cigarette consumption has slightly increased since that time.

Q. The hope was that it would be increased?—A. That was the object.

By the Chairman:

Q. Might I interrupt; your point, as I understand it, is that the percentage of profit to the jobber and to the retailer was maintained?—A. Slightly increased.

Q. Although the actual dollar value of the percentage might be lessened?—A. That is right.

By Mr. Ilsley:

Q. The manufacturer got just as much for his cigarettes and got the benefit of the increased consumption, didn't he?—A. That is right.

By Mr. Sommerville:

Q. That applies to the cigarettes. What reduction took place in the cut tobacco?—A. Well, on the cut tobacco and popular lines in general, some prices were reduced and other prices were increased. In the case of some lines where they continued to put booklets of papers in, they reduced the quantity of tobacco per package and continued with the booklet, and increased the price per pound; whereas in other lines the booklets were taken out and the quantity of tobacco increased to maintain the 10 cent unit price to the consumer.

Q. That was the method adopted with respect to cut tobaccos?—A. Yes.

Q. What is the price or the amount of the cost of the booklets per pound?—A. Naturally they would vary, depending upon the quantity you bought and the type of paper. Some were more expensive than others. I figure in our case booklets were costing us five or six cents to the pound of tobacco. There are different types of paper. Some are more costly than others.

Q. You say they cost five to six cents a pound?—A. That is what we figure.

Q. That is per pound of tobacco?—A. Yes.

Q. And when they were taken out, the tobacco was reduced in price to that extent?—A. The reduction in price was not altogether offset by the papers, but we figure by packing fifteens instead of sixteens there was a little less labour attached—one package less per pound. Your packing materials were a little less. We figured it about evened up.

Q. You packed one-fifteenth of a pound instead of one-sixteenth of a pound?—A. Yes.

Q. In that way the reduction was effected?—A. Yes.

Mr. Factor: There was also a two-cent tax put on these.

The Witness: On the booklets, yes.

By Mr. Sommerville:

Q. On the booklets that were left in?—A. On the booklets that were left in there was a two cents per booklet tax.

Q. But in the majority of the brands the booklets were taken out, weren't they?—A. Yes, I would say the majority.

Q. Was it not a fact, in general, that each manufacturer kept one or two brands with booklets in, but removed them from the balance of his brands?—A. I don't know what others do. I know in our case we have only two brands, to begin with. We kept them in one and took them out of the other. Our experience has been that the one without them has been the one that sells, and I think that is general amongst the trade, in general.

Q. Can you give us your quantities of leaf that you have purchased; have you come prepared with that?—A. You mean flue-cured?

Q. Flue-cured, yes. You don't buy direct in your company?—A. Not from the grower.

Q. With your flue-cured, you buy from the packers?—A. From the packers.

Q. Or the processing companies?—A. That is the idea.

Q. And on your cigar, you buy from whom?—A. We buy from the co-operative companies, St. Jacques; we also buy a little from the co-operative St. Cesaire, not an awful lot. Then, of course, there is our Havana tobacco.

Q. That is imported?—A. Yes, but I am speaking about domestic tobaccos.

Q. Perhaps you will be good enough to tell us your quantities?—A. Of flue-cured?

Q. Yes?—A. In 1931 we had a contract, through special order, through the Canadian Leaf Tobacco Company, Limited, for 298,147 pounds, green weight; also through the Consolidated Leaf of Kingsville, 328,983 pounds, green weight.

Q. At an average price of what?—A. The average price to the Consolidated Leaf was 29¼ cents per pound; and the average price to the Canadian Leaf was

24·69 a pound, making a general average on the two purchases of 27 cents per pound. That is of the 1931 crop.

Q. That was purchased at the close of the crop season?—A. Well, at the beginning of the purchasing season. Our order was in at the opening of the season.

Q. That was 1931. What about 1932?—A. In 1932 we didn't purchase through contract. We were advised by the packers that there was a big crop, and they advised us to wait, that our requirements could be amply taken care of later on, which we did. Later on in the year, during the year 1933, we bought 374 hogsheads from the Canadian Leaf Company, 334,841 pounds, dry weight. We also purchased from the Norfolk Leaf 99 hogsheads, with a weight of 86,470 pounds, dry weight.

Q. Dry weight?—A. Yes. From the Canadian Leaf we purchased at an average price, in the hogshead, at 31 cents per pound, and the Norfolk Leaf at 27 cents a pound, dry weight.

Q. Dry weight; and that was of the 1932 crop?—A. Yes.

Q. We have already heard that the average of that crop was about 16 cents, green?—A. Yes, green.

Q. Then what about 1933?—A. 1933, we purchased through contract again with Canadian Leaf, green weight, 342,462 pounds at an average price of 20.31.

Q. That is the total purchases for 1933. I think the only other average we had given us here was 19.3 by the Imperial?—A. I don't remember off-hand.

Q. Then, Mr. Hughes, what quantities have you on hand, in storage, of domestic leaf?—A. Well, I didn't exactly bring the inventory of that, but I would estimate that we probably have about 800,000 pounds.

Q. About 800,000 pounds?—A. Including the 1933 purchases. There are a few odd lots that we bought outside of this, that I have not got a record of here, just small lots, off and on.

Q. What are your usings of Canadian domestic leaf, Canadian flue-cured leaf? Perhaps you can give us that approximately?—A. I would say, roughly speaking, probably about 450,000 pounds.

Q. A year?—A. During the year 1933, the calendar year.

Q. In connection with the sale of your products, perhaps you will tell the committee just what the practices are that you have found affect the development of your business?—A. With your permission, if I may, before going into that, if I might pass a remark or two—I have been keeping a note of different things that passed since this committee has been sitting, and there are one or two impressions that I fear may have been caused, that I would like to have an opportunity of correcting, if I may.

Q. Very well?—A. To begin with, it has been mentioned on many occasions here that the Imperial purchased the cream of the crop. Naturally this impression being spread amongst the consumers, would probably lead them to think that for that reason they are able to turn out better merchandise. I would like to point to our average price of purchases as an indication that we have not been buying poor tobacco. For the 1931 crop, when we first became interested in this game, I have not heard any such average price mentioned as what we paid, because we were interested in cigarettes until at that time; and we gave specific instructions to the Canadian Leaf and Consolidated Leaf to buy the cream of the crops. That is one impression I would like to correct.

By the Chairman:

Q. As a matter of fact, would you say what you received was, shall I say, good or better or good or fancy?—A. Yes, I would believe it is the best that was to be procurable. As a matter of fact, of course you understand that from every packing, when you buy the crop run, you always get a certain percentage

of lower grades of tobacco which we, on account of not having any use for it, have disposed of, sold.

Mr. KENNEDY (*Peace-River*): Is the price you paid filed?

Mr. SOMMERVILLE: They have been given in evidence.

The WITNESS: I may be stepping on dangerous ground when I approach this question of the 20 cent duty on tobacco sold in the leaf, but I do not think that the committee has really had a proper impression of that affair. To be quite frank with you, the matter has been under consideration for some time. There was a meeting held during last winter some time in which it has thoroughly discussed, with the sole object of trying to help the Quebec tobacco industry.

By Mr. Ilsley:

Q. A meeting of whom?—A. Farmers, packers and manufacturers.

By Mr. Boulanger:

Q. Who convened the meeting? Who called the meeting?—A. I just don't remember off-hand now, to tell you the truth. I think it was one of the packing houses that were very much interested in the affair. At that time we were not interested in that kind of tobacco because we were not making any—we were not selling any cut pipe tobacco of Quebec origin. But at the same time, if you look at the past experience of the Quebec tobacco industry from the growers' standpoint, his position to-day is due to an absolutely declining market. At one time he was permitted to dispose of a large percentage of his crop because the cigar industry was prospering, for one thing. Besides that, there was a certain quantity of that tobacco being sold packaged, by manufacturers. Well, the cigar industry, owing to the depression, I suppose, started to slide off. He had less call for his tobacco, and I suppose to try and dispose of surplus crops he started this selling in the leaf. I admit that it has always been done, but not to the extent that it is done to-day. Naturally it has had the effect of the manufacturers losing interest in the product. At the present time their tobacco is being sold practically on the local market in leaf form; whereas if something was done to restrict the sale of that tobacco in leaf form on the local market, the manufacturers would be interested to get behind it and try and sell it in a Dominion-wide market, the same as other Canadian tobaccos are being sold. I am not trying to influence you in any way, but I think that that matter really needs more thought than what has been brought out or the views that have been submitted on it.

By Mr. Sommerville:

Q. You say that the price has fallen from 15 cents to 3 or 4 cents, and it has been due to the fact that sale has been confined to the local market?—A. That is the idea.

Q. And the fact that the manufacturers are not interested because of the nature of the competition?—A. That is right. Up to four years ago we ran our own packing house for cigar tobaccos, and right up to that time we paid as high as 34 cents a pound to the farmer for his tobacco.

Q. For the same kind of tobacco that is to-day being sold at 4 cents?—A. Absolutely.

Q. How do you account for that drop from that very big price to the very low price of to-day?—A. Those prices were being paid around 1919 and 1920 when cigar consumption was about three times what it is to-day. That is one thing. You know, there is nothing like supply and demand to keep the prices up.

Q. Your cigars were more largely in demand than at present?—A. Absolutely.

Q. In 1930 you had a price of 15 cents, and from that time it has slipped down very steadily, has it not?—A. Very steadily, practically so little demand for it now, that is why.

By the Chairman:

Q. Have you any statistics to show the increase in the sale of tobacco in the leaf?—A. No, no real statistics, no.

Q. Any estimate? For instance, did the conference of which you spoke arrive at any estimate?—A. None, to tell you the truth, or I would have gone into it in such detail as maybe others who were more interested in the branch have. Up until two months ago we never tried to market any such tobacco. I do know, for instance, it is being abused. I have had a storekeeper in Montreal tell me he has regular customers who come in and buy that tobacco twenty pounds at a time, and take it out and make cigars and sell them without paying duty on it, selling contraband cigars. I would imagine quite a lot has been taken care of that way. Then again other quantities of it are being sold as cut tobacco without any duty being paid on it.

Q. Have you any suggestion where the line should be drawn between the legitimate sale of the leaf, according to ancient custom, and this comparatively new method of surreptitious merchandise?—A. Well, Mr. Boulanger raised the point the other day that the farmers had always been used to smoking his leaf tobacco, and it would be a shame to restrict him from that at the present time. I do not think the manufacturers had that in mind at all. I remember distinctly that it was brought out quite clearly, I think in your own discussion, the farmers could grow tobacco for their own use, and they would not be subject to the tax of 20 cents a pound; and besides that, the tax of 20 cents a pound would not apply when it was sold to manufacturers for further manipulation on which he would pay the regular excise stamp duty of 20 cents a pound.

By Mr. Boulanger:

Q. What about the working man who has no land?—A. We tried to—

Q. He likes to smoke tobacco?—A. We are trying to give employment. If we can sell that manufactured tobacco, we would give more employment. If the working man has more employment, he would be willing to pay a few cents more for his tobacco. If he has no work, he cannot buy tobacco.

The CHAIRMAN: He gets it free, if he is on relief, I think.

WITNESS: I mentioned a moment ago we have always been in favour of price maintenance. I would like to add to that that I am also more or less in favour of the present methods of distribution as used in connection with the tobacco trade in general. I know lots of objections can be raised to why you should sell one man's product and not another's, and there are many reasons that can be given for it. Some of them are probably worthy of consideration, others not. But you know, there is one thing that is very important in the sale of tobaccos, and that is that they reach the consumer in good condition. For that reason we have always been more or less in favour of confining distribution within reason, to the wholesalers, because in that way the retailer buys his supplies more often, and they do not have the chance to lie on the shelves any great length of time and dry out, and reach the consumer in such a condition that he becomes prejudiced against that brand. Besides that, there are so many retailers that you could never consider trying to reach direct. There is always bound to be some that you cannot possibly consider, who would not buy in sufficiently large quantities, and your margins on tobacco products do not permit him—that is, ourselves, I do not know about others—to sell in small quantities; so that the method of distribution at present in use for me is ideal for the tobacco trade. I should like to go on record as being absolutely in favour of it.

By Mr. Factor:

Q. What line of distinction do you draw between the retailer who sells direct and the retailer that you will force to buy through the jobber—what are the qualifications?—A. Well, we try to base our decision in that as to whether or not location, for one thing, warrants it being sold direct. If it is a good location, whether he has a good turnover or your goods are going to turn over quicker and not deteriorate on the shelves. Naturally, a man's credit is another feature which enters into it. There are many things.

Q. Do you ever refuse to sell direct to the retailer or an intending purchaser who wants to pay for the goods in cash?—A. I guess we have. I do not remember any particular incident, but I would not be surprised if we had at one time or another.

By Mr. Sommerville:

Q. You endeavour to support the Distributors' Association in various provinces?—A. Yes, but we are not dictated to by them.

Q. No, I understand you; but you endeavour to support that method of distribution?—A. Surely.

Q. Through them?—A. Surely.

Q. And limit your direct customers in each province?—A. That is the idea.

By Mr. Factor:

Q. Have you ever refused to supply a jobber who does not comply—.—A. Yes, if he cuts prices or supplies cut prices. That is about the only means at our disposal to enforce price maintenance.

By Mr. Sommerville:

Q. That is one of the incidents of the price maintenance plan?—A. That is the idea.

Q. That is about the only measure of enforcement you have at your disposal.

Mr. Factor: The jobber who is willing to maintain prices does not necessarily have to belong to the association?

The Witness: Not at all; no.

By the Chairman:

Q. There is no question about that?—A. None whatever.

Q. I should like you to make that very emphatic.—A. None whatever. A jobber does not necessarily have to belong to the association to be sold.

By Mr. Factor:

Q. You do not contribute any money to the Jobbers' associations?—A. Not as a regular habit. As a matter of fact, I can only remember one incident where we did, and that was unsolicited. Now, while I have declared myself in favour of the general principles of merchandising, I am going to be just as frank and say I do not like some of the methods that are used I must say, to strangle opposition. The methods are so numerous it would probably take a week to enumerate them. I have taken note of a few of them. For instance, it is a foregone conclusion to successfully merchandise, to have your merchandise displayed is very important. That is one thing that we, and I presume all other independent manufacturers have a great difficulty in accomplishing. I think I can say without any fear of contradiction that some manufacturers' salesmen go around to the stores, and if they see our merchandise on display, they will take the liberty themselves to switch it in the back, and bring their own out in front, and the retailer dares not say a word.

Q. Why?—A. Because he is afraid of the consequences.

Q. Well now, what are the brands of cigarettes that you have, for instance?—A. Roxy, Duchess, and recently on the Toronto market, Grads.

Q. Recently on the Toronto market Grads?—A. Yes.

Q. You say competitors' salesmen check up that display and move them?—A. I would say this refers more particularly to cigars, as cigarettes as a rule are not displayed on the counter, only when a new brand is brought out. It refers particularly to cigars.

Q. In the matter of cigars, you have had a very large trade in the past, have you not?—A. I have.

Q. At one time you were the largest manufacturer of cigars in Canada?—A. I believe so.

Q. How does that operate? Develop that complaint?—A. Well they just seem to have the impression that nobody is entitled to any preferable spot on the counter except their own line.

By Mr. Kennedy (Winnipeg):

Q. Are special considerations given for that preference in the matter of display?—A. Not to my knowledge, except fear.

Q. On what grounds is that fear based?—A. Well, I think it is very easy to draw conclusions. That applies mostly in the case of accounts that they sell direct, through fear of being cut off, and in the case of accounts that they do not sell direct, on the promise that some day they may sell direct.

Q. Whether they sell direct or not, it would not affect the other firm whose goods had that preferred position in display if they would sell direct. What is the ground of fear then?—A. I just did not get that.

Q. You say a representative of one firm comes along and finds goods of a competitor displayed in a prominent position?—A. Yes.

Q. And exercising some influence, he has those goods put in the background?—A. Yes.

Q. Seeking for a reason you tell me there may be fear they would be cut off the privilege of direct purchase from the manufacturer?—A. Yes, that particular manufacturer.

Q. Suppose the party whose goods are displayed in the preferred position is selling direct?—A. Yes.

Q. What cause would there be then to remove them?—A. Yes. The possibility of lost sales of that particular cigar to the manufacturer who has already displayed, would be negligible compared to the loss of sales on the cigarettes and tobacco. The source of each supply would be stopped by the other.

By Mr. Sommerville:

Q. To whom are you referring?—A. The Imperial Tobacco Company.

Q. They say they supply from 60 to 75 per cent—A. Depending—

By Mr. Young:

Q. You know these things go on?—A. Absolutely.

Mr. Heaps: Have you any proof?

Witness: Yes.

By Mr. Young:

Q. I was in a tobacco store last night, and I asked the storekeeper how it was that he had several different makes of cigarettes in his window. He said, "My window is my own, I do as I like with it."—A. Fortunately, there are a few that still reserve their independence.

Q. He said, "Nobody bothers me."—A. He is an exception to the rule.

By Mr. Kennedy (Winnipeg):

Q. To what extent is that complaint real—I do not mean each individual case—but is it real?—A. Absolutely, practised generally.

Q. Can you name where that practice is—A. I can. I can name it; but with the permission of the Chairman, I should like to ask that if I give any, specific cases, that names be withheld, as I fear for the consequences to those people through their names becoming known.

By Mr. Sommerville:

Q. The retailers would suffer?—A. I think so.

Q. From the fact that they have given this information?—A. That is right.

Q. Is there any doubt in your mind of that?—A. No, unless a change of heart is brought about by what has come out in this committee.

Mr. Factor: Mr. Heaps asked you for the proof. You have the proof there, but you say you hate to divulge the names of men who have lodged complaints with you?

By Mr. Kennedy (Winnipeg):

Q. Will you give, confidentially, to the committee specific cases so that they can be investigated?—A. Surely, with pleasure.

Q. Otherwise, we are just dealing with fog?—A. Absolutely.

Mr. Factor: Read a few cases, and give the complaints to the Chairman in confidence.

Witness: Without mentioning names.

Mr. Sommerville: Without mentioning names. I see you have a handful of them there?

The Witness: Yes.

By Mr. Ilsley:

Q. There sems to be no motive for those retail merchants to tell anything but the truth?—A. I beg your pardon?

Q. Could there be any motive, any possible motive to tell anything but the truth in these matters?—A. I do not see any reason. This comes from Winnipeg.

> On investigation it was found that no contract had been signed between above and the "I.T." but the above had given their word to put the Imperial Tobacco line in their show case and to put Imperial display case on top of the counter. This was in consideration for the fact that the above were on the "I.T." cigarette list. The "I.T." also told them that if they wanted to continue to be on the direct list they would have to display Imperial cigarettes prominently, giving them 80 per cent display.

By Mr. Kennedy (Winnipeg):

Q. What special consideration were they getting for that 80 per cent display?—A. Being sold direct cigarettes.

By Mr. Kennedy (Peace River):

Q. What does 80 per cent display mean, eighty per cent of the favourable positions?—A. I think 80 per cent means 100 per cent.

By Mr. Young:

Q. Why do you say that?—A. Because we find in many cases we cannot get any display at all.

Q. I came down Bank Street this morning and I looked into 23 different windows displaying tobaccos, and I saw yours in some windows.—A. You may find the occasional one.

Q. And I saw Macdonald's in some windows, and I saw Imperials in most windows, but there were some windows in which Macdonalds predominated over Imperial; in the majority of cases Imperial predominated. I cannot see any justification for your remark that 80 per cent means 100 per cent.—A. Maybe if you were as conversant with the trade as I am, you would. The fact of your seeing some other manufacturers' goods occasionally does not prove that I am not right. If you were to make a thorough investigation you would find, I think, I am not very far wrong.

By Mr. Kennedy (Winnipeg):

Q. Suppose a manufacturer, we will say, Imperial, wanted an 80 per cent display, is there anything to prevent the Macdonald people coming along and saying, we will sell you direct because of our share of your display?—A. No, there is nothing to prevent them selling direct.

Q. Is it not a form of competition that exists?—A. If it was confined to the 80 per cent, it would be all right, but it is not done. In most cases it means the complete discrimination against other lines.

Q. The point I want to clear up is this: where a tobacco store, whether yours, Imperial, or Macdonald, comes along to me as a tobacco retailer and says, I want you to display our goods, give them preference, and we will put you on the direct list, could not another competitor such as the Imperial, or yourself, come along and make the same bargain? Does not that competition exist throughout the retail trade?—A. Yes, and it has been practised to some extent, but I will give you the result of the practice. We, or Macdonald and somebody else can come along and open up a direct account that has not been sold by the Imperial Tobacco Company, and nine times out of ten the result of the opening of the account is that the Imperial come around and sell them afterwards, and then we are out where we were before we started.

Q. Do competitors like the Imperial or Macdonalds' make the same complaints that you are making now?—A. Who?

Q. Do you find complaints made by the Imperial Tobacco Company or the Macdonalds about your company ousting them from preferred position?—A. We never had that luck. I wish we had.

Q. It comes down to this: Your company is the one that you find—I do not say what the merits are—that they have an edge on you in getting the business?—A. No, I would not say ourselves alone; no. I would not admit that. From what I know I believe the same thing applies to everybody else but themselves.

By Mr. Sommerville:

Q. Everybody but the Imperial?—A. Yes.

Q. In other words, they use the fact that sixty to seventy-five per cent of the products sold is Imperial, to force other people's goods out of competition in display?—A. I will recite a funny instance that occurred in Montreal about two months ago. I had a telephone call from the head window dresser of the Imperial Tobacco Company. He called me personally. He said one of our window dressers had taken out one of their windows before the allotted time had expired. I said, "Well, I do not know anything offhand about it; I will have a look into it and I will call you back." I went to the party who looks after the distribution of our windows in Montreal, and he said, "Yes, that is true, but did he say anything to you about the two he took out of ours this week?" I said, "No." I said, "What were they?" He cited the cases, and I called him back and I said, "What about those two windows of ours you took?" He said, "That is so, but it is two new direct accounts we opened up, and we are entitled to their windows."

By Mr. Factor:

Q. It is a fact, as Mr. Summerville suggests, generally speaking, the retailer sells between 60 and 75 per cent of Imperial products?—A. I have no actual figures on it, but I would imagine it is pretty nearly right.

Q. So that they have this, in addition to the other things, the retailer buys a substantial part of the products that he sells from the Imperial Tobacco Company.

By Mr. Sommerville:

Q. After all, if the retailer does not play with the Imperial, it is life and death to him; is it not?—A. Pretty near.

Q. As against you independents. If only 15 or 25 or 30 per cent of the business is in the independents' hands, his living really depends upon his sale of the Imperial Tobacco Company' goods?—A. Surely, Yes, it is.

Q. And that puts them in a position where they use that influence?—A. Certainly.

Q. And your statement is that they are using that to prevent the display of competitors' goods?—A. Surely.

Q. You were reading some of those letters?—A. I got a telegram this morning from Toronto, addressed to me at the Chateau Laurier:

> "Stickers put up stop Imperial claim we are interfering with windows, and they took them down stop No concrete proof stop Writing".

That is signed by my Toronto manager.

Q. Explain.—A. Gentlemen, I put a new cigarette on the market about three weeks ago in Toronto. I was up there last week for one day and drove around Toronto a bit. I saw nothing but Imperial streamers all over the city. I said to my man, "You have to go out and get some streamers; you have to put enough up where they are going to be seen, and make an impression." He said, "I need more men." I said, "Go ahead and get some men." That is the result.

Q. They were put up and taken down—A. Yes.

Q. You were quoting some of your material?—A. "On October 23rd, our representative, Mr. So and So, was into Mr. So and So's store at 66—" I nearly let the cat out of the bag there.

> —at about 10.30 a.m. Mr. Gagnon, Imperial Tobacco Company's salesman met Mr. So and So in front of his store, had a talk with him. When Mr. So and So came to the store, he told our traveller the following: one cannot do anything without the Imperial Company finding it out. I allowed L. O. Grothe Company to give a demonstration in the window of my St. Catherine Street store, and this traveller told me I should not have done that.

That is signed by somebody else. There are so many here it is hard to pick out a good one.

> October 24, 1930. Mr. So and So, such and such address, declared to our representative that the assistant sales manager and the traveller of the Imperial Tobacco Company called at his store and told him that if he stopped displaying all goods but their own, they would sell him cigarettes the very next day.

That is one that they were not selling direct.

Mr. HEAPS: From where?

WITNESS: Montreal.

Mr. SOMMERVILLE: The assistant sales manager?

WITNESS: Yes. If he stopped displaying all merchandise but theirs, they would sell him direct.

> Mr. So and So, proprietor, at such and such a cigar store, such address, stated to the writer, that Mr. Des Rosiers of the Imperial Tobacco Company came to his store and told him unless he took other manufacturers' cigars off the counter, that he would have trouble in buying any more Imperial Tobacco Company merchandise.

By Mr. Sommerville:

Q. Mr. Des Rosiers is a director of the Imperial Tobacco Company?—A. No, sir, a kind of local salesman. This statement was made in the presence of Mr. So and So.

> During a conversation, on October 30, Mr. So and So, proprietor of such and such an ice cream parlour, situated at such an address, stated that the Imperial Tobacco Company representative had told him he would have to take—

This is funny: it is not our own.

> —Benson and Hedges' case off his counter, and implied that if he did not, the Imperial would refuse to sell him direct. This man also told Mr. So and So that the Imperial Tobacco Company were giving him a living and protecting him and their merchandise would have to be shown on the front of his counter. Mr. So and So repeated these statements in the presence of So and So.
>
> Mr. So and So, at such a place, stated to the writer that the Imperial Tobacco Company representative intimated to him that unless he kept their show case on the front of his counter it would not be possible for him to buy direct from the Imperial Tobacco Company. He also stated the Imperial man told him he must buy cigars with each order; if not, he would have trouble in buying cigarettes.

Q. That is another practice?—A. Another practice. I can elaborate on that later.

Mr. FACTOR: Mr. Chairman, could we save time by having those complaints filed with you and counsel of the committee?

The CHAIRMAN: I think perhaps it would save time. Apparently Mr. Hughes has a number of those in his hand. If he would hand them in, counsel and staff of the committee could examine them, and we could make such verification of them as we desire.

The WITNESS: I would be glad to do that, but before doing so, I would like permission to read just one telegram. This is a telegram from western Canada that we received in regard to the distribution of cigarettes out there—I am sorry, I have not got it here.

By Mr. Kennedy (Winnipeg):

Q. For identification purposes I suggest these might be filed as an exhibit; is that agreeable?—A. You may keep them, if they are of no use to me now they never will be.

By Mr. Factor:

Q. I want to ask you, are these complaints general; or are they confined to one or two?—A. Oh no.

Q. From all over the country?—A. Yes.

Q. Have you any personal experience about these complaints; have they ever occurred when you were in the establishment of an independent, were you ever there when such practices took place?—A. I do not recall any. I very

seldom go out amongst the trade myself, mostly through representatives, through written statements, and such as these. Excepting one case I know in particular where I got a telephone call from a certain jobber saying that the Imperial representative had been up to his establishment that day and wanted to see his invoices and know just what that jobber was paying for other manufacturers' goods, and the jobber refused to tell him. He says the Imperial representative said, you had better make up your mind between now and to-morrow morning, because I will be back again. The following morning he came back at half past eight. I found out in the meantime and I put two men secreted in the room next door, who heard the conversation that went on. He said explicitly that he was sent there on instructions from the office, not on his own initiative, but he simply had to have that information. In the meantime that particular jobber's order had been held up for a couple or three days. When our representative stepped out and the man saw he was trapped, the jobber got him his goods that afternoon.

By Mr. Sommerville:

Q. That was a demand from the officers of the Imperial for a statement from that jobber of all the goods that he had bought from other manufacturers?—A. From other manufacturers.

By Mr. Ilsley:

Q. Would you say that this practice was so widely spread, to your knowledge, that it must have the approval of the executive officers of the Imperial Tobacco Company?—A. I have no doubt whatever. That man just said he was ashamed to act that way but it was ordered from the office. He said that the order was to obtain that information right or wrong.

Q. That is correct, is it Mr. Hughes; I do not know whether you answered that question or not?—A. I am of the opinion that they are so wide spread that they could not be otherwise than on the instructions from head office.

By Mr. Sommerville:

Q. Now, Mr. Hughes, perhaps you will be good enough just to summarize the complaints that you have, or the conditions you have found; you have dealt only with the one, display—the display of competitors' goods; perhaps you will give us the other practices complained of?—A. There are only a few different things. There is the display of merchandise, the display of advertising and in certain cases unfairness with distribution particularly on new lines.

Q. What do you mean, first of all, as to the display of advertising; what is the practice complained of there?—A. Try and influence the dealers about allowing us the use of their windows, or putting up streamers or window bases; advertising on trucks. I had an instance not very long ago where a jobber in Montreal was putting out a new truck and he came to us and he asked us if we wanted it; we said certainly, and sent a painter up there and he prepared a design and everything. We found out a couple of days afterwards, they said, sorry we can't give you the truck. We asked them what was the matter, and they said Mr. Desrochier had been up there. What has that got to do with it we asked them. He said, we have got to give them the truck.

Q. That is in Montreal?—A. In Montreal, yes. Then I have another case of a truck in Montreal, that carried our advertisement for two years. It has the Imperial advertisement to-day because that jobber was told that he had had our ad. on his truck long enough.

Q. Now, what do you say as to the destruction of advertising material?—A. The only destruction that really goes on is in the case of these streamers, where they tear them up. Where we do succeed in getting a window display they do not interfere with the material, they do not do us any damage there.

Q. But these streamers, the paper signs that you display on the window?—A. That is not a serious loss of material, but it is a loss of advertising.

Q. What has been your experience, take for instance in the city of Hull?—A. As our men put them up they tear them down.

Q. And was that in large quantity?—A. I had a man working on it for a whole week.

Q. Over in Hull?—A. Yes.

Q. And when you say "they," who do you mean?—A. The Imperial Tobacco representative.

Q. Do you learn that from the storekeepers as you go around?—A. I learn that from my local representative here. I do not think he would have told me unless he had proof of it.

Q. Does that condition that you find here also exist in Toronto?—A. You have the same thing happening in Toronto within a week's time.

Q. Oh yes, one of the telegrams you gave us this morning?—A. I might mention that my Toronto manager felt this so severely that he called me by long distance. I said, send me a wire.

Q. What do you say with reference to the questions that you have mentioned in addition to display advertising?—A. Well, they try to use certain influence and try to prevent distribution as much as they can.

Q. What do you mean by blocking distribution?—A. Particularly through the jobbers.

Q. Will you just develop to the committee what you are referring to when you speak of blocking distribution?—A. Well, co-operating as we do with the wholesalers throughout Canada, and trying to maintain prices in their interests and in the interests of the trade in general, we expect to be treated the same as any other manufacturers, large or small.

Q. Yes?—A. For that reason we expect when we put in a line of merchandise—we don't put out new lines very often, and when we do we give serious thought to putting them out; but when we do put them out we expect the same consideration as any other manufacturer. I had a case in Montreal not long ago. We were putting out a pipe tobacco and after it had been on sale for about a week or ten days I put eight men out to check up on the distribution, and they came back to me with all kinds of reports that such and such a storekeeper had called for it, but he could not get it from his jobber, the jobber said he was out—oh, they said everything. I naturally got in touch with the association and they said that they were distributing it. One jobber sent a representative to see, to buy a certain quantity a week after. He was told that it was out of stock. Now, if they had wanted to distribute that, only one package to each one of his customers, he would not have had enough tobacco to fill his supply. When the Imperial put out a new line, they fight their heads off to distribute it.

By Mr. Ilsley:

Q. The jobbers fight their heads off to distribute it?—A. You would conclude from that there is some authority, implied or real, trying to bring about this condition.

By Mr. Sommerville:

Q. Did you have any complaints from any of the other manufacturers about the Imperial?—A. No, unfortunately none of them are big enough to have any influence.

Q. What else have you, Mr. Hughes?—A. Well, I mentioned a while ago that I would come back to the reference that was made about being obliged to buy cigars. It has been brought to our attention on different occasions that jobbers were forcing the sale of Imperial cigars; and on inquiring the reason they said, we are obliged to take a certain quantity, we can't afford to keep them, we have got to sell them.

Q. The jobbers were required to take a certain quantity?—A. That is in order to have their supply of cigarettes and tobacco.

Q. The jobbers were required to take a certain quantity of cigars in order to get their other commodities; and that, you say, interferes with free distribution?—A. Naturally, if the jobber is over-supplied in one line, he is trying to sell that and he is not going to buy. It is not absolute public demand—that has some bearing on it, of course.

By Mr. Kennedy (Winnipeg):

Q. It is a case where the big fish eat the little fish?—A. That is it.

Q. And that practice has been going on ever since there were fish?—A. Yes. It may be we're fish to have gone into this business; however, now that we are in it, we have got to fight.

By Mr. Sommerville:

Q. Sometimes the little ones get away?—A. The smaller they are the better chance they have, I think.

Q. Yes, Mr. Hughes?—A. There is another serious complaint that I would like to bring out. Owing to the present economic conditions a lot of our retail tobacconists are not very flush with funds, and they are buying on a daily basis and paying cash for their requirements.

Q. Yes?—A. It has been our experience that where a retailer has not got just enough money to pay for his whole requirements, that independent manufacturers, let us say, are eliminated altogether instead of reducing the order proportionately. In order to bring the order within the scope of the amount of money that the indirect retailer is able to pay as cash, instead of reducing the order proportionately on all lines, they eliminate the independent man completely.

Mr. Young: Would not they have to buy the lines they sell the best?

Mr. Ilsley: They would, if they were not interfered with.

By Mr. Sommerville:

Q. That is your point. That is to say, if the retailer were free and not subject to this restraint, you feel that all the independents would have a very much better chance of developing their business?—A. At least they would have a chance to live.

Q. And of developing a competitive business in Canada?—A. Yes.

Q. At least a chance to live?—A. Which I think is necessary for the interests of your growers, and right down to the consumer.

By Mr. Kennedy (Winnipeg):

Q. You feel this restraint was forced on you?—A. I do.

By Mr. Sommerville:

Q. How would it affect the grower?—A. As I said before, it does not make competition, it is not supply and demand. If you have more than one purchaser in there, you have more than one purchaser to buy. There is only one real purchaser. If you had real competition it would very likely improve prices.

By Mr. Factor:

Q. Did you have any experience with a certain company which opened up in Toronto?—A. I do not wish to talk about anybody else but myself. I do not know that company and I prefer not to mention it.

By Mr. Sommerville:

Q. That was the firm that went into bankruptcy some six months after it started?—A. Yes.

By Mr. Sommerville:

Q. All right, Mr. Hughes, if you would proceed?—A. Just before I go: as I said a while ago there, we have always been in favour of price maintenance and I mentioned that within the last two months we had been co-operating with this retail tobacco association in Montreal to stamp out a very serious evil down there. As you know, at the present time we are all in the premium game. We are all giving premiums with our merchandise.

Q. Yes.—A. Some time ago some of the small merchants conceived the idea of giving a couple of extra cards with a package of cigarettes in order to draw trade to a store. It looked good to the man next door who started giving three, and then four, and it gradually increased until we had probably some 250 or 300 men giving aditional cards, giving as much as a complete series with a dollar purchase. Now, a complete series represents 15 cents on a dollar purchase, 15 per cent. Some of them that were doing this were buying indirect and doing business on a 13 per cent basis, giving 15 per cent away. I do not know how they did it, but they did it.

Q. A rapid method of liquidation?—A. In co-operation with the retail trade generally we have pretty well stamped that out, but in place of it other things are creeping in. For instance, certain stores have started giving away coupons with the proprietor's photograph on it, and when you get a certain quantity, you can go back to the store and get some merchandise with it.

Q. Yes?—A. Naturally, we took exception to that as being a measure of price cutting.

Q. Is not that against the trading stamps act?—A. I do not know. Anyhow we objected to that because we claimed that it was a mode of price cutting.

Q. Yes?—A. And they came back with the argument, we don't consider it that way, we consider it a premium; you are giving premiums free, why can't we do it?

By Mr. Factor:

Q. Where did they get the extra cards to give away?—A. Buy them from the public.

Q. You mean the merchant does?—A. Yes, he pays as much as 10 to 20 cents a series for them.

By Mr. Sommerville:

Q. Yes?—A. And at different meetings that were held by this retail association in Montreal, and which I attended, I frequently stressed the fact that the only way of stamping that out altogether would be to abolish the premium.

Q. Yes?—A. There is another thing to take into consideration if we look at it from the standpoint of the grower. We can all afford to pay the grower a little more if we do not have to put in premiums; that costs money.

By Mr. Factor:

Q. Who originated this premium idea?—A. I could not say definitely.

Mr. SOMMERVILLE: Cards and cigarettes are as old as you and I. I remember we used to get pictures of Delia Fox, and other celebrities.

The WITNESS: They were not redeemable at that time.

Mr. SOMMERVILLE: Oh no, they were keepsakes.

Mr. FACTOR: Just to look at. I would like it, Mr. Hughes, if you would file on behalf of your firm a schedule of the wages paid its employees.

Mr. SOMMERVILLE: The same as we have asked from the Imperial Tobacco Company.

By the Chairman:

Q. Will you do that, Mr. Hughes?—A. Yes.

The CHAIRMAN: Thank you, Mr. Hughes.

The Witness was discharged.

Mr. H. C. FORTIER, called and sworn.

By Mr. Sommerville:

Q. Mr. Fortier, you are a tobacco distributor in the Province of Quebec?—A. Yes, sir.

Q. With headquarters in the City of Montreal?—A. Yes, sir.

Q. And you distribute the products of the Macdonald Tobacco Company?—A. Yes.

Q. Tobacco and cigarettes?—A. Yes.

Mr. BOULANGER: Mr. Fortier is a jobber, isn't he?

By Mr. Sommerville:

Q. No, Mr. Fortier is not a jobber. You are a distributor?—A. Yes.

Q. And you distribute the Macdonald products on the basis of a commission?—A. A commission; yes, sir.

Q. A manufacturer's agent, in a sense?—A. Yes, sir.

Q. And you have been associated with the tobacco business in Quebec, for a great many years?—A. 31 years.

Q. As a matter of fact, I think it was a firm that was organized by your father that has been referred to here already as having been acquired by the Imperial Tobacco Company back in 1916?—A. In 1916.

Q. And you have been associated with the sale of the Macdonald Products throughout the Province of Quebec for how many years?—A. Since 1918.

Q. That would be some 15 odd years. Now, Mr. Fortier, will you tell this committee what are the practices you have found interfering with, or militating against the development of independent manufacturers in Canada in the sale of their tobacco product?—A. Well, Mr. Chairman, it is pretty hard to enumerate them all. We have found that where we have put a sign up for a man that the sign would be no sooner up than the Imperial Tobacco Company would come along and say, " we sell you direct, we are sorry now you have put up their sign since we can't sell you direct any more. That has happened in quite a few cases.

Q. Yes?—A. Then there is another case where in the City of Montreal in 1932, we arranged to give out a few packages of tobacco to the unemployed. This was done at a corner store in Montreal, the very next day these people were notified that they would have to buy Imperial goods from the jobber.

Q. That is, the firm that made the distribution?—A. No, we arranged for somebody to distribute in that store.

Q. Certain tobacco for the unemployed?—A. To the unemployed.

Q. And because they distributed this tobacco that was given by you to the unemployed this firm was notified that they could no longer get their goods direct from the Imperial?—A. Yes, sir.

Q. At the preferred direct discount?—A. Yes.

Q. They would have to buy their goods from the jobber?—A. Yes, sir.

Q. Which meant they lost the 10 per cent on all Imperial goods bought?—A. Yes.

By Mr. Ilsley:

Q. Were they actually compelled to buy through the jobber after that?—A. Yes, they bought through the jobber.

Q. And have ever since?—A. No, they were reinstated some months afterwards.

Q. I suggest, Mr. Sommerville, that the witness give us that name confidentially.

Mr. SOMMERVILLE: Yes.

By Mr. Sommerville:

Q. What other instances have you?—A. We have other practices where we are anxious to get some particular jobber's wagons painted, and we go to the jobber and we say, would you like to have us paint some of your wagons. The jobber turns around and says, I am sorry, Mr. Fortier, but if I have any of my wagons painted by you I am afraid the Imperial Tobacco Company will cut us off. That would mean they would have to buy from the jobber and lose their 10 per cent, and that would drive them out of business.

By Mr. Ilsley:

Q. Do the Imperial have wagons painted?—A. Yes, they have quite a few, sir.

By Mr. Sommerville:

Q. Yes—what else, Mr. Fortier?—A. Well, we have had a few cases where counter displays, where we have had our stuff on the counter and the Imperial come along and practically say, you had better take those goods off the counter, otherwise we would not be able to sell you any more. In other cases in lots of stores we have had our stuff on display and before the Imperial representative came around, the dealer would take the stuff off, and put the Imperial on to show that they were good fellows.

Q. And then I suppose after the Imperial man had been around they would put yours up again?—A. Absolutely.

Q. And that is evidence of the fear they have of the Imperial, isn't it?—A. Yes, sir.

Q. Is there any doubt at all, after your fifteen years experience, that the retailer does fear the Imperial if he displays the goods of a rival?—A. At one time the Imperial Tobacco Company had about 90 per cent of the trade, and the storekeeper would tell us, well, that is our livelihood and if we display your goods, we do so at the risk of losing the privilege of buying direct from the Imperial Tobacco Company, which would mean 10 per cent.

Br Mr. Kennedy (Winnipeg):

Q. Can't you answer that by saying, we will sell you direct?—A. We sell all these fellows direct, but we have been so small; we are getting bigger every day.

Q. Supposing you sell these men direct instead of the Imperial, is not that the answer to it; or is it that the public don't want your goods?

By Mr. Sommerville:

Q. Not all people want Macdonalds, you are hoping they will?—A. We are hoping they will. We are hoping that the hands of the independent will be strengthened.

Q. Then the situation is that because of the preponderence of the business of the Imperial, the retailer is afraid of losing the right to purchase these goods if he makes any display of your goods?—A. Yes, sir.

Q. What other practices have you found, Mr. Fortier?—A. Well, I came up here just to hear what was going on. We have become so calloused to the complaints that we have received, that I could not enumerate them all.

Q. These are the practices that have been going on over the whole Province of Quebec?—A. I would say so.

Q. Do you substantially support the evidence given by Mr. Hughes here? —A. Absolutely.

Q. And is it of such common practice that you feel that it cannot be carried on without the knowledge and approval of head office?—A. It must be with the approval of head office, because it could not go on the way it has been going on.

Q. And what is the effect of these practices on the smaller independents?—A. Well, it is pretty hard to say. The Imperial and our company are pretty big concerns. We notice when we bring out a new line that we do not get the support from the jobbers that the Imperial do.

By Mr. Ilsley:

Q. The Imperial's competitors seem to have gained on them?—A. Yes, we have gained in the last few years.

Q. Because you say at one time they did 90 per cent; to what cause do you attribute your gain?—A. Well, I think as far as we are concerned we had better distribution now than we had three or four years ago.

Q. I think we had the evidence of Mr. Stewart the other day that he had spent $7,000,000 in advertising?—A. Which helps a lot.

By Mr. Young:

Q. The Imperial must be losing ground, I think the volume of some cigarettes has been maintained very considerably through the sale of cigars?—A. We have gone up the last few years.

Q. They must have lost tremendously?—A. The government figures on cigarettes have been down the last couple of years.

By Mr. Ilsley:

Q. So far as this Macdonald's increase is concerned, it can be explained by the terrific advertising campaign?—A. To a certain extent, yes, sir.

The CHAIRMAN: Thank you, Mr. Fortier.

The Witness was discharged.

Mr. AUGUST C. PICARD, called and sworn.

By Mr. Sommerville:

Q. Mr. Picard, you belong to the Rock City Tobacco Company?—A. Yes, sir.

Q. What is your position?—A. Vice-president, executive looking after sales.

Q. And the Rock City Tobacco Company has been in business for —?—A. 35 years.

Q. Your father being in business before you?—A. Yes, sir, with Mr. Drouin.

Q. And what do you manufacture, Mr. Picard?—A. Special tobaccos, plug and cut tobacco—we went into cigarettes a little in the last three or four years.

Q. Special cut and plug tobaccos?—A. Yes, sir.

Q. And in the last three or four years you have gone into the manufacture of cigarettes?—A. Yes, sir.

Q. And what brand of cigarettes do you make?—A. Our principal brand is Spud.

Q. Your principal brand is Spud?—A. And we have another brand, Master Mason.

Q. And you have also developed, or gone into, the cut tobacco business lately; or were you always engaged in that?—A. We were in the pipe-smoking tobacco, but we have only lately gone into the fine-cut tobacco.

Q. For cigarette purposes?—A. In the last few years, yes.

Q. Now, Mr. Picard, when the excise tax was reduced upon cigarettes, what amount of reduction was made by the manufacturer?—A. The reduction of the excise.

Q. The reduction of the excise?—A. Yes.

Q. So the amount that was reduced was $2.00, plus the 6 per cent on $2.00, or $2.12?—A. Yes.

Q. I have not figured out how the 13 cents is arrived at, but it seems there must be a fractional basis between the $2.12 and the $2.13?—A. Yes, sir.

Q. But that is the net amount of the reduction?—A. Yes, sir.

Q. And any further reduction that took place to the consumer was taken up by the retailer and the distributor?—A. Yes, sir.

Q. And is that generally throughout the trade; is that the practice that was followed by the manufacturers generally?—A. Yes, sir.

Q. Then when the tax was put upon cigarette papers, I understand you took the cigarette papers out of most of your brands of fine cut?—A. Yes.

Q. And left them in one brand?—A. In two brands for us. But generally, nearly all the companies left them only in one brand.

Q. And as a result of that, it effected a saving to you of about how much a pound?—A. Between 4 and 6 cents.

Q. That enabled you to sell to the distributor; did you pass that on to the distributor?—A. We reduced the price of those brands by—I don't remember very well. I think 10 cents, of 7 or 8 cents.

Mr. Ilsley: How did that compare with the value of the cigarette papers?

Mr. Sommerville: The cigarette papers taken out were 4 to 6 cents.

The Witness: There were some brands we reduced more than that; but that is another question, I suppose.

By Mr. Sommerville:

Q. In your purchases of flue-cured, I observe you purchased of the 1929 crop 96,613 pounds at an average of 38.46 cents per pound; in 1930, you purchased 99,021 pounds at an average of 36.52 cents; 1931, you bought none; 1932, you bought 161,248 pounds at an average of 19.29 cents per pound; in 1933, you bought 431,932 pounds at an average of 16.47 cents; and then you bought some broken leaf and sand leaves, 802,267 pounds at 4.7 cents. Those have been your purchases?—A. That is purchases from the growers. We bought sometimes from the packers.

Q. These have been purchases from the growers?—A. Yes.

Q. Have you a plant for receiving them?—A. Yes, we have the Leamington Tobacco Sales Corporation. 75 per cent of the stock belongs to the Rock City Tobacco Company, 12½ per cent to the Drouin family and 12½ per cent to our family.

Q. That is operated at Leamington?—A. Yes.

Q. And through that plant you buy from the growers—A. For our own use, and we pack for whoever wants to have packing done.

Q. Then in addition to that, you buy off or process for any grower that may desire it?—A. Yes.

Q. Then, following up your purchases, the Rock City purchases of Burley, in 1929 you bought 47,780 pounds at 20 cents; in 1930, 70,041 pounds at 17.64 cents, average; 1931, 969,766 pounds at an average of 6.65 cents; 1932, 801,068 pounds at an average of 5.61 cents; and 1933, 155,500 pounds at an average of 6.21 cents?—A. Yes.

Q. How do you account for the very great drop from 17.64 cents in 1930 to 6.65 cents in 1931 in the price of Burley?—A. As far as we are concerned—

you will see what quantity we bought in 1930, 70,000 pounds—we bought only the highest grade. That is all we needed. We had a lot of tobacco of the medium grades, and we bought only the best grades at 17 cents. In 1931, we went on the market and bought the average tobacco.

Q. How do you account for the very severe drop that has taken place in the entire average of Burley?—A. Oh, well, we don't make the market. We buy it as it is.

Q. Who makes the market on Burley?—A. Well, the heavier buyers, I suppose.

Q. The heavier buyers?—A. Yes.

Q. And the largest buyer is the Imperial, is it not?—A. Yes.

By the Chairman:

Q. Would you go on the market and start buying before the Imperial started to buy?—A. I think we did that one year or two. We don't usually do it. We don't do it. We can't afford to do it.

Q. Why?—A. We don't buy heavy enough to compete with them; and they can buy at a lower price when there is no more competition. For a long time there were only two firms; the heaviest buyers in the market were the Imperial and Rock City Tobacco Company, and we used to buy pretty near half the crop.

By Mr. Sommerville:

Q. Then there was competition?—A. There was competition.

Q. And then there were good prices for the farmer?—A. Yes.

Q. Those were the days.

By the Chairman:

Q. Before we get away from that, what grade of flue-cured do you buy?—A. We buy the very best for a certain quantity, and then we go in the medium ranges, to blend them. Then in the last year we had to buy a lot of low-priced flue-cured to be able to compete with some other companies that were going out and buying those grades.

Q. Take your 1931 purchases?—A. We didn't buy from the grower that year.

By Mr. Sommerville:

Q. In 1932 you bought 161,248 pounds at an average of 19·29 cents?—A. Yes.

Q. That was 2 cents a pound more than we have had, so far, from the Imperial?—A. Yes. I heard Mr. Hughes a minute ago say he would like to correct that impression that the Imperial buys only the best tobacco, because I think for our best brands we buy just as good tobacco as anybody else, if not better.

Q. At any rate, you paid 19·29 cents?—A. Yes, that is the average of the amount we purchased from the farmer.

Q. In 1932?—A. In 1932.

Q. That was the average of 1932 dry, and the average for the green was about $16\frac{1}{2}$ cents?—A. Yes.

Q. Then in 1933 your average was 16·47 cents?—A. Yes. But there are tobaccos there that we bought at 23 cents. We bought the quantity we needed of the best grades that we paid 23 cents for; and then we went out and bought other grades.

Q. What flue-cured have you on hand, approximately?—A. Well, we have on hand, I suppose, one and a half million or so.

Q. 1,500,000 pounds?—A. I am saying that now from memory. I could not say the exact figure.

By the Chairman:

Q. That is within a narrow range of it?—A. Yes.

By Mr. Sommerville:

Q. What are your usings of flue-cured?—A. They are increasing from year to year, and I would not be able to tell you.

By the Chairman:

Q. What did you use last year?—A. Last year?

By Mr. Sommerville:

Q. Yes, approximately?—A. It is very difficult to say. I would not like to make a blunder.

Q. What are your total usings of flue-cured and Burley?—A. One and a half millions, about.

Q. About one and a half millions of flue and Burley?—A. Yes, Burley and flue-cured.

By the Chairman:

Q. Your holdings of tobacco to-day are not alarming, compared with what you use?—A. Oh, we are not scared.

Q. You are not at all frightened about it?—A. No. We didn't buy very heavy of Burley this year, because we didn't think we should go very heavy in Burley. We bought a little heavier flue, because our business has turned a little to flue, because we are going more in the cigarette tobacco business than we were before.

Q. You will hold that for what, 18 months or 24 months?—A. Oh, 24 months.

By Mr. Sommerville:

Q. Twenty-four months average?—A. Yes, or 30. We usually try to keep a 30 months' stock, so we won't be squeezed on the market if anything happens. At the same time we have to let our tobacco get a little older, because it is not good to use when we buy it.

Q. As far as you are concerned, you have no fear about the quantities that are on hand?—A. No. I would not say we will buy as heavy next year, because we never know what is going to happen. At the same time, we are not afraid of what we have. We can carry it; and then we have just about enough to keep us going in our ordinary way.

Q. Now, Mr. Picard, out of your particular experience in selling, perhaps you can give us some of your experiences of the practices that you meet in competition?—A. Sir, before I begin, if you will allow me, by an accident, this morning I went into one of the stores on Sparks street, and I was talking to a merchant there. He showed me where he had a request to answer whether they were in favour of price maintenance or not. He had a little piece of paper, typewritten, on which was marked, "Are you in favour of price maintenance?" There was a space to mark yes, and a space to mark no, and a space to sign the name. It is understood he was in favour of price maintenance. I only bring this up at all to have the opportunity of telling you as far as we are concerned we are very much in favour of price maintenance. In fact we co-operate as much as we can. Furthermore, we never went into the practice of selling even to canteens or relief camps at prices below the price we are selling to the ordinary jobbers or retailers, because we can't do it; because we sell our tobacco at prices such that we can't afford to cut them.

Q. You do approve of price maintenance as a method of merchandising in the tobacco industry?—A. Oh, 100 per cent; especially to-day with the small profits the retailer is getting. He would not be able to make a living if there is any cutting in the prices.

Q. He is getting 13 per cent now?—A. Yes. He is getting a little more than that from us. We give him 15 per cent. Even at that, I don't think we are giving enough. Because the habit before was that it was a gentleman's understanding, I think—or anyhow, years ago it was 20 per cent. Tobacco that was selling at 5 cents would cost the retailer 4 cents. Tobacco that would sell at 10 cents would cost the retailer 8 cents; tobacco that would sell at 15 cents would cost the retailer 12 cents. I think I am the only man here that knows that. I think I am the oldest man in the tobacco business in this room.

Q. But gradually that has been cut down so that the retailer's profit is 13 per cent?—A. Well, that began when the sales tax came on. They began taking a little off the retailer, and then next time a little more, and the next time a little more, until now he is starving. The profit to the retailer, by allowing 25 per cent,—if we take the sales in this country at $75,000,000, which we think it is, or thereabouts, and that the retailer gets 25 per cent of all the business, which is the average that the Imperial state in their brief, he would be getting about $12,000,000. If that is divided among 57,000 retailers, it is $260 a year each, or $4 a week each. Any retailer that sells $500 a week is a good retailer, $25,000 a year. At 13 per cent, that is $65 for him to pay his own salary, to pay his employees, to pay his rent and pay everything. Before, he could sometimes sell novelties, pipes and things like that. He can't any more, because they are given away as premiums, and the only thing he has to live on now is tobacco.

Q. What do you say, generally, is the position of the retailer, the retail tobacconist?—A. Very, very, very poor.

Q. At the present time?—A. Yes, very, very, very poor. Very dangerously poor.

By Mr. Ilsley:

Q. Did you hear Mr. Spafford's remarks on that?—A. I heard them, but I don't agree with them. I think he is in a very, very hard fix. I think the retailers in this country in another year or two will be out of business, every one of them.

By Mr. Sommerville:

Q. On the basis of the present conditions?—A. Yes. I know some retailers that are the best retailers in this country, and to-day they cannot pay their bills. They have been in business for twenty, twenty-five and thirty years. They own their business. They are getting a special 10 per cent discount; and even with that, they can't live to-day.

By Mr. Factor:

Q. What about the retailer that has to pay 10 per cent extra? He is still worse off?—A. He is pretty badly off. If the one with only 10 per cent can't make a living, the other one certainly can't.

By Mr. Young:

Q. Is that due to the falling off in business?—A. That is one of the reasons. But at the same time his margin of profit has been reduced from time to time. It is really the retailer that pays the sales tax. Well, there is part of it paid by the manufacturer, but every time the sales tax goes on, we increase the price to the retailer.

By Mr. Ilsley:

Q. When you started, how much did he get in place of the 13 per cent he is now getting?—A. It was an agreement. It is understood. It is a fact. It is the basis of the tobacco industry not only in Canada; in the United States it was the same, even on tobaccos. In the States there has been a lot of cutting of price in cigarettes. The retailer should get 20 per cent and the jobber 10 per cent. That is the figure that we should start on when we make our selling price, and then come along the line, or if we are going up, use the same figures. That was what it was until, I would say ten years ago or so. I don't remember very well the exact date, but I do remember very well—although I am a young man, I think—the day that the first we did, a 5-cent package of tobacco sold at 4 cents, a 10-cent package at 8 cents, a 15-cent package at 12 cents. There was always that 20 per cent. Then, in those days, cigars were selling at $36 to retail at $50. That went up and up, and now cigars are selling at $41 and some tobaccos are selling for—well, our average is about 15 per cent. But you see, we are not very heavy in cigarettes. If we were very heavy in cigarettes, we would be 13 per cent, the same as the others.

By Mr. Ilsley:

Q. You spoke about the retailer being starved. What about the jobber? How is he faring under the present system of distribution?—A. The jobber is not getting too much either.

Q. He is getting as much as he ever did; that is 10 per cent?—A. Well, there is a very, very small reduction of about—once it was about a half or so per cent. But we don't calculate our prices like the others. We give them a straight 10 per cent off the selling price. Others have two lines. We give a straight 10 per cent, so we consider they get 10 per cent, although they get a lot more from tobacco.

By Mr. Factor:

Q. You have a list of direct retailers, the same as the other manufacturers, who do not buy through jobbers?—A. Not belonging to us. We sell direct to retailers.

By Mr. Sommerville:

Q. You sell direct to some retailers?—A. A lot of them.

Q. Just as some other tobacco men sell direct to retailers?—A. Yes.

Q. But most of your business is done through the merchandising method that has been given in evidence here, through the jobbers?—A. Yes. We are not against the jobber; we are in favour of the jobber. He is very useful. In fact, we can't do without him. But the reason why, I think, that the business is going away from the jobber is because the retailer is starving; and to allow him a little more, we may put him on the list.

By Mr. Factor:

Q. That is why there is such a cry from so many retailers, particularly in Toronto, about being put on the direct list and trying to make a living?—A. Certainly, I have to admit here, as a manufacturer, that the profit to the retailer is certainly very unreasonable.

By Mr. Sommerville:

Q. Now, Mr. Picard, will you please tell us what are the practices that you have found militating against the development of the independent business?—A. Anything they can think of, and anything they can do.

Q. You say anything they can think of, and anything they can do. That is broad enough. That is a good start. Just develop that, please. Just tell

us what you mean by that?—A. Well, I don't know. Sometimes I really think the officers of the company don't know about it. It is a question of them driving their men. They drive their men, I suppose. That is the way that everybody, or the great majority of manufacturers do, I suppose. I don't know. We don't do it. I suppose that is the way it should be done. That is probably the reason we are not any bigger. Unfortunately they drive their men, and their men get so nervous and excited that they think they must upset everythnig in the way. They have 133 men, I heard them say this morning—I don't think that includes Tuckett's and B. Houde men.

Q. I don't think so either?—A. There are 133 men going around the country with 100 advertisers following them up, and reporting on them if everything does not turn their way.

Q. Wait a minute. What do you mean by that? You say there are 133 men, and you say they are 100 advertising men?—A. Yes.

Q. That is, the Imperial have 100 advertising men?—A. I am taking the figures that I saw in their brief.

Q. They have 100 advertising men; what is the job of these advertising men?—A. They are supposed to get space to put up signs, and supposed to put advertising matter in the stores, and supposed to make window displays, and supposed to check up on the salesmen.

Q. Check up on the salesmen?—A. Yes, and they are supposed to keep on putting the fear of God in the hearts of the retailers.

Q. They are supposed to keep on putting the fear of God in the hearts of the retailers. In what way?—A. In telling them that they will have to report them to the salesmen or to the managers of the branches.

Q. For what? They will have to report them for what?—A. Well, if they display any other people's brands, or if they have not got their share of advertising or their big lion's share of advertising, or if they don't do what they tell them to do.

Q. You spoke about checking up on the salesmen. In what way does that operate? What happens with that?—A. Well, you know, they have their advertisers going around making up windows and things like that; and the salesmen I am giving a personal opinion, you know—

Q. You have had some of their salesmen on your staff?—A. Yes.

Q. Subsequently?—A. Yes.

Q. You have had both inside and outside information?—A. Yes.

Q. Just tell me how it operates?—A. Well, these men go out there and they report to the manager if the store is not giving enough display, or if the salesman does not seem to have had enough hold on the merchant, or things like that. Then the salesman, being so afraid of losing his job in this situation, sometimes goes to extremes. Sometimes I think that the head office does not even know it, because I would not think they would allow things like that, purely and frankly. It is going too far.

Q. What is done by the salesman with respect to display, for instance, of other people's goods?—A. Firstly, they have instructions by writing or in conferences to see that their goods only, if possible, are displayed, if the man is not too independent. If the man is a little independent, he can put up a fight. But you know how it is; every body is expecting to go on that list, that preferred list. Their work is to see that their goods only are displayed, if possible; and if there is any displays on the counter, like in the country stores where they have their displays in cases in the back there, they are supposed to show the merchant how to display his goods, and they go up there and display the goods to the merchant, show them how they could display them better than the other fellows; and while doing that, they push the other fellows' goods behind and put their own in front—a nice point of view for the people that walk in, but not so good for the independents.

Q. What happens if their goods are displayed in the retail merchant's establisment? What have you found within your experience?—A. I had so many complaints about that, about the ways and means that they were using in these things, that we just simply told our salesmen, "Now, gentlemen, don't report that to us. Fight, make your own battle, because if we begin looking after all these things, we would not be able to do anything else." So we didn't think that there would be any place to report, or anything like that; but unfortunately when I got at the office on Saturday, I had a letter and if you will allow me, I will read it to you.

Q. Yes, go ahead.—A. Last week on my way back from Quebec, I stopped at the Imperial's office and had a chat with Mr. Spafford about Mr. Watson of Saint John. This letter was written on May 8, and I can tell you it was not requested; because our instructions to our salesmen are not to report these things, they are too heartbreaking, but to take their medicine: that we have enough of our own, and that they are not working—they are not supposed to be looking after what the other fellow is doing. They are supposed to be selling goods for us. I got a copy of the letter they wrote to you. This reads:

> I suppose you have Ned Tucartians' and E. P. Watson's letters by now. Mr. Watson received a letter from Mr. Miller, president of the Imperial, to-day, saying he had instructed Mr. Farry to put him back on the list again with no restrictions. He is certainly very thankful to you for your help.
>
> This Mr. Farry, manager for Imperial, is using regular gangster methods with the direct accounts here and has most of the merchants frightened to push or display opposition lines. I told you in my last letter that Harry Green was displaying 20 Grand and Leicester Square on his counters and in his windows for us, and Mr. Farry gave him the devil for it to-day, and forbade him from putting any other lines but theirs in his window when they dress the backgrounds. Mr. Green was telling me to-night that he would likely have to get me to take back the Leicester Square as he says he is afraid they will take him off the direct list, the manager told him so only in a different way, and I could name you several more, but they are frightened to write in like Mr. Watson.

The rest of the letter has nothing to do with it, excepting just at the bottom of the letter where he says:

> ....We have enough new lines to keep us busy on our territories for another five or six weeks. You may depend I will fight all I can, and I would not trade jobs with any other salesman on the road to-day.

That is the only way we can put up a fight, by making our men believe they have the best job in the world.

Q. Is this the condition which, out of your experience of years, you have found to be general in the trade throughout Canada?—A. Yes, from Vancouver to Sydney.

Q. And is it a fact, from your experience with retailers, that they are subject to this amount of pressure from the Imperial Tobacco Company?—A. Sir, to me personally there is not less than a thousand have told me. I travel around and go and see them once in a while.

Q. What is their fear, Mr. Picard? What is the fear of these retailers?—A. Well, there are two things. There is the fear of being cut off the list when they are on the list; and there is the fear of not going on the list some day, if they don't follow the instructions and the directions that they are told to follow.

Q. And these things are accountable for the condition that exists, the condition you have described?—A. Yes.

Q. You heard some one give evidence here about the purchase of cigars, one having to buy cigars in order to get other tobacco. What is your experience

in that connection?—A. Well, I must say it is not cigars; it is tobacco. The merchant is told, you won't get our cigarettes if you do not buy so many pounds of tobacco. The merchant, when he has the tobacco has to push it. He has to do everything he can with it. Then, that cuts out the other fellow.

Q. Cuts out the independent?—A. Yes. Mr. Sommerville, will you let me add something, as well, to what I said when we were talking about price maintenance.

Q. Yes.—A. We admit that the Imperial Tobacco Company is helping, in many cases, in keeping price maintenance, and it is a good thing; but sometimes for reasons of discipline, or when the merchants do not agree with what they say, they just come out there and let everything loose. Quebec city is in that position to-day.

By the Chairman:

Q. When you say " Let everything loose," what do you mean?—A. They sell in Quebec city to-day—not only our relief camps, but the canteens at the citadel are buying goods at $6 a thousand, when the retailers have to pay $8.64.

By Mr. Factor:

Q. From whom?—A. From the Imperial, and I think Macdonald's also. I do not know from whom; anyway, not from us. But furthermore, there is a special man or agent or whatever you want to call him, who is buying cigarettes direct or from the jobber, less discount price, and has a list of customers of about, I should say, probably—well, I heard they told me about 2,500; and these people pay $1 a year to be on that list and then they can get their cigarettes at cost.

By the Chairman:

Q. Whose cigarettes?—A. Well, those that I saw were Imperial Tobacco Company's. I do not say there are no others, but those I saw were Imperial. They buy cigaretes at 21 cents when the price is 25 cents.

Q. Your point is, this is in violation of the so-called maintenance scheme? —A. Yes, because, what about other retailers with all their customers.

By Mr. Sommerville:

Q. What is the reason for this condition in the city of Quebec to-day?—A. I think the reason is because the jobbers would not agree to form an association.

Q. You are agreeable to the method of distribution through jobbers and jobbers' association?—A. And jobbers and all that. We state that. We have advised the jobbers that we will agree to price maintenance, and that we agree even to go as far as to cut off anybody who cuts prices. What is happening? The associations insist on having lists of our customers, and things like that. That is not our agreement. They insist also in other places on having customers who were buying from us for twenty or twenty-five years directly, to be cut off the list; and that is not our agreement either. We could not do that, because of this reason: Take a province like Manitoba, for instance. If we take ninety accounts, the Imperial with two or three different companies will take 200 or 270.

Q. What do you mean by that? You say if you take ninety accounts in Manitoba, the Imperial will take 200 or 270? What are you referring to now? The jobbers' association is in operation in Manitoba?—A. Yes.

Q. Then the jobbers' association will agree to your taking ninety accounts that you sell direct?—A. Yes, the jobbers will allow ninety accounts of retailers that we are allowed to sell to direct. We are allowed to go and sell to these, whoever we please, in the province. We are allowed to do that.

Q. You are allowed to sell to these; that is their suggestion?—A. The first chance, the first place where the independents have not got, I would not say, a

show. That is the first place where the independent has not got the same showing, because of the United Cigar Store.

Q. Why?—A. The United Cigar Store for one.

Q. First of all, you say you would have no showing because the United Cigar stores are on the direct list of the Imperial?—A. Yes.

Q. Then, in addition to that, the Imperial will have ninety accounts?—A. Ninety accounts, Tucketts and go around—

Q. And they have ninety?—A. Yes, and the B. Houde Company come in.

Q. And they have ninety accounts?—A. That will be 270, but we will be allowed ninety, and the United Cigar Stores and all the same value, and so there is very little value in comparison to what they are for the Imperial Tobacco Company.

Q. Is that the plan that is in operation in any of the provinces?—A. Well, at the meeting of the jobbers' association in the West last February, this came up, and that was the objection I put to it. I said, if the Imperial Tobacco Company will make their three companies one company—

Q. And take ninety?—A. Ninety accounts for the three companies, it would not be objectionable to us; but they would not agree to that. They said they were different companies, and furthermore I may say that the other fellows that are not buying direct, they have their General Cigars and can sell them with discount and come in there and sell them at a discount for 200 or 300 cigars, and they tell them, we will sell your cigars at a discount on condition you do this and that in the store.

Q. Yes. What about the method of appointing somebody in the town to represent one firm, and then another firm, the Tuckett Company, and Houde, and Imperial or General Cigars; what information can you give the committee upon that?—A. I do not get your question.

Q. Well, have you had experience where one man is appointed to represent Tucketts, and another man appointed to represent the Imperial?—A. Yes, sir, in the province of Quebec, in one district of Quebec, the eastern district that is from Three Rivers east, what we call the eastern division of Quebec, we have had several complaints from our salesmen, where they tell us that in a town where there would be four or five merchants the Imperial Tobacco Company would go to one and say: We will make you our agents in the town if we get the whole of your window display, and then later on the Tuckett Tobacco Company will go to the next one, and B. Houde would go to the next one, and there would only be one or two left for the independents.

Q. Each one of those companies would go to different stores or different merchants leaving the independent rather in the cold, is that the position?—A. Yes, sir. I know of some instances in places where the independents had the run on the tobaccos, where they allowed them to run wild.

Q. What do you mean letting them run wild; do you mean where the independents were selling or had the sale?—A. Yes.

Q. And then the Imperial allowed their men to sell, run wild as you say?—A. Yes.

Q. Sell to everybody?—A. Yes, sell to everybody at a discount.

Q. At a discount?—A. Yes, at a discount.

Q. And that is against your price maintenance plan?—A. Yes. Another thing against our price maintenance plan, and the reason why Mr. Gibbs resigned as president of the association: They have the United Cigar Stores and they have what they call branch stores that belong to the people but who have the sign of the United Cigar Stores on the condition that they buy their goods, and the United Cigar Stores have sent them circulars telling them that the man who sells the most Turrets will get a cash premium of $300 or something like that, and the

man who sells the most of another brand will get another cash prize of so much, and Mr. Gibbs objected to that because he said it was against price maintenance.

Q. Well then what has been your experience with respect to window displays; have you had any interference with your window displays?—A. A few years ago we used to have some window displays but we had to quit.

By the Chairman:

Q. Why?—A. We could not get the windows, sir, we had no chance; it was just throwing money away, and we cannot throw money away. We would go in and we would get a display. Some of the merchants are very independent and are very nice, in fact, I would say the majority are very nice, but you know how it is. They would come to us and say: We are very sorry but we have made an agreement with the Imperial Tobacco Company that from now on they will have displays always ready for us, you come in and give us your display every two weeks and walk out and come back after a month, and they have their displays all the time—and other reasons like that.

By Mr. Sommerville:

Q. In connection with your display signs, you were in the habit of using a good deal of those for some years?—A. Yes we were.

Q. That is, your outdoor display signs?—A. Yes, and there again we had lots of trouble. I remember writing to the Imperial Tobacco Company asking them to discontinue some of these tactics.

Q. What do you mean by that?—A. Well, they were tearing down the signs, displacing them, or seeing that they were pulled down.

Q. And was that a general practice throughout your territory?—A. In different parts of the territory, yes, in Quebec.

Q. And as a result what did you do with respect to outside signs?—A. That is another thing. We wrote to the Imperial Tobacco Company a few years ago, and they wrote back to us, and they told us that it would be stopped and in some places they replaced them, but about three years ago the same thing happened, and the first thing we knew the local manager came and we met him at his office and had quite a discussion over it there, and he had the chief advertiser in and the chief advertiser said that he had not done it although I had affidavits that he had done it; while he was not there he had paid to have it done.

Q. Yes, you had affidavits to that effect which you produced to him at the time?—A. Yes, and that kept on until I got pretty hot and told them that if it happened again I would hire men to pull down theirs, but I am against that sort of practice, and when I walked out he said "The next time you have anything to do with the Imperial Tobacco Company don't write to the office for they have other things to do than read your letters."

Q. As the result of what you found with respect to the tearing down of your signs have you given up the use of these outdoor signs?—A. Yes. We have considered it two or three times since, but we came to the conclusion that it was nearly impossible and it was just throwing money away. We have come to the conclusion to put them back but we felt we could not do it.

By Mr. Senn:

Q. Mr. Picard, I suppose you in common with other manufacturers have been buying your tobacco more cheaply those last three or four years?—A. Pardon?

Q. I suppose you, in common with other manufacturers, have been buying your tobacco more cheaply those last three or four years?—A. Yes, sir.

Q. Have you been able to pass that benefit on to the consumer?—A. Yes. I may tell you that our prices in 1933 were 20 cents less than in 1932.

Q. Per pound?—A. Yes.

The CHAIRMAN: Mr. Spafford wanted to interrupt. I have no objection to your doing that, Mr. Spafford. What was it? If you have some specific point we will hear you, but we do not want to put you under examination now, because we are not through with our program.

Mr. SPAFFORD: Mr. Picard stated we are selling cigars and tobacco at special prices to canteens. While it did prevail it does not prevail to-day.

The CHAIRMAN: It did prevail but you have stopped it?

Mr. SPAFFORD: Yes, and Colonel Spry of the Department of National Defence will tell you that.

The CHAIRMAN: How long ago?

Mr. SPAFFORD: I would say within the last three weeks.

Witness retired.

A. G. MUNICH, sworn.

By Mr. Sommerville:

Q. Mr. Munich, you are a tobacco manufacturer, connected with the manufacture of tobacco?—A. Yes. I am president of Benson & Hedges.

Q. You are president of Benson & Hedges?—A. Yes, of Canada, Limited.

Q. And you manufacture cigars and cigarettes?—A. And tobacco.

Q. And fine cut tobacco?—A. Yes.

Q. And your head offices are in?—A. Montreal.

Q. And you have been engaged in the business in Canada for some years? —A. Yes.

Q. And have a general business from coast to coast?—A. Yes, sir.

Mr. FACTOR: How long has he been in business?

By Mr. Sommerville:

Q. How long have you been in business in Canada?—A. Oh, about 35 years.

By Mr. Boulanger:

Q. Where is the parent company?—A. In London, England.

By Mr. Sommerville:

Q. Mr. Munich, will you be good enough to tell the members of the committee what your experiences have been during these years of your experience in the industry in the practices of your competitors, or some of your competitors, in the merchandising of your product?—A. Well, of course, I am president of the company but I am not very actively connected.

Q. At the present time?—A. In the management of the affairs of the corporation; but I became president in 1926, and from that time on I figured that we should go into a different method of merchandising our product. That is, go to the general trade. Up to that time Benson & Hedges were dealing more exclusively with a certain class of the trade. The objection to that was pointed out to me by our manager at the time, that if we did anything of the kind we would immediately be interfered with by the Imperial Tobacco Company. Well, that statement appeared to me at that time rather ambiguous, and I could not see why the Imperial Tobacco Company should interfere in our merchandising program. However, we started on that policy and started to distribute our goods in as many stores as we could from coast to coast. Then the complaints began to come in from the travellers of the interference that they met with from the Imperial Tobacco Company. Unfortunately, every time it was the Imperial Tobacco Company that was interfering, it wasn't anybody

else. Well, I did not pay any attention to it, would not listen to the argument, and I blamed our sales manager, the men were putting it over on him, and that I did not believe the Imperial Tobacco Company, as a corporation, a large institution, would lend itself to such tactics as were brought to my attention. And this condition went on for some years until finally we had to take notice due to the fact that our business was gradually dwindling, and several instances were brought to my attention. As a matter of fact, I can only say that what the other manufacturers have just a few minutes ago stated was exactly the case with us.

By the Chairman:

Q. That has been your experience, Mr. Munich?—A. Absolutely.

By Mr. Sommerville:

Q. From coast to coast?—A. Yes, from coast to coast.

Q. And from year to year?—A. From year to year.

Q. Is it your belief, Mr. Munich, from your experience in the generality of the charge, both in area and in time, that these practices could not be continued without the knowledge and approval of the head office?—A. Well, I am rather surprised. Of course, I have only attended the meetings since yesterday, but I was rather surprised to hear some of the evidence of some of the officials of the Imperial Tobacco Company on the stand here admitting that they were not aware of the situation. I can hardly credit that.

By Mr. Ilsley:

Q. Mr. Spafford you mean, I suppose, Mr. Munich?—A. Yes. It does not seem believable, because it is such a well known situation that exists among all the dealers; they are all afraid; they are all frightened. You approach a dealer; you can almost say anything to him, but he is absolutely afraid of his life to do what is a certain thing for the benefit of the independent; they would like to, but they say: If I do that my bread and butter is going to be taken away from me, what am I going to do with my family?

Q. And is the dealer willing but afraid?—A. Absolutely. Then you take the indirect dealer, he is just in the same position, because it seems to be a method of baiting the dealer, holding a bait in front of him by getting him to believe that if he does the right thing with the Imperial Company's goods, promote the sale of the Imperial Company's goods, feature the merchandising of the Imperial Company's goods, and allow the proper display of advertising matter and all that, he will eventually get on the direct list, and that is a bait naturally which prevents the dealer from doing anything to help the independent but rather to do everything he can to oblige the Imperial Tobacco Company, and we are left—

Mr. Factor: Holding the bag?

The Witness: Yes, holding the bag.

By Mr. Sommerville:

Q. What are some of the practices that have been referred to by the gentlemen who have given evidence to-day?—A. Well, I have just an instance that was brought to my attention the other day in Montreal at our office by one of our salesmen; in the north end of the city of Montreal he had cultivated a certain new store who did a very nice business. That man has three windows. I think it is a corner store having one window on one corner and two windows on the other street. Our salesman was able to obtain two of these windows, and he was an indirect account. That is, he could not buy directly from the Imperial Tobacco Company but he could buy from a jobber indirectly, and naturally he

was trying to get on the list, because it is the object of every dealer to try to get on the list and get the extra 10 per cent, and it has been the reason of hurting our merchandising on the counter. As I say, we had two of his windows. Well, the other day we were notified to take our stuff out because the Imperial Tobacco Company had agreed to put him on the direct list and we lost out.

By Mr. Ilsley:

Q. Agreed to put him on the direct list?—A. Yes. Well they signed him up for five years on his windows. At least, that is what the dealer reported to us.

By Mr. Young:

Q. Signed him up on the entire window space?—A. Yes.

By Mr. Sommerville:

Q. That he give the windows to them for five years?—A. We have many cases where it is impossible, where the dealer would like to display our merchandise, but he has been compelled to take it off.

By Mr. Boulanger:

Q. Did you pay anything for the use of the window?—A. They didn't have to pay anything. You must bear in mind that practically 80 per cent of the dealers' business in tobacco represents Imperial Tobacco Company's merchandise, and the rest of it is distributed among the rest of the independent manufacturers. A large proportion of the rest of it goes to the Macdonald Company. We, the smaller ones, get the leavings.

By Mr. Sommerville:

Q. What is the effect of such a policy upon the development of independent business?—A. Well, I think the more I look at it the more I am convinced that it is just a matter of a very short time when the remaining independent dealers will be thrown out of business, and all the business will be in the hands of the Imperial Tobacco Company. It cannot be otherwise. I must say that if I were in the position of Imperial Tobacco Company probably I would do the same thing. I am not going to say I would not. I might do the same thing, it is human nature.

By Mr. Factor:

Q. It is a pretty low state of human nature, that is all I have got to say about it?—A. The way the situation is fixed to-day all you have to do is just to sit back and wait. We are all of us, I do not know any of our competitors' financial statements, I have never made any attempt to look at their financial statement, but I am quite prepared to make this statement to the committee: that every one of these companies must show a terrific drain on their resources to-day, and that is entirely due to the fact of that kind of competition that we manufacturers have to meet against the Imperial Tobacco Company; because, although we were always willing to limit the amount of merchandise compared with the Imperial Tobacco Company when the times were good, the dealer was able to pay us. They would pay promptly. But when times got bad, and the drop of consumption in cigars especially, the dealer finds himself forced—he must pay spot cash to the Imperial Tobacco Company for his product. Now, where is he going to get the money? The only way he can get that money to pay the Imperial Tobacco Company is to take my money, Grothe's money, or the Rock City money, or the Macdonald's money—take every small manufacturer's money and hand it over to the Imperial Tobacco Company; and we

have to stand a heavy loss. Our failures up to the period of the depression probably amounted to less than—I do not think they amounted to one per cent. To-day our failures amount to as high as 10 or 15 per cent.

Q. Yes?—A. All this we have to absorb, and that is the cause. I do not like to talk against the Imperial Tobacco Company, because we all have to run our own business, but I am quite satisfied—and if the Committee desires to verify all these statements that have been made by the Independent, it is quite possible for them to do so; because the situation is so clear that all you have to do is to go in to the dealer, and you can pick anyone out blindfolded; but he is afraid to talk, he is afraid to open up on the subject, because he realizes that indirectly or directly he is going to get hit. Probably I will be hit after this speech of mine, but I don't care; they are not big enough to frighten me as far as I am concerned.

By the Chairman:

Q. Tell me this, Mr. Munich: have you found these objectionable competitive tactics on the part of any of your other competitors?—A. No, I certainly have not. There is no question there is some competition between us naturally.

Q. I am speaking of objectionable competition?

Mr. FACTOR: Not that jungle competition.

The WITNESS: Not a single instance.

By the Chairman:

Q. One other question: do you think it is necessary in business to engage in these practices?—A. No, it is not. I think it is a detriment to the whole tobacco proposition throughout the Dominion. In the first place, if I understand the matter, this inquiry is largely with the idea of helping out the farmer, the source. Well, what is the result to-day?—A. To-day the prices for raw tobacco are dictated by the largest manufacturer. He dictates the price, and we have to follow suit and take the leavings. If we were enabled to trade in this country openly and sell our merchandise in competition with everybody else on its merits, I am sure that every one of our independents would develop our business inside of a year. And if we were able to do that, what would be the result? We would be in a position to compete among ourselves in the purchasing of raw material, and that in itself would create a far better situation with the farming community. But until something like that is done it will never be possible to make that statement very definitely. Gentlemen, you have not got the slightest conception of the conditions under which the Independent manufacturers are labouring to-day. You cannot realize it.

By Mr. Factor:

Q. We have some conception, from the evidence that has been given?—A. They have not even touched the true basis of that situation, it is alarming. It is alarming, and from the general standpoint it could not be tolerated.

By Mr. Sommerville:

Q. And from the retailer's standpoint, what is your observation, Mr. Munich; is it good for the retailer to be in that position?—A. No, it is not good for the retailer. It is not good for the retailer in this way: the retailer to-day is selling largely one product, and he has not got the ability of showing his merchandise the way he should show it. And then in addition to that it is not fair to the consumer, because the consumer has not got the ability of buying at all, or judging the quality of the different classes of merchandise. He is practically dictated to to-day into one class of merchandise. To-day the situation is that the average Canadian is forced to smoke a certain class of manufactured goods.

Q. Because of the prominence with which they are displayed?—A. Absolutely, yes. If the storekeeper gives prominence to our merchandise and happens to build it up, immediately something happens, sooner or later something happens as it has happened in the past. These things have been brought to our attention, and all of a sudden we find this man is not buying any more, not the same amount of product from us; and his reply to us is, well I have been told that if I do not buy so many cigars I will not be able to get my cigarettes. So that is not fair, and you cannot blame him. There is nothing to blame the retailer for, if he cannot buy cigarettes he is going to starve.

Q. That really means he is not a free agent?—A. He is not a free agent; oh no, far from it. It is very much changed.

By Mr. Senn:

Q. Have you a preferred class among your purchasers?—A. A preferred class?

Q. Such as was described?—A. Yes, we have a direct list and we have an indirect list.

Q. You think then that is not the cause of the difficulty?—A. No, because you see the indirect list as we consider it, is the very small dealer. For instance, there are many restaurants you know, or people who make a store out of a residence or a room on a small side street, and they are selling soft drinks, and all sorts of things and they handle a few cigarettes, and probably a few cigars. Well these small dealers are probably buying two or three packages of cigarettes at a time from one dealer, and they are probably buying four or five cigars because it is retailed out to them—they do not have to buy a box of 25 or 50, they will go out and buy a small carton of five. Well now, it would not pay us to sell a man that small quantity; therefore, that goes into the hands of the jobber.

Q. Yes?—A. We certainly would rather sell entirely through the jobbers, because our method of collecting would be so much easier. But that is where we discriminate, if you call that discrimination, between the direct and indirect account.

By Mr. Edwards:

Q. When the Imperial Tobacco Company put a dealer on the direct list, does that automatically put them on as an independent dealer?—A. Oh no, we have nothing to do with it; it does not automatically put them on with us, but we have many dealers on our direct list that the Imperial Tobacco Company have not got on their list; they have them as indirect.

By Mr. Young:

Q. You said a minute ago that if you had more competition, that is with small dealers buying—fair competition in the selling—that you would be able to pay the farmer more for his tobacco. Would you explain how you could do that?—A. I did not say that we would be able to pay more. I believe we would be able to pay more in this respect. To-day we are paying a big price for tobacco, far more than the Imperial Tobacco Company are paying.

Q. You pay more for your raw material?—A. We do, because you see they buy direct from the farmer. They have their own shipments and they sort out and grade that tobacco, and by getting it in bulk like that, they are able to grade it, and they are able to get it on an average price and they are able to dispose of all of their tobacco through their whole tremendous organization and business. Now, if we were all on the same footing, and were all doing a much larger business than we are doing to-day, we would be able to buy from the farmers and grade the tobacco. Listening to the evidence of yesterday, there is no question that the proper method of merchandising tobacco is the

method that applies in the United States; that is the auction method. When you have the auction method the farmer naturally has to grade his tobacco. He grades his tobacco, and if he can get 20 cents or whatever the price may be for that particular grade, all the better for the farmer. And it gives him this further incentive of taking care to grow a better crop. The method as applied to-day, in my mind, is all against that.

Mr. FACTOR: Mr. Chairman, do you think we had better adjourn?

The CHAIRMAN: Yes. Do you want anything further of Mr. Munich?

Mr. FACTOR: We are having the other witnesses back to-morrow, aren't we?

The CHAIRMAN: Yes, we are; in the afternoon, not in the morning.

Mr. FACTOR: Not in the morning?—A. No, I have to attend a meeting of the Agricultural Committee, if you don't mind.

Mr. SOMMERVILLE: Before we adjourn, I would like to have delivered to me the wage list of the Imperial Tobacco Company.

Mr. LANE: They are not prepared yet, they are in the course of preparation.

Mr. SOMMERVILLE: Could I have them in the morning?

Mr. LANE: I am sorry, it is physically impossible.

Mr. SOMMERVILLE: There are some that would be ready, I feel sure, at this time, and I would like to have them in the morning; those companies that are ready.

Mr. LANE: I will telephone to Montreal to-night and see what is available.

The witness was discharged.

The committee adjourned at 6.05 p.m. to meet again on Wednesday, May 16, 1934, at 3.30 o'clock p.m.

HOUSE OF COMMONS, ROOM 368,

May 16, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 3.30 p.m. Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of the last meeting indicate the witnesses that were heard and certain documents that were filed. We will order the minutes approved as presented. The clerk of the committee desires to file a list of exhibits numbered 144 to 162 inclusive. They represent certain documents which have been laid on the table. I will not read the list because it is long.

EXHIBITS FILED

The Financial Statements of the following Companies:—

Exhibit No.

144.—The Tuckett Tobacco Co., Ltd. (years 1930 to 1933 inclusive).
145.—Hodge Tobacco Co. of Canada, Ltd (1929 to 1933 inclusive) together with Statement covering purchases of 1933 crop flue-cured tobacco.
146.—Dominion Tobacco Co. Ltd. (1929 to 1933 inclusive).
147.—Empire Tobacco Co., Ltd. (1929 to 1933 inclusive).
148.—James Kirk Limited (1929 to 1933 inclusive).
149.—The H. Fortier Company, Ltd. (1929 to 1933 inclusive).
150.—John Erzinger, Limited (1929 to 1933 inclusive).

Now, to-day we have requested the Honourable Mr. Cahan, Secretary of State, and the Honourable Mr. Matthews, Minister of National Revenue to be present. The Honourable Mr. Rhodes, Minister of Finance, as the committee and others all know recently suffered a very sad bereavement and is not in the city and, therefore, has no knowledge of the request to be present to-day, but, no doubt, if it is desired he will be available later.

Counsel for the committee advised Mr. Stewart—and later he will read into the record the telegram which he sent—that we would meet to-day and the

Ministers would be here, and he replied indicating that he had no further desire to be present and would be quite satisfied with whatever statement was chosen to be made by the Ministers; he had nothing further to add. I am sure we appreciate the attendance of the two Ministers who are present with us. Counsel for the committee suggests reading these short telegrams first.

Mr. SOMMERVILLE: The first is a telegram to Walter Stewart dated Ottawa, Ontario, May 14, 1934, which reads as follows:—

> Your letter received and read to the committee stop The Prime Minister has requested that you be given every opportunity to ask the Ministers to whom you referred the questions indicated by you in your evidence and in your letter stop These Ministers will be requested to be present next Wednesday afternoon for the purpose of affording you that opportunity you desired stop Possibly Mr. Rhodes who so recently suffered such a sad bereavement in the death of his wife may not have returned but it is expected the other Ministers will be available.

That is signed by myself as counsel for the committee.

This telegram was received from Mr. Stewart dated at Montreal, May 15, 1934, addressed to myself:—

> Your telegram received and I wish to thank the Prime Minister for giving me every opportunity of asking the Ministers to whom I referred the question indicated by me in my evidence and my letter stop If I went to Ottawa I could only reiterate the question mentioned in my letter stop I will be satisfied with an answer to that question without further attendance before your committee.
>
> Signed Walter M. Stewart.

The CHAIRMAN: Perhaps I might first read the question to which he refers as indicated in his letter and what was stated when he was on the witness stand:—

> I would have liked to have asked the Minister—

naming the three Ministers—

> —if they could tell why other manufacturers had advance information of the changes in excise duty.

That is the question. Now, Mr. Cahan and Mr. Matthews are here, and I am sure the committee will welcome a statement from Mr. Cahan first.

Hon. Mr. CAHAN: Am I on oath?

The CHAIRMAN: Not necessarily.

Mr. YOUNG: We will accept your word for it.

Hon. Mr. CAHAN: Mr. Chairman, so far as I am concerned, when I read the evidence of Mr. Walter M. Stewart I had no recollection whatever of any such decrease in excise duty as was then under consideration by this committee. I was a member of the executive committee that discussed reductions in customs tariff at the time of the Imperial Economic Conference, but I was not, until that date, aware that a reduction in excise duty had been made such as appears in chapter 8 of the statutes of 1932 and 1933, which Act was assented to on the 25th of November, 1932. I do not think it is necessary for me to tell this committee that never directly or indirectly, by any oral or written communication or in any way whatsoever, have I ever revealed to any person any matter that was being discussed prior to the bringing down of any budget since I have been a member of this government. That is clear. But I was intrigued by the fact that I did not recollect anything about this particular reduction in excise duty;

therefore, on looking up the debates I found that the House opened on October 6, 1932, that the late honourable Mr. Ryckman introduced his Bill to make this reduction of November 3rd, that it then passed its second reading on November 7th, 1932, and that it was assented to on November 25, 1932, and my entire ignorance was accounted for by the fact that I was appointed a delegate to represent the government of Canada at the Geneva Assembly of September, 1932; that I sailed from Quebec on the 17th, I think it was—I have a note of it—yes, on September 17, I sailed from Quebec; that I had other duties abroad in connection with the second special assembly of the League of Nations in December, and at the time I was negotiating a trade treaty with France; and that I did not return to Canada until early in February, 1933—I think the 6th day of February, 1933—and, therefore, these were matters entirely beyond my knowledge in any way, as, when I was away, I was so very busy. I did not receive the Canadian newspapers and I saw, really, only such Canadian news as was published in the continental papers and occasionally in the London Times.

On reading the Statute it was brought to my attention that this enactment, chapter 8 of the Statutes of 1932-33, although it was assented to on the 25th of November, 1932, was made, in respect to the reduction in cigarette excise duties, retroactive to the 13th day of October, 1932, which seemed to me to preclude any possibility of premature information.

The CHAIRMAN: Which is about two weeks before the date of its introduction.

Hon. Mr. CAHAN: Yes, nearly three weeks before. I would like to say one thing more, that for two summers I acted as the Minister of National Revenue during Mr. Ryckman's illness. I sat by him in the House of Commons, I sat by him in council, and during two summers when he was ill I was administering his department, and I saw the precise way in which that department was administered, and it would be impossible to convince me that any revelation was made by him with respect to any prospective change in duties, excise or otherwise.

The CHAIRMAN: Thank you, Mr. Cahan. Mr. Matthews is here. Although Mr. Matthews was not the Minister of National Revenue at the time, he is the Minister of National Revenue now and that was the Minister referred to by Mr. Stewart. So we will hear Mr. Matthews.

Hon. Mr. MATTHEWS: Mr. Chairman, the change in duties referred to took place in 1932. I was appointed Minister of National Revenue on the 6th of December, 1933, and, therefore, it is quite obvious that I could have had no knowledge whatever of any contemplated change in duty before I heard this matter read in the House of Commons. I do not know, Mr. Chairman, that I need say anything further than that.

The CHAIRMAN: Counsel for the committee has a word to say. It has already been referred to by Mr. Cahan, but I think it ought to be put clearly on the record in justice to the memory of the late Mr. Ryckman who was Minister at the time and so there may be no conceivable doubt in anybody's mind as to anything of an improper nature having occurred in connection with this matter.

Mr. SOMMERVILLE: The Bill which I have before me was the Bill in the form in which it was introduced as Bill No. 7, "An Act amending the Excise Act," introduced by the late honourable Mr. Ryckman on November 3, 1932, retroactive, as the Honourable Mr. Cahan said, as of the 13th of October, 1932. So that even if it were conceivable that somebody did know a day or two days or three days even or many days before it would make no difference whatever to the manufacturers since the Act came into force and effect as of the 13th day of October and the reduced tax was in effect from that date, some

three weeks or more before the date. The reasons given by the Honourable Mr. Ryckman for the introduction of the Bill are set out, when the Bill was receiving its second reading, in Hansard at page 883 on the 7th day of November, 1932. The Bill deals with the duties on spirits and cigarettes. Mr. Ryckman says:

> The occasion for it is brought about by the agreement which was entered into with the United Kingdom. It will be noted from the schedule of the agreement that the Customs duties on spirits were reduced from $10 right across the columns to $8 British preferential, making a reduction of $2 per gallon.

And then it goes on to deal with the question of spirits and the reduction of the tax on spirits to bring the reduction into line with these preferential duties. Then on the same page Mr. Ryckman says:

> The next and last item that the Bill deals with is cigarettes. As the schedule will show, we made a change in the preferential tariff on cigarettes at the instance of representatives of the United Kingdom. That tariff was changed from $4.10 per pound and 25 per cent ad valorem to $3.50 per pound and 25 per cent ad valorem. It was thought necessary toa strike a proper ratio, and it will be found, if you work it out, that in all cases the difference will be at least $2, depending upon whether 3 pounds or $2\frac{1}{2}$ pounds of tobacco go into a thousand cigarettes. I believe this will not result in a great loss in revenue. In the first year there may be some loss, but I would hope that in the second year it would be made up. I believe the law of diminishing returns applies here. Due to the fact that cigarettes have been smuggled, and that many are rolling their own, the revenues from this commodity have fallen off. I believe members of the committee will be surprised to learn that 75 per cent of the fine cigarette tobacco manufactured goes into what was known as roll-your-own cigarettes. I believe that those who make their own cigarettes will feel that they may purchase manufactured cigarettes at a reasonable cost. May I point out that all we get from that source will mean a gain of $3.40 a thousand in the amount collected by the Department of National Revenue. I would hope that what might be a loss brought about by this deep cut in the tax on cigarettes will be made up at an early period through the plan suggested in the Bill—cheaper cigarettes.

Then Mr. Euler says:

> Concerning the reduction in the excise on cigarettes I favour the action taken by the Minister. In fact, I hazard the opinion that he has not gone quite far enough.

And on that date the Bill received second and third reading and was adopted.

The Chairman: And it was retroactive.

Mr. Sommerville: And it was made, as the honourable Mr. Cahan says, retroactive to the 13th day of October, 1932, and there therefore, could be no possible or conceivable loss or inconvenience occasioned to any manufacturer for any want of knowledge if such did exist with reference to the Bill.

The Chairman: Now, gentlemen, that, I think, should end this incident inasfar as the committee is concerned. I think it was most unfortunate in its inception, but it seems to me there is nothing more to say about it that can be usefully said.

Mr. Heaps: May I try to obtain a little information. I believe at the early part of these proceedings you made a statement to the committee that you intended to proceed with an inspection of the textile industry. May I ask if it is the intention of the committee now to proceed with the investigation of the textile industries, or has such investigation already begun.

The CHAIRMAN: The committee will have an executive session shortly and we must go into the whole question of what we can possibly cover in this investigation. The work we have in hand is enormous, and I am exceedingly anxious that we shall at least complete what is in hand, and there are two or three matters of considerable importance that will have to be discussed and considered, and that particular question will be considered at that time and a statement will be made later.

Mr. HEAPS: Up until now there has been nothing in regard to investigating the textiles.

The CHAIRMAN: I am not in a position to answer that question definitely, as to what extent the audit has taken that into consideration, but I will be able to do so. We will have an executive meeting in a few days, at the convenience of the committee, and we will go into that and other matters.

Mr. HEAPS: There has been an investigation of the needle trades. I do not know whether it is completed or not.

The CHAIRMAN: Yes.

Mr. FACTOR: You will remember some weeks ago at an executive council the request was made that the textile industry be included in the investigation. We agreed on that.

The CHAIRMAN: Yes. I want to discuss the whole situation with the committee.

Mr. SOMMERVILLE: Yesterday, you remember, the request was made by Mr. Thomas that he file with the committee a statement of the various grades into which tobacco was graded by his company. That has been handed to me and will be filed.

(Statement of grades filed, marked exhibit 163.)

You will remember also that requests were made by Mr. Stewart when he was here that he file a statement showing the price changes on cut tobacco and cigarettes of various brands and in their various quantities between the year 1929 and the year 1934. I have that schedule which has been submitted by Mr. Stewart, and I am filing it at the present time.

(Schedule filed, marked exhibit 164.)

At the same time Mr. Stewart was asked to file a statement of wages and hours of labour showing the changes, if any, that had taken place since 1929. This statement has been forwarded and is now being filed.

(Statement filed, marked exhibit 165.)

This will be considered by counsel when preparing the material for further investigation. May I ask Mr. Miller if he has the wage schedule of the Imperial Tobacco Company?

Mr. MILLER: Some of them.

(Statement filed, marked exhibit 166.)

Mr. HEAPS: Have they covered all the phases?

Mr. SOMMERVILLE: They have covered all the various occupations in the factory back to 1929, Mr. Heaps.

Mr. MILLER: That covers part of the Imperial factory and needs some explanation. Others will come along. We will submit them when they are ready. There are various changes from day to day and time to time according to the different kind of package which needs a lot of explanation. We have not the explanation ready.

Mr. SOMMERVILLE: When would this be ready, Mr. Miller?

Mr. Miller: I don't know, Mr. Sommerville; we are doing the best we can. There have been a tremendous lot of statements you have asked for. We have tried to do the best we can. I could not say just when, but as soon as they are prepared they will come along to you. We may mail them on as fast as we can.

Mr. Sommerville: I would like to have the various subsidiary factories this week if it is at all possible.

Mr. Miller: All right. We will try to do it for you if it can be done.

Mr. Sommerville: This shows the rate that is being paid, the piecework rate?

Mr. Miller: Yes, and also the other work.

Mr. Sommerville: Does it show the total per week?

Mr. Miller: No. We are working on that.

Mr. Lane: It is only the rates of wages paid by the respective departments and it is subject to fluctuation from time to time arising from the change in the processing—either of the mechanical processing—

The Chairman: Give us a typical payroll.

Mr. Lane: That is what we are trying to prepare, but it is a large order.

Mr. Sommerville: I thought it was a matter of keeping one week's payroll.

Mr. Lane: You can have a payroll if you wish it.

Mr. Sommerville: That is exactly what we wish.

Mr. Lane: Very well. That is not what you asked for; you asked for the rates of wages. Please understand, we are not objecting to giving you anything you asked for, but we cannot accomplish the physically impossible.

Mr. Sommerville: No, but we asked for a weekly wage roll.

Mr. Lane: For each week? For 52 weeks?

Mr. Sommerville: No. We asked you to pick out some average weeks or any weeks over a period for 1933.

Mr. Lane: By departments—for various operations?

Mr. Sommerville: By whatever method you divide your various employees up in your own factory. Just give us a copy of your wage scale.

Mr. Lane: You want each individual employee's payroll, or a summary of it?

Mr. Sommerville: I am sure it is carried through in each employee's case.

Mr. Lane: If you tell us specifically what you want.

Mr. Sommerville: Here is the kind of thing sent to us from Macdonalds covering 1,200 employees.

Mr. Lane: This is merely the rate of wages. There is no total wage in this at all. Your headings on this are "Rate of wages per week," "Hours of labour per week," "Number employed, male and female, 1929, 1930, 1931, 1932, 1933." If that is what you want we can prepare it readily for you.

Mr. Sommerville: Those are the wages paid.

Mr. Lane: The rate of wages paid, not the wages paid.

Mr. Heaps: Does not that show us exactly what the person obtained?

Mr. Lane: No. It does not; it shows the rate of wage he is paid making plug tobacco; the rate of wage per week ranges from $18, $12, $11 and $10. That is 1929. The next item is wrapping the finished plug, rate of $11 per week; girls under 18, $9; stemmers, boys and girls, $6; stamp cutters, boys, $11.

Mr. Senn: Does it not give the hours of labour?

Mr. Lane: Fifty hours per week.

Mr. Heaps: It does not show what they actually received?

Mr. LANE: It does not. I am quite prepared to give you anything you ask for, but I understood you wanted the actual wages paid per week.

Mr. SOMMERVILLE: That is it.

Mr. LANE: A fair sample week, but not necessarily the rates paid per week, and, in addition, you did ask for the rates paid per week.

The CHAIRMAN: Naturally, I think one calls for the other.

Mr. LANE: Quite right, Mr. Chairman.

Mr. SOMMERVILLE: Mr. Miller, in your brief you referred to certain statements which you have of typical cases of cost of production. On page 48 you say, "We have in our possession certain statements indicating the cost of production on various farms." I wanted to ask you if you will be good enough to let the committee have your statements?

Mr. MILLER: They were given to us in confidence. I do not know about the question of the names involved.

Mr. SOMMERVILLE: Remove the names and give us the farms.

Mr. MILLER: All right. We will do that.

ARCHIBALD LEITCH, called and sworn.

By Mr. Sommerville:

Q. Professor Leitch, there has been some discussion this week on the question of surplus and production and quantities. Having knowledge now of the use of flue-cured tobacco in Canada during the last week, will you be good enough to make a statement to the committee respecting that whole situation? I remember when you were before the committee before you intimated that without a knowledge of the exact usage you could not make a complete statement with respect to that production that otherwise would have been made?—A. As far as my memory serves me, the use of flue-cured tobacco in the Imperial Tobacco company which, I presume, includes the usage in all their factories and subsidiaries, 8,800,000 pounds in round numbers. Mr. Stewart, in giving his evidence—I have not read a copy of his evidence—but what it said in the newspapers—slightly over 2,000,000 a year for the last year stated. The combined totals given by the smaller manufacturers in evidence indicates something like 1,200,000 pounds. That is the Rock City and Grothe, although Mr. Picard's statement as to the actual usage was—

Q. About half a million pounds?—A. A little better. He said it in another way. He mentioned as having on hand one and a half million pounds which he thought was about two years' usage. From some little personal knowledge I have of the total purchase on Grothe's account I would say their usage is around one-half million, maybe slightly less. Among the small manufacturers scattered all over the country, the best information we can get, especially from those people like the Canadian Leaf who handle a lot of tobacco, is that the combined usage of all the little manufacturers other than those mentioned is somewhere at or about a million pounds. That makes a total for the principal manufacturers of 13,000,000 pounds dry weight. Now, possibly some of these figures are exaggerated a little bit; allowing for that it would seem to indicate 13,000,000 pounds—in the neighbourhood of twelve or thirteen million.

Q. Dry weight?—A. Dry weight. I would say that the average shrinkage differential between green and dry would be 12 per cent. That would indicate between 14,500,000 and 16,000,000 pounds a year.

Q. Growing weight, usage in Canada?—A. Yes. That coincides fairly well with all the information we can get from government sources. Up until the present time we have never had as detailed information as this presented. Any-

where between fourteen and fifteen million pounds green weight. Now, that would about represent the usage of last year. That rate has been increasing quite rapidly in spite of the decline in the total amount of tobacco sold. There has been a consistent raise annually in the amount of domestic tobacco used, in the total quantity.

By Mr. Senn:

Q. Can you tell us offhand what the total surplus on hand would be?—A. The lowest estimate of the total crop of last year was 23,000,000 pounds, the highest 25,000,000 pounds; I suppose the truth is somewhere in between the two. That would seem to indicate about 11,000,000 pounds at least—maybe a little above, maybe a little below—green weight in the field over and above the usage for last year of Canadian manufacturers. Now, that may be checked with reasonable accuracy against the quantity of dried weight tobacco now to be sold.

By Mr. Sommerville:

Q. Yes?—A. In the hands of the new organization that hold the bulk of the present supply of pipe tobacco, still owned by farmers—that is, not definitely sold—is almost exactly 7,000,000 pounds, almost equally divided between the two co-operative associations on the one hand and the Canadian Leaf Tobacco Company on the other.

Q. Strongly held?—A. Strongly held. In addition to that and also strongly held are 610,000 pounds, owned and controlled by Mr. Scythes, mostly his own production; 288,000 pounds, my two companies; and below 200,000 pounds with Mr. Freeman—that is also strongly held; there is from 85,000 to 100,000 pounds in addition to that, held more or less strongly, making a total of 8,156,000 pounds.

Q. Strongly held?—A. Yes; and in addition to that the Canadian Leaf owns at least 1,500,000 pounds not yet sold, but they own it, and it is also strongly held.

Q. Yes?—A. Now, that part of the surplus is not entirely alarming, because it is well known from general sources, and known also from purchases that have been made, interest that has been shown in this tobacco by Canadian manufacturers who quite obviously have not purchased yet their supplies out of the 1933 crop.

Q. Yes, I think we had a statement from Mr. Stewart that the quantity on hand for his company was comparatively small?—A. Using all the pessimism that I have—and being a Scotchman, that is a good deal,—I would say that there is a prospect of selling—I won't put it that way. If Canadian manufacturers who have not yet bought their full supply buy in proportion to their normal usage out of the 1933 crop, I would say that there is a market for about 2,000,000 pounds still in Canada.

Q. A market for 2,000,000 pounds still in Canada?—A. The biggest market, of course,—since it has been disclosed here—being the Macdonald Company. There is certainly a million and a half pounds indicated there in that one source alone. That does not necessarily mean they are going to buy it, because it is not of as good a grade as we usually produce, and there may be reasons why they should not; but to get their stock up to the usual capacity, it would indicate that nearly 2,000,000 pounds or 2,500,000 pounds that would have to be used. That would leave somewhere around 7,000,000 pounds presumably for export, or to be carried over for sale another year.

Q. It is in hogsheads, is it?—A. It is in hogsheads.

Q. Well matured?—A. It will improve.

Q. Strongly held?—A. Strongly held.

Q. It does not waste?—A. No.

Q. And is a good commodity?—A. A good commodity, it improves normally with age. A poor crop like 1933 will not improve as much as a good one, but it improves nevertheless.

Q. Then, with reference to the export market, what are your observations as to usage in Great Britain in the early months of 1934. I understand the figures are given monthly as to withdrawals and usage of the various kinds of leaf and you are able to tell how much has been used there?—A. Yes, not the various kinds of leaf, but the total amount of leaf used from the various producing countries. Unfortunately we have not been able to get from governmental sources in England a breakdown of the types of leaf used from any one producing country. We know that in England there is still used a reasonably uniform quantity, around, 2,000,000 pounds dry weight—fairly consistent, slightly declining, but around 2,000,000 pounds. There is still being used some little old stock of dark fired tobacco, and each year a very small quantity of the new crop of dark fired is going over, but it is becoming an almost negligible business.

By Mr. Senn:

Q. Is that from all sources?—A. No, Canadian. From 1931, including 1931, 1932 and 1933, the consumption of Canadian tobacco in the United Kingdom increased from 4,850,000 pounds in the Calendar year 1931 to 8,974,000 pounds in 1933.

Q. Almost a 100 per cent increase?—A. Actually 85 per cent increase, or an increase at the rate of 4,117,000 pounds a month. Now, we know there was a small quantity of Canadian flue-cured tobacco, 857,000 pounds of 1931—it could not have been over much more than 400,000 pounds, because there was not enough went out of the country in previous years to produce any more than that. Since the usage of Burley and Dark Fired has been declining through each of these years, necessarily all of this increase is flue-cured tobacco. A little more than the actual increase is shown by these figures is flue-cured tobacco. Now, during exactly the same time the consumption of Rhodesian tobacco in England, which is largely flue-cured, rose from 7,051,000 pounds to 8,600,000 pounds; or an increase of only 22 per cent as against an 85 per cent increase in Canadian flue-cured in England. In other words, in the same three years the use of Canadian flue-cured increased at least 4,200,000 pounds as against 1,550,000 pounds for Rhodesian; and it is noted that there was a consistent premium of from 1 to 4 pence per pound during all that time in favor of Canadian.

Q. That is a premium?—A. That the manufacturers paid, anywhere from 1 to 4 pence per pound.

Q. That is from 2 cents to 8 cents a pound more for Canadian flue-cured than for Rhodesian?—A. Than for Rhodesian.

Q. And notwithstanding this increased price which they paid, you have had this increasing volume of Canadian flue-cured being used?—A. Yes, and that can be justified only on the superiority of the Canadian over the Rhodesian for certain purposes for which it was bought. There could be no other reason for it.

By Mr. Senn:

Q. Do you consider the Canadian tobacco, if it is going to be used more freely in the British Isles, will displace Empire tobacco rather than Virginia Leaf?—A. No, I think, it will displace non-Empire tobacco largely of American origin.

Q. The reason I ask that is your present figures are comparing Rhodesian tobacco with Canadian?—A. I just interjected the Rhodesian to show the progress we had made in comparison with the Rhodesian which was on the market

six years before we were with commercial quantities. You have Canadian displacing Virginia Leaf from the United States; yes, that is what it is actually doing.

By Mr. Ilsley:

Q. The years you took were 1930 to 1933?—A. 1931 to 1933 inclusive, three years.

Q. The difference is two years then, that is the increase in 2 years?—A. Two years, yes; there were 3 years covered but it is really an increase in 2 years.

Q. I understood from reading your evidence before, I was not here, that there was some incidental or very temporary circumstance that affects the use of Canadian tobacco; that is, certain firms were pressing it by the use of premiums, or something of that sort, and that has stopped. For that reason it has fallen off. When did that falling off take place?—A. From around December, 1933.

Q. It is not reflected in the 1933 figures?—A. Except in the last month.

Q. Would not the increase you have given us for the 2 years give an unfair picture of it?—A. I was coming to that.

By Mr. Sommerville:

Q. He was going to deal with that very situation?—A. From 1931 to 1933, which would be from the crop years 1930 to 1932 the imports of Canadian flue tobacco raised at rather a higher rate than the consumption in England. For the year 1931, which would be largely out of the 1932 crop, the imports by the United Kingdom of Canadian tobacco, of all tobacco, rose from 6,300,000 pounds to 13,900,000 pounds. Flue-cured tobacco raised from $5\frac{1}{2}$ to just a little below $12\frac{1}{2}$ million. No matter which figure you use you see an increase of 7,700,000 pounds, or about 122 per cent.

Q. That would be imported for maturing purposes?—A. For maturing.

Q. And they would have to mature it, I think they said 18 months or two years, before using it?—A. Of course, that really suggests that they did not have enough tobacco to mature. But with a company like the Imperial of Great Britain, they acquired from the Imperial of Canada some aged stock.

By Mr. Ilsley:

Q. The figures you gave before were use?—A. Yes.

Q. The figures you are giving now are on importations?—A. Yes.

Q. Now, give us the use as against the importations for the year 1931?—A. In 1931 the use was 4,850,000 pounds; the importation 6,294,000 pounds.

Q. Yes?—A. For the year 1933 the use was 8,974,000 pounds—practically nine million; importations were 13,999,000 pounds. That is for all tobacco.

Q. That is for all tobaccos?—A. Yes. I can give you the same figures for import of flue-cured—5,550,000 pounds.

Q. Use?—A. No, imports—5,550,000 pounds for 1931; and a little below 12,000,000, I call it 12,000,000 pounds, for 1933.

By the Chairman:

Q. For 1933?—A. 1933.

By Mr. Ilsley:

Q. The first figures you gave us, something over 4,000,000 in 1931 was use; and 6,294,000 pounds of importations—are they flue-cured, or all tobacco?—A. That is all tobacco.

Q. Inasmuch as they are all tobaccos, the flue-cured might get it all mixed up?—A. I can start back from the beginning again. My difficulty is, of course, that I cannot give you—quoting actual government statistics—I cannot give you

the figure as to use exclusively. I can only estimate it from the knowledge I have received from various sources, I think reasonably accurately, for the consumption of Burley tobacco which has remained fairly steady, although it is declining a little lately—around 2,000,000 pounds a year.

Q. Yes, I feel disposed to accept your estimate. I would like to get the use for 1931, the use of flue-cured in Great Britain; and the importations of flue-cured from Canada to Great Britain?—A. I would say then about 2,800,000 pounds use in 1931.

Q. Yes?—A. And importations in 1931, out of the 1931 crop, about 5,550,000 pounds. Now, taking some 2,000,000 pounds of 8,900,000 pounds use in 1933, leaves us 6,974,000 pounds, and an importation of a little below 12,000,000 pounds.

By Mr. Sommerville:

Q. Yes, Mr. Leitch?—A. There is no question that for the particular use which has been largely disturbed in the last few months, for the particular use for which a large part of these purchases were made, that is, in the 10-for-4 cigarettes sold with premiums. On account of conditions that arose with this competition, the English manufacturers decided last October that as after the first day of January they would discontinue putting coupons in the cigarettes. The result was, from the English standpoint, a very great disturbance in the sales of that class of cigarettes.

Q. Yes?—A. Felt by all those who had been using Canadian as their raw material going into these ten-for-four cigarettes. But the damage was suffered unequally by the four principal manufacturers. They did not all feel the same results. From the manufacturers standpoint the serious part of it was that of the two that suffered worst one was the Imperial of Great Britain, who are the largest users. But two of the pioneer users of this type of tobacco for this purpose did not suffer as much because, frankly, their cigarette was a better quality product and they did not have such generous premiums, and the real pioneer users that is Gallagher's—suffered practically nothing. He had suffered nothing up to the end of a month ago, but the Imperial Tobacco Company did suffer, and they were the largest purchasers. No doubt a large part of their purchases during the years 1932 and 1933 were made for use in this particular cigarette. But we have now some idea as to how it is going to hit us, because we have available now figures up to the last of February—for January and February.

Q. Your January and February figures are available, after the coupons were taken out of the cigarettes, and they have come down to a basis of usage? —A. Usage, yes.

Q. What was the usages for January and February; how did they compare with the similar months of the previous year when the cards were in the cigarette package?—A. They are almost exactly the same, a slight increase for the two months. But we must remember that a large part of this increase during the year 1933 began in April. In other words, put it this way: for the months of January and February the usage of Canadian was about 550,000 pounds a month, or a rate of 6,600,000 pounds.

By Mr. Factor:

Q. For what years?—A. This year. This is this year, 6,600,000 pounds a month.

By Mr. Sommerville:

Q. A year?—A. At the rate of 6,600,000 pounds a year. In the whole year of 1933 the average was 8,974,000 pounds, so there is a deep line—there has been something happening.

Q. That is to say, if there is no increase in the summer months as there was last year, there will be a decline?—A. There will certainly be a decline.

Q. But as for January and February of this year, compared with January and February of last year, there has been a slight increase?—A. Yes.

Q. Indicating that there is a continued and substantial usage of this same Canadian flue-cured leaf?—A. Yes.

Q. Among the British manufacturers?—A. Yes. Even at that it is a higher rate than 1932, and it shows that there has survived some quantity at least of the premium cigarette with Canadian in it, or/and that Canadian tobacco is finding other uses. I do not anticipate any miracle happening, as I said before, that will at once bring the total consumption of flue-cured in England, or the total of Canadian tobacco in England, up to that 9,000,000 pound level for the calendar year 1933.

Q. You are not anticipating the same amount of usage this year as before? —A. No.

Q. What do you say as to the usage of Canadian tobacco increasing in the British market?—A. That all depends on the extent to which it finds a use in the more stable and better brands of tobacco as an alternative for American; as, since and chiefly because there is more and better aged stock available of Canadian tobacco. These aged stocks are only beginning to accumulate within the last year.

Q. That is to say, up to within the last couple of years, there were few aged stocks available; and it is only within the last couple of years that you have had large quantities available for grading and ageing?—A. Yes.

Q. And as that aged stock develop do you think there will be a steady and increasing demand for the aged stock?—A. Decidedly. I am satisfied in my own mind that, given reasonable time, Canadian tobacco will have the same history in England, in usage in English brands of cigarettes, as it has had in Canada in supplanting American tobacco.

Q. There has been a very substantial and steady increase in Canada?—A. Yes.

Q. In the use of Canadian Leaf in supplanting American tobacco?—A. For a number of years.

Q. And that is steadily advancing?—A. Yes.

Q. And you fully expect the same history with respect to this tobacco on the English market?—A. Yes. And that makes our problem one of keeping our own rate of production on export tobacco for England at such a level as will permit of sale at reasonable and profitable prices, or somewhere near to what our domestic prices are.

Q. Then your stock on hand at the present time is in very much better shape for the English buyer than it has ever been in the history of the industry? —A. From the standpoint of the trade, for use, yes. But it just happens that at this present time we are meeting a check from two acute conditions: a poor crop to begin with, not a good export crop; and this drastic cutting off of one particular use.

Q. So that you have met that situation, and it is a situation that has combined in 1934— —A. In this year, 1934. If we had a quality of tobacco somewhere near—it is not even as good as 1932, but was like 1931—it was just a fair year; I would not worry one bit about that 7,000,000 pounds of tobacco.

By Mr. Young:

Q. Would you think, Mr. Leitch, that a market will be found in Great Britain, not only for the present surplus, but for the increasing production of flue-cured in Canada?—A. Decidedly. I can sell every pound I have to-day if I want to take a low enough price.

Q. Do you think the British buyer is going to pay you more than an average world price?—A. Yes. There is no such thing as a world price for tobacco.

Q. There must be some guiding principle that influences these buyers in buying tobacco?—A. Decidedly. Tobacco from each source coming out of the market has its reactions on the market.

Q. The price will be influenced by the price which the English market has to pay for Rhodesian, American, etc.?—A. By the general level of tobacco prices, decidedly.

Q. That is a world price, is the Englishman going to pay you more than the world price for your tobacco?—A. Yes, he is going to pay more than that for Empire tobacco.

Mr. SOMMERVILLE: Because of the preference of 40 cents a pound for all Empire tobacco over other tobaccos.

By Mr. Young:

Q. Canadian tobacco is not the only tobacco to get that preference?—A. Decidedly not. It has its own particular peculiarities, and it has its own level of prices. Then it has its general characteristics and peculiarities under which it must come in competition with other Empire tobacco. Its own peculiar peculiarities or characteristics are that is it more near in flavour particularly to the American Virginia leaf than the tobacco from any other Empire source.

By Mr. Sommerville:

Q. And the quantity of American Virginia leaf imported in Great Britain exceeds something like 175,000,000 pounds?—A. Around 125,000,000 pounds is more nearly correct.

Q. 125,000,000 pounds, is it?—A. Yes.

Q. I thought we had discussed that here?—A. I think you have a total American, of all kinds.

Q. I beg your pardon.

By Mr. Young:

Q. The general advantage which our tobacco has over all other tobaccos, and the special advantage which it has over American tobaccos; putting these two together, how much do you think they will amount to in cents per pound over the price that Britain is willing to pay for her tobaccos?—A. You can only speak from past experience, and I would not care to go into it. But we have consistently, ever since we started to ship flue-cured tobacco—even this year small sales have been made at a consistent premium—as I said before from one to four pence per pound.

Q. Yes, but didn't you tell us on a former occasion that the tobacco you exported this year and last year brought you less than the tobacco you sold here in Canada?—A. Yes, decidedly.

Q. But is it not a fact that if you get a higher price in Canada than you do in the Old Country, would not the effect be—?—A. All the Canadian flue-cured tobacco sold in Great Britain brought a lower price per pound on the average than all the Canadian tobacco sold in Canada.

Q. I see?—A. Some, on the other hand, got just as high a price in England as we could have obtained in Canada for a comparable tobacco, I am speaking of the whole volume.

Q. On the bulk of the crop the price in Canada was higher than the price in England for the same tobacco; but the price in England was higher than the price than other countries got?—A. Yes.

Q. So you were doubly blessed?—A. Yes, doubly blessed. I think we deserved it, our tobacco was worth it.

By Mr. Sommerville:

Q. Was there any other observation you wanted to make on that export situation, Mr. Leitch?—A. It might be to the interest of the Committee to get the significance of the amount of the Canadian flue-cured in stock in England. I have given you some idea as to the rate at which it is being used.

Q. Yes?—A. The first commercial quantity—this is not the first quantity—shipped over to Britain was out of the 1929 crop, 350,000 pounds. Out of the 1930 crop, 1,350,000 pounds; out of the 1931 crop, 5,500,000 pounds; out of the 1932 crop, 11,500,000 pounds; out of the 1933 crop—well now, the figures are not available, but I have every reason to believe that the Imperial of Great Britain must have received a large part of what they bought last fall by this time—around 1,250,000 pounds, and from private sources 450,000 pounds; and I believe since the shipment of this type of tobacco started to England in any commercial quantity, the total amount shipped to England would be around 20,120,000 pounds. From the best information available there would be used out of this to the end of 1933, 10,800,000 pounds.

Q. To the end of 1933?—A. Yes. 10,800,000 pounds. In the last three months there would be another million and a half gone, there was a reduction of 6,500,000 pounds a year.

Q. Yes?—A. That would be 12,200,000 pounds of that gone. There must be 8,000,000 pounds over there, not included there, on top of that. 8,600,000 pounds, and 1,500,000 pounds -approximately 2,000,000—all Canadian leaf. That leaves a total world stock, as far as we know—

Q. If 12,000,000 pounds have been used up to date in England out of a stock of 20,000,000 pounds, that leaves about 8,000,000 pounds?—A. In England, in the manufacturer's hands.

Q. In the manufacturer's hands?—A. Yes.

Q. That is the amount that is maturing?—A. Yes.

Q. And a considerable quantity of it is not yet ready for use; and that represents over a complete year's supply?—A. Yes, nearly two years' supply.

Q. And this 6,500,000 pounds?—A. Is the entire consumption of Canadian tobacco.

Q. That is on flue-cured?—A. On flue-cured, yes.

Q. Yes?—A. Probably 4,500,000 pounds.

Q. And that situation is one which, as you say, you can face without apparently difficulty?—A. I do not say that, it certainly gives me a considerable amount of concern, naturally.

Q. Yes?—A. Because of the poor quality largely, and because we are meeting this particular check of giving up these premiums just at this particular time. But it is not a situation to be unnecessarily alarmed at. The reason I say that is this: it happens that there is one grade of tobacco which is the largest grade that we have in the association pack—it makes up over 35 per cent in the case of one association, and about 19 per cent in the case of another—roughly about one-third of the Canadian pack. The price that we have received from our border brokers indicates that the lowest that particular grade could sell at is just exactly the price at which we are holding it. But our difficulty is this, out of the four grades there are some qualities considered good in England especially. Those are so low we are not yet ready to consider, or take the responsibility of making sacrifices on these low grades, of which we could sell a third of the crop for the price we are holding at, since this tobacco was only packed two months ago.

Q. It was only packed two months ago?—A. Finished packing just two months ago. The market has really just started, but the indications we have from very high class border brokers covering the whole trade—and we necessarily get indications as to what we might sell at, what business might be done

at—demonstrate to me that we could if we wished, sacrifice at this moment, and sell that tobacco in England in the course of the next few months at a price that would yield the Canadian grower—I am assuming we can sell it on these indications at about 3 cents a pound less than what is the desirable price we try to get for it, which is what the crop was worth on the basis of a 24 cent top last year. But we are not yet in a situation where we have to sacrifice the farmers' interests, and there is not sufficient pressure for funds yet on the farmers to give us the necessary courage to sacrifice that three cents.

Q. So you are holding, and it is being held in strong hands?—A. Yes.

Q. You have had assistance in the matter of financing from the Ontario government?—A. Yes, and the Canadian Leaf. They are well financed. Their financing is available to the farmers.

Q. Thank you for that. Now, you were asked to consider certain definite samples of yields and returns on crops that were set out in the brief filed by the Imperial Tobacco Company, and you have handed to me certain statements as to the return, and your observations upon those. On page 48 of the Imperial Tobacco Company's brief there are set out a certain number of cases, and the first case is one of a farmer producing tobacco on 35 acres, with a capital investment of $16,000, producing 40,902 pounds or 1,168 pounds per acre, with a gross return of $8,589.42, on which the Imperial figures indicate that the total cost was $2,050, leaving a return of $5,670. Perhaps you will just let us have the benefit of your criticism of this statement. By the way, you have considered this with your associated growers, and with the government, as to the necessary cost in the various branches, have you?—A. Yes, with the officers of the tobacco division of the Central Experimental Farm of the government.

Q. Please let us have your observations upon this case that is set up as a specimen case?—A. If I understand this—it is quite a while since I have read it—

Q. Let me read the case as set out in the brief. At page 48 there is this statement:—

> We have in our possession certain statements indicating the cost of production on various farms, the first of which, while not disclosing the total number of acres included in the farm, nevertheless indicates that an investment in land, dwelling, buildings, kilns, machinery, greenhouse and other equipment amounted to $16,000. On this particular farm 35 acres of land were cultivated to flue-cured tobacco in the season of 1933. The cost of operation, which included interest at the rate of 5 per cent on investment in land, buildings, kilns, machinery and all other capital expenditures, taxes on property, depreciation on buildings, machinery, etc., horses, feed, fertilizer, fuel, seed, insecticides, twine and paper, oil and lubricants, repairs, hail insurance, building insurance, crop insurance, labour $2,050, cost of boarding labourer and curer's wages, etc., amounted to a total of $5,670 which is equivalent to a cost of $161.97 per acre or 13·86 cents per pound.
>
> After providing for all the aforementioned expenses and 5 per cent interest on capital investment, there remained a further profit or return of $2,900 which means that the total net return on the invested capital of $16,000 is some 23 per cent, and before providing interest on invested capital the net profit is 43 per cent of the gross sales value.

Dealing with that particular case, what do you say?—A. Those expenses totalled by the Imperial Tobacco Company, the Imperial Tobacco Company's figures, —of which only one was itemized—that is labour appearing at $2,050—amounting all told to $5,670 were broken down into the individual items mentioned in that list, and in about the same order in which they appear.

By Mr. Ilsley:

Q. Do you know the farm?—A. No, I don't know it.

Q. You are just criticizing what you see here?—A. Yes. Except this, it specifically says 35 acres of tobacco. A lot of the costs of 35 acres of tobacco are the same, no matter who grows it. However, starting in the same order in which the Imperial's brief indicates them, interest on investment at 5 per cent—that was $16,000—is $800. Taxes on property, $160. That would be a rough average, assuming the average 100 acre farm with 35 acres of tobacco—$160 a year. Depreciation on buildings, machinery, etc., $835. We know pretty well the equipment needed to grow 35 acres of tobacco from those who have farms, and it would be about that figure. Feed for one team of horses, $250. Here is a place where there may be quite a discrepancy. If that farm follows the usual practice and the feed for the horses is purchased, it would be about $250 for last year; that is approximately the cost of buying feed for a team of horses. If that feed was grown on that farm—that is if there was other farming besides tobacco—there might not be in the Imperial's items any similar amount. That is not disclosed. Fertilizer, $560. No matter who bought fertilizer, that is about what it would cost. That is common usage. Fuel for curing, $216. Here is another item that the Imperial's list of figures does not disclose where the fuel came from. If it was cut off the farm, which is done in many cases, there might not be any cost for fuel, except what might be reflected in labour. But if the fuel, as is customarily done in most farms, was purchased, it would be $216. Seed, $3. Insecticides, $88.50; that is all kinds of insecticides, poisoned bait for cut-worms and arsenate of lead for hornworms. That can't vary much on each farm per acre. Twine and paper; that depends almost entirely on the size of the yield of the crop. Repairs of all kinds, buildings and machinery—our own experience on a large number of farms, and Mr. Freeman's was that that runs all the way from $125 to $175 a year. Hail insurance is a fixed amount of $110.25 for that acreage. Building insurance, including the class of buildings that must be used to house that tobacco, and provide a living place for the operator, would be about $148.75 a year. Crop insurance for a year; that depends on the yield, and the size and value of the crop. There can't be much error in that at $199.50. Labour, including board, we put in at $2,200. We only departed from the Imperial's figure of $2,025.

Q. You add $150?—A. Yes. There was a reason for that. That was done out of our knowledge of what we pay on our farms, what our own growers pay on their farms for the labour in growing 35 acres of tobacco on a big yield like that. It may be possible that in the Imperial's figures that the man referred to, the grower or cultivator as they call him, may have had members of his own family doing certain work and not paid any regular wages; that might account for the little difference of $150 a farm between the two. Curer's wages and transportation—I don't know whether there is any reference made to that.

Q. There is none?—A. That will cost, on a farm of that size, to cure a crop of that size, about $275.

Q. You bring in a curer who does the curing?—A. Yes. The total of these figures, estimated from our wide knowledge of what all these things cost, and our wide experience, was $6,052.50 as against $5,670, as put in by the Imperial, although the difference of $275 would appear to be the curer's wages. That may or may not be included in this labour included here. We don't know. It is quite possible it may not be the reason. This may be a very economic director of labour, and he might easily have got his crop harvested for that, but $2,200 is very low. The balance of the difference, which is only $380 is a difference that could easily be accounted for by these departures from the usual practice that I mentioned in connection wth feed and fuel.

Q. Feed and fuel?—A. Yes. There would appear to be no estimate or no return in the brief—

Q. In the case filed?—A. —for any wages for the cultivator himself and his overseeing, any labour for himself. We just consider he is not any better than any ordinary hired man and put in for his labour $600 a year. We adopted that figure in spite of the fact that in case No. 2 or case No. 3—

Q. Case No. 2?—A. Case No. 2, is it—the compiler of these figures for the Imperial Tobacco Company admitted that a reasonable figure for the cost of the operator's living and keeping his family was $1,150; but when we allowed him $600 for his labour for a year, we don't think we were over-paying them.

By Mr. Young:

Q. You say $600 for his labour?—A. Yes.

Q. Is his board included in that item?—A. No.

Q. He has got to pay his own board out of the $600?—A. I would say so, and keep his family. This is a moderate figure.

By Mr. Sommerville:

Q. This is a very moderate basis that you are figuring on?—A. Yes.

Q. What is next?—A. We had another very important item of cost in a crop, being hazardous and speculative as it is, and that is crop hazard. There are three very important sources. Great damage results in a crop like this, a specialty, from hail, frost and wind.

By Mr. Young:

Q. Have you not already provided for insurance?—A. For hail. And all the hail insurance you can get is not going to recoup you for your loss of your crop. It is just going to give you your out of pocket expenses.

By Mr. Sommerville:

Q. You don't get the value of your crop?—A. No. For frost you have no protection, and even in the five years I have been in business here, we have had large losses from frost. We are trying to grow a sub-tropical plant in a northern climate and we have that inevitable danger from frost; although in the last three years since we started priming, that hazard has been minimized considerably.

Q. Yes, we have had evidence here by Mr. Kingston that in one year he left $120,000 worth of tobacco in the field?—A. Yes.

Q. I think we quoted Mr. Buell's letter of September 28, 1932, to Mr. L.H. Reed, that he had made a careful survey of the 1932 crop in Norfolk county last week with Mr. T. L. Lea and our local buyers, and he goes on to say that there was a killing frost on the night of the 18th instant which destroyed about 15,000 pounds, but this improved the situation from the buying standpoint, as most of this tobacco would have been coarse and rough?—A. Yes.

Q. There was a substantial loss from frost that year?—A. Yes, that particular year.

Q. And the percentage that you have arrived at as a basis of your crop hazard allowance is 15 per cent, I observe?—A. Yes.

Q. Is that a reasonable amount?—A. 15 per cent of the gross return in any one year. That is $1,375.

Q. Have you had occasion to discuss this average with those who are in the habit of buying crops?—A. Oh, yes, all these hazards are discussed.

Q. Is this a reasonable and proper allowance?—A. Well, the reason we adopted 15 per cent was that Mr. Lane agreed with me one evening in discussing this thing, that it looked reasonable, 15 per cent.

Mr. Lane: I question that.

The Witness: Maybe you are right.

Mr. LANE: I suggested to you that provision for loss for hazard would be arrived at in taking the average yield of the crop over a period of years, instead of taking a flat, fixed average, if there is depreciation in any one crop year. Quite frankly, while you may be quite correct in stating that you mentioned 15 per cent, I have no recollection of it.

The WITNESS: Our discussion about the method of calculation took place in this manner, general agreement—

The CHAIRMAN: Anyway, Mr. Lane says he does not agree with you. We will take it at that.

The WITNESS: All right, leaving it at that—but to be fair to Mr. Lane, we were ourselves making some arbitrary calculations on this one night in his room, and we put in 15 per cent. Mr. Lane says, "All right, that will do for this purpose.

By Mr. Sommerville:

Q. At any rate, is 15 per cent, one crop in seven, a reasonable proportion or a reasonable reserve for hazards—A. Yes. I think in my own experience with the 64 farms we operate, we have 9 farms a year, over five years, on the average, which have suffered from these very things.

By Mr. Young:

Q. Suffered to the extent of 100 per cent of the crop—A. Practically 100 per cent of the crop. That is what it would come to, the damage. In other words, put it the other way, the damage resulting from these things practically wiped out—although it is spread over more than 9 farms, it practically wiped out or reduced the return on 9 of these 64 farms to nil. In my judgment, 15 per cent is reasonable. It is a very speculative and hazardous crop. In this particular crop that ran to the substantial sum of $1,375, leaving a total cost of $8,027.50. Those things must be considered. The return you are going to get over the course of years is absolutely important.

By Mr. Sommerville:

Q. Your growers are entitled to set up a reserve as well as some manufacturers, I suppose?—A. The revenue from this farm, according to the figures of the Imperial, who evidently bought it, was $8,589.42, and on this basis of calculation of ours, it left a profit above this 5 per cent on the investment, of $472.50. In other words, it is another 2·95 per cent.

Q. On the investment of $16,000?—A. Yes.

Q. I observe there is 5 per cent interest allowed on the investment. Can anybody borrow money up your way on farms?—A. No—oh, well, on mortgage, yes.

By Mr. Young:

Q. Can you tell me any other kind of farm that pays as much as this, 5 per cent interest on the investment?—A. Yes, but it is only one farm. It is only one farm in a thousand.

Q. I don't mean only tobacco farms. I mean cattle farms, wheat farms, dairy farms or any other kind. Can you tell me any other that pays 5 per cent and 2:9 per cent?—A. Yes, I would say that even in the present circumstances—

Mr. KENNEDY (*Winnipeg*): The witness is not speaking of it paying 5 per cent. It is a charge, what the money costs.

The WITNESS: Yes.

Mr. SOMMERVILLE: Interest.

The WITNESS: Mr. Young is right. This farm actually did return, even on our figuring, it returned 5 per cent.

By Mr. Young:

Q. I want to know another kind of farm in Canada, other than a tobacco farm, that will pay even one per cent?—A. The situation is this way: No matter how bad conditions are or how low prices are, there is always some farmer who can make money, the most efficient one, because he is efficient. That is what this man was.

Q. You say this is the gentleman?—A. It is the man who is efficient.

By Mr. Sommerville:

Q. Complete your story then, will you?—A. This man has a yield of 1,168 pounds to the acre.

By Mr. Factor:

Q. What is the average yield?—A. The average for the whole year last year—it is a little hard to determine.

Mr. SOMMERVILLE: You have it on the next page.

The CHAIRMAN: 842.

Mr. SOMMERVILLE: Item No. 8.

The WITNESS: 748 for 1933. This was 1933.

By Mr. Sommerville:

Q. That is the average yield given by the Dominion Bureau of Statistics and Department of Agriculture for 1933, 748 pounds to the acre?—A. Yes.

Q. In this particular case there was a yield of 1,168 pounds to the acre?—A. Yes.

Q. And according to the estimates of the Imperial Tobacco Company, the average yield per acre was 842 pounds, as set out on page 19 of their brief. On the basis of the official estimate, the particular grower under consideration produced a yield of 56 per cent above the average, and on the Imperial estimate, 38·7 per cent above the average?—A. Yes.

Q. Is that the fact?—A. That is the fact.

Q. You go on to say: "It is of further interest to know that the average yields during the past six years as given by the Dominion Bureau of Statistics are as follows: 1928, 800 pounds; 1929, 696 pounds; 1930, 720 pounds; 1931, 896 pounds; 1932, 995 pounds, and 1933, 748 pounds"?—A. Yes.

Q. That is correct, is it?—A. Yes. In addition, this man got 21 cents for his tobacco, as against something less than 20.

Q. 19·3 was the average?—A. 19·3 paid by the Imperial Tobacco Company for its purchases for only part of the crop, and the best part of it.

Q. 19·8, I am informed it was?—A. Yes. This man had a yield of 33 or 34 per cent above the Imperial's own estimate of the yield per acre last year, which was higher than the government's estimate. I don't think either one was right. I think it was somewhere in between the two, as a matter of fact. Anyway, taking the highest estimate, that is the Imperial's, I think it is about 36 per cent higher in yield, and 2 cents a pound—no, 1½ cents a pound more. By that combination of circumstances he got himself $8,589.

Q. That is not an average case?—A. Decidedly not.

Q. It looks like an abnormal case?—A. That would be one in the whole 1,000 farms that stands out. He may have got rain that nobody else got. I had a couple of farms that turned out as well as that, right up in the north corner of my own property. They got rain that nobody else got, and they turned out good.

By Mr. Factor:

Q. With regard to this paper with all those figures that you have put in under the different items, are the expenses correct?—A. Yes, those are correct. I know they are substantially correct. They can't vary very much.

By Mr. Ilsley:

Q. This is not an average case at all?—A. Not at all. It is an absolutely outstanding case.

Q. Would it be about the best possible case that could be found in the province?—A. Absolutely. I did'nt know of a single farm, till I saw this example, with an average of 1,168 pounds a year.

Q. Is it represented to be an average case?—A. I don't think so.

Mr. SOMMERVILLE: It just says, "We have in our possession—"

The WITNESS: I don't think they claim it is an average case.

By Mr. Sommerville:

Q. In paragraph 10, you say, "One is forced to the conclusion that in order to attain the results shown above it was necessary to grow a crop at least 38·7 per cent above the average in yield and to receive a price at least 50 per cent above the average. For the purposes of comparison, the results of producing an average crop and receiving an average price, using the Imperial's figures in both cases are given below." Then you examine that same acreage at the average yield of the Imperial's figures?—A. Yes.

Q. And I see with a production of 35 acres, with an average of 842 pounds, it made 29,470 pounds; gross return at 19·8, the average price, at $5,835; and the cost of production, $8,027.50 less $800 or $7,227.50, or a net loss of $1,392.50 on that farm, if it were an average farm?—A. No, if the same farm had had just an average yield.

Q. If that same farm had had just an average yield?—A. Yes. And the reason for the $800 was taken off for the outside expenses was because with an average yield below this, certain expenses would come down in proportion to the yield—labour particularly; twine and wrapping material and quite a number of items are reduced.

Q. Take the second case which is mentioned on page 49, which deals with that of a proprietor of 33 acres cultivated by a tenant producing 34,400 pounds of tobacco, which was sold to Imperial Tobacco Company at 19⅓ cents per pound, yielding $6,650 or $201 per acre. What have you to say with respect to the examination of that case?—A. Well, this was a farm in which the price received was just slightly below the Imperial's figures, slightly below the Imperial's average—19½ against 19·8. The yield was above the average. It was 1,042 pounds to the acre. It brought in $6,650. Now, according to their statement, the out of pocket expenses indicated but without provisions for the following: Interest, depreciation, repairs, building insurance, hail insurance, labour, $1,600—taking that statement.

Q. Taking their $1,600?—A. This is the aggregate amount.

Q. But they do not provide for the items you have mentioned?—A. With provision for the above mentioned items on the same basis as in table No. 1, pro rata, for reduced acreage, 33 against 35, and a little smaller yield, those items amount to $3,946, which includes, of course, interest at 5 per cent. Then, provision for the operator's labour was also omitted, $600. Provision for crop hazard, $990 was also omitted, which gives a total cost of production of $7,136. The crop return was $6,650. In other words, there was a net loss of $486, which means that fell within $486 of paying 5 per cent interest.

Q. I observe you said: "It should again be noted that the yield per acre is high, being 22·4 above the Imperial's average of 842 pounds and 39·1 per cent above the official average of 748 pounds"?—A. Yes.

Mr. SOMMERVILLE: I just asked you to prepare this statement. We will file this statement of the examination of these two cases indicated.

(Statement filed, and marked Exhibit No. 167.)

By Mr. Ilsley:

Q. You gave what you thought was the cost of production per pound?—A. No. I always answer that question by saying there is not any such thing in farming.

Mr. FACTOR: There was some gentleman here who gave that.

Mr. YOUNG: Mr. Freeman said 20 cents a pound was the cost of production.

The WITNESS: I think Mr. Freeman said under last year's conditions—if I recall it correctly—if the grower got above the average yield and above the average price, he could make a little money.

By Mr. Young:

Q. At 20 cents?—A. Yes.

By Mr. Sommerville:

Q. That was without allowance for depreciation and crop hazard?—A. Yes.

Mr. YOUNG: He didn't say without anything.

The WITNESS: I think he must have included depreciation. Mr. Freeman would.

Mr. SOMMERVILLE: Well, thank you, Mr. Leitch.

The CHAIRMAN: We have no one else to call to-day.

Mr. SPAFFORD: Mr. Chairman, may I make a statement in reply?

The CHAIRMAN: Yes.

EARL SPAFFORD, recalled.

By the Chairman:

Q. What is the statement in connection with, Mr. Spafford?—A. In connection with what I might term rather wild statements made yesterday by some of our competitors.

Q. Well, Mr. Spafford, whether they were wild or not, you are quite at liberty to make a statement, but I think it would be just as well not to say they are wild; because I suppose if one calls another's statement wild, the other will call his statement extravagant, so we will get nowhere with it. Their statements were made on their own responsibility, and the committee will judge whether they were wild or otherwise?—A. Yes, sir. I merely said, "In my opinion," sir.

Q. Well, all right, go ahead, Mr. Spafford?—A. I wish to refer to the signed statement with regard to our advertising policy as presented by me when this committee convened yesterday morning. It is a true statement of the facts, and I resent the insinuation made by several of our competitors who testified here yesterday that the executive officers of the Imperial Tobacco Company have knowledge or had knowledge and gave their consent to the alleged methods of our men. So far as I am aware evidence covering only a comparatively few cases were submitted, and with the exception of those which were sworn statements, I question the veracity of the dealers who made the others. In other words, the statements made yesterday were, in my opinion, wild, exaggerated and without foundation.

The CHAIRMAN: Might I interrupt you. I question from your own standpoint the wisdom of merely making a statement concerning another man's statement as being wild, inaccurate and so forth. They made certain statements. The committee will judge from their estimate of the gentleman who made those statements as to the weight of them. If you have anything specific to state, to refute those statements we are pleased to give you an opportunity of doing so, but I would suggest that you refrain from characterizing other people's statements as wild. Give us your facts. There were some very definite statements made yesterday about practices, and certainly the committee would be very glad to hear an explanation, or if you wish to refute the statements with any facts, proceed to do so, but we must ask you to refrain from characterizing the statements of reputable gentlemen as wild.

Mr. ILSLEY: Mr. Chairman, I do not know whether the point is worth arguing or not, but this point was pretty well talked about yesterday.

The CHAIRMAN: The practices were, and I am quite willing to hear any statement refuting the allegations and the charges, if you like, made against the company; but I merely state that I do not think it is an effective answer to say simply that they were wild.

The WITNESS: Pardon me, sir. If my memory serves me right—I have not seen the official record of the evidence—but all the witnesses intimated that statements I have made were not correct. I resent that. My statements were made under oath.

The CHAIRMAN: So were their's.

Mr. FACTOR: Resenting a statement is not disproving it. Let us have some facts and figures disproving some of the statements.

Mr. ILSLEY: Mr. Spafford, there is only one thing I would like to ask. What would be the motive of these retail merchants in making the statements?

The WITNESS: Well, I think as one of the witnesses said yesterday, sir, some of them were disappointed perhaps, because we did not put them on what you know as our preferred list. Others had possibly been price cutters whom we had, perhaps, taken off our list.

By Mr. Sommerville:

Q. No. These were all cases of men who were on your list either direct or indirect?—A. I do not know that, sir; they could not be on our list indirect.

Q. They were on your list direct, or they were buying indirectly from the jobber?—A. I say that, sir; that some of them may have been on our list and cutting prices, and we had cut them off which forced them to buy from the jobbers.

The CHAIRMAN: Proceed.

Mr. FACTOR: That has not been the complaint.

The WITNESS: I wish to read a letter, sir, written by Mr. Tingle, director of our company, written August 19, 1933, to our Ottawa office. It reads:

> GENTLEMEN: We have recently had drawn to our attention two cases in different parts of the country where our employees placed signs over those of other advertisers.
>
> This is very much against our wishes and instructions, and there is absolutely no excuse whatsoever for this. We felt that all our men were familiar with our instructions, evidently they are not or they are disobeying same.
>
> If we have any further cases brought to our attention, we will be compelled to take strong disciplinary measures.

By Mr. Ilsley:

Q. Have any disciplinary measures been taken?—A. Yes, sir—no, I could not say they have. I could not cite a case.

Q. It seems to me that there is a pretty strong feeling against you. That evidence yesterday made it appear that the practices are pretty general all over the country. I cannot imagine a conspiracy of slander as far reaching as that unless there is some basis in fact, and if you say you have not fired any of your men it looks as if you did not disapprove of it?—A. I cannot recall, sir, where any case has been definitely proved of our men doing these things that they have been accused of. Now, as I said yesterday, my experience with the Imperial Tobacco Company only dates three years—that is within their organization. I have been 15 years in the tobacco business in Canada.

The CHAIRMAN: Just before you proceed to that. I do not want to seem narrow in my interpretation, but yesterday the statements were made by, I must say, reputable business men in the country that certain practices prevailed. I think the committee had the impression that they prevailed rather generally. Now, you offer in contradiction to that this letter from Mr. Tingle. It is addressed to the advertising department of the Imperial Tobacco company at Ottawa and it says this: "We have recently had drawn to our attention two cases in different parts of the country where our employees placed signs over those of other advertisers." Then the letter goes on to say that this is against the wishes and this letter then says that you were cognizant of the practice. That is the point I am making. So that the statements made yesterday, even if they were exaggerated, were not entirely wide of the mark.

The WITNESS: We knew of them having been reported, sir.

The CHAIRMAN: So that the answer you give is simply an admission that you knew that was going on to a degree. You deny, of course, the generality of it.

The WITNESS: May I read this letter which presents the other side of it, sir. This is from our Edmonton manager and he writes to our Calgary manager dated March 17, 1930:

> At the new Edmonton Grocery, 97th street on March 13th, I saw a window bill advertising Spud cigarettes tacked on to our Old Chum calendar. It was placed squarely across the printing above the date pad, the top edge of the bill just about touching the package of Old Chum shown in the picture.
>
> I asked the clerk in the store at the time whether he had seen the window bill placed, and he said that he had seen the Rock City salesman put it up a few days previously. He removed it while I was in the store.

The CHAIRMAN: I hope you condemn that.

The WITNESS: Yes, I do.

By Mr. Factor:

Q. Well, Mr. Picard admitted himself that they had to resort as a matter of defence to methods like that, and they ceased. They could not get along?—A. Mr. Factor, I want to say this: competition between manufacturers is very keen; competition between salesmen and advertising men is very keen, and you cannot overlook the human element. Anyone who has a fighting organization, they will go out to get what they can, and we will expect them to do it.

Q. I quite appreciate that. I am not so sure if the other men were in your shoes they would not have done it the same way?—A. I admit we have reports both ways, for and against.

The CHAIRMAN: All right, Mr. Spafford.

The WITNESS: I would like to read a letter which indicates our willingness to co-operate with other manufacturers in trying to overcome the evil that we know does exist to a certain extent where competition is really keen. This is a letter, addressed by my assistant Mr. Wadd in Montreal to Mr. J. Hughes, secretary-treasurer, Messrs. L. O. Grothe, Limited.

Mr. SENN: Of what date?

The WITNESS: February 17, 1933:—

> At the meeting held in Montreal on August 5th last—

That would be in 1932.

> —of representatives of certain manufacturers it was understood that the subscriber would arrange to call a meeting of these representatives early this year.
>
> It is understood that several of the manufacturers' representatives would like to hold this meeting as soon as possible and it is, therefore, suggested that the meeting be held at 3 o'clock on the afternoon of February 23rd at the Mount Stephen Club on Drummond street.
>
> In so that all problems that the manufacturers wish presented at this meeting may be properly discussed a representative from each of the manufacturers is urged to be present.
>
> Please signify your intention to attend by notifying the subscriber not later than Monday the 20th.

This was also sent to Mr. Arthur Simon of the Simon Cigars, A. G. Munich, of Benson Hedges, Mr. D. Granda of the Granda Cigar Company, T. H. McGuire, of the Tuckett Tobacco Company and Mr. J. M. O'Brien of our company. I might say we did not send one to Mr. Stewart or Mr. Fortier because they have a tradition that they have to live up to which does not permit them to associate with other manufacturers.

Mr. SENN: May I ask you what response you received?

The WITNESS: Yes, sir. Mr. Hughes was present, Mr. Munich, Mr. Arthur Simon, Mr. McGuire and Mr. O'Brien. The meeting was held on March 8th.

The CHAIRMAN: 1933?

The WITNESS: Yes, sir. And this is what was agreed upon:—

> That it will be the policy of each manufacturer to respect the others' advertising material.
>
> That windows dressed by one manufacturer will not be defaced with an opposition window bill or other advertising material but for the following exception—

This is a technical thing. I do not know whether I should read it or not.

Mr. SOMMERVILLE: You can state the general result.

The WITNESS:

> That a window dressed by a manufacturer will not be taken out by another manufacturer until the period for which it was dressed has expired. If there is any doubt as to the expiration date the manufacturer who has received permission to dress the window upon the expiration of the present window will telephone the manufacturer whose window is at present on display obtaining the date his window is supposed to come out.
>
> That window dressers of all manufacturers will respect the window dressing material of the others and in the event the material is not being properly cared for by the dealer such window dressers will advise their companies who in turn will telephone the manufacturer suggesting that he pick up the material on hand.

This line-up was for a period of 30 days. It worked out satisfactorily and so far as I know it is still working. I telephoned our Montreal office this morning and they corrobated that.

By Mr. Sommerville:

Q. That is in Montreal?—A. Yes.

Q. Did you not hear the evidence yesterday of Mr. Hughes that in the city of Montreal he had had a complaint from your firm that one window had been taken out of Grothe and that he made enquiries and the person in charge said; yes, that window had been taken out, but the Imperial had taken out two of Grothe's windows that very week; and that when your firm were apprised of it your firm replied, "Oh, that is a different matter." You heard the statement? —A. I heard the statement, yes, sir; but as the particulars were not given it was impossible for me to check it up.

Mr. FACTOR: The very fact that you entered into an agreement corroborates the evidence that there was that problem?

The WITNESS: I have never disputed that, sir.

By Mr. Sommerville:

Q. I suppose the Imperial have 70 or 80 per cent of the window displays? I desire to get the total in proportion to the volume that you sell, and you endeavour to get 70 or 80 per cent of the total?—A. It all depends upon organization. If the other organizations have not got the men they cannot get the windows.

Q. No. It would mean that seven out of eight of the windows would be Imperial windows that would be affected by any such arrangement?—A. Seven out of ten.

Q. Seven out of ten, all right; but among all the other manufacturers there would be the other three?—A. Yes, sir. If they could get them.

Q. If they could get them?—A. Yes, sir.

Q. Apparently they have their troubles in getting them?—A. Well, sir, that is a matter of organization.

By Mr. Senn:

Q. Did you say that that proportion exists to-day?—A. No, sir, I did not, but I say we have the biggest window dressing organization in Canada to-day.

Q. And your proportion of display, not only window but in other ways, is larger than your proportion of sales?—A. I would not say that, sir. We try, as I say, for 70 per cent.

Q. You have no figures on that?—A. It would be anybody's guess.

Q. You would not like to hazard an opinion?—A. According to Mr. Young who walked down Bank street yesterday morning it was about fifty-fifty.

Mr. YOUNG: No, you had more window display than the others.

The WITNESS: Did we have 70 per cent?

Mr. YOUNG: Yes.

The WITNESS: That is fine. I will congratulate our representatives.

Mr. YOUNG: You might have had more than that.

Mr. FACTOR: I cannot see the joke myself.

The WITNESS: Well, you were kind enough to smile.

Mr. FACTOR: Well, I am smiling at your arrogance.

The WITNESS: Arrogance?

Mr. FACTOR: Yes.

The WITNESS: That is very complimentary.

The CHAIRMAN: What else, Mr. Spafford?

The WITNESS: I should like to deal with the general statement by Mr. Hughes if I might. To do this I am afraid I will have to refer to certain general merchandising principles that I personally believe in and my company believes in them and at all times to the best of our ability carry them out. Now, to effect distribution of a brand a manufacturer must depend on his own sales organization. Experience has shown that the average jobber will put very little effort behind any one manufacturer's goods. He sells what his customers ask for which, of course, means what the public demands. The maintenance of distribution is accomplished by the manufacturer's sales and advertising efforts plus consumer demand. With our sales organization of 127 men calling on 57,000 retailers throughout Canada once in approximately every five weeks we are enabled to maintain distribution, and I say that this is the primary reason for our success, plus our advertising efforts. This success cannot be attributed, as stated by witnesses, to our supposedly strong arm methods, and I should like to point out that not 25 per cent or, say, 14,000 of the 57,000 retailers in Canada have window, counter or other advertising space suitable for the proper display of cigarettes, cigars or tobaccos. Now, here is something I believe has quite a bearing on this whole subject that we are being, I believe, censured for. It will be interesting, and, in my opinion, the information is most important, to know the number of advertising men employed and the amount of money spent annually on advertising by our competitors. I do not hesitate to tell you that during the three years of my connection with the Imperial Tobacco company we have spent approximately three and one-half million dollars in salesmen's salaries and expenses and nine and a half million dollars in advertising our brands. Great stress has been laid on this privilege of buying direct, and the hold that we are supposed to have over these dealers; but I would like to point out that less than 10 per cent of the total number of retailers in Canada buy directly from us. In other words, of the 57,000 retailers we sell approximately 5,000 direct, so that this terrible influence that we are supposed to exercise could only be applied to relatively few dealers to the detriment of other manufacturers.

Q. The question of cigar merchandising: Mr. Hughes and Mr. Munich have made the statement that we insist upon our customers including a certain quantity of cigars with each order for cigarettes and tobacco, otherwise we will not sell them our goods. That is not our policy.

Q. Not your policy, but is it your practice?—A. May I continue, sir.

Q. Yes, I just asked you the question?—A. That will come in the rest of my brief here.

By Mr. Senn:

Q. Might I ask you a question, Mr. Spafford?—A. You said 10 per cent of the retailers, only 10 per cent?—A. Less than 10 per cent.

Q. Who have this preference privilege?—A. That is right, sir.

Q. Would they be the larger retailers, naturally?—A. Naturally, yes.

Q. You could not say what proportion of the business was transacted by these people?—A. No, I could not.

By the Chairman:

Q. You probably could give us that, Mr. Spafford; surely you can give us what you sell direct, as against what you sell indirect?—A. I could easily make up a statement.

Q. Would you mind getting that for Mr. Senn?—A. No.

Q. Because all the indirect includes these little stands, restaurants, and so on, where they sell other goods; refreshment stalls?—A. That is right. Furthermore, in the province of Ontario, from roughly Oshawa, West and North to the boundary of Manitoba, where 53 per cent of our total cigar sales are

made, we operate a separate and distinct cigar sales organization under a sales manager who has nothing whatsoever to do with the cigarette and tobacco end of our business. In other territories where our sales organization handles the full line of our products, as I said before, it is not our policy to insist upon a certain quantity of cigars or other merchandise.

By Mr. Edwards:

Q. Would you be wrong, supposing you did insist; what is wrong with the principle?—A. Personally, I cannot see that there is anything wrong with it; but I rather got the impression from the committee that we were doing something we should not, it seems that everything we do is wrong; and I am trying to explain why we do it. The minimum shipping quantity of cigars we will ship prepaid is approximately 500, and any dealer may buy this quantity regardless of whether he orders cigarettes and tobacco.

By the Chairman:

Q. Oh, but wait; is not that just the reverse of the allegation, although I am not objecting much myself to it. You say he can buy cigars, irrespective of whether he buys cigarettes?—A. That is right, sir.

Q. But the suggestion is that when you are selling cigarettes, your men say, well now, you must buy cigars. I am not saying it is wrong. I am passing no judgment on it whatever. It was an allegation made?—A. No, sir. I am making a point that 53 per cent of the cigar business is handled by salesmen who do not handle cigarettes.

Q. That is a good answer?

By Mr. Sommerville:

Q. But do you say that it is not true that you require men who are buying cigarettes to also buy cigars?—A. No. We do not insist upon it. We try to get the business, but it is not a condition of sale, if that is what you mean.

Q. And it has not been done at any time in the last two years?—A. Not to my knowledge, sir. Percentage of displays: Mr. Hughes made the statement that one of our men in Winnipeg told "a" dealer—not giving the name—that if he was going to enjoy the privilege of buying direct, he must give us 80 per cent of his display space. Now, remembering that I made the statement that we expect dealers to give us co-operation in proportion to our percentage of the total business, which we say is about 70 per cent, was it unreasonable for our representative to start trading at 80 per cent, knowing that he would be satisfied with 70 per cent.

By the Chairman:

Q. In other words, guilty. Let it go at that. I am not saying it is wrong.—A. I do not think that he got 80 per cent, sir; I think he should have started at 100.

Mr. Sommerville: He should have tried for 100 per cent.

By Mr. Ilsley:

Q. I do not know, you demanded the whole thing if you say he should have done that?—A. I do not agree with that, sir. When a salesman goes out to sell, he goes out to try and sell as much as he can. If you can sell a man $10,000 worth, you are not going to be satisfied with $5,000.

Mr. Edwards: That is good sales practice, isn't it?

By Mr. Ilsley:

Q. Just what you say, isn't it; that it was quite all right for him to say, now if you want to stay on the direct list and buy direct, you have got to give us 100 per cent display?—A. I do not say that he should have stuck to that point, no sir; he should have been satisfied with 70 per cent.

Q. Should he have started at that; does not that appeal to you as being a little bit wrong toward your competitor, to tell him that he has got to sweep other lines off his counter if he is going to stay on your direct list? That is what you are being accused of, and that is about the worst you are being accused of. Whether or not it is wrong, I do not know; it seems a little bit wrong to me, I must say—and not a little bit either?—A. A statement was made about the fear dealers have about the Imperial Tobacco Company. I would just like to say a few words about that. Witness testified that dealers were afraid to give concessions to other manufacturers because their living depended on the sale of Imperial brand. This is true to the extent of 70 per cent, but what is most important in my opinion is this—that if we did not exercise the reasonable control we do over retailers, whether they are direct buyers or buy from the jobber, retail prices would break in 24 hours.

By Mr. Sommerville:

Q. Price control is one thing, but shop control is an entirely different thing, isn't it?—A. My contention is, sir, that each has a bearing on the other.

Q. But it is not one and the same thing?—A. If we could not control the dealers, we could not control their action on prices.

By the Chairman:

Q. There is a big difference there, Mr. Spafford?—A. Yes, sir.

Q. Mark you, let me point out to you, I think every one of your competitors endorse the principle of price control?—A. That is true, sir.

Q. Let us just drop that from our picture as far as any dispute is concerned, I think they are all agreed on that. That is a question for the committee to determine later on, whether they agree with that suggestion. But there is a vast difference between exercising price control, price maintenance, and what you describe as controlling the retailer. Why should you exercise control over any retailer except your own organization?—A. Well, sir, we do it so that price control may be maintained.

Q. Surely this is a free country, and a man selling tobacco, or candies, or other products is at liberty to conduct his own affairs as he likes. Surely he is entitled to that?—A. Well, sir, possibly the word "control" is not the right word to use. But I say this, that if we do not exercise our influence with the dealers to maintain prices, the efforts of other manufacturers, no matter how much they are in favour of price control, would be of very little value.

Q. Oh, but wait: there is an altogether different thing. Your price maintenance is controlled through your jointly refusing to sell a man your stock through your jobber. You have an agreement, cited in evidence yesterday; a contract between yourself and the jobber, and I am not for a moment calling that into question. That is another matter. But I question the exercising of arbitrary control over what the retailers should do in the operations of his business. That is a different matter, and that is what is complained of. If you will just stick to that and leave this price maintenance, for a moment—I doubt whether we are in agreement on it, but the committee will discuss it on its merits. That is another problem, but when it comes to your exercising arbitrary control, or taking a dictatorial position—I use these terms because they are implied—over the retailers; that I think is something that you ought to explain,

certainly in a manner different than what you are doing now?—A. I thought I had explained that, that it is the jobber selling arrangement. It does not cover the indirect retailer, it only covers the activities of the jobber.

Q. Yes, but it was stated in evidence, if not by yourself, by one of the other witnesses, that the manufacturer was used by the jobber in order to control any recalcitrant person cutting prices?—A. Amongst the jobbers.

Q. Quite so. But between yourselves and the jobbers refusal to sell was a disciplinary measure that was used. However, what I want to get away from is that I do not want to draw the committee into a consideration of price maintenance when you are dealing with an entirely different matter; namely, interference with the privilege and liberty of a retailer in the conduct of his business in any way?—A. May I make this point, that these indirect dealers that buy from the jobbers do not come within the scope of any price maintenance agreement.

By Mr. Factor:

Q. You are missing the whole point?—A. No I am not, in my opinion; it is up to us to keep order amongst these indirect buyers, because nobody has contact with it.

By Mr. Sommerville:

Q. You are the policeman of the retail trade?—A. Yes, sir, and if we withdraw that supervision as I said before, I am confident that prices will be cut.

By the Chairman:

Q. When you say " supervision," just explain what you mean by that?—A. I mean that if the dealer is cutting prices we do our best to persuade him to go back to standard prices; if he is an indirect man we cannot say he must go back.

Q. None of your competitors brings any action of that kind into question.

By Mr. Ilsley:

Q. We are not talking about that, Mr. Spafford at all; that price maintenance may be all right with the chairman, I don't know about that. But what we were dealing with was all this evidence about your disciplinary methods for another purpose, that was to prevent your competitor's goods from being displayed and advertised. Now, let me ask you this; if you did not take any disciplinary methods at all, would you not get your share?—A. Which point are you speaking about, display?

Q. Display advertising. If you did not take any disciplinary measures against retailers, would you not get just as large a share—apparently you approve of that, say that they should stop it all?—A. I do not approve of it.

Q. If you did not use disciplinary measures, or make threats to that end at all, would you not get your share of advertising display?—A. I have said before, sir, that the condition of sale is not that you must give us 100 per cent, or that you must give us 70 per cent; we try to get 70 per cent, and we are satisfied with 70 per cent.

Q. You may not have meant it in your evidence but you certainly said a few minutes ago that you would have approved if your salesmen had started out by saying, give us 100 per cent of this thing, intimating that you would not put him on the direct list if he did not do it?—A. He was not being forced.

Q. You hoped he would get it?—A. I say that it is not even absolute, that the dealer must give us 70 per cent.

Q. Let me ask you this question? If your people did not make these threats, and exercise this discipline that you direct towards price maintenance at all, and directed towards a larger share of display advertising, would you not get your share?—A. I do not say they make these threats. I would not admit that they make these threats. I assume they try to get advertising space, but I say it is not considered a condition of sale.

By the Chairman:

Q. You yourself read a letter from Mr. Tingle admitting a case?—A. Which had been reported, but not proved.

Q. What is the object of reading the letter? I think you should frankly admit that this practice is indulged in by your officers. You may say that they do it without your instructions, or something of that kind. I must say it is pretty hard for me, I do not know what the other members think, but it is pretty hard to ask me to think that all these men who have come before us, reputable business men of this country, are drawing on their imaginations for these statements.

By Mr. Ilsley:

Q. Will you tell me if in your opinion you think trade practices of this kind are necessary for the maintenance of your fair share of the advertising business?—A. I do not admit that they do exist; if they do exist I would say it is not necessary.

Q. It is bad trade practice?—A. I do admit that, freely.

By the Chairman:

Q. Then it is a question, if you are an official of the organization, of finding out whether it happens or not? You practically say, however, that you are not aware of it?—A. I ask you to believe, sir, that it does not go on with our countenance.

Q. There is just a nice little narrow point there, I would think you were perfectly idiotic if you gave instructions to do it?—A. We give instructions not to do it.

Q. Just wink with the other eye, something like that. You just always get away from it. Tell us frankly that you discountenance it, or rather discipline your staff if they do it, and tell us whether it has been done; and then the committee will be satisfied that you were very sincere in the matter?—A. Mr. Chairman, I made the statement before that no clear case has ever been proved; and if we may have the evidence, the sworn statements that were submitted yesterday by Mr. Hughes, I personally would like the privilege of investigating each one of these. And I can personally assure you that where something detrimental has been done it will be corrected and the principal concerned will be disciplined.

By Mr. Factor:

Q. But, Mr. Spafford, in all these complaints from coast to coast, and coming all over for two or three years; did you ever discipline a single man in your organization for any of these practices?

Mr. Edwards: Or reprimand him?

The Witness: Frankly, I can call no case to mind, because none have ever been proved.

By Mr. Factor:

Q. Is not that a reasonable assumption, your not having done so as an executive in charge of these men, having been aware of these things, have countenanced them?—A. That is not true, I have never countenanced them, and do not know of them apart from reports that have not been proved. If I have an opportunity of going through our records, I might be able to place as many complaints—I could give you a lot of complaints that we have had about other manufacturers using the same tactics.

By Mr. Sommerville:

Q. I should think that they would encourage similar tactics by others?—A. It is a question of who started them first.

Q. No, I think it is rather a question of who does it most?

By the Chairman:

Q. But you will admit that it is reprehensible in any case, whoever does it?—A. I do, sincerely.

By Mr. Factor:

Q. Is there any way by which you and the other manufacturers could get together and eliminate this, shall I say this matter of high pressure salesmanship and high pressure advertising?—A. The letter that I had describing a meeting in Montreal is an indication of what we would like to do, and we would do that from coast to coast if there were any way of getting the representatives together.

By Mr. Young:

Q. Might I ask you this question: you are accused of doing certain things, and of expecting things from the dealers; and you are accused of using certain disciplinary measures to force them to comply with your rules and regulations; the discipline you apply is that if they do not do as you say, or as you wish, they will be cut off the list and find it difficult to get their supplies?—A. Only if they cut prices.

Q. Quite apart from that, in the matter of display or any of these so-called mal-practices of which you are accused; supposing this committee were to find some way of opening to these men who are disciplined a new source of supply, would not that be the most effective check of those practices whether you or anybody else is carrying them on?—A. The men whom we discipline are price-cutters. If they got their supplies from some other source, they would still cut the price.

Q. We have had evidence to the effect that men have been disciplined for failing to give you sufficient window display—you are accused of it— assuming that it is so I ask you this: would not the most effective way of checking it be to open some new source of supply to these men so that if they should be cut off, they could still get a supply.

Mr. SOMMERVILLE: How would they get supplies from the Imperial?

Mr. YOUNG: I think we could still find a way of getting the supply. You leave that to me and I will show you where the supply is coming from.

By Mr. Young:

Q. Is not that a natural correction?—A. It sounds that way, but I have never considered it so I would not like to give a hasty reply. It is an entirely new angle to me.

By Mr. Kennedy (Winnipeg):

Q. You don't know where these other supplies of the Imperial came from?—A. No. There are a lot of jobbers to-day getting our goods, and I wish I knew where they are getting them.

By Mr. Sommerville:

Q. What would you do?—A. We would try and stop their source of supply.

Q. That is what I thought?—A. For we must follow out our plan.

Q. Under your price maintenance plan, that is what you would have to do?—A. Yes.

By Mr. Factor:

Q. May I ask this question rather bluntly? You say these practices do not exist. You have heard the sworn testimony of Mr. Hughes, Mr. Fortier, Mr. Picard, and Mr. Munich. Are those men not telling the truth?—A. Mr. Factor, I say that we do not countenance them, and so far as I know there has never been a proven case submitted to us.

Q. I know, but here are four men, reputable business men in Canada, sworn on oath, giving us concrete illustrations. Mr. Hughes has left with the committee twenty-five examples.

Mr. Sommerville: And here is another batch from Mr. Munich.

Mr. Factor: Yes, and I have in my own file dozens that I have not had a chance to submit to the counsel.

By Mr. Factor:

Q. Now, Mr. Spafford, these men come in and swear that these practices do exist. Will you tell me that these men are not telling the truth?—A. I tell you this, that they are making these statements in good faith; I will give them credit for that. I would not make any other insinuation. But I say this, that apart from the sworn statements—I believe they presented some—I question very much the other statements which have been handed to them by their salesmen or by dealers.

By the Chairman:

Q. What about that case from Toronto yesterday where certain streamers were put up to introduce a new cigarette?—A. I have that right here.

Q. You can't question the fact that the streamers were torn down or destroyed?—A. No; but might I give my impression of the situation?

Q. Yes, give us whatever you can.

By Mr. Senn:

Q. Before you deal with that, may I ask one question. You heard the evidence of these four gentlemen yesterday. Presumably they are heads of their organizations. Have they ever indicated to you, as head of your sales organization, that these practices were being carried out?—A. Oh, yes. That is why they got together in Montreal, for example, and tried to straighten them out.

Q. Did they give you concrete examples of it?—A. I didn't attend the meeting.

Q. And you are head of the sales organization?—A. Well, sorry to say, at the present time mine is an inside job—I don't mean in the ordinary sense of the word. But Mr. O'Brien is our sales manager, and in charge of all our outside activities, and he talks with all the representatives of the other manufacturers.

Q. I was wondering, if these things are so prevalent as suggested by the witnesses yesterday, why they didn't submit concrete examples to the organization?—A. Well, I may say this, that if the representatives of the different manufacturers, including our own, the local ones, would get together and discuss their troubles, it would go a long way towards overcoming this trouble that does exist.

Q. And you are willing to meet them?—A. Absolutely.

By Mr. Sommerville:

Q. Suppose a merchant did go so far as to allow his name to be used, to bring a complaint to you that your salesman had come in and removed all the goods of Grothe and Benson & Hedges off the counter, and those two men had come to you with that complaint, what would have happened to that merchant from the Imperial?—A. Why, he would have been thanked very sincerely.

Q. Then you would be writing letters of gratitude, if I gave you all the names, for a long time to come. May I give you one illustration just of the situation now. Here is a man about which it is said:—

> About September, 1933, the Imperial Tobacco Company threatened to cut this customer off the list if he did not remove our goods—

That is Benson & Hedges.

> —as well as L. O. Grothe's, from his counter.
>
> This customer was given five days in which to do this. He did not want to remove our Admiration or Londres cigars, since they were enjoying such a good sale, but at the same time he did not wish to lose his account with the Imperial Tobacco Company, since it meant so much to him.
>
> When this case was brought to the attention of the writer by this gentleman the matter was immediately taken up with our office. The writer was advised to see the customer, to ascertain if he would verify this statement before an investigation, but fearing pressure from the Imperial Tobacco Company should we, for any reason, lose our case, this customer hesitated to have his name used, stating that Imperial would cut him off completely.
>
> After the five days were up, all opposition cigars were removed from the counter and this gentleman was once again in good standing with the Imperial Tobacco Company, having complied with all their demands.

Do you say that is a thing that is just produced out of the imagination of a creature?—A. No, I don't at all.

Q. Is not that the exact condition that these merchants are under, having 70 per cent of their supplies coming from you, that they dare not come forward and make their complaints? I have a whole grist of these, and I think that if they were handed to you, there would be some talking to some of these men, if there was not anything more. Let me give you an illustration of a dealer. Here is a dealer who has a whole district, on April 27—just last month?—A. What do you mean by a whole district?

Q. He is a jobber covering a whole district. He is not a retailer in a single section. He is a jobber in a district?—A. With other jobbers.

Q. Yes, with other jobbers. He says:

> On April 27 I was demonstrating a certain brand of Benson & Hedge's cigars and trying to persuade—Mr. Smith, we will call him—to buy in larger quantities so he would benefit by the extra 5 per cent discount, which is a considerable item.
>
> He brought to my attention the fact that the Imperial Tobacco salesman spends considerable time in this district, and brings in a large amount of detail orders, giving them splendid co-operation.
>
> He claims he could very easily place a box of our cigars with most of his customers, but he stressed the point that when the Imperial man would call on these customers he would immediately inquire who was responsible for having these cigars placed on the counter among his goods, and they would of course state that they were sold by—Mr. Smith, as we are calling him—and that was something he could not afford to let the Imperial Tobacco salesman know.

—A. That is that man's impression. It is not a fact.

Q. That is such a general impression among jobbers that it must arise from somewhere, not simply out of the air?—A. Mr. Sommerville, you say "amongst jobbers." Among these telegrams which you kindly allowed me to present yesterday, there were many telegrams not referring exclusively to price maintenance. They referred to the general policy, sales policy, of the Imperial Tobacco Company. Those telegrams were from reputable men from coast to coast.

By Mr. Factor:

Q. They referred to the system of distribution of jobbers and retailers only. They didn't approve of these tactics going on?—A. You contradict my statement? Have you read them?

Q. Listen, be reasonable. I say that these telegrams approved of the system of distribution between jobber and retailer?—A. Not exclusively, no.

Q. Do you mean to say that they approved of these tactics that were used?—A. They don't admit they exist. They admit they approve of our general policy.

Q. Of distribution?—A. No, no, our treatment of the trade. They were from retailers as well as wholesalers.

By Mr. Ilsley:

Q. I thought they had reference to price maintenance?—A. Not exclusively.

The CHAIRMAN: No, not exclusively, but largely. There is not any doubt of this. They were never asked whether they approved of strong-arm methods of control in the trade. That question was never submitted to them. They didn't refer to that at all.

By Mr. Senn:

Q. Mr. Spafford, if those tactics are resorted to, and the retailer refuses to comply with the demands of your travelling salesmen or your jobbers' association, who in your organization has authority to refuse your goods to them?—A. Well, sir, I have made the statement before that that is not a condition of sale.

By Mr. Sommerville:

Q. Who has authority, though? Is it the local man?—A. If it was a question—

By Mr. Senn:

Q. Can the travelling salesman, for instance, refuse your goods?—A. No, our district sales manager, of which we have eleven throughout the country.

Q. Do you know whether these cases are referred to your district managers or not?—A. I don't admit that there are any such cases.

By Mr. Sommerville:

Q. Is Mr. Cohen a district manager of yours in Montreal?—A. Cohen? Oh, yes, he is a supervisor.

Q. He is a supervisor. Then let me give you this case of April 30, 1934. This is a letter received:

> In the presence of an Imperial Tobacco Company window dresser, a booking was taken by me for an Oxford cigarette window—Benson & Hedges—to be made on April 30, 1934.

That was in the presence of a salesman.

> It was agreed by both the owner of the store and the Imperial window dresser that the necessary arrangements would be made for Benson & Hedges. It is stated by the owner of the store that on April 29th—

The day before the window was going in.

> —Mr. Cohen and two other representatives of the Imperial Tobacco Company told the owner of the store that Benson & Hedges could not dress his window and suggested something in the form of a threat.

And the window was not dressed. Now, is that the kind of thing that a supervisor is supposed to do for you?—A. No, it is not.

Q. There it is, right on the 30th of April?—A. Well, I have asked so many times if I might be supplied with names and full details of these cases. There are so many general statements that have been made, that I think in fairness to our company I should have that information.

By Mr. Factor:

Q. Don't you see the difficulty, Mr. Spafford? I think you are quite fair in your request, if the committee was assured that in the subsequent negotiations similar tactics would not be adopted in threatening them. Let me give you an illustration. I, personally, tried to get two dealers from Toronto, two retailers, to come and give evidence to this committee, and they refused because of the fear of being cut off in their supplies. I speak here personally, and of my own knowledge?—A. Well, I think that fear is exaggerated.

Q. Well, it seems to prevail to a great extent?—A. It is not from any desire of mine.

Mr. SOMMERVILLE: I can tell you of a dozen that have some fear, who would like to give evidence before this committee of the practices, but who are afraid of what would happen to them and their livelihood.

Mr. YOUNG: It seems to me that it puts this company in a very awkward position. They are accused of certain things, and their accusers refuse to face them.

Mr. ILSLEY: That is so.

The CHAIRMAN: We had before us five, I think it was, of the leading competitors of the Imperial Tobacco Company, everyone an outstanding leader in his line of business and head of his firm. On oath they made statements that certain practices are prevalent through the country, and they point out to us that they do not wish to disclose the names of the individuals, because from their knowledge of the way the practice is carried on, those individuals would undoubtedly suffer. We could—I have been giving this matter a lot of thought—summons these people before us and make them tell us. Take the two men that Mr. Factor mentioned. Mr. Factor mentioned that matter to me. We could summons them and force them to tell us, but I hesitate to take the responsibility myself to do so. What we are trying to do with Mr. Spafford to-day, or at least at his request, is give him an opportunity to answer.

By the Chairman:

Q. Now, Mr. Spafford, is it quite an answer simply to say that unless you have full details you cannot deal with the matter? Because you have yourself admitted in two or three instances that the practice is indulged in. You don't say it is prevalent, but you say it is indulged in?—A. Which practice?

Q. The practice of bludgeoning people, because your own letters admits two cases, frankly?—A. It does not. I am sorry to contradict you but I don't think the letter admits it. The letters says it has been reported.

The CHAIRMAN: Oh, well, I know, but it goes on to say that these practices—I have forgotten just the wording, and the letter has gone out—but I think anybody would take it that it was admitted by Mr. Tingle and says it must stop, or something to that effect.

Mr. YOUNG: Now, Mr. Chairman, if the company says in their letter that this thing should be stopped, and then we go and bring them before us and say, "Now, you are accused of doing that in a dozen different cases," then the natural thing for them to say would be, "Tell us the cases and we will see it is stopped," and we refuse to tell the cases.

The CHAIRMAN: I admit it is a very difficult thing. However, I will tell you what we will do. The committee will take into consideration whether or

not we shall bring the individual witnesses here to back up these statements which were given. It is a serious responsibility for the committee, and I was hoping that Mr. Spafford, when he asked to make a statement to-day, would offer us some real explanation of the matter, but I confess that you have not given us much yet.

The WITNESS: Mr. Chairman, I have made the statement that if a dealer came to me and laid his complaint, and I found it was justified, I would not censure him. I would censure the salesman. If you will give me the information of every one of those complaints, I tell you in all sincerity the same condition will prevail, and in the future—that goes for the future too.

Mr. ILSLEY: I think they had better be communicated with, in view of that statement he has just made; and if they agree that their letters may be produced, they certainly should be produced, so that he will not be confronted with hearsay rather than fact.

The CHAIRMAN: We will do that.

Mr. KENNEDY (*Winnipeg*): Just before we get into this last phase, you asked the witness regarding the pulling down of streamers.

By the Chairman:

Q. Can you make that plain?—A. The episode referred to by Mr. Hughes, which occurred recently in Toronto—I have not had time to see or communicate with our Toronto man yet, but I believe the explanation is this: According to Mr. Hughes' statement, the representative of his company put the window bills on windows containing our window dressing material.

Q. He didn't say that.—A. Well, I say, sir, that is my impression, that they were put on windows trimmed by us.

Q. He didn't say that.—A. Well, then, I have no defence, if it occurred.

Q. However, go ahead and make your explanation on that assumption?—A. Well, I say it is, if I am not mistaken, the statement made by Mr. Hughes. This was in our opinion, and is sort of a gentleman's agreement amongst the manufacturers, that they will not put window bills on windows trimmed by each other. It would be the same thing as putting a sign across another sign that is tacked up on the wall. It spoils the effect of the window. If it did occur, I would say it is contrary—if they were taken down by our men whether they were on windows trimmed by us or not, it was contrary to instructions from head office.

By Mr. Kennedy (Winnipeg):

Q. Frankly, Mr. Spafford, this is not of much value. You start out by saying, "If it did occur," that you have not communicated with them, and this is your impression of the explanation?—A. Yes.

Q. I suggest that as evidence it is of little, if any value. You might better investigate the facts, and let us have that.

By Mr. Sommerville:

Q. Might I suggest to you that while you are in Ottawa, you investigate to-morrow, how many of your signs in the last two weeks have been put over the windows or on the windows dressed by Benson & Hedges, Rock City or Grothe in the city of Ottawa?—A. Well, may I make another statement? You referred to Hull.

Q. I just ask you to make that examination right here in Ottawa?—A. But in connection with the episode which occurred in Hull, I want to explain that by saying that I must admit there is what might be termed a local feud between

the Imperial and Grothe, the local advertising representative? We have not been able to get them together. I believe those practices prevail on both sides, but it is my intention before I go back to try and straighten them out.

The CHAIRMAN: Now, it is six o'clock; is there anything else?

Mr. ILSLEY: Is Mr. Spafford going on? You want to say some more about this?

The WITNESS: I would like to finish this, or I would like to file it with you.

By Mr. Senn:

Q. Will you be here to-morrow?—A. I had hoped to go home to-morrow.

Mr. ILSLEY: I think Mr. Spafford ought to have a full opportunity of replying to the very serious charges that were made yesterday.

The CHAIRMAN: Yes, I think so.

Mr. ILSLEY: And take whichever course he thinks fit. Perhaps it can't be done now.

The WITNESS: Another matter is the painting of jobbers' wagons.

Mr. YOUNG: How long will it take?

Mr. SOMMERVILLE: He has four or five pages yet.

By Mr. Ilsley:

Q. Would you rather file it, or come back?—A. I would rather not come back. I would like to go home to-morrow, and do a little work, and see how everything is going; but it is whatever you instruct me to do, sir.

The CHAIRMAN: I don't want to handicap you or curtail you in any shape or form. I would like, myself, to make a little more progress, though.

The WITNESS: Well, may I file this with you?

The CHAIRMAN: If you wish.

The WITNESS: That would save you gentlemen time.

Mr. FACTOR: Yes, we can read that into the record, and your representatives will be there.

Mr. SOMMERVILLE: You have covered up to a certain point. Just indicate that.

Mr. HUGHES: If we are going to remain until to-morrow, I would like to have permission to reply to some of this cover-up explanation.

Mr. SOMMERVILLE: Mr. Munich is making the same request.

Mr. SENN: I am afraid if this goes on, we will be here indefinitely.

The CHAIRMAN: I will tell you what we will do. We will meet to-morrow morning at 10 o'clock and give these gladiators another chance.

The balance of Mr. Spafford's statement, referred to above, is as follows:

Painting of Jobbers' Wagons: This matter as referred to I know nothing about excepting that circumstances as described are contrary to our instructions. If I may have the particulars of each case I will personally investigate it. If any injustice has been done it will be corrected. I say again, we will not tolerate any such action of an employee of ours. Nor will we tolerate an action described by Mr. Hughes wherein a representative of ours is supposed to have obtained from a jobber in Montreal figures showing purchases of competing lines under the threat that if the information was not supplied the account would be closed. He went on to say that the figures were not forthcoming

at first and that as a result an order placed with us was held up. If all of this is true it was done without my knowledge or approval or the knowledge of any one of our executive officers. The matter will be investigated at once and if guilty the employee concerned will be dismissed. It will be necessary, of course, for me to have full particulars which I assume Mr. Hughes will supply.

Mr. Hughes, and I believe one or more of the other witnesses, made the statement that an affair such as this went on with the knowledge of "Head Office." Someone in Head Office, perhaps an order clerk if an order was held up, might know, but certainly not an executive of the company. That is definite.

Evidence submitted by the Macdonald representative: Mr. Fortier made the same general statement as Mr. Hughes, but, in addition, stated that we closed a retailer's account because he distributed free tobacco to the unemployed. If Mr. Fortier refers to the closing of the New-Way Tobacco Store account he is labouring under an illusion. We closed this account because the arrangements under which it was opened were not lived up to. This account, if my memory serves me right, also operated deals which are equivalent to price-cutting.

Benson Hedges' representative: Mr. Munich referred to a dealer in the north end of Montreal with whom we entered into a five year contract for two or three windows. I should like to have full particulars of this case as when I telephoned our Montreal office this morning for a report on this matter no record of any such case could be found. As a matter of fact I want to state that with the exception of two cases, and this is not one of them, we do not have contracts with any dealer covering window display space.

Rock City Tobacco Company: I am particularly anxious to go into Mr. Picard's statement to the effect that we deliberately demoralized prices in Quebec city because we were disappointed that the Jobbers' Association did not get properly organized there. Mr. Picard is correct in one contention. We were sorry after devoting a lot of time to assist the jobbers, to have their efforts fail.

The price proposition to canteens is another matter and goes back several years, possibly five, when the W. C. Macdonald Company quoted a special price of $8 per thousand cigarettes and 90 cents per pound of tobacco (regular price to the trade $9.75 for cigarettes and $1.17 for tobacco) to the Department of National Defence so that their cigarettes and tobaccos could be sold at cut prices in military canteens. The cigarettes were retailed at 20 for 23 cents the tobacco, I believe, at from 60 cents to 70 cents per half-pound tin. We found that these special prices were seriously affecting our business. Not only in the canteens but with civilians who, through knowing people who enjoyed the privilege of buying from canteens, obtained their supplies from this source. We endeavoured to have the special prices discontinued but were not successful with the result that in order to protect our own interests, we offered similar prices to the Department of National Defence in September, 1932. In May, 1933, the W. C. Macdonald Company reduced the price of cigarettes to $6 per thousand. We followed. Cigarettes then sold on a basis of 20 for 18 cents. On May 1st this year, which is just over two weeks ago and not three weeks ago as stated by me yesterday, we raised our prices on cigarettes and tobaccos to our regular list prices with the exception of canteens operated for the benefit of the unemployed where we continued the special price of 80 cents per pound for tobacco. I believe all this is what Mr. Picard refers to and has nothing whatsoever to do with general conditions in Quebec or the failure of the jobbers there to form an association. As a matter of fact I might mention here that, outside of the city of Toronto, Quebec city is the worst cut-price territory in Canada.

I do not understand Mr. Picard's reference to a club or an individual to whom consumers pay $1 membership fee and get cigarettes at cut prices. I know nothing about any such arangement, nor do I believe that we sell to any such club or individual. If Mr. Picard will supply me with full particulars I will give the matter my personal attention.

The Committee adjourned at 6.05 p.m. to meet Thursday, May 17, at 10 a.m.

House of Commons, Room 368,

May 17, 1934.

The Special Select Committee on Price Spreads and Mass Buying met at 10 a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Parry, of Toronto, appeared as Counsel for the Committee.

The Chairman: The minutes of yesterday's meeting record the filing of a large number of exhibits set forth therein, certain witnesses called and heard, and also the fact that two of the Ministers of the Crown were heard in regard to a matter previously referred to. I declare the minutes approved.

Who is your first witness this morning, Mr. Sommerville?

Mr. Sommerville: I think Mr. Spafford filed the balance of his brief last night.

The Chairman: I am told it has been printed in the record.

Mr. Sommerville: Yes.

Mr. Spafford: You asked for certain information, which I have.

Earle Spafford, recalled.

Mr. Kennedy asked for particulars of the Toronto episode. First of all, Mr. Senn asked what our volume of business was direct with retail accounts. It is 28 per cent, sir.

The Chairman: Twenty-eight per cent of your business was direct?

The Witness: With the retail accounts.

Mr. Sommerville: In answer to Mr. Senn's inquiry as to the volume of your business with the direct retail accounts, you say that these direct accounts represent 28 per cent of your entire volume of sales.

The Witness: Correct.

Mr. Sommerville: Does that include sales to the United Cigar Stores?

The Witness: Yes. You asked me to have the Ottawa and Hull situation checked up last night, and there is the report sir.

Mr. Young: We would like to have that read.

Mr. Sommerville: Yes. Mr. Spafford says:—

> Thorough check-up last night revealed no opposition advertising on our windows. None of our advertising on opposition windows.

A perfect condition.

The Witness: Yes, 100 per cent.

Mr. Young: At present. What was it a week ago?

Mr. Sommerville: I was only referring to the check-up of the night before.

The Chairman: Mr. Spafford, you would call that snappy work, would you not?

The WITNESS: We have a very thorough organization. I have a telegram from our Toronto manager, which I would ask you to read, sir.

Mr. SOMMERVILLE: Yes. A telegram from Mr. A. R. McWhinie, Manager, Imperial Tobacco Company, Toronto:—

> Earle Spafford. Read in papers Grothe Biased—

What is that, " biased " or " based "?

The WITNESS: Both, I would say, sir.

Mr. SOMMERVILLE: That is efficiency.

The WITNESS: I think he means based.

Mr. SOMMERVILLE:

> —charges regards removing window bills in Toronto we should be the ones to complain of unfair tactics stop We respect all advertising whether by our competitors or other advertisers and while we have complaints we also have grievances which we mutually adjust stop Grothe put on a window bill campaign for Grad cigarettes and placed same on windows dressed by our window dressers in many cases obstructing our showing the work and material in these windows costing us approximately from five to eight dollars each stop In a number of these cases we did remove their window bills stop After doing so we phoned Grothe representative Smith registering our complaint Smith made an appointment for Tuesday morning coming to our office when this question was discussed he said that he had two novices putting up window bills and probably good judgment was not used he agreed with us that the practice was unethical and he would adjust further complaints on request and we would mutually respect one anothers advertising stop I was surprised to see that he wired his complaint to Grothe stop To-day we checked up a number of windows dressed by our window dressers and found four of our window displays with view of centre piece obstructed with Grad window bills making displays of no advertising value to us stop Five other windows which we dressed have had grad bills but high up so as not to obstruct these showing stop We checked five Grad window displays but no window bills of our brand shown we respected their windows but they have not respected ours we are the ones have a grievance stop Grothe remarks about us following their window bill campaign three weeks ago is absurd as we have carried on regular weekly bill display since last October stop Regarding Grand counter displays their statement is grossly exaggerated stop They are and have been showing since placed on the market in a great number of stores including retailers who buy our goods direct and we have made no comment to the retailer figuring they are just another brand stop Can give you names and addresses of stores where windows dressed and view obstructed stop We tried to get in touch with Smith to-day left word to phone us have not heard from him yet stop We do not remove other manufacturers outdoor signs even when requested to do so by the retailer and we receive and expect the same courtesy from other advertisers stop In Toronto we are the ones who should be complaining.

By Mr. Factor:

Q. I should like to ask one question in regard to this Toronto situation. I received a letter yesterday complaining that in connection with the Canadian National Exhibition in Toronto, the Imperial products are the only ones that are on display at the Canadian National Exhibition. Can you enlighten me on that?—A. Well, there are two features in connection with the Canadian National Exhibition. In the first place, they have what they call a process building display, where we run a manufacturers exhibit. That is, of course, exclusively ours.

By Mr. Young:

Q. You pay for that privilege?—A. Yes.

Q. Could others get that privilege if they paid for it?—A. I believe they could. We make arrangements with the directors of the Canadian National Exhibition.

By Mr. Sommerville:

Q. I suppose in connection with that they sell privileges at the exhibition to the highest bidder?—A. I believe, sir, this display that I refer to, is not paid for. They run it as an attraction to the exhibition; it is a mechanical display showing.

Q. In the process building?—A. Yes.

Q. With respect to the complaints that Imperial goods exclusively are sold in the Toronto Exhibition, that applies to other exhibitions, because we have had similar complaints come in; but I understand the situation is that those exhibition boards sell the exclusive privilege for the sale of goods?—A. That is correct.

Q. Whoever makes the highest bid gets the contract?—A. That is right, sir.

Q. And the contract that you have gives you the exclusive privilege in those cases?—A. Yes. I might add that our contract expired last year, and when we renewed this year, for I think three or five years to come, we agreed to carry an assortment of opposition brands.

By Mr. Young:

Q. You are paying for the place and you are going to advertise your competitors' goods in the place you pay for?—A. We did not say we would advertise, we would carry them in stock.

Mr. Factor: So that the customer could buy them?

The Witness: Yes. There is a telegram from Saint John, which I would like you to read, sir.

Mr. Sommerville: This telegram is from Mr. H. C. Green, manager of Louis Green's Cigar Store. Did we hear his name before?

The Witness: In Mr. Picard's evidence of the 15th.

Mr. Sommerville: I do not remember the name. This telegram is dated Saint John, N.B., May 16th.

> Mr. Spafford, Chateau Laurier, Ottawa, Ont. Understand my name has been used in a telegram sent to Ottawa making certain charges against the Imperial Tobacco Company's policy regarding window dressing I wish to emphatically deny any authorization or knowledge of this telegram nor will I sanction the use of my name and furthermore will deny any of its contents recently I had reason to ask Mr. Farry to state his companies policy in regard to window dressing his answer was that if their man dressed the background they would not permit us to display any competing brands but they would be willing to send us a background and providing we put it in we could display any other firms brands we liked.

Mr. Farry is, I understand, the manager of the Imperial at Saint John?

The Witness: Yes. That is all I have sir.

Mr. Sommerville: As we were adjourning last evening, some of the members who have given evidence indicated a desire to answer certain evidence that was given in reply.

JOHN HUGHES, called and sworn.

By Mr. Sommerville:

Q. You desire to reply to certain statements that were made yesterday by Mr. Spafford?

Mr. FACTOR: I should like to know what is going to happen if Mr. Spafford wants to reply to Mr. Hughes.

The CHAIRMAN: I was going to observe that we want to bring this to a finality pretty soon, so, Mr. Hughes, please confine your observations as far as possible to rebuttal, if you like to so state it, because we must bring this matter to a finality.

The WITNESS: That is just my intention. First of all, on behalf of ourselves and the other independent manufacturers, I should like to go on record as taking absolute objection to some of the suggestions made by Mr. Spafford yesterday that our claims were wild and irresponsible. I would like to go on record as taking objection to that very strongly. In the first place, the claim has been brought out by Mr. Spafford, while he would not admit those affairs, he possibly gave the idea that they might have been carrcid on, but unawares to the head office. Well, I think that it is a foregone conclusion that an organization is responsible for its employees' actions; to the extent to which those affairs have been carried on they must surely have been brought to their attention, and if they did not take the pains to have them stopped, I think they had no alternative but to accept the responsibility.

By the Chairman:

Q. What would you say to the suggestion that the independents have been the aggressors, and that they have been defending their position possibly in some isolated cases by retaliation?—A. It is childish, childish. Any aggressiveness we could possibly take individually, is so small that it is absolutely lost. In connection with the Toronto streamer affair, any streamers that were put up by our representatives there, were put up with the permission of the storekeeper. I am not saying that some streamers were not put up on Imperial windows, possibly that is right.

Q. By Imperial windows you mean what?—A. I mean windows that were dressed by them.

Q. Windows of independent retailers?—A. That were dressed.

Q. Which were dressed by the Imperial Advertising Department?—A. Yes. I am not saying there were not some of our streamers put on those windows, I am almost sure there were; but if we did not resort to using those windows, we would not be able to have any streamers at all.

By Mr. Young:

Q. Were these streamers put in front of their display?—A. I have not seen it personally. I could not say that without seeing it. I do not think that our men would put a streamer in the centre glass to obstruct their view; I hardly think that.

Q. But you expect the Imperial Tobacco Company to answer charges that they have been doing this, so I think we should expect the same from you?—A. In connection with these Ottawa displays I personally went out myself to see the displays in the Ottawa district, and I saw Imperial streamers on some of our windows. So while Mr. Spafford says this morning that he took it up last night—probably they went around and took them down before he went around. The night previous they had the streamers on our windows right here in Ottawa.

By Mr. Edwards:

Q. Where does the owner of the window come in on this business, has he nothing to say?—A. My information is that every streamer put up there was put up with the permission of the dealer.

Q. He still controls the window, doesn't he?—A. He should. I am not saying that the streamer business is not abused a little bit by all; but if we want to make use—if the independents want to make use of that medium of advertising, and if we are confined to putting in windows only in our own windows, well we might as well drop it altogether.

By Mr. Factor:

Q. Why can't you get together and decide upon a policy so far as matters of advertising are concerned. You are all here now and you could get together and decide on a general policy?—A. There is nothing impossible.

By Mr. Sommerville:

Q. Are you willing to meet in such a conference?—A. Naturally I can only speak for myself; as to the other independent manufacturers, you will have to consult with them.

By Mr. Senn:

Q. What do you say, Mr. Hughes, about that; are you willing to enter into an agreement, some such thing as a conference with the Imperial Tobacco Company, with a view to arriving at some arrangement that will avoid all these difficulties arising out of these practices?—A. Well, naturally we are not out for revenge or anything like that, all we want is fair play; if I could really believe that the result of such a get-together would bring satisfactory results, I think I would be in favour of it.

By the Chairman:

Q. Mr. Hughes, if I understand the position of the Independent correctly, it might be summarized in this way: your complaint is that by weight of influence the Imperial Tobacco Company have used their efforts to control advertising space in retail shops, and also to influence the purchase of their goods to the detriment of purchases of independent goods; that that condition militates against your trading freely. Make your comment, is that a fair interpretation? —A. That is.

Q. Now, listen: have you as independents taken notice of Section 27 of the Excise Act, which seems to me to offer you some protection. However, I want to make this clear, I am not now saying that such a condition is proven to exist; that will be for the Committee to determine. You make that allegation, if it is true, why do you not invoke Section 27 of the Excise Act, which reads as follows:—

> The Minister may declare forfeited any licence authorized by this Act in any case where a person who, being a manufacturer of any class of goods subject to a duty of excise, either directly or indirectly,
>
> (*a*) makes a sale of any such goods, or consigns them for sale upon commission, to another person, subject to the condition that the purchaser or the consignee shall not sell or deal in goods of a like kind produced by, or obtained or to be obtained from any other manufacturer or dealer; or
>
> (*b*) makes a sale of any such goods, or consigns them for sale upon commission, to another person, upon such terms as would, in their application, give more profit to the purchaser or the consignee if he should not sell or deal in goods of a like kind produced by, or obtained or to be obtained from any other manufacturer or dealer.

A. That ruling was only brought to my attention this morning.

Mr. Factor: I do not think, Mr. Chairman, that covers the situation at all.

The Chairman: It might not, but it certainly would if the condition is as alleged.

The Witness: Besides that, I think you would have extreme difficulty in trying to prove such a case, because they do not put anything like that in writing.

Mr. Factor: Not only that, but Mr. Spafford said that it was never a condition of sale with them to prevent the sale of their competitors' goods.

The Chairman: I submit that possibly this section might have been invoked in order to make an enquiry into the matter, to see whether the conditions actually obtained. Here we have one side saying one thing, and another side saying another; each one denies the accuracy of the statements of the other. We are not here to try disputes between individuals. However, I do not want to curtail you in making your statement.

The Witness: I will be very brief, Mr. Chairman, the suggestion was offered yesterday that the trouble here in Ottawa was a matter of ill feeling between our advertising men and theirs.

The Chairman: Hull.

The Witness: Ottawa and Hull, they work conjointly. I have been talking to my advertising man since and he says that is the first he has ever heard of anything like that; that he has no personal grievance with any of the Imperial advertising men, or anything. It is just a presumption that has no ground. It is reported to me also by him that one of the Imperial salesmen admitted to him that they took down their streamers here in Hull; furthermore, they reported the matter to the Montreal office—so it would seem that the Imperial Head Office are aware of these matters.

I would then refer to this meeting in Montreal. We had an arrangement that was made between certain manufacturers as respecting each other's advertising. That meeting took place some possibly two years ago and that was really brought about because at the time numerous complaints were being received from all over that advertising material was being interfered with. We found our advertising material torn down, also our streamers torn down, and all this kind of stuff. That was the object of holding the meeting. What was really decided at that meeting was this—some of the manufacturers were not dressing windows, and it was in the interests of the manufacturer who was not dressing windows that the manufacturer would have the right to put up a streamer on a window dressed by another manufacturer, because that would eliminate certain manufacturers altogether from that particular kind of advertising. What was agreed was this, that no manufacturer would put a streamer on the front glass of another manufacturer's window, on a window that was dressed by another manufacturer. He could put up that streamer on a door or on the side glass, in such a way as to interfere as little as possible with the advertiser's display.

I can show you in Montreal photograph specimens of windows that we had in that were so plastered with Imperial and Tucket window streamers that you could not see what was in the window at all.

The suggestion was offered yesterday by Mr. Spafford that our claim that they had such a big control over the trade was exaggerated, due to the fact that they were only selling about 5,000 accounts direct in Canada out of possibly fifty some odd thousand. To begin with, when he says 5,000 accounts he is referring I have no doubt to Imperial Tobacco accounts; but then if you add to that the number of Tucket accounts and B. Houde accounts it seems to me a whole lot more than 5,000 would be included. But then it does not stop at

that. There is a lot of accounts that they do not sell direct over which they exercise disciplinary methods through the promise that some day they may become a direct buyer, and that is the ambition of anybody in the trade.

By Mr. Young:

Q. Just on that point, Mr. Hughes: these people I understand are the retailers who get thirteen and a fraction per cent; that is, those who buy from the jobbers?—A. Yes.

Q. And those who buy direct get about 23 to 24 per cent?—A. That is right.

Q. Do you offer any similar inducement to dealers to handle your goods—preferred?—A. We all merchandise on practically the same methods.

Q. That is to say, you have some dealers who get 13 per cent?—A. Yes.

Q. And other dealers who buy direct from you, and they get 24 or 25 per cent?—A. That is right.

Q. Do you ever bring any pressure to bear on your direct dealers?—A. Oh no, we can't.

Q. You can't, why?—A. No. The direct dealers that we sell in possibly 99 cases out of 100 would be direct accounts of Imperial. Any influence we could bring to bear on them would be so small that it would be hardly worth while attempting it.

By Mr. Sommerville:

Q. I suppose a man who becomes a direct dealer with the Imperial Tobacco Company is in a position where he can really almost insist upon you making him a direct dealer?—A. If we did not, he probably would not handle our goods at all. If we open a new direct account 99 times out of 100 it is just because of the ambition of that dealer to buy direct from us to get on the Imperial's direct list. They just use us as a way to get that. That is why we do not open any more than we can possibly help.

By Mr. Young:

Q. How many have you?—A. I really could not say, offhand; I imagine if the Imperial have 5,000, we possibly have something near the same.

Q. You say you do not open any more than you can possibly help?—A. No, there is no advantage to us to do so.

Mr. Spafford mentioned yesterday, in connection with the question of cigars, that they did not exercise this rule in connection with their cigar sales; and offered as reference that there were 53 per cent of their cigar sales made in Ontario where they had independent salesmen. Although they have independent salesmen they were in conjunction with Imperial salesmen just the same. As far as policy goes I think they exercise—. And besides that he mentioned a minimum quantity of 500 cigars. I have in my office in Montreal a letter over the name of the B. Houde Company in which they advise their customers that they can buy one box of 50 cigars of Imperial lines at list price along with their merchandise. I would be glad to mail that for you to file as an exhibit if you wish.

By Mr. Sommerville:

Q. Selling their cigars to whom?—A. They do not make cigarettes, that was tobacco—one box of cigars, Imperial lines, at wholesale list price.

By Mr. Young:

Q. You did not finish your sentence in the answer you gave a moment ago. You said, as far as policy goes I think they exercise; what were you

going to say there?—A. While they exercise—I would say they exercise certain methods by which they get cooperation for the sale of their cigars on account of them having the privilege of buying their cigarettes and tobacco direct.

Q. Do you think that?—A. Yes.

By Mr. Edwards:

Q. Really, I may be stupid, but I cannot see how they object to that merchandising practice. If the Imperial or your company wish to sell so many cigarettes to a dealer and they arrange, now we will sell you so many cigarettes at a certain price; that is a merchandising practice, and I do not see where this committee has anything to do with it?—A. Possibly.

Q. There may be a question as to whether it is good practice or not?

By Mr. Senn:

Q. Mr. Hughes, could you inform the committee as to the percentage of the retail business you enjoy in Canada?—A. What—percentage of retail business?

Q. Yes?—A. Oh, I haven't even a rough idea; very small.

The CHAIRMAN: You are speaking individually.

Mr. SENN: I mean, of your company.

The WITNESS: Yes.

By Mr. Senn:

Q. Would you say that your share of the advertising is smaller than your share of the retail trade?—A. No, I would think that our percentage of advertising was higher than our percentage of sales.

Mr. FACTOR: That is where the point comes in, you say that the Imperial say that because they have 70 per cent of the business, they should have at least 70 to 80 per cent of the advertising.

By Mr. Senn:

Q. Does he say that he is getting a larger proportion of advertising than his trade amounts to?—A. No, no, that is not what I wish to convey; what I wish to convey is this—that our company spends on advertising a larger percentage in relation to total expenditure of the advertising on tobacco alone in Canada than on the window end—actual sales in relation to total consumption in Canada.

Q. You really did not answer the question I had in mind. Is the proportion of your advertising out of the whole of the advertising done in the tobacco business lower than the percentage of your retail trade?—A. I just don't get that. Do you mean the proportion that we get from the retailer?

Mr. YOUNG: Your actual advertising.

Mr. SOMMERVILLE: You mean, displays in stores.

Mr. SENN: Yes.

The WITNESS: Referring to displays in stores.

By Mr. Sommerville:

Q. What relation has the amount of display that you get in the stores to the volume of your business, the percentage relationship?—A. I would say that the percentage of display that we get in the store is much smaller than the volume of business we get in comparison to total sales.

Q. The point is, why should the retailer be under any obligation at all to make displays except as it suits himself?—A. He should not, that should be his privilege.

By Mr. Edwards:

Q. Unless it can be proven, Mr. Hughes, that some illegal practices are resorted to, or some pressure applied on these dealers to have them exclude the other person, where do you enter into the picture at all?—A. That is just what we are trying to prove, that such measures are exercised.

By Mr. Sommerville:

Q. Have you anything further, Mr. Hughes, in your answer to Mr. Spafford? —A. Reference was made yesterday again to the question of price cutting. To be quite frank I am perfectly willing to give credit to the Imperial Tobacco Company for doing their share in the maintenance of prices; but I would like to go on record that the independents have done their share.

Q. Yes, I understand. We have that very clear?—A. I would like to stress it still further. It was brought out by Mr. Spafford yesterday that probably our efforts did not count, but I think that is a little bit exaggerated, because if any independent manufacturer would hear about it immediately if he allowed his goods to be sold at a cut price. I have evidence of cases which happened in the past that the Imperial would allow their goods to be sold at a cut price to compete against us. I would like to make reference to Dan Peace of Hamilton, where such a thing occurred.

By Mr. Young:

Q. Tell us what happened there?—A. He was selling an independent manufacturer's line at cut prices and they started—I have not got the exact details, it happened some time ago; as a matter of fact I do not say he was buying from Imperial direct, but something like that; and they started a price war there on that account.

Q. Who started to cut the price; did the Imperial man cut the price?—A. Yes.

Q. Tell me, what is the matter with that?—A. There is probably nothing the matter with that, I am not objecting to it. It probably was a good method to stop price cutting. What I am trying to put out is this, that their contention that they were instrumental wholly in the maintenance of price is not right, that we have done our share. I am not objecting to their policy of stopping price cutting, that is not the point.

By Mr. Sommerville:

Q. Now, Mr. Hughes, what other point have you?—A. It was also mentioned yesterday by Mr. Spafford that the only way by which they could keep maintenance of prices amongst indirect buyers was by these disciplinary methods that they exercised. I do not think that that is a correct statement, because it is well known that no indirect buyer could cut his prices; the jobber from whom he buys his supply—he would have his supplies cut off if he continues to sell that price cutter; so that there is control over prices in the case of the indirect buyer without any disciplinary method from any manufacturer.

By Mr. Young:

Q. When you speak of price cutting, does that include price reduction?—A. By price reductions, you mean reductions made by the manufacturer himself in the retail price of his merchandise.

Q. Yes?—A. No.

Q. When you speak of price maintenance, you mean keeping to the uniform price stipulated by the manufacturer to the dealer?—A. That the goods be sold at the price set by the manufacturer for a particular line of merchandise.

By Mr. Ilsley:

Q. To the consumer?—A. To the consumer.

By Mr. Factor:

Q. How could the retailer afford to cut the price on a 20 packet of cigarettes when he only makes the small percentage he does?—A. That is the problem. We had trouble in Montreal a short while ago where they were giving away additional premium cards secured from private sources. They would give away a whole series of cards for which they paid 15 cents to an individual, and they would do that on a one dollar sale—that would be 15 per cent of their selling price. I do not know how some dealers could do it when they buy from the jobbers to sell on a 13 per cent basis. They were actually losing 2 per cent. How they could do it I do not know, it is beyond me.

By the Chairman:

Q. It is the same principle as the loss leader?—A. Yes, a loss leader on cigarettes; and it is principally loss.

Mr. Factor: I do not think so, Mr. Chairman, it is rather a struggle for existence.

The Witness: They were actually losing 2 per cent. How they do it I do not know. That is beyond my ken.

Mr. Sommerville: It is just another case of loss leaders.

Mr. Factor: It is rather a struggle for existence in business.

By the Chairman:

Q. Is there anything further, Mr. Hughes?—A. Just one or two small matters. A request was made yesterday by Mr. Spafford that he be given the names of the special complaints that had been made before the committee so that he could investigate them. Well, as mentioned before, we would prefer not to have these names passed on because we really do care for the consequences, and besides that we do not see that it is going to serve any useful purpose. We have only tried to lay before the committee special examples of what is being carried on, in the hope that that condition might be rectified, and for the information of the committee I might say that there are many more similar cases that we have not laid before you.

Q. Do you repeat your former evidence, Mr. Hughes, that this practice is a matter of general knowledge throughout Canada?—A. I do.

Q. You are emphatic on that?—A. Yes, sir.

Mr. Young: Here is a complaint that has been before us for two weeks accused of all kinds of malpractices, and they have been denied the right to have a lawyer speak for them. They have submitted evidence that if these practices are carried on to any extent, or at all, they are willing to correct them. They have asked to have the names of those who have made the complaints so that they may investigate them, but that information has been refused them and we say: No, you are guilty, we will not tell you when you did this thing, we are going to condemn you now.

The Chairman: We have not said anything of the kind.

Mr. Young: We are accepting the evidence of men who refused to put their names to the charge.

The Chairman: We are listening to their evidence, nobody has been accused up to the moment; we are simply listening to their evidence.

Mr. Young: I do not care how rich those men are or how bad they are, I do not think they are getting a fair deal.

Mr. Edwards: That may be your opinion.

The Chairman: What have you got to say?

Mr. Young: I think we should have the names of the men who are making these complaints.

The CHAIRMAN: We have them here, all of them.

Mr. YOUNG: And a company should be given a chance to answer these men.

The CHAIRMAN: We have them all here, and the committee will decide on what they are going to do with them.

The WITNESS: In which case we will have to supplement that file with a whole lot more.

By Mr. Ilsley:

Q. What objection have you?—A. Personally I have no objection whatever, but a lot of this evidence has been given to us in good faith by certain dealers who are really fearful. Mr. Factor mentioned himself yesterday where he personally tried to get two dealers here to give evidence and they would not do so.

Mr. ILSLEY: If the dealers themselves would consent to have their letters submitted to the Imperial then we ought to do that much to supply the Imperial with definite charges. I do not see what objection you can have to that.

The WITNESS: Personally I have no objection at all. I just have in mind the interests of the dealers themselves.

By Mr. Sommerville:

Q. You simply bring the matter to the attention of the committee through having the matter brought to your attention by retailers?—A. Yes.

Q. That is the situation is it not?—A. Yes.

The CHAIRMAN: All right Mr. Hughes, thank you.

Witness retired.

A. G. MUNICH, sworn.

By Mr. Sommerville:

Q. Mr. Munich, you had desired to be heard yesterday with respect to certain statements that were made. Will you just be good enough to give the committee the statement to which you have reference. A. Well, I do not want to take up the time of this committee. I have heard what Mr. Hughes has had to say, and I can only corroborate most emphatically every statement that I have made to this committee as being correct. It is a peculiar situation. Mr. Spafford would like to have the names of these individuals who submitted complaints. I have no objection that that should be the case, but in my own mind—if I may be permitted to say so—I am convinced that Mr. Spafford is not ignorant of the situation, and cannot be ignorant of that situation, because at the meetings that Mr. Spafford referred to that took place in Montreal between manufacturers and the Imperial Tobacco Company representative, numerous complaints were talked of but always with the excuse: Well, that is not the policy of the company. The dealer is absolutely frightened. It is not an isolated case; It is, practically speaking, the same with every dealer throughout the country. He is afraid that if he does not agree to display the merchandise of the Imperial Tobacco Company, and if he attempts to show evidence of supporting the independent manufacturers, he will be retaliated against by being struck off the list.

By Mr. Ilsley:

Q. You told us all that.—A. Yes, it is only a repetition of what I have said.

Q. Do not repeat, just rebute, if I may be permitted to suggest.—A. Well, that is about all I can say on this situation.

By Mr. Sommerville:

Q. As the result of your own experience?—A. Exactly.

Q. And in particular in your desire to endeavour to introduce your product?—A. Exactly.

Q. Your cigarettes, tobacco, and cigars?—A. Exactly.

Q. In not only your own province but the Dominion?—A. The Dominion from coast to coast.

Mr. FACTOR: Mr. Chairman, there is a suggestion I have to make. I do not know whether it will meet with the approval of the committee or not. Mr. Spafford told us that he had a book full of complaints in reference to this practice. I was wondering whether he could put before the committee privately all these complaints, and if he did then we might get somewhere.

The CHAIRMAN: The committee might independently check up both sides of the question.

Mr. FACTOR: That is what I mean.

The CHAIRMAN: We are not concerned in a dispute between manufacturers, but we are concerned in general with the practice in the merchandising of goods which might affect the system, shall I say, of distribution in the country as a whole, and that is the only application to the committee's order of reference that we should keep in mind. But my view is this—and we will discuss it in executive session before very long—that the committee itself should have a cross-check on some of this evidence rather than dragging people in here who do not wish to give names.

Mr. FACTOR: We can appoint an independent investigator to go through the complaints on both sides and satisfy ourselves.

The CHAIRMAN: We will take that into consideration.

The WITNESS: Well, it is exactly the same with us. I do not want the committee to think for a minute that we are in any way unfriendly with the Imperial Tobacco Company as an organization. On the contrary, we have no objection at all to any of their methods of merchandising. We are just as interested as they are in a proper and regulated merchandising method that may be necessary in the trade.

By Mr. Ilsley:

Q. You mean price maintenance?—A. Yes. We are thoroughly in accord with that, but what we are here for to-day is to try and impress upon the committee the practice as Mr. Stevens has just now mentioned. It is the practice, the method of placing the merchandise in the hands of the dealers to the detriment of the independent manufacturers. That is exactly the situation.

Witness retired.

The CHAIRMAN: Is that all?

Mr. SOMMERVILLE: That is all at this stage with reference to that inquiry.

The CHAIRMAN: This morning we had called for 11 o'clock the growers, and also the canneries trade were notified to be present. Who is the first witness?

Mr. SOMMERVILLE: In order that the committee may have before them the subject of the inquiry into the Fruit and Vegetable Growers' situation, I shall read the resolution that was forwarded to the committee by letter of March 2, 1934, from the Ontario Growers' Markets Council, as follows:—

The Hon. H. H. Stevens,
Chairman,
Parliamentary Committee on Mass Buying,
Ottawa, Ont.

Dear Sir,—At a joint meeting of the executive of the Ontario Fruit Growers' Association, the Ontario Vegetable Growers' Association, a Provincial Committee of Canning Crops Growers, the Niagara Peninsula Fruit Growers' Association, and the Ontario Growers' Markets Council, held in Toronto on Wednesday, February 28, the following resolution was unanimously adopted:—

"That it is the opinion of this representative body of growers that the Hon. H. H. Stevens be requested to proceed with an investigation of the Canning Industry from the cost of production, sale of raw product, chain buying, large wholesale groceries and departmental stores, and all method pertaining thereto and spread and profit in relation to that of the primary producer, the labour conditions pertaining thereto, quality and quantity of the product contained therein."

Following that resolution, notice was given to the representatives of these bodies and they are here to-day to present their case.

M. M. Robinson, sworn.

By Mr. Sommerville:

Q. Mr. Robinson, you represent the growers?—A. Chairman of the Ontario Growers' Markets Council.

Q. And you have prepared a brief?—A. Yes.

Q. All right, Mr. Robinson?—A. Mr. Chairman, we are presenting a brief on the relationship of canners, jam manufacturers, chain store system and some fertilizer companies to the fruit and vegetable industry of Ontario. This case is presented by the Ontario Growers' Markets Council and deals only with the situation as found to exist in Ontario.

The brief is a bit lengthy, but the subject is a wide one and, I might say, the brief is compiled from the evidence submitted by the growers. It is my object to present the brief, and we have growers here who will be prepared to support it.

Q. Associated with you?—A. Yes, sir.

We appear before you for the purpose of outlining certain abuses which have crept into the distribution of the fruit and vegetable crops of the Province of Ontario. To-day the plight of the market gardener and horticulturist is serious. Unquestionably some of the conditions encountered are due to general business conditions—to this period which His Excellency the Governor General has aptly termed "a period of economic restrictions." On the other hand many of the difficulties can be traced to the manner in which distribution is disturbed by certain organizations such as the chain stores and the manufacturers of canned goods and of jams. These people have been directly responsible for a policy of bearing down on prices of primary products until they have at last succeeded in placing the fruit and vegetable industry in jeopardy.

In addition, we propose to show how the grower—long a determined exponent of the principle of rugged individualism—is ground between two forces, for at the other end is to be found a series of business combinations controlling such necessities as fertilizers and baskets or containers, and setting up a price structure which removes the competitive spirit from the sale of such articles to the producers.

No farmer finds particular fault with any business combination which seeks to market its products at a profit, but he does find fault when the practices indulged in prove a load to the producer and are maintained at the latter's expense. Our contention is that the primary producer is entitled to a chance to live and if, because of his unorganized state, he is unable to combat certain conditions, he is justified in turning to the government for assistance, even though such assistance may of very necessity have to take the form of government interference with business. It is because of the difficulties now being encountered that the producers sought the introduction of legislation paving the way for controlled marketing of primary products with price-fixing powers in the hands of the farmers.

One other point might be mentioned. Some people profess, in all these conferences having to do with the price of primary products, to be interested in the welfare of the consumer. That is very fine. We believe, however, these gentlemen will hold with us when we state that the consuming public, and when we use that phrase we mean—as do nearly all others—the urban population, has come to a full realization that the urbanite's welfare is bound up in that of the ruralite and that until the farmer is re-established there is little opportunity of the shadow around the corner developing into anything tangible. We also believe the residents of city and town are alive to the need for fair prices for farm products and are willing to pay such prices.

Then, there is another angle. Who constitutes the consuming public? Would not an examination of the situation develop the fact that the farmer is a consumer just as much as the people of our cities or towns? Few people have any realization of the consuming power of the gardener or fruit grower. Only two weeks ago I visited a truck farm in the city of Ottawa, within the city limits, where sixty men were at work—a farm of 38 acres requiring receipts of $50,000 to pay operating costs. Surely the operators of that farm are consumers, and surely a business of that size is entitled to seek protection against the business groups who have set themselves up to seize all the cream and the best part of the milk.

For the purpose of keeping within the nature of this inquiry, we propose to confine our brief to three activities:—

1. Practices of canning companies and jam manufacturers;
2. Chain Store methods as they affect our industry;
3. The set-up maintained by the fertilizer companies.

Other phases could be introduced but we believe any action crimping the style of these manipulators would serve as a salutory warning to others and lead them into ways more wholesome.

The plight of the industry can be charged against two major evils. First, a collective and organized effort on the part of canners, processors, distributors, and chain stores to chisel down the price of our product. Secondly, collective and organized effort on the part of those who sell to the grower those materials which enter into the science of production. In all these operations there is to be found a pious indifference to the plight of the grower. This is best exemplified by the alleged statement of a general manager of a canning company who informed some growers that the stock manipulator or company promoter who heads the company had issued orders that the corporation had to show a profit of a million dollars for the year.

By Mr. Kennedy (Peace River):

Q. Who was that?—A. I believe it was the head of the Canadian Canners?
Q. Who made that statement?—A. My information is Mr. Drynan.

Dealing with the canning situation first, it is possibly advisable to emphasize one or two difficulties faced by the canners, difficulties which unquestionably enter into their methods of operation. Recently the cost accountant of Associated Quality Canners Limited, in an article in a trade journal, charged that many canning companies did not know how to maintain proper cost sheets and that until costs of production were definitely established and sales prices set up on a basis of true costs, chaos would continue to result. He then went on to say: "How long is the price war between canners and the knuckling down to large buying interests to continue? This could all be stopped in Canada by the concerted action on the part of four or five banks. These banks control the funds of the canning industry and could insist upon standardized costs being made and selling price in keeping with those costs maintained, and could refuse a line of credit to packers not conforming to the laid down code.

Here we have a frank admission of a price war and of the influence of "large buying interests".

Recently two conferences of Ontario canners and growers were held in an effort to reach an equitable price for tomatoes. These conferences emphasized the fact that 53 canning companies are operating in Ontario at the moment. Imagine the fun "the large buying interests" must be having with the 53? These conferences also brought out the contention of the canners that they could pay more for tomatoes if certain things were done. They unfolded a story of the competition now developing from Quebec and presented the following resolution:—

"That notwithstanding that the canners of Ontario have already made firm contracts for practically all the tomatoes required from the crop of 1934 at prices ranging from 25 cents to 27½ cents per bushel and can secure a much larger acreage on the same basis than it is possible for the Ontario canneries to properly market, yet it is fully realized that something should be done to increase prices to the growers, and we accordingly urge that a joint committee of canners and growers be appointed to meet the Minister of Agriculture and point out the need of joint action by the province of Ontario and the province of Quebec to regulate planted acreage, and likewise joint action in both provinces to establish a uniform scale of wages in the canneries of both provinces, as otherwise the canneries of Ontario would have to close up through inability to compete with the canneries of Quebec.

It is further urged that the Minister of the respective provinces bring to the attention of the Federal Government the need of increasing the British preference on tomato products from 10 per cent to 20 per cent."

Mr. Ilsley: They could enforce a combine, that is what that means?

The Witness: That is his contention. Here we have a practical admission of a price war.

Mr. Sommerville: And you growers are the victims?

The Witness: Yes; and it works around to us and we pay for all these price wars.

Unquestionably the development of a canning industry in the province of Quebec will be a given factor in the situation. Our contention is that the canners will bring that in themselves.

"We believe there is truth in what the canners claim in this regard. Support of this is to be found in British Columbia, where tomato growers are facing the same grave crisis as the Ontario producers. In this regard may we quote from Country Life in B.C., the official organ of the growers of that province:—

"Tomato growers of British Columbia are facing a grave crisis. So are the canners of this province. So are the growers and canners of Ontario. Why? Because Quebec has taken to growing and canning tomatoes and because of the low costs of labour in that province and the willingness of the people there to

work long hours for starvation wages. Quebec canners can lay down their prices that are below the actual cost of producing and processing in British Columbia.

It is a difficult situation and it is becoming more difficult because Quebec is increasing its tomato production and its canning output.

Ten years ago Quebec packed 25,000 cases. Last year Quebec packed 1,000,000 cases.

I might say I am quoting from a British Columbia publication. I do not altogether agree with some of those figures.

Last year 4,000 canning licences were issued in Quebec. This year more will be issued and next year there will be still more.

A juggernaut of commerce has been created in Quebec and it is rolling over and flattening out the growing and canning industries of British Columbia and Ontario.

In Quebec the companies lease canning equipment to families. The families are large and everyone works. Neither wages nor sales tax have to be paid.

If a similar condition existed in Ontario and Quebec, crisis would not exist. But a wage standard does exist in these provinces, also a standard of living obtains. These standards will be maintained unless a general economic crash occurs.

The Quebec wage scale, where it can be figured out, runs about $1 for 14 hours a day, or about seven cents an hour.

Ontario's scale is 18 to 22 cents an hour for an 8-hour day.

British Columbia tops the list with 30 cents an hour for an 8-hour day.

As a problem in mathematics, how can 30 cents an hour compete with 7 cents an hour or even with 22 cents an hour?

Q. Quebec ships by the all water route to Vancouver at no more than it costs to ship from Kelowna to Vancouver, which is about one-twentieth the distance.

So concerned are the growers and shippers of Ontario over the menace of Quebec that they are co-operating in an examination into what can be done about it.

Ontario growers, forced through the competition from Quebec, to sell at less than cost of production, are agitating for a uniform basis of payment, a code and the licensing of canners throughout the Dominion.

Mr. Young: How much cheaper do Quebec tomatoes sell than British Columbia?

The Witness: I cannot give you those facts, sir. They will have to be brought out by other witnesses.

By the Chairman:

Q. I understand what you are referring to is a quotation. Is that what might be called a family canning practice?—A. Not altogether.

Q. You mentioned 4,000?—A. What I am trying to bring out is that the canners in a recent conference contended that one of the reasons for the low prices being paid in Ontario was the competition from Quebec, and their argument was that they could not meet this competition in some districts because of the cheap article that is produced in Quebec.

By Mr. Sommerville:

Q. When you are referring to 4,000 you mean licences?—A. Home canners.

Q. You are referring to licences that are issued to families or homes to can the products of their farms?—A. Yes.

Q. And these home licences which occur again, I have no doubt, in your brief are developing very rapidly?—A. Yes.

Q. Both in Quebec and in Ontario?—A. And Ontario.

Q. And in order that we may have the system before us at this time probably you can tell us just what the system is under which the home canners operate?—A. I will have to leave that to one of the tomato men. I am not familiar enough with all the details.

Q. Generally speaking, somebody either sells or leases a machine to the family and also supplies them with cans and boxes?—A. Yes.

Q. And the family put up the canned goods, complete them and then hand them over to the agency that has supplied them with the machinery and cans for sale?—A. Correct.

Q. And they receive a certain guaranteed price?—A. I believe that the growers' contention is that the development of the home canning practice has been due almost entirely to the low prices paid by the canning factories for tomatoes.

Q. It is a development due to the fact that the canning factories have not paid sufficient for the tomatoes and the farmer has been forced to put them up himself in his own home?—A. Correct.

Q. And this has created one of the conditions to which reference is made here.

Mr. Young: What label is put on these cans?

The Witness: In the eastern counties I believe it is the label of the selling agency for the home canner.

Mr. Young: You do not know who makes the label for the farmer.

By Mr. Sommerville:

Q. The label of the farmer is not on it. I understand the label put on is the label of the chain store, the label of the large distributor, and the same label goes on the product of probably 100 or 300 homes.

Mr. Ilsley: When did this practice begin?

The Witness: Oh, it is some years back now.

Mr. Ilsley: How many years?

The Witness: I could not tell you.

Mr. Senn: It has been gradually increasing?

The Witness: Yes. It has increased quite rapidly now in the eastern counties of Ontario, but it has developed to a large extent in Quebec.

The Chairman: All right. Proceed.

The Witness: "We present this side of the canning picture before dealing with other features of the situation because it is given by the canners as the main reason for failure to pay a fair price for the primary products put in their cans. Without doubt events in Quebec are destined to create further confusion unless the efforts to get together on wage minimums are successful. At the moment the minister of agriculture for Ontario is waiting word from Quebec as to the possibility of a conference with the Federal minister of agriculture and the minister of Quebec."

Mr. Senn: Are all classes of canned goods being put up in this way?

The Witness: No, it is confined largely to tomatoes, peas, corn and beans, I think—about four articles.

Certainly the growers of Ontario are keen to have the truth brought out. They know some Ontario canning companies are paying wretched wages. We know the Ontario fair wage officers were called, last summer, into one plant in Ontario and we know that in that same plant a man worked 32 hours straight at 20 cents an hour and was discharged for falling asleep.

By Mr. Sommerville:

Q. Did he work straight ahead for 32 hours?—A. Yes. "The largest of the Ontario companies will not admit that mass buying has anything to do with the conditions prevailing in that company's plants nor will it admit, in conference with growers, that the company is making money. The growers find it difficult to reconcile the facts. In these conferences we are told that a large part of the 1933 pack remains in the warehouses yet we learn that tremendous quantities of canned tomato products found ready sale in Britain and that one very large company shipped 450,000 cases of catsup to England last year and was forced to purchase from another company when their own supplies had been exhausted. And this company is building a very large addition to their plant at the present time. Examination of the situation presents facts and figures which do not jibe. All that we can do is give you a general survey and leave the baby on your doorstep with the thought that something will be done about it.

Beyond doubt the time has come for a recognition of our claim that all canning companies should be forced to provide the government, in confidence, with the nature and the extent of the carryover of each year's pack. If this were done the growers would be able to prove the yearly claim, made in all price negotiations, that there is a large supply on hand. This year the canners contend they have on hand a large supply of tomato products. The growers, frankly, refuse to believe it. They were told the same yarn a year ago and yet last fall witnessed the most frenzied rush for tomatoes in the memory of any native."

Mr. Senn: Did the price go up?

The Witness: No, the price did not go up as it did in some districts.

Mr. Edwards: There were whole districts where tomatoes were left on the field; they did not harvest them.

The Witness: Not last year.

Mr. Edwards: The year before.

The Witness: Yes. I touch on that later.

By Mr. Sommerville:

Q. Do you deal with that later in the brief—with the question of the prices—the rapid advance in prices after the contracts had been completed?—A. I know that in the Leamington area when some of the companies entered there in an effort to pick up tomatoes that the prices did jump, I think, at the finish a total of 10 cents a bushel from companies bidding against each other. Heintz had contracts, and in spite of the fact that their contract called for a given price, before they were through they of their own accord had raised the price in order to meet the competition from the buyers from the Toronto factory. So that the grower did benefit last year as a result of drought conditions.

Q. Your statement, however, is just in support of the argument that the canners told you before that they had large quantities on hand?—A. What we tried to bring out is that every year in price negotiations we are told the same story: there is a large carry-over, and our contention is that if the government have the information in confidence we could go to the government and not secure the individual figures of any one company, but we could check their contention that they have a large carry-over. I believe in connection with the carry-over that it is the policy of one or two companies to keep a considerable supply on hand to protect them against the possibility of a short crop the following season, and that may always be the carry-over that they refer to. I think that information, sir, is quite desirable.

The CHAIRMAN: It is a question, I may say, that has been exercising the Bureau of Statistics for some time. I think, possibly, the committee might hear from Dr. Coats on this subject a little later. There is no secret about it; it is quite a controversial point. The canners, no doubt, will give their views, and I think that we had better hear Dr. Coats later on. In the meantime, I will suggest that the committee take particular note of this observation by the growers' representative.

By Mr. Ilsley:

Q. What is it they say they carry over?—A. We were negotiating the past two or three weeks for asparagus. They contend they have a large pack and because there is a large pack on hand "We cannot pay the price." If it is tomatoes, "We cannot pay the price; we have a large pack, a large carry-over."

Q. Of what?—A. Of the product—canned goods.

The CHAIRMAN: And the canners strongly object to disclosing what their stock is at any given time?

The WITNESS: I believe their argument is that one company does not want to disclose to the other company what their stock on hand is.

The CHAIRMAN: That is not necessary; it is all in confidence.

The WITNESS: We do not ask for that.

"The production of tomatoes for canning factory purposes under conditions of contract now offered by many canning companies is most unsatisfactory, and is resulting in a very depressed financial condition of the men engaged, to any extensive degree, in this work. The contract price is entirely too low. Average cost for the production of tomatoes in the province of Ontario, worked out by growers representative of Niagara, Central and Eastern Ontario districts, is as follows:—"

I believe this scale of prices is worked out on land costing $100 an acre which, we figure, is the lowest price you can consider land of this sort at.

"Rent of land..	$ 8 00
Plants, 3,000 at $5 per 1,000..	15 00"

You may not know that the practice is for the canning companies to raise plants and sell them to the growers.

"Fertilizer, 750 pounds..	$14 40	
Manure, 12 tons at $1.25..	15 00	
Ploughing and preparing the soil..	8 00	
Dropping fertilizer and planting..	2 25	3 75
Cultivating five times..	4 05	5 55
Hoeing..	3 00	5 00
Picking 200 bushels at 5c. per bushel..	10 00	
Hauling 200 bushels at 4c. per bushel..	8 00	
	$86 10	$92 70
Average..	$89 35"	

Mr. SENN: Is that a fair average of production?

The WITNESS: They are the best statistics we can get, Mr. Senn. They are to the effect that the average production in the province of Ontario is 200 bushels. And there is another factor in it; it seems to be a general practice for canning companies to take not more than 200 bushels to the acre from the growers.

By Mr. Sommerville:

Q. Uusually their contract provides that they will buy at a certain price the product of that farm in tomatoes at the rate of 175 to 200 bushels per acre?—A. At a given price.

Q. At a given price?—A. Yes.

Q. You have taken the figure 200?—A. We have taken 200. This is the basis of a two hundred bushel delivery which is about average for these districts. It does not allow of return for management nor does it allow for any margin of profit.

Now, the price to-day is 27½ cents, and you can readily see that on a 200 bushel delivery at 27½ cents the grower cannot reach his $86.10.

Mr. YOUNG: What do you do with the grower who gets 300 bushels to the acre?

The WITNESS: I refer to that a little later.

By Mr. Sommerville:

Q. At the present time 200 bushels to the acre at 27½ cents will produce how many dollars?—A. $54.

Q. $55 an acre for his tomatoes?—A. Yes.

Q. In other words, that is $44.35 short?—A. No, $31.

Q. That is $31 per acre short of the average cost of production?—A. On a 200 bushel delivery.

By Mr. Kennedy (Peace River):

Q. What I want to know is how you manage to carry on at all. Suppose you strike out the rent of the land?—A. I do not know how he carries on. I do not grow tomatoes for canners. I would not grow them.

Q. They must be going behind.—A. They are going behind. I think our story will show why they do it, later on.

By Mr. Young:

Q. Mr. Robinson, can you tell me where land that you lose money on is worth $100 an acre?

Mr. EDWARDS: You go down in that district and try to buy it.

The WITNESS: I am operating a $1,000 an acre farm. That is what it cost me.

By Mr. Kennedy (Peace River):

Q. You would not break even if you struck out the land value?—A. No. These costs are absolutely worked out. I mean, they are fair costs.

By Mr. Sommerville:

Q. Will you continue?—A. Yes. Canners apparently recognized that production costs vary in different parts of the province, and contracts offered vary in price according to locality, and the disposition of the canners. Growers have been forced to contract for prices varying from 44 cents to as low as 22 cents per bushel (60 pounds) of tomatoes. The growers' contention of an equitable price according to production zones (zones established on the basis of cost of production, considering investment, rates for labour, taxes, etc., follows. This is the contention we have set up:—

Zone No. 1.—Kent, Essex, Lambton, and Elgin, flat rate of 35 cents per bushel.

Zone No. 2.—Counties of Norfolk, Oxford, Brant, Wellington, flat rate of 35 cents per bushel.

Zone No. 3.—Counties of Wentworth, Halton, Lincoln, Welland, Haldimand, flat rate of 45 cents per bushel.

Zone No. 4.—Toronto district, including Peel, York, flat rate of 50 cents per bushel.

Zone No. 5.—Counties of Ontario, Durham, Northumberland, Prince Edward, flat rate of 35 cents per bushel.

By Mr. Young:

Q. Why this difference?—A. Land values, largely one factor; taxes.

By Mr. Sommerville:

Q. Labour?—A. Labour costs. Operating in the Toronto district, your overhead is much heavier than it would be in Northumberland or Norfolk.

By Mr. Senn:

Q. How do these prices compare with the retail prices of tomatoes, generally?

The CHAIRMAN: Fresh tomatoes?

By Mr. Senn:

Q. Yes, fresh tomatoes?—A. Oh, they are much lower.

Q. They are much lower than the retail price?—A. Yes. You are talking of the basket business?

Q. Yes?—A. Yes, much lower. We are very happy with basket conditions. The lowest I have got in several years is 20 cents a basket.

Q. Is that early?—A. Yes. The basket business is over invariably in our district before the canning business starts.

Q. There is a certain amount of retail trade while the bulk of the crop is being harvested. How would prices compare there?—A. A certain amount of basket trade while—it is being harvested?

Q. Yes, I suppose small retailers, on the farmers' markets and through the stores?—A. Well, the practice in some districts,—this is where it helps in some districts. Take the Burlington area, which is not a heavy canning area of tomatoes now, where we produce tomatoes for the wholesale trade, for the consumer direct, and we grow early tomatoes, specialize on them. We basket them; and possibly at the end of the season after the basket trade is pretty well finished, and we are in competition with what we call the back country producers, the canners may come along, as they did last year, and clean off our patches at a very cheap rate. The grower who sells on that basis, figures what he takes at the end of the season is to the good.

Q. Do you think it is a good practice?—A. No, I don't think it should be permitted.

Q. It must depress prices?—A. It does; but he has got his crop off.

By Mr. Sommerville:

Q. Generally speaking, with the canner contracts, the farmer does not engage in the basket business?—A. The districts I am talking about from the standpoint of this brief, like Northumberland, Prince Edward and Norfolk are straight canning crop propositions.

Q. Not a basket crop?—A. No.

By Mr. Senn:

Q. They are not allowed?—A. They are allowed. They are not early enough. But they don't do it.

By Mr. Factor:

Q. Zones 1, 2 and 5 at 35 cents a bushel for 200 bushels only gives $70. That is not even the cost of production according to your table at the top of the page?—A. This part of the brief has been worked out from the growers, one in each county, and they have done it in an effort to meet the competition from the other side.

By Mr. Sommerville:

Q. That is this 35 cents is a compromise price?—A. Yes. These growers in Norfolk, Northumberland and Prince Edward counties claim that if they can get 35 cents a bushel, if they deliver all their output per acre, they can make money.

Q. They can produce more than 200 bushels?—A. Yes, they can produce more. It is possible to produce up to 500 bushels an acre, and some growers do deliver 500 bushels an acre to the canners.

Q. Although the contract may call for only 175 or 200?—A. The thing they object to is being held to 200 bushels to the acre.

By the Chairman:

Q. Is that in all the contracts?—A. I have the contracts here, which I intend to submit.

By Mr. Sommerville:

Q. Generally speaking, there is a restriction in all the contracts?—A. Yes.

The CHAIRMAN: Possibly it will be just as well to file them at this stage, if you have them handy.

By Mr. Kennedy (Peace River):

Q. Is 200 bushels about an average yield?—A. No, it is a low yield.

By Mr. Senn:

Q. I don't know whether it is the time to ask this question or not, but if the contract is being filed perhaps it is just as well. That contract does not bind the canners to take any set amount?—A. No, the canner will shut you off any time he wants to.

Q. Has that been done quite frequently?—A. Yes.

Q. I know it is in my own county?—A. I deal with that further in the brief.

By Mr. Young:

Q. What is the object of putting 200 in if he does not have to take it, and he can take more if he wants to? What is the object of that?—A. I am not familiar enough with that subject.

Mr. SOMMERVILLE: It means that he limits his obligation.

Mr. YOUNG: He has no obligation.

Mr. SOMMERVILLE: Yes. He limits his obligation, if he wants to. In other words, the option works only his way.

Mr. YOUNG: But Mr. Robinson just said he does not have to take the 200.

Mr. SOMMERVILLE: That is perfectly true. There is a clause in most of the contracts to the effect that they may stop deliveries at any time and not take the 200; but if he continues, he can say that he will not take more than 200, and he gives out then to the farmer, a basis for his crop.

The WITNESS: One of the practices is to contract for more than their actual needs.

By Mr. Factor:

Q. Is not fixing it at 200 rather to limit production to a 200 bushel yield? —A. Oh, no.

By Mr Edwards:

Q. Do you mean contract or do you mean option?—A. They call it a contract.

Q. It is not a contract if he is not bound?—A. The grower is bound but the canner is not bound. I would like you to read it.

Q. Head I win, tail you lose.

By Mr. Ilsley:

Q. He has to deliver up to 200?—A. Yes; if he is called upon he has got to deliver.

By Mr. Young:

Q. Suppose he does not grow 200, what does he do then?—A. If he does not grow that, it would be a pretty poor outlook.

The CHAIRMAN: I think we had better take a little time and examine the contract, and question him on it later, when we are more familiar with it. Will you just proceed with your brief now?

The WITNESS: I might say when it comes time to deal with this, we have growers here who are more familiar with it. I am not a canning tomato grower, and it is difficult for me.

These prices are subject to the contract including the stipulation that all tomatoes be bought on grade, with a differential for No. 1's of 7½ cents per bushel up from the flat rate price, and for No. 2's of 7½ cents per bushel down, as for example, zones in the 35-cent flat rate per bushel area, No. 1's would be contracted for at 42½ cents per bushel and No. 2's for 27½ cents. It is also desired that the Department of Agriculture establish and supervise the graders, expenses of grading to be borne half by the growers and half by the canners. Delivery is to be on the following basis: quantities in excess of fifteen bushels per day for each acre contracted, shall not be received except by buyer's request unless at least 65 per cent of the seller's deliveries are No. 1 tomatoes, when the total marketable quantity shall be received. Briefly the grower's request, first, a sufficient price; second, recognition of quality of product; third, sufficient delivery to pay growing costs at the contract price. Copy of the proposed contract for tomatoes, corn and peas, and a 1934 tomato contract are appended.

By Mr. Ilsley:

Q. How many grades are there now, just No 1's and No. 2's?—A. Yes.

Q. Who grades them, the canners?—A. The practice has been for the canners to do the grading.

Q. Does the government not do grading?—A. Well, they are. They have been working on this same practice of these companies where they put in a government grader, and the grower and canner pay the cost between them.

Q. Is there any complaint about the grading that the canners give you?

Mr. SOMMERVILLE: Oh, yes.

The WITNESS: Plenty of them.

By Mr. Sommerville:

Q. I think the tenor of the complaint is that the contract may be for 27½ cents, and when the tomatoes are delivered somebody says they are only second grade and they pay 20 cents?—A. Unquestionably the practice is that, in a glut year or big crop year, the grading is severe. In a drought year, such as last summer, grading is forgotten about. That is absolutely the condition.

By Mr. Ilsley:

Q. What basis is the grading on, size?—A. Size, colour.

Q. The regulations are made by the Department of Agriculture here, are they?—A. No, by the canner, in this contract. It is in the contract. The government sets the grade for the basket trade, but not for the canning trade.

Q. Not for the canners?—A. No.

By the Chairman:

Q. All right, Mr. Robinson, will you proceed with your brief?—A. Yes.

Canners will argue that they can contract for their supplies on the basis of prices mentioned. We submit that in canning factory areas many of the growers have become so involved as the result of depressed canning factory prices and unsatisfactory conditions under which crops have been received by canners, that these growers are forced to accept contracts at prices which will not pay production costs. The vicious condition exists wherein canning factory contracts are recognized as collateral for the securing of loans from banks and in order to secure sufficient capital with which to finance—to buy seed, fertilizer, etc. These growers must have a canning factory contract, even if at a price which necessitates the giving of labour, the furnishing of the fertility of the soil and the possible profits from live stock in order to carry on from year to year.

By Mr. Factor:

Q. May I interrupt for a moment. Previously you mentioned something about the canners growing plants and selling them back to the farmers?—A. Yes, that is the seedling plants.

Q. Where do they do that?—A. In their own hot-beds. They may have somebody grow them for them.

By Mr. Ilsley:

Q. Why did you refer to that as a vicious condition?—A. It is a vicious condition, because a man who is hard up and needs cash money in the spring to carry on operations will invariably accept a lower price than the chap who has a little money and can fight.

By the Chairman:

Q. Your point is that he cannot get a loan from the bank unless he has a contract?—A. Yes; and if he has not any money, and he has to begin to operate his farm in the spring—

By Mr. Sommerville:

Q. If he has a contract, he can take the contract into the bank and on that basis get money, get an advance against that contract?—A. Yes.

By Mr. Young:

Q. Do I understand that different farmers have contracts at different rates from the canner? The man who is hard up and needs money has to accept a poor contract?—A. No, the rates differ very often between areas, but not so much within the area.

Q. How does it hurt him?—A. What?

Q. If the man who does not need money from the bank gets the same price on the contract as the man who does, I don't see how it hurts him.—A. Simply because the man who is hard up, needs cash and needs that contract, to secure the cash is naturally in the position where he will accept a lower price than the fellow who is independent. In the end, that fellow sets the price. The man who sets the price is the man who is hard up.

By Mr. Sommerville:

Q. The fellow who is hard up sets the price for the independents?—A. Yes.

By Mr. Kennedy (Peace River):

Q. And the first charge against the crop is the bank loan, and not his living?—A. Yes.

By Mr. Young:

Q. What would you suggest as a remedy for that?—A. We are going to leave that to you.

Mr. EDWARDS: If we just got that contract, and read that contract, we might get an idea of it.

Mr. YOUNG: We are dealing with the banker. The banker wants a contract before he will loan the money, and I want to know what Mr. Robinson would suggest instead of that.

The WITNESS: I am just a poor farmer.

By Mr. Ilsley:

Q. It comes to this, that the tomato growers are hard up. That is the vicious condition you are referring to?—A. They are hard up because they have been selling produce at ridiculously low prices, largely through disorganized conditions.

Mr. ILSLEY: They are having the same trouble as all the other farmers in Canada, and a lot of others.

By Mr. Sommerville:

Q. Will you continue?—A. This is the custom to such an extent that it is not an uncommon practice for bankers to more or less dictate, to men who have loans outstanding, the necessity of having a contract with a canning company if they are to secure further recognition with which to carry on for another year.

By Mr. Kennedy (Peace River):

Q. Has this any bearing or any connection with the former statement that banks control some of your factories?—A. We believe that the banks do control in the usual way.

By Mr. Young:

Q. In what way is that?—A. Accommodation.

Q. You mean they have loaned factories money also?—A. Yes. I think the farmer is in a rather awkward position. There may be a bank here that has made an advance to a canning company, and it is possible that the bank may be interested in the canning company buying tomatoes at the same low price, and they will therefore urge the growers to accept contracts. I don't say it is done, but you can see the possibility.

Q. You don't mean there is a possibility of the company not being able to pay its bank loan unless it gets these contracts at low prices?

By Mr. Sommerville:

Q. You are not making that suggestion?—A. No, I am not familiar enough with it.

By Mr. Ilsley:

Q. What the banks want to know is that the grower is going to sell the crop?—A. I think all the bank is interested in, in any case, is getting its money back. I don't think it cares much else.

The CHAIRMAN: All right, Mr. Robinson, will you proceed?

The WITNESS: Yes. Some canning companies are not content with paying too low a price for tomatoes, but insist upon the growers also contracting an acreage of corn and peas if they are to secure a contract for tomatoes. The contract prices for corn and pease this year are $8 a ton for corn and $30

to $35 a ton for shelled peas. The land used for these crops at that price, picking and delivery costs deducted, would show the farmer considerably more profit if utilized for the production of livestock; hence growers are forced to suffer the further indignity of producing two or three crops at an additional sacrifice of labour, soil fertility and food for livestock.

Crop production under normal conditions of weather, prevalence of disease affecting the crops, and attacks of insects, is recognized as hazardous. In the production of canning factory crops in addition to these hazards owing to the contracts which growers must sign, the additional hazard of restricted delivery more or less places every year in the category of a poor crop year. This condition results from canners contracting sufficient acreage to permit of a full pack being put up in a poor crop year. Of necessity, this results in an over supply of these contracted crops on a good crop year. When this latter condition obtains canners refused to accept delivery of more than a small proportion of the crop from all but a small percentage of their growers, whose total marketable crop is accepted. The men of this group from whom the total yield is accepted are commonly referred to as leaders. They are usually efficient growers and deliver from 350 bushels up to 500 bushels of tomatoes for each acre contracted. As a result of this consideration on the part of the canners, they are usually willing to contract each succeeding year and hence the term "leader growers", who influence others into signing contracts at an insufficient price.

By Mr. Sommerville:

Q. That is, there are two things that you have brought to our attention here. First of all, the canners sign up contracts which will take care of any possibility of a poor crop?—A. Yes.

Q. In other words, larger than is necessary?—A. Yes.

Q. In doing so, they limit in their contract the amount that they are obliged to take to a certain amount per acre?—A. Yes.

Q. For instance, I observe in this contract that has been filed here, Canadian Canners, Limited, grower's contract, these words:—

> When in its opinion, the company is unable from any cause to take proper care of the produce at its factory for proper canning, the company, upon notice to the grower, may limit the delivery of produce to a quantity per acre per day, which, in its opinion, will allow it to handle the produce in such a manner as to take proper care thereof, and the company, at its option, shall not be bound to accept from the grower a quantity in excess of one hundred and seventy-five bushels per acre.

A. Yes. They can go on and take more.

Q. If the condition should be that it is a poor crop year and they need them?—A. Yes.

Q. But if it is a good crop year, a large quantity being offered, in pursuance of their contract, they can limit the amount taken?—A. Yes.

Q. Now, in addition to that, you say there is another feature, the canners take what is called the leader grower in a district, and he is a man who has the reputation of growing a large crop, and they sign up the contract with this leader grower, whose cost of production is apparently lower because of his quantity?—A. No, his cost of production is not lower. He is willing to take the price, because he is sure of delivery of his entire output, which puts him on a profit-making basis.

Q. They will take from him 350 to 500 bushels, eventually?—A. Yes.

Q. And make his contract the basis for signing up others?—A. Make it a factor in setting the price.

By Mr. Young:

Q. On what basis do they select those leader growers?—A. I cannot tell you.

By Mr. Sommerville:

Q. I presume it is out of experience of the company?—A. They know who they can play with, I guess.

By Mr. Senn:

Q. Do the leader growers have a different type of contract?—A. I do not think so, no.

Q. There is a tacit understanding between the leader growers and the company that his crop will be fully absorbed?—A. Yes. In 1931 one grower with a contract of twenty-one acres of tomatoes was shut off from further delivery by the canning company with five thousand bushels of tomatoes left on his field, one thousand of which were picked and in crates ready for delivery. Another grower with twenty-three acres contracted, had seven thousand bushels left on his field, one plot of four acres from which not a single tomato had been delivered.

By Mr. Young:

Q. How many did he yield?—A. I have not that information.

Q. You do not know what his yield was?—A. No. Another grower with 23 acres contracted, had 7,000 bushels left on his field, one plot of four acres from which not a single tomato had been delivered. In Northumberland county in 1931 one factory closed its doors on the 8th of September. Ordinarily the tomato crop is at its best during the last three weeks of September, as to both quality and quantity. Many of this company's growers had practically no tomatoes delivered to the factory that fall. Another canning company, in the same year, ran a total of ten days during the latter part of August and early September. Some of its growers who had contracted up to four acres were not able to deliver a single tomato.

Q. What was their idea in shutting down after working only ten days? Surely they built the factory to run it?—A. I cannot tell you.

Q. Could they not sell their pack?—A. I can get the information for you through the growers from this county, but I cannot give it to you now.

By Mr. Sommerville:

Q. Was it that they had obtained enough tomatoes at the time of their closing?—A. It may have been a branch factory of a large concern, and they decided not to operate that particular factory. I cannot tell you. The tomatoes were just coming up to their best grade when the factory was shut down. Instances of farmers having hundreds of bushels held back and spoiled in crates due to the factory not taking delivery, can be proven. In a good crop year farmers loads of tomatoes have been docked as high as 60 per cent, yet all the tomatoes, if left at the canning factory platform were put in cans. In 1931, Mr.——— brought to the——— canning company, 80 crates of tomatoes. These were rejected by the grader at the factory. Mr.——— asked permission to place these tomatoes on the company's platform and return in the afternoon for the purpose of having the grader show him just why this particular load of tomatoes should be rejected. Upon his return in the afternoon he found all his crates empty and was informed that the tomatoes had been canned. This load had not been weighed but he was paid the full price for 80 bushels of tomatoes.

By Mr. Factor:

Q. What point do you make in that?—A. When they start in to reject, an aggressive grower sometimes can beat them at their game, and force them to accept the tomatoes.

Q. What do you mean by reject Reject completely?—A. They may not; they may decide they have enough tomatoes, or this load is not up to grade, reject them because not up to grade. They will find some reason to reject them.

By Mr. Kennedy (Winnipeg):

Q. Is there such a general practice?—A. Yes, quite prevalent.

Q. In using those excuses in rejecting them?—A. Yes.

By Mr. Sommerville:

Q. Where a canner has——A. When he has got sufficient—he thinks he has,—he will find plenty of loopholes in which to turn back the loads.

By Mr. Kennedy (Winnipeg):

Q. Does he have to resort to that expedient to return them? Can he not just refuse them?—A. I question whether he can just refuse them, by the contract.

By Mr. Sommerville:

Q. He must take up to 175 bushels?—A. There is no doubt he grades severely in good crop years. If there is a plentiful supply of tomatoes, he grades severely, but if he wants tomatoes badly, he forgets about it.

By the Chairman:

Q. Your complaint is the grading is not done independently, but it is done by the canner?—A. In many cases.

By Mr. Senn:

Q. As I understand the contract, it provides that before they can refuse tomatoes, they must notify the grower; is not that true?—A. I have known them to refuse only on the loading platform.

The CHAIRMAN: In Ontario?

The WITNESS: Yes; after the grower has waited around half a day with a load of tomatoes, there are cases where he has been turned back.

By Mr. Factor:

Q. What can the grower do about the rejected tomatoes?—A. Dump is the prevalent practice. He might take them home, if he is in a certain district, and try to basket some and upset the basket trade, but there are very few in a locality where they can do that.

By Mr. Kennedy (Winnipeg):

Q. Some of those rejected tomatoes are completely lost?—A. Lost, yes.

By Mr. Heaps:

Q. How does the supply compare with the demand?—A. To be honest with you, I must admit in an average year the supply is excessive. We must admit that. I do not think it is due to over production.

Q. Under consumption?—A. No, I do not think it is under consumption. I think it is entirely due to the faulty distribution. I do not think there is an overproduction of agricultural products in Ontario. I do believe it is the very poor distribution which creates an appearance of over-production; that is, in vegetables and fruit.

By Mr. Factor:

Q. Distribution of the primary products?—A. Yes, fruits and vegetables.

By Mr. Sommerville:

Q. In other words the distribution of tomatoes by the present system is limited to the area in which they are actually produced. If you had a wider area—A. I do not think we secure full distribution, and that contributes to somewhat glut conditions which are not true conditions, which may give you the impression of over-production. I do not think it is over-production.

By Mr. Edwards:

Q. How far afield do you go in your basket trade?—A. I have shipped tomatoes from Burlington to Newfoundland.

Q. They are fairly green when they start out?—A. What we call half ripe. Just a slight touch of colour in one spot.

By Mr. Heaps:

Q. Do you believe the Canadian market could absorb a great deal more of goods if there was a proper system of distribution?—A. Yes, sir.

By Mr. Senn:

Q. Bulk or basket?—A. All kinds of fruits and vegetables, including tomatoes.

By Mr. Ilsley:

Q. Do you send them to the Maritime provinces?—A. Yes, sir, right along.

Q. We will have to stop that.

Mr. SOMMERVILLE: Mr. Ilsley represents the famous Annapolis valley.

The WITNESS: We will have to stop your apples coming up this way.

Mr. ILSLEY: They do not come.

"In the case of farmers contracting for peas in a good crop year, it is a common practice for the companies to order the peas in early when very few peas in the pod are of sufficient size to go into the tins, consequently the farmer secures a disastrously low yield. Later in the season it is a practice to order a certain area of peas cut for delivery the following day, with the deliveries held up to a small portion of the amount ordered in. As a consequence the balance of the crop is spoiled in the field due to wilting, hence the reason for attaching the pea contract as a condition to the tomato contract."

By Mr. Young:

Q. What do you do with the balance that is left in the field?—A. It is just done, lost.

Q. Are they no good for stock feed?—A. It becomes green manure or stock feed. With corn on a good crop year, owing to over contracting of acreage, corn is held back in the field by canning factory field men until too hard for canning and then rejected, with the farmer getting only a small portion or in some instances none of his crop into the factory.

By the Chairman:

Q. That is a rather serious statement?—A. It is made, sir, by the corn growers of Northumberland county.

Q. "Corn is held back in the field by canning factory field men until too hard for canning and then rejected."—A. I believe it is the practice, yes, sir.

Q. From your experience you think it is true?—A. I cannot say from my experience; I have never grown corn.

Q. Have you men who will state that?—A. This is submitted by the Northumberland Fruit and Vegetable Growers' Association; it is part of the brief.

By Mr. Kennedy (Winnipeg):

Q. Prior to the submission of those facts, had that come to your knowledge?—A. As an individual?

Q. Yes.—A. No, my district is not in this—

Q. You have Northumberland men here?—A. I have Northumberland men here.

Mr. YOUNG: How long is corn fit for canning?

The WITNESS: I cannot tell you.

The CHAIRMAN: We will get that later.

The WITNESS: I would rather you would not question me on some of those things, because, as I say, I do not grow some of those products, but we have men here who do.

The CHAIRMAN: I just draw attention to the seriousness of the statement. We will expect it to be supported.

The WITNESS: Yes, sir; I will make a note of it. Loads of excellent corn have been turned down upon canning factory representatives finding one or two off-colour kernels in an ear, as being not true to variety, although produced from seed supplied by the canning factory.

"It is a recognized fact that the canning industry in Ontario is over equipped to the extent of 300 or possibly 400 per cent and canning companies are endeavouring to meet competition carrying this load. To further aggravate this condition, small home canning outfits are springing up at an alarming rate throughout Ontario. This further competition, unless recognized by organized canners as the result of unsatisfactory contracts offered and these growers given satisfactory contracts, will tend to multiply and still further demoralize the industry and gradually work to the disadvantage of the canning companies. As the regular canners are forced out of the business so will a large percentage of the growers be forced out, many not being in a position to operate home canning outfits."

By Mr. Factor:

Q. To what do you attribute this over-expansion of the canning industry to 300 or 400 per cent?—A. I cannot give you the story.

By Mr. Young:

Q. Do you mean they have 300 or 400 per cent more capacity than they can sell?—A. I think what they are trying to bring out is there are too many canning plants.

By Mr. Edwards:

Q. I was going to ask this question when Mr. Young spoke up: When these these canning factories were operated as individual units by individual owners, did this condition of affairs exist?—A. No, I think—

Q. Before the combination?—A. I think the condition has developed since one or two large concerns have come into the field.

Q. They have a number of plants closed now?—A. Yes, unquestionably.

By Mr. Young:

Q. When you say three or four times too many factories it must mean either three or four times the factories that we can find work for, or three or four times the number required to can the crop.—A. I think that is what he means.

By Mr. Sommerville:

Q. The point you are making is the equipment of canning factories is three or four times the requirement?—A. I think that is what their intention is.

Q. Many of those canning factories owned by large canners are actually closed?—A. Yes.

Q. Not operating?—A. Yes.

Q. Not functioning, but their carrying charges are being carried as part of the overhead of those factories?—A. Thrown back on the growers.

Q. These big canners are thrown back on the farmer producer?—A. Yes. I think that is what he is trying to bring out. It is recognized that certain companies are now buying tomatoes on grade and taking delivery of all marketable tomatoes at prices almost on a par with those suggested by the committee representative of the growers as satisfactory. This, in spite of competition with other companies, paying a very much lower price, on a flat rate basis, and a limited delivery clause in the contract.

By Mr. Sommerville:

Q. That is to say, these contracts now are being made to take all the marketable tomatoes?—A. There are some companies operating that way.

Q. There are some companies operating that way?—A. Yes.

Q. And paying prices suggested in your brief?—A. Yes.

Q. In those districts?—A. Yes; and they are still competing with companies that have a limited acreage under bargain in their contract and paying a lower price for tomatoes.

By Mr. Factor:

Q. Why can they do that?—A. I do not know; they are large firms.

Mr. SOMMERVILLE: Lower overhead.

By Mr. Young:

Q. How is a man located in zone 4 where he pays 50 cents a bushel able to compete with a man in zone 1?—A. The fact remains he is doing it. There was a plant in Toronto last year, at least one that I know of, which paid as high as 50 cents a bushel for tomatoes, and yet went out and competed with plants that are buying—

Mr. EDWARDS: The size of the immediate market would have something to do with it?

Mr. YOUNG: Not in canned goods.

Mr. SOMMERVILLE: That is your argument.

The CHAIRMAN: The following paragraph elucidates your point. Proceed.

" Growers contend that the inefficient canner can no longer be carried by the industry.

Some points worth considering in connection with the canning of tomatoes are as follows:—

To just what extent, for instance, does the financial set-up of Canadian Canners Limited enter into the picture? We recommend a study of this structure and the number of dead factories that are being carried at a high appraisal

value. In all price negotiations we are told by Canadian Canners Limited they are losing money, but their annual statement does not support that story. Either they lie to the growers or their shareholders are being successfully kidded. The truth should come out and, at the same time, some of the water boiled out of their stock.

We are told this year that the price of cans has advanced and that is given as one reason for inability to pay more for our products. The position of the pound sterling is the reason for the advance in the price of cans.

We suggest a study of the can monopoly. Some interesting facts would unquestionably be uncovered including a condition whereby every canner must contract for a three years supply with all transactions on a C.O.D. basis."

By Mr. Edwards:

Q. How many factories are there in Canada making cans?—A. I believe it is a one company proposition.

Mr. YOUNG: Two.

The WITNESS: Not more than two.

Mr. SOMMERVILLE: One at Trenton and one at Simcoe.

The WITNESS: The Simcoe plant, I believe, is closed now.

Mr. EDWARDS: Hamilton.

The WITNESS: There is a plant at Hamilton, the American Can Company. I think it is one company, I am not sure.

Mr. YOUNG: Where do they get the tinplate?

The WITNESS: England.

Mr. SOMMERVILLE: Wales.

By Mr. Factor:

Q. Is it not a fact that the price of cans has gone up?—A. Yes.

"The can manufacturer has a three year contract at no set price. Any advance in cost of production he passes on to the canner, who in turn takes it out of the grower.

The grower would welcome the opportunity to make three-year contracts at prices set by themselves. If such arrangements are in order for the maker of cans why not for the individual who produce the product going into the cans?

We are informed that the tin can used for tomatoes costs 3 cents. Compare this with the cent's worth of tomatoes (at present prices) put into the can?"

Mr. SOMMERVILLE: That is to say, there is just one cent's worth of tomatoes put into a can?

The WITNESS: Roughly.

Mr. SOMMERVILLE: At the present prices?

The CHAIRMAN: Growers' prices.

The WITNESS: Yes.

"Dealing with an international tin cartel which is stronger than the entire Canadian canning industry the latter has no option but to submit to any price structure set by the can monopoly. To offset these price fluctuations the practice is to even the balance by reductions in labour costs and in the prices paid for the primary products."

By Mr. Factor:

Q. Is not that the vital problem? Have you not touched on the vital problem when you mention the can problem?—A. We sat in on a conference

recently trying to reach a price for tomatoes with these canning group fellows, and the first thing thrown at us was the price of cans had gone up. That was given as the reason why they could not pay more for tomatoes.

Mr. YOUNG: Is anybody going to give us any evidence in connection with this international tin cartel?

The WITNESS: The farmers are not in a position to give you that evidence, but we expect you to dig it up.

"Home canners claim they can pay 45 cents a bushel for tomatoes and make money? A bushel roughly makes a case or two dozen cans of tomatoes. If home canners can pay that price why not the canner who can pack 500,000 cans a day in one plant?"

By Mr. Sommerville:

Q. That is really the reason for the increase in the number of home canners, is it not?—A. The price paid to the grower?

Q. Yes. In other words, generally speaking, the arrangement made with the home canner is that the vendor, the man who supplies the machinery and who sells the finished product, will guarantee to the home producer 20 cents more per bushel than he gets from the canning company, and the farmer then proceeds with his family to earn the 20 cents more?—A. Correct.

Q. Is not that about the general principle?—A. Yes.

Q. And these products are delivered then to the distributor who sells them in large quantities to the wholesalers or to the chain store organizations, the big buyers. That is the picture?—A. That is the picture.

Q. When the farmer can get 20 cents more per bushel for his tomatoes by canning them at home, there is an inducement to use the labour he has available, his family and his farm labour, to increase the production of tomatoes in that way?—A. Correct.

By Mr. Factor:

Q. How many home canners are there in the province of Ontario?—A. I have not any idea.

Mr. SOMMERVILLE: We will be able to get these figures. There were 4,000 licences issued in the province of Qubec last year, and I understand there were a very large number issued in Ontario as well.

The WITNESS: Canners inform growers it costs 85 cents to produce and sell a dozen cans of tomatoes yet in the same breath they admit they are selling to large buying interests for 70-75 cents and claim they are glad to get the business.

The CHAIRMAN: That is per dozen, isn't it?—A. Per dozen, yes. The company showing a million dollars profit in the year just closed contends it is only this chain store business that moved their 1933 pack. Once again the figures don't jibe. On might ask if it costs them 85 cents to grow and the bulk of the pack move at 70 to 75 cents how do they continue to show a profit. It may be we just can't figure.

By Mr. Sommerville:

Q. The canners in your conference have given you the information to the effect that it cost them 85 cents a dozen to produce?—A. Yes, sir.

Q. And they have admitted at the same time that they sell to the chain store at 70 and 75 cents; that is less than the cost of production?—A. According to their figures, we have no check on it.

Attached are copies of standard contracts now in use. Perusal of these contracts will show their one-sided nature. Under these contracts the canners do not have to take delivery but the growers must deliver. Such little faith is

attached to the contracts that in some districts the growers don't bother signing, knowing they will have to dance to the call of the factory manager in any event.

By Mr. Young:

Q. Can they deliver if they do not sign?—A. Oh yes. They can go into the factory, or the manager can go into the field and say I will take 200 bushels of tomatoes from you at 35 cents, and he can take them down.

Q. You do not sign a contract, yet you can go into the factory with a load of tomatoes and sell them?—A. No, sir, you have got to have a verbal contract; he cannot just drive up to the door and say I have a load of tomatoes here and take them. What I mean is that the growers, especially in the Wellington district that we are dealing with, seldom bother with a contract. Why consider a contract when they will do this anyway?

By Mr. Ilsley:

Q. The bankers attach some value to them?—A. In our district the bank does not, we do not have to have canning contracts.

Mr. Young: You are kind of independent of the banks.

Mr. Ilsley: He means, they are prosperous.

The Witness: The grower is a little better off than the chaps I am talking about. Our district is a different district. These chaps that I have been referring to are not straight gardeners, they are largely what one refers to as dirt farmers—stock and grain farmers, who put in a certain acreage of canning crop products.

By Mr. Ilsley:

Q. The straight gardener deals in all kinds of fruits and vegetables, has quite a variety?—A. He is not in the position that these fellows are, he is a little more independent.

Some years ago some canning companies were in the habit of growing considerable quantity of produce on their own farms. This practice has been much restricted of late, it being cheaper to buy them to grow. Some processors with farms will say they can make money on tomatoes at 25 cents a bushel but these gentlemen shove every tomato they grow through their own plants and don't operate, with their own produce, on the same basis as they deal with the growers. The point is, you are liable to have the canners contend that they grow the tomatoes on their own farms and they are content with 25 cents a bushel for these tomatoes, but we know from past experience that there are no restrictions, they are not very severe with their grading; they shove everything from their farms through.

By the Chairman:

Q. They would have to grade, but there is no restriction on quantity?—A. No restriction at all; that is possibly why a lower price is attractive to them.

By Mr. Young:

Q. What about the product, is it as good as though it had been graded before going into the can?—A. We do not know, that is their business.

Q. They could sell for the same price, could they?—A. I think the question of quality is fast disappearing from the canned goods business since the Chain has been in the picture. That is a personal observation.

In the Kelowna district of British Columbia the offered price this year is \$10 per ton although cost of production is \$15 a ton. The canners will take 6.250 tons in this one district at the price offered which is equivalent to $33\frac{1}{3}$ cents a bushel. The growers are holding out for \$12.50 a ton as a minimum price.

By Mr. Factor:

Q. You said the cost of production is $15, and the growers are content to take a reduction to $12.50?—A. As compared to $10 that is a split in the difference.

Q. They would still be losing?—A. Absolutely. I know it is hard to understand, but it is a cash crop proposition.

Canners tell us they have not cleaned out last year's pack and intimate a big carryover, yet representatives of some companies were active this spring encouraging growers to put in larger acreages.

That is a confounding fact. The canners claim they have a large carryover and yet their agents are encouraging the growers to put in increased acreage.

All this is confusing to the grower who is in the unfortunate position of lacking the necessary information with which to properly negotiate. In this connection we suggest the time has come for the establishment of a federal board of referees—experts empowered to negotiate for the primary producer in order that the price to the canner for the raw product shall be based on costs of production and not on the collective power of the canning industry which continues to build the price structure of canned products from the top down, instead of from the bottom up.

The growers feel, that, in addition to the establishment of some agency with power to set minimum prices based on grades for primary products sold to processors there should be minimum prices for labour in all factories, minimum prices to the trade for the finished product, based on grade; a controlled spread between producer and consumer; and legislation requiring the net weight to be plainly marked on each container in a conspicuous place.

By Mr. Ilsley:

Q. That would mean a higher price to the consumer?—A. True, it might mean a slightly higher price.

Q. Would not your demand fall off to a very marked degree?—A. I doubt it.

By the Chairman:

Q. There is one suggestion there, the net weight being specially marked on each container in a conspicuous place. Have you considered the suggestion that there should be a uniform type of can or container?—A. We would like that in everything, unquestionably. The Chain store is interfering with the standards for containers.

By Mr. Sommerville:

Q. The Chain store you say is causing—?—A. Some are openly wanting a smaller package, smaller container for jam and everything else.

By the Chairman:

Q. Do you think it would be in the interests of the grower if there were uniform standards of size in containers?—A. Unquestionably, it would be.

By Mr. Edwards:

Q. Is that common practice, Mr. Robinson; that they are demanding smaller containers?—A. Yes, sir, absolutely.

By Mr. Senn:

Q. Does not the Trade Marks Act define the size of containers?—A. I believe many of those regulations have been changed.

Mr. SOMMERVILLE: A very large number of sizes are set up in the canned goods, or canned fruits act.

The CHAIRMAN: The canned foods act.

Mr. SOMMERVILLE: The canned foods act; and there are a very large range of variations, and if you comply with the requirements and put your material into any of these standard cans, you are not required to put the weight, or any indication of the weight on it; if you depart from this section, then you must put the net drained weight on it. For instance, we have a can before us now; instead of a 16 ounce can, which was a standard can, here is one of 14½ ounces, an ounce and a half less, but having much the same appearance; that requires to have on it the 14½ ounce weight.

Mr. ILSLEY: Which people do not look at.

Mr. SOMMERVILLE: No. It would be in the interests of the consumer to have the quantity stated on the outside of the can.

The CHAIRMAN: We will have evidence on that later I just wanted to get the view of the grower as to uniformity of size.

By Mr. Heaps:

Q. Mr. Robinson, you referred to the minimum wage act there in your statement just now; do you know anything about wage conditions and labour conditions in the canning factories?—A. Other than the general observations that I believe they are not—I know there has been a little trouble in the past year in some of the factories over labour conditions.

Q. You have no personal knowledge?—A. No, but I could secure it.

Q. I think perhaps that might be of interest?—A. I know definitely that the fair wage officers of Ontario were called to the one plant in my district last summer.

By Mr. Sommerville:

Q. That is, the minimum wage officers?—A. The minimum wage officers.

By Mr. Heaps:

Q. Do you know what the wages offered were?—A. I think it was an average of around 18 cents an hour.

Q. Was that for male or female labour?—A. I could not say, male I think.

By Mr. Sommerville:

Q. The minimum wage officers have nothing to do with men?—A. It was in connection with some of the girls who were employed at that factory.

By Mr. Heaps:

Q. Was about 18 cents an hour the wage offered?—A. I can't tell you.

By Mr. Sommerville:

Q. We will be able to get the wage scale Mr. Heaps.

The CHAIRMAN: All right, Mr. Robinson.

The WITNESS: Such suggestions may be deemed radical by some but are no longer radical to the farmer who is rapidly growing weary of being booted around while canners indulge in price wars, in struggles for control of business; and "knuckle down" to large buying interests and, in at least one case, struggle to show profits on a stock structure that appears false in every detail. Some companies maintain that Canadian Canners Limited in selling tomatoes to the chain stores at 72-75 cents a dozen are doing so in an effort to keep the small independent from operating and to stop others from selling futures at 80 cents or 85 cents per dozen. The latter, if unable to deliver, will, according to the theory, pass out of the picture. Another report is that Canadian Canners

Limited while selling some quantity at this price do not, actually, pass out any real quantity at the price. Many smaller companies need signed orders so that they may finance operations. Canadian Canners Limited are charged with making sales at low prices in the hope that the little fellows will be prevented from securing the needed orders.

I wish that could be developed through the smaller independent companies.

Tomatoes, yielding 20 cans to the bushel and sold at 30 cents represent a cost in the can of $1\frac{1}{2}$ cents. At 40 cents the cost would be 2 cents per can. In other words an increase of ten cents per bushel to the grower, the difference between profit and loss, would mean but one-half cent per can to the consumer. We feel satisfied the consuming public will not object to such a slight increase, especially when it means profitable operation to the farmer. There need be little alarm for the consumer. When the canning companies were battling for supremacy and prior to the creation of a working agreement, peas were selling wholesale as low as 75 cents per dozen and apparently less to chain organizations who were retailing them at 5 cents a can. Now the wholesale price is $1.20 a dozen and there has been no howl by anybody on behalf of the consumer.

You can see how prices are raised through the operations of the canners, and yet nobody says anything about the consumer suffering; but every time the grower fights for a little more somebody cries out, well the consumer has to pay.

By Mr. Ilsley:

Q. The consumer has nobody to represent him, as far as I can see.—A. And the grower we feel—

Q. But still, you have your organizations while the consumer does not.

By Mr. Kennedy (Peace River):

Q. Well, Mr. Robinson, don't you think the producer is entitled to a living anyway?—A. Yes, sir.

Q. I do not see what the consumer has to kick about, do you?—A. You will find, if you go into the consumer's earning power, that he is battling for a living; but so is the grower—has he not a right to battle, too.

Mr. SOMMERVILLE: We are all consumers, aren't we, both the farmers and the rest of us.

By the Chairman:

Q. I take it that the point Mr. Robinson is making in that particular paragraph is that the increase to the purchaser which would make it a profitable business to the farmer would not affect the price more than about one-half cent a can?—A. Correct, sir.

Q. That is the point you wish to emphasize. I think it is one we should bear in mind.

Mr. HEAPS: You might take it up in the cans?

Mr. SOMMERVILLE: Whereas by reason of some manipulation or effort to again control the price brought it up from 75 cents to $1.20 per dozen without any increase to the grower.

Mr. FACTOR: That is the position.

Mr. KENNEDY (*Peace River*): An increase of 4 cents a can.

The WITNESS: And there was no particular complaint.

The CHAIRMAN: All right, Mr. Robinson, go ahead.

The WITNESS: The grower does not find fault with the canning company putting out a can of tomato product at a price of two tins for 25 cents, but he does wonder how a rival company can sell a similar product at 5 tins for the quarter.

I might say that I have information recently from the agent of a company that his company was selling a tomato product at 2 tins for a quarter in competition with a product from a rival company at 5 tins for a quarter, and in spite of the high price their volume of business was much increased over that of the 5 tins for a quarter article.

By the Chairman:

Q. I suppose there was a difference in the size?—A. In both quality and size; he was selling a higher priced article in opposition to a small can.

There is an old saying that it takes a weak mind and a strong back to make a good gardener. Well, the weak mind is functioning enough to ask: How and at who's expense?

With the empty can costing 3 cents, the fellow with the weak mind wonders if the strong back is the answer.

By Mr. Kennedy (Winnipeg):

Q. Now, do you really mean that; or is it just a figure of speech you are using?—A. We do.

Q. You think that a man to get along as a producer should have a strong back and be a man with a weak mind?—A. That is what we say about ourselves; he certainly has to have a strong back.

Q. I do not like to think that is true.

The CHAIRMAN: Let somebody else say it to him, and see if he will say it is all right. All right, Mr. Robinson.

The WITNESS: One deal which possibly demonstrates better than any other the evasive actions of certain barons of the canning industry is the purchase of asparagus in 1933 and again in 1934.

Early in 1933 certain asparagus growers became alarmed with the prospects for disposal of the crop at a price which would meet costs of production. They entered into negotiations with the canners and finally secured an agreement calling for a price of 10 cents per pound for all fresh asparagus purchased for processing. In return the growers were to seek imposition of a special dump duty on imported canned asparagus. Failing application of the duty the canners were to pay 8 cents per pound for their requirements. Accordingly steps were taken to have a value fixed for duty purposes on imported canned asparagus. This was accomplished on May 13 on the understanding that the price of 10 cents would prevail.

By Mr. Sommerville:

Q. Is that May 13th of this year?—A. Last year, 1933.

Some time after the dump duty went into effect it was discovered that only two canning companies were playing the game, purchases being made in some cases at 5 cents per pound. Ability to buy at the fixed price was due to lack of knowledge on the part of some growers of the deal made and the action of some canners in withholding purchases and threatening not to purchase at all.

Mr. FACTOR: A deal made with whom?

The CHAIRMAN: Between the canners and the growers.

The WITNESS: Yes, sir.

Mr. FACTOR: I wanted the witness to answer that, Mr. Chairman.

The CHAIRMAN: I beg your pardon.

By Mr. Factor:

Q. I wanted the witness to answer that; I mean, there is apparently some obligation there. There was a dumping duty put on, and I suppose the idea was that the growers were to get 10 cents per pound, Mr. Robinson?—A. That was the understanding.

Q. That was the understanding, then the dumping duty was applied and the canners did not play the game?—A. They broke faith.

Q. I think it is up to the government to get a refund from the canners to the growers.

By Mr. Young:

Q. In other words, the conditions following that became worse?—A. Yes, and they have done it for a long time.

Undoubtedly the canners broke faith but the growers were in the position that if they sought to have the tariff restrictions lifted they would cause those canners who did keep faith to suffer.

By Mr. Young:

Q. Is that the reason you spoke of them as having weak minds and strong backs?—A. I know one could read more into it than there is.

One of the offending companies was Canadian Canners Limited. At a conference of canners and growers Mr. W. R. Dryman, for Canadian Canners Limited, submitted his company had purchased its needs at 10 cents and would not be in the market for any additional quantity. Documents in our possession prove that Canadian Canners Limited did buy at lower prices and admission by Mr. Dryman that they deliberately went out to average their costs " down in some way " and one reason advanced was that they had to meet competitors' costs.

The correspondence, which we are prepared to submit, definitely proves that the growers were deliberately let down and that some companies never had any intention of keeping faith.

This year the growers again organized to maintain price and two weeks ago were able to negotiate an agreement calling for 10 cents per pound of asparagus six inches in length payment one-half at end of cutting season and one-half one month after end of cutting season. Again the dump duty was imposed, but even though this duty was put on after the agreement was signed and on the distinct understanding that it was to be maintained only as long as the 10 cent price was adhered to, at least one canner is violating the undertaking and, at the moment, Associated Quality Canners are forcing the growers of the Burlington area to deliver $5\frac{1}{2}$ inch " grass " instead of the 6 inch length agreed upon. When the Associated Quality agent contacted the growers the 10 cent price had been agreed upon but negotiations as to length were still going on. The agent informed the growers that the length would be that stipulated by the St. Catharines Committee and Canadian Canners Limited, then in conference.

By Mr. Senn:

Q. Can you say, Mr. Robinson, that the Associated Quality Canners were a party to the agreement?—A. That may be the argument, Mr. Senn. The agreement was set by their conference, what we call the St. Catharines Committee and Canadian Canners, but the understanding was that it was to apply to the trade in general if the dump duty was maintained. Their agent said that the price would be 10 cents and the length would be whatever was agreed upon, yet we have them already violating that agreement three or four days after the dump duty goes on.

J. A. Daball & Son, of St. Catharines, and Culverhouse Canning Company of Vineland Station were the only firms who lived up to the agreement in 1933.

We submit that a representative of the Department of Trade and Commerce should be assigned to the task of investigating the asparagus deal now, and

that the dump duty should be removed without delay if it is found that the agreement is not being lived up to. We submit when some companies are willing to play the game that there should be some way of making the others do the same.

May I submit the observations made by Captain L. F. Burrows, secretary of the Canadian Horticultural Council, after it was well established that we were again being played with:

> The understanding reached at the Hamilton meeting was as clear-cut as one could make it, in fact there certainly was not any misunderstanding on the part of Daball and yet the Canadian Canners and some of the others immediately violated it and what can we do about it.
>
> After reading your report in last week's Financial Post it is quite evident that the Canadian Canners intend to recoup their losses as, although they have to pay more for cans and for sugar, they hope to be able to buy their fruits and vegetables for less—and so help the growers out, a favoured expression of Mr. Drynan. Of course both the manufacturers of cans and the sugar refineries control their supplies, whereas there is absolutely no control of fruit and vegetable supplies and the mere statement on the part of the Canners that they do not intend to pack or that they have a very heavy carryover is sufficient to cause the growers to throw their supplies at the feet of the canners.
>
> My only solution is a board of control which, legally, can control and negotiate wtih the canners as they do in New Zealand, Australia and South Africa.

A few years ago when the consumer bought jam he got a pure product which was so labelled. Jams contained at least 48 per cent to 55 per cent or more of the fruits they were named. Pure granulated sugar was used. A small percentage of apple jelly and glucose was allowed. But the bulk base of the jam was the fruit that was named. High quality fruits are health giving products as well as delicacies and should not be allowed to be adulterated. A lot of the supposed to be high quality jams to-day have not near the amount of high quality fruits in them that the ordinary canned and preserved fruits had a few year ago.

By Mr. Young:

Q. When did this change take place—A. It has been developing, I would say, since the advent of the chain system.

By Mr. Sommerville:

Q. The chain store?—A. Yes, sir.

With the coming of the chain and departmental stores the demand was made on the manufacturer for lower priced jam so that these stores could undersell the small stores. At first many manufacturers shaded their prices to meet this demand and started cutting the price to the grower for his fruit where possible. Then they commenced buying and importing cheap jam pulps grown and put up in cheaper producing countries and in some cases government subsidized products, such as pulp from Tasmania. They used these cheap pulps as a club to the grower to force prices down. Many of them had brands of jam of certain standard of quality of which they were justly proud and refused to cut that quality. They had spent money in advertising getting the public acquainted with the fact that that name meant a regular assured quality product. Some of them started to cut the amount of fruit used substituting pectin and apple products, glucose, etc., using colouring matter and flavouring to conceal the defects. They usually sold this product under another brand. Growers demanded that these adulterated products should be so labelled. This

has been done in a way but in type so small that it is not noticed by the average buyer or even the merchant who sells it, and in a way that if read the significance of it is not understood by the average consumer.

Then they cut the size of the glass containers and soon the continued demands from the big chain buyers to cut still further in the price were followed by further adulterations. The use of sugar was done away with in many cases and the substitution of sugar syrups with lower taxes and costs was adopted.

By Mr. Young:

Q. What is the difference between sugar and sugar syrup?—A. Well, sugar is the raw product and sugar syrup is the preparation.

Q. Is this sugar syrup just sugar dissolved in water?—A. We have a jam man here who will go into the technical details.

By Mr. Sommerville:

Q. That is, instead of using granulated sugar they are using principally sugar syrup?—A. Yes.

Apple pulp instead of manufactured pectin was used. Cull apples, worms, rot and all, instead of selected apples were used for the manufacture of the apple products for adulteration.

By Mr. Kennedy (Peace River):

Q. That is a pretty serious thing?—A. I think that can be borne out in some cases.

By Mr. Factor:

Q. Is not there some law which provides for certain content?—A. It has been changed; the regulations have been revised continually.

By Mr. Heaps:

Q. When were they revised?—A. In the last two years.

By Mr. Factor:

Q. You mean lowering the content?—A. I believe so.

Mr. SOMMERVILLE: These are the general regulations; it might be wise to have them before you at this time. First of all, take strawberries, there are a whole list of them in the Canned Foods Act:—

No. 1A, properly labelled as pure strawberry jam, will contain 55 pounds of strawberries to 62½ pounds of sugar, making 117 pounds boiled down to 100 pounds of jam, with a minimum of 66 per cent water insoluble solids.

Mr. YOUNG: You do not add any water?

Mr. SOMMERVILLE: No. They must be 66 per cent of a solid that is insoluble in water. Now, that is pure jam.

Mr. HEAPS: What is the date of that regulation?

Mr. SOMMERVILLE: Well, that is the Act. February 25, 1930, I understand. Now then, the next is:

No. 1B, 55 pounds of strawberries and 62 pounds of sugar, 117 pounds boiled down to 100 pounds of jam with a minimum of 66 per cent of water insoluble solids, properly labelled Strawberry Jam with colour and—or preservative. That is the second one; it is not called pure. The third is:

No. 2A, 32 pounds of strawberries, 4 pounds of pectin approximately, 65 pounds of sugar, approximately, and 10 pounds of water, a total of 111 pounds boiled down to 100 pounds of jam with a minimum of 66 per cent water insoluble solids, and this jam is properly labelled "Strawberry Jam with added pectin."

Then the next one is:

No. 2B, 32 pounds of strawberries, 15 to 20 pounds of fruit juice and 60 to 64 pounds of sugar, making 107 pounds total boiled down to 100 pounds of jam with a minimum of 66 per cent water insoluble solids, and this jam is properly labelled "Strawberry Jam with added fruit juice."

Then the next is:

No. 3A, 15 pounds of strawberries, 7 pounds of pectin, 65 pounds of sugar, approximately, and 18 to 20 pounds of water, making a total of 105 to 110 pounds boiled to 100 pounds of jam with a minimum of 66 per cent of water insoluble solids, and that is properly labelled "Pectin and Strawberry Jam."

By Mr. Boulanger:

Q. What is pectin?—A. It is an apple preparation, which jellies to jam.

Mr. SOMMERVILLE: It is used with these products to jam and give a jellied condition to the whole product. It is mostly obtained from apples and some citrus fruits; it has that property in fruit which makes it coagulate.

Then the next is:

No. 3B, 15 pounds of strawberries, 30 to 40 pounds of fruit or fruit juice according to jelly value; you will notice that is the lowest standard; there are four other standards starting off with 55 pounds of strawberries but now we are down to, in 3B, 15 pounds of strawberries, 30 to 40 pounds of fruit or fruit juice, according to jelly value, 63 to 65 pounds of sugar, a total of 108 to 120 pounds boiled to 100 pounds of jam with a minimum of 66 per cent water insoluble solids, and this is properly labelled "Apple and Strawberry Jam." There are relatively similar regulations or provisions for all other kinds of jams and canned products.

By Mr. Young:

Q. Where does this 10 per cent come in?—A. The contention of our fruit men is, that there are jams being sold to-day with 10 per cent fruit content. There is a jar with 10 per cent strawberries in it.

By Mr. Factor:

Q. I know, but the point you make is that there is some adulteration about that, but the regulations permit of a mixture, in accordance with the proportions mentioned in the regulation.—A. Quite true, but we are satisfied that some of the public believe that it is all a pure content, a pure article, and they are buying it as such, not buying an adulterated article.

Mr. SOMMERVILLE: You will observe, from what I have just read, that they are allowed 15 pounds of strawberries under No. 3B, in a total that may be 120 pounds in weight, about one-eight.

Mr. YOUNG: No, but you boil the water out of it.

Mr. SOMMERVILLE: 15 pounds of strawberries to 108 to 120 pounds.

The WITNESS: I think our statements will be supported in further evidence. This jar here shows 3·2 ounces, and this jar shows a content of 12 ounces of fruit. That would be a 40 per cent fruit content.

By Mr. Sommerville:

Q. You have the jam man here who will explain or develop that?—A. Yes.

By Mr. Young:

Q. In the old days we used to get 40 per cent?—A. Yes.

Mr. KENNEDY (*Winnipeg*): I think there is quite a bit in what Mr. Robinson points out there. If a man asks for strawberry jam at breakfast,—the average fellow knows nothing about adulteration or the percentage of strawberries in it; he thinks he is getting a good article or the pure product.

By Mr. Senn:

Q. You would advocate, Mr. Robinson, having some of these lower grades of jam, jams of lower fruit content, eliminated?—A. The point we are trying to make as we go on, sir, is that the reduction of fruit content is seriously curtailing the distribution of sale of tender fruits, raw fruits, and that if our jams were put on a proper basis and the law was such that there had to be 35 to 40 per cent fruit content it would help the fruit industry by increasing the sale of raw fruit; that is what we are trying to develop.

By Mr. Kennedy (Winnipeg):

Q. And it would be better for the consumer?—A. Yes, it would be better for the consumer.

By Mr. Factor:

Q. Would it not cost the consumer more?

Mr. Edwards: It certainly should.

Mr. Sommerville: It may cost a little more.

The Witness: Unquestionably a little more.

By Mr. Senn:

Q. Have you any figures to show the additional cost of the raw product, or will that come later?—A. I have some figures, but I think later that when you come to examine the jammer that I have here in connection with this part of the brief you can bring out those points.

By Mr. Heaps:

Q. Who is it that makes those regulations?—A. The Department here at Ottawa.

The Chairman: Agriculture.

The Witness: We contend the public is more or less defrauded. With the reduction in the fruit content of the jam it has curtailed the sale of tender fruits and has thrown more tender fruits on the open market, the fresh fruit market, with a possible increase in glut condition in glut time.

By Mr. Factor:

Q. But the department framed all those amendments.—A. You permitted it.

Q. Parliament did?—A. Yes, parliament did.

Q. And that is the fault you find, that parliament permitted this adulteration?—A. Well, if you want to go that far.

By the Chairman:

Q. I do not think adulteration would be the right word, Mr. Robinson?—A. We are content to say reduction of fruit content.

Q. Because, after all, the other properties that are allowed to enter into a jam called strawberry jam are largely fruit properties which are indicated on the label. Now, I am not arguing in support of it, I am merely making a statement of facts. I understand the point of the growers is, that it would be much better if these jams representing plum, or strawberry or raspberry contained a larger quantity of the actual fruit than is now used.

Mr. Ilsley: It is a question of one producer against another.

The Chairman: I think I have in my office now two bottles of jam sold as strawberry jam but the average purchaser would not know the difference. The lower grade is filled up with simply some pulp. However, we will have some more evidence on that later.

By Mr. Kennedy (Peace River):

Q. What is the food value of the pulp?—A. I cannot tell you.

Mr. SENN: I think it would be wise, Mr. Chairman, to allow Mr. Robinson to proceed.

The WITNESS: May I point out, sir, that I cannot answer these technical points.

The CHAIRMAN: All right, Mr. Robinson.

The WITNESS: The public is more or less defrauded. The use of from $\frac{2}{3}$ to $\frac{3}{4}$ of the quantity of fruit in the same amount of jam has seriously curtailed the growers' largest market. The price of fruit has ben forced down below the cost of production and the growers are tasting the necessity of operating at a loss or go out of the business in which all their life savings are invested.

This has been brought about by the mass buying of the larger stores and chains demanding cheaper products and the desperate competition between manufacturers to compete for this big business. If the manufacturer does not submit his plant stands idle and overhead eats him up while his competitor, who does submit, is at least unloading his stock and saving on his overhead. In years gone by the jammers used to buy their berries or other fruits and rush them into jam with a large labour force. Now they cannot do this as they do not know the quality of jam they will have to manufacture to suit the buyers' price so they put it into fruit pulps or freeze it in cold storage and manufacture it again to order of the price quality demanded by the chain store buyer. This partial manufacture and cold storage, etc., adds to the price spread between the grower and the consumer.

Recently a group of growers made some enquiry into the jam situation. Before they were through they were dumbfounded with the revelations. That apple, turnip,—I have the turnip here, but I am advised it was only in the war years that turnip was used—and even corn products have practically taken the place of delicious Ontario fruit in the jars was pretty well established. One grower checked up a few samples on sale in a chain store. He found 32 ounce jars with but 12-16 strawberries in each container and yet the product was labelled and advertised pure strawberry jam.

By Mr. Young:

Q. When was this, Mr. Robinson?—A. Quite recently.

By Mr. Factor:

Q. I suppose it was labelled in compliance with the regulations?—A. We are finding no fault with that; we are not putting up any argument on that point. This is the direct result of the operation of the big buyer who commands the manufacturer to "send down a sample for so much," in other words, the jam is made to the buyers' specifications. Gone are the days when a manufacturer can put up quality brands and sell on the quality basis.

Our information is that one-tenth of 1 per cent of benzoate of soda will preserve anything for two months. The use of benzoate of soda is prohibited in Britain. Some processors of tomato products in Canada carry on their cans the words, "no benzoate of soda used." This chemical is injurious and is not necessary in any pure fruit product.

By Mr. Factor:

Q. The regulations permit that?—A. Quite true.

It is no idle statement to say that there is no fresh-fruit going into Canadian jam to-day. It takes 30 per cent fruit to make a palatable jam. Cost of packing strawberry jam with 30 per cent fruit content has been set up as follows:—

COST OF PACKING STRAWBERRY JAM, 32 OZ. GLASS, 1933

Cost of berries—(2,743 boxes at 8 cents)	$ 219 44
Labour, girls	21 27
Labour, men	32 45
Labour, pieceworkers—2,743 boxes	27 43
Cost of jars—(3,883 at 4.70 gross)	126 74
Cost of cartons—(324 at 107.15 M)	34 72
Cost of labelling—324 cases	15 00
Cost of labels—(3,883 at 1.30 M)	5 48
Cost of sugar—(53 bags at 6.61 each)	350 33
Cost of pectin—(5¼ cents at 7.90 each)	41 48
Cost of coal—(2 tons at 6.50 each)	13 00
Freight on pectin	2 00
Tops for jars—(3,883 at 8.70 M)	33 78
Overhead—324 doz. at 20 cents doz., taxes, insurance, electricity, rent, repairs, depreciation, etc.	64 80
Total	$ 987 92

Cost of packing 1 jar—987·92/3883	25·44 cents
Sales tax absorbed 6 per cent	1·68 cents
Freight absorbed—Average 25 cents cwt.	0·854 cents
Total cost per jar	27·974 cents

By Mr. Sommerville:

Q. That is for?—A. For a 30 per cent fruit jam.

Q. That includes the berries, the labour, the container, the carton, and the fruit and overhead?—A. Everything. These figures are reliable. It was ascertained that the jam, in this case, was sold for 28 cents a jar, delivered, tax paid. It is generally admitted that 30 to 35 per cent should be the minimum fruit content, but in spite of this jams are on sale to-day with fruit content as low as 10 per cent.

One jammer has admitted that he is now using 900 crates of strawberries with which to put up the pack that formerly took 4,000 crates. With the change in methods and lowering of quality there has developed the frozen pulp racket, wherein jams are semi-processed and made up as required.

By Mr. Sommerville:

Q. What do you mean by that? I suppose the jam man can explain that? —A. It is frozen and held over until they are ready to finish up.

By Mr. Ilsley:

Q. Why the word "racket"?—A. Perhaps I will withdraw that.

Q. I know, but you say it is a racket. What have you in your mind?—A. It has reached that stage, has it not, where anything is a racket if the crown believe they are being imposed upon.

Q. If they are imposed upon.

Mr. Young: Is not this what they do? They cannot can all the berries the day they get them so they mix them with sugar and put them in barrels and freeze them until they are ready to can them and then they can them?

The Witness: They can them according to the order they get from the chain later on.

Mr. Young: I cannot see any racket in it.

The Witness: Well, I will withdraw the word "racket".

By Mr. Sommerville:

Q. What you have in mind is that under the old process they were canned according to a certain quality of canned goods put up by the manufacturers; now they are held over until they are required by some big buyer who sets the price, and then they are mixed and made to a quality to suit the price.

Mr. YOUNG: That is not the statement here.

The ACTING CHAIRMAN: What would you substitute for "racket"?

The WITNESS: Game.

Mr. EDWARDS: I think racket is a good word myself.

Mr. YOUNG: Frozen fruit business.

The ACTING CHAIRMAN: There is no objection to "racket" provided it is proven.

By Mr. Ilsley:

Q. We are on the scent for rackets. If this is one tell us about it?—A. Don't you think it is a racket where a jam is adulterated down to such a fine point that it has seriously curtailed the sale of the raw products in this country? And it is done because of a large buying power influence. Is not there an element of racket in it?

Q. The manufacturer is telling the truth about his product, is he not?—A. We are not finding fault with the manufacturer; we are talking about the chap who forces the manufacturer to do business.

By Mr. Sommerville:

Q. Do you refer to the chain stores buying stuff under specification for so much money?—A. Yes.

Q. And the people believe they are getting something else?—A. Yes.

Q. If that is not a racket I do not know one.—A. Yes.

By Mr. Kennedy (Peace River):

Q. Is that in accordance with the regulations?—A. I do not know whether you call this a racket or not. Our secretary, I think it was yesterday, followed an ad in a departmental store in Toronto selling strawberry jam for 25 cents, "Today's special 25 cents". That is the ad. He went into the store and he picked out the jam, and on the back of the jar was a label saying, "Today's special 25 cents, Eatonia strawberry jam, specially packed with higher fruit content than regulations require." When he paid for it he was charged 34 cents, and he drew attention to "Today's special 25 cents". He was told he had picked it off the wrong shelf. I do not know whether you call that a racket or good business. That is good business.

Mr. ILSLEY: That is not what you are complaining of.

The WITNESS: It is part of it. I have withdrawn the word "racket". I may be able to work it in later.

Mr. YOUNG: If there is any racket in connection with this it is in the shape of the bottle; it looks bigger than it is.

The WITNESS: The master mind in the chain store business has all these things figured out. "This permits of complete adulterations as it minimizes the dangers of spoilage through reduction of the period between final processing and consumption. Inasmuch as low quality jams made to the order of chain stores are usually sold in a comparatively short time because of advertising ballyhoo the margin of safety is invariably ample.

Unquestionably this development in the manufacture of jam has been one of the chief factors in the gluts of fruits. Before the advent of the gentlemen of the chain stores jam was invariably put up in glass jars holding three pounds. Bearing down in customary fashion the mass buyer has forced a steady reduction to the 32 oz. or 2 lb. jar of to-day, a jar which we believe in many cases, is incapable of holding 2 pounds."

By Mr. Ilsley:

Q. You put in "we believe". Have you any ground for that belief?—A. Yes. I think we can support it before we are through. We have witnesses coming on that will bear out the brief.

Q. That is fraud, of course, is it not, to advertise a 2-pound jar that does not hold 2 pounds? Does that take place?—A. Our contention is that it does.

Q. It seems to me, before you make statements like that you ought to check that over very carefully.

Mr. YOUNG: That could be easily proven; take an empty jar and weigh it.

The WITNESS: This brief is supported by makers of jam and growers of fruit, and the information contained is received from them. If, in the evidence submitted in support of the brief, these things are not substantiated, it is up to us to substantiate them and we accept the responsibility. The information is submitted to me and my job is to put it together and submit it.

Mr. SOMMERVILLE: And the other witnesses are here.

The WITNESS: "Three years ago one Ontario manufacturer was supplying one customer with 90,000 lbs. of jam of which 30,000 lbs. were pure fruit, in other words it took 30,000 boxes of strawberries to produce the jam for this order. This business has been lost to another processor who was prepared to adulterate to order.

About the only natural product the grower makes and sells to the trade is maple syrup and sugar. On this he is not allowed to put the word or letters "maple" in any shape or form unless the syrup or sugar is absolutely pure. The grower is not allowed to ship a covered package of fruit or vegetables unless it is marked and stamped and the Government tells him exactly what size, quality and quantity of fruit or vegetables he is to put in that package, and makes him stamp it, and the Government supplies numerous inspectors to see that he does so. The manufacturer, on the other hand, is allowed to use the growers' product and use the word strawberry, raspberry, plums, etc. in the largest type and adulterated down to 10% fruit, if he pleases." I may be wrong in that 10 per cent; it may be 15. Why should the manufacturer of fruit products not have to put his full formula on the label the same as a patent medicine with the exact content of each constituent used in the manufacture exactly as stated?

Mr. SOMMERVILLE: At the present time I have a label before me. We have what is required in the jam. That complies with the regulations as 15 per cent of fruit content as, say, plum jam with other fruit juices, contains colour and corn syrup; or in another case of 15 per cent fruit it may be apple or apple and plum.

Mr. YOUNG: That goes on a 4-pound tin, and that appears on the store keeper's shelf alongside of another tin that says "pure jam" and the prices are adjusted accordingly, and for pure jam you pay more than for the other, and the buyer is given his choice and buys what he wants.

Mr. ILSLEY: There is nothing misleading about that lebel. "Plum" is not in large letters on it; it is fruit jam.

Mr. FACTOR: Here is a case of raspberry jam in large letters, and in small letters are added the words "pectin and colour". Is not that the point?

Mr. SOMMERVILLE: We will have all these jars submitted as exhibits and dealt with at the time they are submitted in evidence.

"If his jam does not contain the full 48% to 55% fruit of former years he should, if allowed to manufacture such a product at all, at least be forced to use the word "compound jam" or some such similar designation in the largest type on the label followed by the percentage of each product used, the names of the fruit used to be in no larger type than the remainder of the formula. In no case should he be allowed to manufacture jam with less than 30% of the named fruit.

We submit that these practices of the buyers and manufacturers with unfair competition and quality reductions have caused heavy losses to the growers, decreased buying power on the growers part, increased farm mortgages, and

increased high interest bank indebtedness. In many cases complete insolvency has resulted and the loss of life's savings to suit the whim of the big buyer of the chain and departmental stores for cheaper products in order that he might crush his competitor. We further submit that farm labor has been forced down by these methods in many cases to one dollar per day and even less for a married man for only part of a year's employment with subsequent increase in relief and thereby increase of taxes."

The ACTING CHAIRMAN (Mr. Kennedy (Winnipeg)): I would like to make one observation. You suggest that where the fruit content is reduced below 48 per cent there should be a provision for some marking on it—a heading "compound jam" instead of fruit?

The WITNESS: Yes, instead of "strawberry" it should be "compound" jam.

Mr. SENN: Did he not go further and say they should not be adulterated any more than maple syrup?

The WITNESS: No, I did not go that far. I pointed out that maple syrup could only be sold with the designation "pure". I claim you should not allow jam with less than 30 per cent fruit content.

The ACTING CHAIRMAN: To be sold by the name of fruit.

The WITNESS: If sold with less than that it should be called "compound jam". If it has 30 per cent or higher fruit content it should be called "strawberry" or "peach" jam, or whatever it is.

Mr. SOMMERVILLE: And the quantity content of each fruit should be on the label?

The WITNESS: Yes.

Mr. SENN: I asked you a question a moment ago about doing away with some of these lower grades that are provided by the regulation, and I understood you to say it would be in the interest of the grower to do so?

The WITNESS: It would, because it would tend to increase the use of fresh fruit, tender fruit in the jam; therefore, it would help the grower.

The committee adjourned to meet at 3.30 P.M.

AFTERNOON SITTING

The committee resumed at 3.30 P.M.

The WITNESS: We finished our brief on the canning and jam manufacturing, but there is one observation I should like to make, and that is unquestionably in rebuttal the contention will be advanced as regards asparagus, that if it were not for the purchasing of the canners at the present time, the grower would be in a sorry position with regard to the disposal of his asparagus crop. That is quite true. The real reason for it goes back a number of years, and it must be established that the large increase in the acreage of asparagus during the past four or five years has been due to the development of the Canadian canned asparagus business. Previous to the development of the canned asparagus industry, there was not anything like the present acreage of asparagus in the country. I say this so that you will keep it in mind.

By Mr. Sommerville:

Q. You have endeavoured to meet the demand of the canners for asparagus? —A. Yes, and in doing so the acreage has developed to such an extent that now, without the purchases by the canner, there is no doubt but what the grower would be in rather an awkward position.

By Mr. Edwards:

Q. Has the canner increased the acreage?—A. No, I do not say they have deliberately gone out and encouraged acreage, but the fact has been, anyway, that a demand has developed over quite a number of years and that has automatically produced an increased acreage. Without the canners' support the price of asparagus would naturally be—it would be just too bad.

"Running through the story of manufacture and distribution of canned fruits and vegetables is the shadow of mass buying as inaugurated and developed by the chain and department stores. All growers contend that this buying system is one of the worst threats now confronting the primary producer.

" is a factor in the canning situation and an equally important one in the sale and distribution of fresh fruit and vegetables. One well-known chain (A. & P.) operates on a system which must be regarded as the most efficient of all. This company buys from the farmers and pays itself a purchasing commission of 7 per cent. If this practice became general the contribution by the growers would carry all the purchasing departments of all the huge retailing enterprises for A. & P. officials have been known to boast of the fact that the 7 per cent purchasing commission does maintain their purchasing department."

By Mr. Kennedy (Peace River):

Q. What does that mean? There seems to be something missing there?—A. They come to a grower and they buy a load of cabbage, say, as happened in our district last spring. The growers sold them the cabbage in good faith, but when they received their cheque at the end of the week, there was a 7 per cent reduction, which we have explained.

Q. "—that the 7 per cent purchasing commission does maintain their purchasing department." To just what part of it does that belong?—A. Fruit and vegetables. We are dealing with fruit and vegetables.

The CHAIRMAN: You are dealing now with fresh fruit and vegetables?

By Mr. Kennedy (Peace River):

Q. That sentence is confusing, "That the 7 per cent purchasing commission does maintain their purchasing department."—A. I mean if they all undertook to operate on the same basis. If one is able to get away with it, there is no doubt the others may in time.

By Mr. Young:

Q. Do you say that they bought a load of cabbage at a certain price and did not pay him the price?—A. Yes.

The CHAIRMAN: Would you make that clear? Mr. Young's question and your answer, I think, makes it a little difficult.

The WITNESS: One specific case which happened in a district that had to do with cabbage is this: Last spring a buyer for the A and P. came into the district and he bought two loads of cabbage. The cabbage was delivered to the A. and P. warehouse in Toronto, and when the cheques were received from the A. and P. a week later, there was a 7 per cent reduction which was stated to be purchasing commission.

By Mr. Young:

Q. Did the farmer accept those cheques?—A. Yes, they had to in those two particular cases. They accepted the cheques, but refused to sell any more to A. and P.; but it is a common practice.

Mr. FACTOR: Was the price fixed at the time of purchase?

The WITNESS: Yes, $1.25 a case.

Mr. SOMMERVILLE: They buy all fruit and vegetables from the Atlantic and Pacific Commission Company.

Mr. YOUNG: He tells us a buyer for this company went and bought the cabbage from the farmer at a certain price.

The WITNESS: Sure.

Mr. YOUNG: And sent them a cheque for a different price?

The WITNESS: Yes, sir.

Mr. EDWARDS: They deducted commission?

The WITNESS: Deducted 7 per cent.

Mr. YOUNG: They were buying; they were not commission men for the farmers?

Mr. FACTOR: Were the farmers notified?

The WITNESS: These two farmers were not aware of the fact there was such a charge, because it was their first deal with A. and P.

By Mr. Young:

Q. Was there an agreement signed?—A. No, sir, there are very few agreements in those kind of things; all verbal deals.

Q. I do not see how they can get away with it— —A. Well—

Mr. SOMMERVILLE: We will have evidence from the auditors with reference to the commission company in that particular instance who does this buying and takes commission on purchases.

By the Chairman:

Q. Your object is to record the criticism of and objection to that practice?—A. Yes, sir.

Q. You say it is commonly done?—A. By this one firm.

"The bitterest complaints we receive from the growers have to do with the chain system practice of using fresh fruit and vegetables as leaders. Unquestionably the offering of fruits and vegetables at leader prices for the purpose of enticing consumers into stores has a detrimental effect on the market price of the article so advertised. The contention is that primary products, especially those of a perishable nature, should not be used to further the sale of other products that are priced on a highly profitable level. Then every time rival chains indulge in a little price-cutting war they automatically force down the price of the products at the expense of the producers. Repeatedly fruits and vegetables are sold at a loss so that the chains can, in their advertising and window displays, establish attractive leaders. The results of this practice are far reaching. Most of our fresh fruits and vegetables are sold through the medium of wholesale commission houses and trucker-buyers. Repeatedly the prices they establish are based on the advertising of the chain stores. A trucker dickers with a farmer for a load of produce. The farmer is holding out but, invariably, when a daily paper is produced carrying a chain store advertisement in which the said produce is offered at a price much below that demanded by the grower, the argument is over. To illustrate the point may I relate a deal in which I was an innocent participant. Last year, just as we were about to dig early potatoes I entered into a contract to sell a chain store company 5,000 baskets of potatoes at 30 cents each, delivery spread over the week. The chain, in turn, advertised and sold the potatoes for 35 cents, a spread which was certainly not out of the way. By the end of the week the chain sought to make further purchases at the same price but I refused to sell because we were enjoying a rare thing—a rising market. This was on Friday. The chain buyer then moved fast in an effort to round up enough potatoes to meet

the anticipated demand of Saturday, having in mind his advertised price of 35 cents. By Saturday the wholesale price had jumped to 40 cents but the chain buyer went into the open market at Hamilton and bought hundreds of baskets at the 40 cent price, rushing them to his stores for sale at 35 cents. Late in the day he woke up to a realization that the heavy sales in the stores were not due to consumer buying but rather to purchases, in quantity, by truckers and pedlars, who had discovered that the chain store in question was at least 5 cents per basket under the market.

Only the other day the buyer of a Toronto department store communicated with the Secretary of the Ontario Growers' Markets Council. He desired information as to where he could pick up a quantity of shallot onions. 'You are out of luck, there aren't any in the province,' our secretary replied. 'But I've got to get some,' the buyer answered. 'I've advertised them for sale tomorrow'.

From each case the lesson is on of advertising and its adverse effects. The advertiser was really conducting a ballyhoo on something he didn't have and certainly there was never at any time true knowledge of market or price conditions. The advertising system employed does much to prevent growers enjoying any possible advantages of normal price fluctuations due to weather conditions or other factors. Once the chain has established a price for any one of the many fruits or vegetables it refuses to change to higher levels even though crop conditions warrant a rising market. There is no doubt but the inability, in recent years, to move up prices after a glut low, is due to the chain store system of merchandising. There may be some advantage to the consumer but it is very questionable if the slight advantage thus gained by the consumer makes up for the loss to the farmer and the inevitable reduction of his purchasing power.

Recently the Toronto wholesale jobbing trade was endeavouring to reorganize their credit system. With one exception all the Chain Stores concurred in the request of the wholesale jobber trade for weekly payments for all produce purchased from them. The one exception, however, was quite indignant that they should be asked to pay cash weekly for their purchases, even though all transactions through their outlets are on a strictly cash basis. They even said that while they were now receiving thirty days' credit, they intended to ask for a longer period. Under the present system, they were able to make on interest around $2,400 per year on the fruit trade. They felt this was not sufficient and that they were entitled to more. However, if the jobbers would agree to give them a liberal cash discount, they would fall in line on the weekly payments."

Mr. Kennedy (*Winnipeg*): What do you mean by being able to make $2,400 interest on their deposits?

The Witness: On the use of the money.

Mr. Kennedy (*Peace River*): They get cash for sales.

The Chairman: They have a 30 day use of the money and they sell for cash.

The Witness: The point I am trying to make is these commission houses are handling purchases on a commission basis of 12½ per cent, and naturally with the great difficulties they have in collections the tendency is for it to rebound on us.

The Chairman: They demand a wider margin.

The Witness: Yes.

"Another instance—of interest to producers especially—concerns one of our vegetable growers near Toronto who had been selling produce from day to day to a chain organization, possibly the same one I have just referred to. On

this particular day the chain organization called the grower by long distance 'phone, reversing the charge to the grower's account and ordered fifty hampers of cauliflower at 45 cents per hamper, to be delivered to four or six stores that day between three and four o'clock. At eleven o'clock the grower received another call, the charge being reversed to him as before, and was told the cauliflower must be delivered before two o'clock. The grower had sent his truck into Toronto on other business and did not expect it back in time for the earlier delivery as now requested. This, however, did not have any effect on the buyer, who told him the cauliflower must be there at two o'clock or else the order would be cancelled. The grower had the cauliflower already packed and crated and had to hire a truck to make the trip at a cost of $3. The next morning, still expecting his 45 cents per dozen, another call with charges reversed as heretofore, came through advising that the market had dropped and they were only able to pay 35 cents per dozen."

Mr. KENNEDY (*Winnipeg*): Is there any reason, Mr. Chairman, when an allegation like that is made, why we should not be given the name?

The WITNESS: I can secure it.

By Mr. Kennedy (Winnipeg):

Q. Will you give it to the committee in confidence. I may say we have had some reluctance in getting certain growers to appear here.

Q. That is a definite allegation?—A. We will be glad to give it in confidence. The grower, I think, will be prepared to come forward.

Q. That is a definite allegation against a certain organization.

The CHAIRMAN: Give both the grower and the buyer.

By Mr. Ilsley:

Q. There was only 35 cents paid?—A. Yes.

Q. The other ten cents is still due?—A. Well, I think the grower would like to think it is still due.

Q. It is, if what you state there is true?—A. Yes.

Mr. KENNEDY (*Winnipeg*): You mean he will always have it coming to him?

The WITNESS: Always.

By Mr. Ilsley:

Q. In other words, he will do no more business unless he accepts the terms?—A. They won't deal with him. One of the leading vegetable growers of Ontario has had long experience with the chains. He finds they are not interested in handling fresh produce at the beginning of a season when supplies are limited. Neither are they interested in quality products. He says—I quote from this grower. Incidentally, he asked not to be called, although he is quite prepared to give anything in confidence. He makes no special charges.

Mr. FACTOR: Why is he afraid of being called?

The WITNESS: He states the moment he is called to appear before this committee, he would lose the business.

Mr. YOUNG: It is not much value to him, is it?

The WITNESS: Yes it is, those days.

Mr. SOMMERVILLE: Anything is of value in the way of purchases.

The WITNESS: It is not in the days when a grower can pick and choose, but he has got to take a lot of this stuff and like it.

"Our experience with the chains is that they quite effectively block the distribution of Canadian produce as it comes on the market. They will not

handle any line until it is well established. Frequently their buyer claims the price is too high and he will wait until it becomes cheaper. At the same time other stores in the same localities are getting a good sale at a reasonable profit. Their contention is that a large profit at the beginning of the season retards the legitimate sale, although it was not so before the advent of the chain system. At all times they seek to force down prices. They will not trust their store managers to buy anything even if he knows there is a real demand for it. They demand a daily delivery but their system does not permit of readily fluctuating prices and they are not in a position to assist in a downward or upward revision of prices should weather conditions demand it of perishable products."

Now, you may inquire, gentlemen, why we are interested in a downward revision of prices. Well, there are times when the market warants a downward revision because of say a glut condition, and if the downward revision were made promptly, it would help to make purchases and clear up that glut condition.

Mr. Young: We are interested in knowing why they are not interested in a downward revision.

The Witness: I think it is their system. The majority, as I understand it, advertise on a three day basis, and they try to maintain a standard price for the duration of the advertising period.

Mr. Sommerville: The next sentence helps.

The Witness: "They frequently set a price on Wednesday for a balance of the week and that selling price will be maintained regardless of any natural change in the wholesale price. If the wholesale price advances and their supply is limited or even if they are sold out their price holds to the detriment of the farmer in his sales to other people. If the wholesale price drops their stores simply do not get distribution and at this time they are of no assistance in extending distribution. Each chain has one buyer for a city and if his guess as to what a price should be is wrong, it is the growers who suffer as with a price too high distribution is again blocked. On the other hand their losses are restricted as they only buy one day's requirements at a time even though their advertising may be set for three days. They will not handle the best quality of such lines as cauliflower as they want one price in all stores in the same district. Individual store managers know better than a general purchasing agent what they can sell with a change in price but the producer cannot deal with and must wait while the system gets under way. This very often results in a hold up for a full day on goods which should be moving. It has the effect of checking distribution to the grower's loss.

Of recent years another evil has crept into the picture to the detriment of distribution. We refer to the chain wholesaler who is either a subsidiary of a chain company or is a wholesaler with a working agreement with a chain store group. Some of them are:—

Atlantic Commission Company, subsidiary of the Atlantic & Pacific Tea Company;

National Grocers Limited, catering to Red & White Stores in Ontario;

Western Grocers Limited, looking after Red & White in Western Canada.

There are others including Canada Packers Limited, who have been intruding on the fruit and vegetable business, apparently for the purpose of furthering the sale of fertilizers, which is one of their principal by-products. It is not uncommon for Canada Packer agents to approach heads of co-operatives, as well as large producers and offer to handle certain lines of produce providing the co-operative or association will undertake to purchase their fertilizers from them. This club has been used on onion, potato and grape

growers principally but may be extended to other products. One particular shipment of grapes was handled by Canada Packers Limited last fall for $12 a car. This automatically depressed the market in the area into which the shipment was made to such an extent that many days elapsed before the trade could resume business."

You see, there are 1,200 baskets of grapes in a car, and they handle it on the basis of one cent a basket.

By Mr. Sommerville:

Q. What do you mean by that reference, Mr. Robinson?—A. Their spread is not a basic commission.

The CHAIRMAN: Or handling charge.

The WITNESS: The handling charge was too low compared to the handling charges of the legitimate trade, and they were able to place the article in this market at a price which the legitimate trade could not meet.

By Mr. Senn:

Q. Do you know whether the producer received the usual price?—A. The producer received the current price for his grapes. I think it was around 17 cents on this particular deal. There was nothing wrong with that. But they shoved this one car at this low handling charge, out of all reason; and they shoved the car into a good area, and they were able to put it into that area below the price of the legitimate trade; and it had the effect of blocking further sales for a time in that area.

By Mr. Factor:

Q. What is the usual handling charge?—A. It varies. I think they figure that 3 cents is a fair charge.

By Mr. Kennedy (Peace River):

Q. Was this just an isolated deal?—A. I think what we are trying to bring out with these people is that they are shoving the business. Generally they step into an area and they do dispose of some of our goods, but it is an effort to shove along their fertilizer business.

By Mr. Sommerville:

Q. That you say is the result of an arrangement made when the grower buys the fertilizer, that they will handle his products?—A. The grower on this particular deal did not suffer, but the other growers did suffer in the succeeding two or three days.

By Mr. Kennedy (Winnipeg):

Q. How did their low handling charge put them in a preferred competitive position?—A. They would be 2 cents under a regular shipment which has a 3 cent handling charge.

Q. Would they not charge less?—A. Yes, they would; two cents less.

By Mr. Sommerville:

Q. Sell for less to the dealer?—A. Yes.

By Mr. Senn:

Q. And I suppose if that particular producer had more grades to sell he would suffer as well?—A. Yes. Although he would not recognize it at the time.

"Others of the chain wholesalers have adopted the policy of securing their supplies through employees or buying brokers who purchase direct from the growers on a salary of per package basis, the wholesaler absorbing the normal spread between producer and retailer, only to such an extent as will enable them to sell under the independent wholesaler. This tends to eliminate fair competition and has a restrictive influence on distribution.

Stability of markets, once enjoyed and always the desire of any grower, is a thing of the past because of the combined practices of these two groups. They ignore the old law of supply and demand, and instead of the growers' reaping the benefit their labours and investments entitle them to, they are fast becoming serfs of these business combinations and will continue to be tied hand and foot unless some regulating influences are brought to bear. Possibly the Natural Products Marketing Act will be the much-sought answer. The prayer of the growers is that it will be.

Confronted with steadily decreasing prices fruit growers and gardeners have been forced to give serious thought to the question of costs of production. Following the practice common to the big business executives they have been successful in reducing some of the items such as labour, which always suffers first, but in other matters have encountered conditions which show an amazing attitude on the part of allied industries to exact the maximum even though they are slowly squeezing the last penny out of the people who are the foundation of their entire business operations. It matters not to these gentry that farm labour is to-day being paid as low as $1 a day on farms where the rate three years ago was $2.50 and $3 a day. Even the fines levied on the basket manufacturers for violation of the Combines Act failed to serve as a warning, in fact, some of these allied industries have, if anything, become bolder and more ruthless. Many of them could be safely investigated but in the hope that examination of the practices of the fertilizer companies will have a salutory effect we are content, at the moment, to bring before you a condition of affairs which we believe is intolerable. We charge that certain fertilizer manufacturers are party to a price fixing structure which has for its purpose the maintenance of prices that permit of an exorbitant margin of profit as far as the gardeners and fruit growers of that section of Ontario west of a line drawn from Kingston to Pembroke are concerned. No section of agriculture is as vitally interested in fertilizer costs as gardenering and fruit growing. Because of modern methods of intensive culture, producing two and three crops to the given acre in the season, the gardener is perhaps the heaviest purchaser of fertilizers, hence his vital interest in the subject."

By Mr. Factor:

Q. Mr. Robinson, you allege a price-fixing combine; why do you not take proceedings under the Combines Act?—A. We may have to.

Q. Is not that the mode of procedure open to you. I mean, that there is a direct allegation that there is a combine with a price-fixing objective; the Combines Act provides a remedy for that?—A. If your suggestion is that that is the way we should proceed I imagine we would do that.

By Mr. Young:

Q. You said something about the price of baskets; did you ever try to buy a basket from the United States, and did not the customs instruct you that you had to pay a higher price for those baskets?—A. Not to my knowledge.

Q. Have none of your growers had that experience?—A. Not that I know of personally.

Q. I thought it was rather common knowledge.

"It is common knowledge that there has been a vast improvement in the manufacture of fertilizers in recent years. This improvement has made it safe for the farmer to mix his own fertilizer combination, buying the ingredients direct and eliminating the high toll demanded by the companies manufacturing the prepared mixtures. Home mixing is a money saver and the practice has shown signs of rapid extension. To stop it and to protect investments in plants which are fast becoming a heavy burden to the farmers, the companies have reached an understanding which has for its objective the stamping out of home mixing and discouragement of the establishment of cheap but satisfactory co-operative mixing plants by groups of growers. The method of tackling this problem has been to make it as difficult as possible for the grower to buy his materials. True, he can secure the materials but only through controlled channels in which the price is rigidly maintained at a figure which tends to discourage the practice.

This price structure is maintained by an organization known as the Eastern Canada Fertilizer Association of which A. L. Smith is president and Alex Mooney, secretary. They, undoubtedly, are in a position to supply the committee with some illuminating information and we suggest they be asked for the following:—

1. Costs on which they base consumers' prices showing cost to the manufacturers per unit of mixture—nitrogen, phosphoric acid and potash.
2. Factory cost of mixing plus bags, per ton.
3. Factory cost per ton ready for shipment of, say, the following mixtures:
   2—12— 6
   4— 8—10
   2— 8— 6

4. Cost of selling, interest on investment, depreciation allowances, etc.
5. Dealers' prices, dealers' profits, consumers' prices less discounts compared with factory costs.
6. Investment in plants for manufacture of fertilizers, exclusive of superphosphates.

We have reason to believe the farmers, in respect to this last item, are being asked to carry investments, which, in the light of modern knowledge of fertilizers, are no longer economically sound.

By Mr. Sommerville:

Q. Before you go any further with that I would like to ask you a question in regard to the difficulty which you say you experience in buying fertilizers separately so you can mix them; that practice or condition does not obtain in the Maritime Provinces, does it?—A. No, sir. It does not obtain in the Maritimes or Quebec, they buy their fertilizers much cheaper in the Maritimes than we do in Ontario.

Q. And it does not obtain in Ontario east of Kingston?—A. No, sir.

"One of the illuminating features in this fertilizer business is the deal as it applies to that triangle of Ontario within the points Kingston, Ottawa, Montreal and to all Quebec. In the latter province and that part of Ontario east of the Kingston-Pembroke line fertilizers can be purchased at an average of $11 per ton less than in what we will term western Ontario. Here are some of the cash prices:"

By Mr. Sommerville:

Q. You are now going to give us the comparative prices on mixed fertilizers between Ontario and—?—A. The eastern counties.

Q. The eastern counties of Ontario and Quebec?—A. Yes, sir.

Q. And the Quebec price that you give applies not only to the Province of Quebec, but to that part of the Province of Ontario east of a line drawn from Kingston to Pembroke?—A. Yes.

"Mixed fertilizers—	Ontario	Quebec	Difference
2—12— 6..	34.65	25.00	9.35
2—12—10..	37.45	29.00	8.45
4—12—10..	41.10	28.00	13.10
6— 8—10..	46.65	31.50	15.15
9— 5— 7..	48.64	30.50	18.15
5— 8— 7..	40.40	29.50	10.90"

By Mr. Factor:

Q. What are these secret figures which you were giving us, does that indicate the mixture?—A. That is the mixture.

"The combine will argue that the Quebec prices are due to the buying capacity of the Co-operative Federée de Quebec which purchases for over one hundred co-operative locals but the answer to that is the eastern Ontario does not come under the Quebec Federée and yet the Quebec prices prevail in the eastern counties of Ontario.

Proof of an agreement and of the existence of the Kingston-Pembroke line is found in the experience of a growers' association in Northumberland county. Early this year the secretary of the association contacted a Quebec manufacturer and after correspondence forwarded an order on the following price basis:—

2—12— 6..	27.00
4— 8—10..	30.00
6— 8—10..	32.00

Shortly after the order had been mailed word was received from the manufacturer that he was forced to refuse the order because Brighton was west of Kingston."

By the Chairman:

Q. You could almost buy that in Eastern Ontario and ship it in yourself, could you not?—A. No, sir.

Q. Why not?—A. They won't let you.

Mr. SOMMERVILLE: He is giving us an example here.

By Mr. Senn:

Q. Do you mean to say that you cannot buy the ingredients separately and bring them in and mix them yourself?—A. You might, through indirect channels.

By Mr. Kennedy (Winnipeg):

Q. But not if you disclosed what you wanted to do?—A. I think you would have difficulty. I think we can prove that.

By Mr. Senn:

Q. Do all these mixtures come from the United States?—A. No, sir. They are made in Western Ontario. Some of the ingredients may come from the United States, and in some cases you would have trouble buying from the States.

By Mr. Young:

Q. Could you not bring in the finished article from the United States?—A. I do not think it would be desirable.

Q. Why?—A. Freight and duty.

Q. What is the duty?—A. I cannot tell you.

Q. You said a moment ago, word was received from the manufacturer that he was forced to refuse the order—who forced him?—A. Well, that is a matter of supposition.

By the Chairman:

Q. Will you let us have the name of that manufacturer, give it to the Counsel for the committee?—A. I can give you the letter from the grower, giving us the information, I have it here.

Q. Give it to counsel for the committee?—A. He could supply us with the manufacturer's name.

Mr. Factor: We are learning a lot of things.

The Witness: "Perusal of attached documents—price lists and instructions to dealers—will show how the price structure is maintained. Examination of witnesses will bring out the extreme spread between costs of production and the selling price to the farmers. Quebec farmers benefit because they are supported by the provincial department of agriculture in all their negotiations and because government financial assistance is available for mass buying while Western Ontario is forced to carry a costly selling organization with keen competition although this competition gains the farmer nothing because of the measure of price control. In addition the method of carrying on the business in Western Ontario places the responsibility for collections on the shoulders of the farmer-agents and materially adds to the burden. Report has it that there are some 500 or 600 of these farmer-agents selling fertilizer and taking a toll of the business.

It is charged that the Eastern Canada Fertilizer Association maintains a black list and that on it are to be found the names of cooperatives and individuals who have been content to handle fertilizers on a smaller margin than that demanded by the Association. Some of these cooperatives and independent agents are able to carry on by bootlegging some of their ingredients and by use of substitutes in their mixtures.

Consideration of attached price lists will prove the existence of an agreement while we are convinced it will be possible for the committee to develop the extent to which pressure has been placed on firms handling such materials as sulphate of ammonia, potash and nitrate of soda by manufacturers of mixed fertilizers with an old friend, Canada Packers Ltd., foremost in the set-up."

The Chairman: Now, you are going to file the document you have just referred to.

By Mr. Ilsley:

Q. What is the reason they do not do something like this east of this line?—A. My understanding of it is, that some of the Quebec people have been selling in that area for a number of years, and they have made an arrangement to reserve that area for their own purpose. That was given to me here in Ottawa last Friday by the representative of the Quebec Cooperative Federee.

Q. There are other companies again selling to the Maritime Provinces?—A. That is my understanding of it.

By Mr. Young:

Q. Might I ask you, Mr. Robinson, who prepared this brief?—A. I did, sir, from information and the contribution of growers and others.

Q. What others?—A. Some one or two individuals interested in the jam business, one or two people interested in fertilizer sales.

Q. And that is all?—A. Yes, sir, but largely from the growers.

By Mr. Sommerville:

Q. The organizations in the council are those that I mentioned at the beginning the session on this subject, are they not?—A. Well, that is not the council proper, but those people have been interested in the preparation of the brief.

Q. The resolution came to us from a meeting of these organizations which requested this inquiry?—A. Yes, sir.

Q. The Ontario Fruit Growers' Association, the Ontario Vegetable Growers' Association, the Provincial Canning Growers' Committee, and the Niagara Peninsula Fruit Growers' Association?—A. Yes, sir.

Q. And the Ontario Growers' Markets Council?—A. Yes, sir.

Q. And these organizations represent, or can you give us any idea of the number of members or growers?—A. We believe there are about 25,000 fruit and vegetable growers in the province of Ontario, and these organizations would be speaking for the vast majority of them.

By Mr. Factor:

Q. What is the solution for the problem of the evil effect of the chain store on the fruit growers and vegetable growers? You have given us your brief. Now, can you suggest what this committee should do?—A. I think you ought to give me an opportunity to prepare another brief on that.

Q. I think it would be interesting, but assuming that your brief is correct in stating the evil effect of the chain store, what are we going to do about it?—A. I think there should be some measure of control. I do not profess to know the answer, but it seems to me there should be some control.

By Mr. Sommerville:

Q. The price lists that you have furnished are the price lists of various dealers in fertilizer?—A. Yes, sir.

Q. And you say the price lists give evidence of their being in agreement?—A. Yes, sir.

Q. You mean they are all in line with one another?—A. Yes, sir.

Q. And the prices are identical?—A. They are uniform.

Q. Uniform?—A. Yes.

By Mr. Senn:

Q. Would you name the different corporations that are interested in that?—A. I cannot give you that, no, sir.

By the Chairman:

Q. I suppose you submit that differential in price between eastern Ontario and Quebec and western Ontario is evidence that the prices in western Ontario are being maintained and are out of line with what, on a competitive basis, they ought to be?—A. Yes, sir.

By Mr. Factor:

Q. Have not you touched the problem there, that there they are enabled to have mass buying?—A. Not in eastern Canada.

Q. Well, in Quebec the government gave financial assistance for the purpose of mass buying?—A. That is one reason for it, and the fertilizer people will undoubtedly advance that, but that does not affect eastern Canada.

By Mr. Sommerville:

Q. That does not affect Ontario?—A. No.

By Mr. Factor:

Q. Well, if it is right in the case of the fertilizer to have mass buying what is wrong with the chain store in mass buying the product?—A. It might be all right.

By Mr. Kennedy (Winnipeg):

Q. I would like to draw attention to certain provisions in this sample grower's contract I have before me. I understand you filed typical original grower's contracts. I will not mention the names; they are all uniform. I draw your attention to certain matters at the beginning of the contract. This is a contract between the Canadian Canners Limited and a gardener for the delivery of tomatoes for this season's crop. At the beginning it starts:—

TERMS AND CONDITIONS

> Produce of all kinds must be strictly first class in size, quality and condition; absolutely fresh, firm and clean and in the very best condition for the purposes required.

Then going on:—

> The company, or its agent, is to be exclusive judge of the quality of all produce and of its condition and fitness for canning. When any produce is not judged to grade first class according to contract, a reduced price fixed by the company may be paid therefor, which must be accepted by the grower, or such produce may be rejected entirely.

Now, I may say I am familiar with contracts reading similar to this, but there is often a great difference between the letter of a contract and the spirit in which it is enforced. Reading that language I would say that all the power there rests with the canner. It first provides, that the produce must be first class, and so on, and then goes on to say, that the canner or his agent shall be the exclusive judge as to its condition and can reject it. Now, in the operation of that contract, or similar contracts, what has been the attitude of the company towards their interpretation of these contracts?—A. My advice is that they interpret the contract to suit their own purposes.

Q. You mean arbitrarily?—A. Yes, sir.

Q. And do you say unfairly?—A. Yes, sir.

Q. And you propose to produce witnesses to substantiate that?—A. Yes, sir.

Q. Then a further point just there, where the company or its agent so decides under this contract that a given shipment is not up to standard, not judged to grade first class under the contract:—

> a reduced price fixed by the company may be paid therefor, which must be accepted by the grower, or such produce may be rejected entirely.

To what extent has that power been exercised?—A. I cannot tell you.

Q. You do not know?—A. No, sir.

Q. Then another phase of it:—

> All produce when fit for delivery and acceptance within this contract shall at the option of the company, on notice to the grower, become the property of the company.

Now, I interpret that as meaning this, that if you are a grower of tomatoes and you have signed up under one of these contracts then at the option of the company giving you notice that crop, while still on your land, becomes the property of the company?—A. Yes.

Q. And they can exercise it, because this gives them the right to go in and possess it?—A. I do not know of any case where they actually did.

Q. That is what I want to get, because it goes on to say:—

> and the company shall have the right after such notice to enter upon the lands where the same is grown, or wherever it may be, and to take possession thereof and all costs, charges and expenses of taking and acquiring such possession shall be charged against the grower—

A. Not to my knowledge; I do not know of any case.

Q. It then goes on to provide, that even after they notify the grower, after it has become the property of the company:—

> and be deducted from any moneys payable to him, but the said produce shall at all times, until delivery thereof at its said factory be, and remain at the growers risk and subject otherwise in all respects to the terms of this contract, and the company shall not be liable to pay for any produce not so delivered to and accepted by it at its factory.

Do you know of any hardship arising from that clause?—A. Not to my personal knowledge.

Q. One other thing:—

> If the grower grows similar produce for, or supplies to other canners on or from the same land or other lands, this contract at the option of the company may be cancelled and terminated by the company at any time, in whole or in part, or to such extent as the company, by written notice to the grower may determine.

That raises the question of you, a grower, having contracted with a canning company for the sale of the produce of three acres of tomatoes; under this contract they can prevent you from growing on that land that you have for another company?—A. I do not know of any case where they have but our tomato growers may be able to give you information on that.

Q. Further:—

> The company reserves the right to cancel this contract on or before March 1st, next, by notice to the grower. Any notice to the grower hereunder may be given by mailing it in any Post Office addressed to him at his address as shown hereunder or delivered personally or left for him at his residence and shall be deemed to have been received by him if mailed, one day after mailing, or if left for him at his residence, on the day it is so left.

A. Quite true.

Q. You are familiar with those conditions?—A. Yes, sir.

Q. This is the uniform contract under which the growers deal with the canners?—A. Yes, sir.

Q. Well, all the comment I would make is this: That in view of this evidence and similar evidence that we have had in connection with the growers of tobacco, the primary producers, so far as I am concerned, are in a similar position to an army armed with clubs and scythes compared to an army equipped with the most modern mechanized equipment?—A. Usually the grower or the farmer is not organized at all because of the fact that for years he has had an inherent aversion to regimentation. He is hopelessly licked before he starts.

Q. Well, the point is, that under a contract like this the company has all the power?—A. Yes, sir.

Q. If they want to exercise it?—A. Yes.

Q. And has there never been any action taken about the unfairness of that contract?—A. The individuals have expressed themselves forcibly by talking to some grower organizations, but there has never been any action taken on the part of anybody that I know of. The average grower finds himself helpless to beat such a contract.

Mr. SOMMERVILLE: He cannot, there is the contract.

By Mr. Factor:

Q. How long has this form of contract been in existence?—A. I have been in the business fourteen years and I think they have been using that form for that length of time more or less.

Q. I suppose what they want, Mr. Robinson, is, instead of being armed with clubs and scythes against modern machine guns, to be placed either on an equality in armament or let everybody disarm, put them all on the same level.—A. One or the other. Of course, I think they would rather have a little heavier armament and go to it.

Q. In these days there is a great urge for universal peace?—A. I may say that whether it is right or not, whether we are unjust to the canners or not, the sooner the canners recognize the fact that the farmers hate their very name and change their tactics throughout the whole province of Ontario the better for themselves. Now, we may be unjustly accusing them; we may not have all the facts, and possibly when they tell their story it may be that we are absolutely wrong, but my personal experience, of over fourteen years in the gardening business, to put it frankly, the grower has not a chance; he is licked before he starts.

By Mr. Sommerville:

Q. Then the net result of the argument of your brief with respect to the method with which the prices are fixed for the finished product is this, is it not, that the chain store has obtained a price of from 72 to 75 cents a dozen for your canned packages?—A. Yes, sir.

Q. And that that price, you say, is, on the admission of the canners, below the cost of production?—A. Yes, sir.

Q. That the canner then out of that reduced price of 72 cents to 75 cents a dozen takes the cost of processing plus a reasonable profit, plus the cost of storing until they are delivered to the large buyer, and whatever is left goes to the farmer?—A. Yes, sir.

Q. Now, that is the order of things?—A. Yes, sir.

Q. And you say that the process is wrong?—A. It should be reversed.

Q. They ought to start with the cost of production to the primary producer and build upon that?—A. Yes, sir.

Q. And the net result of building upon that would be a very little alteration in the price to the consumer, would it?—A. Very little.

Q. You were referring to different sized packages. Here are two cans—tomato cans. You will observe that one of these is the standard 16 ounce can?—A. Yes, sir.

Q. This is a new one, I am told, just put up within the last thirty days, net weight $14\frac{1}{2}$ ounces, $1\frac{1}{2}$ ounces less than the 16 ounce can; drained weight 7 ounces; that is a little less than 50 per cent solid?—A. Yes, sir.

Q. Solid tomato?—A. Yes, sir.

Q. $1\frac{1}{2}$ ounces net weight would mean on that basis about $\frac{3}{4}$ ounce less solid weight. What can be the object of producing a can that is out of standard for the sake of $\frac{3}{4}$ of an ounce of solid tomato? Can it have any effect at all on the price to the grower, $\frac{3}{4}$ of an ounce of tomato?—A. It would have an effect.

Q. It would have an effect?—A. Yes, sir.

By Mr. Factor:

Q. What is the price to the consumer of the small packages?—A. I have not the least idea.

Q. The consumer, in looking at those two packages, can tell they are not the same.

Mr. SOMMERVILLE: If you look at them side by side.

The WITNESS: I do not think the consumer to-day is buying that way. I think the consumer to-day, through advertising urge, is buying by price. We have run into it this week for fresh produce; we ran into it yesterday with asparagus. The average individual does not stop long enough to consider that slight difference.

By Mr. Sommerville:

Q. You see, if you only have them in the store there is nothing to compare it with, but if you have them side by side then you can tell.—A. Yes.

Mr. KENNEDY (*Peace River*): Is the price marked?

Mr. SOMMERVILLE: No, there is no price mark on this. There is nothing on the standard tin, just the 16 ounces, but there is on this tin, which is a sub-standard, a small type size with the weight $14\frac{1}{2}$ ounces.

Mr. FACTOR: Of course, it depends on what the consumer pays for the two.

Mr. SOMMERVILLE: I fancy so.

Mr. KENNEDY (*Peace River*): Do you say, Mr. Sommerville, there is a difference of $\frac{3}{4}$ of an ounce solid?

Mr. SOMMERVILLE: Well, the net weight of the whole liquid and solid is $14\frac{1}{2}$ ounces, that is $1\frac{1}{2}$ ounces of the liquid and solid less than the standard. The net weight of this can, drained weight, is 7 ounces; that is a little less than 50 per cent of the content of solid, and therefore the net weight, the drained weight of $1\frac{1}{2}$ ounces would be $\frac{3}{4}$ of an ounce.

Mr. KENNEDY (*Peace River*): The amount of tomatoes in this is just worth a cent.

By the Chairman:

Q. Having in mind this differential in size, what is the attitude of the grower towards the variation in sizes?—A. We want standardization and we want to stop this practice of the chain leading the processor into similar channels.

Q. Of variation?—A. Yes, variation. We want to stop that if we can.

By Mr. Factor:

Q. What is the attitude of the consumer toward it?—A. I do not think the consumer is really aware of the situation. I honestly think if the consumer knew of some of our difficulties he would be with us. I am quite convinced that the consuming public in Canada is with the primary producer. I do not think there is any doubt about it.

By Mr. Young:

Q. Can you tell me then, Mr. Robinson, what happened here a few weeks ago when the price of cauliflower was trebled they suddenly disappeared?—A. I do not know of the particular instance.

Q. Had it anything to do with seasonal duties going on?—A. I cannot tell you. I would have to know the details. I do not think it is fair to ask me because I do not know anything about it. However, I do say this, that the grower is just like anybody else, that he can get the price of his product too high, and when he does get it too high the answer is automatic and sudden and sharp. The buying stops, that is simple law.

Q. In your brief you have given us considerable information about the pressure that is put on the canners by the chain stores. Where do you get this information? You are a grower; you do not represent the canners or the chain stores.—A. The lead to it came from an article by the cost accountant of Associated Quality Canners, one of the largest companies in Ontario.

Q. That is the lead?—A. Yes, sir. We followed it up in the usual channels, discussing with canners. I think if you bring some of the independent canners here—

Q. You went to the canners to get this information?—A. Through round about methods.

Q. Have you any other source?—A. I think it is general knowledge throughout some districts that such things are taking place.

Q. And that is the only source you have?—A. Yes, sir.

By Mr. Sommerville:

Q. I think you quoted from Mr. Tallman's article, did you not?—A. Yes, sir.

Q. And Mr. Tallman is the cost accountant of the Associated Quality Canners?—A. Yes, sir.

Q. And they are a very large organization?—A. Yes, sir.

Q. Next to Canadian Canners probably the largest in Canada?—A. Yes, sir.

By Mr. Factor:

Q. I was always under the impression that during the last few years the canners were in pretty bad shape, that they had been losing money?—A. My answer to you, Mr. Factor, is that I think possibly there is some justification for that statement as it refers to some of the canners. I do not think it refers to all, but unquestionably refers to some.

Q. They are in bad shape?—A. Undoubtedly some of them are from what knowledge I have. I think it is due to price war in part. However, I am not conversant enough with the facts, but I would say that that has something to do with it.

Q. And the increase in the price of the can, I suppose, has something to do with that too?—A. I cannot say.

By Mr. Edwards:

Q. Might it have something to do with the question of paying dividends on watered stock?—A. I think that is a factor.

Mr. SOMMERVILLE: Thank you, Mr. Robinson.

Witness retired.

L. B. REYNOLDS, sworn.

By Mr. Sommerville:

Q. Mr. Reynolds, what is your business?—A. Well, sir, I am a fruit grower and gardener.

Q. A fruit grower and gardener?—A. Yes, and manager of the Cooperative.

Q. One of the ancient occupations that came down to us from the Garden of Eden?—A. Yes, sir.

Q. It has apparently as many troubles to-day as it had in those days.

Mr. KENNEDY (*Winnipeg*): It was only apples they grew in those days.

Mr. YOUNG: Don't forget the figs.

By Mr. Sommerville:

Q. And you have been associated with the fruit growing industry for a great many years, Mr. Reynolds?—A. And the selling end of it. I am the manager of the Cooperative.

Q. And the selling end of it?—A. Yes, sir.

Q. And where do you operate?—A. Waterford, Ontario.

Q. And now, Mr. Reynolds, some information has been given to us in the brief presented by Mr. Robinson. Will you be good enough to give us your evidence with respect to the statements therein contained, and the information which you desire to present to the committee respecting the fruit growing section of this presentation?—A. Well sir, in regard to the strawberry situation and the raspberry situation there are certain things that we would like to bring forward. I have made a few notes here, and, with your permission, I will read them, and be willing to answer any questions that might come up.

In the first place, in the growing of berries it is a very uncertain business. A grower takes big risks. Drought and white grubs may prevent a stand of plants being obtained. Unsuitable fall, winter and spring weather may cause heavy damage and winter injury. Black rust may come in. Frost may get the blossoms, and heavy rain in blossom time may work off pollen. Lack of rain in fruiting time, and too hot weather may dry them up, as it did last year. The attached cost sheets show a cost of $336 per acre for growing and harvesting a crop of 4,000 boxes to the acre. At 8 cents per box this would be a net loss of $16. The average crop, however, for Canada is under 2,000 boxes per acre. Individual years occur where the average yield has been as high as 3,500, but they are rare indeed. If all deterring factors are absent, which rarely occurs, individual yields of 6,000 and 7,000 boxes occur. Such yields are always pointed out by the canner and jammer in talking prices.

Q. When you talk of a jammer you mean a jam manufacturer?—A. Yes, a jam manufacturer.

Q. Not a wind-jammer?—A. No, not a wind-jammer.

Q. This is a new word to our vocabulary in the committee?—A. With strawberries at 10 cents in a good year a good grower ought to break even, but in a bad year he will lose heavily. Any price below that is ruinous. Now, I will say that last year we had every factor against us in our district. We had rain in blossom time which worked the pollen off the late berries and there were no late berries at all. The season was cut in two by that rain. Then we had drought after that rain that cut off our first crop of berries, and the consequence was that my personal loss was something like $1,300.

By Mr. Factor:

Q. The canners are not to blame for that?—A. No, the canners are not to blame for that, but what I am pointing out is a man has his heavy losses as well as his gains and these things have to be averaged up, whereas, whenever you start talking price to the canner he always immediately points out those 5,000 or 6,000 or 7,000 boxes to the acre yield that we obtain occasionally.

Q. He wants to present a good picture to you, Mr. Reynolds?—A. Well, that may be.

Mr. Sommerville: Proceed, Mr. Reynolds.

The Witness: Well, to take up the matter of strawberries. A box of strawberries contains 20 ounces, by law, which with good berries will yield I pound of fruit, hulled and ready for jamming. This would make one 32-ounce jar of 50 per cent fruit jam. Now, that jar there has 12 ounces of strawberries in it. We had to pack them into a 32-ounce jar to get them in there. They have not been cooked or boiled down but that is less than the 50 per cent jar of fruit.

By Mr. Sommerville:

Q. What do you mean by that?—A. Fifty per cent jam.

Q. The bottle you are producing there now which is referred to as exhibit 168 is filled to the shoulder with strawberries alone?—A. Yes, not hulled.

Q. Fresh, dry, not hulled, not boiled, and it contains at that 12·80 ounces of fruit?—A. Yes.

Q. And that is a 32-ounce jar?—A. Yes.

Mr. Factor: What is required to give 50 per cent fruit content to the jam?

The Witness: It requires 16 ounces, 3 ounces more.

By Mr. Sommerville:

Q. 3·20 ounces more than the strawberries shown here are required to produce an ordinary 50 per cent?—A. No, 40 per cent.

Q. 40 per cent of fruit?—A. Yes.

Mr. Edwards: Would 40 per cent be a high standard?

The Witness: A good deal higher than the average.

The Chairman: Now, then, 12·80 ounces is a 40 per cent fruit in a 32-ounce jar?

The Witness: Yes. I will refer to that a little later on. One pound of strawberries would make a 32-ounce jar of 50 per cent fruit jam and an advance of 1 cent per box in strawberries would mean 1 cent per jar in jam of a 32-ounce jar, a 15 per cent jam.

By Mr. Sommerville:

Q. In the 15 per cent fruit jam?—A. Yes. One box would make over 3 jars of jam and it would take an advance of 5 cents per box in the price of the berries to make a 1-cent advance in the 32-ounce jar. What I am trying to point out, sir, is that the cost of the fruit is a very small item in the manufacture of jam, and it is also more so in vegetables, but in the jam it is a very small factor, and an advance in the price of the fruit means very little on the advance in the price of jam.

Mr. Factor: The consumer would only have to pay a cent more for a 32-ounce 15 per cent content of jam and it would mean a 10 per cent increase to the grower.

Mr. Sommerville: It would mean more than a 10 per cent increase—a 12½ per cent increase in the return to the grower.

The Witness: It would mean 5 cents a box to the grower.

The Chairman: You had better let the witness give his own explanation.

The Witness: Now, just to show you, this one here would be a 10 per cent. They tell us there is no 10 per cent allowed according to law. Probably there is not. Maybe we should put three more berries in there and call that a 15 per cent, and that is what is in a lot of the jams under government regulations.

The Chairman: In our strawberry jam?

The Witness: Yes, in our strawberry jam.

By Mr. Sommerville:

Q. No, that has to be called pectin and strawberry jam?—A. Yes, pectin and strawberry jam. We will do a little shopping. After some of the things that were said here this morning Mr. Bower and myself thought we ought to go out and buy a little jam and see what we got and show you what we got. Now, we went out and purchased some jam—I will not give you the names of the stores publicly, but I have them here on this list to check them up. I have the bills for the jam from the stores at which we bought this jam; and we went around and bought a little jam, and we will produce some of the stuff that we bought.

Mr. Kennedy (*Winnipeg*): Mr. Sommerville, this is not one of the weak minded growers.

The Witness: In the first place, every store we went into, we went into and said, "We want some pure strawberry jam." You see what we bought.

Now, in one store we went into we said, "We want some pure strawberry jam" and the salesman said, "We have no pure strawberry jam; we have strawberry with added pectin and colour." Now, we bought that jar of jam, sir. These jars of jam are labelled exactly the same.

By Mr. Sommerville:

Q. Let me see them?—A. They have on there—I will give you this bill that you can put with it. That jar of jam in that hand cost 43 cents. That is Cross & Blackwell's jam with added pectin and colour. That jam that you have there in the other hand is labelled exactly the same, is it not, sir?

Q. Yes.—A. It is supposed to be the same weight, is it not, sir?

Q. I do not know.—A. They claim it is.

Mr. KENNEDY (*Winnipeg*): Did they say it was?

The WITNESS: Yes. They said it was. That jam is 25 cents, and it is labelled exactly the same way.

Mr. YOUNG: Is it the same maker?

The WITNESS: No. There is a spread in there of 18 cents. If they gave 2 cents to the grower how would it affect the price of that jam?

Mr. FACTOR: One quality may be away better than the other.

The WITNESS: It does not matter. They are here under the government regulations. You have here what there must be in jam labelled of that kind.

By Mr. Sommerville:

Q. These are both jams which comply with regulation showing number 3A —15 ounces of strawberries?—A. No. I do not think so, sir.

Q. I beg your pardon. These are for jams labelled 2A—strawberry jam with added pectin and colour to comply with the regulations for the manufacture of strawberry jam 2A?—A. In the same government regulation. Now, sir, I wish to call your attention also to the fact that Crosse and Blackwell with added pectin and colour is—

Q. That is 43 cents?—A. Yes, sir.

(Crosse and Blackwell strawberry jar marked exhibit 170).

Q. Old City strawberry jam with added pectin and colour, 25 cents.

(Old City strawberry jam jar, market exhibit 171).—A. That Old City jam is advertised as a leader in that store to-day. I did not know that when I bought it.

Mr. KENNEDY (*Winnipeg*): Is the weight marked on it?

The WITNESS: There is supposed to be 2 pounds in each one. The regular price of it, however, is 30 cents and it is a special sale to-day.

Mr. FACTOR: Is there any difference in quality?

The WITNESS: Not under the government regulations.

Mr. FACTOR: But the government regulations provide a certain content, but does that necessarily follow that because they comply with the regulations that the quality of the jam is the same?

The WITNESS: What I am trying to say to a certain extent is that the government regulations are wrong and they are not fair to the grower.

Mr. FACTOR: That may be so.

Mr. YOUNG: This evidence seems to indicate that one man can take certain ingredients and make better jam with it than another man can.

The WITNESS: That may possibly be so.

Mr. KENNEDY (*Winnipeg*): Are the same proportions of the ingredients supposed to be approved too?

The WITNESS: 2A is supposed to be made up of 32 pounds of strawberries, 4 pounds of pectin approximately, 65 pounds of sugar approximately, 10 pounds of water. 111 pounds boiled to 100 pounds of jam with a minimum of 66 per cent water and insoluble matter. This jam is properly labelled "strawberry jam with added pectin."

Mr. KENNEDY (*Peace River*): Could it be analyzed?

The CHAIRMAN: Surely.

The WITNESS: No, that is one of the things that cannot be done. Any fruit matter that is in there cannot be separated from the real fruit.

By Mr. Sommerville:

Q. There is no process of separating the pulp from the strawberry?—A. No, sir; not as I undertand it.

Mr. EDWARDS: There is no reason to think that one manufacturer's product would be better than the others in that case.

The WITNESS: Remember that jam was sold to me as pure. No, they said in that case that was not pure jam.

Mr. FACTOR: I cannot understand the point you are making.

The WITNESS: I think it will be clear in a little while that what I am trying to demonstrate is that there is a big variation in these qualities of jam and a big variation in price. Now, here is a jam. I went in this store and asked the man, "Have you got any pure strawberry jam"? He said, "Yes, we have." He sold me this jar of jam as pure jam. It states on there "added pectin, colour and sodium benzoate." That jar of jam was sold to me for 32 cents. Where does the consumer get off at in this, I am asking?

Mr. SOMMERVILLE: And that is a 32-ounce jar of jam?

The WITNESS: Yes. (Jar Anne Paton Strawberry Jam with notation "pectin, colour, and sodium benzoate, marked exhibit 172.)

Mr. KENNEDY (Winnipeg): Do you suppose he would know what pure jam was?

The WITNESS: Well, if he does not, how does the consumer who is buying it know. If the storekeeper does not know what he is selling where is the consumer going to get off at with these regulations. He does not know whether he is buying pure jam or 15 per cent jam.

Mr. FACTOR: Was that last jar of jam bought in a chain store or from an independent retailer?

The WITNESS: I do not know—an independent store. Here is another jar of jam we bought, and this man sold us this jar of jam which is one of the few jars of pure jam we were able to buy, and the price on it was 49 cents. He also sold us this raspberry jam—pure jam with added pectin and colour for 11 cents. "Strawberry jam pure, finest quality, absolutely no pectin, pulp or seed used, strawberries and sugar only, free from artificial preservatives."

(Jar Smith's Pure Strawberry Jam filed, marked exhibit 173.)

Mr. YOUNG: Is it possible to make strawberry jam without something to set it?

Mr. SOMMERVILLE: Oh, yes.

The WITNESS: I am not saying that that is the best jam made—a pure jam.

Mr. YOUNG: I understand that strawberries and sugar alone will not make jam.

The WITNESS: There is a definition here: 1A-55 pounds strawberries, 62 pounds sugar boiled to 100 pounds jam with a minimum of 66 per cent water insoluble. This jam is labelled pure strawberry jam.

Mr. YOUNG: I must have been misinformed. I always understood you could not make jam with strawberries and sugar alone.

Mr. SOMMERVILLE: That is the kind mother used to make. She never put anything else in.

Mr. YOUNG: She did not make jam; she put it in a bottle with juice in it. It was not jam.

Mr. SOMMERVILLE: Now, the next bottle you bought is this one entitled "Raspberry jam with added fruit, pectin and colour". That would be under 2A of the regulations, and that was bought for 11 cents.

(Jar of Gold Medal Raspberry jam, filed marked exhibit 174.)

By Mr. Sommerville:

Q. Do you know what weight that is?—A. No. That is for the public to guess. It is sold to them. They are suckers when they buy it. This store assured me that it is the purest jam that can be bought—raspberry jam with added pectin and colour, and I paid 19 cents for that raspberry jam.

Q. Do you know how much there is in this?—A. With added pectin and colour under your government regulations.

(Jar Sunrise Raspberry jam, filed, marked Exhibit 175.)

Q. You do not know the weight in it.—A. No. Here is the same grade. This is Crosse & Blackwell's raspberry jam with added pectin and colouring. I bought this as the purest jam I could buy. I was assured of that by the salesman that that is what it was.

Q. It has got seeds in it?—A. Yes. I took a witness along with me.

Mr. YOUNG: Are you sure it is not timothy seed?

Mr. SOMMERVILLE: You are getting on to some of the secrets of the jam business.

(Jar of Crosse & Blackwell raspberry jam filed, marked as Exhibit No. 176.)

By Mr. Sommerville:

Q. It was bought for how much?—A. 21 cents.

Q. And you don't know the weight of it?—A. No. The other was 19, and that was 21, the same government label standard on it. We went into this store and asked for pure strawberry jam, and he had two funny looking bottles there, so we took the two of them. On examination we find that this one is pure strawberry jam, 12 ounces; and this one which is also sold as pure strawberry jam, is strawberry jam with added pectin and colouring.

Q. Let me see that bottle. 12 ounces of pure strawberry jam. What was the price of that?—A. 25 cents.

(Jar of Crosse & Blackwell pure strawberry jam filed, marked Exhibit No. 177.)

The WITNESS: And that jar is 39 cents. That is 12 ounces.

By Mr. Sommerville:

Q. 12 ounces is the small one?—A. Yes.

Mr. YOUNG: Is that net?

Mr. SOMMERVILLE: It says net, yes. This is Crosse & Blackwell's strawberry, with added pectin and colouring, price 29 cents, and there is no weight on it, but from the size of it it looks like a 32-ounce bottle like the rest, the bottle with the shoulder.

By Mr. Sommerville:

Q. This last bottle was sold to you as pure strawberry jam?—A. Yes.

(Jar of Crosse & Blackwell's strawberry jam filed, marked Exhibit No. 178.)

By Mr. Ilsley:

Q. If they don't have any weight on them, are they not a standard weight?—A. I don't know. I am one of the innocent public in this matter, and I know nothing about it. But what I am wishing to point out is that there is a great variation in the price. And what do you know—I am going to ask you a fair question—what do you gentlemen know of what it means when it says, "With added fruit pectin"? Have you any idea? Do you think the average public has any idea of what that means? Do they know how much dilution there is in that jam, or anything about it? Is it a fair deal to the consumer or to anybody else?

Q. Well, if they don't know or care— —A. How can they find out? There is no way they can find out that I know of.

Q. Perhaps it does not make any difference to them.

Mr. SOMMERVILLE: This jam that was referred to this morning is advertised at 25 cents, Eatonia strawberry jam, specially packed with higher fruit content than regulations require, with this special price of 25 cents, and somebody got it off the wrong shelf and paid 34 cents—May 15. This is called "Eatonia strawberry jam with added fruit and pectin, contains colouring." That apparently is a 32-ounce bottle.

(Jar of Eatonia strawberry jam filed, marked Exhibit No. 179.)

By Mr. Kennedy (Winnipeg):

Q. Before you go on with that, I want to get a point straight. These containers do not have the weight of the jam on them?—A. Can you see it there?

Mr. SOMMERVILLE: No.

By Mr. Kennedy (Winnipeg):

Q. I cannot see it, but you have examined it?—A. Some of them do. A few of them do.

Mr. SOMMERVILLE: One did.

By Mr. Kennedy (Winnipeg):

Q. But not regularly?—A. No.

Q. From your experience in looking at them, you can't tell us the differential in weights?—A. No, I don't know. I think they are supposed to be 32 ounces, but I don't know.

Q. That is what I want to get, whether or not the general impression is that they are a standard weight?—A. I could not tell you. I know that some of them are not 32 ounces. They may be 16, and some are 12.

By Mr. Edwards:

Q. You suggest that the net weight be shown plainly on the bottle?—A. Yes, and not only the net weight, but the contents.

By Mr. Kennedy (Winnipeg):

Q. And that they be standardized?—A. Yes.

The CHAIRMAN: Of course, I think what Mr. Reynolds is driving at is this: You may have a jam which is sold to the public which they think is pure, but which may contain only 15 per cent strawberries.

The WITNESS: Certainly?

The CHAIRMAN: And another bottle of the same size which is pure or which is as nearly pure as it can be made, would contain about 50 per cent of strawberries.

Mr. SOMMERVILLE: The minimum is 55 per cent of strawberries.

The CHAIRMAN: His argument is that it cannot be claimed that a cent or so a pound on the raw material can materially affect the packers or the jam manufacturers' price.

The WITNESS: That is one point that I wish to make. Look at the variation in the price of these, and with that variation in the price of jam, what does a cent or two a box amount to on the strawberries?

The CHAIRMAN: Quite so.

The WITNESS: With a pound of jam, it amounts to practically nothing.

The CHAIRMAN: That is your main argument.

The WITNESS: That is one of my leading arguments. The other one is this, that we as growers have been told by one jam manufacturer—I have been told by three different jam manufacturers: "We don't buy many strawberries any more; we don't need them." One man said, as stated in that brief, that a few years ago he took 4,000 crates of strawberries to manufacture his jam, and last year he used 900 to manufacture the same quantity of jam. As a result of that, our principal and leading market has been taken away from us. We have to put out a pure article and deal fairly and squarely with the public on it. Why should the manufacturers be allowed to take our product that we produce, and do things with it which we are not allowed to do? They take that product and they sell it to the public as strawberry jam. But it only contains a very small percentage of strawberries. We object to the use of the word "strawberry" there. I think in this argument I am making that the majority of the jam makers are with me. Some of these jam makers have spent an awful lot of money in advertising, and putting out a standard brand of jam, and had their business ruined by one of the—we fought this matter out to get this put on the labels some years ago, and they are put on the labels. They are put on there in a rather contradictory way. Here is a strawberry jam or raspberry jam with other fruit juice. "Note: Words 'With other fruit juice' must follow directly after or immediately below words 'Strawberry jam'. They must be shown in letters at least one-half height and of equal visibility as the words in naming the jam."

Then down below that is strawberry jam with added pectin, and raspberry jam with added pectin.

> NOTE: If colour or preservative is used, the label should show the declaration of presence of same as follows: Contains artificial colour; contains benzoate of soda; or contains artificial colour and benzoate of soda.
>
> This declaration to be in type not less than one-eight of an inch in height.

By Mr. Kennedy (Peace River):

Q. Why should not the labels have a statement on them saying exactly what is in the jam?—A. That is what we want to know.

By Mr. Sommerville:

Q. Your argument is that if the jar bore a label showing the content of strawberries and the content of other ingredients, the public would know what they were buying?—A. Yes.

Q. That it would be in the interests of the growers?—A. Yes.

Q. Because they would then buy the better quality of product, and not that which has the other ingredients in it. Is that your argument?—A. We contend further than that, that they should not be allowed to use the word

"strawberry" or the word "raspberry", or the name of the fruit on a jam that contains less than 30 per cent of the product.

By Mr. Senn:

Q. Could you say whether the other ingredients, other than the strawberries in those jars, have the same food value, or more or less food value than the strawberries themselves?—A. I don't know anything about that.

By Mr. Edwards:

Q. What are the other ingredients?—A. Mostly pectin, I believe. They are defined in the government regulations, which can be got.

Mr. SOMMERVILLE: We have a jam manufacturer who will tell us what they are.

Mr. FACTOR: Pectin is made out of apples, I understand.

The WITNESS: Here we are, fruit.

> Fruit: Where a percentage of fruit is required it is deemed to be fresh fruit or its equivalent in preserved, dried or otherwise prepared fruit, e.g. 55 per cent strawberries would be equal to $82\frac{1}{2}$ 2 plus 1 strawberries, or it would require 75 pounds or more, water-pack raspberries to equal 50 pounds fresh raspberries.
>
> Sugar: Where sugar is mentioned it is understood to include cane or beet sugar or invert sugar syrup. It does not include glucose, corn syrup or other sweetener.

Then it goes on with other fruit. Then fruit pulp:—

> For the purpose of the regulations respecting jams, jellies and marmalades, fruit pulp is the manufacturer's intermediate product made by boiling clean, sound whole fruit or parts of fruit and removing the inedible portion therefrom.

It does not say what kind of fruit. They can put wild bananas in it, if they want to.

By Mr. Factor:

Q. Let me ask you this: You, as a strawberry grower want to put more strawberries in?—A. Certainly.

Q. What about the growers of other fruits, those from which this pectin and other ingredients are made? What would they say if you eliminated them?—A. If they are going to put theirs in, it should be sold as such, not sold as our product.

By Mr. Kennedy (Peace River):

Q. What is benzoate of soda? It is not allowed in England, I understand?—A. Well, I am not altogether a chemist. I think the department could answer that question.

Mr. SOMMERVILLE: Perhaps our jam man can tell us.

By Mr. Sommerville:

Q. Before you proceed, Mr. Reynolds, there are a couple of other bottles that you produced here that have not been identified; or a statement has not been made as to what they are here for. Perhaps you can give us those?—A. They were bought as jure jam.

Q. This is a jar of Old City?—A. Yes.

Q. Raspberry jam with added pectin and colouring?—A. Yes.

Q. A 32-ounce bottle?—A. That was bought there, at that store (indicating).

Q. And that was bought—A. We were assured that was the purest jam that could be bought. Nothing to it.

(Jar of Old City raspberry jam filed, marked Exhibit No. 180.)

By Mr. Sommerville:

Q. With reference to this last jar, Harvest brand strawberry jam with added pectin and colouring, what are the circumstances or information—you will give evidence with respect to that later. We will leave that.

The CHAIRMAN: Are you going to put that in?

Mr. SOMMERVILLE: No, not at the present time.

By Mr. Sommerville:

Q. Now, what further have you?—A. Well, we have possibly one other grievance. It affects us rather seriously. After years of struggle we obtained a duty on raspberry pulp which was imported principally from Tasmania. The climatic conditions there are conducive to enormous yields of a poor quality of raspberry. It makes a jam very dark in colour and poor in flavour. It is used as a base for raspberry jam quite a bit, and also is used for manufacturing jam, alone, with added flavour. The duty was only on a short time when, out of a clear sky, it was removed by the Australian treaty. This pulp receive a government export subsidy, and in six months after the duty was cut off, at least two years' supply for Canada was stored in Montreal and offered at six cents per pound. Raspberries can't be grown in Canada profitably for much less than twice that, but are of a far superior quality.

By Mr. Kennedy (Winnipeg):

Q. I take it you are in favour of a duty on any such commodity coming in in competition with local growers?

By Mr. Factor:

Q. It was under the empire agreement?—A. Yes.

Mr. KENNEDY: Let him answer my question, Mr. Factor.

The WITNESS: What was it?

By Mr. Kennedy:

Q. I take it that you are in favour of a duty on such commodities coming in in competition with local growers?—A. Yes.

Mr. FACTOR: You will have to revise the empire agreement, Mr. Chairman.

The WITNESS: But the point we are making is that that comes in here under a government subsidy from the government of the country it comes from.

By Mr. Kennedy (Winnipeg):

Q. That is an element of unfair competition that you want corrected by a duty?—A. Yes. We can't object to those products coming into our country, but we certainly do object to them coming in when they are coming in under subsidy from the country from which they come.

Q. I agree with you.

By Mr. Sommerville:

Q. With regard to these pulps, these raspberry pulps are taken by the manufacturers of jam and are made the base for jams manufactured by them?—A. Yes. And you go to sell them raspberries, and they will promptly tell you, "We can't pay you any big price for your raspberries because we can buy this stuff."

Q. And that complies with the law because it is raspberry?—A. Yes.

By Mr. Young:

Q. Are there no manufacturers of jam in this country who want to put out a quality product, and who are willing to buy the better quality Canadian

berries?—A. Yes, there are and they do. There is no question about that. But they are up against it with the man who does not do that, and sells this cheap product that undersells him all the time. There is one other thing I wish to point out in the regulations, and that is this: For instance, we will take that Gold Medal jam. That is a brand that is put up, I believe, by the National Grocers. It is allowed, under the government regulations, to label them with the second seller's label; the second handler of them is allowed to label the stuff with his name on them.

By Mr. Sommerville:

Q. It is not the name of the manufacturer at all?—A. No, it is not the name of the manufacturer.

Q. The name of the distributor is on it?—A. That jam may be manufactured by half a dozen different manufacturers. I don't say that these people do it. But I do say—at least, I have been told by jam makers that it is done, that there are a number of small concerns that will jump into it, if there is a glut in the market on fruit, and buy a lot of cheap fruit, and they will put it up in the lowest grade of jam. Then they will sell it to one of these chain store organizations, and put that chain store's label on it. And they set the price for the good jam that is manufactured in the proper manner by the jammer who is trying to manufacture the best, trying to do the right thing. That works a hardship on him, and that reflects back on the grower.

By Mr. Edwards:

Q. Is your point that the manufacturer should have his name on his product?—A. Certainly. Why should not he?

Q. I am not saying why should not he. But you say he should?—A. Yes.

Q. That is right?—A. That is allowed under the regulations, that a distributor may put his name on there. Let the distributor put his name on if he wants to, but also have the manufacturer's name on.

Q. But it must be identified?—A. Certainly.

By Mr. Factor:

Q. How long have these regulations been in force?—A. They came in force in November, 1930.

Mr. Sommerville: There were regulations before that.

Mr. Factor: What is the joke?

Mr. Edwards: That is a saucy answer.

The Witness: There were regulations before that didn't allow these words put on there: "With added pectin and flavour or fruit juices." They had to put up a good quality of stuff before that. With the coming in of this—well, they were diluting the jam before that, but they didn't put it on the labels. Then the manufacturers got permission to put that on the label, in that little bit of print and in language that it is impossible for the average consumer to understand what he is buying.

By Mr. Factor:

Q. In other words, before the regulations were amended they bought "Strawberry jam" that was either made out of that or other ingredients?—A. Yes. They were required more or less to turn out a higher quality of jam. I don't think they were allowed to put out these low grade jams at all.

By Mr. Sommerville:

Q. At the present time, all they require to tell you of the product is, if it is this second grade, "Strawberry jam with pectin"?—A. Yes.

Q. They don't have to tell you what else there is in the product?—A. No.

Q. And you think they should?—A. Yes.

Q. And then you say that this has been made to a price; the variation is because of a desire to make it to a price?—A. That is what the jammers tell us.

Q. And they have not a desire to do it, but it is made to suit a demand for a price?—A. Yes.

Q. And that accounts for the variation that you have given us in the price to-day, and because of the proportion of fruit that is used in this particular grade of jam, and that a small amount of a cent a box to you would not be reflected in any serious increase to the purchaser?—A. Five cents a box would not.

Q. Five cents a box would not increase the jam more than one cent?—A. It would not increase the jam more than one cent.

Q. In a 32 ounce jar?—A. Five cents would not be noticed in the spread that is being put on the different prices that these jams have been sold by the retailers that have been produced here to-day, which are labelled as the same quality jam.

Q. Five cents a box?—A. No, sir.

By Mr. Kennedy (Peace River):

Q. Can you give us a statement of the prices paid for strawberries in the last five years; can you file that with the committee?—A. Yes.

Q. We should like to have it.—A. I cannot file it to-day; I would have to go home to get it.

By Mr. Young:

Q. You spoke about the duty on pulp. Will you tell us about the duty on baskets?—A. What do you want to know about it sir?

Q. I understand you can get baskets much cheaper in the United States than you can in Canada, but the government would not permit you to buy them unless you paid an extra price?

The CHAIRMAN: Parliament.

The WITNESS: Well, I wish to state that we purchased crates in our association the other day—well, yesterday, as a matter of fact, and I showed, or told the manufacturer of crates who was asking us the price of 24 cents for a 24 box crate, that; and he explained that he could not make that crate and come out reasonably under that price. Last year we paid him, I think, 21½ cents for the same crate. Last year we paid him \$3 or \$3.90 for baskets. This year the price for the baskets is \$5.50 with 10 per cent off to the association handling them.

By Mr. Sommerville:

Q. A hundred?—A. A thousand.

Q. These are small shrubbery baskets?—A. Yes. The price of those baskets in Kentucky, a better grade, made of better materials and better made, materials which could not be obtained in Canada, because they use gumwood which holds nails much better than any wood we have, was 12½ cents, f.o.b. Paducah, Kentucky.

Q. 12½ cents; what quantity?—A. Apiece; 24 cents in this country.

The CHAIRMAN: What is the freight?

The WITNESS: It works about between 19 and 20 cents delivered in Canada.

By Mr. Kennedy (Winnipeg):

Q. Do you know anything about the labour conditions under which they are made down there?—A. Yes, I know it is very cheap labour, mostly negro labour.

Q. Much cheaper than the labour up here?—A. Yes, sir, and their baskets over there, I am not quite positive of the quotations, but I think it was $3.50 a thousand.

By Mr. Sommerville:

Q. Against $3.90 last year?—A. Yes, and $4.90 this year.

Q. $4.90 net this year?—A. Yes, to an association; the regular price is $5.50.

Q. Laid down here these baskets would be what?—A. I cannot tell you exactly off-hand what it would be, but they would be somewhere in the neighbourhood of the same price, very little difference in the price.

Q. In the Canadian basket and the basket brought from Kentucky?—A. Brought in here and the duty paid, a marked difference in the price of the crate and a better crate. Nevertheless, we bought our crates and boxes from the Canadian manufacturers, because we believe in supporting Canadian industry. We prefer to pay a higher price and we do so, but it is a fact that we can buy them cheaper by importing them.

By Mr. Edwards:

Q. You cannot very well sell your product to the makers of baskets in Kentucky?—A. No, but I can tell you we have done it. We can sell our berries in the States, and if we do that we can get a rebate on the crates and baskets and it is quite a considerable item.

Q. Another factor is in bringing light bulky baskets from a long distance. They are bulky, and they are subject to a very high freight rate?—A. No; they can be knocked down, 3,300 crates in a box, and they all go in one car.

Q. Is not there a very great competition in Canada among the basket manufacturers?—A. There is none whatsoever.

Q. No competition?—A. No, sir.

Q. Are not there a lot of people making baskets?—A. The prices are all the same, and the same companies do not sell in the same area.

Mr. Factor: Did you not hear about the box manufacturers being fined?

By Mr. Young:

Q. I did not get an answer to my question?—A. What is your question?

Q. My question was this: could not you buy baskets in the States at a certain price which our customs' department would not allow you to pay? They insisted on your paying more, or else paying additional duty?—A. Well, I cannot answer that offhand. I have not bought any baskets in the States for some time, because we do not believe in it, unless we are going to ship to the States, and in that case we are forced to do it, on account of the enormous difference in prices.

Mr. Sommerville: You get a rebate?

The Witness: 99 per cent of our duty back.

The Chairman: What is the duty, 10 per cent?

The Witness: No, sir—I cannot tell you offhand, but I think it is 30.

Mr. Ilsley: On the crates?

The Witness: Boxes and baskets both, and then they add freight on before the duty is taken off.

By Mr. Kennedy (Peace River):

Q. What about the duty in the case of a crate of strawberries, Canadian baskets against United States baskets?—A. Well, at the present time, I do not think it would be but very little, because if you entered 4,000 baskets, that would be about $1.60.

Mr. SOMMERVILLE: Is that on an average of 2,000 crates?

The WITNESS: $6.50.

By Mr. Young:

Q. Will you tell us about the duty on fertilizer? You are not very far from the American border, are you?—A. I cannot tell you anything about it.

Q. What is to stop you from bringing your fertilizer from the States?—A. Well, in the first place the average grower does not know how to go at it.

Q. Somebody would develop a business if there was an opening there?—A. Well, I understand that the same people control a good deal of the interests in the States that they do over here.

Q. Do you know anything about the prices in the States?—A. There are men coming after me who know all about that.

Mr. SOMMERVILLE: I understand the ingredients are free?

The WITNESS: I do not know anything about it.

By Mr. Senn:

Q. You just made a statement that the same interests control the fertilizer companies on both sides of the line? Are you certain of that?—A. I can only say in regard to potash, especially, and nitrate of soda.

Q. That does not make the fertilizer. These are only ingredients?—A. I never buy anything but ingredients.

Q. Do they not come in free of duty? I think you will find that to be so? —A. I do not know.

Q. Do you think the basket manufacturers are making undue profit at the price they are offering those baskets to you to-day?—A. As to that I cannot say; but I do know that the basket manufacturers have been carrying an immense credit account; that due to the terrible conditions in the industry, a great number of growers have not been able to pay for crates and baskets, and they have enormous outstanding accounts which they figure in their overhead.

Mr. SOMMERVILLE: Very large losses have been sustained.

The WITNESS: Yes.

By Mr. Senn:

Q. Do you think that the price charged by the Canadian Basket manufacturers at the present time is unfair?—A. You would have to have an accountant go through their books to determine that. I cannot tell you offhand.

By Mr. Sommerville:

Q. You gave us a figure a few moments ago to show that if you put American baskets in Canada you had figured on the basis of 4,000 baskets to the crate?—A. Yes.

Q. I think we had evidence given us here to show that on an average there have been 2,000 baskets to the crate?—A. Yes.

Q. Is that correct?—A. Probably.

Q. That would mean that the difference would be about $3 a crate on the basis of 2,000 baskets to the crate?—A. Yes, sir.

Witness retired.

Mr. E. M. SMART, called and sworn.

By Mr. Sommerville:

Q. Mr. Smart, what is your business?—A. Manager of the Canning plant of Smart Bros. Limited.

Q. Located where?—A. Collingwood.

Q. And your people are both growers and canners, are they?—A. Yes, sir.

Q. Both growers, canners, and jam manufacturers?—A. Yes, sir.

Q. And have been for some years?—A. Yes, sir.

Q. Now, we have had some evidence here to-day with reference to the various grades and qualities of jam. Perhaps you could give the committee the benefit of your knowledge with respect to this industry, and what has been happening in the last few years with respect to how it affects the growing of raw fruit, and the use of raw fruit in these jams?—A. My personal observations are that the present pectin jam containing 30 to 35 per cent of fruit is preferable to the average consumer over what is known as a pure jam, under the regulations.

Q. Yes?—A. It is not too rich, and in use it is much appreciated by the consumer.

Q. Yes. What else goes into the jam with strawberry, for instance; when you have 32 per cent of strawberry, what else have you?—A. Pectins and sugar.

Q. Are there any other ingredients?—A. Not that I know of, unless it is specified on the label.

Q. Those are the only ingredients. In what jam does the pulp go?—A. Pulp would be used in a compound jam. You mean, apple pulp.

Q. Any kind of pulp, what pulps are used?—A. Strawberry, raspberry, citron and frozen fruits.

Q. What other pulps are added to strawberry and raspberry?—A. In what grade of jam?

Q. In the cheaper grades of jam?—A. I believe that pulp is used rather extensively; that is the only other ingredient that I know of that is used to any account.

Mr. KENNEDY (*Winnipeg*): Will you have the witness define what pectin is?

Mr. SOMMERVILLE: All right, what is pectin, Mr. Smart?

The CHAIRMAN: As used in a bottle of jam, that is what you mean?

Mr. KENNEDY (*Winnipeg*): Yes.

The WITNESS: I think it would take the Douglas Packing Company, who manufacture pectin, to give you a definition of what it is. I do not know.

By the Chairman:

Q. Can you tell us how it is supposed to be made?—A. It is supposed to be made out of apple and other types of fruit.

By Mr. Sommerville:

Q. Yes?—A. Apples principally.

Q. What does it do, what is the effect of it, what is the purpose of it?—A. Creates a jell.

Q. Creates a jell?—A. In the jam.

Q. And what quantity of pectin would be added to the 32 per cent of the strawberry in the jam?—A. The regulations call for four pounds.

Q. Four pounds for 32 pounds of strawberries?—A. Yes.

Q. And then in addition to that, what else; what are these other ingredients, sugar and water? Now, Mr. Smart, has there been a dropping off in the quantity

of strawberries used in the manufacture of strawberry jam of late?—A. Not in our plant.

Q. That is, to make the same quantity of jam that you made five years ago, do you use the same quantity of strawberries?—A. Exactly.

By the Chairman:

Q. Mr. Sommerville, Mr. Smart said I think in his opening remarks, he used the term 35 per cent of strawberry was used in jam; did you not use that term?—A. Yes.

Q. What about these lower grades that are labelled 15 per cent?—A. Our company does not manufacture any of those grades, so that it would be impossible for me to answer your question on that subject intelligently.

Q. You could not answer that question?—A. No.

By Mr. Sommerville:

Q. What do you say with respect to the competition of these lower grade jams with your own?—A. Competition is severe.

Q. What effect has it on the better grade of jam?—A. It has curtailed our sales.

Q. Has there been a substantial increase in the quantity of these lower grade jams being manufactured in the last few years?—A. I do not know that.

Q. You do not know that?—A. No.

By Mr. Young:

Q. Does it sell cheaper than your own?—A. Our sales have been curtailed. for what reason I do not know; that would be the better way to put it.

By Mr. Kennedy (Winnipeg):

Q. Don't you know whether this lower grade jam has displaced it?—A. There is supposed to be a depression.

Q. Yes. I do not care much whether you answer it, I am just trying to clear up the point. You say your sales have been curtailed, and you mention that this lower grade jam is severe competition; are you not trying to get clear as to whether or not this lower grade of jam is gradually displacing the better type of jam. That is the point?—A. I do not know.

Q. I thought, being a manufacturer, you would know.

By Mr. Young:

Q. Does this jam sell cheaper than yours?—A. Well I presume that it does.

Q. You do not know how much?

By Mr. Kennedy (Winnipeg):

Q. Are you the manager of your business, might I ask?—A. I am manager of the canning company.

Q. But you have nothing to do with the sales end of it?—A. Yes, I have.

By the Chairman:

Q. You have some reluctance to answer these questions. We do not want actually to press you, but we are anxious to get at the facts. If you have any reluctance to explain why I am sure the committee will be very reasonable with you?—A. Well, the sale falls off on some of your products, and you are not just sure why. You keep trying to get more business, and delve into it, and try to find out why. This is just a matter of competitors doing more business. Our company cannot find any fault with that, because they possibly have been a little smarter in getting business.

By Mr. Kennedy (Winnipeg):

Q. But you do not investigate why it is their product has displaced yours?—A. Not necessarily, sir.

Q. Do you?—A. We have our own opinion.

Q. What is your opinion?—A. Our opinion is that our price is too high.

By the Chairman:

Q. Why?—A. Because we won't sell at a loss, we will do without the business first.

By Mr. Young:

Q. Do you put up a better product?—A. We think we put up first class products.

By Mr. Kennedy (Winnipeg):

Q. Then it comes down to the cheaper jam displacing your product?—A. Well, price rather rules the situation.

By Mr. Sommerville:

Q. Rather than quality?—A. We think that has a great influence on it.

By the Chairman:

Q. Do you find any retail organizations coming to you in the last few years and demanding an article to sell at a given price?—A. No.

Q. You have never experienced that?—A. No.

Q. How do you market, do you send your travellers out?—A. We have no travellers.

By Mr. Sommerville:

Q. How do you market your goods then?—A. Through brokers.

Q. And you have not had any requests to make goods at a certain price for any organization?—A. No, sir.

By Mr. Young:

Q. You have never made any investigation as to how much your trade is higher than the others?—A. Well, that investigation would have to cover the other fellow's prices. There is no combine that I know of. We feel that we would secure more business if our prices were equal or lower.

By Mr. Sommerville:

Q. What do you say, Mr. Smart, you have heard the statements made by Mr. Robinson in reading from his brief to-day on the jam situation; is there anything in that brief that you take exceptions to, or with which you do not agree?—A. Well, my name is not signed to that brief. There was one place where one claim was made, that some jam manufacturers had 15 per cent of berries in their jam.

Mr. YOUNG: 10 per cent?

The WITNESS: 10 per cent or 15 per cent. Of course, I have no way of knowing that and I am not responsible for that statement.

By Mr. Sommerville:

Q. You are not responsible for that statement?—A. No.

By the Chairman:

Q. You say it is not so in your case?—A. It is not so in my case. That is the limit of my knowledge.

By Mr. Sommerville:

Q. But did you consult with Mr. Robinson and give him certain information in connection with the jam manufacturing business?—A. I have talked to Mr. Robinson on the jam business, yes.

Q. And when he was preparing the brief for presentation here to-day you knew that he was presenting the brief?—A. I never saw the brief until to-day.

Q. That is not the point, Mr. Smart. I was asking you if you knew he was presenting this brief here to-day.—A. Well, I suppose I had an idea to that effect, but no person informed me directly that he was going to present a brief.

Q. Well, my reason for asking you is because when the brief was presented it was stated that certain witnesses would support the statements contained in the brief, and your name was one of those that was given to us. Did you have any discussion with Mr. Robinson and others in connection with the problems of the grower with respect to the canning and manufacturing of jam?—A. A general discussion, yes.

Q. What phases of it did you discuss wtih him? What are the difficulties that the grower is up against at the present time, Mr. Smart, in the manufacture of jam?—A. In the past three or four years there is no doubt the grower has been up against the difficulty of merchandising fruit to the canners and to the general public by below cost of production.

Q. There is no question of that, is there?—A. Not in my mind, no.

Q. And how do you account for his being obliged to sell to the canners at less than the cost of production?—A. General conditions is one of the contributing factors.

Q. What other contributing factors are there?—A. Well, a great many people are out of work and they turn to a garden or a means of providing a livelihood, and that has created a surplus in the market that is not visible in a commercial way.

Q. Yes?—A. But it is so in every town and city.

Q. Any other factor? Has the severe competition among large distributors, large retail organizations, had any effect upon the grower?—A. I have had no dealings with them in the line of goods and cannot answer the question.

Q. You do not know?—A. No.

By the Chairman:

Q. In this brief there are one or two statements. At page 18 Mr. Robinson has this:—

> A lot of the supposed to be high quality jams to-day have not near the amount of high quality fruits in them that the ordinary canned and preserved fruits had a few years ago.

Do you endorse that statement?—A. I would pass no comment on it. I would not endorse it because I do not know. I would suggest that it be referred to the Department of Agriculture to take these samples and grade them, test them and find out if that is so.

By Mr. Sommerville:

Q. But in your years of experience as manager up there have you not come across any of these conditions that have been referred to?—A. What particular conditions?

Q. Well, the condition that Mr. Robinson has read with respect to the jam manufacturers.

By Mr. Factor:

Q. What is the name of your company?—A. Smart Bros. Limited.

Q. Who are interested in the concern?—A. It is a family concern.

Q. It is a family concern?—A. Yes.

Q. And you have no connection with any other company?—A. We are independent, no connection.

Q. Have you discussed the matter of this problem of jam with any other canning concern?—A. Not till to-day.

Q. And with whom did you discuss it to-day?—A. I was speaking to Mr. Bell of the Canadian Canners, sitting with him back there for a few minutes, and talked about jam in a general way.

By Mr. Sommerville:

Q. Yes, and did he give you his brief on the jam situation, or did he show it to you?—A. He told me a few things about jam, just a general outline, that he claimed his company were not using anything except government regulations; that was about the limit of it.

By Mr. Factor:

Q. What else was discussed?

Mr. ILSLEY: I do not know why he should be cross-examined.

Mr. SOMMERVILLE: No, perhaps not.

By the Chairman:

Q. Do you agree with this statement:—

> "Some of them started out to cut the amount of fruit used, substituting pectin and apple products, glucose, etc."

A. Government inspectors examine all factories at regular intervals and take samples and check, and if that situation existed it should have been checked up.

By Mr. Sommerville:

Q. Do you know anything about the change in the use of sugar and syrups, increasing the use of syrups instead of sugar, Mr. Smart?—A. No, I do not.

By the Chairman:

Q. Do you use sugar or syrup?—A. We use sugar.

By Mr. Sommerville:

Q. What are the syrups that are referred to in the manufacture of jam?—A. I believe they refer to —syrup.

Q. And do you know whether or not this is one of the ingredients used in the manufacture of cheap jam?—A. I do not know.

By Mr. Young:

Q. Do you do any canning? You do not can tomatoes, do you?—A. Yes, sir.

Q. Tell us about these contracts you have with the growers of tomatoes.—A. Our contracts?

Q. Yes?—A. We contract with the growers in February for an acreage of tomatoes. The contract is not limited, and we have never reduced our price below 30 cents a bushel.

Q. That is to say you take all their product?—A. Yes, sir.

Q. You do not confine yourself to 200 bushels to the acre?—A. No, sir.

Q. You take all their product and you never go back on your product?—A. In the fall of 1931, in October, there was an early frost and we limited the delivery.

Q. Because the quality was damaged?—A. That was in October.

By Mr. Sommerville:

Q. But you had taken delivery right up to then, had you?—A. That was the only occasion that we never took full delivery.

By Mr. Young:

Q. Then these complaints to not apply to you?—A. I do not know. We have had no personal complaints.

By Mr. Sommerville:

Q. Well then, buying your tomatoes at 30 cents, do you sell these through brokers also?—A. Yes, sir.

Q. And what organizations are they sold through, the large chain stores or individual retailers?—A. Chain stores, wholesalers.

Q. Chain stores and wholesalers?—A. Yes, sir. No retailers.

Mr. SOMMERVILLE: Well, thank you, Mr. Smart.

The WITNESS: There is one thing: We have no federal inspection of provincial canning factories or jam factories when they sell within the province; they do not come within the federal inspection in the same way when we export outside of the province.

By Mr. Sommerville:

Q. Yes, federal laws apply to all those companies which export from the province?—A. Yes.

Q. Or interprovincial trade?—A. Yes.

Q. But companies that operate and sell their product entirely within the province are not subject to federal regulation. What effect has that?—A. Well, I would just like to make a recommendation, that all canning factories and all jam companies be subject to federal inspection and regulation; also a minimum wage be established for canning factories and preserving factories in a federal sense, which would give us as well as other canners a chance to pay better prices to the growers. We would not be suffering from unfair competition.

Q. Yes. What have you found with reference to the competition from these jam manufacturers who are entirely within the province and do not do business outside the province? What observations have you to make to the committee on that kind of competition?—A. It is fair competition, but I still think that they should be federally inspected.

By Mr. Factor:

Q. What about the wages? You spoke about low wages. How are the wages?—A. The minimum wage regulations for Ontario are higher than in Quebec and lower than in British Columbia for female employees.

By the Chairman:

Q. You think there should be a uniform wage?—A. We should have a common rate of wages.

By Mr. Kennedy (Winnipeg):

Q. Approximately how many employees have you in your factory?—A. An average of from 65 to 70 and a peak of 120.

Q. What proportion of that is female?—A. Seventy-five per cent.

Q. What is their average weekly wage or earnings?—A. Well, the government regulations require—

Q. I know what the government regulations require, but what is their average earning?—A. Throughout the summer?

Q Yes?—A. I have not got that. I did not come prepared with anything like that.

Q. But you know approximately. Take during the season when they are actually canning, what do girls earn?—A. They should earn in the neighbourhood of at least $12 a week.

Q. In the neighbourhood of at least $12 a week?—A. Yes.

Q. Can you say anything as to the condition throughout Ontario in canning factories as to what girls actually earn and receive?—A. Well, I believe that the regulations are enforced.

Q. Well, what about your own case, your factory?—A. They enforce them in our plant.

Q. They enforce the regulations in your plant?—A. Yes, they do.

Q. They do?—A. Yes.

By Mr. Young:

Q. What months do you operate in the year?—A. How many months?

Q. Yes?—A. Approximately five months.

Mr. SOMMERVILLE: Thank you, Mr. Smart.

The CHAIRMAN: It is almost six o'clock. We will adjourn until eleven o'clock to-morrow morning.

The committee adjourned at 5.55 p.m. to resume on Friday, May 18, at 11 a.m.

HOUSE OF COMMONS,

ROOM 368, May 18, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C. of Toronto and Mr. W. W. Parry, K.C. of Toronto appeared as counsel for the committee.

The CHAIRMAN: The minutes of yesterday's meeting record the names of the witnesses heard and the list of exhibits filed. I declare the minutes approved.

I have here a communication from Mr. Francq of the Minimum Wage Board of Quebec. The communication contains a statement of the textile industry showing the number of firms and the number of employees in the three classifications, the knitting mills, cotton mills and silk mills, first in the city of Montreal and then the province of Quebec as a whole. It shows the number of firms reporting and the firms employing workwomen, piece workers, time workers, and the average weekly wages received and the average weekly basic wage. It also includes Minimum Wage board typical orders No. 5 and No. 6, giving the rulings of the board on certain phases of employment. These are filed as exhibit 181, and are available to members of the committee.

Communication from Mr. Francq *re* Minimum Wage board, province of Quebec, filed and marked exhibit 181.

HENRY WILLIAM HUNT called and sworn.

By Mr. Sommerville:

Q. Mr. Hunt, what is your occupation?—A. I am a fruit and vegetable grower.

Q. One of the men of the land?—A. Yes.

Q. And where is your farm?—A. Northumberland.

Q. In Northumberland county?—A. Yes.

Q. Whereabouts do you live?—A. Brighton.

Q. That is in the heart of a very large fruit and vegetable growing district?—A. Yes, sir.

Q. And your county is close to the very large fruit and vegetable county of Prince Edward?—A. Very close.

Q. So you have a large area devoted to fruit and vegetables?—A. Yes.

Q. In that area you do a very large business, I understand, with the canning companies?—A. Yes.

Q. Then, the farmers growing vegetables do not market them ordinarily through the basket method?—A. No.

Q. They market them practically entirely with the canning company?—A. Yes.

Q. You are then, dependent upon the canning companies for your outlet for the product of growers?—A. That is right.

Q. Are you a member of the Northumberland county canning group association?—A. Vice-president.

Q. You are vice-president? You have been associated with this business for a great many years?—A. Twelve years.

Q. Now, you heard the brief read by Mr. Robinson yesterday, and I shall ask you to be good enough to give this committee the benefit of your knowledge and information respecting the vegetable situation particularly. I understand you have a particular knowledge of tomatoes?—A. Yes, mostly tomatoes. In what line would you wish me to carry on with this?

Q. Tell the committee in your own way what are the difficulties that you and your association have in the matter of tomato growing with relation to canning companies?—A. Well, the chief thing we have against it is price. It cannot be grown for the price paid by the canners those last three years.

Q. That is, the crop cannot be grown for the price paid by the canners during the past three years?—A. No, they cannot, not under the canners' ruling of 175 to 200 bushels per acre.

Q. As a result are there accumulating debts and obligations in your district?—A. Oh, most certainly.

Q. What effect has the very low price that has been paid for tomatoes upon the growers?—A. Really, the growers have to go to the bank with the canners' contract to get money to pay last year's taxes, and still going in the hole all the time because they cannot produce this year's crop at a profit, and they are going down hill.

Q. Now, is that a general condition that is prevalent in a number of cases throughout your district?—A. Oh, a tremendous lot.

By Mr. Young:

Q. When they take those contracts to the bank, they can get money?—A. They certainly can. That is admitted by the bankers. We have got that admission from one of the bank managers.

By Mr. Sommerville:

Q. They can get money to pay the previous year's taxes?—A. I asked a bank manager if that was so, if he had that as collateral. He had a pile, up so much.

Q. He just raised his hand about a foot above the table to show how many he had?—A. About that.

Q. About that many contracts held as collateral for farmer's obligations? —A. Yes.

Q. At that particular bank branch?—A. Correct.

By the Chairman:

Q. Do you suggest, Mr. Hunt, that that fact forced the growers to accept contracts that otherwise they would not accept?—A. It certainly does; in my opinion it certainly does.

Q. You know the contract we had here yesterday?—A. Yes, I have seen them.

Q. You have seen lots of them?—A. Yes.

Q. What is your view of the contract, now, independent of the necessity of signing one for the purpose of bank credit??—A. Well, in my opinion, it is not a contract.

Mr. SOMMERVILLE: It is not a contract?

WITNESS: I do not think it is; it is not mutual between the two; it is all for one.

The CHAIRMAN: I would say it is rather an amazing contract, but we should like your view on that.

WITNESS: My view on that is, it is not a contract, and is very very unfair to the grower in any way at all.

By the Chairman:

Q. Would you say that is a representative view of the growers?—A. It is, sir; it certainly is.

Q. The grower resents having to sign an owners' contract of that kind?—A. Yes, they do resent it yet they are helpless.

Q. They are helpless?—A. Yes.

By Mr. Sommerville:

Q. They have got their farm and equipment, but they have no other outlet?—A. And people dunning them for money. They can go to the bank when they get one of those contracts and get cash to carry on with.

The Chairman: Did you ever find a loophole in the contract through which you could escape?

Witness: No, never did yet; the canners have lots of them.

Mr. Factor: I think it would be well to read one of the contracts in the evidence. I do not want to waste the time of the Committee but I think that could be done .

Mr. Young: I think we had the essential features read in by Mr. Kennedy yesterday.

Mr. Sommerville: We had two or three features. At this point we will just have a copy of the contract copied in the record and treated as though it were read in.

The Chairman: And it will be described as the contract which the witness has referred to.

TOMATOES

Read the Whole of This Contract Carefully.

CANADIAN CANNERS, LIMITED

HEAD OFFICE, HAMILTON, CANADA.

GROWER'S CONTRACT

I hereby contract and agree to grow and deliver during the season of 1934 to the Canadian Canners, Limited, hereinafter called the company, at its factory or elsewhere in Brighton if required by it the following produce in first class order and condition and when at its best condition for canning purposes and in accordance with the terms and conditions hereinafter set forth, which are hereby accepted and made part of this contract, the Company agreeing to pay me therefor the prices specified herein which are hereby accepted.

3 acres tomatoes at 27½ cents per bushel.

Canadian Canners Ltd to supply plants at $3. per M. Positively no payment will be made unless weight tickets are surrendered at time of settlement.

TERMS AND CONDITIONS.

Tomatoes.

Produce of all kinds must be strictly first-class in size, quality and condition; absolutely fresh, firm and clean and in the very best condition for the purposes required. Frozen, sunburnt, bruised, unsound, over-ripe, under-sized and underdeveloped specimens cannot be accepted.

Tomatoes should be of the large, smooth red varieties, not less than 2½ in. in diameter, solid, sound and clean, picked when red ripe and delivered fresh

picked, free from stems. Rough, undersized, jammed, bruised, sunburnt, or dirty tomatoes, or those partially ripe, green on one side or with yellow ends, will not be accepted.

Quality. The company, or its agent, is to be exclusive judge of the quality of all produce and of its condition and fitness for canning. When any produce is not judged to grade first class according to contract, a reduced price fixed by the company may be paid therefor, which must be accepted by the grower, or such produce may be rejected entirely.

Payment. Payment will be made for tomatoes on December 1st, or one half November 15, and balance December 15 next, subject to one per cent discount for payment in full on November 15, growers' option.

Crop Reports

Crop prospects must be reported weekly to the local office on postcards if supplied for that purpose. In case of failure to comply with this provision, it is agreed that other growers complying therewith are entitled, in case of congestion at the factory, to priority in the acceptance of their produce.

Seed

The company reserves the right to supply at reasonable prices all seeds necessary for filling this contract.

Crates

The grower must furnish all necessary tomato crates which must be distinctly and plainly marked for ready identification and shall be at all times at owners' risk. All tomato crates must be weighed back if requested.

No tomatoes grown under this contract will be accepted after October 1 unless the company consents to such delivery.

Delivery

Delivery shall commence as soon as the first of the crop is in suitable condition for delivery and is available in sufficient quantities to warrant operation of the factory, in the opinion of the company without further notice. All produce must be delivered before six o'clock p.m. and unless otherwise agreed, no delivery will be received on Saturday or any day preceding a public holiday. The company will not be bound to take delivery of any produce on any days on which the Agricultural Fair of the County or District is held, if unable to operate at full capacity through shortage of labour.

When, in its opinion, the company is unable from any cause to take proper care of the produce at its factory for proper canning, the company, upon notice to the grower, may limit the delivery of produce to a quantity per acre per day, which, in its opinion, will allow it to handle the produce in such manner as to take proper care thereof, and the company at its option, shall not be bound to accept from the grower a quantity in excess of 175 bushels per acre.

Special

All produce unfit for delivery and acceptance within this contract shall, at the option of the company, on notice to the grower, become the property of the company, and the company shall have the right after such notice to enter upon the lands where the same is grown, or wherever it may be, and to take possession thereof, and all costs, charges, and expenses of taking and acquiring such possession shall be charged against the grower, and be deducted from any moneys payable to him, but the said produce shall at all times until delivery thereof at its said factory be, and remain at the growers' risk and subject otherwise in all respects to the terms of this contract, and the company shall not be liable to pay for any produce not so delivered to and accepted by it at its factory.

In the case of a wrongful sale of the produce, the company at its option shall be entitled to receive from the grower 50 per cent of the price received by him therefor as liquidated damages, which the grower agrees to pay.

If the grower grows similar produce for, or supplies to other canners on or from the same land or other lands, this contract at the option, of the company, may be cancelled and terminated by the company at any time, in whole or in part, or to such extent as the company, by written notice to the grower, may determine.

Fires, Strikes, Etc.

In case of fire, strikes, power shortage, or any cause beyond the control of the company, whereby it shall be unable to operate its factory, all rights of the growers under this contract shall be suspended, and the company shall not be bound to accept delivery of produce hereunder until such cause can be removed, and provided that if, in the company's opinion, the factory cannot be operated to carry on its contracts, this contract may, upon notice to the grower, be thereafter determined and ended by the company, but in such case the company will use its best efforts, if feasible in its opinion, to receive and use the produce at some of its other factories.

The company reserves the right to cancel this contract on or before March 1 next, by notice to the grower. Any notice to the grower hereunder may be given by mailing it in any post office addressed to him at his address as shown hereunder or delivered personally or left for him at his residence and shall be deemed to have been received by him if mailed, one day after mailing, or if left for him at his residence on day it is so left.

....................Lot...... Con............ Tp.

Canadian Canners, Limited, hereby accept the said contract and agree to bind themselves to the terms thereof.

Date .... Factory No............

(Signed in triplicate) ....Local Manager.
Canadian Canners, Limited.

Mr. FACTOR: Are they all the same?

Mr. YOUNG: Mr. Smart said last night they had a different contract.

The CHAIRMAN: This is the tomato contract.

Mr. SOMMERVILLE: Of Canadian Canners.

The CHAIRMAN: A grower's contract with Canadian Canners. Is that the type of contract to which you have been making reference?

WITNESS: That is the one we have.

By Mr. Factor:

Q. That is the form of contract you entered into with the Canadian Canners?—A. Yes, and the other canners are very much the same.

By Mr. Young:

Q. The other canners' contracts are very much the same; they vary a little.

Q. We had a canner here last night who said he had a different one, that he took the whole crop?—A. Oh, it must be an independent canner. I am not dealing with independent canners in any way.

By Mr. Sommerville:

Q. When you referred to canners, you referred to the larger companies?—A. I refer to the larger companies.

Q. Canadian Canners, Associated Quality Canners, and so on?—A. Nesbitt Canners.

Q. Nesbitt Canning Company is one that would not be like the other one, and similar companies?—A. Yes.

Q. Can you give us some observations with respect to the operation of the contracts? We had some information given in the brief yesterday about how it works; but I understand you attended a meeting of the executive of your association recently and some observations were made there?—A. Possibly it would be as well to read the minutes of our association meeting.

Q. Yes.—A. Held on April 22nd.

Q. Last month?—A. Yes.

"Managers of large canners are given a bonus for the men who put up the most cases per bushel".

That is one of the points there.

Mr. Young: Most cases per bushel?

Witness: Yes, given a bonus.

By Mr. Sommerville:

Q. Given a bonus?—A. Yes.

Q. By the manager of the canning company you mean the branch managers?—A. That is correct.

Q. The branch managers of certain large canners are given a bonus for the men who put up the most cases per bushel?—A. Yes.

Q. You mean by that one branch plant competes with another?—A. Yes.

Q. And the manager who is able to get the most cases per bushel out of his tomatoes gets a bonus?—A. A point that I would like to make is this, there would be the matter of dockage.

The Chairman: Exactly what happened in the grain business in the west years ago before the amendment to the act?

Witness: If that manager was against the growers in any particular way at all, he could very easily take off five pounds or ten pounds per crate, or per bushel as the case may be, as dockage, wastage on tomatoes, and that would consequently bring his package of crates up.

By Mr. Young:

Q. How do you agree on dockage?—A. You cannot agree; never has been agreed on.

Q. He fixed the dockage?—A. By God he does, in great shape. Excuse the English, please; I feel hot on those things, sometimes.

By Mr. Sommerville:

Q. That is to say, because of this competitive system amongst the branch managers of the large canning companies, and a bonus being given to the men who produce the most tomatoes out of what they buy——A. Correct.

Q. ——you think it is an inducement to the local manager that prompts him to make use of his dockage privileges to reduce or to take from the farmer a certain amount of weight?—A. I certainly do.

Q. And reduce the grade that the tomatoes ought to come at?—A. The grade is all one grade, anyway; good, bad or indifferent, it is all the same.

Q. Good, bad or indifferent, it is all the same?—A. It all goes through, flies and everything.

Q. It all goes in?—A. Yes.

By Mr. Young:

Q. Do you say flies go into the can?—A. It all goes through the factory, anyway. By God, I have seen it.

Mr. EDWARDS: We will all be off canned goods for life.

Mr. SOMMERVILLE: I think Mr. Hunt was just joking about that.

Mr. HEAPS: He had better say he was joking.

By Mr. Sommerville:

Q. The fact is all the tomatoes that go in there go through the canning plants?—A. Yes.

Q. And you feel that the inducement that is offered to the manager to produce the most cans per bushel affects his judgment?—A. I certainly do.

Q. In dealing with the farmer; and the result is that he docks the farmers for grades and weights?—A. I think so.

Q. And reduces the amount that he pays to the farmer accordingly?—A. I really do not think so.

Q. And shows a better return for what he has bought?—A. Yes.

Q. Was that the general consensus of opinion of the growers who were present at your association meeting in April last?—A. Yes.

Q. Yes.—A. "Culliver and Leavens, of Prince Edward county, supply everything, charge 5 cents per dozen—pay for machine in three years—buy own motor—pay cash for can cases and balance to grower—take whole pack."

Q. For the home canner proposition?—A. Yes. I am just giving the minutes of our meeting—it is more probably notes.

> King and Rankin—furnish all equipment.—Grower furnishes labour, fuel, plants, building, guarantee 40 cents per case, take everything grown. Pay for pack first December.

Q. There is another firm that offered to take the home-canned tomatoes on this basis?—A. Yes.

Q. Guaranteeing 40 cents a case?—A. Yes.

Q. Would 40 cents a case mean 40 cents a bushel?—A. Yes, roughly it would mean that.

Q. It takes how many bushels of tomatoes to make a case?—A. Roughly, one bushel would make a case of tomatoes if they are like asked for in the contracts.

Q. If according to the quality asked for in the contract?—A. That is right.

Q. So that the guarantee of 40 cents a case would mean a guarantee of approximately 40 cents a bushel?—A. Yes; they clean them, pay for the labour, fuel and plant.

Q. They have to pack them?—A. Yes.

By Mr. Factor:

Q. What else goes into a can of tomatoes besides tomatoes?—A. Supposed not to be anything.

Q. Nothing at all?—A. Supposed not to be; tomatoes and all their juices.

Q. Tomato and juices?—A. I think the act says a certain amount of solids.

Q. The act requires that the can shall be so much. That is the requirement as to the quantity of solids?—A. That is the canner's point of view.

By Mr. Edwards:

Q. Is there any chemical to preserve them?—A. I do not think so.

By Mr. Young:

Q. Under this home-canning arrangement, how do they get uniform quality of tomatoes put up in different homes under different auspices?—A. Well, it would be about the same as if I would go to my own pack and pick some for the wife to put up. I would not willingly pick anything that was bad. I do not mean to say I would not pick them undersize.

Q. What supervision is exercised? The farmer can take his pick when he has them at home; but is there any inspection conducted in the homes when they are doing the work? How do they know it is properly done?—A. If it is done by more than one family, I would presume it would be government inspection.

Q. You are a grower of tomatoes?—A. Yes.

Q. Somebody offers you so much per case—I want you to preserve a can of those tomatoes in your own home, and I offer you so much a case for doing it. How do I know you put them up properly and that your pack is the same as your neighbour's pack, and when they put the label on them, how do they know it is a uniform article?—A. They do not know at all; they presume so.

By Mr. Sommerville:

Q. At any rate, you do not pack?—A. We do not pack.

Q. You sell to the canner?—A. I sell to the canner.

Q. These are the reports of the meeting in regard to the price offered?—A. That is done, and it can always be verified.

By Mr. Young:

Q. Are we going to have here the men who buy tomatoes on this basis?—A. If you want names, I can give names.

Q. What I want to get at is this: if I go into a store and buy tomatoes that are packed on that basis, when I buy that man's brand, am I sure I am going to get the same brand tomorrow as I got today?—A. No, I do not think so. The season would vary them a little bit, certain parts of the season.

By Mr. Sommerville:

Q. Perhaps we can clear this up for the record. In this home canning industry, each farmer packs the crop that he raises himself?—A. Yes.

Q. Sometimes he may pack some of his neighbour's?—A. Yes.

Q. But it is all done in the kitchen of the farmers?—A. Or in the small outbuildings built for the purpose.

Q. Then, the pack is sold to some distributor?—A. Yes.

Q. The distributor supplies the labels?—A. Yes.

Q. And the same label will go on all the pack in the district?—A. That is one of the—

Q. And so the distributor is distributing tomatoes that are packed perhaps in ten, twenty, thirty or forty different farmers' homes?—A. Yes, to the best of my knowledge, that is correct.

Q. That is the system?—A. Yes.

Q. I am just trying to get an idea of the system. Therefore, there is no person who can say that this can of tomatoes is the same as the next one, because it may be packed in a different farmhouse?—A. Yes.

Q. And there being nothing but tomatoes going into the can, that is the only guarantee you have that there is nothing else put in?—A. Person's integrity itself.

Mr. HEAPS: What about the health regulations governing packing?

The CHAIRMAN: There are none.

By Mr. Sommerville:

Q. There is no inspection by any government official of the homes where they are packing those farmers' tomatoes?—A. That I cannot say.

Q. Is there? Perhaps we will learn that from the canners?—A. I cannot say.

Q. With reference to the home canners, I think we have the picture pretty well before us now. What do you say, on the basis of the prices sold last year, the growers would have received?—A. In what way do you mean?

Q. Under that home packing method of last year, on the basis of the prices sold last year, every grower under that Culliver and Leavens plan would receive how much?—A. From 35 to 40 cents per bushel.

By Mr. Young:

Q. Would they get any allowance for packing in addition to that?—A. That is included in everything. I think about half a cent a case, or one cent a case, would cover all charges.

Q. Do you mean they can peel those tomatoes and put them in the cans, cook them and so on, for half a cent?—A. To the best of my knowledge, yes. They are done quickly when they are being packed that way.

By Mr. Sommerville:

Q. Now then, the question of the contract came up. What was the result of the discussion of those contracts and the price of 25 to 27½ cents offered this year?—A. "Tomatoes— contract— hardship. 27½ cents to 25 cents. 175 bushel limit.

Q. That is a quotation from the minutes of the meeting?—A. Yes. "With farmers accepting such prices they have become so involved as result of relying on income from canning factory crops to the exclusion of other lines of agriculture endeavour, that they have no alternative—lack of live stock sufficient to carry on. Bankers admit enough contracts are handed over to the banks for collateral for money to carry on that growers of this calibre establish the price in the district. Banks suggest in case of delinquent patrons get a contract with canning company to clean up their indebtedness." The banks suggest that.

Q. With reference to farmers who are in debt to them?—A. To the bank.

Q. The bank suggests to them to get a contract with a canning company to clean up their indebtedness?—A. We know we cannot get money from the bank unless we have one of those.

By Mr. Factor:

Q. Do you know of an actual case where the bank did tell the grower who was in debt to the bank to go ahead and get a contract in order to pay that debt?—A. I can give particulars.

By Mr. Young:

Q. Is the contract with one of those canning establishment just as reasonable as the contract with Canadian Canners?—A. No; you have there a contract from the company that you are packing for.

Mr. Sommerville: You have a contract with the company you are packing for?—A. Yes.

By Mr. Young:

Q. Does it make any difference to the bank whether your contract is with the Canadian Canners or with one of the companies that allows you to can at home?—A. I do not think so; I would not say.

By Mr. Kennedy (Peace River):

Q. Does the bank collect the money from the canners?—A. It is a first mortgage on your crop.

Q. Any question about your getting a living out of it, for instance?—A. Oh, Lord, they do not allow you to live.

By Mr. Sommerville:

Q. At any rate, it is a first charge upon your crop?—A. Yes.

Q. Go on with your notes with reference to that.—A. "Prince Edward county wonderful example. Involving fertilizer and seed grain. How much credit allowed on a contract."

Q. You referred to the notes or minutes, and you say Prince Edward county is a wonderful example?—A. Yes.

Q. Of the plan of home canning?—A. Yes.

Q. And also of the plan of taking contracts to the bank?—A. Well, it is that way.

Q. I see it says "Involving fertilizer and seed grain." What is the reference to that?—A. They bought it co-operatively, and consequently can get a better price than can be obtained by the individual farmer, and another point on that—how shall I put it. The canning companies field man in some cases, we know, has the fertilizer agency, and he makes it a point that a man taking a contract for tomatoes from them must buy his fertilizer from them; and consequently they are paying anything from $6 to $11 a ton more than what they would otherwise be paying in buying through the regular channels.

By Mr. Factor:

Q. Is he acting in the interests of the canner?—A. No, not acting for the canner. The canning companies' field man, their representative, who goes out taking contracts—

Mr. SOMMERVILLE: For tomatoes? He is also a fertilizer man?

The WITNESS: Yes.

By the Chairman:

Q. Does he refuse to give a contract to buy tomatoes unless they buy his fertilizer?—A. They have refused to give acreages.

By Mr. Young:

Q. Have you ever reported that to the company?—A. No. It has generally been brought up in our meetings and discussed, the best way to go at these things. It is absolutely of no use for us to go at it and buck the fertilizer firms independently.

Q. If a buyer for a canning company is sent out by the company to buy tomatoes and refuses to buy your crop because you won't buy fertilizer from him, I should think the company would fire that man pretty quickly?—A. No, they don't refuse to buy the crop. They won't give us acreage. They go out in the spring of the year to take acreages. They have been asked by their company to get so many acres.

By Mr. Sommerville:

Q. They have been asked to get so many acres of tomatoes; that is to say, to contract for so many acres of tomatoes at 200 bushels to the acre?—A. Yes.

Q. That is the way the annual contracts are made?—A. Yes.

Q. And the field man is sent out to get this acreage?—A. Yes.

Q. Then you say when he goes out to get this acreage, the field man is also a fertilizer man. What happens?—A. If they don't buy his fertilizer, they don't get the acreage; that is all.

Q. At least, that is the feeling among the farmers?—A. It is, very much so. I think this can be vouched for, too, without very much trouble.

By Mr. Factor:

Q. Have you ever experienced that yourself?—A. No, I have no kick myself with the canners. I have always had mine go right in.

By Mr. Sommerville:

Q. You have had your acreage each year?—A. Yes. I am just fighting for the other fellow. It makes no difference with me, for that part. I have no kick whatever with them.

Q. We had an example—at least it was referred to in the brief yesterday—that sometimes when they take these contracts, they will just run for a certain number of days in the season, and then close down?—A. Yes.

Q. And those who have made contracts are out of luck; have you any examples of that?—A. I have.

Q. Referred to at this same meeting?—A. Yes, I have. One canning factory ran for ten days out of a season's run. One man—the names can be given to the committee of these—had 400 bushels per acre, on 4 acres, and not one tomato delivered.

Q. Although they were under contract?—A. Yes. I saw the contract. I may say just here, too, that I helped estimate that man's acreage after the factory closed down, when proceedings were going to be taken against them, a hardship on him. We used the factory field man's figures, and had an independent man come with me, quite a well-known man there, to count them, and we did the estimating ourselves. I was personally in on this.

Q. That man had 400 bushels to the acre?—A. On 4 acres.

Q. That is 1,600 bushels?—A. Yes, and not one tomato delivered.

Mr. FACTOR: Of course, that goes to the interpretation of the contract. If it is really only an option to buy as much as they want, there is nothing which forces them to take that.

By Mr. Sommerville:

Q. Did the case go to court?—A. No, it didn't go to court, but at the time it was going to court the canning factory owners came and offered him a cheque for $50. That $50 looked good to him just then—I guess he thought it was better than fighting—and he took it.

Q. He took $50?—A. Yes.

Q. In settlement of his loss?—A. Yes.

By the Chairman:

Q. Before we leave that question of fertilizer, and the agents of canneries acting as fertilizer agents, can you tell the committee how those agents are paid? Are they salaried officials of the cannery?—A. I think so, yes. In some cases I know they are.

Q. Fertilizer agents on the side on commission, I suppose?—A. They had a side line. I don't think it is right. I don't think it should be. We have discussed that at our meetings at different times, and I don't think it should be.

By Mr. Factor:

Q. What happened to that particular fellow's tomatoes?—A. Just wasted.

By Mr. Kennedy (Peace River):

Q. What would they be worth? What were they worth at the prices going on then?

Mr. SOMMERVILLE: 25 cents a bushel.

The WITNESS: They were contracted at 35 cents. That is 1931.

Mr. FACTOR: 1,600 bushels.

The WITNESS: 1,600 multiplied by 35.

By Mr. Sommerville:

Q. About \$500 or \$600, and he got \$50. What other examples had you under that?—A. The Associated Quality Canners cut a good load 60 per cent.

Q. Cut that load 60 per cent. What do you mean by cutting the load?—A. That means that if a load of tomatoes went in, say 100 bushels, all you would be paid for would be 40 bushels.

By Mr. Young:

Q. Why did they dock you 60?—A. Search me. They got plenty I guess.

Q. Were those tomatoes over-ripe, under-ripe or spotted? Was there any defect in them, in any way?—A. Not to my knowledge. It is just a matter of their system of doing business.

Q. You don't mean they will practically say, "You have 100 bushels; we are going to pay you for 40?"—A. By jingo, I have had them tell me they would take off 10 pounds of each crate, that they had got plenty. You don't know how much they have.

Q. You had them tell you they would take 10 pounds off each crate?—A. Yes.

Q. They had the right to do so under their contract?—A. Yes.

Mr. FACTOR: I can't sit here and believe these things, it is so shocking to me. I would like a little more information on that, Mr. Hunt.

The WITNESS: I will try and give you what information I can.

By Mr. Factor:

Q. Did you experience that yourself?—A. I have experienced the point myself where I have probably taken down 40 crates of tomatoes, and been paid for 30.

Q. What reason was assigned for that?—A. Well, if the season was rather poor, there would be no reason at all; but as the season was good, they were getting all they wanted.

By Mr. Sommerville:

Q. If the season was poor, they would take the whole 40 crates?—A. Yes.

Q. And pay for the whole 40 crates?—A. Yes.

Q. But if the season was good, and they were getting all they wanted, you say under their contract they would pay you for 30?—A. Yes.

Q. Is that because they would reduce the grade of your tomatoes?—A. No, I don't think that. That was the excuse they would put up, of course.

Mr. ILSLEY: That is what we want to know.

By Mr. Sommerville:

Q. That is the excuse they would put up, you say?—A. Yes.

Mr. EDWARDS: I think the witness ought to give the specific case which he is speaking of.

Mr. SOMMERVILLE: Yes.

Mr. Factor: Does he mean the company only purchased 30 out of the 40 crates?

Mr. Ilsley: They graded them down. Mr. Robinson said when they were plentiful they were severe in their grading, and when they were not plentiful they were generous in their grading and practically took them all.

The Witness: That is right.

Mr. Ilsley: It is a question of grading, apparently.

The Witness: That is it. And the canner is the grader.

By Mr. Sommerville:

Q. With regard to the tomatoes that were taken in your own experience, the 40 crates which were reduced to 30 crates, were they tomatoes which were all the grade required by the contract as first grade?—A. Most assuredly. If they hadn't been, they would not have accepted them, would they?

By Mr. Kennedy (Winnipeg):

Q. What became of your 10 crates?—A. Left there. We have nothing to say on that; presumably in the cans.

By Mr. Factor:

Q. You mean they took the 40 crates?—A. Yes.

Q. And only paid you for 30?—A. Sure.

Mr. Factor: Unbelievable.

Mr. Kennedy (*Winnipeg*): I think we ought to have particulars.

Mr. Sommerville: It is the same thing as reducing the grade.

The Chairman: Of course, the point this witness and other witnesses make is this, that under this contract the sole authority for grading or determining the quality of the tomato is the canning company, the buyer; that there is no arbitrator in between the grower or canning company whatever.

The Witness: No one whatever.

The Chairman: Then the inference is—or the charge, if you like to put in that way—that when tomatoes are plentiful canneries will deliberately degrade the tomatoes received; and the inference is that they do that for the purpose of lessening the cost of the goods they purchase, although the grower contends that the quality is not inferior.

By the Chairman:

Q. That is the story that you wish the committee to receive, is it not?—A. That is it.

Mr. Kennedy (*Winnipeg*): I think he has gone farther in this instance. He said he had an instance himself where he delivered 40 crates. The 40 crates were kept by the canning company, though he was only paid for 30.

The Chairman: That is right.

Mr. Kennedy (*Winnipeg*): I think we ought to have the details.

The Witness: I can tell of one more case, with your permission, right on my brief here.

By Mr. Kennedy (Winnipeg):

Q. Tell us about that?—A. Delivered Associated Quality Canners 80 crates, not weighed, rejected. Grower to come back to grade according to grader's instructions. These tomatoes were run and he was paid for 80 bushels, for a load of rejected tomatoes.

By Mr. Sommerville:

Q. That is a case you are giving us?—A. That is a specific case.

Q. That is a case that occurred in your district?—A. Yes.

Q. Where 80 crates were delivered?—A. Yes, brought in by the load in the morning, rejected. He asked permission to leave them on their platform while he had other business to see to. He came back in the afternoon to get those tomatoes, to take them home. He asked where they were. They were in the cans.

Q. And they had been rejected?—A. They had been rejected. Those were run, and he was paid.

Q. He was paid for them?—A. The full 80 bushels.

By Mr. Ilsley:

Q. They changed their mind about rejecting them?—A. Yes.

Mr. FACTOR: That is not as serious as your other allegation.

Mr. SOMMERVILLE: No.

Mr. FACTOR: I feel the same as Mr. Kennedy does, that it requires some explanation.

Mr. SOMMERVILLE: Let me get the explanation of this other one.

The CHAIRMAN: His own.

By Mr. Sommerville:

Q. In your own case, Mr. Hunt, do I understand your case to be that you took 40 cases of tomatoes in?—A. I brought so many 40 cases I could not give you this figure off-hand, till I went home and looked up my records.

Q. Well, approximately 40 cases?—A. Yes.

Q. You took those to the canner, under your contract?—A. Yes.

Q. Under the contract, if they were first grade, you would be entitled to receive how much for those tomatoes?—A. 35 cents per bushel.

Q. And instead of receiving 35 cents per bushel for the 40 cases, you received 35 cents per bushel for 30 cases?—A. Yes, approximately.

Q. Is that the situation?—A. Yes, that is the situation.

Q. In other words, they reduced the grade so that the net amount you got was equivalent to 30 cases at 35 cents?—A. That is correct.

Mr. KENNEDY (*Winnipeg*): No, that is not what he said

Mr. FACTOR: That is different.

Mr. KENNEDY (*Winnipeg*): He said they got 40 cases, and paid him for 30.

The WITNESS: That is the point.

Mr. KENNEDY (*Winnipeg*): Let us get it.

By Mr. Sommerville:

Q. That is, they paid you for 30 cases at 35 cents a case?—A. Yes, and got 40 cases.

Q. And got 40?—A. Yes.

Q. In other words, 10 cases were equivalent to the degrading?—A. Yes, that is right, or in their opinion what it was.

Mr. HEAPS: Did they pay so much a case?

By Mr. Kennedy:

Q. Is the argument that 10 bushels were unfit for canning? Is that the argument?—A. That is the argument.

By the Chairman:

Q. It is dockage?—A. It is dockage.

By Mr. Kennedy (Peace River):

Q. In your judgment, were there 10 bushels that were unfit for canning?—A. Oh, heavens no. I know I never picked that kind of tomatoes, and I don't know anyone that ever did. You may be as careful as you can, but there are some that will get by you. But I have always tried to do the square thing.

By Mr. Kennedy (Winnipeg):

Q. When did this incident take place?—A. 1931; September, 1931.

By Mr. Young:

Q. Coming back to the 80 bushels, or the 80 crates, on what grounds were they rejected? Because they were not fit for canning, or because they didn't need them?—A. Well, evidently they needed them, because they used them.

Q. But in the morning when they rejected them, did they say, "These are not fit for canning," or did they say, "We don't need them?" What reason did they give the man for not taking his tomatoes that morning?—A. That is not a personal case of my own. I have not got that. I can get it.

By the Chairman:

Q. Were they under contract?—A. Yes, under contract.

Q. When was that?—A. 1931.

By Mr. Sommerville:

Q. This was one of the cases reported to your association last month?—A. Yes.

Mr. Young: It is important that we should have that, because if they said, "These tomatoes are not fit for canning, we must reject them", and then canned them, that is a serious matter. If they said, "We can't handle those, we are filled up", and then they found they could handle them later in the day, that is a different matter.

The Witness: You have the name there, Mr. Sommerville.

By Mr. Kennedy (Peace River):

Q. Did he get the regular price for them?—A. Yes, and no dockage; paid the full 80 bushels, or 80 crates.

By Mr. Ilsley:

Q. There are number 1's and number 2's, I think Mr. Robinson said?—A. No, there are no grades.

Q. No grades?—A. Well, the grades the canners have got on the contract are better than our basket trade.

By Mr. Sommerville:

Q. The top grade?—A. The top grade. It is all that. You can't grow the crop of tomatoes they want.

The Chairman: You could not make anything much better.

By Mr. Ilsley:

Q. They either inspect them and pay you the one price for what they inspect, or reject them entirely?—A. Yes.

Q. There is no question of paying one price for the top grade and a lower price for the next grade?—A. I have never known that. If they have got that in your contract you can expect the lower one. I have never known that.

Q. It is a matter of either accepting or rejecting?—A. Yes.

Mr. SOMMERVILLE: He says it is simply a matter of taking so many pounds less.

By the Chairman:

Q. As a grower of experience, Mr. Hunt, can you consistently deliver to the cannery tomatoes described as follows:—

> Produce of all kinds must be strictly first-class in size, quality and condition; absolutely fresh, firm and clean and in the very best condition for the purposes required. Frozen, sunburnt, bruised, unsound, over-ripe, undersized and undeveloped specimens cannot be accepted.
>
> Tomatoes should be of the large, smooth red varieties, not less than $2\frac{1}{2}$ inches in diameter, solid, sound and clean, picked when red ripe and delivered fresh picked, free from stems. Rough, undersized, jammed, bruised, sunburnt or dirty tomatoes, or those partially ripe, green on one side or with yellow ends, will not be accepted.

Is it possible to deliver that class of fruit out of the ordinary crop?—A. You can't do it.

By Mr. Ilsley:

Q. Would it be all right if there was what we call a tolerance in the apple business? That is to say, if a certain proportion had to be that way, say 90 per cent, could you do that?—A. Yes, I think you could, but not anything approaching that price. You could not deliver them for $27\frac{1}{2}$ cents a bushel.

Q. We are not talking about price. The chairman was talking about whether it would be practicable to deliver that quality?—A. No, it would not be practicable.

Q. If there were a clause in there saying that 80 or 90 per cent have to be of that quality, would that be practicable?—A. I don't think that is in the contract whatever.

Q. No, it is not in there, but would it be practicable? In packing apples, they allow for a certain proportion to be not up to specifications, because a certain amount will slip in—and it is provided for in the regulations—no matter how careful you are. If you had something like that in the contract, would that be a fair contract then, so far as quality is concerned?—A. I think it would. If we could get grading, which we have been advocating for years—I think if we had grading put into effect, but not the factory, it would solve all our problems; so that we would have one or two grades, and be paid for whatever quality we put in. Now it is a flat rate; if we put in a good thing and you put in a bad thing, I have got to set up for what you have put in, under the present system.

By the Chairman:

Q. Your point is that such a standard is not a practical thing?—A. It is not.

Q. The next clause says this: "When any produce is not judged to grade first class according to contract,—or according to the preceding clause—a reduced price fixed by the company may be paid therefor, which must be accepted by the grower, or such produce may be rejected entirely." In other words, if you can't deliver what you say is an impracticable thing, then a price may be fixed by the company or the whole thing rejected. That is your contract?—A. That is it.

By Mr. Sommerville:

Q. That is what you call dockage?—A. That is what they do in dockage. I have never known a lower price put on.

Q. You have never known them to dock you by way of calling it a lower price?—A. No.
Q. The dockage is by way of weight?—A. That is right.
Q. So many pounds per bushel?—A. Yes, that is it.
Q. And that is equivalent to a dockage in price?—A. Yes.
Q. In actual practice that is the method that is adopted?—A. Yes.
Q. And the general method?—A. Yes.

By Mr. Factor:

Q. So that in your case, with the 40 bushels, they were of the opinion that they were not up to the quality as described in the contract, and they only paid you for 30 bushels?

By the Chairman:

Q. 25 per cent dockage?—A. Yes. That is not unusual.

By Mr. Sommerville:

Q. That is not unusual?—A. No.
Q. Is that an experience which your farmers have had frequently?—A. Oh, numerous times; quite a lot of it.

By the Chairman:

Q. You didn't take the trouble to watch and see whether those 40 crates went into the pack?—A. No, I am living 4 miles from the factory, and I always have my truck down. That was the report brought back to me about my tomatoes, and there also came back a few in the bottom of one of my crates, said that they picked that one, and that is how they got my dockage I didn't see them do it, so I can't dispute it; but I swear on a stack of bibles that I never did it, never picked such stuff. But that is all right.

By Mr. Ilsley:

Q. They sent back somebody else's, do you mean?—A. Well, the inference is that, anyway. If they got by me, I am a poor picker; that is all I know.

By Mr. Sommerville:

Q. You have dealt with the 80 bushels. What is the next complaint that was lodged at this meeting?—A. Another man had 23 acres contracted, 4,900 bushels in, 4 acres loaded, didn't get one bushel in. 7,000 bushels left on the field. Over-contracted practised by the company.
Q. What do you mean by that?—A. Well, I think most canning factories have an estimate on the crop of 200 bushels to the acre—something like that. They can figure it approximately, anyway. And they would contract enough acreage to get that, if that was in a poor year, to get their pack for that year. If there came an extra good year, or a really fair year, they would have more than their requirements.
Q. That is, the contracts covering the acreage would provide much more than 200 bushels to the acre?—A. They were making sure of their point, that they were getting their pack.
Q. And then you say in that way they are over-contracted?—A. Yes.
Q. Then when they are over-contracted, I think the statement was made that they are then strict in the grades?—A. Yes, they are.
Q. And that is when the dockage takes place?—A. It works to the detriment of the grower.
Q. That is when they restrict the amount that comes from the acreage?—A. That is right.

By Mr. Factor:

Q. How could a canning company tell, when they contract, what yield per acre there would be?—A. Well, they can't tell, nor can the farmer. He can't tell what he is going to have.

Q. You are complaining that it is a system of contracting per acre rather than buying so many bushels from each farmer?—A. Well, I think that would act in same way back on the farmer again, if he was contracting for so many bushels. Every year you can't grow a good crop, even if you are a good grower. So many factors come in. If you are tied down to 35,000 bushels of tomatoes, and you have not got them, then you are in the soup.

By Mr. Sommerville:

Q. If they contracted for the acreage, your contention would be that they take the good tomatoes from that acreage?—A. Yes.

Q. Even if it runs over 200 bushels?—A. They will in some cases, but they have that clause that they need not do it.

Q. That they need not do so, but sometimes they do?—A. Yes.

Q. Sometimes they do take more than that?—A. Yes.

By Mr. Factor:

Q. Suppose that, at the rate of 200 bushels per acre, they have already fulfilled their requirements. Do you expect them to buy more than they need?—A. No. They do do it.

Q. I know, but you complain that they don't buy in the good yield. You say they will only exercise their rights under the contract of buying up to 200 bushels per acre. What do you expect them to do if that gives them sufficient to fulfil their requirements for their pack? What are the canning companies going to do?—A. Well, my contention, and what we are trying to fight for, is for a living wage on the whole thing; and we can get a living wage if they would take the whole crop.

By Mr. Sommerville:

Q. But you can't get it if they limit you to 200 bushels an acre?—A. No, we can't do it. The facts speak for themselves.

By Mr. Edwards:

Q. Is there any way of keeping tomatoes for any length of time?—A. Not that I know of.

Q. In cold storage?—A. You could not very well, for the price paid, put anything in cold storage.

Q. Or picking them green and allowing them to ripen?—A. They won't allow that. The contract calls for them to be picked fresh and delivered fresh—to be picked when red ripe and delivered fresh.

Q. We had evidence here yesterday, I think from Mr. Robinson, that he shipped to Newfoundland, where they picked them under-ripe?—A. The basket trade does not affect the canning industry.

Mr. SOMMERVILLE: That is the basket trade.

By Mr. Young:

Q. In regard to the company's not taking the full crop, at what point do they stop? Is it at the point at which they can't sell any more, or the point at which they can't handle any more in the factory?—A. The point, I think, sometimes when they can't sell any more; when they have got about all they care to carry.

Q. Do they ever stop buying because they have all the factory equipment will handle?—A. Yes.

Q. They do stop then occasionally?—A. Yes. That is in their contracts; where you will find they are limiting to so many bushels per acre per day, it is when the tomatoes come in in a rush, and the factory can't handle them.

By Mr. Kennedy (Peace River):

Q. In the year of a good crop, do they try and buy a percentage over the whole of the contracted acreage or do they simply take what comes first to the factory?—A. They take what comes along until they get their requirements.

Q. They don't try to pro-rate their deliveries over the whole of their contracts?—A. No.

Q. So that everybody will get a chance at the same percentage?—A. No.

Q. It is a case of the fellow who is in first——A. He gets the preference, of course.

Q. He gets the preference, and the other fellow is left out?—A. Oh, yes, they can, and I have known them to shut down fairly early. I say fairly early. Their contract calls—sometimes contracts have been the last day of September. They need not accept any after that. Other times they want tomatoes, and they might run on till the 10th of October.

Q. You say you want a living wage. How much do you want for a living wage? How much do you need?—A. Well, at least it should be a flat run basis; in my opinion, 35 cents per bushel on a flat rate.

By Mr. Young:

Q. For the entire crop?—A. As many as are suitable for the factory. I don't want the canners to take anything that is not right. Just what is suitable for canning.

By Mr. Kennedy (Peace River):

Q. How many hours a day do you work? Eight hours?—A. Sixteen, usually; about that.

By Mr. Young:

Q. This brief we had yesterday said that some could get along with 35 cents, but others needed 50 cents?—A. That is higher land. I think my brief will give that, as well as Mr. Robinson's.

By Mr. Sommerville:

Q. That is, in some areas where the land is more expensive, close to Toronto? —A. Yes.

Q. The different elements?—A. Yes.

Q. In your district you could get along with 35 cents a bushel?—A. As a flat rate basis.

Q. For the good tomatoes that come off your acreage?—A. Yes.

Q. And not limit you to 175 or 200 bushels to the acre?—A. Oh, gee, no. What good is the agricultural board, if they are asking us and telling us all the time to grow better stuff and bigger crops, and get cut down like this?

Q. Encouragement is given to grow 500 and 600 bushels to an acre, is it not? —A. Yes.

Q. That is the whole program of the Department of Agriculture?—A. That is right.

Q. And when you do grow it—A. Get knocked down.

Q. Your contract is limited to 200 bushels by the canners?—A. It does not work together.

Q. What other cases had you reported at this same meeting?—A. Tomatoes just coming up to the best quality when shut off. That is referring to those two or three factories that closed down in 1931, in September. One man had 100 bushels left on the field. Another man had 200 bushels left on the field, packed in their crates. Not all canning companies are sinners alike. It is recognized that certain companies are now paying prices and buying tomatoes on grade and taking delivery of all marketable tomatoes—

By Mr. Young:

Q. That is preferable, is it? You like that better?—A.—which are at prices almost on a par with those asked by the committee representative of the growers, even in competition with low prices paid by other companies.

Q. You are satisfied with that way of dealing with it?—A. I think so. I think the majority of us would be, that is provided that the grader was not a government man or a factory man, but was paid half by the grower and half by the government, or by the factory, as the case might be.

By Mr. Sommerville:

Q. As long as the grading was not entirely in the hands of the company?—A. Yes.

Q. That is your point?—A. Yes.

Q. Then I observe that there are some comments in the brief about contracts, that corn contracts and pea contracts are being tacked onto tomato contracts?—A. Yes, they are, in a good many cases.

Q. What do you mean by that, and what is the objection to it?—A. Well, they know, a good many do, that with peas and corn,—it does not matter the price being paid,—they can't grow them at a profit. But to get two or three acres of tomatoes, although they are not growing them at a profit—that is beside the mark,—they must take an acre or two of peas or an acre or two of corn, to be able to get an acre or two of tomatoes.

Q. And you think that is an objection?—A. I do, yes. There is always a kick.

Q. There is a kick throughout the district?—A. Yes.

By the Chairman:

Q. Is there much of that sort of thing?—A. Quite a lot.

Q. Many of these demands made?—A. Quite a lot.

Q. Whether the land is suitable or not?—A. Yes.

By Mr. Factor:

Q. You mean when tomatoes were a paying proposition, that corn and peas were not paying, is that it?—A. Not at the prices being paid then. Corn, peas and pumpkins—it has been a long time since they have been paying.

By Mr. Sommerville:

Q. Then the question arises, or at least there was some reference in the brief to rejections of corn, and the contract giving the privilege of rejecting in an arbitrary way. Have you some evidence of that?—A. I can give the man's name to the committee, sir. Field man orders corn held back; then corn was too hard. Not one kernel delivered, in 1931.

By the Chairman:

Q. Is that the same as mentioned yesterday, or one of the others?—A. In that other brief—yes, I think so. Another man was turned down for three kernels of yellow corn in six ears, most beautiful corn; whole load and crop turned down.

Mr. Young: On what grounds?

By Mr. Sommerville:

Q. In the examination there were three yellow kernels in six ears?—A. And they are seeds supplied by the canner. That is one point. You have to buy your seed from the canner. You can't go to another house and buy your seed.

Q. That is, in order to get a quality and uniform type of corn, they supply the seed?—A. Yes.

Q. And when this seed was grown you say in this case the grading was so severe that this man's whole crop was turned down. The whole crop turned down, because on examination of six ears they found three yellow kernels?—A. Three yellow kernels.

By Mr. Kennedy (Peace River):

Q. There would not be the loss on this corn that there would be in the case of tomatoes?—A. No, there would not be that loss.

Q. It would keep indefinitely and could be fed to something else?—A. It could be fed to stock, and would not be that loss, but it is the injustice of the thing that we are bringing out.

By Mr. Kennedy (Winnipeg):

Q. You mentioned that growers must get their seed from the canners?—A. Yes.

Q. Is there any complaint as to the unreasonableness of the charges for the seed?—A. I have not heard anything that way, sir, no. I do not think they kick on that at all, but when they get their crop turned down from seeds supplied by the canners, through no fault of theirs, that is where the kick comes.

Q. It is because of the faulty seed?—A. Yes.

By the Chairman:

Q. That is not an uncommon thing?—A. No. Then, the canning company should not have turned down his whole crop for the sake of finding three kernels—

By Mr. Sommerville:

Q. You have to buy a considerable quantity of fertilizer. What do you say is your objection, if you have any, to the present system under which you buy fertilizer?—A. The only difference there is in the fertilizer firms this year that I can see at all is the colour of their price lists. I am a member of the purchase committee of the Northumberland county, and at our representative meeting in March we agreed to buy fertilizer from a Quebec firm. That was done in our meeting, everything sealed up. Two weeks after that, two or three of the committee had to get together and do something else because they were absolutely stopped from selling to us.

Q. The Quebec firm?—A. Yes.

Q. What was the price at which you were buying?—A. Oh, quite favourable. I did not think this was coming up, or I would have had data on that.

Q. Was it from the Co-operative Fédérée of Quebec that you were buying?—A. Yes.

Q. You say that two or three weeks afterwards they refused to sell? On what grounds?—A. I think there was pressure brought to bear, and therefore they could not sell in Ontario.

By Mr. Factor:

Q. Can you buy your fertilizer from the United States?—A. That I cannot say.

By Mr. Edwards:

Q. Have you ever tried to bring in the separate ingredients and make your own fertilizer?—A. I have mixed my own fertilizer for years, and this year I have got Old Country stuff and it is a dashed sight better, in my opinion.

Mr. FACTOR: Is there a duty on fertilizer?

WITNESS: No.

Mr. YOUNG: Yes, there is.

WITNESS: Not on the raw materials.

Mr. YOUNG: A duty on the mixed?

WITNESS: Yes.

Mr. FACTOR: What is the duty?

WITNESS: I do not know.

By Mr. Young:

Q. From what you have said about it, it seems to me that the home canning of tomatoes in particular is a very simple process?—A. Yes.

Q. Is the equipment necessary expensive?—A. No; equipment necessary for home canning costs, I think, around $200.

Q. What is to stop a man putting in his own plant and canning his own tomatoes?—A. His own family, sufficient help.

By Mr. Sommerville:

Q. Mr. Young asks what is to stop a man putting in his own equipment and canning his own tomatoes?—A. I do not think there is anything to stop him as long as he has sufficient family to do it.

Q. It is a question of having a family large enough?—A. Yes; the French could do it very easily down in Quebec.

Q. They cannot be easily raised?—A. It takes time.

Mr. YOUNG: How many is required?

WITNESS: Roughly, five.

Mr. YOUNG: Five?

WITNESS: Yes.

By Mr. Factor:

Q. Five is not a large family?—A. Not in Quebec.

By Mr. Young:

Q. Two or three together could rake up five?—A. Yes.

Q. If the investment is only $200, it seems to me you have an outlet or a way of escape from the canning combine?—A. If you have four or five families coming in like that, the $200 equipment would not do you. You would have to get a $700 or a $800 one.

Q. $200 plant will cover one family?—A. Probably eight acres, roughly.

Q. Eight acres. Could you not put in a plant at home with little help yourself the same as the canners do?—A. You would be a factory at once, then.

The CHAIRMAN: And you have to pay sales tax.

WITNESS: And there would possibly be friction between the families—I grow better tomatoes than you.

By Mr. Factor:

Q. As a matter of fact, those family canners have increased?—A. Tremendously.

Q. If they come along much more the canners would have to go out of business, and that will decide the issue.

Mr. YOUNG: Effective competition is developing with the canners?

WITNESS: Yes, there is.

Mr. FACTOR: The canners are there, and we cannot do without them.

WITNESS: Some families cannot.

By Mr. Edwards:

Q. Supposing a family or two families purchased equipment for canning. How many weeks in the year would they operate?—A. If they were canning tomatoes only, roughly seven weeks.

Q. They could can other things?—A. Peas, corn, beans.

Q. Taking that into consideration, how long?—A. They could run roughly five or six months.

Q. And the plant would be idle the other six months?—A. Yes.

By Mr. Kennedy (Peace River):

Q. How long have you been in this tomato business?—A. Twelve years—thirteen years actually.

Q. Were you doing pretty well up until the depression struck?—A. Well, I think so. I have made money growing tomatoes. I had no kick from the factory. I put in 400 or 500 bushels.

Q. What price did you get in the years 1929 and 1930?—A. Fifty cents.

Q. When did the price drop?—A. In 1931 I was getting 35 cents. Since then I have not grown any, but it has been down to 25 cents. This year it has gone back $2\frac{1}{2}$ cents, to $27\frac{1}{2}$ cents.

Mr. SOMMERVILLE: For the last two years it has been 25 cents, and now it is $27\frac{1}{2}$ cents?

WITNESS: Yes.

By Mr. Kennedy (Winnipeg):

Q. You have not grown any since when?—A. 1931.

Q. Have you grown any substitute crop?—A. Yes, I have gone in heavily for berries.

By Mr. Kennedy (Peace River):

Q. Is there any over-production of tomatoes in Canada?—A. I do not think so.

Q. You think there is a market, if it was well organized?—A. I think so.

Witness retired.

EARLE M. GROSE, called and sworn.

Examined by Mr. Sommerville.

Q. You are associated with the fertilizer business?—A. Yes.

Q. You were for some years manager of the Ontario Fertilizer?—A. That is right.

Q. That is a branch of the Canada Packers?—A. Now?

Q. It was formerly.—A. Harris Abattoir and William Davies.

Q. Later you were managing director of the National Fertilizer?—A. That is right.

Q. And you have been connected ever since with the fertilizer business, operating now as an independent?—A. As an independent.

Q. You have been asked to come here and give some evidence with respect to the allegations that are being made respecting prices of fertilizer and the existence of an association with uniform prices. Now, first of all, you have done a good deal of investigational work in the fertilizer field? -A. Yes, I did, for the province of Quebec in 1930. I was given a big investigational work there.

Q. You made an investigation for the province of Quebec and reported to the government of the province of Quebec upon the method of handling the fertilizer situation?—A. Right.

Q. In 1930. Since then the fertilizer situation in Quebec has been very much improved, apparently?—A. Well, I would hate to say so—I think it is.

Q. Are the prices of fertilizer lower in the province of Quebec than they are in the province of Ontario?—A. It would appear so.

Q. Is there an association of fertilizer manufacturers in existence in eastern Canada?—A. Well, I am not a member of the association, nor do I know the qualification of members. I believe there is an association in eastern Canada.

Q. Known as—A. The Eastern Canada Fertilizer association.

Q. What firms are in the association?—A. Well—

Q. Can you give me the names?—A. I do not think it is dark secret at all I think it is published. I am not informed as to the members in Quebec or the eastern provinces of Nova Scotia and New Brunswick, but I think possibly I can name some of them in Ontario.

Q. Who are the members of the association in Ontario?—A. Well, in Toronto you have Canada Packers, Limited.

Q. Yes?—A. You have Canadian Industries in Hamilton, Montreal and Halifax; and then in Ingersoll there is the National Fertilizers, subsidiary of William Stone Sons Limited, Wetts Fertilizer Products at Norwich, Norwich Fertilizer Sales; Canadian Fertilizers Limited, Chatham, Agricultural Chemicals, Limited, Port Hope. I think that covers about all.

Q. You have seen the price list of those firms?—A. Yes, I had the opportunity of perusing them.

Q. What do you say as to their prices?—A. I would say they have a uniform basis of figuring.

Q. A uniform price for their—A. Uniform schedule.

Q. For their various fertilizers?—A. That is right.

Q. Are these fertilizers standard fertilizers?—A. They are all registered under the Fertilizers Act, 1922.

Q. Fertilizer, in order to be sold, must be registered with the Dominion government?—A. As to its content, nitrogen, available phosphoric acid, and potash.

Q. Before any fertilizer can be sold, containing those ingredients, it must be registered?—A. Yes, it must.

Q. These are, then, the chief ingredients, nitrogen, available phosphoric acid and potash?—A. Nitrogen, available phosphoric acid and potash.

Q. Nitrogen provides for growth?—A. Yes, that is its function.

Q. Phosphoric acid to assist in maturity?—A. Right.

Q. And the potash, I understand, gives it a starchy or sugary quality? —A. Induces sugar content; for instance, in sugar beets.

Mr. Factor: Would there be a different fertilizer for the different soil types?

Witness: Different groups, different fertilizers for the different soil types.

By Mr. Sommerville:

Q. When you find a fertilizer described as 2-12-6—A. Yes?

Q. How does that read, what does it mean?—A. It means that fertilizer carries 2 per cent nitrogen, 12 per cent available phosphoric acid and 6 per cent of potash. That is the guarantee.

By the Chairman:

Q. What is the rest?—A. Well, it is like when you take a prescription to a drug store, you get so much of the medicine you are to take, and the balance is aqua add, which is water.

By Mr. Sommerville:

Q. Filler?—A. Filler. It might not exactly mean there is a filler—2-12-6 can be manufactured without filler.

Q. But there are fillers that are added to the fertilizer in addition to those three?—A. At times, yes.

By Mr. Ilsley:

Q. Are they ever manufactured without filler?—A. Yes.

Q. 2-12-6?—A. That is a fertilizer that is usually used as filler because it is one of the lower types of fertilizer.

Q. These are just the proportions of the three ingredients?—A. Yes. Mr. Sommerville, Mr. Chairman, I should like to explain to the gentlemen of the committee this. For instance, there is phosphorus, which is P_2O_5 available—I do not want to be technical.

Q. Neither do I want you to be technical, so we agree?—A. Phosphorus pentoxide is a colourless gas so you cannot give it to the plant in that form; therefore we must combine it with some other material to help it so that when it goes into the soil solution the plant will be able to absorb it. Therefore we sell 16 per cent superphosphate acid or 16 per cent acid phosphate as the grower usually calls it. In order to balance the content in every 100 pounds of acid phosphate there is 16 per cent available phosphoric acid, and the same way nitrate of soda, from which we derive nitrogen, which, Mr. Sommerville no doubt asked about.

Mr. Edwards: Apparently called that a filler?

Witness: No, it is not a filler.

By Mr. Ilsley:

Q. Is it a fact that your terms, for instance, in using this fertilizer, are based on filler?—A. Yes, it is in some cases, where the material—for instance, 2-12-6 may be made from materials which work out at 1,740 pounds of the actual fertilizer material used. Then, you can tell him he can use a filler of 240 pounds of sand or 240 pounds of lime, or 240 pounds of humus.

Q. Based on the particular use?—A. Yes. He is not charged for that. He is charged on the basis of the unit of phosphate acid and potash—

Q. In other words, aqua add does not come in there?—A. No.

By Mr. Sommerville:

Q. I have, for instance, the price list of the C.I.L. for the province of Ontario, for the spring of 1934 and a price list for the spring of 1934 for the Province of Quebec?—A. Yes.

Q. Both of them are called free flowing fertilizers, made in Canada by Canadian Industries?—A. Free-flowing is a local term.

Q. That is what?—A. All fertilizers should be free flowing if properly mixed.

By Mr. Ilsley:

Q. What does it mean?—A. It means it has been set up. It is a real term.

By Mr. Sommerville:

Q. Take 2-12-6?—A. Yes.

Q. I see in the province of Ontario, western Ontario, it is sold at $34.65 on this price list and in the province of Quebec at $25, or a difference of $9.35?—A. That is fortunate for the grower in Quebec.

By Mr. Ilsley:

Q. Could there be any difference in the quality or value of the material as a fertilizer?—A. I would say that a firm such as the C.I.L., their material would be uniform. Now, I do not operate in Quebec, but having done that investigational work down there, I might offer two or three reasons why the fertilizer may be lower, which might be enlightening to this committee. In the first place, they have a lower transportation cost. Their basis of supply of raw materials, nitrate of soda, superphosphate and potash they bring by boat right to Montreal or Beloeil or Quebec city. In the second place—

By Mr. Young:

Q. What is the source of origin of those things?—A. Well, you get superphosphate several places. Some is brought in from Holland, and some brought from Morocco. They generally bring superphosphate from Morocco. Morocco is the source of phosphate rock. I think there is some firm operating in Canada which are bringing their supply of phosphate rock, which is largely a sulphuric acid to make the superphosphate, which is the greater bulk of material used in the manufacture of fertilizer from Northern Africa. Now, you have two sources of potash. Potash comes from France and Germany. It was chiefly German potash; formerly before the war it was all German, but now that France got back Alsace they have got back some of their potash mines, and they get potash from both France and Germany. Then, we have another source at Searles Lake, California, which is a very wonderful form of potash, very high in K_2O.

Q. At any rate, that is the course of supply.—A. Yes. Then we have one more source, from Carlsbad, New Mexico. That is just being developed. We have another source of potash there.

Q. You say it may be because that is the source of supply and the materials come by boat to these places?—A. Yes.

Q. To Quebec? There may be a somewhat lower freight rate from the point where it is manufactured to the farmer?—A. Yes, but there are two other important points.

Q. Yes?—A. There are two co-operative societies in Quebec, the Co-Operative Fédérée, and the Catholic Union of Farmers. Now, they have a large enough distribution to establish a competitive retail selling price in the province of Quebec. This overlaps into eastern and northern Ontario on account of the French population in those parts, in Prescott county and northern Ontario.

Q. So that the price that refers to the province of Quebec also applies to the eastern part of Ontario?—A. Yes, and northern Ontario.

Q. And to all the northern part of Ontario?—A. Well—

Q. Rather, a portion.—A. You mentioned one price list. I know where a firm sold a carload of 4-8-10 to two stations west of Kapuskasing on the Grand Trunk Pacific, the Canadian National, for $35 a ton. 4-8-10 was listed in—

Q. 4-8-10 is listed in the province of Ontario at $41.55 and in the province of Quebec at—

Mr. Edwards: 4-12-10 is given at $41.10 in Ontario, and $28 in Quebec.

By Mr. Sommerville:

Q. 4-8-10 in the province of Quebec is listed at $28, but in the province of Ontario it is listed at— A. $41.55—

Q. Less \$2.—A. \$39.55. That was sold at the station I mentioned for \$35 cash. Now, then, there is another reason and the last. It is my own idea of why the price may be different. I imagine that superphosphate can be manufactured in Quebec considerably cheaper than it can be in Ontario. First, you will remember that superphosphate is manufactured by two firms in Canada, at Beloeil, Quebec, Hamilton, Ontario, and at Trail, B.C. Now, I think that their acid cost at Beloeil, Quebec, would be much lower than at Hamilton. I think that enables the manufacturers to manufacture superphosphate, which I said before is the bulk of the materials given in the manufacture of several fertilizers, at a considerably lower cost—

By Mr. Factor:

Q. Why lower?—A. There is sulphuric acid that they use, and it costs them less for treating the phosphate rock at Beloeil than it will at Hamilton—they have a more favourable contract, probably.

By Mr. Edwards:

Q. That would be the only reason?—A. That would be—

Q. Sulphuric acid is quite common, and purchased in very large quantities in many industries?—A. That is quite true, but the freight rates from the source of supply differ.

By Mr. Sommerville:

Q. Now, then, taking into consideration these three factors—by the way, most of the product is delivered to western Ontario, Toronto, Hamilton and Chatham by boat?—A. Yes.

Q. And from Montreal and Quebec?—A. Yes.

Q. Therefore that is a very cheap method of transportation. Taking all those factors into consideration, is there any justification for such a wide spread in the price between western Ontario and eastern Ontario in the price of those fertilizers. Take, for instance, 5-8-7. In Quebec, it is \$29.50 and in western Ontario \$40.40, a difference of \$10.90, which is more than 33 per cent. It is 33 per cent higher in Ontario than in Quebec and eastern Ontario?—A. No. If I were a member of the association, Mr. Sommerville, that is the first thing I would say, it is most unfair.

Q. Then, the next one, 9-5-7, is \$48.65 in western Ontario and in eastern Ontario and Quebec it is \$30.50, a difference of \$18.15, or 60 per cent higher in western Ontario than in eastern Ontario. Is there any justification that you can think of for that?—A. I do not think so. Not for that spread.

By the Chairman:

Q. Let me ask you this: If they were able to purchase in eastern Ontario they could buy it and ship by local freight, and still get it cheaper than at the list price?—A. The railway freight from Montreal to Toronto is 44½ cents per hundred L.C.L.

Q. You have a difference of \$18 a ton there?—A. Yes, but of course, accord-to arrangements, that would not be shipped. You have had an example.

Q. That is what I am getting at.—A. Yes.

By Mr. Sommerville:

Q. According to arrangements it would not be shipped. What do you mean by that?—A. I am taking the evidence of the previous witness. Mr. Hunt said he ordered his fertilizer from a firm, a certain firm, and on the Quebec basis, and he was saving money, purchasing lower than in Ontario, and consequently it was not delivered to him.

By Mr. Factor:

Q. Where do you operate?—A. West Toronto.

Q. Can you assign any reason for the spread between eastern Ontario and western Ontario?—A. I cited what the manufacturers' reasons may be. I think the co-operative Federee can buy enough superphosphate—

By Mr. Sommerville:

Q. Who are they buying from, the same companies? You gave the manufacturers supplying western Ontario. Now, are there not a lot of companies supplying Quebec?—A. No, I believe the C.I.L. have the Co-operative Federee contract, Canadian Industries Limited.

Q. Here is a price list of the C.I.L. and the Co-operative Federee of Quebec?—A. Yes.

By the Chairman:

Q. You are in the fertilizer business in Toronto?—A. Yes.

Q. The freight is what?—A. It is $4.80.

Q. A ton?—A. No, $4.80 L.C.L.

Q. $9 a ton?—A. Yes, $8.90 a ton L.C.L.

Q. Take a carload, what would it be?—A. A carload rate to Montreal is 24½ cents.

Q. A hundred?—A. Yes, $4.90 a ton.

Q. Now, you are in the fertilizer business in Toronto?—A. Yes.

Q. You can buy 9-5-7 in eastern Ontario, and deliver it, we will say, at Cornwall, or right down to Kingston for $30.50?—A. Yes.

Q. And you sell that in western Ontario for $48.65 or an advance of $18.15 a ton, and your freight would cost you $4.90; in other words, it would leave you an additional profit of $13.50 a ton?—A. Mr. Chairman, I might explain to the committee that I am in the fertilizer business. I am operating independently. All materials, and certainly lots of fertilizer which I import direct from the Old Country, which now comes into Canada free of duty.—I have an arrangement with a Canadian company for mixed fertilizers, but I cannot ship into eastern Ontario because I cannot get the fertilizer shipped.

Q. Would you mind sticking to my point, and never mind eastern Ontario for a moment. You are supplying fertilizer, presumably, to western Ontario?—A. Yes.

Q. You supply 9-5-7 for $48.65?—A. Yes.

Q. That is right, is it not?—A. Yes, $46.45 cash.

Q. Then, you can buy that at Kingston delivered for $30.50?—A. I cannot.

Q. Well, why can you not?—A. Because they would not sell to me.

Q. That is the whole point. Now then, I want to find out who are "they."

Mr. SOMMERVILLE: I suppose Mr. Grose says, Ask the other fellow.

Mr. ILSLEY: Members of this association?

The WITNESS: Yes.

Mr. EDWARDS: Who are they please?

The CHAIRMAN: Let us get them. Let us get at the truth.

Mr. FACTOR: Quit skating around.

The WITNESS: Members of the association.

By the Chairman:

Q. Now, wait a moment. Who are those firms? Suppose you were living in Cornwall or Kingston, and buying fertilizer?—A. Yes.

Q. Who would you buy 9-5-7 from at $30.50 a ton?—A. Canada Packers, Canadian Industries.

Q. Who else?—A. I do not know, whether the International Fertilizer of Quebec city would sell me at all there, but I imagine they would.

Q. Who else?—A. That is about all that operate down there.

Q. Those three firms?—A. Yes.

Q. But they won't deliver to you in Toronto?—A. No, not on that basis.

Q. At that price?—A. No.

Q. They positively will not do it?—A. No.

By Mr. Sommerville:

Q. The Canada Packers manufacture this at Toronto?—A. That is true, but they are supposed to have a factory in Montreal.

By the Chairman:

Q. Who are the biggest manufacturers of this fertilizer in the eastern section, Quebec section?—A. I would think Canadian Industries.

By Mr. Sommerville:

Q. And that is a branch of a United States company?—A. Well, of course, I don't know the set up of Canadian Industries. I understand that a certain percentage was held by Imperial Chemicals in the old country and Duponts in the United States.

Mr. FACTOR: Is that not a restraint of trade, if they won't sell it to them?

The CHAIRMAN: Of course it is.

The WITNESS: I will leave that for the legal men.

By the Chairman:

Q. The differentials to which you refer, namely freight and so on, are quite natural; no one can dispute that?—A. No.

Q. But there is no answer to this problem I put to you, other than that they won't sell?—A. No.

By Mr. Ilsley:

Q. What is the situation in the maritime provinces?—A. Well, I have been out of touch with that. The maritime provinces are a little more fortunate. They have been buying materials down there—they have been buying large quantities of materials direct from Baltimore. For instance, over on the island, Prince Edward Island, they have been buying direct from Baltimore and getting them in by the boatload.

Q. They import some fertilizer from Europe, too?—A. Yes, from Holland.

By Mr. Kennedy (Peace River):

Q. Are you the Canadian agents for some of these fertilizers?—A. No.

Q. Or do you buy?—A. We buy it. I have exclusively Humber Fish Manure. They call everything manure in the old country. All fertilizers are called manures. We don't.

By Mr. Sommerville:

Q. When you buy your raw materials for the manufacture of these, do you have to buy your raw material from these same firms?—A. Not necessarily. I don't. I am not like the grower.

Q. You have other sources of supply for your raw material?—A. Yes.

By the Chairman:

Q. All raw materials entering into fertilizer are free, under all headings?—A. No. I noticed yesterday that came up. Materials are free to the manufacturer. If the grower buys bag superphosphate, he is penalized 10 per cent.

By Mr. Sommerville:

Q. That is, the duty on bag superphosphate is 10 per cent?—A. 10 per cent.

By the Chairman:

Q. Superphosphate is classified as a manufactured article?—A. Yes.

Q. That is, if he buys it under the general tariff?—A. No. He can't bring it in. I am not sure on this point. It could be taken up with the Department of National Revenue. I think the people in the Maritime provinces kicked, put up a severe kick, and I think they got some bag superphosphate in there free of duty, but generally speaking there is a 10 per cent duty on bag superphosphate.

Q. But fertilizer compounded by the manufacturer is free under the British preferential?—A. Oh, yes. Pardon me. Yes, all British fertilizer is free.

Q. You can get this superphosphate from Britain free?—A. But it can't compete.

Q. With the American or German?—A. No.

By Mr. Ilsley:

Q. What is the situation about acid phosphate? Is that the same?—A. That is the same thing. We use the term interchangeably.

Q. That is dutiable at 10 per cent, is it not?—A. Yes.

The CHAIRMAN: And $7\frac{1}{2}$ per cent intermediate.

By Mr. Sommerville:

Q. That is manufactured in Canada?—A. Yes.

By Mr. Young:

Q. Is there not a ruling that if you use it for one purpose it is dutiable, and if you use it for another purpose it is not?—A. Well, it is rather clouded there. My opinion is it is rather unfair to have a 10 per cent duty on bag phosphate for the reason that the manufacturer could bring it in—if he so desired he could bring it in in bags, and he could claim it was for the manufacture of fertilizer. But it is probably unlikely he would attempt that. He probably would sell it to the growers, and he would have it free. That is the probability.

By Mr. Sommerville:

Q. That would be if he were dishonest?—A. Yes, but it is not likely.

Q. You are not basing any calculations on dishonesty?—A. No.

By Mr. Ilsley:

Q. Acid phosphate is used for this?—A. Where you have the green covering crops or manure, where you have plenty of nitrogen in the soil.

By Mr. Young:

Q. Is this largely a matter of interpreting the act by the officials of the department?—A. Yes.

Mr. ILSLEY: No, I don't think so.

The WITNESS: It would be. It could be done, as far as bag phosphate is concerned.

By Mr. Ilsley:

Q. I understood acid phosphate was dutiable, unless it came from a British source?—A. No.

Q. Acid phosphate, if it is used, of course——A. For fertilizer.

Q. —it is free?—A. It is free.
Q. Otherwise it is dutiable?—A. Yes.

Mr. ILSLEY: I don't think there is any question there, is there?

Mr. SOMMERVILLE: No.

By Mr. Sommerville:

Q. If it comes in in bulk, it is free to everybody, growers and manufacturers?—A. No, not to growers.
Q. Not to growers?—A. No.
Q. I understood if it was in bulk it was?—A. No.
Q. But if it was in bags— —A. If they can prove that it is for mixing purposes.
Q. Yes, if a farmer proves that it is for mixing?—A. Home mixing.
Q. For home mixing, it is free?—A. Yes, in bulk.
Q. In bulk?—A. Yes.
Q. But in bags?—A. It is 10 per cent.
Q. Will you tell me what the costs are of making this fertilizer, or mixing this fertilizer?—A. Do you mean the basis?
Q. How do you arrive at the cost of the 2-12-6?—A. Do you mean the manufacturers?
Q. What is the basis upon which the manufacturer arrives at the price or cost, or what is the schedule that is used?

The CHAIRMAN: The formula.

By Mr. Sommerville:

Q. What is the formula of arriving at that cost?—A. The prices that he would use this year run something like this: Nitrogen is taken at a cost of $1.75 a unit. That would be $3.50 for your nitrogen. Your available phosphoric acid is 65 cents a unit, which would be $7.80. Your potash is 75 cents a unit, which would be $4.50. Totalling that, you would find it cost you $15.80. You take 2 per cent shrink, which is legitimate, no question about that, 32 cents. Bags and tags, $1.50. I don't think that could be disputed. Factory is $2.
Q. What do you mean by " factory "?—A. Well, superintendence and mixing.
Q. Factory overhead?—A. Well, that is the mixing charge, and packing.
Q. Labour and handling and such?—A. Yes.
Q. At the factory?—A. Yes.
Q. The two?—A. Yes. That is $19.62.
Q. Then what?—A. Overhead.
Q. What does the overhead cover?

The CHAIRMAN: It covers a multitude of sins.

The WITNESS: Of course, I suppose that is depreciation on plants that have not been writen off more than twice, and so forth.

The CHAIRMAN: That is very well put.

By Mr. Sommerville:

Q. Yes, depreciation on plants and salaries of officials and such-like?—A. Yes, administration.
Q. Administration?—A. Yes.
Q. What is that?—A. $3.92.

The CHAIRMAN: That is pretty steep.

Mr. FACTOR: What is that for?

Mr. SOMMERVILLE: That is for overhead.

The CHAIRMAN: I think that is where you are covering a multitude of sins.

Mr. SOMMERVILLE: That is almost 22 per cent.

The WITNESS: That is for the committee to decide.

The CHAIRMAN: That is your figure. Go ahead.

The WITNESS: Totalling that, it will be $23.54. The average freight, $3.50. I think that is fair. I might point out that the prices as shown on these lists that you have there are delivered, Ontario points. Take for instance a manufacturer in Toronto who ships to North Bay a L.C.L., lot of fertilizer; he will pay 35 cents a hundred, that is $7 a ton—take the bitter with the sweet.

By Mr. Edwards:

Q. What is a carload lot to North Bay?—A. I have that here. It is 252 miles, I think, to North Bay. We get a mileage rate on fertilizer. 252 miles is $17\frac{1}{2}$ cents.

Q. Against L.C.L. of what?—A. $35\frac{1}{2}$ cents.

Q. Double?—A. Yes. That makes a total of $27.04. Your profit is 10 per cent, $29.74.

By the Chairman:

Q. Which one are you looking at?—A. 2-12-6.

By Mr. Factor:

Q. What does that sell at?—A. I am not through yet.

Mr. SOMMERVILLE: He is going to add on something for profit.

The WITNESS: You have $29.74. In order to arrive at the price you have to add $2 a ton carrying charge,

By Mr. Sommerville:

Q. That is for time?—A. That is for time.

By Mr. Young:

Q. What time do you give for that?—A. That is October 1.

Q. That would be six months?—A. Yes.

Q. Pretty stiff interest, is it not?—A. Well, your hazard for non-collection. That is $31.74. Have you all got that? In order to arrive at the retail selling price, the agent's commission of 10 per cent, and 1 per cent for spot cash—the agent pays spot cash—or 11 per cent to be accounted for has to be taken into consideration. Therefore you divide that $31.74 by 89.

By Mr. Young:

Q. You allow the agent 1 per cent for paying cash?—A. Yes.

Q. But you make the farmer pay it?—A. Yes. I didn't set this.

Q. Or add it to the price?—A. That is the schedule, I didn't set it.

Mr. SOMMERVILLE: Just let us get this figure. I know what is being worked on, and I think you will get what you want.

Mr. FACTOR: This is a reverse policy.

By Mr. Sommerville:

Q. This figure is now considered as being 89 per cent of the retail price?—A. Of the retail selling price.

Q. Then when you make this 100 per cent, what is the retail price?—A. It figures out at $35.70, but the nearest nickel is $35.75.

By Mr. Factor:

Q. You add 11 per cent to $31.74?—A. It does not work out just that.

Mr. SOMMERVILLE: A little more. If this figure represents 89 per cent, you bring it up to 100.

Mr. FACTOR: Divide by 89 and bring it up to 100.

The WITNESS: You are all in on the secret.

Mr. SOMMERVILLE: Well, the basis.

The CHAIRMAN: Oh, no, we are not.

Mr. SOMMERVILLE: Not yet. You say there are these time prices.

The CHAIRMAN: That runs about 30 per cent.

By Mr. Sommerville:

Q. This fertilizer is sold through farmer agents, is it not?—A. Well, implement agents, farmer agents, anybody who has credit standing sufficient to pass the credit department.

By Mr. Factor:

Q. What about canners' agents?—A. Well, I suppose they might be classed —canners' representatives as was mentioned in the evidence previously—yes, I suppose so.

By Mr. Sommerville:

Q. Is it not a fact that the companies require these agents to assume the liability for all the collection, and guarantee the same?—A. Well, in the majority of cases I would say yes.

Q. So that an agent has to take the hazard of the collection?—A. Yes. Of course, then the company takes the hazard of his paying.

Q. They take the hazard on the agent?—A. Yes, on the agent.

The CHAIRMAN: They reduce it.

By Mr. Sommerville:

Q. They reduce their hazard from the large number of farmers to the limited number of agents?—A. The eggs are not all in one basket; that is right.

By Mr. Ilsley:

Q. Do they take bonds or get someone else to sign an agreement of indemnity against loss for their agents?—A. You mean credit insurance?

Q. I didn't just mean that.

By Mr. Sommerville:

Q. Are the agents bonded to the government?—A. Not that I know of.

Q. Or do they put up a deposit?—A. I think the cost of doing that would be prohibitive.

By Mr. Ilsley:

Q. Do they get their father or brother or someone to sign for them?—A. Oh, they sometimes get their wives, when their property is in their wives' names.

By Mr. Sommerville:

Q. They are sold on an agency basis, and you have told us that is sold on a 10 per cent commission basis?—A. Yes.

Q. Is that 10 per cent paid immediately that the sale is made?—A. No, there is 5 per cent of it, in mixed fertilizer, that is retained.

Q. Five per cent of it?—A. Yes.

Q. That is to say, 5 per cent is paid at the time?—A. Yes

Q. And the other 5 per cent is retained?—A. As a good behaviour guarantee.

Q. That is retained for good behaviour. We are learning a lot of things in this business. What do you mean by a good behaviour guarantee? When is that paid or under what circumstances?—A. Well, it is paid on July 1st.

Q. On July 1st?—A. Following the date of the sale, if it is not later than July 1st.

Q. Then the agent may pay spot cash and get an extra 1 per cent discount or commission?—A. Yes.

Q. If he pays spot cash, does he not get his entire 10 per cent at that time?—A. No, that is retained, 5 per cent is retained by the company selling it.

Q. That is, 5 per cent of his own money is retained?—A. Yes. I think that must be there in a trust account or something.

By the Chairman:

Q. It is a sort of disciplinary measure?—A. It might be termed that, Mr. Chairman.

Q. To keep him under control?—A. Yes.

Mr. Young: Does he get interest on that?

Mr. Factor: Something like the reserve of the tobacco manufacturers.

The Witness: You get it back, but get no interest on it.

By Mr. Sommerville:

Q. Then if the agent gets 1 per cent, he gets 1 per cent for paying cash?—A. Yes. If he paid his cash, that $2 a ton would not be applicable. He would get $2 a ton less.

Q. He would take the hazard of the farmers?—A. Yes.

By Mr. Factor:

Q. Are these figures that you cite to us from the people that are in the fertilizer association?—A. I believe that is the schedule they use in figuring these costs.

Q. What about yourself as an independent? Do you base your price on a similar structure?—A. When I sell mixed fertilizer I am obliged to.

By Mr. Sommerville:

Q. You say that you are obliged to. Why should that be?—A. Well, I depend on them.

Q. You depend on some of these firms?—A. For mixed fertilizer.

Q. And for some of the materials that go into these?—A. Not so much the materials, no.

Q. But for the mixed fertilizer?—A. Yes.

Q. I have here something called "Agent's rules and regulations for the spring season of 1934." Do you know what that is? Have you seen anything similar to that?—A. Well, I think that is much along the same line as I have been outlining here. It is instructions to fertilizer agents concerning bonuses and the like. That is a point I would like to bring up here. There are bonuses.

Q. Let me identify this. These are instructions to agents, and rules and regulations for the spring of 1934, for the sale of fertilizers by these members of the association?—A. Yes.

The Chairman: Are you putting that in?

Mr. Sommerville: Yes, I will put that in as an exhibit.

(Agent's rules and regulations filed, marked Exhibit No. 182.)

By the Chairman:

Q. There is just one point here. You have three items that enter into this product. There is nitrogen, acid phosphate and potash?—A. Yes.

Q. You fix a unit figure for nitrogen of $1.75; for acid phosphate, 65 cents, and for potash, 75 cents?—A. Yes.

Q. What do you base those figures on, the cost of material?—A. The cost of the material, average cost of materials used as a source of nitrogen. You might, for instance, derive your nitrogen in one case from ammonium sulphate, or you might derive it from nitrate of soda, or you might derive it from a combination of nitrate of soda and sulphate of ammonia; or you might derive it from three sources. You might have an organic source, packing house byproducts.

Q. What I am getting at is this: How can you satisfy the committee, for instance, that the price of $1.75— —A. That $1.75 is a fair price?

Q. Yes?—A. Take sulphate of ammonia. Suppose it cost the manufacturer, in carload lots, $30 a ton. Say it analyzed 20 per cent nitrogen. That would be $1.50 a unit.

By Mr. Sommerville:

Q. Is that an average?—A. That is an average.

Q. Is that average a reasonable one?—A. Yes.

By the Chairman:

Q. What I am getting at is that in your set up here you have got a lot of items, and I am not disputing them. But it looks to me as if you had protected yourself perhaps with a profit in each of these items which would not be out of the way, but after all, when we are getting at the rock bottom of things, it is good to know?—A. Well, Mr. Chairman, I want it clearly understood before this goes to the press that I didn't set this schedule. I don't want it to go out that I did.

By Mr. Sommerville:

Q. You don't want it supposed that these are your costs?—A. No, not that they are my personal costs.

Q. No, but they are the basis of the schedule by which these prices are arrived at?—A. Yes.

By the Chairman:

Q. That is precisely what I am getting at. Therefore these figures of $1.75, .65 and .75 may in themselves show a profit?—A. They could, yes. I want to be perfectly fair. I don't think that acid phosphate at 65 cents can show a profit, because I think the manufacturers of superphosphate to-day are taking a licking on superphosphate. It is the sugar in the fertilizer business.

Q. But the other two may show a profit?—A. It is possible. The nitrogen, I think, might show a profit, but I don't think available phosphoric acid could show much profit.

By Mr. Factor:

Q. You say "show a profit." Do you mean that the cost is set at a high figure at $1.75? Is that what you mean?—A. Yes.

The Chairman: Yes, they use this as unit basis upon which they figure the cost of the ultimate article.

The Witness: Some of the large manufacturers can purchase nitrogenous materials at a lower figure than $1.75, yes.

By the Chairman:

Q. You charge an overhead of 20 per cent; you charge a profit of 10 per cent?—A. That is the charge, yes.

Q. A profit of 10 per cent?—A. Yes.

Q. And then when you get to the last of it, you divide by 89. That means that up to that point you have 89 per cent?—A. Of your retail selling price.

Q. So that between 89 and 100 per cent of the retail selling price comes what?—A. The agent's 10 per cent, and 1 per cent for paying spot cash.

Mr. Young: That is $12\frac{1}{3}$ per cent. It is not 11.

Mr. Ilsley: Advanced on the $31.

The Chairman: But you have got to figure on the retail price.

Mr. Sommerville: It is really $3.96 actual cash advanced upon the $31.74.

By the Chairman:

Q. What are your losses generally, by and large; what is the percentage of bad accounts?—A. Well, I remember in the packing house business they used to say if you had—they used to count on, in the meat end, one-tenth of 1 per cent. But in the fertilizer end the proportion was higher than that, say 1 per cent.

Q. How much higher?—A. Say 1 per cent.

By Mr. Factor:

Q. You charge $2 for the time price?—A. Yes.

By the Chairman:

Q. That $2, for the time it is out, amounts to about 30 per cent?—A. That is what I have always contended to the grower, that he should go to the bank; and if his credit is any good at all he can save a great percentage by buying for cash.

Q. He could only save 1 per cent by buying for cash?—A. Why?

Mr. Factor: He can save $2.

By the Chairman:

Q. They take $2 off as well?—A. Yes.

Q. If he paid cash he would get the $2?—A. Yes.

By Mr. Sommerville:

Q. What is the farmer's cost if he adopts the popular method of rolling your own—mixing his own? Does he save substantially by that?—A. Yes, he does. It all depends on the location. Some localities are situated more favourably than others regarding the importation of materials, for the delivery costs of the importation of materials. For instance a grower in the Niagara peninsula would be more favourably situated than a grower up around Muskoka or some place like that. I would say to be fair with the grower, to the manufacturer of fertilizer, that 2-12-6 fertilizer, the bare material cost would be approximately $22. That is the bare material cost. That is nothing for mixing or anything else.

By Mr. Kennedy (Peace River):

Q. How do you mix it, with a shovel?—A. It all depends. You see, the question will be raised, no doubt, that home mixing does not give as well or completely balanced a mix as mechanically mixed fertilizer, and one which has been stored, mixed and cured, so to speak. But if he uses ammonium sulphate, superphosphate and potash, and uses it quickly—what I mean, if he mixes it up

to-day and does not wait for a week to allow any set up, it should work out all right. He could not use any mixture. He could not use cyanimide and sulphate of ammonia because you would have a chemical reaction.

Q. It just about ruins his health to handle the stuff, in mixing it, it is dusty?—A. Yes, it is not the most pleasant thing. There is a little dust. There are a lot of things worse. I would rather mix fertilizer than stand in front of a blower or in front of a threshing machine in a head wind.

By Mr. Young:

Q. He has got to know something about these things, has he?—A. Yes. The Department of Agriculture here issued a home-mixing guide in 1928. I have a copy of it, and it says, "The farmer is competent to mix fertilizer at home if he understands the above calculation." It was a very simple one, too.

By Mr. Sommerville:

Q. Is there any difficulty about his getting the necessary materials, or do they come from the same source?—A. There was a case cited yesterday, and I would like to take that one case up. That was a buyer at Burlington who wanted to buy a carload of nitrate of soda. I didn't see this man, but the evidence has been produced. This grower wrote down to New York, to the New York brokers who handle nitrate of soda. He could not get a price because he was not in the category of a mixer, and he had to buy that through a west Toronto firm, and I understand it cost him $2 extra a ton. He had to buy through Canada Packers. I don't know why he should not have been able to buy that.

By Mr. Kennedy (Peace River):

Q. He was not in the category of a mixer?—A. Yes, a dry mixer.

By Mr. Sommerville:

Q. You say there may be handicaps?—A. There may be handicaps.

Q. Handicaps in the way of the grower getting them direct from the source of supplies?—A. Yes, there may be.

The CHAIRMAN: Thank you, Mr. Grose.

Mr. BELL: There is a gentleman here who says he has to go away to the farther part of Ontario, and wants to know if it possible to have a sitting this afternoon.

The CHAIRMAN: No, we are not having a sitting this afternoon. The committee will adjourn until Monday morning at 11 o'clock.

The committee adjourned at 12.55 p.m., to meet again on Monday, May 21, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,

May 21, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of the last meeting contain a record of the witnesses heard, and two exhibits filed. I will declare them approved.

Mr. SOMMERVILLE: The first witness to be called is Mr. Craise.

H. L. CRAISE, called and sworn.

By Mr. Sommerville:

Q. Mr. Craise, you are engaged in the fruit growing industry?—A. I am.

Q. And have been for a number of years?—A. All my life.

Q. Located in the Niagara peninsula?—A. Near St. Catharines.

Q. You have been associated with the various efforts made to market the product of the fruit farms in the Niagara peninsula?—A. Yes, I have.

Q. In connection with that, you have had considerable experience in your dealings with the canning companies that use fruits in canning?—A. Yes, I have.

Q. Will you be good enough to give the committee the benefit of your information and observations as to the problems of the growers which you desire to have presented to the committee——A. With the Chairman's permission, I would like to explain a few things to the committee which I think were overlooked on Friday—not overlooked, but not explained. The question was asked by the committee, " How can the farmer continue to sell tomatoes below cost?" I submit, sir, that he cannot forever. The point we want to bring out at the moment is how he is doing it. I would like to paint a word picture just for a minute. In my own district, between the lake and the escarpment, probably two and a half miles, is a very intensive area of fruit and vegetables, back of which escarpment is a dairy country. At least 5,000 tons of manure have been sold by those farmers to the fruit and vegetable farmers during this last winter. Any person that knows anything about farming knows that a farmer who sells the fertilizer off his farm is courting destruction. But in order to get cash, and in order to get money to live on, he is forced into this position.

By Mr. Young:

Q. That is the dairy farmer who is selling the fertilizer?—A. That is the dairy farmer. Let us take this county, Northumberland county, where they have not an outlet for manure to the other farmers. He is subsidizing, to my mind, the canning industry, by selling tomatoes in which he puts a large percentage of his labour and the manure from his farm, at below what could reasonably be named as the cost of production, including the cost of manure and

labour. He is selling, at the moment, below cost that would ordinarily be computed, and giving in that product part of his manure and part of his labour for nothing.

Q. He is the man that is buying the manure?—A. No, he is not buying it. He is producing it. He is the ordinary farmer growing the odd acre of tomatoes, four or five acres of tomatoes, but he has on that farm a dairy herd.

By Mr. Edwards:

Q. This is Northumberland county?—A. Yes.

Mr. Sommerville: Mr. Craise is referring to the conditions in the Niagara peninsula where one group of farmers are selling manure off their farms to vegetable growers and fruit growers. Now he transfers that same situation to Northumberland where they have not the same situation and do not sell manure.

The Witness: They don't sell the manure. They put it on their crop. They put it on the tomatoes, and sell the tomatoes below cost, and they do it in this way, and continue to keep going.

By Mr. Sommerville:

Q. That is so as to get cash to carry on?—A. To get cash. It is a cash crop, about the only cash crop they have in that district; that is, these canning crops. I am going to leave that picture for a minute.

By Mr. Senn:

Q. Mr. Craise, before you leave that, I suppose you have heard it said, as other farmers have heard it said, that if you were to estimate the cost of production on the farm in the same way as it is estimated in other industries, by charging a reasonable amount of depreciation, interest rates and labour cost and all the rest of it, you could not find any phase of farming operations that would show a profit?—A. I would not say that, no.

Q. That is an old adage?—A. I know. That is quite possible. But I would like just to prove my statement. That applies on tomatoes, I will grant you, at the moment. But to prove my statement, or my contradiction of that statement, I will take the asparagus situation. Now, this last year we have had reason, due to the lowering of prices of asparagus, to go into the cost of production very carefully. A group of growers were appointed at a meeting in Hamilton, a fruit growers meeting in Hamilton, to do that very thing. We took a price set-up that would cover the time that the asparagus is coming into production—just about three years—carrying over a period of twelve years of production, putting the whole thing on a business basis. It will cost 9 cents a pound, based on a ton to the acre, to produce asparagus. The asparagus crop over the province this last year was 1,500 pounds, an average crop.

By Mr. Sommerville:

Q. To the acre?—A. To the acre. On the other hand we have growers who will produce probably twice that amount. So, in order to show a fair picture, we took a basis of a ton to the acre. At 9 cents a pound that is $180 an acre for cost of production, without depreciation or allowance for manager.

Now, to corroborate that price set-up, we asked the agricultural college in Guelph to produce, for our benefit, a price set-up on asparagus. Their price set-up, with the cost of production based on 20 cents an hour for labour, was $179 per acre; so we felt that, in producing a cost set-up of $180 per acre, we were very, very near the mark. To answer your question, a few years ago—1928, I think, and up until 1930—asparagus sold for 14 and 15 cents a pound from the grower, which as you can readily see was a profitable proposition.

By Mr. Young:

Q. What year was that?—A. That was 1928 and 1929. Now, let us see what happened in those years. A gentleman who sat in this room—I refer to Mr. Lowery of St. David's—was sent out by the canning interests. I expect it was the Canadian Canners, because he is employed by them, but it might have been supported by the canners. He went through our district telling the growers there was an unlimited market for asparagus, advised them to plant it, and it was done. Now, it takes three years for an asparagus crop to come to maturity, and it is really not at maturity then, but it comes to its first production in three years. It will then go on and increase its production probably for the next four or five years. You can see that from 1928 to 1934 is six years. Last year we had a fight to get 10 cents a pound for asparagus.

By Mr. Senn:

Q. Because of overproduction?—A. The increase in production has made it so that the market—that is the basket market—would not absorb the quantity without the canner entering the picture.

The CHAIRMAN: What year did he tell you that?

Mr. SOMMERVILLE: 1928-29.

The WITNESS: Yes, just in there, at that time.

By Mr. Senn:

Q. Did importations have anything to do with that?—A. Which is that?

Q. Did importations, early importations, have anything to do with the overproduction or oversupply?—A. Well, we have been fairly well cared for in early importations, inasmuch as the government have seen fit to assist us during the season in which we have the product for sale. Before that the asparagus comes in practically free of duty, when we have not it to offer. When it comes in, we are fortunate in having a sufficient duty put on to more or less assist us. This does not raise the price, generally speaking, to the consumer. It may for a day or two, but the crop comes on fast enough that the consumer gets asparagus at a very reasonable price, even although duty is applied to foreign asparagus.

By Mr. Young:

Q. Has there been any falling off in demand?—A. For what?

Q. Asparagus?—A. The raw product or canned?

Q. Raw—either one.—A. No, I would say the raw product is being more freely used to-day than it was at the time I speak of.

Q. The market is greater then for the sale of these extra acres?—A. Yes, I think so; because it is a product, like any other product that is being produced, that is a good, palatable product, one that is a health-giving product —naturally as long as the price is not too high, it is one that the consumption increases on.

By Mr. Senn:

Q. Don't you think your argument goes to prove that statement that I made, that sooner or later prices get down to a place where the cost of production is higher than what you realize?—A. Well, that is possibly the case if you carry on long enough. I don't think there is any doubt about that.

By Mr. Sommerville:

Q. With respect to the asparagus situation following the suggestion that you should increase your acreage, when that was increased and your crop came into bearing, then the price was dropped substantially from 14 cents to what? —A. Well, it started—it came down from 15 to 14, then to 12 and 11, and last year to 10.

By the Chairman:

Q. That is for canning purposes?—A. That is for canning purposes.

By Mr. Sommerville:

Q. You are not now referring to the basket trade?—A. No, I am not referring to that at all.

Q. Then, what happened with reference to the asparagus situation this year? Just follow that through?—A. Well, to give you a proper picture, I would have to go into the situation last year that developed, what we did last year, due to forced conditions. We formed an asparagus association. At our first approach to the canning industry, we were informed that American asparagus would be laid down in Canada, due to forced labour conditions—I should not say forced labour, but cheap labour conditions—at a price below which we could not expect to get 10 cents a pound.

By Mr. Heaps:

Q. Do you know anything about labour conditions under which asparagus is produced in the United States?—A. Not personally, no.

By Mr. Factor:

Q. Where is it grown?—A. In the southern states.

By Mr. Senn:

Q. May it not possibly have been the clean up of their fields?—A. Well, of course that is a possibility. I am not prepared to say that under oath. I am only giving my opinion. The canning company with which we negotiated, Canadian Canners—and I would say they gave us every assistance to get a proper perspective of the situation—gave us a contract for 100 tons of asparagus, based on two prices, a price of 8 cents if no further protection was afforded, and a price of 10 cents a pound if that protection was forthcoming. When we approached the government, the government said, "That is all right, so far as it goes." And they were perfectly justified in this claim, that if this is to apply, all canners must pay the price for asparagus. If this is to be done for the grower, the grower must get it. We held a meeting with the canners, and they agreed to that proposition. Unfortunately some seemed to be of the opinion that their word didn't mean a thing to the government or to anybody else, and there were only two that actually fulfilled that agreement. Canadian Canners bought their 100 tons. Their claim is that to help the growers out, some of them offered their asparagus at below 10 cents a pound, and they accepted the grass and paid for it on that basis. However, the fact remains that over and above 100 tons they did buy asparagus at 6, 7 and 8 cents a pound, which naturally brought their average down somewhat, probably not a great deal, but it brought it down below the price paid by the man who actually stood by his guns and paid the 10 cents a pound all the way through.

Now, this year a similar arrangement has been made. Due to further organization the whole province, so far as I know, is getting a price of 10 cents a pound. As was referred to the other day, one canning company did try to slice a little off the end of the asparagus and get the tips cheaper, but I believe since that time, they have come into line.

By Mr. Sommerville:

Q. What is the effect of that slicing that was referred to the other day, that the grower is to have 10 cents for?—A. It is on 6 inch grass.

Q. 6 inch grass?—A. Yes.

Q. And 6 inch grass weighs more than 5½ inch grass?—A. Yes, quite properly.

Q. Then one of the canners went out and tried to get 5½ inch grass for the 10 cents?—A. Yes.

Q. Which meant that half an inch of the grass had to be taken off the heavy end?—A. For which the grower paid.

Q. The grower?—A. Yes.

Q. The grower got no allowance in that respect?—A. No, but I believe since that day, since our inquiry opened, that matter has been rectified.

Q. Since the inquiry opened last Friday?—A. Yes.

Q. Or Thursday, rather?—A. Thursday.

Q. That canning company is paying 10 cents for 6 inch grass?—A. Yes, that is my understanding over the week-end. We are recommending,—if you care to get any recommendations that we have, to get this picture properly, to get this set-up right,—that there should be a price to the grower, based on proper cost of production, to give him a decent living. Now, to enlarge on the statement made by Mr. Drynan, that they took this asparagus to help the grower out, my claim is if they don't want this asparagus, they should not buy it at any price. If I want a tractor, I go and buy it, and pay for it. If I don't want a tractor, there is no man in the world that can sell it to me. If the canner doesn't want that asparagus, he should not buy it, that is all; and I don't think, if he didn't want it, that he would buy it, as a matter of fact. However, that is the statement that is made.

Q. However, you are referring to last year's arrangement?—A. Yes.

Q. That they were to take 100 tons?—A. Yes, and said that was all they needed, at the conference which I referred to.

Q. And because that was all they needed, the price was fixed at 10 cents a pound for 100 tons?—A. Yes, and any other quantity produced.

Q. And you say subsequent to that, all of the canners agreed?—A. They agreed at this one conference—they all agreed to pay this price, but some didn't pay it at any time.

Q. At this conference they agreed to pay this price, and that was to be for their needs?—A. That was to be for their needs.

Q. And they estimated their needs at 100 tons?—A. No, you have got the picture wrong. The Canadian Canners bought their 100 tons, but the other canners agreed to buy what they needed on the same basis; and that was the only way the government were justified in giving us any reasonable protection at all.

Q. Following this arrangement, the government did provide some protection for you, in order that you might have a price of 10 cents a pound for your asparagus?—A. Yes.

By Mr. Factor:

Q. What was the dump duty that was placed on it?—A. I think 3½ cents a pound. That is the basis of value for duty.

Q. Was there an agreement signed between the growers and canners, including Canadian Canners?—A. There was an agreement for 100 tons, to purchase 100 tons.

Q. By the Canadian Canners?—A. By the Canadian Canners, if this condition prevailed with the other canners. The agreement was verbal, as a matter of fact, but it was agreed to at a conference at which a representative of the government sat in, and the growers and the canners.

Q. And under that condition the government put on a dump duty?—A. Yes, on the understanding that the grower was to get the benefit.

By Mr. Sommerville:

Q. When you referred to a representative of the government, did you mean a representative of the federal or provincial government?—A. Federal.

The CHAIRMAN: From the Department of Agriculture.

By Mr. Senn:

Q. Was there a pretty good clean-up of the fields?—A. Yes, the asparagus—personally I did something I had never done before. For two things—in the first place I needed money, and the agreement set out last year for the first time in history was that 50 per cent of the asparagus was paid for 30 days after finishing cutting and the other 50 per cent was not to be paid for until the fall, and that was a stipulation of the canners in order to get this 10 cent price. That was the last time it had ever been in existence, and due to that stipulation and having need of money I reserved a part of the crop for the market and I shipped about 40 per cent of my crop in baskets. I had seven tons. I put four tons in the factory and shipped the balance to the open market, and my books will show and I am testifying that my average price for the asparagus was equal to the canning price. Now, I made that statement the other day and it was disputed that the average grower did not get that. That is possibly the case. I would like to say what I am giving is my actual experience.

Q. What I wanted to find out is if the fields were fairly well cleaned up. Would they have been as well cleaned up if these further purchases had not been made by the Canadian Canners?—A. Of course, if the asparagus had not gone to the Canadian Canners it would have gone to the markets, and it would have been cleaned up in that case. I do not know to what extent it would have affected the general market, but, probably, to some extent on the lowering of the average price. The market was there and the asparagus would have been consumed in any case.

By Mr. Factor:

Q. When this agreement was made did the government obtain an agreement from the canners to pay the growers 10 cents?—A. They had said the canners should pay as they agreed in the conference although not to the word. We did not demand an agreement from the other canners because we thought we were dealing with a bunch of gentlemen and we took their word they would live up to their agreement.

Q. The government took the word of the canners that they would pay 10 cents?—A. And sat in with the growers.

By Mr. Ilsley:

Q. Do you know how much they took at 10 cents?—A. Two independent canners of which I have knowledge bought 150 tons.

Q. I am speaking of the Canadian Canners?—A. They agreed to take 100 tons and they paid for them on the 10 cent basis, and they bought outside of that, I don't know how much, we were given to understand by growers in the district who said we did this and that, that it would run in the neighbourhood of 30 tons at the lower price.

Q. Your complaint is that for their requirements over and above the 100 tons they did not pay 10 cents?—A. That is the complaint—as agreed. It was agreed that they should buy—well, put it this way. We will say you are the general manager of one of the canning companies. You say, "I will buy 100 tons and I am willing to pay 10 cents." On the basis of that settlement other canning companies went out and bought their total requirements at 10 cents a pound, and when the other canners step back into the picture and buy a limited quantity at a lower price it puts him at a distinctive advantage on the market.

By Mr. Young:

Q. What is the practice? Do you sell what you can to the canners and then sell the rest on the market in baskets?—A. Up until the last year I sold the entire crop with the exception—

Q. If the Canadian Canners came in at the end of the crop to buy below the 10 cent price why didn't the others sell on the market as you did and get their 10 cents?—A. I could not answer that.

By Mr. Senn:

Q. Could they have got 10 cents?—A. Possibly not if they had all been shipping. They did not buy this at the end of the season; they bought this through the season at the prices I have mentioned.

By Mr. Young:

Q. Did they not first buy their hundred tons at 10 cents?—A. Yes, but they were taking in from other growers who were not signed at the lower price at the same time they were accepting the 100 tons.

Q. Were there some growers not in the agreement?—A. Yes.

Q. What price did they get?—A. Six, seven and eight cents.

By Mr. Edwards:

Q. Did they have an opportunity of coming in under the agreement?—A. Last year the organization of the asparagus growers did not begin until late in the season. As a matter of fact, the asparagus cut started about the 8th of May and the final arrangement for protection was not put on until the 13th of May. There was an upheaval until the completion of the final agreement.

By Mr. Young:

Q. Is there any difference in the quality of asparagus—A. Yes, asparagus is bought on two grades by the factory. They buy on two grades.

Q. If they are paying one man 10 cents and his neighbour 6 cents, I should think the neighbour would want an explanation—A. You ask for an explanation but it is not afforded; it is either a case of take it or take it away.

Q. Quality has nothing to do with it?—A. No.

By Mr. Sommerville:

Q. This was for top quality?—A. Yes, number 1 asparagus. Asparagus is all graded by the growers and sold to the canner on the basis of two grades this year, 5 cents for number 2 and 10 cents for number 1.

By Mr. Senn:

Q. What I cannot understand is this. If they only paid 8 cents why could the farmer not have taken it on the basket market if he could have realized more?—A. If you understood the farmer as well as I do. He feels that when the canner is offering this price that must be the market price; that he will take it some place else but he cannot get any more anyway. There are many farmers that seem to be easily led. I do not know why, but it is the case.

By Mr. Heaps:

Q. Is it the market price the farmer is receiving from the canner?—A. The canner is demanding a different product from the market—asparagus that is cut too short—that is cut—that has not long enough green on it and a white tip at the bottom. That is not worth the money, and if the green is cut long enough and his whole stock is green the canner demands and receives a product

that is all green. There might be the slightest tip that is white and that grows at the top of the ground—as it comes to the ground it is white. It turns green and comes up in that nature, and it is cut off and sold to the canner as an all-green product. The market does not get that product in that form; there is usually a small white tip. If there is a small white tip, sometimes longer, that is not a suitable product for the canner.

By Mr. Senn:

Q. Would you say that because the canners did pay 6, 7 and 8 cents that it had any effect on the price of the basket market?—A. It probably helped it some. It would help it some because every hundred pounds taken off the market has that tendency.

Q. It cannot be all to the bad?—A. No; but on the other hand we expect people to keep faith.

By Mr. Factor:

Q. Did you make any complaint to the government?—A. We did not for this reason: here we have two canning companies with a total pack of 10 cent asparagus. They were men who had played the game right through the piece on word of mouth. Now, if we had gone to the government and said, "Here, take off this protection" these men would be ruined.

By Mr. Young:

Q. How much did these men take?—A. 150 tons.

Q. How much did they agree to take?—A. They did not agree to take anything; they agreed to buy their requirements.

Q. And Canada Canners agreed to take 100 tons?—A. And took it.

Q. Was 100 tons their normal requirements?—A. I could not answer that.

Mr. ILSLEY: That was their estimated requirements?

The WITNESS: That is what they said last year was their requirements.

Mr. KENNEDY (*Peace River*): Did they agree to buy all at 10 cents?

The WITNESS: No. The manager when he went out said, "I have bought all I am going to do; I have bought all the grass I want at 10 cents a pound. If the protection is afforded, it was enough for the other canners and for us."

By Mr. Sommerville:

Q. And as he estimated his requirements at 100 tons you assumed that is what it was?—A. Yes.

Q. You did not expect he would buy anything over and above 100 tons?—A. We expected on the basis of the agreement if he did buy he would pay 10 cents a pound.

Q. The larger canners did go ahead and buy their whole requirements for 10 cents?—A. Yes.

Q. Without limiting the amount in any way?—A. At the time the agreement was made we had no idea what they were going to buy.

By Mr. Ilsley:

Q. It may have been an honest effort at the time, or not?—A. I rather think it was.

Q. How soon after that time did he start to buy?—A. The next week.

Q. Outside of the lower price?—A. The next week. Some independent canners went out within three days and bought at the lower price—some other canners.

Q. Were they bound— —A. They had given the same agreement as the others.

Q. For instance, you are not complaining of Canadian Canners only?—A. Oh, no. Don't get me wrong. There are many canners in the province, only two of which actually live of up to their agreement. I do not want to do that at all.

By Mr. Young:

Q. Those canners estimated their requirements and agreed to buy them at a certain price and they bought at a certain price?—A. We found there was a lot more asparagus on the market and they said possibly now we could handle it at a lower price and move it.

Q. But is that what happened?—A. I expect that will be the rebuttal.

By Mr. Edwards:

Q. It was the independent canners that broke the market, and Canadian Canners came in after they had taken their hundred tons and bought at the lower price?—A. They started to take their hundred tons immediately, and within a week—and that was spread over a period from the 13th of May until 25th of June—and within a week of the signing of the agreement, or rather the completion of that agreement, and within a week of the 13th of May at which time the whole thing was completed they, as well as other canners, were buying asparagus at 8 cents a pound, and next week at 7 and next week at 6 which continued for the rest of the season.

By Mr. Sommerville:

Q. While they were still taking their hundred pounds?—A. Yes.

By Mr. Senn:

Q. I understood they all agreed to take 500 tons at 10 cents?—A. Oh, no; I did not mention 500 tons.

Q. I thought you mentioned that?—A. Oh, no.

By Mr. Sommerville:

Q. The only company which estimated its requirements was the Canadian Canners?—A. The Canadian Canners.

Q. All the companies said they would take their requirements at 10 cents?—A. Yes.

Q. The Canadian Canners estimated its requirements at 100 tons?—A. They signed a definite contract for 100 tons.

Q. And other canners—two of them that you referred to—did take their entire requirements at 10 cents?—A. Yes.

Q. But notwithstanding the estimate of 100 tons, the Canadian Canners, while they were taking the 100 tons, took more at the lower price?—A. Yes.

Q. And while they were taking their 100 tons other independent canners within three days of the agreement went out and were taking their requirements, which were not estimated, at 6, 7 and 8 cents?—A. Yes.

By Mr. Senn:

Q. Is there no memorandum of this agreement in existence?—A. There is no memorandum of the agreement as between the growers and the government and the canners, because it was all verbal. There is a copy of the Canadian Canners contract for 100 tons, which is available.

By Mr. Edwards:

Q. But they took that?—A. Yes, they took that; there is no complaint about it.

By Mr. Heaps:

Q. Has there been a large increase in the production of asparagus during the past few years?—A. There has.

Q. Have you any idea of what it is?—A. No, I could not say to what extent the increase has been, because I did not know the acreage at the time that I spoke of. The area around St. Catharines has been increasing very materially. I was a member of the asparagus committee and did considerable to get the organization completed, and I may say—I think I could safely say that where there were four acres last year there are five this year.

Q. Up to now the production been taken care of?—A. Up until now, yes.

Q. Do you expect the same continuing increase as during the past few years?—A. Of course, there is only one thing can happen if it continues to increase. Unless general conditions pick up, it is bound to go down.

By Mr. Sommerville:

Q. While this production has been taken by the canning companies, has there been, as well, an importation of asparagus from the United States?—A. Up until last year the importation of asparagus was very heavy, and last year, due to the situation, the importations were cut in half.

Q. That is by reason of the increased duty?—A. Yes. I think the figures—speaking from memory—I am sorry I have not that here; I think you have it; it is in the Department of Agriculture in any event—the importations of 1932 were 803,000 pounds and in 1933 were 413,000 pounds.

By Mr. Young:

Q. At what season does this come in?—A. That is covering the period—the heaviest importations last year were in April.

Q. Before your asparagus was on the market?—A. Yes. I am speaking now of canned asparagus, not of the green product at all.

By Mr. Sommerville:

Q. I was asking you if the Canadian canning companies that do put up asparagus had imported asparagus for canning purposes last year and this year?—A. Not last year. There has been a slight importation this year; just very slight.

Mr. FACTOR: The only person who got the practical benefit of the application of the Dumping Duty was the canner?

The WITNESS: Very largely.

Mr. FACTOR: To a large extent.

The WITNESS: That is our complaint, that the government—

The CHAIRMAN: It is not the Dumping Duty. The duty on asparagus under item 87 is: "Asparagus free, intermediate 27½, general tariff 30 per cent; provided that when imported under the general tariff rate from April 15 to May 31st inclusive the duty shall be not less than 3 cents a pound." That is according to the statute passed in May, 1930; that is a fixed duty within those dates.

Mr. FACTOR: They passed an Order in Council.

Mr. YOUNG: The importations which the canners make for canning purposes I suppose are made before the seasonal duty is effective?

The WITNESS: You would naturally expect that to be the case. I could not say as to what was done.

By Mr. Ilsley:

Q. What was the special duty that the government put on last year that you have been speaking of?—A. A dumping duty on canned goods, valuation for duty as against American canned asparagus; and the reason for it was this that

the price quoted to the trade in Canada was just practically 50 per cent of what it had been the year before due to slaughter conditions on the market on the other side and the growers felt we had reckoned it on the basis on which we were working which was a cost of production of 9 cents. We were asking a cent a pound depreciation for merchandizing and farm equipment.

Q. That duty was on canned asparagus?—A. Yes.

Q. Not on green?—A. No.

Q. What duty was it?—A. I do not know how they compute it as a matter of fact. I do not understand it well enough, but 3½ cents a pound was the basis of the increase.

By Mr. Senn:

Q. I understood you to say in reply to Mr. Factor that the canners were the only ones that benefited by that?—A. Those that did not pay the price certainly were.

Q. Did the farmer not benefit by it?—A. The only farmers that benefited by it were the ones that got the 10 cent price.

By Mr. Heaps:

Q. What percentage was sold at 10 cents?—A. About 250 tons, probably. There was a very large percentage as far as that goes because the two canners that actually paid the 10 cents all the way through, outside of Canadian Canners, are the heaviest canners we have.

Q. What percentage would that be?

Mr. SOMMERVILLE: Their purchases were 150 tons.

Mr. HEAPS: I am trying to get a percentage on the total sale.

The WITNESS: Eighty per cent.

Mr. SENN: That 80 per cent did derive some benefit?

The WITNESS: Absolutely they did.

Mr. SENN: I understood you to say they derived no benefit?

The WITNESS: Oh, yes; the 80 per cent did derive a benefit. But the ones that bought at a lower price defeated the principle that was involved and the grower got a poor price for his product; and they also put themselves in the position to undermine the man who had done as he agreed.

Mr. HEAPS: You complain about the 20 per cent.

The WITNESS: That is the situation.

By Mr. Young:

Q. You ask that a fair price and living wage be allowed to the grower on his asparagus. Suppose such a price is fixed and the canners agree to pay so much under the agreement. If they have their requirements filled the farmer still finds himself with asparagus on his hands, how is he going to get his fixed price on that?—A. I cannot say. As far as I know it is subject to the law of supply and demand. I am in hopes that if this Marketing Act ever develops this whole picture will be ironed out so that everybody will get the same price. Anything that has to be bought off the market below that price will be spread all over the whole crop, but at the moment it is not.

By Mr. Kennedy (Peace River):

Q. You mean, the same price will be paid to others?—A. Yes.

By Mr. Young:

Q. Then each grower will be required to keep a portion of his crop at home?—A. Not necessarily. I think asparagus is one of the crops that a

diminution in price will very readily remedy itself because it is a very costly product to produce, and when it gets to a point where he cannot profitably produce he quits feeding it so that it will remedy itself in a hurry.

By Mr. Factor:

Q. Would not you say that the grower that gets 10 cents for part of his crop will have some of that taken away from him and given to the other growers who are getting less than 10 cents?—A. I am simply trying to give you the picture of the situation as it exists to-day, but we now have an organization that is stepping into the picture to iron out our difficulties.

By Mr. Sommerville:

Q. But you are satisfied that the industry, as such would operate properly under such a marketing system?—A. I do.

By Mr. Young:

Q. It is some sort of a cooling system you want?—A. Yes.

By Mr. Senn:

Q. Something after the system that they have in the Old Country in connection with dairy products?—A. I am not familiar with that system.

By Mr. Ilsley:

Q. Your plan would be to put each grower on an equal footing. It is not your idea to have it so that the grower can only sell part of his crop to the canners. It does not involve that, does it?—A. I do not think it does because in some instances that would be a hardship.

Q. I mean, the man who is far away from the canners would share in the good price just the same as the man who is near to the canners?—A. That would be the outcome of it.

Q. Then the man who is near the canners loses the benefit of his geographical location?—A. I do not just get that.

Q. The man who is near to the canners loses the benefit of his geographical location if he has to divide that up with the man situated far distant?—A. Well, I suppose that would be the natural deduction.

By Mr. Sommerville:

Q. You are hoping that through whatever machinery is set up that you can get together and make some kind of arrangement or agreement?—A. Yes.

Q. That would be satisfactory to the industry?—A. Yes. Mr. Chairman, I just want to say one thing here. I did not come here to say we want redress for this, that or the other. I came to point out what things are like in our industry, and I would like to suggest that something should be done to remedy the situation if it is at all possible.

By Mr. Young:

Q. Do you contemplate any reduction or restriction in acreage this year?—A. No, I cannot say that, I think that can take care of itself.

Q. Is this the only product on which you lose money?—A. Oh, no, I wish it were.

Q. You lose money on all your products, do you?—A. I would not say so, no. Outside of asparagus, everything at the moment is being sold in a haphazard way, some sold to the canners, some sold to buyers, and some to commission men.

Q. And what produce do you make money on?—A. At the present moment, the man who can say he is making money has a lot of assurance. Most of us who are in the production of tree fruits—and I am referring now to my own district because I would not include apples, not being an apple man and our district is not very heavy on apples, but I would say plums, pears, cherries, sweet and sour, peaches and grapes. Grapes at the present time are over-planted, but up till the last couple of years there has been a reasonable profit in grapes. However, taking it over a period of five years I am just about able to hold my own and pay my way, and I would say in the fruit district they are just holding their own.

Q. And a good part of their trouble is due to the general depression?—A. Of course, a lot of our trouble is due to the fact that the average labouring man hasn't any money.

Q. He cannot buy the goods?—A. No, he cannot buy the goods.

Q. Can you tell me how that situation would be remedied by increasing the price of the goods?—A. Take in asparagus, this last year the price is the best we have ever had.

Q. You just said that the working man hadn't the money to buy?—A. As a matter of fact, the statistics will show that the canned goods in hand to-day are lower than they were a year ago—canned asparagus.

Q. That asparagus that was bought at 6 cents how did that benefit the consumer in any way, how did it help the consumer?—A. I do not think he got it any cheaper.

Q. How was it that the man who bought it at 10 cents made a profit?—A. I do not know whether he made a profit or not. However, they do not say they made a loss, but I do not think the consumer benefited by that situation.

Q. You are sure of that?—A. Only from what the canners have told us.

Q. You are sure that the asparagus that was bought at 6 cents was sold at the same price as the stuff that was bought at 10 cents?—A. I would not swear to that. Some of them say that they have 6 cent stuff on hand yet, and if they have they deserve to have it.

By Mr. Sommerville:

Q. It was the same quality, and I presume went into the same kind of can?—A. Yes.

By Mr. Kennedy (Peace River):

Q. Could you get along with a 10 cent price for asparagus?—A. On the basis of present day conditions, yes.

By Mr. Young:

Q. If these canners figure that they could sell say on a 10 cent basis and then buy some more for 6 cents thinking that they might be able to dispose of it, I do not know that we should hold any grudge against them for it?—A. I like to see a man play the game.

The CHAIRMAN: I think we have got that point pretty well clear in our mind.

The WITNESS: There is another question, Mr. Chairman, that I would like to bring to your attention in connection with the local manager. I am not going to refer to the general manager because I do not think the general manager enters into it so far as the grower is concerned. I am now referring to the peach crop of 1931. In the early season of 1931 the Canadian Canners imported into Canada 14 cars of peaches, brought them in in such a condition that the growers had them inspected. Of course, they were much greener than they had been allowed to ship their own goods, but they were left to ripen and they were

canned. Immediately we put in a kick they came out and offered a price of 3 cents per pound for the Canadian product, and so far as I know, with no limit to the amount that they would buy at that price. These peaches went into the can, the imported peaches, and our crop came on; the crop of peaches you put in the cans must naturally be riper when delivered to the canner than peaches that you would ship a distance. Very shortly after the growers started their delivery to the factory, the local manager came out and said: I am sorry but these peaches must be on a 2½ cent basis from now on. And this was a bona fide contract on the form you have here at 3 cents a pound.

By the Chairman:

Q. On the same form?—A. On the same form on exhibit here.

By Mr. Ilsley:

Q. That did not help you much then?—A. Just let us see how much it did help. So far as my knowledge goes—and I have made very close enquiry —only two men that sold to the Canadian Canners in St. Catharines—and I am going to qualify that beause I am not conversant with the situation outside my own district—only two men received the price on which they made their contracts. One was paid the price by fighting the thing through with the local manager and the other went to the general offices and got the price. They then went during this same period to the manager of a co-operative organization who had sold them between twenty thousand and twenty-two thousand bushels.

Q. Who went?—A. The manager of the canners, that is the local manager, went to the manager of this co-operative company.

By Mr. Young:

Q. A farmers co-operative?—A. Yes, a farmers co-operative organization and, what we say, browbeat him, and this man told him that he would take 2½ cents per pound for his stock. Before he accepted the price he was told that they would be accepted on a reasonable inspection, and that if he did not take that price of 2½ cents they would inspect them more closely. Now, he accepted that reduction, and when he made the reduction to the Canadian Canners he found himself duty bound to make the reduction to another canning company to which he had sold 7,000 bushels in order to equalize the price, so that on his crop of peaches he lost $7,500, that is, half a cent a pound on 20,000 bushels.

By Mr. Ilsley:

Q. Is the inspection wholly in the hands of the purchaser?—A. Just as that contract says, wholly in the hands of the purchaser.

By Mr. Young:

Q. Was he selling for all the members of his association?—A. Yes, he was selling for all the members of his association. I am not here to say the general manager knew all about that, but when he did find out he did not say to the local manager: Go back and pay the growers that price, that went through on that basis. As I am pointing out, I am not here to kick about that, but what I am pointing out to you is the conditions under which our growers are existing.

By Mr. Ilsley:

Q. Why did they say that they were buying on a 2½ cent basis from that time on?—A. I do not know why. The general opinion of the growers is that they offered the 3 cent price till they got the imported peaches into the cans in order to keep him quite.

Q. Was not some reason given for reducing it to $2\frac{1}{2}$ cents; was it the quality?—A. The peaches were absolutely O.K.

Q. What reason did the Canadian Canners give?—A. None to my knowledge. The other canners, the independents, who had bought on a basis of 3 cents went on and finished their year and paid the price.

By Mr. Young:

Q. In other words, the 3 cent price was a fair price?—A. Yes.

Q. And you do not object to them bringing peaches in so long as they pay you the price?—A. No, so long as they pay us the price.

Q. Do you know what it cost to bring in those fifteen cars?—A. No, I do not know, but it scares the grower to death when they come in, because he sees them coming in in competition against his product.

By Mr. Sommerville:

Q. Why do you refer to the local manager as being in that position, or why is he put in that position?—A. Well, there is a reason in this way, that I suppose it is good business from a large firm's standpoint, because the local manager has to make his factory pay and he wants to make as good a showing as possible as against the other local manager, and if he can prove that his factory is doing a little better than the other then if he wants an increase he can probably get it.

Q. Do you know of any bonus system that prevails?—A. I understand there is one, but I would not swear that there was.

Q. As between local managers?—A. Yes, as between local managers. There is this system that prevails; I did not realize it for a couple of years. In that same factory the previous manager—not the manager that is there now but his father had his son, not the same son, but another one in there as his factory manager, and he was supervisor over a number of factories in his district; he was buying pears for canning. I had them to sell, and he got my contract for a period of two years at a size of $2\frac{1}{4}$ inches, while in all the other factories over which he had jurisdiction they were taking $2\frac{1}{8}$ inch pears. Now, what I am trying to bring out here is the fact that the manager who was buying the $2\frac{1}{4}$ inch pears had a finer product to exhibit after the season was over than the man who was buying the $2\frac{1}{8}$ inch pears.

By Mr. Young:

Q. And the same price was paid?—A. The same price, yes. I was paying for that factory producing a better product to get myself in right with the head office. That was Keefer pears.

By Mr. Sommerville:

Q. What about some of the problems arising out of the price paid for Keefer pears now that you are dealing with it?—A. Of course, about two years ago there was some effort made by the marketing board in Ontario to get a better price for the growers, and it was agreed by head office, and I believe the notices were sent out, but that was more or less given under pressure, and the growers were satisfied that that was done.

Q. What was the price agreed upon to be paid by head office?—A. I am not certain, I cannot give you that; it was half a cent above the price actually paid, I think.

Q. When you refer to head office you mean the head office of what?—A. Canadian Canners.

Q. That they had agreed to pay 2 cents for canning pears?—A. Yes, and their local managers were buying at $1\frac{1}{2}$ cents.

Q. After they had agreed to pay 2 cents then you say they went ahead and their local managers were buying at $1\frac{1}{2}$ cents?—A. Yes, and it was worked out in such a way that they would pay freight; they said we will take your ones and twos on this basis and in that way it worked out that the grower did not have the grade and they got him to accept the price of $1\frac{1}{2}$ cents.

By Mr. Young:

Q. What other outlets have you besides the factories?—A. As far as Keefer pears are concerned the only market we have is the export market.

Q. Peaches?—A. Of course peaches are shipped as far west as Winnipeg and as far east as the Maritimes.

Q. How would you ship them, in baskets?—A. In baskets, yes.

Q. How do you deliver them to the factories?—A. In bushels.

Q. Bushel baskets?—A. Yes. They provide the bushels.

Q. They provide the baskets?—A. Yes.

Q. And when you ship them to the other market you have to provide your own baskets?—A. Yes.

Q. What price do you get for them in that case?—A. In the early part of the season last year we got 50 cents which would be on the basis of 4 cents and during the bulk of the season at 30 cents, which would be about $2\frac{1}{4}$ cents a pound.

Q. And then you had to pay for your container out of that?—A. Oh no, that was net.

Q. That is just half way between the 3 cents and the $2\frac{1}{2}$ cents that the canners were paying?—A. Yes, but then they have a product thoroughly ripened on the tree. You can quite understand that when you have the product thoroughly ripened on the tree there is quite a loss from falls, and then you take a chance on windblows, and when they are blown off they are not fit for the requirements.

By Mr. Sommerville:

Q. The hazard is great?—A. Yes, the hazard is great. And then sometimes we have to hold back on deliveries.

By Mr. Young:

Q. You cannot ship ripened peaches, you have to ship them on the green side?—A. Yes, that is so. If we take green peaches into the factory they will say: We don't want peaches like that, we will take off so much on that load, and don't bring them in so green. Then you take another load into the factory and they will probably say: Why, those peaches are too ripe we will have to dock you so much on that load, so you see they get you both ways.

Q. If you keep them at home until they are ripe will he accept them then?—A. Yes, if they are fit for canning he will accept them.

By Mr. Ilsley:

Q. You have to put up with this arbitrary docking all the time?—A. Yes.

Q. What would you say about buying on grades?—A. I would say that there should be government inspection of grades; we are very strong for that. This year, as a matter of fact, we are selling a large percentage of our asparagus subject to government grade and it is working out very satisfactorily. When it comes in the government inspector looks it over, inspects it, and that is all there is to it, and it is accepted by both parties as being fair.

Q. That is a mutual arangement?—A. Yes, it is a mutual arrangement. We just called in the government inspectors and said we will pay for that, and that has been done.

Q. The growers are paying for the entire cost?—A. Yes.

By Mr. Sommerville:

Q. What else have you there, Mr. Craise? Can you give the committee any information on the spread in prices between the raw product that you deliver to the canners and the price at which it is sold by the canner?—A. No, I cannot give that spread. One of the independent canners told me that due to the several taxes that are put on the canning industry this last two or three years it was impossible to pass that along to the consumer. That has been the argument, of course, when this tax went on, that it could be passed along to the consumer, but sometimes it gets so big that it cannot be passed along and the upward trend would be too great. In the case of one of the canners, in 1931 he paid the growers, for the entire product that year $54,000 on which he paid taxes of different kinds amounting to $3,000. In 1932 he paid $6,000 on a like buying, and in 1933, with the increase in the sugar tax or the imposition of a tax on sugar, he paid $19,000 on the purchase of the same product.

Q. Yes.—A. Now, it is quite readily apparent that that cannot be passed on to the consumer.

Q. You have not got the figures on the spread?—A. No, I have not.

Q. What else did you desire to present, Mr. Craise?—A. We feel that in the industry in which we are involved, because it is part of our industry, while the canning companies may think that they are the only ones in the picture we would like to say We do not want to do that. However, the American Can Company's contracts have a very great bearing on the canning industry, and we feel that this relation of the canning companies, the can producers with the canning industry would stand a good deal of enlightenment.

By Mr. Factor:

Q. You mean the monopoly and the high price?—A. Yes, because in order to get cans the canning factory has to give a three year contract ahead on a C.O.D. basis on the basis of price set by the canning company.

By Mr. Young:

Q. Is this canning company located in Canada?—A. There are two located in Canada.

By the Chairman:

Q. When you say "canning company" you mean manufacturers of cans?—A. Yes, can manufacturers. We as growers feel that the position in which we find ourselves is very materially affected by this monopoly.

By Mr. Edwards:

Q. Where are those two factories located?—A. One is in Simcoe and the other is in Trenton.

By Mr. Factor:

Q. Are they subsidiaries of the American Can Company?

Mr. Sommerville: The American Can Company is located at Simcoe and the Whillet Can Company has its headquarters and plant at Montreal.

By Mr. Young:

Q. They just make the cans, not the tin plates?—A. No. As far as the fruit end that is all I have to say, but there is one question I would like to see answered with regard to the fertilizer, and to put my position before the committee I want to recite an experience of my own this spring. Going back to last Fall, an agent of one of the companies came to me and asked me if I would like to take a contract as an agent to sell fertilizer. I remarked that I did not

think I wanted to do any such thing and that I was not at all satisfied with the price structure. Well, he said, you take the agency and probably you will have a chance to sell a little bit of fertilizer and you will get your own at the net price. So I took the agency and got some of my own on that basis. This spring he came to me, and in the meantime I had been in touch with a fertilizer committee in the province of Ontario set up by the Ontario government, of officials who are in a position to advise on that sort of thing. Well, he came in one day and asked me if I would go with him on an inspection with the local agent round amongst the growers in an endeavour to make sales. I said Before we go any further let us find out about the prices, what about the price on sulphate ammonia, what is your price to the grower? He said $44 a ton. I then said: Have you sold any on that basis? He said Yes, this morning. I said You ought to be in jail. He said, that is a pretty strong statement, and I said I mean every word of it.

By the Chairman:

Q. $45?—A. $44 cash price, and $46 fall terms, and I will verify that price by the price list, Mr. Chairman. Now, let us analyse that situation: The local dealer quoted me that same price, and he can lay that fertilizer down in his siding by the carload, the minimum carload of 15 tons, at $29 a ton, practically a spread of 50 per cent. I do not know who gets that spread.

By Mr. Young:

Q. Do they deliver that stuff, or does the grower take it out of the car himself?—A. Both.

By Mr. Factor:

Q. What do you mean, he can sell a ton for $29?—A. I can go and buy a carload containing 15 tons and lay it down at my siding for $29 a ton.

Q. Where would you get it from?—A. Well, at the time I was speaking of this I was connected up with the Empire Fertilizer Company in Chatham; they were prepared to do that, and this man told me I will sell you a carload at that price.

By Mr. Ilsley:

Q. Does the manufacturer fix the price to the farmer, or is it the dealer?—A. There is a schedule right there. That is put out by the fertilizer company.

By Mr. Sommerville:

Q. According to the price list of, say, the Empire Fertilizer Company, sulphate of ammonia, your cash price on this price list is $44 per ton and the time price is $46 per ton; that is, of the Empire Fertilizer Company, the spring of 1934 price lists. Now, you say that would be laid down to the agent at what?—A. The $44 price is the grower's price.

Q. Now then, in the province of Quebec sulphate of ammonia cash price was $34.50, and that would apply east of Kingston, $9.50 a ton more west of Kingston than east of Kingston.

By Mr. Senn:

Q. Let us get that right now. Are those prices comparative?

The CHAIRMAN: One is in the area east of Kingston and the other is in the area west of Kingston.

Mr. SENN: No, but I think it will go further than that probably.

By Mr. Senn:

Q. Is not the Ontario price the price laid down and the other price is f.o.b?—A. But if I was going to buy from an agent I would pay $44, that is the quotation there. That would be the price at my dealer's platform wherever it was located.

Q. The local dealer?—A. Yes, the local dealer, or at his warehouse.

Q. Would that fertilizer be delivered by truck to your door?—A. If you are close enough by, but you see it would not be in our location. For instance, we are down on the Peninsula and you know where Chatham is.

Q. I know in my own case, and I live on a farm, that a good deal of that fertilizer is delivered by truck and it comes a considerable distance.—A. Yes, if you buy in quantities; I expect that will chiefly be done by truck, that would be a practical form of delivery.

Q. They generally have truck orders, made up from the same area for delivery at once. As to the differences in these prices, I would imagine one price would be delivered in the farmer's district, while in the other case it would be the price f.o.b., the factory.

The CHAIRMAN: That is right: f.o.b., all brands $9.50 difference; and the freight would be $4.80 by the carload.

By Mr. Ilsley:

Q. Your objection is to the big profit on it?—A. What we are objecting to is the big difference in price between Ontario and Quebec. I happen to be a member of the Ontario Markets Council, and we tried to see if we could buy the fertilizer in Quebec and bring it into the Ontario area for the benefit of our growers there, and we found we could not do it. The companies would not sell it to us.

By Mr. Kennedy (Peace River):

Q. Suppose you did buy a carload at $29 a ton, and went out and sold it at a profit of $5 a ton, what would happen?—A. The basis of the arrangement—fortunately it is getting out—because those of us who know something about it are trying to circulate the news, and the growers are picking up on it. And the committee in Toronto—that is the government committee on fertilizer—are objecting to it. In the first place, the set-up, as far as the dealers are concerned, they tell me that unless you maintain this price schedule that they would not give you their mixed goods to sell. The mixed goods is where they make their money; unless they get an enhanced price on the raw product to the grower, there is no object in that—all of these raw products are purely shipped in so the grower can mix his fertilizer—if the companies can boost the price of the raw product, then the matter of the grower mixing his own does not enter into the picture.

By the Chairman:

Q. Let me ask you one very definite question: you say that you are a member of a committee that endeavored to buy it, could you buy a carload of sulphate of ammonia in Montreal and take it out into Western Ontario?—A. Not so far as I know. We have tried it and could not get it.

Q. They refused to sell?—A. No, they refused to deliver.

Q. How did they do that, did you tell them where you were going to use it?—A. As soon as you give your order and they see that it is to be delivered west of Kingston, they simply say they can't deliver it.

Q. Why do you not buy it at Montreal, and ship it for yourselves?—A. That has not been tried, as far as I know; of course, it would work probably the first time.

Mr. SOMMERVILLE: Once, perhaps.

Mr. FACTOR: Where would you buy it in Montreal?

The WITNESS: You could probably buy it from the agencies there. I imagine the Federee; but they might be limited by some provision with respect to delivery in the area.

By Mr. Heaps:

Q. What is the difference in price?—A. The difference is $9.50.

Q. Between Montreal and Western Ontario?—A. Yes.

By Mr. Ilsley:

Q. You are suggesting that perhaps the reason for the high price of sulphate of ammonia is that the manufacturers want to keep the price of their mixed fertilizer high, so as to encourage the sale of mixed fertilizer?—A. Yes.

Q. That would not explain the big spread between the price to the dealer and the price to the farmer?—A. No. It only explains it to this extent, that the dealer by getting a big spread is encouraged to see that big spread maintained.

Q. I should think it would be the other way; I should think it would encourage the sale of as much sulphate of ammonia as possible?—A. It probably would, but at a price the grower didn't want. But you can understand that if you were buying sulphate of ammonia at $22 a ton and it jumps to $44 a ton, it is going to make a big addition to that product.

Mr. Young:

Q. And is that the result of price maintenance?—A. I do not know the basis for it, but I do know it is happening. I do not know the reason for these things, all I know is what happens the grower on these things. Take sulphate of potash; their price list is confusing. One price is the price delivered, and the other price is the price F.O.B. the factory. It makes a difference, any way you look at it, on this sulphate of potash of $14.00 per ton.

The CHAIRMAN: Do you not mean muriate of potash?

Mr. SOMMERVILLE: Muriate of potash? I thought it was sulphate of potash.

The CHAIRMAN: Yes, you are right—sulphate of potash; and it sells from $70 to $72 a ton.

By Mr. Sommerville:

Q. On sulphate of potash the cash price is $56 in Quebec, and $70 in Ontario?—A. I submit that there is no difference in the quality of sulphate of potash in Ontario and in Quebec; it is a product that is imported on the same basis for quality. What is the difference? Why all the spread?

By Mr. Senn:

Q. Does not the United States Farmers Cooperative handle this product in Ontario?—A. I believe they do.

Q. Do you say they have to pay that $70?—A. No, I would not say that; I do not know what basis they buy their stuff on at all. I am looking at this thing from the grower's picture.

Mr. FACTOR: Would not the question of quantity come in there; if the factory can sell in large quantity would they not deliver it cheaper than to the small farmer?

Mr. SOMMERVILLE: Apparently anybody can buy?

The WITNESS: The question is one which I cannot answer; it is beyond me. I am just trying to point out to the committee what is happening, and what the grower says. It is beyond me to explain it.

Mr. SENN: I think we will get the explanation probably.

By the Chairman:

Q. Is there anything else, Mr. Craise?—A. That is all, Mr. Chairman.

Mr. SOMMERVILLE: Thank you, Mr. Craise.

The witness was discharged.

The CHAIRMAN: I think, gentlemen, with your concurrence, I would like to suggest that we adjourn until this afternoon, and that we will ask the fertilizer representatives here to be prepared to come before the committee this afternoon and deal with this question of price spreads. If that is agreeable to the committee we will stand adjourned until 3.30.

Mr. FACTOR: What about Friday, Mr. Chairman; is the committee going to sit on Friday?

The CHAIRMAN: That has not been decided yet.

The committee adjourned until 3.30 p.m.

AFTERNOON SESSION

The committee resumed at 3.30 o'clock p.m.

Mr. SOMMERVILLE: May I just recall Mr. Craise for a minute.

H. L. CRAISE, recalled.

By Mr. Sommerville:

Q. You are already sworn, Mr. Craise?—A. Yes.

Q. Can you tell me what was the price of nitrate of soda per ton at St. Catharines last Monday?—A. $50, cash price.

Q. The cash price at the dealer's platform?—A. Yes.

Q. That was on Monday, a week ago to-day?—A. Yes.

Q. That was what date?—A. The fourteenth.

Q. That was on Monday, the fourteenth?—A. Yes.

Q. Do you know of any sales at a less price than that?—A. Well, the only sale I know of at a less price than that was in the Burlington district where we have an independent dealer who sold at $41, cash price, last Monday.

Q. That is, where there is an independent dealer nitrate of soda was sold at $41 a ton?—A. Yes. That applies to recently. I don't know what the change was, but this was within the last ten days that price has been arranged.

Q. And that was sold by one of the— —A. Mr. Scott.

Q. I mean it was sold at that price by one of the firms offering at St. Catharines at the same price, at $50?—A. You mean the product came from the same firm?

Q. No, was the sale at Burlington not made by the regular company, the company that was offering it at St. Catharines?—A. No, I would not say that. The dealer at Burlington found he could not buy nitrate of soda direct, and he arranged with Canada Packers, to whom he gave an over-riding commission of $2 a ton to place an order for him. After paying all charges, including $2 a ton, he was able to lay the product down in Burlington at $36 a ton, and he figured that $4.50 a ton—I believe that $36.10 was the correct price, and he charged the growers $40.60.

Q. That is the independent?—A. That is the independent dealer.

Q. To meet that independent dealer's price, do I understand then that the regular company agents in Burlington sold that nitrate of soda at $41 a ton?—A. Yes.

Q. But in St. Catharines at $50?—A. So far as we know, from the same source. I could not say positively, though.

Mr. SOMMERVILLE: Thank you, Mr. Craise.

Perhaps you will let me have the receipt for that, Mr. Robinson, please?

The WITNESS: Thank you. Mr. Chairman, I would like to express the appreciation of our committee for the very fine hearing we have had.

The witness retired.

Mr. SOMMERVILLE: This was a sale to Mr. Robinson by National Fertilizers at $41, May 14, 1934, of one ton of nitrate of soda at Burlington.

(Receipt for one ton of nitrate of soda, May 14, 1934, filed, marked Exhibit No. 183.)

The CHAIRMAN: Who is the next witness?

Mr. SOMMERVILLE: Now we should like to hear from the Eastern Canada Fertilizer Association. The officers are here.

ALFRED L. SMITH, called and sworn.

By Mr. Sommerville:

Q. Mr. Smith, what position do you hold in the Eastern Canada Fertilizer Association?—A. Presiding officer or president or chairman, whichever you like to call it.

Q. Well, what do you call it?—A. Chairman, I guess.

Q. Who is the secretary of that organization?—A. Alex. Mooney.

Q. How many members are there in that association? Will you just name them, please?—A. I think I can name them from memory: Canadian Fertilizer Company of Chatham; National Fertilizers of Ingersoll; Scottish Fertilizers of Welland; Canada Packers of Toronto; Empire Fertilizers of Toronto; Canadian Industries, Hamilton and Witts Fertilizer Works, Norwich.

Q. That is Norwich, Ontario?—A. Yes, Norwich, Ontario.

Q. Have you any fertilizer companies east of Montreal?—A. No.

The CHAIRMAN: In Montreal or east.

By Mr. Sommerville:

Q. In Montreal or east?—A. No.

Q. These are all the companies that form the association?—A. Other than the link-up there might be with Canadian Industries. Their head office is at Montreal, but it is their Hamilton plant that is in the association, I believe.

Q. Their Hamilton plant manufacture the fertilizer?—A. Yes.

Q. How long has this association been in existence?—A. Since January 3, 1929.

Q. What are the objects of the association?—A. I suppose if I would give you the minutes of every meeting, it would probably explain that.

Q. Is it an incorporated association?—A. No.

Q. What are the objects set out there?—A. I will read the minutes of the initial meeting:

> On a motion of A. Mooney, and seconded by S. J. Smith, it was resolved that we form an association to be known as "Eastern Canada Fertilizer Association," with headquarters in Toronto, Ontario.
>
> The purpose of the association is to foster and encourage a better understanding in regard to the proper use and distribution of fertilizers.

Q. Yes?—A. And the next is:

> On the motion of R. A. Stone and S. J. Smith, A. L. Smith was appointed as chairman and Alex. Mooney as secretary-treasurer.

It was moved by S. J. Smith and D. MacLaren that a levy of $10 be made on each manufacturer included in this association to cover initial expenses.

By the Chairman:

Q. $10?—A. $10.

Q. Not a very heavy fee?—A. Well, it is simply for the preliminary expenses, postage and one thing and another.

By Mr. Sommerville:

Q. That meeting was held in 1929?—A. January 3, 1929.

Q. And you have been the presiding officer ever since?—A. Ever since. I presided at every meeting held.

Q. Now, what does that association do?—A. Well, if we ran into any extreme difficulties, we might go as a body to the government to see if our troubles such as tariff or something could not be corrected; or we might be working, as we are doing, with the O.A.C., at Guelph, in demonstration and experimental work, supplying them with fertilizers free of charge, in plain bags, deriving no direct advertising benefit therefrom; also contributing in cash. We were led to believe by Dr. Christie that, if we would help them to do what he had done down in the States, where he had been before, he thought it would be of benefit to both the agriculturist and the manufacturer to allow this information to come from one place only, and let them be guided by the results that they obtained, to give that evidence to the grower. He said that, if we could contribute a certain amount of money, he thought he could go to the Department of Agriculture, and have it matched, dollar for dollar, which we have done.

Q. And that money then is used?—A. Is used by them. We have no control over it whatever. It is just simply given to them.

Q. And that is a contribution towards the study and development of the use of fertilizer?—A. The proper use of fertilizer.

By Mr. Kennedy (Peace River):

Q. Is there any advertising?—A. No, no advertising whatever.

By Mr. Senn:

Q. Can you give us the amount contributed?—A. The amount has varied.

Q. From year to year?—A. No, it is gradually getting less. As industry runs into difficulties, we do not feel that we can contribute quite so much. There is a financial statement here showing everything, every contribution. We contributed ourselves, as Scottish Fertilizers, $1,000 as the start; National Fertilizers, $1,000; Canadian Fertilizers, $1,000; Ontario Fertilizers, $2,000; Gunns Limited, $2,000; Witts Fertilizers, $200.

By the Chairman:

Q. That is to the Guelph college?—A. To a fund which we pay over to the Guelph college.

Q. What is the total of that?—A. $7,200.

By Mr. Sommerville:

Q. That was in what year?—A. That was in the year 1930.

Q. Then you say each year it has been getting less?—A. It didn't get less, I don't think, the following year. If my recollection is right, I think it was the same the following year,—probably added to it in that Canadian Industries came in and contributed a like amount of $2,000.

Q. They contributed $2,000?—A. Yes.

Q. What amount did you pay over in 1932, the same $7,200 or more?—A. 1932 was $7,200.

Q. And 1933?—A. 1933 was $4,050.

Q. Since the original organization of this association, what additions have been made to the membership? I don't think you mentioned Canadian Industries?—A. I don't think Canadian Industries were in existence or were operating at the time it was organized.

Q. By the way, what is your own position? Which company are you with?—A. Scottish Fertilizers, Limited.

Q. Who is Mr. Mooney, the secretary, with?—A. Canada Packers now. It was Gunns Limited, at that time, I think.

Q. Gunns Limited, now Canada Packers?—A. Canada Packers.

Q. What arrangements have you with the membership about their relationship to the association? Do they file bonds with the association?—A. No.

Q. Are there any guarantees from them of any kind?—A. No. They pay their money, that is all.

Q. That is the money that you referred to?—A. Yes, contributions.

Q. Do they pay any membership fees in addition to that?—A. Yes, assessments.

Q. Assessments; what do they amount to?—A. I could not tell you off-hand.

Q. Are they substantial sums or nominal sums?—A. No, they might be $10 or $20.

Q. They are not very large sums?—A. No.

Q. They don't run beyond $25 apiece, would you say?—A. I don't think so. I could go through here and tell you. They can't be any colossal amounts, or I would remember it.

By the Chairman:

Q. Nominal amounts?—A. Yes. I know in the last meeting we had they were saying that funds were getting low, and we would have to make another contribution soon, $10 or something.

By Mr. Sommerville:

Q. In addition to the objects which you have stated, at these meetings did you discuss the terms upon which sales of fertilizers will be made?—A. We have in the past year.

Q. You have in the past year?—A. Yes.

Q. And as a result of that discussion as to terms, have you agreed upon uniform terms or instructions to salesmen?—A. No.

Q. Have there not been issued uniform instructions to salesmen and agents?—A. I guess there are, yes, except we do not, nor do we issue a price list.

Q. Perhaps we will deal with one thing at a time. When you say that you mean?—A. Our own company.

Q. Just look at this and tell me if these are the uniform agents' rules and regulations, spring season, 1934? Perhaps you can identify them?—A. No. I have never seen these before.

Q. Never seen these before? Well, is that company in your association?—A. Yes, they are. I think I have left them out. They are in—Agricultural Chemicals Limited.

Q. They are at— —A. Port Hope.

Q. Do you say you have never seen these regulations?—A. Never seen them.

Q. Or similar regulations?—A. I have seen similar regulations, yes.

Q. Are they practically the same as yours?—A. I would have to go through them in detail to know. I am trusting to my memory for the others. I think this is quite an enlargement on anything I have seen before.

Mr. ILSLEY: Those are instructions to agents?

Mr. SOMMERVILLE: Yes, instructions to agents.

By Mr. Sommerville:

Q. Have you discussed uniform instructions to agents?—A. Yes, a most important thing.

Q. And do these instructions that you see and which I have just submitted to you—do they in general carry out the result of your deliberations?—A. No, I think it is going away beyond anything I have ever had any idea of.

Q. What did you settle upon; anything in the way of instructions to agents as the result of your discussions?—A. You mean for ourselves or for the Association?

Q. I am talking of the association?—A. Yes.

Q. And where are they; are they recorded in your minutes?—A. No, they are not.

Q. Where would they be recorded?—A. If they want to give those instructions they can—we do not to our agents.

Q. I am not talking about your company at all; I am talking about the association. When you discussed and settled upon instructions to agents where are the instructions that were thus settled upon?—A. I do not know. I did not keep them.

Q. Are they not entered in your minutes?—A. There is no minutes in here on it.

Q. There are no minutes in there on it?—A. No.

Q. What were the principles you established—the uniform principles of instructions to agents?—A. A standard selling price as a minimum.

Q. A standard selling price as a minimum? Yes, and was that the same whether it was for cash or time?—A. Oh, no.

Q. What were the terms?—A. $2 off for cash.

Q. $2 per ton?—A. And credit to the first of October of less $2 per ton for cash on delivery.

Q. There was to be, first, a minimum price?—A. Yes.

Q. And, secondly, there was to be the same uniform term of credit to be paid on the 1st of October?—A. No; credit to the 1st of October. You cannot say it must be paid then.

Q. Credit to the 1st of October with $2 discount for cash?—A. Yes.

Q. Now, what next?—A. Probably if we had some of these other lists.

By Mr. Factor:

Q. Haven't you got a copy somewhere?—A. No, because I never figured on operating on that. I did not operate on that basis—the minimum was too low for me.

Q. Your association?—A. Yes, your association.

Q. Have you not got a copy among your formal documents to show that?—A. No, there is not.

Q. Who would have that?—A. Of course, each individual should have it. I should have it.

Q. The members of your association? Your association would not agree upon so important a thing as that without having some record of it?—A. There are certainly records; each of us would have a record.

Q. Has the secretary got the record?—A. He should have.

Q. Mr. Mooney? Do you know whether he is here?—A. I do not know whether he is here or not. I have not seen Mr. Mooney.

Q. Have you not got one of them?—A. No, I destroyed mine because it did not interest me.

Q. When did you destroy it?—A. Shortly after the meeting.

By Mr. Ilsley:

Q. What form is it in?—A. Well, I think I can tell you from memory.

By Mr. Sommerville:

Q. What was the form? Was it in the form of a general regulation or general statement of the prices or terms and dates of payments; the prices for each separate grade of fertilizer?—A. The grade—it would be left with each manufacturer to price his own grades because we do not all sell the same identical brands. As far as the terms are concerned they would be identical with ours.

Q. What was the maximum price agreed upon?—A. That would have to be worked out.

Q. What was the schedule adopted for working them out?—A. That is the point wherein I differed—why I did not agree to it. It is worked on an arbitrary figure which is not true—a true picture of costs.

Q. What was the basis upon which they worked out the cost?—A. So much of nitrogen, phosphoric acid and potash and the various charges, estimated charges.

Q. We had that the other day from Mr. Grose. Did you agree with him that that was the schedule that was adopted?—A. That is pretty well. That is as close as I could rehearse it—closer.

Q. That is closer than you could rehearse it?—A. Yes.

Q. That was the schedule adopted by the association?—A. Yes, as a minimum.

Q. As a minimum; and that basis was to be applied then by each firm to its commodities?—A. That or anything more that he cared to ask.

Q. That was to be the minimum?—A. The minimum.

Q. Yes. And then, Mr. Smith, all the firms apparently sell the same kind of fertilizers to a large extent—mixed fertilizers?—A. No. There would be a few brands that would be sold by all.

Q. There would be a few brands sold by all?—A. Yes.

Q. Now, let us take these standards. The unmixed chemicals would be sold by all—fertilizer materials?—A. No, we do not sell them.

Q. You do not sell any fertilizing materials?—A. No, We try not. Frequently we try to accommodate a man if we have the material there at the time.

Q. You sell them mixed?—Yes.

By Mr. Ilsley:

Q. Take sulphate of ammonia. That was mentioned this morning. Do you sell that?—A. If we had it we would offer it. When we buy our materials, I might explain, we buy what is necessary to make up the tonnage we have previously determined on making for that season. It will be six months or eight months ahead of the season at the least. We buy that and bring it in and we mix it directly it comes to our plants. We do not take it in and handle it again. To save handling we put it through into the various formulas it is going at that time. That has to be again taken out in the matter of four or five days and re-run again, because it is absolutely impossible for any human being to make a definite analysis on a chemical scale; you can make an approximate analysis but the fertilizers get disintegrated.

Q. Let me follow the making of sulphate of ammonia. That is nitrogen? —A. Nitrogen carrier.

Q. It is what you call unmixed fertilizer?—A. Oh, yes, it is only one ingredient.

Q. Now, that is the sort of fertilizer that you do not sell if you can help? —A. No, I do not buy it to sell; we buy it to use. If we have any of it unmixed when we get through—say we have bought five or ten tons more than we use—it is there to sell.

Q. Do you put the price away up, as the witness indicated this morning, in order to discourage its sale?—A. No, we do not.

Q. You heard the evidence this morning that it was selling for $44 a ton to the consumer and at about $29 a ton to the dealer. The $44 price was away out of line?—A. I know that anyone can buy it off me at $29 a ton if he wants to buy it.

Q. Yes, I know; but it was suggested that this $44 price was to discourage the purchase of the ingredients as distinguished from the mixed fertilizer?—A. No. I do not think that at all.

Q. Your own evidence, I think, indicated that you do not want to sell unmixed fertilizer?—A. No. We are in the selling of a manufacture. We are like the baker who does not want to sell flour; he is selling bread.

Q. Exactly. Would that be probably a reason for this very high price for sulphate of ammonia?—A. No, if there was anything like that we would rather not mix at all—just buy and sell it, if we could sell it for that.

By Mr. Sommerville:

Q. Perhaps you, being so familiar with the business, could tell this committee why sulphate of ammonia—why in practically all of the prices filed with us the cash price of sulphate of ammonia is $44 in western Ontario?—A. Experience with business in this game will teach anybody in the course of two or three years that if you buy anything at $29 and try to sell it at $29 you will be broke before very long, depending upon how much reserve you have. The grower in the province of Ontario has been asking from year to year for more and more service. I question if you could get five per cent of the growers this year to take delivery at a railway station; they would not; and it is the price delivered at their barn, whether they want 500 pounds or 100 pounds or 5 tons. We had one order this year of 200 tons. We offered to allow them $100 less on the price if they would take delivery at the station. They would not do it. They wanted it delivered at the barn. They had the teams to haul it.

By Mr. Ilsley:

Q. That does not answer Mr. Sommerville's question. Would you say that $44— —A. Is not too much.

Q. I think you said you would be glad to sell it?—A. If they come and take it. I will not deliver it—200 pounds to this barn and a few hundred pounds to the next barn for $44.

By Mr. Factor:

Q. The price is $44. Is it fixed at $44 cash?—A. I am not sure about that.

By Mr. Sommerville:

Q. Here it is?—A. If it is; all right.

By Mr. Sommerville:

Q. Well here it is, Empire fertilizer, sulphate of ammonia $44; C. I. L. sulphate of ammonia, $46, that is on time, with a discount of $2. per ton.

By Mr. Ilsley:

Q. That is over 50 per cent which is unreasonable, is it not?—A. No, not on that kind of service.

By Mr. Young:

Q. Do you sell this in 100 pound lots?—A. Yes, put up in 100 pound bags. We have to take a shrink on it; the average shrink is about 5 per cent to 7 per cent.

Q. How many of the farmers buy only 100 ponnds? Don't they all buy a ton or more?—A. Well, we sell pretty well over this province and I don't think we have sold 5 tons in the whole province.

By Mr. Sommerville:

Q. In fact, you discourage the sale of sulphate of ammonia?—A. We do not discourage the sale of it.

Q. Well, you prefer rather to sell the mixed fertilizer?—A. Absolutely.

Q. And I presume the reason for that is, that you have found from experience that mixed fertilizers are more profitable than selling the unmixed fertilizer material?—A. We also find it more profitable to the farmer.

Q. I agree with you, but you prefer to sell the mixed fertilizer because it is more profitable than selling the unmixed material?—A. Of course, that is our business entirely. That is what our money is invested in to-day.

Q. You agree with me then?—A. Not in the way you put it.

Q. Well, put it your own way?—A. We have built a plant there and put over a hundred thousand dollars into it, and we built the plant entirely for the manufacture of fertilizer. If we were going into the warehousing of it and the selling of it only we would not need any equipment other than a shed.

By Mr. Factor:

Q. All those reasons you give go to prove that you prefer to sell the mixed fertilizer?—A. Undoubtedly; that is our business.

By Mr. Sommerville:

Q. Now then, Mr. Smith, in your association did you agree upon these various prices that have been set out in the price lists that have been filed?—A. Yes.

Q. For instance, I see here the price for mixed fertilizer per ton of 2,000 pounds, 6-8-10, spot cash $44.85; time price $46.85.

Mr. KENNEDY *(Peace River)*: Is that a zone price?

Mr. SOMMERVILLE: No, anywhere in Ontario.

By the Chairman:

Q. Tell me, Mr. Smith, is that a delivered price?—A. Yes, delivered to the barn.

By Mr. Edwards:

Q. How many months of the year do you operate?—A. Well, our plant is operating almost continuously, but about half of that time is used in manufacturing and the other half in shipping; we will have about four to six months of shipping. We are just about furnished with our spring shipping now, and we will start in manufacturing for next season, and we will be working right along as far as possible, and when it is manufactured it has to be matured for at least three months before we can start shipping.

Q. You will have very substantial carrying charges before you ship?—A. Well, your money is invested for at least six to eight months, and you have got your shrink which runs from 5 to 7 per cent.

By Mr. Young:

Q. Where is the shrink, in the kegs or does it evaporate?—A. There are certain elements. All of these are materials which are injurious to plant life

and which we consider must be taken out. After it is manufactured you can ship it and there will be practically no shrink.

By Mr. Sommerville:

Q. Just let me get this clear. Your mixed fertilizer is 2-12-6, that is your formula?—A. Yes.

Q. And the price that you agreed upon in Ontario is $34.65 delivered?—A. Yes.

Q. And 2-12-10, the price agreed upon in Ontario, delivered is $37.45?—A. I do not know about 2-12-10 because I am not conversant with that one, we do not make it.

Q. Perhaps you can follow some of the price lists that we have?—A. Yes.

Q. What was the price of 2-12-10?—A. I do not know.

Q. You have not got that?—A. No, it is not one of our brands.

Q. Then 4-12-10?—A. I don't know that either.

Q. Then 6-8-10?—A. I don't know that.

Q. Then 9-5-7?—A. That is another one I don't know.

Q. And 5-8-7?—A. I don't know that one either.

By Mr. Factor:

Q. These brands you do not manufacture?—A. No. That is another one of the expenses of the fertilizer manufacturer, a yard and a half of brands, which all cost money. I suppose there are 500 different brands made in Canada.

By Mr. Sommerville:

Q. Well now, at this association you established the price then for 2-12-6, C.I.L., cash price for Quebec, $25?—A. I don't know anything about Quebec, we don't operate there.

Q. Well, in this association had you any discussion of the price to be charged in eastern Canada?—A. No, we have nothing to do with eastern Canada at all.

Q. Your association have nothing to do with eastern Canada?—A. No, nothing at all. That was in 1929. When we started we thought that eventually we would have all the manufacturers in eastern Canada, but since the other industries have started in the Maritimes and in Quebec—they did not exist at that time—our operations have been confined solely to Ontario where these plants previously were and where they still are.

Q. When you say "Ontario" how far east do you go?—A. Kingston is the dividing point in Ontario, because of the fact that for some reason or other the Quebec fellows come as far as Kingston with their Quebec price list. I have had to lose thousands of dollars of business.

By Mr. Factor:

Q. Are you speaking as a member of your firm or as a member of the association?—A. As a member of our firm.

Q. Would a member of your association operate in eastern Canada and Quebec?—A. They may.

Q. Well now, Mr. Smith, don't you know?—A. No, I do not. I would not know. That is entirely up to the manufacturer who wants to go down. If I want to go down and do business in eastern Ontario and Quebec it is entirely up to me.

By Mr. Edwards:

Q. Is there any understanding between the members as to definition of territory?—A. No.

By Mr. Sommerville:

Q. Will you tell me why, Mr. Smith, the Eastern Canada Fertilizer Association only functions as far as Kingston?—A. Because the Quebec price list is down to the point where we cannot possibly manufacture in central Ontario and ship it down there and compete with Quebec.

Q. Where does the Quebec price list come from?—A. From the Quebec producers.

Q. They are also members of your association, are they not?—A. No.

Q. Well, one of them is?—A. One of them happens to be.

Q. C.I.L?—A. Yes.

Q. And Canada Packers?—A. Yes, Canada Packers have a branch in Montreal too.

Q. Anybody else?—A. Not that I am aware of.

By Mr. Factor:

Q. What about Canada Fertilizer?—A. Canadian Fertilizer?

Q. Yes?—A. You mean Canadian Fertilizer, Chatham?

Q. Yes?—A. I don't know I am sure. If they do it is absolutely up to them if they want to.

Q. And what about the National?—A. It is the same with them; they probably might do it.

Q. Well, they do operate both in western Ontario and eastern Canada; they have separate price lists, you know that?—A. Naturally they would.

By Mr. Sommerville:

Q. Why naturally?—A. Because of geographical location.

Q. Just?—A. Just, yes.

Q. And their price list is proportionate to the geographical location?—A. I think so.

By the Chairman:

Q. Who fixed that geographical division at Kingston?—A. As far as I am concerned it was not the association. It certainly was not any Ontario manufacturer who fixed it there.

By Mr. Sommerville:

Q. Did you discuss it with members of the association?—A. No.

Q. Has it ever been the subject of discussion in the association?—A. I don't think it came up at any time. We had to accept the thing as it existed; if these fellows down there were selling the thing as far as there, why they stopped there I don't know; I don't know why they didn't come to Toronto.

By the Chairman:

Q. Who are those fellows?—A. The two you have mentioned, the Canada Packers and Canadian Industries Limited; and I think there are a couple of other producers down there as well.

By Mr. Sommerville:

Q. But those are the big producers?—A. There are some other big producers.

Q. But those are two of the big ones?—A. Yes.

Q. And those two big producers in Quebec, you see, sell as far west as Kingston?—A. Yes.

Q. On a certain price list?—A. Yes.

Q. And that price list is substantially below the price list for all west of Kingston?—A. How much I cannot say; I would have to figure it out; they quote down there, as I understand it, on the basis of f.o.b.

Q. But they are substantially below the prices for west of Kingston?—A. Yes.

Q. And these two big producers are members of your association for western Ontario?—A. Yes.

Q. And you tell us that you have never discussed with them at any time the question of prices east of Kingston and prices west of Kingston?—A. Not any more than I might criticize them sometimes if I had courage enough to do it.

Q. Well, it would take some courage I agree.—A. If he is a bigger man than I am.

By Mr. Young:

Q. What would your criticism be?- A. That they were very foolish selling it at the price they were selling it. Unquestionably, in my estimation.

By Mr. Sommerville:

Q. Now, let us take this mixed fertilizer, 2-12-6, you know that?—A. Yes, sir.

Q. You make that?—A. Yes, sir.

Q. And you sell that?—A. Yes.

Q. And you sell that at $34.65 west of Kingston?—A. No we don't.

Q. What do you sell it at?—A. $36.

By Mr. Ilsley:

Q. What is your cash price?—A. We sell for $34 cash.

By Mr. Sommerville:

Q. Those are cash prices that I quote.—A. $34.65?

Q. Yes, $34.65?

Mr. Edwards: Are those delivered or f.o.b?

Mr. Ilsley: I suggest we take one or the other throughout, either cash or credit.

The Witness: Well, our price is built on the credit basis but we do not give credit. We allow the $2 off this list just the same, and there is a mighty good reason for that if you care to have the explanation. It isn't every man that pays when he gets the goods, and he sometimes keeps you waiting till a bunch of pigs are sold six months hence, and if he bought for $34 he only pays you $34 in six months time. The trucker leaves the goods but you are left waiting for your money.

By Mr. Young:

Q. Then you put another penalty on the farmer if he pays cash.—A. Oh no, no penalty to the farmer.

Q. Oh yes, you charge an extra 1 per cent for cash.—A. Pardon me, we do not.

Q. Well, that is the evidence we had the other day.

By Mr. Factor:

Q. You allow the agent 1 per cent, do you not?—A. If he comes in and lays the money down then we allow him 1 per cent, but he has to finance the stuff for 30 days or so.

By Mr. Sommerville:

Q. Let us take the C.I.L. price for Ontario and also for Quebec. C.I.L. delivery price cash, 2-12-6, for Ontario $33.75?—A. I guess that is right.

Q. And for Quebec and eastern Ontario $25?—A. Well, I cannot say anything about Quebec.

Q. Well, but you know that is the price?—A. I know it is somewhere around there.

Mr. SENN: The delivered price?

Mr. SOMMERVILLE: No, that is the price f.o.b.

Mr. ILSLEY: Both of them?

Mr. SOMMERVILLE: No, the price in Ontario is a delivery price, and the price for delivery from Montreal and eastern Ontario, say Cornwall, is $25 cash, f.o.b. Montreal.

The WITNESS: I presume so, but I cannot say on that because I have not got the price list and I do not know.

By Mr. Sommerville:

Q. Well, Mr. Smith how do you account for this very wide difference in the price between eastern Ontario, east of Kingston, and the price west of Kingston?—A. Well, about half of that is accounted for in the service rendered. In Ontario you are delivering to the farmer's barn.

Q. Yes.—A. And in Quebec they are loading it into a car and shipping it. The other man is paying for all those charges and going to the station and getting those goods. Another thing might be the question, and certainly would be the question if you were located on the Seaboard. Most all of the material used comes in from overseas and based on a seaboard price. For instance Baltimore would be the pivotal point on which it is based, that is, on some material the same as Chicago might be for wheat.

Q. Yes?—A. And whether you bought in Baltimore, New York, Philadelphia, or some other point, you would buy on the basis of Baltimore. You would pay whatever freight there was from that point inland to your factory.

Q. Yes, but if you are on the seaboard your delivery would be by water, would it not?—A. By water?

Q. Yes?—A. That delivery is much less at Montreal than it would be at Welland, St. Thomas, or any other point in Ontario.

By the Chairman:

Q. Not so very much, would it, in large quantities?—A. Between $5 and $6 a ton.

Q. By boat?—A. No, but the boat cannot give you delivery. There might be the odd person who is so favourably situated; but we are on the Welland canal, and we cannot unload a boat at our place now since they have enlarged the canal unless we spend $100,000 or $200,000 putting in a dock. We used to do it but we are shut out from the privilege now.

By Mr. Sommerville:

Q. I suppose if you wanted to unload by boat you would have to unload at Port Colborne?—A. Yes, and we would have shrink and spill along the line, but we have been bringing it in by rail since then because we think it is cheaper.

Q. Now then, what about nitrate of potash and sulphate of potash, German products; there is very little difference in freight as between Montreal and Welland.—A. Why talk of German products alone.

Q. I am just talking of that one line?—A. That one line is procurable in Russia, Palestine, Germany, France, and three places in the United States.

Q. I suggest to you that that which comes from overseas, the difference in freight would be a very small matter, would it not?—A. No.

Q. Between Montreal and Welland?—A. It would be the same thing as on anything else.

Q. It comes in by boat?—A. But we would not bring it by boat to Welland.

Q. To Hamilton?—A. Yes.

Q. And, as a matter of fact, is it not brought to Hamilton?—A. Yes. I suppose at approximately $4 by boat.

Q. That much?—A. Yes. Maybe a little less, but I don't think so. I have not gone into that matter because we were told that we could not unload on the canal bank any longer, and I have not been negotiating for any of the freight being carried by water.

Q. Yes? Well now, you said that probably part of that amount might be freight?—A. Oh, there is a big portion of it, made up by freight.

Q. Can you tell me what might be freight?—A. About $3.50.

Q. That is high?—A. If it could be brought by boat.

Q. That still leaves you $5.50 difference on that mixed fertilizer, 2-12-6?—A. Well, I don't think there is that much.

Q. How do you account for that $5 which is 20 per cent more than the Quebec price in itself, now you have eliminated the freight difference; how do you account for that?—A. If you live ten miles east of Palmerston I would have to ship a carload to Palmerston—a freight rate of approximately $3; and I would have to hire a truck to pick it up from the car and take it out to your farm—approximately $1 per ton; there is $4 of it.

Q. Yes, that is one part of it—how is the rest made up?—A. I do not try to make it up.

Q. How do you arrive at this minimum price for Western Ontario?—A. I do not arrive at it, nor do I approve of it.

Q. Why did you all agree upon it?—A. I did not agree on it, we sell for a higher price than that.

Q. You sell for a higher price than that, $36?—A. Yes, sell more than that on some of the other brands.

Q. At least you have agreed among yourselves that the minimum shall be $34?—A. That is it.

Q. $34?—A. $33.75, I think the figure is there.

Q. $33.75, and you say that that is the amount agreed upon, Mr. Smith; at what meeting of the association?—A. It would be sometime this spring, before the season started.

Q. Sometime in the spring of 1934?—A. Yes.

Q. Have you got the minutes of that meeting?—A. No, that is the minutes I have not got.

Q. Have you any of the minutes of any other meetings settling price for the product?—A. No.

Q. Are there any minutes in existence?—A. Of course there are.

Q. Where are they?—A. I can't tell you, I do not keep the minutes.

Q. You have a copy there—is that the minute book?—A. That is the minute book.

Q. Let me have a look at it—this is a minute book without minutes?—A. No, it is not. I do not think it is.

Q. Without minutes?—A. When we had another meeting I would certainly would want to see the minutes of the previous meeting. We have not had a meeting since that.

By Mr. Factor:

Q. I suggest that you treat the committee with a little more frankness about these minutes. I was under the impression when you first gave evidence that you were giving us the minutes of all your meeting?

Mr. Ilsley: They are important minutes, are they not?

The Witness: We have not had a meeting since that last meeting. I presume so. I do not know.

By Mr. Ilsley:

Q. Was there some reason for suppressing these minutes that are not there?—A. No.

Q. These are the minutes of that meeting between the companies about prices, aren't they?—A. Yes.

Q. I suggest to you that these minutes were being kept dark for some reason; were they?—A. They might be, I do not know anything about it. I did not even see Mr. Mooney, and I did not see any of the other members when I come here, I was out on the road and at midnight there was a telegram and I came to Ottawa. I asked to have the minute book sent. I have received the minute book, but I have not talked with anyone. I did not know that they were not all there.

By Mr. Young:

Q. You asked Mooney to send you the minute book?—A. Yes.

By Mr. Ilsley:

Q. You referred a while ago to some meeting of the association, Mr. Smith?—A. If we were having a meeting and working it out, yes. I think I would make notes, but I do not think I would keep them.

Mr. Factor: That is not what Mr. Ilsley referred to at all.

By Mr. Ilsley:

Q. I want to know how this minimum, the fixing of a minimum price for this territory was arrived at; and what happened to the minutes; it is not here—was it a verbal understanding ?—A. I imagine—no; notes of it would be made, undoubtedly.

By Mr. Sommerville:

Q. Who would have those notes?—A. The secretary should have them.

By the Chairman:

Q. Where is he?—A. He would have them.

By Mr. Sommerville:

Q. And the secretary is not here?—A. I do not know whether he is or not; you can call him, I have not seem him.

Q. You would know whether or not he had been here Friday or to-day?—A. He was not here Thursday or Friday.

By the Chairman:

Q. You see, Mr. Smith, the significance of this—?—A. I quite understand it. I am in the unfortunate position that I am unable to give you more than my version of it.

Q. Wait until I finish my point. The significance of this lies in this: we have evidence before us that the individual purchaser of fertilizer in Ontario living at any point in Ontario beyond the line drawn north from Kingston cannot go into any part of Ontario east of that line and buy fertilizer himself and truck it, or freight it, or deliver it to his own farm; although he can buy it much cheaper than he can buy it west of that line. Now, that is a very important matter?—A. I do not think, Mr. Stevens, that there is anything so far as the association is concerned that will hold any control over that at all. There might be certain members of the association—.

Q. There is something which you yourself said which indicates control. A moment ago you said, in a rather indifferent way—you referred to "them"; I presume you referred to the big manufacturers to the East of that line, that they would not permit you to deal east of that line?—A. Oh no, that would not stop me from dealing there, they have no control over that; but their price is so unattractive that I stay away from it—neither would I go out to British Columbia and do business.

Q. Do you buy any of your materials from C.I.L. or Canada Packers?—A. No, we do not.

Q. Do you not buy from them?—A. I have bought a little once in a while, if we are short or something like that.

Q. How is it that Canada Packers are a member of your association, and you are president, and they can sell fertilizer east of the Kingston line so much cheaper than they can sell it west of the Kingston line?—A. By shipping from the Montreal factory.

Q. Is that the only answer?—A. That is the only answer I can think of.

Q. Freight would not account for that?—A. I would imagine—I have never gone into it—but I would imagine that the dividing line on freight is Kingston. Kingston is approximately the dividing line, I am not sure on that but I would imagine that would be the point; that they could not economically send goods down from there below that point.

Q. Now, wait; just let us test that a minute?—A. Mr. Grose of Canadian Industries is here. He is operating both in Quebec and Ontario. Probably he could answer these questions.

Q. This is rather an important matter. It looks to me, however, that there is something more than just a mere understanding. We take for instance 9-5-7: I have the C.I.L. price lists for Quebec and Ontario before me—unfortunately the Quebec list is wholly October 1st, so I will take October 1st or the credit figures in both instances—9-5-7 in the Quebec area, that is east of Kingston, sold at $32.50 f.o.b. Montreal; west of that line it is sold at $48.45 delivered—I think the differential is $16?—A. That is $46.45 cash, isn't it?

Q. $48.45 is October 1st, the other is credit?—A. Oh, is it?

Q. So they are both on the same basis; that is the differential, $16.

Mr. SOMMERVILLE: Or 50 per cent.

By the Chairman:

Q. Now then, you can ship that from Montreal by the ton into western Ontario for $4.80 a ton, I think, we will say to Hamilton or Toronto?—A. Let me explain, Mr. Stevens, that according to the Dominion Bureau of Statistics, the sales in all Canada for the particular brand you are speaking of was 31 tons.

Q. I don't care if it's only an ounce, I am asking for information?—A. I do not know why that differential, but I imagine if they had some man up there who wanted 2 or 3 tons shipped from Montreal to any place up there (west of Kingston), they would have to take out a registration for that territory and pay $30 for that registration to buy 5 or 6 tons. They are probably trying to make the man pay for some of it.

By Mr. Sommerville:

Q. That surely would not apply?—A. I do not know, that is sales I would not be interested in; and if anybody asks me about it I would not even give them a price—it makes it prohibitive.

By the Chairman:

Q. Let us take 6-8-10; I know nothing about these, I am just taking the price list; the Quebec price is $35.50, and the Ontario price of the same company

is \$46.85; that is \$13.05 higher in Ontario than in the Quebec area?—A. Evidently that is another "special" because there was only 7 tons sold in all of Canada.

Q. Yes. Well, we will take another one then—it seems to me they are wasting a lot of printer's ink?—A. They are, that is what I say; this great list of brands is part of the cost of doing business.

Q. Take 4-8-10 again, I say I know nothing about it?—A. 4-8-10 is the standard.

Q. All right, it is a standard. This \$30 in Quebec, and \$41.55 in Ontario; that is, in Cornwall, for instance, the price would be \$30 plus freight from Montreal, and in Belleville or Brighton, just west of Kingston, it would be \$41.55. Now, I submit to you that there must be some explanation of that other than what you have given?—A. There is about \$8.00 difference.

Q. There is \$11.55 out of which freight would come?—A. Out of which the Ontario man has received the service of freight and trucking.

Q. That is not sufficient, though; there is some other explanation?—A. You can't make it in Ontario at that price.

Q. Yes. What I am getting at is you, or your association, or these people—the C.I.L. or Canada Packers refuse to sell an individual east of that; he cannot go there and pay the cheap price and take it from there west of that line?—A. I did not know that.

Q. We have some evidence before us now that they refuse to sell, and we are asking you as head of this Association in Ontario to explain to us why it is that a person in your territory cannot go into another part of Ontario and buy this product freely and take it home himself if he wished. Surely our people are free?—A. I think he could.

Q. They say they can't; we have evidence here saying they have been refused?—A. Probably Mr. Grose can give you some evidence on that point, I don't know. I think he could give you some evidence that will refute that.

By Mr. Ilsley:

Q. Your territory is not invaded by the Quebec price list, is it?—A. Yes, oh yes.

Q. How far west does it come?—A. I run across it every once in a while, they are liable to go out into western Ontario every once in a while, and I run across people who are getting the Quebec price—and I know I can't touch it; if anybody wants to, let them go ahead and buy it.

By Mr. Sommerville:

Q. Why do you say, let them go ahead and buy it, when you know they can't buy it?—A. No, I do not know that.

By Mr. Young:

Q. Do they buy it?—A. I think, if they knew their business, they could buy it. I am not going to show them how.

By Mr. Sommerville:

Q. You are not?—A. No, I am in the business, I am not going to show them how to beat my prices.

Q. I presume there is a way around?—A. No, not a way around, a direct way; but I do not propose to give them a line on it, because we have to sell our fertilizer.

Q. Why should it be necessary for them to get a Quebec list? Why should not the man who wishes it be able to send and get a direct list from C.I.L. or

Canada Packers, and say ship me five tons of fertilizer on your Quebec list f.o.b. Montreal, I will pay freight, here is cash—why should not they be able to do that?—A. They should.

Q. They are not able to do that, are they, Mr. Smith?—A. I do not know.

Q. Is that a fully frank answer, Mr. Smith?—A. Absolutely, I am not operating in Quebec, I do not know what they might do there.

Q. I am not talking about Quebec, but about the territory in which you are operating. Do you mean to say that anybody to whom you are offering your goods for sale could take that Quebec list and send to Quebec and buy all they want in Quebec, and pay the freight from Quebec?—A. I do not know whether they could or not.

Q. Do you know that they cannot, Mr. Smith?—A. No, I do not.

Q. You do not know that?—A. No, I believe they can.

Q. Have you ever known it to happen, because we would like to have that rare instance established?—A. I can give you hearsay evidence of such happenings, I do not know of any definite cases.

Q. Have you heard of that same price prevailing in Northern Ontario, the Quebec price?—A. No.

Q. Do you ship into Northern Ontario?—A. Some, around Sudbury.

Q. We have had evidence here that that same Quebec price prevailed in shipments to points west of Kapuskasing in Northern Ontario; do you know anything about that?—A. I do not, we do not even operate up there—any more than that we fill orders that come to us from there—we have some men around Sudbury who order each year and we ship them.

Q. Now then, Mr. Smith, in addition to the minimum price to be charged, what else do you agree upon in the association by way of terms or conditions?—A. I don't think there is anything else, except the terms of credit.

Q. Method of credit, all right, that is important, too. Up to a few years ago the agent sold the fertilizer and the company assumed the risk of collecting, did they not?—A. Never, in our case.

Q. Not in your case?—A. Not our firm.

Q. In the majority of cases that was so, was it not?—A. No, I do not think so.

Q. Was not that the general practice up till the last few years?—A. I do not think it ever was practised with the C.I.L., the isolated case was Canada Packers.

Q. What change has taken place in the method or manner of establishing these credits as a result of the deliberations of your association?—A. No change of importance.

Q. What were your discussions about then?—A. Other than that the date of payment, the extended date of payment on tobacco fertilizer which used to be December 1st was changed to November 1st, because we found if we waited until December many of the tobacco growers who had a crop had the money all spent and had nothing for fertilizer. We had to get in early enough to be able to get our money when the sale was made.

Q. Was it in the years 1931 and 1932 that you discovered that?—A. Yes.

Q. Those were the bad years in the tobacco business?—A. Oh, no, there was thousands of dollars from the good years never paid, thousands.

Q. But a good many thousands from these years 1931 and 1932 were never paid?—A. Not with us. We have been on a strictly cash basis for three years.

Q. You are talking now of the other firms in your association?—A. I cannot say anything about these debts so far as any other firm is concerned, because that has nothing to do with our association whatever.

Q. What did your association agree upon then, apart from this question of changing the credit date for tobacco to November 1; what other things did they agree upon?—A. I guess that would be all.

By the Chairman:

Q. Now, just wait a minute, before we leave this other point. Here is from the evidence—I think it is Mr. Grose on Friday, in answer to a question, precisely the same kind of a question as I asked you about shipping from Quebec, if that were possible. The question was:—

> If they were able to purchase in Eastern Ontario they could buy it and ship by local freight, and still get it cheaper than at the list price.

And the answer was:

> The railway rate from Montreal to Toronto is about 44½ cents per hundred L.C.L.

I think that is about $4.80 on a carload lot. Then the question was:

> You have a difference of $18 a ton there and the answer is:—
>
> Yes, but of course according to arrangements, that would not be shipped.

Now, what we are asking you is, what has your association to do with it. C.I.L. and Canada Packers are both members, and have factories in both areas. What is the arrangement that prevents a citizen of Western Ontario from buying his fertilizer in Eastern Ontario and shipping it to his own place?—A. There is no arrangement so far as the association is concerned. I know of nothing to stop it, other than the people who are operating there probably don't want it. If they did it would be too bad for me.

By Mr. Sommerville:

Q. Will you tell me then why the farmers of Western Ontario are paying from $5.00 a ton upwards more for their fertilizer than those of Eastern Ontario?—A. They are getting about $8.00 more service.

Q. Oh, but, this is apart from the service; we have covered that?—A. There is not that differential.

Q. There must be, on your own evidence it would be too bad for you if they brought it in at that price?—A. Sure, it would be too bad for them to try to do it; that, to try to ship it in to Ontario at those prices.

Q. Why?—A. Because they would be losing money.

Q. Because they would be losing money?—A. Undoubtedly.

Q. They have offered to sell it, and they are selling it now all over Quebec and eastern Ontario at this price f.o.b. Their list price is $25 or $30 as the case may be, and it does not make any difference whether the fertilizer goes to McKee or Halifax?—A. That is something I cannot answer, for I am not manufacturing down there. I don't know anything about the problems—I know something of them, I have a faint idea of their problems, but I do not think it would be possible for me to operate down there profitably under the scale of prices you have mentioned.

Q. And did you ever inquire to find out what it was that brought the scale of prices down to this level?—A. No.

Q. Never interested in inquiring?—A. No.

The CHAIRMAN: The thing that puzzles me, Mr. Smith, and I repeat it the third time, is this, two of the biggest manufacturers have factories at both points, Canada Packers and C.I.L., and yet there is a little difference in their prices and they are members of your association; and surely you do not want us to believe you have never discussed the question with them?

The WITNESS: Not so far as division points are concerned, never.

By Mr. Ilsley:

Q. Your evidence amounts to this, that their f.o.b. price at Montreal is unprofitably low; that is what it means?—A. I am sure it is; I am sure it is.

Q. In other words—A. I cannot prove that. I cannot get access to their records or anything else, but I am perfectly satisfied, from my experience in the business, that it would be very unprofitable. I know it is unprofitable in the province of Ontario at the price we are operating at.

By Mr. Sommerville:

Q. Now Mr. Smith, perhaps you can get us the records to which you are referring and the memorandum made at the last meeting. Will you secure those from the secretary?—A. I will secure them, get them for you.

Q. I mean the list prices that were settled upon and the agreements, at that time?—A. I do not know that there would be a list price. I do not think there would be anything like that settled on. I think it would be a scale of operation somewhat similar, possible similar, to what Mr. Grose had there.

Q. Will you get us the scale that was settled on?—A. Yes.

By Mr. Ilsley:

Q. Can you suggest any reasons why these companies would carry on business at a loss from Montreal?—A. When you had got your money invested in place and somebody else comes in and starts some competition, there is only one of two ways to meet it; either meet it or let him have all the business. And there are lots of people in this business, the same as in anything else, who estimate costs to find out later if their estimate was wrong.

Q. How long have those Quebec prices been in existence?—A. I would say about two years.

By the Chairman:

Q. Here is some more evidence of one of the growers who got by the barrage and got one order, and he says he bought from a Quebec firm.

> Q. What was the price at which you were buying?—A. Oh, quite favourable. I did not think this was coming up, or I would have had data on that.
>
> Q. Was it from the Co-operative Federee of Quebec that you were buying?—A. Yes.
>
> Q. You say that two or three weeks afterwards they refused to sell? On what grounds?—A. I think there was pressure brought to bear, and therefore they could not sell in Ontario.

Here is a man who got by—you said you heard of one or two who did—then he was stopped by pressure from Ontario?—A. I think that statement is based upon suspicion, not upon fact.

Q. The fact is clear where the pressure was, in Ontario?—A. I have talked with Mr. Grubb to-day, who, I think, handled that deal, or at least had something to do with it, or was conversant with it. I think the facts of the case are entirely contrary to that evidence there. The man had a quotation weeks and weeks in advance. He waited until it was impossible to ship and then asked them to ship the goods.

By Mr. Sommerville:

Q. No, that was not the case, Mr. Smith. Here was a case where the order was accepted and then two weeks later they wrote saying they could not ship?—A. I do not know anything about that.

Q. We had the letter here.

By Mr. Senn:

Q. Is the Quebec co-operative organization operated by the Department of Agriculture, Quebec?—A. I understand there is a subvention, or something.

Mr. BOULANGER: They get some help from the government.

The WITNESS: They get help from the government.

Mr. SENN: Does the government do anything with the business of the organization in any way?

Mr. BOULANGER: No.

By the Chairman:

Q. Here is a sworn statement, Mr. Senn:

> You have to buy a considerable quantity of fertilizer. What do you say is your objection, if you have any, to the present system under which you buy fertilizer?—A. The only difference there is in the fertilizer firms this year that I can see at all, is the colour of their price-lists. I am a member of the purchase committee of the Northumberland county, and at our representative meeting in March we agreed to buy fertilizer from a Quebec firm. That was done in our meeting; everything sealed up. Two weeks after that, two or three of the committee had to get together and do something else, because they were absolutely stopped from selling to us.

A. That is the first intimation I had of it, that evidence here and I do not think the evidence is correct.

Q. These are responsible men. These are the men who bought fertilizer, and they make those statements.

By Mr. Sommerville:

Q. Now, did you settle upon rules and regulations or instructions to salesmen, apart from regulations to agents—A. Yes.

Q. Will you look at these rules and regulations and see whether that follows the general result of your discussion; that is what you agreed upon. I am told these are the regulations that were adopted?—A. They look like them, so far as I have gone.

By Mr. Factor:

Q. Does it look so unfamiliar to you that you have to read every line of it?—A. I would not want to—I did not even see these—

Q. Have you a copy of them?—A. No; I would not put out one like that.

By Mr. Sommerville:

Q. At any rate, these look to be like the regulations you agreed upon for the salesmen?—A. Yes.

Q. That was at your meeting when, in the early spring of 1934?—A. No; it would be late in the spring, just before the selling season started.

By Mr. Factor:

Q. Meeting of the association?—A Yes.

Q. Have you the minutes?—A. No; these are the minutes I have not got.

Q. Those are also minutes you have not got.—A. No; those are the only minutes we have not got, for the last meeting.

Q. Was it at the last meeting that everything was fixed up?—A. Yes, there has not been any meeting since.

By Mr. Sommerville:

Q. That was in what month, February, March or April?—A. I do not know when; I imagine it would be March.

By Mr. Ilsley:

Q. Who fixed those minimum prices before this year? Did not your association do it?—A. Never had been operative, no.

Q. Never had been operative?—A. No, they have been discussed, often.

Q. You have not been operating upon a minimum price during those few years?—A. No, operating on some awful prices, cutthroat business, you can imagine.

By Mr. Sommerville:

Q. At any rate these rules and regulations had been adopted, and then this statement appears:

> Agents trade discount or commission will be 5 per cent off the credit price of all makes of fertilizer and fertilizer materials;

A. Yes.

Q. Is that right?—A. Right.

Q. "And an additional 5 per cent or bonus based on the credit list price will be paid on all makes of fertilizers, 20 superphosphate." Is that right?—A. "Provided". I think, provided he maintains the selling schedule. Is not that there?

Q. Yes, there is a proviso. He had been getting for years 10 per cent as his commission?—A. No.

Q. For how long has he been getting 10 per cent?—A. It had been left pretty much in his hands, where he could get whatever he could, one per cent, two per cent, ten per cent, twenty per cent, and the result was the majority of the agents were quitting yearly, because they could not get their goods. A fight starts between three or four farmers' agents. If one can sell for 25 cents a ton, the other fellow will come along and sell for 10 cents, and he will do that for one year, and then you will need new agents the next year. We have tried to stabilize things by allowing a reasonable profit to the local agent which he will develop—

Q. You do that by giving him 5 per cent for the sale and an additional 5 per cent to be paid on the first of July, to dealers or agents whose accounts had been paid and providing the sales have been made by them at not less than the list price, cash or credit.—A. Yes.

Q. That is right?—A. Yes.

Q. They only get 5 per cent if their accounts are paid and they have maintained the list price?—A. Yes.

> Q. Where, however, the dealer or agent is paid on credit terms, or sent any customers' goods on credit terms, the bonus shall not be paid until full settlement in cash of all such accounts or goods have been made.

A. Yes.

Q. In other words, the agent is now carrying the credit, is he not?—A. I think he always has.

Q. He always has?

> The bonus will not be held back on the following: but will be deducted from the invoice at the time of the sale.

Now, let me understand this bonus. If a man sold for cash he would get 10 per cent, and he would send you in the full cash price. Suppose it was $46 a ton, he would send in the full cash price and then he would be sent back 5 per cent of it?—A. No.

Q. Would he not?—A. No; he would be invoiced with the full price less 5 per cent.

Q. He would send in the balance?—A. No.

Q. He would send in that money in cash?—A. Well, you see, so far as we are concerned, we would send a draft attached to the bill of lading or he would send the cash before he got the goods. If the price were $40 we would invoice the man $40 less 5 per cent, $38, which is the amount he would pay us, and we would ship him the goods

Q. Then you would hold back 5 per cent of his money until the first of July?—A. No, that is not his money; it will be when he has earned it.

Q. He has earned it by paying for it?—A. No, he has not.

Q. He has not earned it?—A. No.

Q. What has he got to do?—A. We want to maintain some semblance of orderly marketing, and if he won't help us to do it, we won't bonus him that extra five per cent.

Q. He has got that?—A. He has only made on an average 5 per cent in the years previous, and he has been lucky to make that.

Mr. FACTOR: Who invented the term "orderly marketing"?

Mr. SOMMERVILLE: Was it not the wheat pool that invented the term "orderly marketing?"

By Mr. Sommerville:

Q. Then, if he pays cash for the order and carries a customer's account, he gets what himself, what additional discount?—A. If he—would not get anything different.

Q. Does he not get $2?—A. He would buy at $38 and he would sell at $40. I am speaking now, if the price were $40 on the list.

The CHAIRMAN: How long is that $2 held back?

The WITNESS: Until the first of July.

Mr. SENN: On the spring sales?

The WITNESS: Yes.

By Mr. Young:

Q. On what terms is it restored to him; what are the conditions under which it is restored?—A. Provided he has sold it at $40.

Mr. SOMMERVILLE: Providing his own account has been paid.

The WITNESS: This would be his own account. That is a ton of goods he got. If we sold him a credit, we would invoice it to him at $40 less 5 per cent. If he had not paid $38 by the first of July we would not send him the $2 because he owed us the $38.

By Mr. Young:

Q. If he sold it for $39 you would keep the other $2, would you?—A. Yes, absolutely.

Q. He would be out $3?—A. If he is satisfied to work for nothing, why, all right. We are quite ready to let him do it.

Q. You take some more money out of him?—A. No, we are simply not going to pay him for performing something which he won't perform.

Q. This other $2 is not for selling the goods, and collecting the money, it is for maintaining prices?—A. Yes.

By Mr. Sommerville:

Q. Now, the bonus, however, will not be held back on the following firms, but will be deducted from the invoice at the time of the sale.

Then follows a list of nine firms. Why are they not held back on these firms when they are held back on all the rest of the firms in Ontario?—A. Well, you are giving me something now I do not know existed. I did not know anyone had any exceptions from that thing at all.

Q. Just look at your own regulations?—A. These are not my regulations.

Q. Well, your own association?—A. No, it is not association regulations.

Q. Whose are they?—A. I do not know who gets these out.

Q. What are the firms on which the bonus will not be held back?—A. It is evidently somebody in Toronto who is selling, distributors there.

Q. Yes. Are there any firms on your orders that the bonus would not be held back on?—A. Not that I am aware of.

Q. These firms are distributors are they not?—A. No, small buyers of package goods.

Q. Do not they sell large quantities?—A. I do not think so. I have never run across them anywhere around the country ever selling fertilizer in competition with our agents.

Q. These are the seed men?—A. Yes, but they are selling package fertilizer, half pounds, one pound, and five pound cartons.

Q. They sell 100 pound lots, they are agents?—A. No, no agents at all. They are simply buying and selling package goods.

Q. I do not care whether they are selling package goods or carload lots—A. We are not dealing in package goods.

Q. Your firm is not?—A. No.

Q. But the association firms do some?—A. Some of them.

Q. This intimates that with respect to all other firms that may be affected, the bonus of 5 per cent will be held back to see that they are good boys, but with reference to the nine firms the bonus is not to be held back. That is what it means, is it not?—A. I would say yes.

Q. That is a bonus to them as agents?—A. No, they are not agents.

Q. I can readily understand it?—A. No agents, nor do they undertake to develop any business at all. They are putting in their windows a certain quantity of package goods to sell to the florists and housewife and one thing and another like that, and probably Eaton's may have displayed in their window that stock, but they are buying that outright.

Mr. Edwards: In bulk?

The Witness: No, in packages, different cartons for window display, fertabs, and one thing and another.

By Mr. Ilsley:

Q. They get 10 per cent?—A. Plant packages. C.I.L.

By Mr. Senn:

Q. The price at which they sell would be away beyond the bulk price?—A. Yes, three times.

Q. It is not a case of price maintenance at all?—A. No, not price maintenance at all.

By Mr. Ilsley:

Q. You say the bonus is not held back, but they get 10 per cent discount?—A. They would get 10.

Q. In addition?—A. Yes, I imagine from that—I did not know that existed—I imagine they are dealing with that as package goods, and that is all I can think it applies to.

Q. What is the reason for giving them 10 per cent when the agent only gives 5 per cent?—A. They are buying this package goods, small packages goods. Instead of it selling at $40 a ton, it probaly sells for $120, if they take a ton, but they only want maybe 25 pounds, 5 pound packages or a 10 pound package.

By Mr. Sommerville:

Q. You do not mean to suggest to this committee that is the way that Eaton's buy anything, 5 pound package?—A. Maybe not; pretty nearly on that

basis, but I think I would be safe in saying they would not run over just the odd ton, certainly not in carload lots.

Q. You know this, Mr. Smith, they would not let you keep back their bonus until the first of July and therefore they are excepted from the list; is not that a fact?—A. No; if we were doing business with them, they would do it my way, or they would not do it at all.

Q. You are not doing business with them?—A. No, and never tried to.

Q. Then is there any connection between American firms that supply materials going into fertilizers and the Canadian firms?—A. No, I don't think there is, other than that American agricultural—or at least, that Agricultural Chemicals, Limited. That is a subsidiary of an American company—no, American Agricultural Chemicals. It has probably thirty or forty or fifty plants in the United States.

Q. Are there any other subsidiaries in this country of American fertilizer companies?—A. I don't think so; not that I know of.

Q. Are there any companies in this country that are owned or controlled, or partly so, by any of the American firms, that you are aware of?—A. No, I don't think so.

Q. Do you know of any arrangements made by your association with any of the American manufacturers of fertilizer materials not to sell to any but mixing firms in Canada?—A. No. Such arrangement never exists.

Q. Is there any co-operation of any kind between your association and the American firms?—A. No.

Q. Or with any firms?—A. No.

Q. What is meant by this minute of the formal meeting of your association on the 24th of November last, over which you presided, and introduced Mr. W. D. Huntingdon of the American Cyanamid Company, who outlined their plans of closer co-operation with the industry for the coming spring season? What was the closer co-operation outlined?—A. I have never seen any of it.

Q. Well, what did he outline?—A. He didn't outline anything other than that he was—they have always been selling us cyanamid from a manufacturing standpoint. They are also manufacturers of ammophos, a combination of ammonia and phosphates.

Q. What was meant by this, outlining their plans of closer co-operation? Did that mean, Mr. Smith, that the Cyanamid Company agreed not to sell to firms outside of your association?—A. No.

Q. Was there any suggestion or discussion of that?—A. Not that I ever heard, at any time.

Q. Was there any request of any kind to that effect?—A. Not by the association.

Q. Or any members of the association, that you are aware of?—A. There may have been from members, I don't know.

By Mr. Ilsley:

Q. Were you present when that gentleman was there?—A. Yes; so was Dr. Christie and so was the deputy minister.

Mr. SOMMERVILLE: No, I don't see them here. They attended the luncheon later, but they were not in on this.

The WITNESS: Well, may be I am mixed.

Mr. SOMMERVILLE: When you adjourned for luncheon from your session, they came in; but the only business of the morning, according to this minute of the meeting which was called to order at 10 o'clock, was the "Chairman, A. L. Smith, introduced Mr. W. D. Huntington of the American Cyanamid Company, who outlined their plans of closer co-operation with the industry for the coming spring season. General discussion followed." Then, "on the suggestion of the

Chairman, Mr. Huntington outlined at length the operations of the N.R.A. and the Fertilizer Code as it affected the industry. General discussion followed, after which the meeting adjourned for luncheon at the King Edward hotel," and that is when a number of people came in.

By Mr. Ilsley:

Q. Were you discussing a code for Canada then?—A. No.

Q. What were his plans for co-operation? You must have some recollection of his speech? He was making a speech on plans for co-operation?—A. Frankly, I don't recall anything. I didn't even know that was in the minutes. I don't recall one thing of any closer co-operation ever being discussed.

By Mr. Sommerville:

Q. It might just as well have been left out of the minutes, as far as you are concerned?—A. It might just as well. I certainly do remember him talking about the code, because he gave us an hour's talk on that.

Mr. Kennedy (*Peace River*): How long did the meeting last?

Mr. Sommerville: The meeting lasted from 10 until the adjournment for lunch, whenever that was.

By Mr. Factor:

Q. You don't remember anything that was said about closer co-operation? —A. No.

Q. You don't remember anything?—A. I am sure there was not any discussion like that.

Mr. Factor: The minutes say so.

Mr. Sommerville: And these minutes are signed by you.

By Mr. Ilsley:

Q. What interest had his talk about codes for your association?—A. We were very closely associated in the results obtaining from any codes in the United States as well as in Canada. We are very closely, not allied with them, but affected by anything that affects them. If the price of some of these materials which we purchase in the United States were to be affected to the extent of $3 or $4 or $5 a ton, we would be immediately affected, because we have got to purchase them. And what I drew from his talk was that we could look for higher prices if the code got into operation over there.

By Mr. Sommerville:

Q. You remember that?—A. That is about the N.R.A.

Q. But I would like to know if you can tell us what closer co-operation he proposed for the coming spring season?—A. No. You have got me floored there. I have not got the slightest recollection of anything like that.

Mr. Factor: It is rather peculiar.

By Mr. Ilsley:

Q. There was a gentleman here—I think it was the last witness—who talked about nitrate of soda selling for $50 by somebody, and being purchasable for $41 from somebody else. Did that have any relation to the co-operation at all? —A. No. They are not handling any of that, the Cyanamid Company. They are manufacturing cyanamid, which is a nitrogen carrier; but it is not nitrate of soda. There is nothing in common between the two, other than that they would both be used to derive nitrogen in a mixture.

By Mr. Young:

Q. You get your raw material from Montreal, do you?—A. No. Sometimes it comes through New York, sometimes from Baltimore.

Q. When it comes from New York, how do you get it? By what?—A. From New York we used to bring it up through the Erie barge canal. Of course we would have to consider some other source to-day, because we could not unload a barge at our plant.

Q. Generally you get it from Montreal?—A. No. We have brought most of it up through Baltimore and New York in the years gone by.

Q. By the barge canal?—A. Yes, the barge canal and rail.

Q. But you say you can't do it any more; you bring it by rail now?—A. Yes, by rail. We brought it by rail the last couple of years.

Q. What I want to get is this: In bringing it from Montreal by rail or from New York by rail, there is a carload rate from the shipping point to, we will say, Toronto. You have a factory located in Toronto?—A. No, at Welland ours is.

Q. We will take it at Welland, then. Then there will be another carload rate from Welland to, we will say, Palmerston, where you are going to unload?—A. Yes.

Q. Is there not a through carload rate from the shipping point to Palmerston, the ultimate destination?—A. Yes, but you would not ship that product in that way.

Q. What I want to get is this: Will the sum of the two separate rates be greater than the through rate from New York to, we will say, Palmerston?—A. Oh, yes.

Q. It will be greater?—A. Yes.

Q. Then the fact that you have stopped that on the way to mix it will necessitate a higher freight rate, will it not?—A. Yes, surely.

Q. Does it not follow that your factory is located in the wrong place?—A. Well, every place would be wrong on that basis, unless all buyers lived in the one point. We have got to meet all these people who are spread out over the province of Ontario. I think we are geographically well located.

Q. Would that give the factory located at Montreal the mixing plant there, an advantage over your plant?—A. Yes.

Q. They have an advantage?—A. Oh, yes.

Q. In location?—A. Yes, undoubtedly.

By Mr. Sommerville:

Q. Now, I observe that in your meeting of June 15, 1933, held in the Royal Connaught hotel, a question of brands for fall was brought up for discussion, and the following were approved:

0—12— 5	2—12—6
0—12—10	2—16—6
0—12—15	3—10—5
0—14— 6	4—12—6

A. Yes.

Q. According to these minutes?—A. Yes.

Q. Then, what minimum price did you set on those brands at that time?—A. When was that?

Q. June 15, 1933?—A. I don't know whether I have a record of that or not.

Q. Here it is here?—A. It would be worked out on that scale that you have, or a similar scale to that.

Q. It would be worked out on a scale similar to that?—A. Yes.

Q. And the price would be agreed upon for these eight brands?—A. Yes.

By Mr. Senn:

Q. As the minimum price?—A. As the minimum price.

By Mr. Sommerville:

Q. There is no reference to that here; there is no minimum price on the minutes?—A. No, it would not be necessary.

Q. That would be understood?—A. No, it would be worked out. Each one would work out the amount under the scale. You work that out, and that is your minimum price.

Q. You get a scale?—A. Yes.

Q. Who supplies the scale?—A. Well, we have decided on that after figuring and working it out.

Q. When you mention "we", who do you mean?—A. All of us together.

Q. You mean the association?—A. The association, surely.

Mr. Ilsley: When was that?—A. That is an important date, it seems to me.

Mr. Sommerville: June, 1933, was when they settled on the prices for these brands.

By Mr. Ilsley:

Q. You just told me that you didn't have any minimum prices until this year, until 1934. Did you misunderstand my question?—A. That is 1934 he is working on there.

Mr. Sommerville: No.

Mr. Ilsley: No, that is 1933.

Mr. Sommerville: That was June, 1933.

The Witness: I don't know about that. I don't think there was any price at that time.

By Mr. Sommerville:

Q. Were there not any prices agreed upon last year?—A. I don't think so.

Q. Are you sure, Mr. Smith?—A. Yes. I know there were none maintained.

Q. I don't care whether they were maintained or not?—A. I know that.

Q. But were they not agreed upon at the time when these brands were agreed upon?—A. No, that had nothing to do with the prices at all, as far as that is concerned. It is on the recommendation from the O.A.C. as to what the brand should be for that fall.

Q. When was that scale worked out?—A. I think it would be March.

Q. Of 1934?—A. Yes.

By Mr. Sommerville:

Q. So that then you say this is the first year upon which you have had any minimum prices fixed?—A. No. We have had understandings previous to this, but they have never been very satisfactorily maintained.

Q. The difference between what happened before and now is that they are being maintained this year?—A. Well, from the evidence you are giving me now, I am beginning to think they are not.

Q. But you thought they were?—A. I thought they were.

By Mr. Ilsley:

Q. When did the understanding start? When was the first one?—A. I think it was March of this year. Now, I think we may have discussed it after the fall.

Q. Mr. Smith. I have difficulty in getting you to stick to one thing. First you said there were no minimum prices set until 1934. Then, in answer to Mr. Sommerville, you said in June, 1933, there were minimum prices set?—A. No.

Q. You changed that later?—A. No.

Q. You changed that and said there were not, and you said just now that there were understandings from time to time but they were not satisfactorily maintained. I say when was the first understanding of minimum prices?—A. Probably two years ago.

Mr. Sommerville: For the spring of 1932?

The Witness: I think that would be the first, yes.

By Mr. Ilsley:

Q. You are quite sure that is the first?—A. No, I am not sure.

Q. It may have been before that?—A. It may have been 1931.

Q. It would not be at the beginning of your association?—A. Oh, no; no, no.

Q. It would be later than 1929?—A. It would be two years after we were operating.

Q. It would be 1931 at the earliest?—A. It was, offhand, 1932.

Q. Now, may I call your attention to the fact that from 1931 until now there appears to be no record in the minutes of any understanding about prices, although there must have been one for each year of two or three years.

Mr. Kennedy (*Winnipeg*): Is it customary to put things like that in minutes?

Mr. Ilsley: That is what I want to get at. Is there some reason for keeping this understanding about prices out of the minutes and out of existence so far as records are concerned?

The Witness: There naturally would be, I would imagine.

Mr. Ilsley:

Q. You mean you would not want to make any record of that sort of thing?—A. I know I tore my records up when I was through with them.

Q. I wonder if the others did the same; if they tore their records up?—A. No, Mr. Sommerville has copies there. I work on a different scale than anyone else. So I could easily tear mine up and be through with it.

Q. Is there any reason for secrecy between the fertilizer companies fixing minimum prices for this territory—A. Any more than there would be secrecy for ordinary business dealings that you would not publish to the country at large, certainly.

Q. You would not publish to the country at large that you have this agreement between each other about fixing of minimum prices?—A. I think that has been known since this existed.

Q. It was from 1931 or 1932?—A. 1932, I think.

By Mr. Edwards:

Q. You would not broadcast that you had minimum prices?—A. No, that would not be business.

By Mr. Factor:

Q. You association was formed on the 3rd of January, 1929?—A. 1929, yes.

Q. And was there no minimum price fixed when your organization was formed?—A. No. It was two or three years after that before there was any thought or discussion of it.

Q. What was the object of forming the association?—A. Just what it says in there.

Q. I mean outside of this, I mean the real purpose of the association?—A. The real purpose was there in the minutes of the first meeting.

Mr. SOMMERVILLE: Just to get together like good fellows.

The WITNESS: Dr. Christie had asked us to do something. We could not operate with him unless we had some semblance of an association.

By Mr. Kennedy (Peace River):

Q. Why would not you advertise that you agreed on a minimum price? Would it not all come out anyway in the price lists? We had a farmer here the other day who said that the only difference in the price lists was the colour of the paper?—A. He was a little wrong in that.

Mr. SOMMERVILLE: He had not seen your price list.

The WITNESS: No, evidently.

Mr. SOMMERVILLE: He had only seen all the rest of them.

The CHAIRMAN: It does not alter the very difficult and stubborn fact that the growers seem to be the victims of higher prices west of the deadline at Kingston than east of that line. There seems to be no explanation of that; no satisfactory explanation. And the impression the growers give to the committee is that they are unfairly penalized. They think the prices they are compelled to pay are too high. Of course, that is a thing which this committee is concerned with: if the grower in regard to fertilizer and other things that he uses is a victim of understandings and controls that are not fair and open and frank, this committee has got to take cognizance of it; and I think the committee will agree with me that there has been no satisfactory explanation of the growers' complaints in this regard.

The WITNESS: I thought I had explained practically that difference.

The CHAIRMAN: No. The only answer you gave, I submit, Mr. Smith, in all fairness, was that you certainly did not want to produce fertilizer at the price it was sold at in Quebec?

The WITNESS: No. It could not be done.

The CHAIRMAN: Now, that answer does not appeal to me, and I question if it appeals to my colleagues; because we know that at least two very outstanding, shrewd, competent firms are producing it and selling it, and we certainly know that Canadian Packers and C.I.L. are not in the business for their health.

The WITNESS: I agree with you there, but I think I can quite frankly say that the losses incurred in doing that are enormous.

The CHAIRMAN: Show me some of their losses; give us some evidence.

The WITNESS: I will give you evidence on our own lack of profits in Ontario at the higher price.

The CHAIRMAN: We will listen to that. I do not want to shut you off; but that is not an answer.

The WITNESS: I cannot give you an answer on others, but I am perfectly sure from this that if I had to take those prices the picture would be so bad that we would not long exist. We could not.

Mr. SOMMERVILLE: Perhaps you could do this for the committee; file with the committee the breakdown of the costs showing the spreads between prices paid for the commodities and the price at which the commodity is sold?

The WITNESS: That is the only cost book we have ever had for all the years. I do not want to leave it with you.

By the Chairman:

Q. Did I understand you to make this statement: We will take one of your own members because you must be familiar with them. We will take the Can-

adian Packers that sell in Ontario at a certain price and in Quebec at a certain price. You declare the Quebec price is such that it would be destructive of the business?—A. Yes.

Q. Now, you say that the Canadian Packers are deliberately slashing their prices in Quebec below the cost?—A. They must be doing it. I know they are doing it.

Q. Your opinion is that they are cutting the prices below the point of cost? —A. No. They are meeting the competition of a concern that came over here from Holland and put up a plant down at St. John or Levis or some place below Montreal with the idea that they could do this business at a certain price. They undertook to do it. They are meeting that competition, I believe. I am not operating there. I do not know exactly what they are up against, but I believe that is where it started. Now, there is a certain amount of pride in certain manufacturers that do not want to be beaten by the other fellow and let the public know it. They will go on and operate it; and I am frank in stating—I have it on the authority of Mr. McLean himself—that they are losing money and losing it fast.

By Mr. Kennedy (Peace River):

Q. Who is this firm from Holland?—A. What do they call themselves; I think it is the International.

By Mr. Sommerville:

Q. International Fertilizers, Limited, at St. John, New Brunswick.—A. Yes.

By Mr. Young:

Q. Are they still operating?—A. Yes.

Q. And making a success of it?—A. I wouldn't think so.

By Mr. Senn:

Q. What is to hinder them sending their goods into the west?—A. Nothing in the world; I don't even know them; I simply know them by reputation.

Q. If they are competing in Quebec why are they not competing with you here?—A. I think they have all they can do to handle down there. I would imagine it looks to me like a little scrap on in Quebec.

Mr. Bell: I think they are working in connection with the Quebec organization; there are three or four new plants started down there and the Intertional is one of them, and my belief is that they are working in conjunction with the Quebec institutions.

The Witness: I do not know; I am not conversant with it.

Mr. Young: Are they only operating in Quebec?

Mr. Bell: I think they have a branch in Quebec.

Mr. Young: Apparently they are making a success of it.

By Mr. Sommerville:

Q. This is the break-down of your cost?—A. This can only be our estimated costs. We can never know what it costs us to-day until it is completed. That would be our estimated cost at the start of 1934. We won't know till we get to the end of our fiscal year, September 30th, how our estimate works out. But unfortunately we have too many times found that the estimate was wrong in that we did not take cognizance of some things.

Q. I would prefer that you take your own cost book, Mr. Smith, and submit to the committee the costs of your various mixed fertilizer and how you have made them up.—A. I suppose in doing that there is no chance at all of my giving away any secrets of the trade elsewhere.

Q. There is no desire to do anything like that, Mr. Smith.—A. The formula for fertilizer is not the same with all of us; we have an entirely different formula than someone else arriving at the same thing.

The CHAIRMAN: We have to respect that request, because we cannot consider giving away one man's formula to any of his competitors.

Mr. SOMMERVILLE: Under no circumstances.

By Mr. Kennedy (Winnipeg):

Q. That is a break-down of your cost for 1934, but you could give us the exact cost for 1933?—A. Yes. This is the figure of 1933 costs, estimated, if we can maintain that same ratio for 1934, and we arrive at a price on that taking the average of the last few years.

Q. Yes, I understand that, but these are estimated costs for 1934. However, you can give us your exact costs for 1933?—A. That would look very much worse because the tonnage was down in 1933; this is better.

Q. I know, but supposing we get 1933, whether they are good or bad?—A. Yes, that is what this would be. This 1934 would be the actual cost of materials that enter into these goods.

Q. But it is an estimate for 1934?—A. Yes it is. We never will know what 1934 is until it is completed, but this is based on 1933.

Q. Yes, you have told me that three times, and I heard it the first time. Let us leave 1934 for a minute. You can give us a statement of what your actual costs were for 1933?—A. Yes.

Q. Well, let us have that too?—A. Surely.

Q. And your price list and selling price for 1933 and 1934?—A. Yes.

By Mr. Kennedy (Peace River):

Q. I understand you are charging from $1.50 to $2 a ton more for your fertilizer than some other firms?—A. Yes.

Q. For a fertilizer of the same formula?—A. No, no.

Q. A different formula?—A. Yes.

The CHAIRMAN: His is the best on the market, of course.

By Mr. Kennedy (Peace River):

Q. I thought you were manufacturing to a certain standard?—A. Well, there is a difference, and if it would not tire you any I would like you to read that, without publishing any names. You have heard that man here I think, and you have absolute confidence in him. He is the biggest buyer of fertilizer in Canada.

Mr. SOMMERVILLE: This is a letter of recommendation from a man who has been buying fertilizer.

The WITNESS: He could save $10,000 a year and buy his materials to make his fertilizer if the figures that have been submitted to you are correct.

By Mr. Kennedy (Peace River):

Q. Is your firm an Old Country concern?—A. We are originally an Old Country concern, Alexander Cross & Sons, of Glasgow, Scotland. Each organization is formed separately. Our parent people have been in the business for probably three or four generations.

By Mr. Sommerville:

Q. Perhaps you could tell us this, Mr. Smith, before you leave: Do any of the fertilizer people take crops of fruits or vegetables in payment of their fertilizers sold to the farmers?—A. I never heard of it until I heard it in the evidence the other day.

Q. All right?—A. I had made some notes if I can find them. I think I would like to answer some statements that were made.

The CHAIRMAN: All right, Mr. Smith.

The WITNESS: There was a statement made that there was a black list.

By Mr. Sommerville:

Q. Yes, a statement was made that a black list was in existence?—A. Such a thing has never even been discussed at any meeting.

By Mr. Young:

Q. A meeting of the association—A. That is, a black list such as is mentioned in that, but we do take information regarding the men who, by experience, have been proven dead beats or as near to it as they can be.

By Mr. Sommerville:

Q. You exchange credit information?—A. Yes.

The CHAIRMAN: A sort of dark grey list?

The WITNESS: It is a red list with us.

The CHAIRMAN: It is an exchange of information. I do not see any objection to that.

By the Chairman:

Q. Is there anything else, Mr. Smith?—A. Yes. Would you care to have some figures regarding our financial set-up I am speaking of our company now.

Q. All right?—A. We have an authorized capital of $500,000 paid up $160,000 actually. Originally it was $200,000; we reduced it to $160,000. We have operated since 1922 successfully right down to the present date. In the year of 1922 there was no profit, no loss, but there was enough operating profit for $4,835 for depreciation.

Q. What year?—A. 1922. And 1923 no profit, nothing for depreciation, but a loss of $5,724; 1924 the same thing, nothing to provide for depreciation, a loss of $5,922. The next year 1925, just enough to write off $1,300 of depreciation. We took no profit at all. Otherwise, if you had that plant costing over $100,000 rented you would have got $1,300 rent for it that year. Then there are a few years—5 years—in which we made a little profit, enough to take care of depreciation and a profit to reserve.

By Mr. Kennedy (Winnipeg):

Q. That is, of course, a profit over all salaries?—A. Oh, yes. I will speak on the salaries afterwards. If we had to depend on salaries we could not live.

By the Chairman:

Q. All right, Mr. Smith?—A. We made a profit in the years 1926, 1927, 1928, 1929 and 1930, and understand in the year when we were making a profit and paying dividends was when this association was formed; there was no occasion for trying to get more money; we were making a fair thing at that time. In fact, we paid three dividends of 8 per cent. Since 1930 we have continuously shown losses. We have provided nothing for depreciation; we have shown a loss of nearly $10,000 in that period. If we were to take into consideration when we were writing that balance sheet, the list of accounts receivable as 100 cents on the dollar it might be a different story. I am not showing you any names but I am showing you this list and there are 23 pages of accounts receivable in fertilizer in the province of Ontario contracted prior to us going on a cash basis three years ago.

By Mr. Sommerville:

Q. That would indicate the farmers are in rather a bad way.—A. They were when they were making lots of money. They contracted these accounts in the years when they were selling 50 cent tobacco, a dollar and a dollar and a half wheat.

By Mr. Young:

Q. Did you sell any of that to wheat growers?—A. Oh yes. I think that the greatest portion of the trouble is that the farmer is just now learning how to live.

By Mr. Sommerville:

Q. What do you mean?—A. Within his means. For two or three years he continued to live on a high standard of living when he was not able to meet his expenditures.

By Mr. Senn:

Q. Would you care to give us the information about your salaries?—A. Yes, I will give you the total of the salaries in our organization.

By the Chairman:

Q. Tell us what the executive salaries are, how it relates to your expenditures.—A. In percentage?

Q. Yes.—A. I would have to figure that. You mean executive?

Q. Yes.—A. Well, I am the only executive so I would have to tell you my salary, just myself and two girls in the office; the rest are salesmen out on the road.

The CHAIRMAN: Very well.

Mr. SOMMERVILLE: That is not necessary.

By Mr. Kennedy (Winnipeg):

Q. That long list of accounts receivable that you have not succeeded in collecting, were they incurred by the supersalesmanship of the salesmen or were the farmers anxious to buy?—A. They were probably as anxious to buy as we were to sell at that time.

Q. Have you endeavoured to collect those accounts?—A. Yes, we have endeavoured to collect them.

Q. Well, are these farmers all judgment proof?—A. In a great many cases, yes absolutely; if they have a loan from the Agriculture Development Board they are unapproachable by anyone at this time.

Q. Because that loan comes first?—A. That loan, of course, only gets the same security as any other mortgage until there is something past due. Immediately then they take a chattel mortgage on everything he has including the crop, growing crops and everything, to cover the full amount of the mortgage, and then they sit there and carry him for two or three years without him paying one cent of interest or taxes.

Q. Then we may take it that that long list of 23 pages of farmer debtors or organizations are practically all execution proof?—A. Most of them are.

By Mr. Sommerville:

Q. You cannot collect them?—A. Well, I believe many will in time be collected. We have not written them off yet and we are not going to write them off, but if a man has abandoned his farm and has gone we write it off as a bad debt.

By Mr. Kennedy (Winnipeg):

Q. That would certainly show that the farmers generally are in a pretty bad condition?—A. Yes.

By Mr. Kennedy (Peace River):

Q. The statement was made that they were living beyond their means.—A. When those debts were incurred they were.

Q. That was during the years 1925 to 1930?—A. Yes.

Q. And then you went on a cash basis?—A. Yes.

Q. And you are doing better?—A. We have incurred no more bad debts.

Q. Have your sales been curtailed any?—A. Our business this year will be 25 per cent above last year, and last year showed quite an increase over the previous year showing that there must be some improvement in agriculture, or at least we are picking the good ones, I don't know which it is.

Mr. Kennedy: Perhaps they found you easier to stand off before.

By Mr. Sommerville:

Q. The agent is taking the chance; that is what you are talking about?—A. No, there is no agent of ours ever taking any chance, I don't think.

Q. Does he get an additional amount if they pay cash?—A. The man who gets the fertilizer has to pay cash. We will ship our agent a car of goods with a draft attached to the bill of lading. If he has not the money he goes to the bank and the bank will advance him the money with which to lift the draft. He collects from the man when he comes to the car for the goods.

By Mr. Kennedy (Peace River):

Q. Your statement about \$2 wheat might require a little qualification. Not every farmer got \$2 for his wheat?—A. I said \$1.50 wheat.

Q. Not every farmer gets it, even if wheat is \$1.50 a great many of them don't get it—they have crop failures even with fertilizer?—A. That might be, too.

By Mr. Sommerville:

Q. Can you tell us the amount that these accounts represented?—A. I could not tell you, I could only give you an estimate on that because you cannot total up the particular list, there are so many of those who have reported—we report to a central agency, my list goes in there, and somebody else's list goes in, and it is combined into one list and sent out to each one of us. Some of them have reported, from \$50 and over, and I know of one instance where it was \$1,000 instead of \$50. But estimating I would say it was about \$500,000.

By Mr. Young:

Q. What percentage would that be of the total sales?—A. About 50 per cent of one year's sales.

Q. Do you mean to say that—

The Chairman: No, no, this is accumulative.

The Witness: This is the accumulation of two or three years—possibly 3 years' accumulation.

By Mr. Young:

Q. In a good year what percentage of your sales were not collected?—A. About 50 per cent were taking credit, and about 50 per cent were taking advantage of the cash discount.

By Mr. Kennedy (Winnipeg):

Q. What amount not collectable?—A. I don't know, we tried to collect the following year, and the year after that.

By Mr. Kennedy (Peace River):

Q. What percentage of the value of your business do these uncollected accounts represent?—A. That is not ours. I could tell you ours.

Q. That is not yours?—A. That is all the fertilizer business in the association.

Q. How much do these uncollected claims represent?—A. About half a million dollars.

Q. It seems to me rather a strange thing, you can give that information so accurately, but when it comes to any question relating to this misunderstanding, you don't remember a thing. It seems to me you have the poorest memory for a Scotchman that I ever heard tell of?—A. I am not a Scotchman, don't accuse me of that; I am a Canadian.

Q. For a business man of any kind you have a mighty poor memory.

The CHAIRMAN: Is that all, gentlemen.

All right, Mr. Smith, let's get along.

The Witness was discharged.

The CHAIRMAN: The committee will stand adjourned until 10.30 o'clock in the morning.

Mr. ILSLEY: What is on in the morning?

The CHAIRMAN: One more witness on this, and then we are going into rubber.

The Committee adjourned at 5.40 p.m. to meet again on Tuesday, May 22, 1934 at 10.30 a.m.

House of Commons, Room 368,

May 22, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 10.30 a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, appeared as counsel for the committee.

The Chairman: Order, gentlemen. The minutes of yesterday's morning and afternoon sessions indicate the witnesses that were heard and certain exhibits filed. I will declare the minutes approved.

Mr. Sommerville: I think the Canadian Industries, Limited, desire to be heard with reference to the question of fertilizer raised by the growers. Mr. Grubb.

The Chairman: To-day we were to have started hearing some of the rubber industry. These people not having finished, we will finish with Mr. Grubb this morning. I would like to suggest that the witnesses might help us a little more than we were helped yesterday by witnesess, by giving us rather prompt and frank answers. It was a little annoying, sometimes, when a witness would keep us sitting here while he was digging for information which could very easily be given. So if the witness will co-operate, it will be helpful.

Reginald Grubb, called and sworn.

By Mr. Sommerville:

Q. On Friday and yesterday you heard statements made by the growers and some fertilizer men. We would like to have some information from you, Mr. Grubb, with reference to this subject matter. First of all, your company is Canadian Industries, Limited?—A. Yes.

Q. Where are your plants located?—A. We have plants at Hamilton, Ontario, Beloeil, Quebec.

Q. One at Hamilton, Ontario, and one at Beloeil, Quebec?—A. Yes.

Q. Yes?—A. Halifax, Nova Scotia, and New Westminster, British Columbia.

Q. And at all of these plants, do you manufacture fertilizer?—A. Yes, we do.

Q. And at all of these plants do you mix fertilizer?—A. We do, yes.

Q. To all of these plants you bring in some of the ingredients of the fertilizer?—A. We do, yes.

Q. And in some of these plants you manufacture some of the fertilizer which is used by you?—A. At all of the plants we make mixed fertilizer. It is a case of mixing.

Q. Mixing?—A. Yes; and at two of our plants we make superphosphate, which we consider a manufactured fertilizer.

Q. Superphosphate?—A. Yes.

Q. That is made at Hamilton and at Beloeil?—A. Right.

Q. And superphosphate is made from the use of sulphuric acid with what other constituent?—A. Phosphate rock.

Q. With phosphate rock?—A. Yes.

Q. And you have large quantities of sulphuric acid at both of these plants, Hamilton and Beloeil?—A. That is not quite correct.

Q. Is it not?—A. No.

Q. At Hamilton, then, you have large quantities?—A. At Hamilton we manufacture sulphuric acid.

Q. And I understand that in the process of manufacturing sulphuric acid you must practically continue your plant's operations continuously?—A. That is a 24-hour operation.

Q. And it is a year-round operation?—A. If possible.

Q. What I mean is that a sulphuric acid plant is, in a sense, not unlike a battery; when you set it up and let it lie idle it deteriorates very rapidly, does it not?—A. Sulphuric acid would.

Q. The plant, I mean, that manufactures it?—A. It would.

Q. So that for the most effective and efficient manufacture of sulphuric acid, it is desirable to keep your plant going continuously on a 24-hour basis and for as many days of the year as possible?—A. That is correct.

Q. I presume with that being so, you have a very large production of sulphuric acid?—A. In that connection, at Hamilton the fertilizer division does not use all of the output of the plant. Our plant there is operated by our heavy chemical division. We get what we require. At Beloeil— By the way, in connection with your request, Mr. Stevens, that we rather get along with the job, I don't want to alter the general proceedings of these meetings, but I have made quite a few notes here, and I really think we would get along faster with the job if I explained the mooted points, and then let you question me. I am quite willing to go either way.

Q. I am quite prepared to come to that, but I want to clear up this question of superphosphates which appear to be such a large factor in fertilizers?—A. O.K.

By the Chairman:

Q. You just finished part of an answer?—A. Yes.

Q. You said something about Beloeil, or you were starting to say something about Beloeil. Will you finish that sentence?—A. At Beloeil our plant is primarily explosives, for the manufacture of explosives. We have, as a by-product, sulphuric acid. At one time, we didn't have that as a by-product, because we were making all our nitric acid from the weak sulphuric acid. We now make it from the air. So when we had an excess of weak sulphuric acid at Beloeil we looked around for some use for it, and we decided to manufacture superphosphate. So that at Beloeil we have a certain tonnage of weak sulphuric acid at an extremely favourable price to the fertilizer division. We take it from the explosive division at their actual handling cost, which I may say is under $2 per ton. I will be glad to give the committee the exact figure.

Q. That is sulphuric acid; you take it at under $2 a ton?—A. Yes. If I may go a little further on this, I think I can possibly clear up a point. I don't want to be too windy, but I do believe if we throw the cards on the table, gentlemen, face up, we will get along better.

The CHAIRMAN: It will be a new experience for us.

The WITNESS: I will be delighted to do it, Mr. Stevens. We have nothing to hide.

By Mr. Sommerville:

Q. All right, Mr. Grubb?—A. The Canadian Industries, Limited, went into the fertilizer business in Eastern Canada entirely on account of this weak sulphuric acid we had at Beloeil.

Q. Which was a by-product?—A. Yes, which was a by-product. We are not allowed to throw it in the river, because it will kill the fish. There was no market for it. It was so weak we would have to build a plant to handle it. We had it on our hands.

Q. Incidentally there was that same situation at Hamilton; you had an excess over your ordinary chemical requirements at Hamilton?—A. I would not put it exactly that way. We have at Hamilton an acid plant. If it operates at 40,000 tons a year, we can naturally make it a little cheaper than if it is operating at 20,000 tons a year; the more we turn out, the cheaper we can make it. Our raw materials run along just the same. So that our costs at Hamilton are an entirely different picture to what they are at Beloeil.

Q. But your sulphuric acid is manufactured at Hamilton not primarily for fertilizer, but as a by-product?—A. Not as a by-product, in any way, shape or form.

Q. At Hamilton?—A. It is not a by-product.

Q. Don't you manufacture more in your plant in Hamilton than you require for your heavy chemicals?—A. No. The heavy chemical division manufacture for us such quantity as we tell them we can use in the manufacture of superphosphates. They don't manufacture any more than they can market.

Q. They regulate their production of sulphuric acid for heavy chemicals to the amount of their requirements plus what you require for fertilizer?—A. That is correct.

Q. And by the increased production you say you get a reduced cost on the whole?—A. We would, yes. Might I continue my story there to clear up that point, because I find that I was not satisfied with the evidence to date. It does not seem to be exactly face up on the table, and we want to put it there. We went into the manufacture of fertilizer just on account of the weak sulphuric acid. According to the government figures, we found that there was about 100,000 tons of superphosphates imported annually into Eastern Canada, none being made there, so we decided that it was a fair undertaking, a new industry to go into. Superphosphates come into Canada, as an ingredient, duty free. We faced that fact at the start. However, we investigated the prices at which superphospate was freely selling in the United States and in Canada, and decided that we could make some money in the manufacture. We put up a modern plant. But when we began to manufacture, the word was passed to us that our friends to the south did not intend to give up their trade in Canada, that they would drop prices to meet anything we made, irrespective of our prices or the Canadian regulations. Knowing that they could not go quite as far as that—

By the Chairman:

Q. Who are "our friends to the south"?—A. The United States manufacturers, chiefly Baltimore and Buffalo.

Q. Duponts?—A. Duponts are not in the fertilizer business.

By Mr. Sommerville:

Q. Phosphates?—A. They are not in the phosphate business. They do not make superphosphates.

By Mr. Factor:

Q. Who is the chief manufacturer of phosphates in the United States?—A. There are five or six firms down there. There is the Standard Wholesale; there is Baugh Chemical. I have some of their balance sheets here, and I can give you a few of the names. The American Agricultural Chemical; Virginia-Carolina Chemical; International Agricultural Corporation.

By the Chairman:

Q. Those are the main ones?—A. Those are the main ones.

By Mr. Kennedy (Peace River):

Q. Davidson?—A. Yes, Davidson.

By Mr. Sommerville:

Q. Yes, Mr. Grubb, proceed?—A. When they began to reduce prices, we came to Ottawa and asked to have a fair market value established, plus a reasonable profit, as in section 36 (2) of the Code.

Q. That is to say, you asked that a value be put on it to prevent dumping?—A. That is correct. We were successful, and the duty was established.

Q. Or rather a value was established?—A. A value was established.

By Mr. Ilsley:

Q. Were they offering that in Canada for less than they were offering it in the United States?—A. Yes. In that connection, they were offering it for less than the general price in the United States. Here is where I think some of the investigators have some trouble. When they go out there, we will say they go to Davidson's, for example. Davidson will turn up an invoice that he has sold some superphosphate in bulk to Jim Smith & Co. If the records are investigated, it will probably be found that Jim Smith & Co. is owned by Davidson, or partially owned by Davidson; so they are able in isolated instances, possibly, to show a selling price in the United States which would compare with what they shipped it for into Canada; but as a general practice, I should definitely say no.

By Mr. Ilsley:

Q. I gather it is a disputed point, from what you say?

By Mr. Edwards:

Q. That is a common practice, is it not?

Mr. ILSLEY: Just a minute. I asked a question.

Mr. EDWARDS: Go ahead and ask any question you want to. You are asking all the time. I very seldom ask one.

By Mr. Ilsley:

Q. What is the answer?—A. I am afraid I have forgotten the question, due to the interruption.

Q. The question I put was this: I gathered it was a disputed point?—A. Well, I think it is, for this possible reason: The value that we had established—and incidentally we undertook with the government that we would not increase the price of superphosphate in Canada in the event of any ruling that was given—the value that was established lasted one week, and it was wiped out and has not been re-established. So that we are now left with our superphosphate plant, and unfortunately meeting prices that are netting us heavy losses.

Mr. SOMMERVILLE: Where was this?

The CHAIRMAN: In Quebec.

The WITNESS: And Ontario.

By Mr. Sommerville:

Q. Then, with regard to this price which you say lasted one week—how long ago was that?—A. It was either 1931 or 1932. In my notes further along I can give you the exact date.

Q. At any rate, it was several years ago?—A. Yes.

Q. As a result of representations made, a certain valuation was fixed?—A. Yes.

Q. And as a result, apparently, of certain other representations, that valuation was wiped out?—A. Yes.

Q. And there was no valuation; nor has any valuation been in existence for several years on the imported product other than that which is shown by the invoice as it comes in?—A. That is all.

Q. That is the situation?—A. Yes.

Q. So that you are meeting that competition from the United States in superphosphates?—A. And Europe.

Q. And Europe?—A. Yes.

Q. On the invoice price of those commodities?—A. That is right.

Q. And you have not been able to bring to the attention of the department, apparently, any cases of a character that indicated that there was deliberate evasion in the matter of prices?—A. I have brought it to the attention of the department.

Q. In the last two or three years?—A. Yes. But naturally we don't see their findings. We merely know that no action is taken. I am not finding fault with the department. They may have good and sufficient reasons. They have not been tabled, to my knowledge.

By Mr. Ilsley:

Q. Did you ever have a tariff or duty on superphosphates?—A. We did originally, but we found we were up the wrong tree, so we asked for 36 and 2.

Q. Has there not been a recent application for a 15 per cent duty on phosphates?—A. Not to my knowledge; and I think we would be the only people that would apply.

Q. Is there nothing pending before the Tariff Board?—A. No.

Q. Or the Minister of Finance?—A. No; the only thing we have is that we are still persisting in our request that the goods be not dumped into Canada. We have not given up on that yet.

By Mr. Sommerville:

Q. All right. Proceed, Mr. Grubb?—A. Well, if you want me to proceed, so as to clean the thing up, I would suggest that we proceed along the lines of the memorandum that was put in by the growers. Incidentally we have every sympathy with the growers. I made a note or two in connection with that. I find we have many things in common. We are both losing money. We are both selling at too low prices. We both have associations where we get together and discuss our problems. We both agree on selling prices. So I should say that that ragged army that was mentioned here—that when the growers really see our side of the picture, they will welcome us as brothers in that ragged army, and will not figure that we are opposition.

Q. Where did you get the impression, that they meet and agree upon prices? Where have you ever heard of a growers association that ever agreed upon any price and ever put it across?—A. Well, I gathered that. I didn't say they put it across. I said that the evidence was that they are all selling to the different canners at the one price.

Q. They have to take what is given them. It is not they that fix the price. It is the buyer—the tobacco man or the canner?—A. Well, possibly so. We pretty much have to do that.

Q. There is a little difference?—A. We pretty much have to take what we can get.

Q. All right. Now, let us get on?—A. Proceeding along this line, if it is agreeable to the Committee, a question was raised as regards the buyer being able to buy materials in the open market.

Q. Yes?—A. I will begin with superphosphates. I would like to see an order from anybody in Canada with the ability to pay, who wants to buy superphosphates from me, and I will very gladly sell to him.

Q. May I ask this: Are these elements of fertilizers sold on the credit basis or are they sold on a cash basis?—A. We will sell them both ways.

Q. My information is that mixed fertilizers are sold on a credit basis, but as regards the ingredients, the companies insist upon getting cash; and that is one way in which they discourage the purchase of ingredients and this practice of mixing your own, as it is called?—A. Speaking for Canadian Industries, Limited, we will sell ingredients or mixed fertilizers for cash or on time. If we sell them on time, naturally credit approval must be obtained from our credit manager. But it is no harder to get credit approval on the ingredients than it is on mixed fertilizers.

By Mr. Factor:

Q. We have had evidence—I don't know whether your firm were concerned in it—but someone gave evidence that they could not buy mixed fertilizer east of the Pembroke line in order to ship it west of the line?—A. I will come to that a little later, if that would suit you just as well.

Mr. Factor: That will be all right.

By Mr. Senn:

Q. I have to leave shortly, but before I do I want to ask a question just along that line. Is there an agreement between C.I.L. and the International Company by which the International keeps out of Western Ontario east of this line?—A. There is no agreement.

Q. There is no agreement of any kind?—A. None whatever.

Q. Nor understanding?—A. Nor understanding, no.

By Mr. Sommerville:

Q. While you are dealing with that, may I ask if there is any association of fertilizer men east of Montreal—Montreal and east?—A. There is, yes. We have no name for it. We gather together when we find things of mutual importance. We discuss prices. We discuss analyses of fertilizers, try to standard our brands. We discuss the railroad versus truck situation, and we discuss matters quite similar to what is discussed in that western Ontario association. We have a similar organization in British Columbia, and we have a similar organization in the maritimes. The last three named—the maritimes, Quebec and British Columbia—we have no name for. We have no president for them. We don't call anybody the chairman; although at the meetings in Quebec and in the maritimes, any meetings I have attended I have been chairman.

By Mr. Kennedy (Peace River).

Q. Who calls them?—A. Anybody that has anything particular to discuss. Incidentally, I will state that, as general manager of the Canadian fertilizer division, I know the general policies. You may ask me some question of detail that I might not be familiar with. However, I will do the best I can.

By Mr. Factor:

Q. Approximately how many fertilizer manufacturers are there in Canada, outside of the Eastern Canada Fertilizer Association?—outside of the group contained in that association?

Mr. Sommerville: Perhaps Mr. Grubb will give them to us in areas.

Mr. Factor: In sections.

Mr. Sommerville: The sections that form these groups.

By Mr. Sommerville:

Q. We have already had eastern Canada. Will you be good enough to give us the Quebec group?—A. Yes. Canadian Industries, Limited; Canada Packers; International Fertilizers, Limited; they are at Quebec.

Q. At Quebec?—A. Yes, that is their head office.

By Mr. Factor:

Q. Pardon me for interrupting, but is that the same firm that you are referring to, the International?—A. The same one, yes. And A. Lavigeur of Montreal.

By Mr. Sommerville:

Q. Is that manufacturer or dealer?—A. Manufacturer.

Q. In Montreal?—A. Yes.

Q. Those are the four firms in the province of Quebec?—A. Right—and one other. We always forget one of our little friends, Agricultural Chemicals, Limited.

Q. They are also in Western Ontario?—A. They have a plant at Port Hope.

Q. They have a plant in Quebec?—A. No.

Q. They have not any plant in Quebec?—A. No.

Q. But they do distribute in the province of Quebec?—A. Yes.

Q. Then, as a result of this association, or these meetings that you referred to where you discussed prices, have you a uniform price list in the province of Quebec, similar to that which is filed for western Ontario?—A. We have a Quebec price list. Just what you mean by uniform and similar, I don't know. We have a schedule there, where we sell to the dealer, the consumer—the merchant's price, the consumer's price and general set-up of the schedule along similar lines.

Q. And the schedule is a schedule based not in actual figures, but on the same basis as we had given us by Mr. Grose?—A. You mean on that?

Q. On that plan?—A. A different plan.

Q. Well, it is probable the figures may vary, but the scale—?—A. You mean the key?

Q. The key?—A. It is entirely different.

Q. It is an entirely different key?—A. Yes.

Q. But you have some key?—A. We have a key.

Q. You have a key?—A. Yes.

Q. And from that key each manufacturer works out a minimum price?—A. Yes.

Q. And that is by reason of this understanding among you?—A. Yes. Would you like to know how that key works?

Q. Well, I am not particularly interested in that just at present?—A. Well, all right. My point is that I have nothing to hide; and when you ask about keys, I don't wish to be evasive, and I will carry on as far as you like.

Q. We have got the association or the group in Quebec. What about the maritimes?

By Mr. Factor:

Q. One question there: Do all the members of the Quebec association follow the same price list, the fixed price list?—A. There is a minimum price list in Quebec.

Q. And all the members adhere to it?—A. They are familiar with it. I hope they do.

By Mr. Kennedy (Peace River):

Q. What is the difference between a minimum price and a fixed price?—A. Anybody can charge more if he can get it.

By Mr. Sommerville:

Q. Now for the maritimes?—A. Canadian Industries, Limited; Canada Packers; International Fertilizers; Colonial Fertilizers; Summers Fertilizers—they are at St. Stephens; and over on the island, the Island Fertilizer, on Prince Edward Island.

Q. Those fertilizer companies meet in a similar manner, without any officers?—A. That is right.

Q. And without any association name?—A. That is right.

Q. They meet from time to time?—A. Yes.

Q. To discuss the same subjects; prices, terms and conditions?—A. Yes.

Q. And do they have a similar key schedule on which to base their prices?—A. They do, yes. At these meetings we have had two other organizations sat in on occasion. One was the Prince Edward Island potato growers, Mr. Bolter; another was Mr. Margison of the New Brunswick—I forget their name; and there is Associated Shippers of Prince Edward Island.

Q. The price list which they get out is based on the same scale as the minimum price list?—A. Yes.

Q. Agreeable to all?—A. Yes.

Q. And I suppose the same pious hope is expressed that they follow it?—A. Correct.

Q. Then in British Columbia the association is made up in what way, or rather the group?—A. Canadian Industries, Limited; P. Burns & Company; Globe Fertilizer Company and Buckerfields, Limited.

Q. And a similar policy is adopted there?—A. Yes.

Q. And a similar minimum price is agreed upon?—A. Right.

Q. And similar practices approved of, uniform practices in the handling of your fertilizer?—A. Yes. I won't say uniform throughout Canada. The general idea.

Q. No, but uniform for that area?—A. Yes.

By Mr. Kennedy (Peace River):

Q. What about Trail Smelters?—A. They have not sat in on any of our meetings.

By Mr. Sommerville:

Q. Is there a prairie section?—A. No.

Q. The prairie section is supplied from which association or which group?—A. Until a few years ago the prairies did not use 100 tons of fertilizer a year, of chemical fertilizer. In the last few years, Trail have put on some very intensive advertising campaigns, trying to educate the prairie farmer; and the prairie farmer to-day is using some of the highest analysis fertilizer—triple superphosphate, ammophos—made at Trail, and fertilizers which will carry freight rates, will stand heavier freight rates. Low grade fertilizers cannot very well be marketed on the prairies and shipped from far distant points.

Q. With reference to the price list, will you be good enough to file the price lists of these various sections: The maritimes, Quebec and the West?—A. I can give you printed copies of the maritimes, I think—I am not sure if I have the maritimes or British Columbia with me. I will be glad to file them. They are not printed except by the typewriter. I will be glad to file them.

Q. Perhaps you can tell us now what are the prices for the maritimes on the fertilizer 2-12-6? We have had a price on Ontario of $34.65; a price in Quebec of $25; what is the price in the maritimes? Your folder is limited to Ontario?—A. Primarily. I can give it to you in general first, and I will be glad to file the price lists. In the maritimes we have a delivered price, and the delivered price in the maritimes, I should say, is approximately the same as the

Quebec price. We sell different analysis fertilizers in the maritimes to what we do there, but on a similar analysis it would practically be the delivered price instead of the factory price. In other words, if the Quebec price on 2-12-6 is $25, I should say in the maritimes it is probably $25 delivered. On the whole, the maritime prices are lower than the Quebec prices.

By Mr. Ilsley:

Q. Then the delivered price in the Maritimes is the same as the f.o.b. factory in Quebec?—A. I should say approximately.

By Mr. Sommerville:

Q. Well, at that rate then, the delivered price in the Maritimes is from $9 to $12 or $15 less than the delicvered price in Western Ontario?—A. No. I think I can show you that the price in Western Ontario is not $11 higher than the price in Quebec.

Q. But you have indicated that the other price, in the Maritimes, is the same as the f.o.b. price in Quebec?—A. That is right.

Q. And whatever that delivered price in Ontario is in relation to the f.o.b. price, that is the difference in the Maritimes?—A. That is correct.

Q. And at present, on looking at it, it seems to be a price difference of from $9 to $15?—A. There has been—it has been testified here—

Q. Exclusive of freight; no, including the freight?—A. It is my understanding that the difference is reported to be approximately $15 higher in Ontario than in Quebec.

Q. From $9 to $15, according to the fertilizer?—A. All right, from $9 to $15.

Q. And that situation would prevail as between the Maritimes and Ontario?—A. All right; of course, if that spread is correct.

Q. I understand your explanation, that that includes the freight?—A. That is right.

Q. What is the other price, in British Columbia?—A. In British Columbia? We have a price in the zone around Greater Vancouver where all the Chinese and Japanese are farming.

Q. Market gardening?—A. The price in the zone based on the cartage rates that we can get. If our plant is here, we have a ring around that, and we sell anybody around that for a dollar—but if they want to come to the plant they get the dollar.

Q. A dollar a ton?—A. In the Okanagan country it is a delivered price. Up in that country we are in competition with the Trail people. They don't go to the Coast. They say that the price up in the Okanagan is so and so, and we say fine.

Q. How does the price in the Okanagan valley compare with the price in Quebec or the Maritimes, the delivered price in the Maritimes—approximately. Is that not a lower price than in the Maritimes?—A. No, I would not say so; I would say it was higher.

Q. To what extent?—A. As a matter of fact we have a different commodity in British Columbia than we have in the East. We can practically push all the fertilizer business in British Columbia.

The Chairman: They are easier out there.

The Witness: Possibly, Mr. Stevens; we both live there so we ought to know. In the East we have lost heavily.

By Mr. Sommerville:

Q. Is that because you have two definite zones and your deliveries are limited to these zones, one around Vancouver and one in the Okanagan?—A. No, we have at the plant approximately the same deliveries—our shipments

into the Okanagan as compared to our shipments around Vancouver; in other words, our Okanagan price is the Vancouver price, plus freight approximately.

Q. How does your Vancouver price compare with your Quebec price, the f.o.b. price?—A. I would not like to answer that from memory, I will file a price list.

Q. All right, thank you Mr. Grubb, if you will proceed?—A. Fine. Nitrate of soda. I am discussing the ingredients that incidentally are so hard to buy I understand. Superphosphate: In addition to my being willing to sell it I wish some method could be fixed up so that my friends to the South and everybody else could be stopped selling it. I do not see how anybody in Canada could say it is hard to buy superphosphate for his own use, or for mixing purposes.

Nitrate of soda: Not produced in Canada, it is a world commodity. It enters Canada duty free. I have circulars on my desk from jobbers in the various cities offering to sell me Nitrate of soda. I know of no pressure of any kind ever being brought to bear on the Nitrate of soda people to only sell through the dry mixers.

By the Chairman:

Q. Of course, Mr. Grubb, that would not affect the plight of the grower; he could not go and buy it, that is out of the question?—A. I think he can in carload quantities; that is, 15 tons.

Q. We are really concerned about the ordinary dirt farmer who cannot buy Nitrate of Soda from abroad?—A. No, but he could buy it from Baltimore or New York.

Mr. FACTOR: The chief complaint is on the mixed fertilizer rather than on the ingredients.

The CHAIRMAN: We will take it for granted then that he can buy it.

The WITNESS: In carload lots, he can buy it economically—that is 15 tons.

By Mr. Ilsley:

Q. That is important to the Annapolis Valley, N.S.?—A. Could they handle 15 tons.

Q. I would say 5,000 tons?—A. There is nothing to stop them buying it freely; but not for mixing purposes.

By Mr. Kennedy (Winnipeg):

Q. You mentioned that they could bring it in from New York. Could they buy from domestic jobbers here without buying direct?—A. I should think so.

Q. Do you know?—A. For instance, do you know Barrett, the jobber; I think Barrett would sell Nitrate of Soda in carload lots.

By Mr. Edwards:

Q. Would the large chemical houses sell it?—A. Very definitely. Chemicals Limited I know have handled carloads of Nitrate of Soda, yes. They do not need to buy it from the industry.

Sulphate of Ammonia is, we will say, a very important ingredient. It is manufactured in Canada, two plants in Hamilton, one in the Sault, one down in Sidney, one at Trail in British Columbia, and at the present time there is a plant in Ottawa and at Montreal, both of which to the best of my knowledge are closed; I am sure about the one in Montreal—because the price is not attractive. Sulphate of Ammonia enters Canada duty free, and is a commodity which can be bought in any market. Naturally, it would have to be bought in carload lots. Now, Potash is a very necessary ingredient.

By Mr. Sommerville:

Q. Yes, Muriate of Potash?—A. Muriate of Potash and Sulphate of Potash. At one time the "N.B." potash—a French and German syndicate had a corner on it, but it can now be bought freely, it enters Canada duty free and can be bought at two places in New Mexico (I am talking about producing points), one in California, France, Germany, Spain, Russia and Palestine.

By Mr. Edwards:

Q. Palestine is getting very large, isn't it—the production of potash?—A. Quite true, but I should say New Mexico and California are larger; California leads.

By Mr. Factor:

Q. Are Canadian importers bringing in any of this Palestine potash in any considerable quantity?—A. We brought in some Palestine potash two years ago. We did not bring in any last year as far as I know, that is all that has come to Canada.

By Mr. Sommerville:

Q. While you are dealing with Potash I see that your Ontario price on Muriate of Potash, the credit price is $62 per ton, and your Quebec price is $51.50; and on the Sulphate of Potash your Ontario price is $72 and the Quebec price is $58. What is the cost of Muriate of Potash, there must be a very large spread there surely?—A. No, I think I can explain that to you. There is one thing we must remember, that our Quebec schedule is f.o.b. the factory, and our Ontario schedule any place in Ontario—to the farmer's barn—we do not always get the advantage of a carload freight rate.

Q. I quite appreciate that. You have a delivered price in the Maritime, so you have comparatively the same basis in Ontario and in the Maritime, instead of Ontario and Quebec; or a delivered price in the Maritime—why should you deliver in the Maritime?—A. Have you the comparative costs?

Q. The comparative costs?—A. With the price in the Maritimes where we have lost to competition.

Q. Why the discrepancy; that is what the committee would like to know? —A. We will come to competition in a moment. Our plant at Halifax is right on the water. I put the stuff right off the boat into the plant. At Quebec and Hamilton I have to tranship at a cost of $2 or $3 per ton more than in this country.

The next item which I sell in my ingredients is Cyanamid procurable direct from the American Cyanamid Company, and at the same meeting the impression I got from the side lines there, was that we had brought this official of the Cyanamid Company to work for us.

Q. That was the minutes of the meeting which stated that a representative of the Cyanamid Company had appeared before that meeting and explained the course of co-operation he proposed between your association and the Cyanamid Company?—A. That is right. I was not at that meeting, but I was at the luncheon, so I did not hear the remarks he made at that meeting. Within the next day or so Mr. Frost, the Cyanamid salesman, called on me in Montreal and told me what he had proposed at the meeting. We all use Cyanamid in a powdered form in the manufacture of our mixed fertilizer. Within the last few years, the Cyanamid Company have brought out Cyanamid in a pellet form which can be used by the fruit-growing industry instead of Sulphate of Ammonia.

Q. What do you mean by "pellet"?—A. Just the same as B.B. shot, little round pellets. He came in to explain to me that they had put on an expensive advertising campaign, and would like to get our co-operation pushing the sale of cyanamid, that he would be glad to include it in carload lots with our finer material, our powdered material; that he was carrying a stock in Montreal on

which I could draw, or that he had stock in Ontario. Now, I think the minutes of that meeting, judging from the conversation I had with Mr. Frost, were rather badly worded.

By Mr. Kennedy (Peace River):

Q. I understood from the minutes that he came up to talk social co-operation, and the interpretation of the evidence given yesterday by the witness was that he was giving a nice little talk on the results of the N.R.A. I never heard co-operation explained in that way before?—A. I was there when the N.R.A. was discussed, and Mr. Huntington, manager of the American Cyanamid Company, gave us a speech on the workings of the N.R.A. in the United States; incidentally, I might say he was very much opposed to it; but it did not relate to the talk he had previously given on cyanamid. It was more on the general workings of the N.R.A. Now, I think the next point possibly would be—unless there were some question to be answered—the next point would be in connection with this Northumberland County Purchasing Committee.

Q. Did you deal with sulphate of ammonia?—A. I did.

Q. I beg your pardon?

By the Chairman:

Q. Before you leave the question of these ingredients, could you tell the committee the cost of the production of super-phosphate in Quebec as compared with Hamilton?—A. Yes, our phosphate rock comes from Florida.

By Mr. Kennedy (Winnipeg):

Q. From where?—A. From Florida. We have had some from Morocco, but at the present time I have 20,000 tons on the way up from Florida. We landed at Sorel and transhipped to Hamilton and Beloeil. It costs us laid down in our plant approximately the same. The mixed ingredient, sulphuric acid product, that I make in the way of super-phosphate, is 20 per cent strength—P. 205—the difference in my acid cost is $4 per ton in the case of our 20 per cent super-phosphate.

By Mr. Sommerville:

Q. What do you mean by the " difference "?

By the Chairman:

Q. You mean, that the Hamilton plant costs you $4 per ton of super-phosphate more for your sulphuric acid than it does at Beloeil?—A. That is right; if a ton costs me $10 to make at Beloeil, it costs me $14 at Hamilton.

By Mr. Edwards:

Q. What is the difference between what you call weak sulphuric acid and strong sulphuric acid?—A. I am not a chemist, do not get me too badly mixed up. We figure our sulphuric acid on a basis of 100 per cent strength.

Q. That would be ·825?—A. That is right.

Q. What would be the specific gravity, do you know?—A. You know more about specific gravity than I do. We get it at about 62 per cent strength in Quebec, a weak acid; while at Hamilton we make an acid that is 93 per cent, and we have to dilute it down to the same strength as that of our acid at Beloeil.

By Mr. Young:

Q. Does it cost you more at Hamilton?—A. Our manufacturing costs at both plants—I will be glad to turn them into the committee—are practically identical. Both at Hamilton and Beloeil we have identical plants, with the exception that at Hamilton we could turn out twice as much if the market was there for it.

By Mr. Factor:

Q. I do not quite follow you, where does that $4 difference come in?—A. In our Hamilton plant we manufacture acid for the purpose of making superphosphate. At Beloeil it is a waste product and it is turned over to us direct at the pipes, at the cost of transferring it by pipe where it is sent over to our plant.

By Mr. Sommerville:

Q. Somewhere about $2 a ton?—A. Yes, sir, less than $2 a ton, I will give you the figures.

Q. Your sulphuric acid at Hamilton cost you something less than $6 a ton?—A. At Hamilton?

Q. Yes?—A. I did not say that.

Q. You say it costs $4 a ton to produce sulphuric?—A. I said, per ton of super-phosphate.

Q. I beg your pardon.

By Mr. Young:

Q. What are the factors that make up $2?—A. In making sulphuric acid we have to burn sulphur and catch the fumes. It is a very complicated process. I am sorry that I am not sufficiently familiar with it to explain it in detail. But I should say that the average going price for sulphuric acid net under our present basis, which is the basis we always discuss it on, is in the neighbourhood of $16 to $18 a ton to-day. Now, at Beloeil, we get it for less than $2.

By Mr. Edwards:

Q. Less than $2 per ton?—A. Per ton of 100 per cent acid at Beloeil.

Q. I thought it was $2 per ton less than at Hamilton?—A. No, less than $2 per ton. I have no objection to telling you that I pay for sulphuric acid at Hamilton $12.75 per ton.

By Mr. Sommerville:

Q. You pay to your plant?—A. $12.75 per ton. I am willing to give this committee any information it desires, but occasionally there may be something I might not want my competitors to learn. We will be glad to file it, I have no particular objection to that.

By Mr. Ilsley:

Q. The whole difference in the cost of manufacturing superphosphate is due to the difference in the cost of sulphuric acid?—A. In the manufacture of superphosphate in making 100 pounds you need 60 pounds, leaving 40 pounds of 100 per cent acid.

By Mr. Young:

Q. What is the condition of this acid?—A. It is liquid.

By Mr. Ilsley:

Q. That is, it would be 40 per cent of your $12?—A. That would be $4. Now, on this Northumberland County order, and price spreads: to begin with, I think there is a little misunderstanding; I thought that pressure was brought to bear in connection with this order this year on account of the difference in our price schedules in Eastern Ontario versus Western Ontario. I think the statement was made here that the Co-op. Fédérée refused to ship an order west of Kingston, and I gathered the impression that it was to the Northumberland County Purchasing Committee.

By Mr. Sommerville:

Q. Yes?—A. That is correct, isn't it?

Q. I believe so?—A. Now, I am reported—have you a copy of the letter, is it fair for me to ask—they said a letter was written turning the order down.

Q. There is a letter, I have seen it, but I do not know whether we have it here, or whether it was taken by the gentleman who had it?—A. Was the order through the Co-op. Fédérée?

Q. I could not guarantee that?—A. That was the testimony.

Q. I can't say that off-hand?—A. My point is this: on my return to Montreal over the weekend I asked the Co-op. Fédérée if they had heard from the Northumberland County Purchasing Committee, or if they had received an order and turned it down. They referred to their files to show that they really did not know the people, they had had no correspondence with them, and they had never seen the colour of an order. I then rang up Canada Packers to see what they knew about it. They knew nothing. So I rang up Mr. Lavigueur and he said yes.

Q. Lavigueur, who is he?—A. He is one of our little associations down there.

Q. The one for whom Mr. Hunt gave evidence of?—A. Mr. Hunt gave the evidence. Incidentally, he is a member of the Purchasing Committee; and in the final analysis C.I.L. got the order, so I have full particulars here. I rang up Mr. Lavigueur and asked him about it, and he said, yes, we had correspondence with them, but I never received the order; and he said, here is what I wrote—I will read it if you like:—

Mr. Walter H. Smith,

Agricultural Representative of Northumberland County,
Brighton, Ont.

Dear Sir,— Answering yours of the 10th instant, we regret to advise you that the brands 2-8-10 and 9-5-7 are not registered, and as the selling season is at an end the sales which could be made would not permit to make an expense of $60 for the registering of these two brands.

Mr. Lavigueur is a Frenchman, and his language may not be quite correct. Mr. Stevens, I may say in connection with registering that each manufacturer registers with the government the brands he is going to sell. If it is 2-8-10 it costs us $30. He could not sell without registration.

By the Chairman:

Q. You register 2-8-10?—A. Mr. Lavigueur could not use my registration, he must register.

By Mr. Factor:

Q. Could he register if he wanted to go to that expense?—A. He could, $30. It costs $10 for each plant food. 2-8-10 has three plant foods and costs $30. 0-12-15 would be two plant foods and would cost $20.

Furthering to my letter March 7th, I exceedingly regret to have to withdraw my offer of selling you fertilizers.

The main reason is that the roads around Montreal are all blocked for trucking, and most of my goods are sold delivered to farmers' barns by truck, and they will not be opened for 2 or 3 weeks yet, and having an extra large quantity of tons to deliver by trucks, the factory being overfull, I find that I have all the orders I can handle this spring, besides we have yet many hundred tons to mix and we have no storage place as we have shipped only a few hundred tons this winter, I cannot see my way in taking new orders.

This summer I am to enlarge my plant, and will call on you early next fall, and hope to do business with you in future.

Regretting very much the circumstances in not being able to accept your order, I remain,

Yours very truly,

(Sgd.) ARTHUR LAVIGUEUR.

The reason I am bringing that up is on the side lines I got the impression that it was due to pressure that the Montreal supplier had withdrawn, but I don't think that indicates any pressure.

By Mr. Sommerville:

Q. You say that is the only one you have any record of?—A. I think that is the only one.

Q. That is not the letter I remember seeing?—A. I see.

By Mr. Ilsley:

Q. What I was going to say is, could you ship to any point in Ontario at your f.o.b. Quebec price?—A. I would not.

By Mr. Sommerville:

Q. Why not?—A. Could not afford to.

By Mr. Ilsley:

Q. Your main effort to-day is in your Quebec business?—A. I have got up a statement here which I think will clear up that point.

By the Chairman:

Q. This letter seems to me to be a very poor explanation of what Mr. Hunt said. I have just been looking for the exact quotation; but from memory Mr. Hunt indicated that the Northumberland County growers, a very substantial body of users of fertilizer, had approached a Quebec firm for fertilizer and seemed to be encouraged to believe that they could get it. A couple of weeks afterwards they were notified, this apparently is the notification—but there is no indication in it as to what the difference would be in shipping a carload of fertilizer by rail?—A. Incidentally, it was more than a carload; it was 85 tons.

Q. Which could be best shipped by rail?—A. Yes, sir. The legitimate mixers can get their ingredients and mix them together, and they had to be put in bins to allow them to cure—Mr. Smith testified three months' curing, I am willing to admit that with our equipment and with our excellent Super-Phosphate we can cure in very much less time, from 4 to 6 weeks. Mr. Lavigueur has a trade contiguous to Montreal which he feeds by contract. He collects orders in the fall, and he delivers them at the end of March, April and May. His plant was full to the guards—I have been in it—I wish I could store as much in as small a space as he does; and when it comes to taking on some new orders, an order that he received in March which he would have to ship to Northumberland County in the course of 20 days; in the first place he has not the room to put it down to cure it, and possibly had not made arrangements for the additional raw material. He could not take that order in March in his plant because the cure would take from six to eight weeks, and he had to look after his local trade. In addition to that, as he points out, two of the brands were not registered by him, so he would have to put up another $60.

Q. They were registered by you, he could get them from you?—A. No, sir. Each of us must register our own, and dig up our own $30.

Q. You could have sold him?—A. I would have sold him if he had come to me.

Q. Would you sell in Northumberland County?—A. I do sir, I have the invoices right here.

Q. I thought you said you would not sell?—A. I sold him at the factory price; it is not $11 though.

By Mr. Sommerville:
